**Phase 1B vaccine eligibility:** Vaccinations are under way this week for Ohioans age 75 and older, as well as individuals with an intellectual or developmental disability AND one of the qualifying Phase 1B medical conditions. During the week of Feb. 1, vaccine eligibility will expand to include Ohioans ages 70 and older and will begin for K-12 school staff.

- Governor Mike DeWine has made a commitment to prioritize the vaccination of Ohio’s most vulnerable populations and to ensure that K-12 schools are able to safely provide in-person or hybrid education by March 1. As part of this commitment, Phase 1B of Ohio’s COVID-19 vaccination plan includes eligibility for employees in K-12 schools.
- Each school district will have a vaccine administration partner, and those vaccines will be administered primarily during closed clinic settings. Learn more about how the vaccine process will work for K-12 schools here.
- The schools and school districts and their partners receiving allocations for the first week have been notified. Not all schools and districts will receive allocations the first week.

**CDC has updated clinical guidance** – Several items have been updated in the CDC’s Clinical Considerations, including:

- **Second dose maximum interval 6 weeks after first dose** – Previous guidance had not identified a maximum interval between doses; the latest says the second dose should occur as closely to the due date as possible, but not exceed 6 weeks after the first dose, regardless of manufacturer.
- **Timing for administering COVID-19 vaccines in respect to other vaccines** – The vaccine series should routinely be administered alone, with a minimum interval of 14 days before or after administration with any other vaccine. However, mRNA COVID-19 and other vaccines may be administered within a shorter period in situations where the benefits of vaccination are deemed to outweigh the potential unknown risks of vaccine coadministration (e.g., tetanus toxoid-containing vaccination as part of wound management, measles or hepatitis A vaccination during an outbreak) or to avoid barriers or delays to mRNA COVID-19 vaccination (e.g., in long-term care facility residents or healthcare personnel who received influenza or other vaccinations prior to/upon admission or onboarding). If mRNA COVID-19 vaccines are administered within 14 days of another vaccine, doses do not need to be repeated for either vaccine.

**Resources available for working with patients with disabilities** – The Ohio Department of Developmental Disabilities has developed the following resources to help with vaccine administration for people with developmental disabilities:

- Vaccine Provider Best Practices
- Getting a Vaccine: What to Know About Me
- Getting a Vaccine: What to Expect
- Social Story: Getting a COVID-19 Vaccine
- Plain Language FAQ

**Statewide Vaccine Provider Location search** – A recently-launched search tool shows COVID-19 Vaccine Provider Locations throughout Ohio who have received shipments of COVID-19 vaccines for those currently being vaccinated in Phase 1B. Search by county or ZIP code to see a list of providers near you with websites and contact information.

**Stay at Home Tonight order update** – On Jan. 26, Governor Mike DeWine announced a gradual easing of the curfew based upon hospitalization rates, which are a key indicator of disease severity. Read more here.

The most trusted voices when it comes to information about COVID-19 are an individual’s personal physician, medical experts, and emergency room doctors, followed by public health officials.

- COVID-19 vaccines are safe and effective.
- In the early stages of COVID-19 vaccine distribution, doses will be available in limited supply for specific critical populations as a part of phased approach. As supply increases, COVID-19 vaccines will be available to all Ohioans who choose to be vaccinated.
- Vaccines are in short supply in Ohio and across the country. Each week, the federal government will inform Ohio of its statewide vaccine allocation, and providers will be notified of how many doses of vaccine they will be receiving the following week.
- It will take time to distribute all of the vaccine given the limited doses available. So, someone who is 80 or older, for example, will still be able to be vaccinated in the coming weeks as additional age groups become eligible.
- While we know that many people in our community are eager to receive the COVID-19 vaccine, we must be patient while demand for the vaccine remains higher than the available supply. As vaccine supply increases, we will be able to vaccinate more of those in Phase 1B, and eventually, all Ohioans who choose to be vaccinated will be able to receive COVID-19 vaccines.
- The vaccine has been shown to decrease the severity of illness in people who catch this virus. Having a significant portion of Ohioans vaccinated will help us prevent serious hospitalizations and death.
- The COVID-19 vaccine development process included several steps comparable with those used to develop earlier vaccines, such as the flu or chicken pox vaccine. The FDA and independent medical experts have ensured that every detail of these vaccines are thoroughly and rigorously evaluated.
- Using all the tools available to help prevent the spread of the virus continues to be critical until a substantial number of Ohioans can be vaccinated. Continuing to wear masks and social distance will reduce your chance of being exposed to or spreading the virus. Proper prevention measures — like wearing a mask, washing your hands, and practicing social distancing — coupled with the vaccine, will provide the best protection from COVID-19.
- You should continue to wear a mask and practice social distancing after being vaccinated. While the vaccine should protect you from becoming sick with COVID-19, not enough is known about whether or not you can still carry the virus and spread it to others. At this time, those who get the vaccine should continue to wear masks and practice social distancing.

**SOCIAL MEDIA POST IDEAS**

- Vaccines are available at more than 750 locations across Ohio – like pharmacies, local health departments, and hospitals. Find a provider near you with the statewide search tool [http://vaccine.coronavirus.ohio.gov](http://vaccine.coronavirus.ohio.gov).
- Safe. Effective. Rigorously tested. #COVID19 vaccines are rolling out to older Ohioans. While it will take time before it is available for everyone, it’s the best way to prevent our health and help Ohio on the road to recovery. [https://youtu.be/pb-MgPCQFHk](https://youtu.be/pb-MgPCQFHk)
- We know you’ve got questions about the #COVID19 vaccine, like when and where you can get it in our community. Learn this and more on our local #COVID19 vaccine page [Link to provider or local landing page with more information]
- Vaccine supply is limited across the country, and here in Ohio. As the number of available doses increases, #COVID19 vaccines will be available to all Ohioans who choose to be vaccinated. Stay informed with [Link to provider or local landing page with more information]
- FACT: #COVID19 vaccines weren’t rushed and have been thoroughly vetted through a rigorous safety assessment involving independent medical professionals. See more myths vs. facts at [https://bit.ly/OHVaccineMyths](https://bit.ly/OHVaccineMyths).
