Introduction

Ohio's History

Ohio is the birthplace of seven U.S. presidents, the first professional baseball team, the hot dog, the Football Hall of Fame, and the Rock and Roll Hall of Fame! The state name "Ohio" is the word the Iroquois Indians used when referring to the Ohio River and means "large or beautiful river".

Rene-Robert Cavelier, Sieur de La Salle was the first European to explore the state in 1669 and established a system of trading posts to control the fur trade in the region for France. It wasn't until 1788 that the first permanent settlement was established in Marion, Ohio. Partitioned from the Northwest Territory, Ohio was admitted to the Union as the 17th state on March 1, 1803. The state bird is the cardinal and the state flower is the large white trillium.

A "buck's eye" was the term used to describe the nut of the buckeye tree indigenous to the state of Ohio. Ohio historical lore implies the first use of "Buckeye" to describe an Ohioan in 1788. But it was during William Henry Harrison's successful election bid for President in 1840 that forever associated the buckeye with the state, as the buckeye was chosen as his election symbol. The buckeye tree was formally adopted as a state symbol in 1953.

Prior to 1850, Ohio was largely an agricultural state; however, the mid-19th century brought rapid industrial growth in part due to its geography. With ports along Lake Erie and major rivers throughout, Ohio was able to produce and deliver many products. Industry has encompassed steel, automobiles, rubber products, chemicals, machine tools and building materials in addition to the agricultural commodities. Both farming and industry were hit hard by the 1930 Great Depression. Subsequently, labor strife and economic restructuring in steel and other manufacturing areas cost the state many jobs in the late 20th century.

Today in Ohio

New economic models have led to different kinds of development for Ohio in the late 20th and 21st centuries. Modern state, national, and global businesses and industries are found throughout Ohio. Recently, Ohio has been named one of five states recognized as a global center for the fuel cell industry due to its unique combination of knowledge, resources and infrastructure. Ohio is one of the nation's industrial leaders, ranking third in manufacturing employment nationally in terms of gross domestic product. It is a national leader in the production of lime, clays and salt, and is a historic center of ceramic and glass industries. Lake Erie ports, chiefly Toledo and Cleveland, handle iron, copper, ore, oil and finished materials, to include steel and automobile parts. In spite of the massive industrial decline since the 1960s, the state retains many manufacturing centers.

Ohio's transition into the 21st century is best symbolized by the Third Frontier program, a 10-year financial commitment, started in 2002, to support technology-based economic development within the state. As of 2010, the Third Frontier program is credited with attracting 637 new high-tech companies to the state and adding 79,464 new jobs while having a \$6.6 billion economic impact with an investment return ratio of 9:1. In 2010, the program won the International Economic Development Council's Excellence in Economic Development Award, celebrated as a national model of success. The Ohio Third Frontier program has specifically impacted Ohio health care through financial investments in the medical imaging and the biomedical programs.

Even with the growth of the service sector, Ohio was hit hard by the recent recession and manufacturing employment losses during the most recent period. The recession cost the state 376,500 jobs and recorded 89,053 foreclosures in 2009, a record for the state. The median household income dropped 7% and the poverty rate ballooned to 13.5% by 2009. By the second half of 2010, the state started showing signs of recovery.

Recent employment statistics indicate that Ohio's largest sector is trade/transportation/utilities, which employs 1,010,000 Ohioans, or 19.4% of Ohio's workforce, while the health care and education sector employs 825,000 Ohioans (15.8%), government employs 787,000 Ohioans (15.1%), manufacturing employs 669,000 Ohioans (12.9%), and professional and technical services employs 638,000 Ohioans (12.2%). Fifty-nine of the United States' top 1,000 publicly traded companies (by revenue in 2008) are headquartered in Ohio, including Procter & Gamble, Goodyear Tire & Rubber, AK Steel, Timken, Abercrombie & Fitch, and Wendy's.

Geography

Ohio has 88 counties with the capital city of Columbus, located close to the center of the state. Ohio has 44,828 square miles making it the 34th in the nation according to land mass. The length of the state is 205 miles, while the width is 230 miles. To the north, Lake Erie provides Ohio 312 miles of coastline, which allows for numerous ports. Ohio's southern border is defined by the Ohio River. Ohio's neighbors are Pennsylvania to the east, Michigan to the northwest, Ontario Canada, to the north, Indiana to the west, Kentucky on the south, and West Virginia on the southeast.

Ohio's Population

From just over 45,000 residents in 1800, Ohio's population grew at rates of over 10% per decade until the census of 1970, which recorded just over 10.65 million Ohioans. Growth then slowed for the next four decades. Ohio's population (2010 census) was 11,536,504, up 1.6% from the 2000 census. Currently, Ohio is the 7th most populous state in the U.S., with 282 persons per square mile. Age distribution in Ohio is very close to the national average for children less than five (6.2% vs. 6.5%), individuals less than 18 years of age (23.7% vs. 24%) with a slightly higher > 65 year old population (14.1% vs. 13%). By 25 years of age, 86.8% of the Ohio population has received a high school degree and 23.6% have received a college degree.

The ethnicity of the Ohio population has changed slightly since the 2000 Census reports. Black, Hispanic and Asian populations have increased, becoming closer to the national norm. The Hispanic population, even with an increase to 3.1% still continues to be much lower than the national average of 16.3%. In the most recent census, 6.1% of Ohio's population does not use English as their primary home language, lower than the national average of 19.6%.

Ohio's Medical Resources

Currently in Ohio, there are 183 acute care hospitals with 32,613 beds (2011 stats) with an average occupancy rate of 61.3%.

Welcome

The trauma service staff of Cincinnati Children's Hospital has worked diligently to accurately depict the current status of trauma system development in Ohio. The PRQ describes system accomplishments and acknowledges where challenges still remain. To the best of our ability, we have provided current data, charts, maps, documents or studies, to assist the reviewers in gaining an understanding of trauma care and the trauma system in Ohio. The trauma service at Cincinnati Children's Hospital, as well as the trauma community constituents, look forward to your consultative visit and final report providing guidance and recommendations for system enhancement and thus improving care to the injured patient in Ohio.

The entire Ohio trauma community says, "Welcome to Ohio!"

PRQ Organization

The attached application is laid out in the order that the questions are posed in the Systems Consultation Guide. The PRQ and subsequent answers to the questions is being provided to you in hard copy and an electronic file on the enclosed jump drive and CD. The attachments or supporting documentations are all available on the jump drive or CD or on the Internet. To find the reference material, simply locate the desired section in the electronic version of the PRQ and click on the attachment link. If you have any difficulty accessing information, please contact Lynn Haas, Trauma Program Manager, at (513) 636-8636 or Vanessa Hartman, Trauma Administrative Assistant, at (513) 636-3617.

This trauma system consultative review is based on the benchmarks and indicators from the *Model Trauma System Planning and Evaluation (MTSPE)* document developed by the Health Resources and Services Administration (HRSA) of the US Department of Health and Human Services. At the beginning of each of the 18 sections within this document, there is a chart that outlines the following:

- MTSPE Benchmarks which are pertinent for that section;
- MTSPE Indicators which are pertinent for that section;
 - Most recent Ohio score (range from 1-5) for the specific indicator;
 - Determination if that specific indicator was included in the most recent Ohio trauma strategic plan (i.e. Ohio Framework).

Acronyms

ABA	American Burn Association

YRBS	Youth Risk Behavior Survey

Injury Epidemiology

Benchmark 101: There is a thorough description of the epidemiology of injury in the system jurisdiction using population-based data and clinical databases.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-101.1) = There is a thorough description of the epidemiology of injury mortality in the system jurisdiction using population-based data.	1	Y Goal 8
(I-101.2) = There is a description of injuries within the trauma system jurisdiction including the distribution by geographic area, high-risk populations (pediatric, elderly, distinct cultural/ethnic, rural, and others), incidence, prevalence, mechanism, manner, intent, mortality, contributing factors, determinants, morbidity, injury severity (including death), and patient distribution using any or all of the following: vital statistics, ED data, EMS data, hospital discharge data, state police data (data from law enforcement agencies), medical examiner data, trauma registry, and other data sources. The description is updated at regular intervals.	3	N
(I-101.3) = There is a comparison of injury mortality using local, regional, statewide, and national data.	1	Y Goal 8
(I-101.4) = Collaboration exists among EMS, public health officials, and trauma system leaders to complete injury risk assessments.	2	Y Goal 2
(I-101.7) = The trauma system works with EMS and public health agencies to identify special at-risk populations.	2	N

Benchmark 205: Collected data are used to evaluate system performance and to develop public policy.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-205.4) = Injury prevention programs use trauma management information system data to develop intervention strategies.	2	Y Goal 2

Benchmark 208: The trauma, public health, and emergency preparedness systems are closely linked.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-208.1) = The trauma system and the public health system have established linkages, including programs with an emphasis on population-based public health surveillance and evaluation for acute and chronic traumatic injury and injury prevention.	2	Y Goal 2

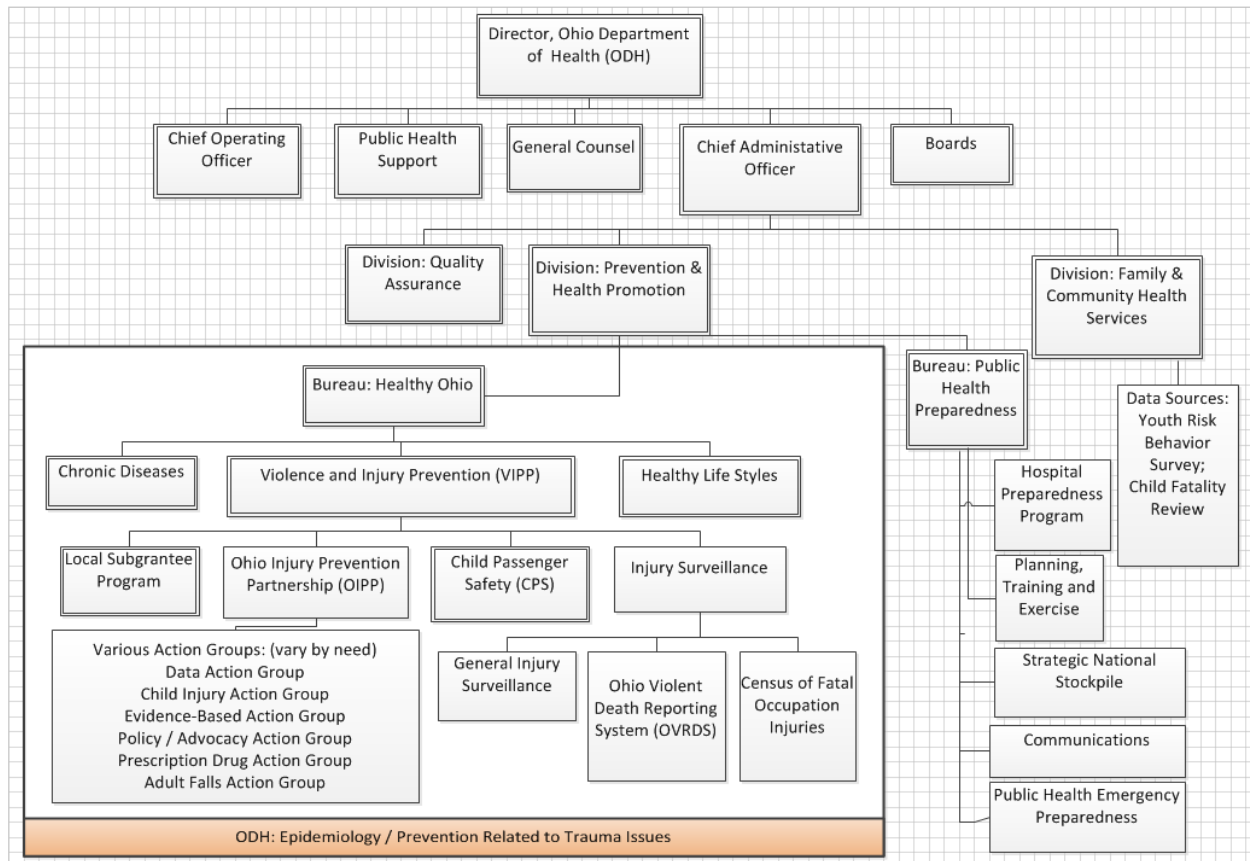

Benchmark 304: The jurisdictional lead agency, in cooperation with the other agencies and organizations, uses analytic tools to monitor the performance of population-based prevention and trauma care services

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-304.1) = The lead agency, along with partner organizations, prepares annual reports on the status of injury prevention and trauma care in the state, regional, or local areas. (Note: Annual reports may be distributed electronically rather than, or in addition to, printed copies.)	1	Y Goal 1
(I-304.2) = The trauma system management information system database is available for routine public health surveillance. There is concurrent access to the databases (ED, trauma, prehospital, medical examiner, and public health epidemiology) for the purpose of routine surveillance and monitoring of health status that occurs regularly and is a shared responsibility.	2	Y Goal 8

Injury Epidemiology

Pertinent History:

The Ohio Violence and Injury Prevention Program (VIPP), within the Ohio Department of Health (ODH), is the primary organization at the state level responsible for coordinating the surveillance systems that collect and analyze injury related data (<http://www.healthyohioprogram.org/vipp/injury.aspx>). The VIPP assesses the burden of overall and specific types of injury in Ohio through the examination of multiple data sets including hospital discharge, death, trauma registry, EMS data and risk factor surveillance. The program monitors and reports trends and emerging injury issues, produces annual reports and responds to requests for data. See following ODH organizational chart.

The Ohio Injury Prevention Partnership (OIPP) was convened in 2007 and is coordinated by ODH with funds from the Centers for Disease Control and Prevention (CDC) and National Center for Injury Prevention and Control (NCIPC). The OIPP is a statewide group of professionals representing a broad range of agencies and organizations concerned with building Ohio's capacity to address the prevention of injury. It is comprised of action groups that advise and assist the VIPP with establishing priorities and future directions regarding injury and violence prevention initiatives in Ohio. The ODH Data Action Groups vary according to the injury needs of the state as evidenced by the recent addition of the Prescription Drug Action Group, which is a recently documented and increasing public health issue within Ohio. In particular, the Data Action Groups were established to:

- Improve networking, communication and collaboration among injury/violence-related data owners and key stakeholders;
- Explore statewide injury-related data sources by reviewing survey results and asking data owners to provide an overview for data action group members;
- Make recommendations to the ODH VIPP about new data products;
- Assess the quality and availability of existing data sources and opportunities for linkages or shared data products;
- Inventory existing injury/violence-related data products and create a resource list for stakeholders;
- Assess OIPP needs surrounding violence and injury prevention priority areas (i.e., prescription drug poisoning/overdose, falls among older adults, child injury including motor vehicle traffic, asphyxiation, falls and violence) and the availability of related state and local data sources;
- Increase the quality and availability of statewide and county-specific injury-related data for planning, surveillance, and evaluation;
- Provide updates to OIPP so that data informs priorities and prevention efforts;
- Improve the availability and quality of existing violence and injury data sources through partnerships or linkages.

An epidemiologist is on staff within the Office of Research and Analysis (ORA), Division of EMS within the Ohio Department of Public Safety (ODPS). Additional information is available within the Lead Agency and Human Resources within the Lead Agency section of this document (pg. 67). An [ODPS Trauma Report 2010](#) was produced which summarized the Ohio Trauma Registry (OTR) data for that year. Previous registry reports were produced in 2002, 2003 and 2009.

Currently, there is no formal relationship between the ODPS and ODH epidemiologists working on injury-related issues.

Injury-related reports are generated by some counties and regions within Ohio. It is unknown how many counties and regions use regional data to implement change and improve care. There is no formal reporting structure of these reports to the Ohio Trauma Committee, VIPP or the OIPP.

Question 1: Describe the epidemiology of injury in your region and unique features of:

This ODH document titled [Burden of Injury in Ohio, 2000–2010](#), is the primary document used to outline the epidemiology of injury in Ohio. Of note, this document which is a 278 page in-depth analysis was found during research for this PRQ. To the author's knowledge, the information from this document is unknown to members of the Ohio Trauma Committee and has not been utilized to develop intervention strategies for trauma system development. The data from this document does not include any information from the Ohio Trauma Registry (OTR).

a. Overall Population Statistics

The following injury data in this section is provided by the document titled [ODH Burden of Injury in Ohio, 2000–2010](#), with the appropriate reference page noted. The complete document provides in-depth analysis of injury patterns within Ohio.

Ohio Overview

- Unintentional injuries are the leading cause of death and disability for Ohioans ages 1 through 44 and the fifth-leading cause of death for all Ohioans, following only heart disease and cancer (pg. 5);
- Injuries are a significant public health problem in Ohio. On average in Ohio in 2010, there was more than one injury-related hospitalization every 7 minutes and an emergency department visit every 23 seconds, and an average of nearly 20 injury-related deaths per day to Ohioans in 2010 (pg. 16) (Table 2.2).

Table 2.2 Ohio Average Injury Frequency, 2010

Injury-related	Total 2010 Number	Per Day	Per Hour	Per Minute	Seconds....
ED Visits	1,360,000	3,726	155	2.6	An ED visit every 23 seconds
Hospitalizations	72,485	199	8	A hospitalization every 7 minutes	
Deaths	7,156	20	A death every 1 hour 23 minutes		

Fatality

- Since 2000, fatal injury rates have increased 33 percent from 45 per 100,000 in 2000 to 60 per 100,000 in 2010 (pg. 17) (see Figure 2.4). The death rate increased by an average of 1.5 deaths per 100,000 per year (pg. 17);

Figure 2.4. Number and age adjusted rate of all injury deaths by year, Ohio, 2000-2010

Source: Ohio Department of Health, Vital Statistics

- The leading causes of injury death in 2010 were unintentional poisoning, suicide, motor vehicle traffic crashes, and falls;
- Death rates increased rapidly for poisoning, suicides, and fall related injuries while rates have decreased for motor vehicle traffic related injuries between 2000 and 2010.

Hospitalizations

- Over 72,000 hospitalizations resulted from injuries in Ohio in 2010. The injury hospitalization rate was 588 per 100,000 (pg. 19);
- Since 2002, injury hospitalization rates have increased 5 percent from 561 per 100,000 in 2002 to 588 per 100,000 in 2010 (pg. 19);

Economic Impact

- Injury related deaths, hospitalizations, and ED visits cost Ohio an estimated \$13 billion in 2010 (pg. 257);
- If these costs were equally divided among all Ohioans, injuries would cost every man, woman and child more than \$1,200 per year (pg. 257);
- The leading cause of injury costs in 2010 were falls (\$2.6 billion), motor vehicle traffic (\$2.3 billion), unintentional poisoning (\$2.0 billion), suicide or self-harm (\$1.7 billion), and homicides or assaults (\$1.3 billion) (pg. 257);
- Another measure of the burden of injury is Years of Potential Life Lost (YPLL), or life lost by a premature death.
 - According to the CDC WISQARS web-based query system, injuries were the leading contributor to YPLL for Ohio in 2009 (See Figure 2.3). Approximately 109,000 YPLL were attributed to all injuries. Unintentional injuries contributed 65,239 YPLL followed by suicides (24,287 years) and homicides (16,675) (pg. 15).

Additional Trends:

- Poisoning:
 - Unintentional poisoning death rates increased more than 372% from 1999 to 2010, largely due to a dramatic increase in prescription drug overdoses ([2010 Ohio Drug Overdose Data: General Findings](#)).
- Suicide:
 - The suicide rate has increased 27% from 2000 to 2010, the highest rates of suicide were found among adults ages 45-54. In 2010, 1,420 Ohioans took their own lives and at least 14,000 attempted suicides (pg. 192).

- Motor Vehicle:
 - Death and hospitalization rates are on the decline while Emergency Department visit rates increased slightly (pg. 69);
 - In 2010, 1,155 deaths resulted from unintentional motor vehicle traffic crashes and fatality rate was 9.8 per 100,000 (pg. 69);
 - Fatal and non-fatal injury rates have decreased the most among ages 15-34 (pg. 69);
 - Percentage of adults who reported always using their seat belt increased from 76 percent in 2002 to 83 percent in 2010 (pg. 69).

b. Children

Infants (Less than 1 Year Old)

The [ODH Special Emphasis Report: Infant and Early Childhood Injury, 2010](#) outline the following conclusions:

- In 2010, the leading causes of injury death among infants were unintentional suffocation in bed (42%), homicide (19%), other unintentional suffocation (16%), and transportation (7%);
- All other unintentional causes (fire/burns, natural causes, and other specified causes) contributed to 9% of injury deaths;
- Deaths of undetermined intent led to 8% of injury deaths;
- The leading cause of injury hospitalizations among infants were falls (17%), assaults (11%), and fire/burn (3%).

Young Children (Ages 1-4)

The [ODH Special Emphasis Report: Infant and Early Childhood Injury, 2010](#) outlines the following conclusions:

- The leading causes of injury death among young children were homicides (19%), unintentional drowning (18%), transportation (18%), and fire/burns (15%);
- All other unintentional causes (falls, poisoning, struck by/against, and natural causes) contributed to 15% of injury deaths;
- Deaths of undetermined intent led to 9% of injury deaths;
- The leading cause of injury hospitalization among young children were falls (11%), poisoning (10%), fire/burn (5%) and transport (4%).

The [OIPP / ODH Preventing Injury in Ohio, A Resource for Policy Makers, \(2012 Edition\)](#) outlines the following conclusions:

- Ohio's maltreatment fatality rates increased by 53% from 1998 to 2009;
- In 2010, 8,091 young passengers were injured in motor vehicle crashes in Ohio;

Children (Ages 5-9)

[ODH Office of Vital Statistics](#) provided the following information:

- Between 2008-2010, the leading cause of injury death among children ages 5-9 were transportation, homicide, fire/burn and drowning;
- Falls are the leading cause of non-fatal injury for both Emergency Department visits and hospitalizations.

Adolescents

[ODH Office of Vital Statistics](#) provided the following conclusions on adolescent injuries:

- The leading cause of injury death among children ages 10-14 during 2008-2010 were transportation, suicide, drowning and homicide;

- The leading causes of death of teens and young adults (ages 15-24) during 2008-2010 were motor vehicle traffic, suicide, poisoning and homicide;
- The top 4 causes of inpatient hospitalizations for 15-24 year olds were from injuries due to self-harm, motor vehicle traffic, assault and falls;
- The leading causes for Emergency Department visits were due to injuries as a result of struck by/against, falls, motor vehicle traffic and overexertion.

[Preventing Injuries in Ohio, A Resource for Policy Makers, \(2012 Edition\)](#) provided the following adolescent information:

- In 2010, 114 Ohioans ages 16-20 were killed and more than 16,000 were injured in motor vehicle crashes.

c. Elderly Adults

[ODH Fall-related Injury among Older Adults in Ohio](#) provided the following statistics on the elderly population:

- From 2000 to 2010, Ohioans aged 65 and older experienced a 163% increase in the number of fatal falls;
- On average, 3 older Ohioans suffered fatal falls each day in 2010;
- In 2010, there were 4.1 fall-related Emergency Department visits for every 100 Ohio older adults and nearly 10 fall-related hospitalizations for every 1,000 Ohio older adults;
- Fall-related Emergency Department visit and hospitalization rates increased 27 percent and 18 percent respectively from 2002 to 2010;
- 63% of hip fractures and 26% of traumatic brain injuries (TBIs) in 2009 in Ohio resulted from falls.

d. Other Special Populations

The injury epidemiology of a special population has not been identified.

Question 2: Describe the databases that are used to formulate the injury epidemiology profile (for example, population-based and clinical).

The relationship or lack of relationship between the following databases is outlined in the Trauma MIS section of this document (pg. 158).

Vital Statistics:

- Death Certificates are maintained by the ODH's Office of Vital Statistics;
- Health districts are required to transmit data monthly to the ODH Vital Records Section (ORC §3705.07).

Crash Outcome Data Evaluation System (CODES):

- The Ohio CODES Program is funded by the U.S. Department of Transportation's National Highway Traffic Safety Administration (NHTSA);
- It assesses the medical and financial outcomes of motor vehicle crashes in Ohio by linking data from traffic crash reports with other injury data sources, i.e. emergency medical services (EMS) runs, hospital inpatient and emergency department data, Ohio Trauma Registry data and death certificates;
- It is housed within the Center for Injury Research and Policy (CIRP) at Nationwide Children's Hospital.

Fatality Analysis Reports system (FARS):

- A nationwide census providing NHTSA, Congress and the American public yearly data regarding fatal injuries suffered in motor vehicle traffic crashes.

Hospital Discharge Data:

- Includes inpatient, outpatient and emergency department data;
- Hospital discharge records are collected and maintained by the Ohio Hospital Association (OHA);
- Enables member hospitals to run a variety of customized and standard reports for marketing, physician recruiting, business development and benchmarking purposes.

Ohio Trauma Registry (OTR):

- Includes the Trauma Acute Care Registry (TACR) and Trauma Rehabilitation Registry (TRR);
- Maintained by ODPS, Division of EMS, Office of Research and Analysis (ORA);
- Details provided in the Trauma MIS section of this document (p. 158).

The EMS Incident Reporting System (EMSIRS):

- An incident reporting system to collect information on the delivery of emergency medicine care in the state and the frequency of the delivery of care;
- The law requires all EMS agencies in the state to report any information the EMS Board deemed necessary for maintenance of the system;
- Maintained by ODPS, Division of EMS, Office of Research and Analysis (ORA);
- Details provided in the Trauma MIS section of this document.

Ohio Violent Death Reporting System (OVDRS):

- Established in 2009, is a reporting system that collects information on violent deaths, suicides, homicides, and unintentional firearm-related deaths;
- Data sources include: vital statistics data, coroner data from all 88 county coroners, state and local law enforcement data, Child Fatality Review data (if victim is under 18 years old);
- Links information from these data sources to create a comprehensive account of the incident as well as to identify violence trends, risk factors associated with violence and to develop intervention and prevention strategies;
- OVDRS is housed within the ODH and is funded through a cooperative agreement with the CDC and is part of the National Violent Death Reporting System (NVDRS).

Ohio Child Fatality Review (CFR):

- Established in 2000 by the Ohio General Assembly (HB 448) and is maintained by the Ohio Department of Health;
- Requires every county in Ohio to establish a CFR Board and to review all unexpected and unexplained deaths of children ages 17 and younger;
- CFR Boards are required to implement a data collection system for child death reviews. A national web-based information system for CFR is available for local boards to input their child death data. CFR boards are able to enter data on each child death reviewed on this secure internet site. CFR boards are then able to access reports and download their own data for analysis.

Ohio Behavioral Risk Factor Surveillance System (BRFSS):

- Maintained by ODH, this annual survey is conducted to identify Ohioan's health risk behaviors, to identify emerging health problems, and to develop, monitor and evaluate health programs;

- Funding to conduct the annual survey is provided by the CDC;
- The survey identifies high-risk health behaviors associated with injuries in Ohio.

Ohio Youth Risk Behavior Survey (YRBS):

- The survey is conducted every two years and is jointly sponsored by ODH, Ohio Department of Alcohol and Drug Addiction Services, and Ohio Department of Mental Health;
- The goal of the survey is to identify practices by young people that put their health at risk.

Ohio Traffic Crash Reports:

- The ODPS, Ohio State Highway Patrol, maintains complete crash reports and crash photos from crashes investigated by the Ohio State Highway Patrol;
- A report that examines the driving habits on Ohio's roads is published annually;
- Data is used by ODPS and local law enforcement agencies to help them determine and allocate resources to improve highway safety in Ohio.

Census of Fatal Occupational Injury (CFOI):

- This injury surveillance program sponsored by the U.S. Department of Labor, Bureau of Labor Statistics (BLS) and collects data on all workplace deaths due to injury in the United States;
- Ohio contributes data to the BLS where it is aggregated with data from all 50 states and used to establish and evaluate occupational safety programs and policies;
- Data sources include death certificates, workers' compensation reports, Occupational Safety and Health Administration (OSHA) reports, traffic crash records, and agricultural injury reports and media clippings;
- Funding for the CFOI program comes from the BLS with a 100 percent funding match requirement for the states.

Ohio Department of Health Information Warehouse:

- A database maintained by ODH that allows researchers to build data tables on birth, death and cancer data;
- State and county level data is available.

Web-based Injury Statistics Query and Reporting System (WISQARS):

- Customized reports of state and national injury-related data;
- Maintained by the CDC.

Wide-Ranging Online Data for Epidemiologic Research (WONDER):

- Online database for use by public health professionals and the public that gives access to a wide variety of public health information, i.e. mortality data;
- Maintained by the CDC.

National Poison Data System (NPDS):

- Maintained by the American Association of Poison Control Centers, NPDS contains information from the human poison exposure case phone calls taken by all 57 poison centers in the United States;
- Three poison centers exist in Ohio: Central Ohio Poison Center (Columbus), Cincinnati Drug and Poison Information Center and Northern Ohio Poison Center (Cleveland).

Statewide Automated Child Welfare Information System (SACWIS):

- Ohio Department of Job and Family Services.

Ohio Incident-based Reporting System (OIBRS):

- Ohio's version of the FBI's National Incident Based Reporting System;
- Voluntary crime reporting program in which Ohio law enforcement agencies can submit crime statistics directly to the state and federal government in an automated format.

Question 3: Have system epidemiology profile results (for example, mortality rates, distribution of mechanism, or intent) been compared with benchmark values? If so, please provide comparisons and origins of the benchmarks.

Injury data is submitted to a variety of national data sets and does allow for comparisons.

- Ohio submits annual data to [NHTSA](#) for inclusion in the FARS database. This data allows for comparison of the number of fatal motor vehicle traffic crashes in the United States.
- Ohio is one of 18 states to participate in CDC's NVDRS. This database examines the characteristics of violent deaths (homicides and suicides) in the participating states.
- Ohio submits mortality data to the CDC's National Vital Statistics System (NVSS).
- Ohio participates in the Bureau of Labor Statistics' [Census of Fatal Occupational Injuries](#) – data is combined with other state data and is used to establish and evaluate occupational safety programs.
- In the [Preventing Injuries in Ohio – A Resource for Policy Makers \(2012 Edition\)](#), comparisons are made to national rates using information from the CDC's WISQARS and WONDER datasets.
- ODH compared [child maltreatment fatality rates](#) of Ohio rates to national rates. The data source for this report was from the Healthy People 2010 and the Child Maltreatment Annual Reports: Reports from the States to the National Child Abuse and Neglect Data System.

Question 4: Describe how emerging injury control patterns (for example, from trend or surveillance data) were identified and acted on.

The OIPP used a data driven prioritization process to identify the five strategic priority areas of its [OIPP Strategic Plan 2011-2016](#). These priority areas include:

- Teen driving safety;
- Bicycle and wheeled sports helmets;
- Infant-sleep-related suffocation;
- Sports-related traumatic brain injury;
- Child restraint/booster seat law/review/revision.

Through its efforts, the OIPP has helped to effect policy change in the State of Ohio.

Data has been used to support grant applications to agencies that fund injury prevention programs. The following federal agencies provide funding to injury prevention programs in the state of Ohio: CDC, NHTSA, Substance Abuse and Mental Health Services Administration (SAMHSA) and Maternal and Child Health (MCH).

The VIPP has used data to develop its program initiatives and to identify specific populations within the state that have higher incidences of injury. The following are the three priority area identified by the VIPP and are the focus of their programming efforts.

Drug Overdose

- Prescription drug overdose and abuse was identified as a high priority by ODH due to increases in the number of drug overdose deaths. From 1999 to 2010, Ohio's death rate due to unintentional

drug overdose increased 372 percent. In Ohio, since 2007, there have been more deaths from drug overdose than from motor vehicle traffic crashes. The Prescription Drug Abuse Action Group (PDAAG) of the OIPP was created to focus specifically on decreasing the number of drug related deaths.

- The ODH launched the Prescription for Prevention – Stop the Epidemic. This is a comprehensive education and awareness campaign to combat the epidemic of prescription drug overdose and abuse.

Falls among Older Adults

- Data has been used by the ODH to show an increase in the number of falls of older Ohioans and that they suffer more serious injuries and are hospitalized at a higher rate.
- In November 2009, the Ohio Older Adult Falls Prevention Coalition was formed and a statewide partnership collaborated to develop the [Preventing Falls Among Older Adults 2010-2014 State Plan](#).
- The five-year plan is an approach to address falls among older adults to include: education/awareness, infrastructure, policy, interventions/risk assessment and monitoring trends, prevention, management, rehabilitation and long-term care.

Child Passenger Safety (CPS)

- Motor vehicle crash data demonstrated the need for child safety seats for all Ohioans. The Ohio Buckles Buckeyes Program provides child safety seats and booster seats to eligible low income families in all Ohio counties.

The following are examples of how injury data has been used in the state of Ohio to inform public policy:

Driver Texting Law (HB 99): Effective August 31, 2012

- To prohibit driving a vehicle while writing, sending or reading a text-based communication on a hand-held electronic wireless communications device and to establish the violation as a secondary traffic offense; to prohibit a person who is less than 18 years of age from using, in any manner, an electronic wireless communications device while driving, and to require driver education course to include instruction in the dangers of texting while driving.

Youth Concussion Law (HB 143). The bill has been sent to the Governor for signature

- Will require that steps be taken to educate parents, youth coaches and officials about symptoms of a concussion and that an athlete who shows symptoms of a concussion be immediately removed from a game. The youth will not be able to return to play unless cleared by a physician or licensed health care provider.

Suicide Awareness Training Law (HB 543). The bill has been sent to the Governor for signature

- To enact the “Jason Flatt Act” to require public schools to train staff in youth suicide awareness and prevention.

Pill Mills (HB 93)

- To establish and modify laws regarding the prevention of prescription drug abuse, development of information programs by the State Medical Board, and Medicaid coverage of prescription drugs.

Booster Seat Law: Effective October 7, 2009.

- Children in Ohio are required to use belt-positioning booster seats when they have outgrown their child safety seat (usually at 4 years old and 40 pounds) until they are 8 years old, unless they are at least 4 feet, 9 inches (57 inches) tall.

Question 5: Describe how ongoing and routine injury surveillance is completed and how results are shared with constituent groups.

Each of the individual datasets and surveillance systems referenced in this section maintain individual guidelines regarding inclusion/exclusion criteria of data, timeliness for data submission and release dates of data sets.

Many of the organizations which collect, analyze, and distribute injury surveillance data, then create fact sheets that are posted to websites, and distributed to listservs. These fact sheets are also used for public service announcements.

Organizations that analyze injury data, often share results through presentations to stakeholders. For example, the OIPP holds quarterly meetings at which members give presentations to highlight work being done in one of the priority areas. The following presentations, which are posted to the OIPP website, have been given at OIPP meetings:

- [Ohio's EMS Data Systems](#), presented by EMS, Office of Research & Analysis presented – August 18, 2011
- [2011 Youth Risk Behavior Surveillance Survey \(YRBSS\) Ohio's Students](#), presented by School & Adolescent Health Services, ODH – August 17, 2012

As a non-voting liaison of the Ohio Trauma Committee, the OIPP representative provides updates to the Ohio Trauma Committee on injury aspects related to the strategic plan.

In addition, data is provided to national injury surveillance agencies. For example, data is submitted to the CDC and NHTSA for inclusion in their multi-state projects, i.e. NVDRS, NVSS and FARS.

Indicators as a Tool for System Assessment

MTSPE Indicator B-300	MTPSE Indicator and Ohio Score (2008)	In Ohio Framework and if yes, goal #
Assurance to constituents that services necessary to achieve agreed-on goals are provided by encouraging actions of others (public or private), requiring action through regulation, or providing services directly.	33% of all potential 300 scores	Y

Indicators as a Tool for System Assessment

Question 1: Has a multidisciplinary stakeholder group participated in the scoring and consensus process associated with the BIS tool?

On March 12, 2008, the Ohio Trauma Committee hosted a consensus conference to evaluate the Ohio trauma system using the MTSPE/BIS (published by the Department of Health and Human Services in 2006) as the scoring tool. The process was facilitated by the Ohio Society of Trauma Nurse Leaders (OSTNL). Representation included: governmental agencies such as the Ohio Department of Public Safety (ODPS), Ohio Emergency Management Agency (EMA) and Department of Health (ODH); the Ohio State EMS Medical Director; Ohio Hospital Association (OHA); the Ohio Fire Chiefs Association; Ohio Ambulance and Medical Transportation Association; OSTNL; and Ohio Trauma Committee members, both from trauma and non-trauma centers. All assigned scores for each indicator shown below were attained through consensus of those present.

MTSPE - Ohio Scoresheet, March 12, 2008

		Max Points	Score	% of max score
100	Assessment - Regular systematic collection, assembly, analysis, and dissemination of information on the health of the community.	130	43	33%
101	There is a thorough description of the epidemiology of injury in the system jurisdiction using both population-based data and clinical databases	35	11	31%
102	There is an established trauma management information system (MIS) for ongoing injury surveillance and system performance assessment.	25	10	40%
103	A resource assessment for the trauma system has been completed and is regularly updated.	20	6	30%
104	An assessment of the trauma system's emergency preparedness has been completed including coordination with the public health, EMS system, and the emergency management agency	15	8	53%
105	The system assesses and monitors its value to its constituents in terms of cost-benefit analysis and societal investment.	35	8	23%
200	Policy Development - Promoting the use of scientific knowledge in decision making that includes building constituencies; identifying needs and setting priorities; legislative authority and funding to develop plans and policies to address needs; and ensuring the public's health and safety.	165	57	35%
201	Comprehensive State statutory authority and administrative rules support trauma system leaders and maintain trauma system infrastructure, planning, oversight, and future development.	20	6	30%
202	Trauma system leaders (lead agency, trauma center personnel, and other stakeholders) use a process to establish, maintain, and constantly evaluate and improve a comprehensive trauma system in cooperation with medical, professional, governmental, and citizen organizations.	20	9	45%
203	The State lead agency has a comprehensive written trauma system plan based on national guidelines. The plan integrates the trauma system with EMS, public health, emergency preparedness, and incident management. The written trauma system plan is developed in collaboration with community partners and stakeholders.	35	9	26%
204	Sufficient resources, including those both financial and infrastructure related, support system planning, implementation, and maintenance.	25	8	32%
205	Collected data are used to evaluate system performance and to develop public policy.	25	9	36%
206	Trauma system leaders, including a trauma-specific statewide multidisciplinary, multi-agency advisory committee, regularly review system performance reports.	10	5	50%

207	The lead agency informs and educates State, regional, and local constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control.	20	8	40%
208	The trauma, public health, and emergency preparedness systems are closely linked.	10	3	30%
300	Assurance - Assurance to constituents that services necessary to achieve agreed-on goals are provided by encouraging actions of others (public or private), requiring action through regulation, or providing services directly.	270	88	33%
301	The trauma management information system (MIS) is used to facilitate ongoing assessment and assurance of system performance and outcomes and provides a basis for continuously improving the trauma system including a cost-benefit analysis.	20	10	50%
302	The trauma system is supported by an EMS system that includes communications, medical oversight, prehospital triage, and transportation; the trauma system, EMS system, and public health agency are well integrated.	50	18	36%
303	Acute care facilities are integrated into a resource-efficient, inclusive network that meets required standards and that provides optimal care for all injured patients.	25	9	36%
304	The jurisdictional lead agency, in cooperation with other agencies and organizations, uses analytical tools to monitor the performance of population-based prevention and trauma care services.	10	3	30%
305	The lead agency ensures that its trauma system plan is integrated with, and complementary to, the comprehensive mass casualty plan for both natural and man-made incidents, including an all-hazards approach to planning and operations.	15	7	47%
306	The lead agency ensures that the trauma system demonstrates prevention and medical outreach activities within its defined service area.	15	3	20%
307	To maintain its State, regional, or local designation, each hospital will continually work to improve the trauma care as measured by patient outcomes	10	2	20%
308	The lead agency ensures that adequate rehabilitation facilities have been integrated into the trauma system and that these resources are made available to all populations requiring them.	10	3	30%
309	The financial aspects of the trauma systems are integrated into the overall performance improvement system to ensure ongoing "fine-tuning" and cost-effectiveness.	20	4	20%
310	The lead trauma authority ensures a competent workforce.	65	20	31%
311	The lead agency acts to protect the public welfare by enforcing various laws, rules, and regulations as they pertain to the trauma system.	30	9	30%
	Overall Total - Unadjusted baseline	565	188	33%
	Overall Total - Adjusted baseline	452	75	17%
	Total indicators given score of 1	68	60%	
	Total indicators given score of 2	24	21%	
	Total indicators given score of 3	14	12%	
	Total indicators given score of 4	5	4%	
	Total indicators given score of 5	2	2%	

The [attachment](#) (March 2008) provides detail on each of the 113 indicators.

Question 2: If the process has been completed, how were the findings used?

In February 2009, a workgroup of the Ohio Trauma Committee was established to begin the development of a strategic plan for Ohio's trauma system based on the results of the MTSPE BIS scoring assessment. Strategic plans from other states were obtained for the purpose of benchmarking in the area of content and format. Once written, the [Ohio Trauma Framework: 2010](#) document was distributed to stakeholders throughout the state for input. The [Ohio Trauma Framework: 2010](#) document was approved by the EMS Board in October 2010 and was incorporated into the [Ohio EMS 2015 Strategic Plan](#), and was approved by the EMS Board in February 2012. Detailed information on this process is outlined in the *Ohio Trauma Framework 2010* (pg. 11) and discussed further in the Trauma System Plan section of this document.

Question 3: Is there a date (year /month) set for a reassessment using the BIS tool to mark progress toward agree-on-goals or benchmarks?

This topic was discussed at the September 2012 Ohio Trauma Committee meeting. It was decided that the American College of Surgeons (ACS) Trauma Systems evaluation needed to occur before reassessment. Therefore, the reassessment date for using the BIS tool to mark trauma system progress is tentatively set for 2015.

Statutory Authority / Administrative Rules

Benchmark 201: Comprehensive state statutory authority and administrative rules support trauma system leaders and maintain trauma system infrastructure, planning, oversight, and future development.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-201.2) = The legislative authority states that all the trauma system components, emergency medical services (EMS), injury control, incident management, and planning documents work together for the effective implementation of the trauma system (infrastructure is in place).	3	N
(I-201.3) = Administrative rules and regulations direct the development of operational policies and procedures at the state, regional, and local levels.	1	Y Goal 1

Benchmark 311: The lead agency acts to protect the public welfare by enforcing various laws, rules and regulations as they pertain to the trauma system.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-311.4) = Laws, rules, and regulations are routinely reviewed and revised to continually strengthen and improve the trauma system.	4	N

Statutory Authority and Administrative Rules

Pertinent History:

With the passage of Am. Sub Senate Bill 98 of the 119th Ohio General Assembly (1992), responsibility was established in law (ORC §4765.06) for the creation of the Emergency Medical Services (EMS) Division and moved emergency medical services (EMS) from the Ohio Department of Education to the Ohio Department of Public Safety (ODPS) (OAC link: <http://codes.ohio.gov/oac/4765-4>; ORC link: <http://codes.ohio.gov/orc/4765>). In addition, the passage of SB 98 provided statutory authority for the establishment of an Emergency Medical Services Board (EMS Board), with the authority to oversee EMS and the certification and the training of EMS and fire personnel in Ohio. Additional trauma system-related actions required of the EMS Board from SB 98 as outlined in the [Ohio Legislative Service Commission Report: No. 148](#) included: establishment of a Trauma Care Advisory Group (TCAG – now Ohio Trauma Committee); formation of a trauma registry; formation of an EMS incident reporting system (EMSIRS); and the development of Regional Physician Advisory Boards (RPAB).

In the years following the passage of SB 98, there was significant debate among stakeholders concerning the structure and function of an organized state trauma system. Discussions led to the introduction of legislation (HB 681) during the 122nd Ohio General Assembly (1997-98). While the bill had several hearings, it was never passed by the legislature.

[Am. Sub. House Bill 138](#) of the 123rd Ohio General Assembly was signed into law in July 2000 and revised Chapters 3727 and 4765 of the Ohio Revised Code (ORC). This law established several elements of a statewide trauma system. As of November 3, 2002, only hospitals verified by the American College of Surgeons (ACS) can represent themselves as trauma centers. The legislation mandated that EMS and all hospitals develop protocols for the triage and treatment of seriously injured patients. HB 138 broadened the membership of the EMS Board and formally established the Ohio Trauma Committee to support the EMS Board in its work. Additional confidentiality protection was provided for the trauma registry data. The EMS / Trauma Grant Program was enhanced with an increase from 50% to 54% of collected seat belt fines being distributed to this fund. Finally, HB 138 called for [special studies](#) through ODPS and for two Commissions ([Injury Prevention Commission Report](#), and [Post Critical Care Commission Report](#)) through the Ohio Department of Health (ODH) to provide information for further development of the trauma system.

During initial trauma system development, it was determined that new trauma hospital development may be difficult due to conflicts in the state's definition of a trauma hospital, state triage rules, and criteria for ACS trauma center verification. A need for provisional trauma designation was identified. [Sub. Senate Bill 124](#) of the 124th Ohio General Assembly made several changes to chapters 3727 of the Ohio Revised Code (ORC §3727.09 - §3727.102 and chapters 4765). SB 124, with an effective date of November 2002, created a mechanism for a hospital to receive and treat trauma patients as a provisional trauma center before completing the ACS verification process. To attain provisional trauma center designation, a hospital must undergo a consultative or re-verification visit by the ACS. Status as a provisional trauma center is terminated if the hospital withdraws its application for verification, the ACS terminates or suspends the application, or if the hospital is not an ACS verified trauma center within 18 months after operating under provisional status (12 months if the hospital is being re-verified).

Chapter 4765 of the Ohio Revised Code (ORC) sets forth the laws that govern EMS and the EMS Board. Chapters 4765-1 to 4765-23 of the Ohio Administrative Code (OAC) are the rules that amplify and implement the EMS' statutory provisions of the ORC. ORC chapter 3727 sets forth the laws that are

pertinent to hospitals. Administrative rules are reviewed every five years to assess if they should be rescinded, amended, or continued without change.

Chapter 4765 of the Ohio Revised Code is located in Appendix A (pg. 184) of this document.

Question 1: Describe how the current statutes and regulations allow the state or region to:

a. Develop, plan and implement the trauma system.

The EMS Board has the statutory authority over trauma system development within the EMS phase of care through the ORC and / or OAC which authorizes:

- The governor to appoint the Ohio Trauma Committee to advise and assist the EMS Board in matters related to adult and pediatric trauma care and the establishment and operation of the Ohio Trauma Registry (OTR) (ORC §4765.04);
- The EMS Board to develop a subcommittee to advise and assist with the trauma registry (ORC §4765.04);
- The EMS Board to develop written protocols for the triage of adult and pediatric trauma patients (ORC §4765.40);
- The EMS Board to oversee EMS by:
 - Administering the accreditation and approval process for Ohio EMS training programs (ORC §4765.17);
 - Adopting rule criteria that each training program must meet to receive accreditation (ORC §4765.15);
 - Validating that applicants must pass a written and practical examination for certification to practice emergency medical services (ORC §4765.29);
 - Administering the application and certification process for EMS instructors, specifying by rule the education requirements (ORC §4765.22);
 - Requiring certificate holders to complete continuing EMS education requirements (ORC §4765.16);
- The EMS Board to distribute funds from the EMS / Trauma Grant Program (ORC §4765.07);
- The EMS Board to implement a statewide EMS plan during periods of disaster (ORC §4765.08) which works in accordance with the statewide emergency operations plan required under ORC §5505.22.

b. Monitor and enforce.

Statutory authority in the area of monitoring and enforcement exists only in the realm of pre-hospital care.

Directives within the ORC and / or the OAC call for:

- The EMS Board to divide the state geographically into regional physician advisory boards (RPAB) and to appoint regional physicians to each RPAB for the purpose of overseeing the delivery of adult and pediatric pre-hospital emergency services (ORC §4765.05);
 - The EMS Board is allowed to create regions or revise them as needed;
 - Chairs of each RBAP region meets at least 4 times annually with reporting responsibility to the state medical director;

- The RPABs have the right to determine pre-hospital protocols utilized by the EMS agency for which they are providing medical direction.
- Each EMS organization, along with their respective medical director, to implement ongoing peer review and quality assurance programs designed to improve the availability and quality of the emergency medical services it provides (ORC §4765.12);
- Managing EMS complaints and disciplinary actions, after investigation of potential misconduct (ORC §4765.33).

Recommendations from the 2011 National Highway Traffic Safety Administration ([NHTSA](#)) report include:

- EMS Board should re-evaluate the current map and functions of EMS regions in Ohio to determine if there can be improvements by updating roles and aligning with the State's Homeland Security regions or other functional models. Details on EMS / RPAB regions are outlined in the EMS section of this document (pg. 101).

c. Designate the lead agency.

The EMS Board functions as the principle trauma agency in Ohio having oversight of the care of injured adult and pediatric patients through the EMS phase. The EMS Board has no clear statutory authority once the injured patient arrives at the definitive destination. EMS Board responsibilities are limited to the pre-hospital phase of trauma care and are discussed in 1a above. Therefore, for the remainder of this PRQ, the term “EMS Board” will be interchangeable with the principle trauma agency.

Ohio law (ORC §3727.101) recognizes trauma centers as those verified by the ACS.

In 2002, the Director of the Ohio Department of Health (ODH) appointed a small workgroup to investigate various model centers in use across the nation for provisional designation of trauma. That workgroup considered the opportunity for provisional designation to be a short term solution to the timing issues arising through HB 138. A better, long term solution could be found if clinical criteria were added to the designation criteria. The workgroup recommended that the State of Ohio choose one of four models discussed in its [Provisional Designation Report](#). No action was taken to establish a lead agency for the trauma system or create a more robust process for designation of trauma centers.

d. Collect and protect confidential data.

Collection of data exists in statutory authority (ORC §4765.06) and authorizes:

- The EMS Board to establish an EMS incident reporting system (EMSIRS) to which all EMS organizations are required to submit information as determined by the EMS Board;
 - Non-emergency medical services organizations, private EMS organizations, mobile intensive care unit organizations (adult, neonatal and pediatric) and medical aircraft (helicopter and fixed wing) organizations are private-for-profit EMS organizations, which operate independent of EMS Division and, currently, are under the authority of the Ohio Medical Transportation Board (OMTB). These organizations are not required to report data to EMSIRS or OTR; however an unknown number of agencies do voluntarily submit information.

- The EMS Board to establish the OTR where health care facilities and public agencies designated by the EMS Board that possesses information regarding trauma care, and county coroners shall submit data;
 - ORC §4765.06 states that the OTR shall provide for the reporting of adult and pediatric trauma-related deaths, identification of adult and pediatric trauma patients, monitoring of adult and pediatric trauma patient care data, and determination of the total amount of uncompensated adult and pediatric trauma care provided annually by each facility that provides care to trauma victims.

Risk adjustment parameters were added with enactment of HB 138 in 2000. Protection of confidential data is specifically addressed in the statute (ORC §4765.06) as follows:

- Information submitted to the OTR that identifies or would tend to identify a specific recipient of emergency medical services or adult or pediatric trauma care shall not be made public;
- Information that identifies or would tend to identify a specific provider of emergency medical services or adult or pediatric care shall not be made public;
- The EMS Board has the authority to make public such information only on a risk adjusted basis.

The 2011 NHTSA report noted that Ohio was one of the few states that lacked authority to submit pre-hospital data to the National Emergency Medical Services Information System (NEMSIS) due to the risk adjustment law. In July 2012, an addition to ORC §4765.06 (G) expanded the Ohio law to allow the EMS Board to transmit non risk-adjusted data from EMSIRS to NEMSIS, pursuant to a written contract between the EMS Board and the federal agency that administers NEMSIS. At the time of this writing, pre-hospital data has not yet been submitted to the NEMSIS dataset. A comparable legislative amendment and subsequent contract has not been implemented to allow OTR data to be submitted to the National Trauma Data Bank (NTDB), therefore non-risk adjusted trauma data cannot be sent from the OTR.

Recommendations from [2011 NHTSA Report](#) include:

- The EMS Board should develop and present a proposal to the Legislature to consolidate the responsibilities of the OMTB within the Division of EMS, thus creating efficiencies, reducing duplication and confusion to the public and EMS providers. Of note, House Bill 35 of the 130th Ohio General Assembly was introduced on February 6, 2013 with language addressing the merging of these two boards.

e. Protect the confidentiality of the quality improvement process.

Protection regarding the confidentiality of quality improvement programs is limited to EMS organizations and is specifically addressed in statute (ORC §4765.12) as follows:

- Each EMS organization is required to implement ongoing peer review and quality assurance programs designed to improve the availability and quality of the EMS that it provides.
 - The form and content of the programs is determined by each EMS organization.
 - Information generated solely for use in a peer review or quality assurance program conducted on behalf of an EMS organization is not a public record.

Information is not evaluated outside of the realm of the individual EMS agency and not reported to the EMS Board.

ACS verified trauma centers in Ohio are required by ACS standards to participate in quality improvement programs within their institution. Provisionally designated trauma centers are recognized in Ohio only by their participation in preparation for ACS verification and, therefore, in the development of quality improvement programs that will satisfy ACS requirements. At the hospital level, statutes exist for protection within peer review and quality improvement activities. Patient confidentiality is maintained if pertinent information remains within the institution.

Question 2: Describe the process by which trauma system policies and procedures are developed or updated to manage the system including:

a. The adoption of standards of care.

For verified trauma centers, the standards set in the ACS's *Resources for Optimal Care of the Injured Patient: 2006* serves as the basis for the standards of care for trauma patients in Ohio.

ORC §4765.12 requires the EMS Board to develop and distribute guidelines for the care of trauma patients by EMS personnel. In January 2012, [pre-hospital guidelines for both adults and pediatrics](#) were updated and approved by the EMS Board, Medical Oversight Committee of the EMS Board and the RPAB chairs with subsequent posting on the ODPS website. These guidelines are not mandatory but meant to assist in the development of local protocols. Guidelines and procedures are updated as needed.

The initial [trauma triage rules](#) (OAC §4765-14) were established and approved by the EMS Board in February 2002. Criteria to evaluate whether an injured person qualifies as an adult or pediatric trauma victim were established, in conjunction with the definition of a trauma patient. Five exceptions to mandatory transport were identified in the OAC and repeated in the ORC: (1) It is medically necessary to transport the victim to another hospital for initial assessment and stabilization before transfer to an appropriate trauma center; (2) It is unsafe or medically inappropriate to transport the victim directly to an appropriate trauma center due to adverse weather or ground conditions or excessive transport time; (3) Transporting the victim to an appropriate trauma center would cause a shortage of local emergency medical service resources; (4) No appropriate trauma center is able to receive and provide trauma care to the victim without undue delay; (5) Before transport of a patient begins, the patient requests to be taken to a particular hospital that is not a trauma center or, if the patient is less than 18 years of age or is not able to communicate, such a request is made by an adult member of the patient's family or a legal representative of the patient (ORC §4765.40).

These trauma triage rules, considered baseline requirements, were distributed to all RPABs for either adoption or amendment. Each RPAB region's trauma triage rules require approval by the EMS Board indicating that the rules meet or exceeded baseline standards. The EMS Board reviews the trauma triage rules every three years for appropriateness. RBAP regions review their trauma triage guidelines every three years with submission to the EMS Board if an amendment is required (OAC §4765-3-04). In addition, following an Ohio Trauma Committee ad hoc workgroup report, which evaluated geriatric data, additions were incorporated into the baseline trauma triage rules in December 2008, specific for the geriatric population.

b. Designation or verification of trauma centers.

Verification of trauma centers is a voluntary process by the hospital. ORC legislatively defines the term trauma center as either: (1) any hospital that is verified by the ACS as an adult or pediatric trauma center; (2) any hospital that is operating as an adult or pediatric trauma center under provisional status pursuant to ORC §3727. SB 124 created a mechanism for a hospital to operate as a provisional trauma center before completing ACS verification. To attain provisional trauma center designation, a hospital must undergo a consultative or re-verification visit by the ACS. Based on the report from this visit, a hospital can attain provisional trauma center status after completing the following tasks: (1) the hospital's chief medical officer and chief executive officer certify in writing to the hospital's governing board that the hospital is committed and able to provide trauma care consistent with the level of verification being sought; (2) the hospital's governing board adopts a resolution stating that the hospital is committed and able to provide trauma care consistent with the level being sought; and (3) the hospital's governing board approves a written plan and timetable for obtaining the level of verification being sought, including provisions for correcting any deficiencies identified during the ACS review. Status as a provisional trauma center is terminated if the hospital withdraws its application for verification, the ACS terminates or suspends the application, or if the hospital is not an ACS verified trauma center within 18 months after operating under provisional status (12 months if the hospital is being re-verified).

All hospitals must notify the Director of ODH of any changes in their trauma center status (ORC §3727.101-102). This would include achievement or loss of provisional trauma center status and achievement, loss, or change in their level of trauma center verification. The Director may request a copy of the hospital's ACS report and timetable for correcting any identified deficiencies. While these documents are confidential, they can be used in any action brought by the Director against the trauma center or a person that authorized, approved, or created the original documents and the information in them. There is no statutory authority for the ODH to administer a provisional designation system. There is also no funding to support activities related to provisional designation.

c. Direct patient flow on the basis of designation.

The state triage protocols adopted under ORC §4765.40 requires trauma patients to be transported to an adult or pediatric trauma center that is able to provide appropriate adult or pediatric trauma care, but does not require a trauma patient to be transported to a specific category of trauma center (i.e. level I, II, III, pediatric). Five exceptions to this rule exist (ORC §4765.40):

- It is medically necessary to transport the victim to another hospital for initial assessment and stabilization before transfer to an adult or pediatric trauma center;
- It is unsafe or medically inappropriate to transport the victim directly to an adult or pediatric trauma center due to adverse weather or ground conditions or excessive transport time;
- Transporting the victim to an adult or pediatric trauma center would cause a shortage of local emergency medical service resources;
- No appropriate adult or pediatric trauma center is able to receive and provide adult or pediatric trauma care to the trauma victim without undue delay; and
- Before transport of a patient begins, the patient requests to be taken to a particular hospital that is not a trauma center or, if the patient is less than eighteen years of age or is not able to communicate, such a request is made by an adult member of the patient's family or a legal representative of the patient.

The EMS Board and the Ohio Trauma Committee maintain a website of verified and provisional trauma centers (http://ems.ohio.gov/ems_trauma.stm). Whether individual EMS runs are transporting patients to appropriate trauma centers, given the current posted website, is not being monitored by the EMS Board or the Ohio Trauma Committee.

d. Data collection.

The statute (ORC §4765.11) directs the EMS Board to establish an Ohio trauma registry and an EMS incident reporting system. Any entity, hospital or EMS organization, that fails to submit data and information to the data systems, as required under ORC §4765.06 will be ineligible to participate in the EMS / Trauma Grants Program, as outlined in OAC §4765-4. Information on data collection systems is discussed in the Trauma MIS section of this document (pg. 158).

For the Ohio Trauma Registry (OTR), the administrative code (OAC §4765-4) requires data collection and submission of information from all hospitals that provide care for injured patients, both ACS verified and provisional trauma centers, and non-trauma verified acute care hospitals. A minimal list of trauma registry data points are written in the ORC. An expanded list of data elements is currently approved and will be included in the Trauma MIS section (pg. 158) of this document. For the EMS incident reporting system, the administrative code (OAC §4765-4) requires each EMS organization to submit a minimal number of data elements as specified by the EMS Board. For both the OTR and the EMS Incident Reporting System (EMSIRS), submission deadlines, the authority to grant extensions and failure-to-report guidelines are also included within the OAC.

e. System evaluation.

No statutory authority exists specifically in regards to trauma system evaluation for the state of Ohio or regions within Ohio and, therefore, there is minimal monitoring or analysis of the requirements defined by law.

In 2011, a workgroup of constituents developed a template for evaluating trauma system development, dividing the evaluation into three aspects: structure, process and outcome. This template was approved by the Ohio Trauma Committee in December 2011. The [Ohio Metrics Scorecard](#) was developed by expert opinion and has not been validated. To date, the Ohio Metrics Scorecard is not being utilized due to multiple limitations stemming from the OTR. For example, two of those limitations are: lack of EMS and trauma registry integration, and non-inclusive registry dataset. At the current time, there are no future plans to operationalize or use this scorecard.

Question 3: Within the context of statutes and regulation, describe how injury prevention, EMS, public health, the needs of special populations, and emergency management are integrated or coordinated within the trauma system:

a. Injury Prevention.

Statutory law states that the EMS Board, under the ODPS, has the statutory authority to establish an injury prevention program (ORC §4765.10) but at the time of this writing, has not done so.

The ODH also has statutory authority for injury prevention within Ohio (OAC§ 3701-2). SB 138 required the ODH to form a commission on the prevention of injury, with particular emphasis on the

pediatric and geriatric populations in Ohio. In October 2001, commission members from across the state first gathered to discuss the status of injury and prevention efforts in Ohio. They developed a strategy and over the next two years, convened regularly to produce a consensus-based report. The result of the commission's work is a comprehensive report examining the current status of injuries in Ohio with recommendations for future action. The [Injury Prevention Commission Report](#), completed in 2003 is attached.

As statutory authority defines trauma centers in Ohio by ACS verification requirements, verified trauma centers are required by ACS to participate in injury prevention activities. Level I and II verified trauma centers are required to employ a dedicated full time equivalent (FTE) to the process.

b. EMS.

As previously mentioned, most statutory authority for trauma care resides within the confines of the EMS system. Therefore, a strong legal relationship exists between trauma systems and the EMS Division.

c. Public Health.

In addition to the public health impact of injury prevention and disaster management, the following are additional legislative aspects that impact trauma system development:

Sub. House Bill 448 of the 123rd Ohio General Assembly mandated Child Fatality Review (CFR) Boards in each of Ohio's counties (or regions) to review the deaths of children under eighteen years of age. In addition, this statutory authority mandates an [Annual CFR report](#) by September 30th with distribution to the governor, the speaker of the Ohio House of Representatives, the president of the Ohio Senate, and the minority leaders of the Ohio House of Representatives and Ohio Senates (OAC §3701-67).

Secondly, the legal records collected in the ODH, Division of Vital Statistics are the data source for many important statistical measures used in public health. These indicators track Ohio's health and are used locally for planning and community analysis. Two data sources under the auspices of the Bureau of Vital Statistics which are related to the trauma system include: 1) Death Certificates (OAC §3701-5), and 2) Ohio hospital inpatient discharge and emergency room records, which are collected and maintained by the Ohio Hospital Association (OHA) from information provided by members hospitals. Lastly, although not mandated in statutory authority, ODH is in the process of coordinating the development of a state health improvement plan (SHIP)([draft of SHIP priority related to injury](#)). This activity is required for ODH to achieve accreditation (tentative for 2013) and extends beyond ODH to involve any and all entities that have a stake in improving "health" in Ohio. Injury and Violence Prevention is included as one component / priority within this plan.

d. Special Needs Population.

Some aspects of pediatric trauma care written into statutory authority, is specifically related to the need for pediatric specific trauma triage criteria (ORC §4765.40). In addition, children are the focus

of special requirements for the Emergency Medical Services for Children (EMS-C) grant from HRSA and as such, receive national attention with current national priorities. A committee within the EMS Board works in conjunction with the EMS Division on this aspect of care.

Before 2008, the elderly were not mentioned specifically in Ohio rule or regulation other than being generically included within the adult population. In Ohio Trauma Committee discussions, it was agreed that the elderly have worse outcomes than younger adults with the same or similar injuries yet are subjected to the same triage criteria. At that time, age was simply a “consideration.” Based on research, a task force was formed to find the evidence needed to create geriatric triage criteria. A member of the Ohio Trauma Committee chaired the task force to develop recommendations for geriatric trauma triage criteria. Recommendations included:

- Trauma patients =>70 years should be defined as geriatric trauma and triaged for evaluation to a trauma center if they meet the following criteria:
 - GCS < 15 in the presence of known or suspected traumatic brain injury;
 - Systolic BP < 100 mmHg;
 - Multiple body regions injured;
 - Fall from any height with evidence of traumatic brain injury;
 - Pedestrian struck by motor vehicle;
 - Known or suspected proximal long bone fracture sustained in a motor vehicle crash.

The Ohio Trauma Committee’s recommendations regarding revision of the trauma triage criteria was accepted by the EMS Board, passed through the administrative rules process and implemented on December 29, 2008. OAC §1765-14 now includes the definition of the geriatric trauma patient and baseline geriatric trauma triage rules. When state trauma triage protocols are amended to include criteria that do not appear in a region’s protocols, such amendments are automatically applied to the region’s protocols.

Goal #10 of the *Ohio Trauma Framework: 2010* specifically addresses individuals with functional needs within the state of Ohio. See System Leadership (pg. 37) and Trauma System Plan (pg. 74) sections of this document for more in-depth information on *Ohio Trauma Framework: 2010*. A member of the Ohio Trauma Committee (current victim advocate position and previous Liaison from the Governor’s Council on people with Disabilities from 2011-12) is chairing this innovative workgroup. As meetings for this workgroup only began in June 2012, no recommendations or statutory rules / regulations have yet emerged related to individuals with functional needs.

e. **Emergency Management.**

Ohio’s primary emergency management statute, Chapter 55, authorized the State Emergency Management Agency (EMA) and countywide emergency management agencies to undertake specified activities and provides for mutual aid agreements as well as temporary seats of government for state and local governments. The statute established the EMA within the ODPS. An executive director, appointed with the concurrence of the governor coordinates all activities of all agencies for emergency management, maintains liaison with similar agencies of other states and of the federal government, and cooperates with those agencies. The executive director is authorized to: develop a statewide emergency operations plan; participate in federal programs; accept grants from and enter into cooperative agreements or contractual arrangements with, any federal, state, or local department agency or any other person or body politic (ORC §5502.22).

System Leadership

Benchmark 202: Trauma system leaders (lead agency, trauma center personnel, and other stakeholders) use a process to establish, maintain, and constantly evaluate and improve a comprehensive trauma system in cooperation with medical, professional, governmental, and other citizen organizations.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-202.1) = The lead agency demonstrates that it can bring organizations together to implement and maintain a comprehensive trauma system.	2	Yes Goal 1
(I-202.2) = The lead agency has developed and implemented a trauma-specific statewide multidisciplinary, multi-agency advisory committee to provide overall guidance to trauma system planning and implementation strategies. The committee meets regularly and is instrumental in providing guidance to the lead agency.	5	No
(I-202.3) = A clearly defined and easily understood structure is in place for the trauma system decision-making process.	1	Yes Goal 1
(I-202.4) = Trauma system leaders have adopted and used goals and time-specific, quantifiable, and measurable objectives for the trauma system.	1	No

Benchmark 205: Collected data are used to evaluate system performance and to develop public policy.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-205.1) = Collected data are used for strategic and budgetary planning.	3	Y Goal 8
(I-205.2) = Collected data from a variety of sources are used to review the appropriateness of trauma system policies and procedures. Note: The format of the reports in this and other sections may be written, Web-based, or other electronic media.	1	N
(I-205.3) = The trauma management information system is used to assess system performance, to measure system compliance with applicable standards, and to allocate trauma system resources to areas of need or to acquire new resources.	2	N
(I-205.4) = Injury prevention programs use trauma management information system data to develop intervention strategies.	2	Y Goal 2
(I-205.5) = Education for trauma system participants is developed based on a review and evaluation of trauma management information system data.	1	Y Goal 9

Benchmark 206: Trauma system leaders, including a trauma-specific statewide multidisciplinary, multi-agency advisory committee, regularly review system performance reports.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-206.1) = Trauma data reports are generated by the trauma system no less than once per year and are disseminated to trauma system leaders and stakeholders to evaluate and improve system performance effectiveness.	2	N
(I-206.2) = The trauma-specific statewide multidisciplinary, multi-agency advisory committee regularly reviews annotated trauma system data reports and system compliance information to monitor trauma system performance and to determine the need for system modifications.	3	N

Benchmark 207: The lead agency informs and educates state, regional, and local constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-207.1) = The lead agency ensures communications, collaboration, and cooperation between state, regional, and local systems.	2	Y Goal 1
(I-207.2) = The trauma system leaders (lead agency, advisory committees, and others) inform and educate constituencies and policy makers through community development activities, targeted media messaging, and active collaborations aimed at injury prevention and trauma system development.	2	N
(I-207.3) = The trauma system leaders (lead agency, trauma-specific statewide multidisciplinary, multi-agency advisory committee, and others) mobilize community partners in identifying the injury problem throughout the state and in building coalitions of personnel to design systems that can reduce the burden of injury.	3	N
(I-207.4) = The trauma system public information and education plan exists that heightens public awareness of trauma as a disease, the need for a trauma care system, and the prevention of injury.	1	N

System Leadership

Pertinent History:

Ohio has been fortunate to have strong grassroots leadership as a driving force behind the development of a state-wide trauma system, with state meetings beginning in 1993. Refer to [Historical Timeline of Trauma System Development](#) and also included as Appendix B (pg. 235) of this document. Initially, trauma system development was perceived within the context of numerous American College of Surgeons (ACS) verified trauma centers within the state. After many years, this grassroots leadership was largely responsible for the passage of Am. Sub. House Bill 138 in the 123rd General Assembly (2000), with enactment in 2002, which provided a foundation for trauma system development. HB 138 established several elements for a statewide trauma system, one of which was establishing the Emergency Medical Services Board (EMS Board) as the principle trauma agency. In addition, HB 138 broadened the membership of the EMS Board and formalized the development of an advisory trauma committee under the auspices of the EMS Board.

The EMS Board and Emergency Medical Services (EMS) Division within the Ohio Department of Public Safety (ODPS) jointly oversee the provision of fire services and EMS in the state of Ohio. The EMS Board Mission states: “The State Board of EMS is dedicated to saving lives and minimizing disability to Ohio’s citizens and visitors by developing and continually enhancing a statewide, comprehensive, systematic response to injury, illness and fire, primarily through education, training, certification and strategic planning.” EMS Board membership includes emergency and pediatric physicians, a trauma surgeon, nurses, educator, hospital administrators, fire chiefs and emergency medical services (EMS) personnel. See Emergency Medical Services (pg. 101) section of this document for details on EMS Board membership. The EMS Board, an official body of the state government, has members which are governor appointed from nominations submitted by EMS stakeholder groups and must have background experience in EMS or trauma care.

The EMS Division serves as the administrative arm of the EMS Board, to support the EMS Board in their actions and to assist with implementation of the mission statement and strategic plan. The Executive Director of the EMS Division serves as the Chief Executive Officer of the EMS Board with this position reporting to both the EMS Board chair and the Director of ODPS.

From various EMS Board minutes and discussion with members, ambiguity exists regarding the role of the EMS Board as the principle / lead trauma agency. Despite this variability in perception, the EMS Board has informed the Ohio Trauma Committee that the EMS Board currently serves as the principle trauma agency in Ohio (February 2011 EMS Board retreat minutes). The EMS Board’s authority is over pre-hospital care while no state agency has statutory authority over trauma hospitals and the rehabilitation of trauma patients. However, injury-related activities do occur through other state agencies and private organizations.

Question 1: How does the lead agency bring constituency groups together to review and monitor the trauma system throughout each phase of care?

All meetings of the EMS Board and the Ohio Trauma Committee are open to the public except for consideration of specific personnel activities when the EMS Board adjourns to go into Executive Session. The EMS Board meeting announcements and [minutes](#) are available on the ODPS website.

For the Ohio Trauma Committee and subsequent workgroups under the Ohio Trauma Committee, announcements and minutes are inconsistently posted on the ODPS website. At the writing of this PRQ (February 2013), the most current [Ohio Trauma Committee minutes](#) posted were March 2012. Trauma-related agendas and supporting documents are rarely available to stakeholders in a timely manner.

Stakeholder meetings, such as that held for development of the Model Trauma System Planning and Evaluation (MTSPE) process in 2008, were broadly advertised and comments from members of workgroups entertained.

Development Process for *Ohio EMS 2015 Strategic Plan*

The EMS Board, as the principle trauma agency, does not have a comprehensive mechanism for reviewing and monitoring the trauma system through each phase of care. The EMS Board has a focus on the initial phase of care (i.e. pre-hospital) and a limited focus on the remainder of the trauma system. As mentioned in the Statutory Authority and Administrative Rules section (pg. 27), the EMS Board has no statutory authority beyond the EMS phase of care.

The main trauma-related constituency group facilitated by the EMS Board is the Ohio Trauma Committee which meets every other month in Columbus, Ohio. From 2000 to 2008, the focus of the Ohio Trauma Committee, as an advisory committee, centered on areas that were legislatively allowed relevant to the pre-hospital care, such as trauma triage rules and the trauma registry. During those years, attempts were made to initiate the MTPSE process; however, these attempts were stalled due to re-direction by the EMS Board. In 2008, a series of events came together to assist the Ohio Trauma Committee in moving trauma system development beyond the EMS phase of care.

In March 2008, members of the Ohio Society of Nurse Leaders (OSTNL) facilitated a day-long session to complete the [MTSPE assessment tool](#). The purpose was two-fold: 1) to proactively and strategically position Ohio if federal funds for trauma system development ever became available, and 2) to assist the Ohio Trauma Committee and EMS Board in furthering trauma care in Ohio. Following the reporting of the results to the Ohio Trauma Committee and EMS Board, a workgroup consisting of nurses, physicians, EMS providers and representatives of trauma and non-trauma hospitals, worked for over a year to develop a draft of a trauma system plan (i.e. *Ohio Trauma Framework: 2010*). Additional details of the [Ohio Trauma Framework: 2010](#) are provided later within this section and in the Trauma System Plan (pg. 74) section of this document.

In order to address the various obstacles regarding implementation of a trauma system plan, an ad hoc subcommittee was established by the EMS Board in April 2010. This subcommittee, the Trauma Visionary Committee (TVC) consisted of five Ohio Trauma Committee members, plus five EMS Board members, along with two adjunct individuals, who were tasked with moving the trauma system plan into action.

In December 2010, the EMS Board completed a Strength / Weakness / Opportunity / Threat (SWOT) analysis, which assisted in the development of an EMS strategic plan. Another impetus that fostered progression of the trauma system plan was the most recent recommendations from the National Highway Transportation Safety Administration ([NHTSA; Feb 2011](#)). This provided additional support for continual development of EMS and trauma systems in Ohio.

In January 2012, the EMS Board adopted the [Ohio EMS 2015 Strategic Plan](#). The Mission of the Strategic Plan is: to provide a comprehensive emergency medical services (EMS) system to ensure that persons incurring medical and trauma emergencies receive prompt and appropriate emergency medical care from properly trained and certified personnel. The entire EMS system will be data-driven and medically directed with clearly defined, and publicly available, responsibilities, authorities, and accountabilities. The State EMS system will help assure consistent, quality, local emergency care as well as a regionalized, accountable emergency care system.

The *Ohio EMS 2015 Strategic Plan* consists of the following 11 overall goals:

Goal 1: Regulation and Policy

- Seek comprehensive enabling legislation, and develop operational regulations, policies and procedures to provide an effective state-wide system of emergency medical and trauma care.

Goal 2: Resource Management

- Develop a method to identify, categorize, and coordinate resources necessary for establishment and operation of regionalized, accountable EMS and trauma systems.

Goal 3: Human Resource and Education

- Ensure the EMS system has essential trained and certified/licensed persons to perform required tasks. Provide a comprehensive statewide plan for assuring a stable EMS workforce including consistent EMS training and recruitment/retention programs with effective local, regional and state support.

Goal 4: Transportation

- Provide for a safe, reliable, and coordinated EMS transportation system, which incorporates regionalized, accountable systems of emergency care and which provides for the systematic delivery of patients to the most appropriate specialty care facilities.

Goal 5: Facilities

- Ensure the seriously injured (or ill) patient is delivered in a timely manner to the closest appropriate facility, through a statewide and medically accountable system, including protocols and medical direction.

Goal 6: Communications

- Develop an effective communications system for EMS operations and provide the means by which emergency resources can be accessed, mobilized, managed, and coordinated.

Goal 7: Public Information and Education

- Develop a public awareness and education program about the EMS system, that addresses the components and capabilities of an EMS system; the public's role in the system; the public's ability to access the system; what to do in an emergency (e.g., bystander care training); and prevention issues (e.g., alcohol or other drugs, occupant protection, speeding, motorcycle and bicycle safety).

Goal 8: Medical Direction

- Develop an EMS system in which physicians are involved in all aspects of patient care, through planning, protocols, quality improvement programs and licensing/discipline.

Goal 9: Trauma Systems

- Develop and maintain a fully functional trauma system to provide a high quality, effective patient care system. By vote of the EMS Board at its August 2011 meeting, the goals established in "A Framework for Improving Ohio's Trauma System" are incorporated into this document.

- **Trauma Goal 1: Leadership** – Have a viable, active state lead agency with authority, responsibility and resources to plan, implement and evaluate an inclusive trauma system for Ohio.
- **Trauma Goal 2: Injury Prevention** – Have a state trauma system that is an active partner in a state coordinated system for the reduction of injury-related morbidity and mortality.
- **Trauma Goal 3: Emergency/Disaster Preparedness** – Have a trauma system prepared to respond to emergency and disaster situations in coordination with state disaster plans.
- **Trauma Goal 4: Pre-hospital Care** – Evaluate and maintain guidelines specific to the transport of trauma patients that result in timely and safe delivery to trauma care.
- **Trauma Goal 5: Definitive Care** – Acute Care Hospitals and Trauma Centers – Establish a statewide network of trauma centers, meeting minimum state standards for operation and provision of quality trauma care, in coordination with all other trauma system participants.
- **Trauma Goal 6: Definitive Care – Rehabilitation** – Establish rehabilitation centers as active participants in Ohio’s trauma system, resulting in coordinated post-acute care for trauma victims.
- **Trauma Goal 7: Evaluation, Quality Management & Performance Improvement** – Establish statewide and regional system evaluation, quality management, and performance improvement process.
- **Trauma Goal 8: Trauma System Registry Infrastructure** – Evaluate and maintain an accurate and accessible injury data system, including a trauma registry, to support trauma system evaluation, performance improvement, public health planning, injury prevention, and outcomes research.
- **Trauma Goal 9: Professional Education and Public Information** – Integrate trauma education and public information into all aspects of the trauma system.
- **Trauma Goal 10: People With Functional Needs** – Ensure that special needs and high-risk populations are identified and their specific needs accommodated.

Goal 10: Evaluation

- Implement a comprehensive evaluation program to effectively assess and to improve a statewide EMS system.

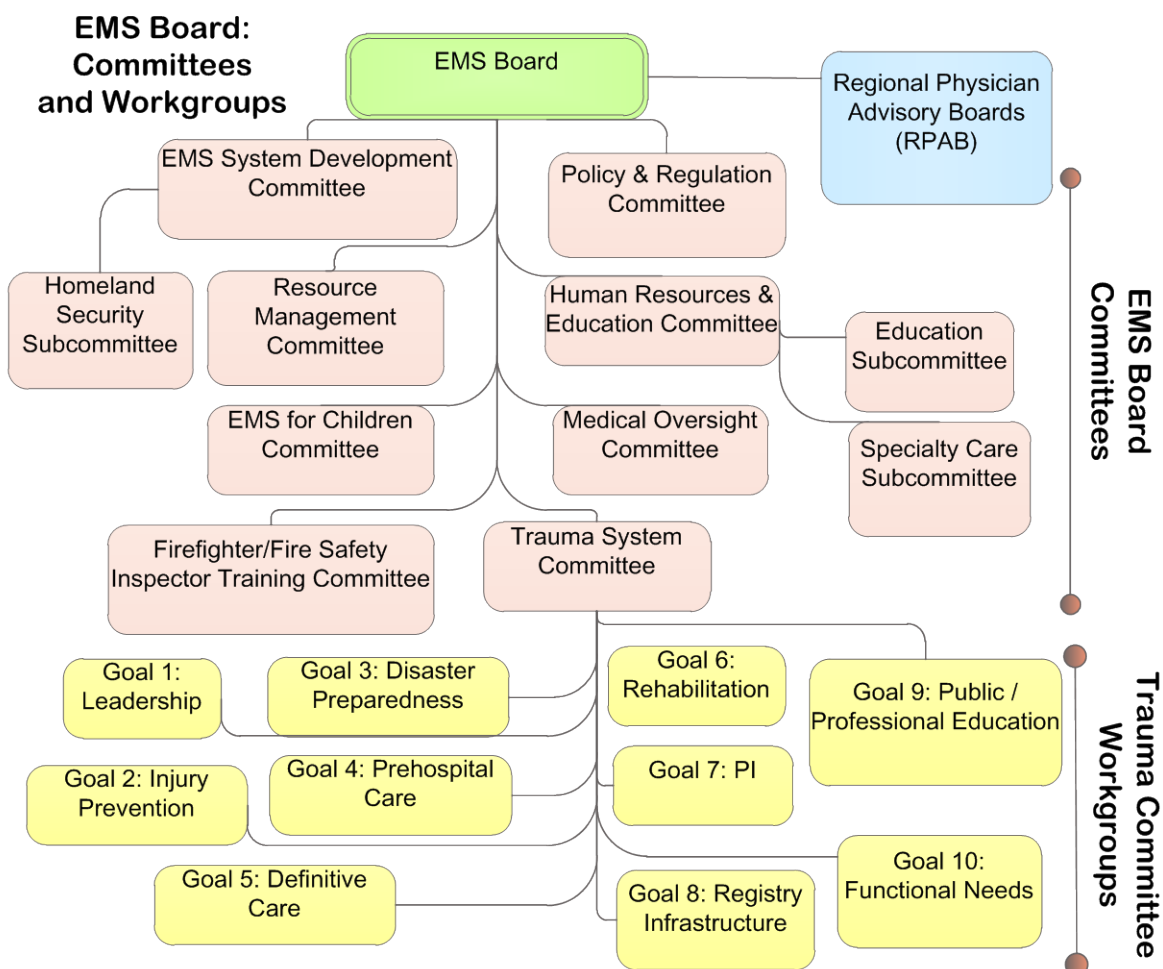

Goal 11: Preparedness

- Building upon the day-to-day capabilities of the EMS system, ensure that EMS resources are effectively and appropriately dispatched and pre-hospital triage, treatment, transport, tracking of patients and documentation of care appropriate for the incident is provided, while maintaining the capabilities of the EMS system for continued operations.

Structure to Support Strategic Plan Implementation

With the advent of the *Ohio EMS 2015 Strategic Plan* in January 2012, all committees of the EMS Board, except the Ohio Trauma Committee which is legislatively mandated, were permanently disbanded. This provided the opportunity to re-organize the EMS Board committee structure, making the new committees parallel with the goals of the new strategic plan. The *Ohio EMS 2015 Strategic Plan* was the document which guided the following new committee structure.

The following organizational chart was created based on interviews by the PRQ author(s) from December 2012.

Responsibilities of each EMS Board committee and their relation to trauma are outlined below:

Committee	Chair (EMS Board Member)	Responsibilities	
		Trauma-Related	Non-trauma related / general EMS
EMS System Development	Vacant; TBD	Database oversight of Trauma Registry and EMS Incident Reporting System;	Transportation (Goal 4); communications (Goal 6); evaluation (Goal 10); preparedness (Goal 11)
Policy and Regulations	Mr. James Davis	Legislative issues for trauma system development	Legislative initiatives for EMS system development; administrative rules; position statement; policy-related issues

Resource Management	Mr. Daryl McNutt	Trauma / EMS Grants	Resource management (Goal 2); public information and education (Goal 7);
Human Resources and Education	Ms. Pamela Bradshaw		Human resources & education; recruitment and retention; certification; accreditation and training issues (Goal 3)
Medical Oversight	Dr. Brian Springer		Facilities (Goal 5); medical direction; scope of practice issues; research (Goal 8)
Trauma Committee	Dr. Jonathon Saxe	Trauma system implementation (Goal 9)	
EMS-Children	Dr. Wendy Pomerantz	Collaborate with trauma workgroups on EMS-C related areas	Implementation of performance measures as established by federal EMS-C; collaborate with other committees on EMS-C related areas
Firefighter and Fire Safety Inspector Training	Mr. Jim Steele		Provide advice and counsel to the Executive Director on Firefighter and Fire Safety Inspector training and certification issues

Other Trauma Constituents

Beside the Ohio Trauma Committee, the EMS Board brings other constituency groups together to move the trauma system forward.

1. Regional Physician Advisory Boards (RPAB)

While not trauma-specific, Am. Sub Senate Bill 98 of the 119th General Assembly established the concept of Regional Physician Advisory Boards (RPAB) in 1992. The EMS Board divided the state geographically into 10 RPAB regions and appointed regional physicians for the purpose of overseeing the delivery of adult and pediatric pre-hospital emergency medical services. (ORC §4765.05) The State Medical Director provides RPAB updates at the EMS Board meetings.

Responsibility of the RPABs (OAC §4765-3-04) includes:

- May develop and recommend written medical protocols for EMS providers;
- Assist in developing and maintaining appropriate EMS medical services in region;
- Assist in the maintenance of information regarding all EMS providers in region, including medical directors;
- Assist in identification of EMS problems in region;
- Facilitate mutual aid agreements;
- Assist all EMS organizations in region in procuring services of a medical director;
- Review triage protocols for adult, pediatric and geriatric trauma.

RPAB productivity and membership varies per region with some being active while 1 RPAB has no members. The main composition of the RPABs is emergency physicians. There is no formal relationship between the RPABs and the Ohio Trauma Committee, except through liaison with the State Medical Director for EMS. Most recent regional RPAB minutes available on the ODPS website were from 2008. Attempts to obtain more recent minutes from the EMS Division were unsuccessful.

The State Medical Director summarizes RPAB activity at the EMS Board meetings and Ohio Trauma Committee.

The EMS Board has statutory authority to create its own RPAB regions or revise them as needed (ORC §4765.05). The February 2011 NHTSA report noted that RPABs utilize the configuration of the EMS regions, which is geographically different than Homeland Security regions. This was noted to not be ideal and NHTSA recommended the EMS Board revise the current map and functions of the EMS / RPAB regions. The EMS Board approved (Feb 2012) the revision of RPAB regions to align with Homeland Security; however, as of this date, no action has occurred.

2. Homeland Security Subcommittee

Another constituent of the EMS Board is the Homeland Security Subcommittee which is under the auspices of the EMS System Development Committee. The EMS Board has a designated EMS Board member leading this committee and collaborates with the Ohio Department of Health (ODH), the Ohio Hospital Association (OHA) and the Division of Homeland Security within the Ohio Department of Public Safety on disaster preparedness at the state level.

3. Emergency Medical Services – Children (EMS-C)

The Emergency Medical Services - Children (EMS-C) committee has statutory authority within the EMS Board. EMS-C is a federally funded initiative designed to improve emergency care for children. The EMS Board includes a designated position for a pediatric physician who chairs the EMS-C committee of the EMS Board and serves as an advocate for pediatric issues. Goals of the EMS-C program include:

- Improve pediatric medical direction – online and offline;
- Improve pediatric pre-hospital equipment carried;
- Establish emergency department categorization system for pediatrics;
- Increase number of hospitals with written transfer agreements and guidelines which include pediatrics;
- Improve degree of permanence of EMS-C program in Ohio;
- Improve state disaster planning for children's needs;
- Improve data-driven decision-making for pediatric emergencies.

To date, there is no formal integration between the EMS-C committee and Ohio Trauma Committee.

4. Regional Trauma Systems

Regional trauma systems in Ohio have developed without statutory authority or formal relationship to either the EMS Board or the Ohio Trauma Committee. In addition, the regional systems have no structured method of interaction with each other. Regional trauma systems are most frequently established on the basis of historical referral patterns, of need, and of grassroots efforts within a geographical area. Of the 178 hospitals currently listed within the Ohio Trauma Registry (OTR), 44% (N=77) have no regional affiliation. The following chart outlines the six regions with numbers of reporting trauma centers, provisional centers and non-trauma centers. Also included within this chart is the synopsis for those hospitals that do not have a working relationship with a trauma region.

Information within chart list below is current as of December 2012 and provided by the ODPS.

Regions	Total # of Hospitals	Trauma Centers							Non-Trauma Centers
		TOTAL # Trauma Centers	Adult - Level 1	Adult - Level 2	Adult - Level 3	Peds - Level 1	Peds - Level 2	Provisional	
All Ohio	N=178	N=46 N=43 verified N=3 provisional	N=11	N=9	N=18	N=3	N=3*	N=3	N=133
Central Ohio Trauma System (COTS)	N=27	N=7	2	2	2	1			N=20
Northeast Ohio Regional Trauma Network (NOTRN)	N=11	N=6	2	1	2		1		N=5
Northern Ohio Trauma System (NOTS)	N=11	N=3	1*	2			1*		N=8
Northwest Ohio Regional Trauma Network (NOTR)	N=18	N=7	2	1	4				N=11
Southeast Ohio Regional Trauma Systems (SORT)	N=14	N=5	1	0	1		1	1 (level 2) 1 (level 3)	N=9
Tri-State Taruma Coalition (TSTC)	N=20	N=4	1		2	1			N=16
No Regional Involvement	N=77	N=14	2	3	7	1		1 (level 3)	N=63

* One hospital is verified as both an adult and pediatric trauma center

On the ODPS website, both provisional and verified trauma centers are listed for [Ohio](#). For more detailed information on regional trauma systems in Ohio, refer to section Coalition Building and Community Support (pg. 58) within this document.

5. Other trauma-related organizations

There are trauma-related organizations within the state that have no relationship to the principle trauma agency. Some of these organizations have an informal relationship to the Ohio Trauma Committee but not the EMS Board (examples: Ohio Chapter of the ACS Committee on Trauma, OSTNL, and OHA). The Ohio Trauma Committee is a public meeting and therefore is open to the public. Representatives of these organizations are often present either serving in another role established in the ORC (See question #2. below) or a public member. Input from the public is solicited, although only official Ohio Trauma Committee members may vote. Members of trauma related organizations without official representation on the Ohio Trauma Committee frequently participate in the work of subcommittees

There are trauma related agencies and organizations with only sporadic interaction with the EMS Board and/or the Ohio Trauma Committee. Examples of these include organizations that participated on the two Trauma Commissions convened by the Ohio Department of Health in 2003; most notably on the Post-Critical Trauma Care Commission. Other examples include: The

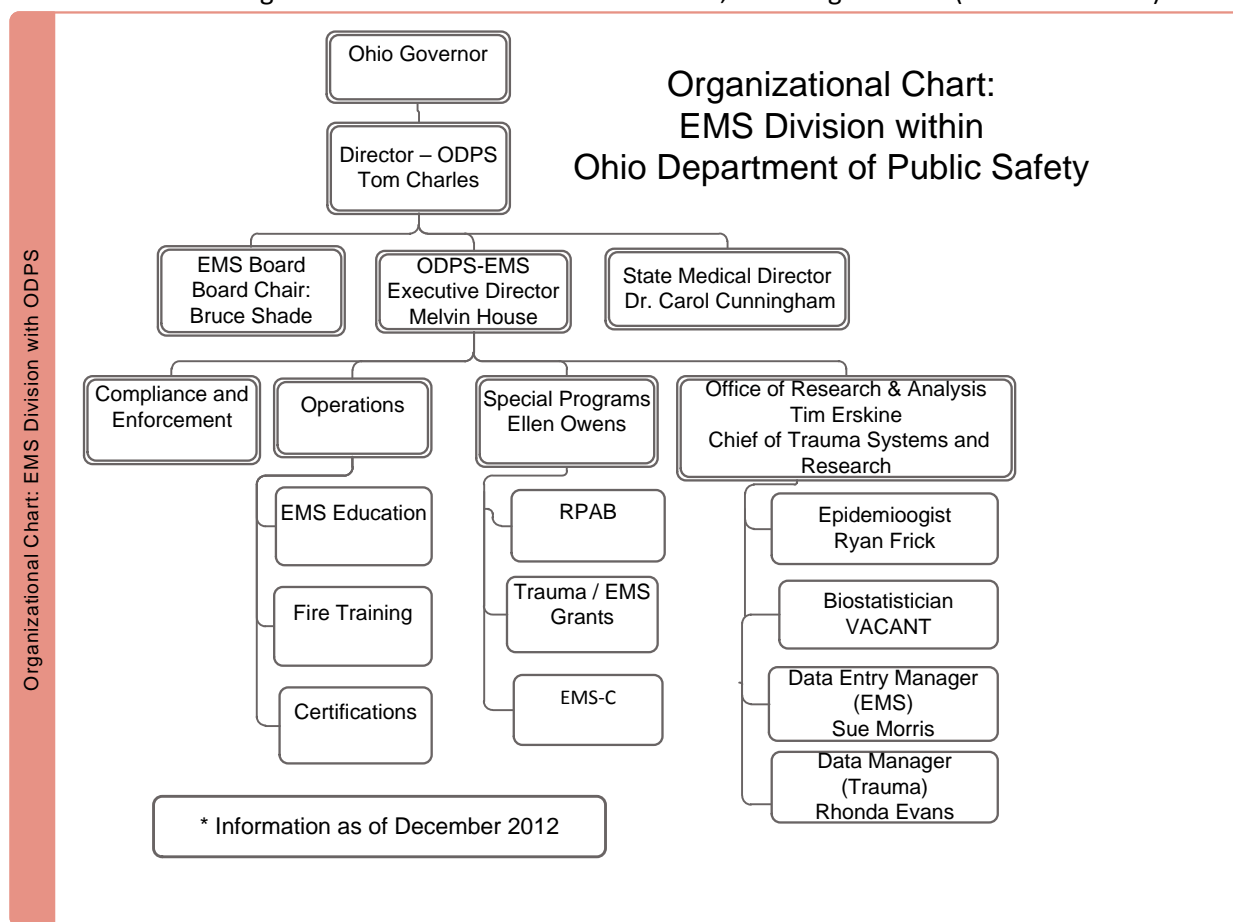

Rehabilitative Services Commission of Ohio, the Ohio Department of Job and Family Services and the Ohio Department of Mental Health.

Question 2: Describe the composition, responsibilities, and activities of the multidisciplinary trauma system advisory committee(s) and the working relationship(s) with the trauma lead agency and the EMS lead agency, if they are different.

Composition

The Ohio Trauma Committee is the advisory body to the EMS Board on trauma issues. The Ohio Trauma Committee has no legal authority to operationalize components of trauma system without EMS Board approval / direction. The Office of Research and Analysis (ORA) provides staff support for daily operation of EMS Board. According to various committee and workgroup chairs, the Ohio Trauma Committee and trauma-related workgroups have limited ORA staff support which significantly inhibits forward progress.

Listed below is the organizational chart for the EMS Division, including the ORA (December 2012):

The authority for the Ohio Trauma Committee, established in November 2000, is identified in ORC §4765.04. The Ohio Trauma Committee membership consists of the following 25 voting members:

- (1) A physician who is certified by the American board of surgery or American osteopathic board of surgery and actively practices general trauma surgery;
- (2) A physician who is certified by the American board of surgeon or the American osteopathic board of surgeon and actively practices orthopedic trauma surgery;
- (3) A physician who is certified by the American board of neurological surgeons or the American osteopathic board of surgery and actively practices neurosurgery on trauma victims;
- (4) A physician who is certified by the American board of surgeons or American osteopathic board of surgeons and actively specializes in treating burn victims;
- (5) A dentist who is certified by the American board of oral and maxillofacial surgery and actively practices oral and maxillofacial surgery;
- (6) A physician who is certified by the American board of physical medicine and rehabilitation or American osteopathic board of rehabilitation medicine and actively provides rehabilitative care to trauma victims;
- (7) A physician who is certified by the American board of surgery or American osteopathic board of surgery with special qualifications in pediatric surgery and actively practices pediatric trauma surgery;
- (8) A physician who is certified by the American board of emergency medicine or American osteopathic board of emergency medicine, actively practices emergency medicine and is actively involved in emergency medical services;
- (9) A physician who is certified by the American board of pediatrics, American osteopathic board of pediatrics, or American board of emergency medicine, is sub-boarded in pediatric emergency medicine, actively practices pediatric emergency medicine, and is actively involved in emergency medical services;
- (10) A physician who is certified by the American board of surgery, American osteopathic board of surgery, or American board of emergency medicine and is the chief medical officer of an air medical organization;
- (11) A coroner or medical examiner;
- (12) A registered nurse who actively practices trauma nursing at an adult or pediatric trauma center;
- (13) A registered nurse who actively practices emergency nursing and is actively involved in emergency medical services;
- (14) The chief trauma registrar of an adult or pediatric trauma center
- (15) The administrator of an adult or pediatric trauma center;
- (16) The administrator of a hospital that is not a trauma center and actively provides emergency care to adult or pediatric trauma patients;
- (17) The operator of an ambulance company that actively provides trauma care to emergency patients;
- (18) The chief of a fire department that actively provides trauma care to emergency patients;
- (19) An EMT or paramedic who is certified and actively provides trauma care to emergency patients;
- (20) A person who actively advocates for trauma victims;
- (21) A physician or nurse who has substantial administrative responsibility for trauma care provided in or by an adult or pediatric trauma center;
- (22) Three representatives of hospitals that are not trauma centers and actively provide emergency care to trauma patients.

Ohio Trauma Committee: Participation Compliance for each Seat							
(Seat # described above)	Attendance by Seat / Year						Attendance / Seat (2007-12) – Avg.
	2007	2008	2009	2010	2011	2012	
Ambulance Owner (17)	50%	50%	80%	17%	0%	33%	44%
Burn Surgeon (4)	50%	83%	40%	50%	60%	50%	53%
Chief Air Medical Officer (10)	83%	67%	60%	100%	100%	67%	79%
Coroner (11)	0%	0%	0%	0%	0%	0%	0%
Emergency Medicine MD (8)	0%	33%	0%	40%	0%	17%	15%
Emergency Nurse (13)	83%	50%	80%	100%	60%	67%	73%
EMS Provider (19)	100%	67%	100%	83%	80%	17%	74%
Fire Chief (18)	50%	50%	80%	83%	80%	100%	74%
Neurosurgeon (3)	100%	100%	80%	83%	80%	100%	91%
Non Trauma Center Admin (16)	17%	67%	80%	100%	60%	50%	50%
Non Trauma Center Rep (22)	100%	100%	100%	67%	20%	0%	65%
Non Trauma Center Rep (22)	83%	33%	0%	0%	0%	67%	32%
Non Trauma Center Rep (22)	0%	0%	0%	0%	0%	83%	15%
Oral/maxillofacial Surgeon (5)	33%	83%	80%	100%	40%	67%	68%
Orthopedic Surgeon (2)	0%	67%	80%	50%	40%	33%	44%

Pediatric Trauma Surgeon (7)	100%	83%	100%	100%	80%	83%	91%
Rehabilitation Physician (6)	67%	67%	60%	67%	100%	83%	74%
RN/MD Trauma Center Admin (21)	100%	100%	100%	100%	100%	100%	100%
Trauma Center Admin (15)	50%	67%	80%	67%	80%	67%	68%
Trauma Nurse (12)	100%	100%	60%	83%	100%	100%	88%
Trauma Registrar (14)	67%	83%	60%	100%	60%	100%	79%
Trauma Surgeon (1)	33%	33%	100%	67%	40%	83%	59%
Victim Advocate	100%	67%	60%	100%	0%	33%	62%

Ohio Trauma Committee members are appointed by the Executive Director of the EMS Division from one of the three nominating organizations. Leadership structure of the Ohio Trauma Committee consists of a chair-person and vice-chairperson from among its members. Meetings are held in Columbus every other month. There is no statutory limit on the number of terms an appointee may serve. Attendance requirement is greater than 60% over 2 year time period. Attendance synopsis of each nominated position since 2007 is listed in chart above.

Responsibilities of Ohio Trauma Committee

The statutory role of the Ohio Trauma Committee is to advise and assist the EMS Board in matters related to adult and pediatric trauma care and the establishment and operation of the state trauma registry (ORC §4765.04). The EMS Board has the final authority on trauma-related decisions; however, this statutory authority only extends through the EMS phase of care and to data issues specifically related to the Ohio Trauma Registry (OTR). As noted in the EMS Board minutes of February, 2011 (p.19) regarding trauma regulatory authority and scope, “This Board’s authority stops when the ambulance hits the hospital parking lot”.

Activities of Ohio Trauma Committee

As outline in response to Question #1, the Ohio Trauma Committee completed the MTSPE, thus leading to the development of a trauma-specific strategic plan (2009 through February 2010), now referred to as the *Ohio Trauma Framework: 2010* (i.e. goal # 9 of the *Ohio EMS 2015 Strategic Plan*).

The *Ohio Trauma Framework: 2010* is currently divided into the following 10 major trauma goals:

- Trauma Goal 1: Leadership
- Trauma Goal 2: Injury prevention
- Trauma Goal 3: Emergency / Disaster Preparedness Plan
- Trauma Goal 4: Pre-hospital Care
- Trauma Goal 5: Definitive Care – Acute Care Hospitals and Trauma Centers
- Trauma Goal 6: Definitive Care – Rehabilitation
- Trauma Goal 7: Evaluation, Quality Management & Performance Improvement
- Trauma Goal 8: Trauma Registry Infrastructure
- Trauma Goal 9: Professional Education and Public Information
- Trauma Goal 10: People with Functional Needs.

Eight workgroups have emerged, with two of the above trauma goals (Injury Prevention, Emergency / Disaster Preparedness Plan) already demonstrating strong committee work within ODH and Ohio Hospital Association (OHA).

Approval of the *Ohio Trauma Framework: 2010* by the EMS Board occurred in February 2010. Most stakeholders vested in trauma system development realize that the Trauma Framework is a critical step for trauma system development in Ohio. Continual revisions and expansions of this document are anticipated. However, it must be noted that with this document, Ohio trauma leadership is venturing into new territory. With the development of trauma workgroups within the *Ohio EMS 2015 Strategic Plan*, these are new domains that have previously been outside the purview of the EMS Board. It is yet unknown if implementation of these strategies, under the direction of the EMS Board with recommendations from the Ohio Trauma Committee and with the limited statutory authority, will be allowed across all system components. Without statutory authority, the trauma framework plan is fragile and at risk of elimination by the EMS Board.

a. Identify pediatric representatives on the multidisciplinary trauma system advisory committee and any pediatric advisory groups that provide input into trauma system development.

As required in statute (ORC §4765.04), the following two physicians, representing pediatrics, serve as members of the Ohio Trauma Committee:

- A physician who is board-certified in surgery with special qualifications in pediatric surgery and actively practices;
- A physician who is board-certified in pediatric emergency medicine and actively practices.

One of the committees under the auspices of the EMS Board is the EMS-C committee, which is chaired by the pediatric emergency medicine EMS Board representative. No Ohio Trauma Committee members are a part of that EMS-C committee.

No formal pediatric trauma committee exists. Informal pediatric input includes nurse representatives from various pediatric trauma centers across Ohio (N=6), who frequently participate on committees, subcommittees and attend Ohio Trauma Committee meetings. It was noted in 2012 that the special

population of pediatrics had no clear “home” within the *Ohio Trauma Framework: 2010* and that a pediatric liaison relationship needed to be established. Therefore, as mentioned above, the EMS-C committee has been asked to provide representatives to each of the trauma workgroups, in order to assure that pediatric-related issues are addressed within each trauma goal.

b. Describe the process of involving experts in, and advocates for, special populations and how they help drive regional trauma system development.

Addressing functional needs of Ohioans was included as one strategic goal within the Trauma Framework. Currently, the victim advocate position of the Ohio Trauma Committee is also a member of the Governor’s Council on People with Disabilities and chairs Goal # 10 (i.e. People with Functional needs). Preliminary discussions within the Ohio Trauma Committee have begun to define what constitutes a “special population” and / or what defines a patient with “functional needs”.

All ACS verified trauma centers in Ohio are required to have injury prevention and education programs. The state of Ohio has 46 verified or provisional trauma centers, of which 6 are ACS pediatric verified (3-level I, 3-level 2). Many of these trauma centers, both adult and pediatric verified centers, have programs that impact special populations, including:

- Child passenger safety, including booster seats;
- Teen driving initiatives;
- Faith based prevention program for Hispanic and African American populations;
- Fall prevention for the elderly;
- Bike helmet programs for children.

ACS verified trauma centers are allowed to choose their own priorities for injury prevention but are encouraged to base their efforts on their data and special populations they serve. Thus, through these programs, the needs of some special populations are addressed; although not in a united, state-wide effort.

The ODH is an advocate for special populations within the context of injury prevention. Outlined in the Prevention and Outreach section (pg. 90) of this document, the ODH promoted a variety of injury prevention programs to both children and the elderly. ODH also is required to address the needs of special populations, including children, in its bioterrorism-related grants from the Federal Government (such as the Ohio Poison Control Bioterrorism Preparedness, the Regional Hospital Coordination Program and the Statewide Healthcare Preparedness Coordination and Response Programs).

One program for special needs stands out in the state of Ohio. Capt. William Piwtorak, the Special Needs Administrator for Liberty Township Fire Department in Delaware, Ohio, developed a web-based special-needs registry for the county that he serves. This program is innovative, cost effective and addresses an at-risk population that is vulnerable during emergency and disaster situations. This program designed for the special needs population in the community is being used as a model by some EMS personnel across the state of Ohio ([Delaware County program](#)).

c. Describe how the multidisciplinary advisory committee is involved in trauma system performance evaluation (for example, review of system performance reports).

In December 2011, the Ohio Trauma Committee approved the format of the metrics scorecard which was developed by the TVC. The prime objective of the Ohio Metrics Scorecard is to evaluate the overall effectiveness of the trauma system and to facilitate future evolution of Ohio's trauma system. Consensus was obtained by the TVC members that the following characteristics were considered the essential parameters of a scorecard for system evaluation:

- Data is easily ascertained by either registry data or survey;
- Data is objective, reliable and sensitive to variation;
- Data is evaluative of system;
- Outcome results should be of interest to both the public and policy makers;
- Performance measures must evaluate one of three aspects: 1) structure, 2) process, or 3) outcome.

Ohio Metrics Scorecard template is listed below.

Ohio Trauma System Scorecard: (timeframe)

	Ohio Trauma Care Delivery		Goals			2013 July -Dec		2014 Jan- June		2014 July- Dec		2015 Jan- June
Category	Measure		2013 Goal	Long Term Goal								
Structure	Access											
	% of Ohio population which live within 60 minutes by ground transport to a Level I, II or III Trauma Center	↑										
	% of Ohio population which live in non-metro area within 60 minutes by ground transport to trauma center	↑										
	% of Ohio population which live within 60 minutes by ground transport to an accredited burn treatment facility	↑										
	% of Ohio population which live within 60 minutes by ground transport to a pediatric trauma center	↑										
	% of Ohio population with access to enhanced 911	↑										
	Transport Availability											
	% of trauma patients where inter-facility transport wait time for air transport is less than 30 minutes	↑										
	% of trauma patients where inter-facility transport wait time for ground transport is less than 30 minutes	↑										

	Reporting of Data									
	% of hospitals with compliance of timely reporting of state trauma data	↑								
	% of rehabilitation facilities with compliance of timely reporting of rehabilitation data	↑								
	% of EMS agencies with compliance of timely reporting of EMS run data	↑								
	Prevention									
	% of safety belt usage for all motor vehicle related deaths	↑								
	% of safety belt usage for injured patients in a motorized vehicle crash	↑								
	% of safety helmet usage for all motorcycle deaths	↑								
	% of car seat / booster usage for children 8 years or younger involved in a motor vehicle related crash	↑								
	% of helmet usage for all bicycle deaths									
	Coroner									
	% of injury deaths that undergo that underwent an autopsy	↑								
	% of injury deaths that undergo a complete autopsy	↑								
	% of in-hospital injury deaths which were eligible and donated any type of organ	↑								
	Finance									
	% of uncompensated care (yearly)	↓								
	Total cost of care for injured patients in Ohio (yearly)									
	Hospital cost of care for injured patients in Ohio (yearly)									
	HRSA Model Trauma System									
Process	% of indicators 3 and greater	↑								
	Triage									

[illegible]

Mortality												
% overall mortality rate	↓											
% of injured patients who die in a trauma center between 4 and 24 hours after the time of injury	↓											
% injured patients who die in an acute care hospital between 4 and 24 hours after the time of injury	↓											
% of pediatric patients that die in a non-pediatric trauma center	↓											
% of admitted patients that die at an acute care hospital (exclude DNR)	↓											
% of patients who die with a probability of survival using ICISS of > 0.50	↓											
% of patients who live with a possibility of survival using ICISS of < 0.50	↑											
% patients that die within 2 hours of reaching a trauma center	↓											
% patients that die within 2 hours of reaching an acute care hospital	↓											
Disability												
% of patients discharged from a certified rehab center to a long term care facility.	↓											
Currently meets goal												
Goal is 75% met												
Goal is < 75% met												

The concept of this scorecard is to identify areas of largest need, so that additional analysis can be performed of the measure along with specific actions and re-measurement. To date, no Ohio Metric Scorecard reports, using Ohio Trauma Registry (OTR) data, have been generated. In addition, accountability for utilizing this metric system has not been addressed or assigned to any of the newly revised trauma workgroups. OTR limitations, such as limited inclusion criteria and inability to probabilistically link databases continue as issues that have hindered implementation of this evaluation tool. To date, this tool has not been operationalized and there are no plans in place for future integration.

A second example of system evaluation with subsequent change in practice was the development of geriatric specific triage criteria. After review of literature and analysis of data, any criterion which demonstrated a statistically significant increase in elderly mortality risk was included in the proposed criteria. As a result, the following criteria were added to the geriatric-specific criteria (2008) in Ohio:

- GCS < 15 in the presence of known or suspected traumatic brain injury;
- Systolic BP < 100 mmHg;
- Multiple body regions injured;
- Fall from any height with evidence of traumatic brain injury;
- Pedestrian struck by motor vehicle;
- Known or suspected proximal long bone fracture sustained in a motor vehicle crash.

To date, no post implementation study or evaluation of criteria has been completed. However, an article was published on this topic by Dr. Howard Werman, who was the lead author in a peer-review journal.

Thirdly, following approval of the *Ohio EMS 2015 Strategic Plan* and overall restructuring of committees, a multidisciplinary workgroup was established in June 2012 to address the Trauma Goal # 7: Evaluation, Quality Management & Performance Improvement. The workgroup is in the early stage of developments, but is tasked with establishing a statewide and regional system for the trauma performance improvement process.

Question 3: Provide examples of how the lead agency and trauma system leadership (for example, trauma centers, trauma medical director, nurse coordinator, trauma administrator and other stakeholders) inform and educate policy makers, elected officials, community groups, and others from the trauma system, about its strengths, and its improvement opportunities.

Historically, the grassroots initiative in the 1990's had a strong media / newspaper component. For all involved, this was considered a major component in obtaining legislative input and the eventual passage of HB 138. With the passage of HB 138 in 2000 and funded by ODPS, the EMS Board was tasked with producing seven special reports on a variety of topics related to EMS and Trauma. Seven special reports addressed the following issues:

1. The status and needs of EMS and adult /pediatric trauma care provided between Ohio and other jurisdictions. – Nationwide Children's Hospital, formally Columbus Children's Hospital (Awarded \$185,371)
2. Methods to improve specialized care provided by EMS organizations to pediatric / geriatric trauma victims (Riverside Hospital – Awarded \$65,366)
3. The feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. (St. Vincent Mercy – Awarded \$461,442)
4. Methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner. (Central Ohio Trauma System & Ohio Coroner's Association – Awarded \$87,500)
5. Methods to increase ATLS, BTLS and PTLT training among appropriate health care providers, particularly in rural areas of the state. (Ohio, COT – Awarded \$49,320)
6. The roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in this state, and methods to enhance those roles. (Hospital Council of Northwest Ohio – Awarded \$64,500)
7. The causes and impact of trauma on minority populations in this state and methods to improve EMS and trauma care for those populations. (Nationwide Children's Hospital, formally Columbus Children's Hospital – \$49,545)

A 2-page synopsis of each of the [seven special studies](#) was presented to the governor and the 125th General Assembly. Besides the 7 special studies, two additional commissions ([Injury Prevention Commission Report](#) & [Post Critical Care Commission Report](#), one on injury prevention and the other on rehabilitation, were mandated by HB 138. The injury prevention commission promoted the development of an injury prevention section (i.e. OIPP) within ODH.

The newly revised Policy & Regulation committee of the EMS Board (April 2012) has the ability to inform and educate policy makers, along with elected officials on aspects of trauma and EMS. This committee is to seek legislative opportunities, and to develop operational regulations, policies and procedures which will provide an effective state-wide system of emergency medical and trauma care. The committee is led by an EMS Board member.

The legislative liaisons of involved state agencies can and do advance trauma system initiatives with the Ohio General Assembly so long as they are in keeping with those of the Governor's Office. Each organization or individual within the state can independently contact elected officials on pertinent issues. As part of the intended political process, such access has hindered and at other times promoted the development of the Ohio trauma system.

Other than these examples listed above, there is minimal interaction and no formal infrastructure to inform and educate policy makers, elected officials and those outside the Ohio Trauma Committee. Some communication is conducted informally through the ODPS website; however, the website is considered difficult to navigate by many, without regular updates and is not comprehensive.

Question 4: Describe the process to expand effective trauma leadership within the trauma system (for example, succession planning, leadership courses, and workshops), including the lead agency and trauma centers.

No formal process has been developed at the state level to expand effective trauma leadership within the trauma system. Ohio Society of Trauma Nurse Leaders (OSTNL) has sponsored the TOPIC Course (from Society of Trauma Nurses), American Trauma Society (ATS) Trauma Coordinator Course and AIS Coding class for trauma registrars. The recent economic recession in Ohio and across the nation has impeded investment in the trauma system by restricting the ability of state agencies to recruit needed personnel and to fund needed grant programs.

Question 5: Describe the process by which lead agency staff would identify changes in system performance?

The lead agency staff does not have a process to identify changes in system performance.

Question 6: Describe how the multidisciplinary advisory committee is involved in trauma system performance evaluation.

See Question 2.B.C above for answer to this question.

Coalition Building / Community Support

Benchmark-207: The lead agency informs and educates state, regional, and local constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-207.1) = The lead agency ensures communication, collaboration, and cooperation between state, regional, and local systems.	2	Y Goal 1
(I-207.2) = The trauma system leaders (lead agency, advisory committees, and others) inform and educate constituencies and policy makers through community development activities, targeted media messaging, and active collaborations aimed at injury prevention and trauma system development.	2	N
(I-207.3) = The trauma system leaders (lead agency, trauma-specific statewide multidisciplinary, multi-agency advisory committee, and others) mobilize community partners in identifying the injury problem throughout the state and in building coalitions of personnel to design systems that can reduce the burden of injury.	3	N
(I-207.4) = The trauma system public information and education plan exists that heightens public awareness of trauma as a disease, the need for a trauma care system, and the prevention of injury.	1	N

Coalition Building and Community Support

Pertinent History:

Term Definitions:

- Constituents = all citizens of Ohio
- Key Constituents = health care professionals, health care administrators, pre-hospital care providers, health insurers and payers, data experts, consumers and advocates, policy makers and media representatives
- Stakeholders = key constituents with a particular interest in the trauma system or any part of it
- Coalition = organization that meets for a designated purpose related to trauma care in Ohio; the agendas of these coalitions are not defined by the Ohio Trauma Committee nor are they limited by the scope of work of the Ohio Trauma Committee

Trauma and EMS constituents have been involved in a variety of multidisciplinary task forces and workgroups over the [last 20 years](#). As a result of Substitute House Bill 138 of the 123rd General Assembly, formalization of the Ohio Trauma Committee brought representatives from various organizations together for the purpose of promoting trauma care in Ohio. In 2012, the development of the *Ohio EMS 2015 Strategic Plan*, which incorporated the *Ohio Trauma Framework: 2010* promoted the expansion of workgroups and increased the number of participating constituents.

Other coalition efforts have developed based on the common interests of groups and the identification of existing organizational structures that allow for networking. A strong injury prevention coalition, led by the Ohio Injury Prevention Partnership (OIPP) and staffed by the Ohio Department of Health (ODH) pulls its membership from across the state. The Ohio Hospital Association (OHA) maintains a liaison relationship with the Ohio Trauma Committee at each of its meetings. It has active representation on various subcommittees that report to the Ohio Trauma Committee. Trauma program managers and trauma registrars have each developed coalitions (i.e. Ohio Society of Trauma Nurse Leaders (OSTNL) and Alliance of Ohio Trauma Registrars (AOTR)) which meet every other month. The state also enjoys an active chapter of the American College of Surgeons (ACS) Committee on Trauma. Each of these coalitions has played, and continues to play, a part in the development of the trauma system in Ohio through their attendance at meetings and willingness to undertake activities which the EMS Board or Ohio Trauma Committee may not be able to initiate or sustain by itself. An example of such an activity is the convening of the stakeholders group by the OSTNL to complete the Model Trauma System Planning and Evaluation (MTSPE).

Question 1: What is the status of the trauma system's coalition (For example, what is the status of recruiting members and building an active coalition? Does the coalition need new energy? Who is not currently involved but should be part of your coalition?)?

While not formally called a coalition, Ohio trauma leaders have worked for more than two decades to develop a trauma constituency interested in advancing trauma system development. Some success has been demonstrated; yet there remain many opportunities for continual improvement.

Currently in Ohio, coalitions, organizations/agencies and individuals frequently contribute to system development and refinement at two levels: at the state level through the Ohio Trauma Committee and, at a local level through the regional systems.

Ohio Trauma Committee

The extent of stakeholders' participation has varied over time depending on the issue facing the system(s). In the 1990's, various multidisciplinary groups collaborated on strategies to promote policy development and the passage of trauma legislation. After legislation was enacted in 2000, the trauma coalition membership was formally limited to members/organizations within the confines of the Ohio Trauma Committee. Non-members of the Ohio Trauma Committee informally participated by attending meetings and contributing in discussions. With the introduction of the *Ohio Trauma Framework: 2010* and the development of 10 workgroups, new opportunities have emerged for recruiting new members within trauma workgroups at the state level.

Ohio continues to strive to develop a more comprehensive trauma constituency. The function of the Ohio Trauma Committee has some coalition building factors, yet this has not been the primary direction of the committee. At the Ohio Trauma Committee or EMS Board level, there have been no discussions regarding who may be missing from the coalition. The Ohio Trauma Committee membership is written into statute with specific nominating organizations and specific representation which offers no room for variation. Meetings of the Ohio Trauma Committee are open to the public, yet few stakeholders / constituents outside of the committee attend these meetings. However, with the evolution of the workgroup structure, stakeholders / constituents should have increased ability to contribute to the development of the trauma system even if they do not have an appointed seat on the Ohio Trauma Committee.

The inability to move trauma system development forward over the past 5-8 years has disheartened or even dissuaded participation. Some constituents, who have voluntarily invested time and energy into the process, have moved on to other endeavors. Conversely, many Ohio Trauma Committee members have demonstrated amazing longevity in their voluntary state roles. Examples include physician (i.e. neurosurgery, rehabilitation, oral facial, orthopedic, emergency medicine and surgery), nursing, and hospital trauma program administrator participation which have been extraordinary considering the fact that much of the committee's emphasis over the past 10 years has been only through the EMS phase of care. See System Leadership section (pg. 37) for Ohio Trauma Committee participation rates. Of note, 11 of the 24 appointed seats have had an attendance rate of 70% or greater over the life of the Ohio Trauma Committee.

As the steering of Ohio's trauma system is based on volunteerism, it is deemed essential that trauma system development progress in an expeditious manner. Even though progress has moved slowly from the passage of SB 138 in 2000 to present time, there is some evidence of recent engagement in the trauma workgroups. Nonetheless, many opportunities continue to exist to enhance the Ohio Trauma Committee and therefore, strengthen and further develop its work. Member suggestions include the following: 1) increased integration and communication with EMS Board and other trauma-related committees / organizations in Ohio (i.e. EMS-C, Homeland Security, OIPP, etc.), 2) improved and formalized flow of trauma-related information, and 3) increased accountability and authority related to trauma system issues.

Regional Trauma Systems

Regional trauma systems have developed around the metropolitan areas of Ohio, based on historical transport patterns to major hospitals providing multi-disciplinary care. Certain sections of the state have not developed consistent referral patterns with any one hospital entity or they may have relationships with multiple major hospitals. These areas that do have regional systems are not officially and legislatively recognized by the state system. No flow of information is directed to the regional trauma

systems. Conversely, the regional systems rarely communicate their needs and expectations to the state system. Therefore, this lack of integration leads to duplication of efforts and overall disconnection of state and local priorities. When asked, regional trauma system leadership has minimal to no connection with colleagues in other regional systems. Numerous opportunities exist for weaving together regional trauma systems and the state trauma system. Additional detailed information on regional systems appears later within this section.

a. What is the role of the coalition members (constituents and stakeholders) in promoting trauma system development?

Ohio Trauma Committee

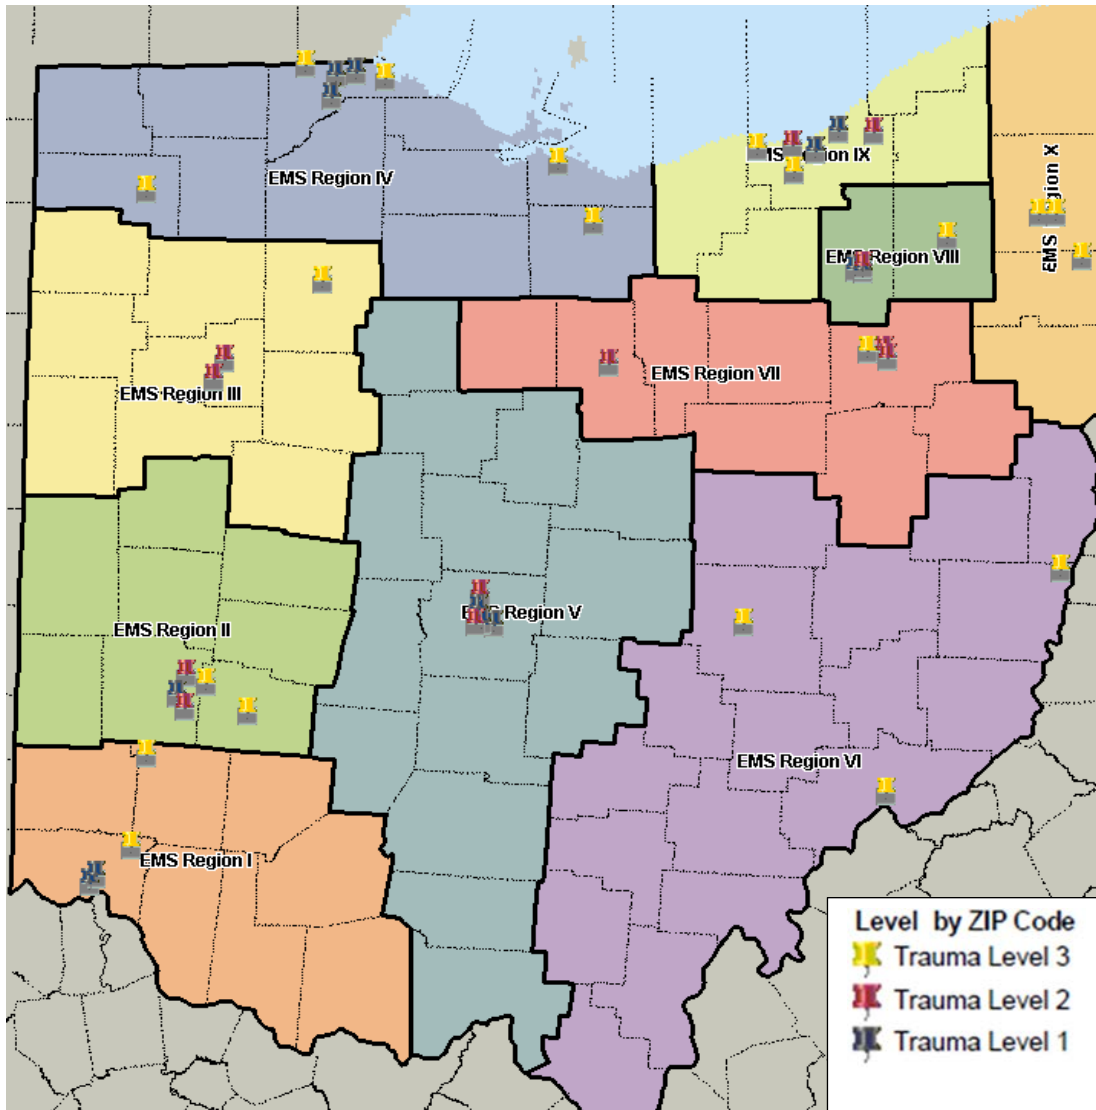

Representatives of at least 25 Ohio stakeholders comprise the Ohio Trauma Committee, which are at the core of promoting trauma system development as noted on page 22 of SB 138. With the initial draft of the *Ohio Trauma Framework: 2010*, the Trauma Visionary Committee (TVC) was formed with the specific purpose of implementing the trauma strategic plan. After the *Ohio Trauma Framework: 2010* plan was incorporated into the *Ohio EMS 2015 Strategic Plan* and the 10 trauma workgroups were developed, the purpose of this committee changed to focus on promotion and enhancement of the trauma system in Ohio. Officially, the TVC has morphed into assuming responsibility for the Leadership Component (Goal #1) of the [Ohio Trauma Framework: 2010](#). However, this workgroup has not met since August 2012.

As of April, 2012, the Ohio Trauma Committee is responsible for implementation of the 10 trauma goals. The progress of the ten workgroups is toward the designated objectives and measures of success. Ohio Trauma Committee members lead eight of the ten workgroups. Progress and reporting of these workgroups now constitute a significant portion of the Ohio Trauma Committee agenda.

Over the years, many organizations have provided much time and energy without compensation to further the development of the state-wide trauma system. The OSTNL has assumed responsibility for leading trauma goal #9 of education, which includes both the public and the medical community. The Trauma Registry Advisory Subcommittee (TRAS) is currently establishing a process where larger verified trauma centers would reach out to smaller facilities (trauma centers and non-trauma centers) to help develop expertise in the area of data collection (component of Trauma Goal #8). The Ohio Injury Prevention Partnership (OIPP) is incorporating Trauma Goal #2 aspects into their existing injury prevention initiative. Lastly, OHA provides leadership for disaster preparedness which is Trauma Goal #3 of the *Ohio Trauma Framework: 2010*.

Regional Trauma Systems

Regional trauma systems effectively promote trauma system development by increased participation of individuals within the region. In Ohio, EMS regions and regional trauma systems are not synonymous terms, each covering different territory. The map below summarizes the 10 EMS Regions with the ACS verified Ohio trauma centers and provisional centers.

Six regional trauma systems currently exist in Ohio, different than the 10 EMS regions listed in the map above. Each regional system has a different structure, composition, level of involvement and goals. Each regional trauma system has provided a synopsis which includes: 1) current organization and infrastructure, and 2) historical timeline. ODPS provided a list of participating hospitals within each of the regions and a map was developed for each region and included within the synopsis. All six regions have included both trauma centers and acute care facilities. This regionalization enables hospitals to meet state requirements to submit injury data to the OTR in a timely manner.

The six regional trauma systems along with pertinent information are listed below.

Central Ohio Trauma System (COTS)

- [COTS synopsis;](#)
- <http://goodhealthcolumbus.org/cots/>

Northeast Ohio Regional Trauma Network (NORTN)

- [NORTN synopsis](#)
- <http://arha.technologynow.com/ProgramsServices/NortheasternOhioRegionalTraumaNetwork.aspx>

Northwest Ohio Regional Trauma Registry (NORTR)

- [NORTR Synopsis](#)
- <http://www.hcno.org/disaster-trauma/nortr.html>

Northern Ohio Trauma System (NOTS)

- [NOTS synopsis](#)
- <http://www.northernohiotraumasystem.com/about/>

Southwest Ohio Regional Trauma System (SORTS)

- [SORTS synopsis](#)
- <http://www.gdaha.org/member-services-reports/committees/southwest-ohio-regional-trauma-system-committee>

Tri-State Trauma Coalition (TSTC)

- [TSTC synopsis](#)
- <http://www.gchc.org/disaster-trauma/trauma/registry/>

Of note, the regional trauma systems do not encompass all areas and / or hospitals within Ohio. Some hospitals are not members of a regional system even while physically located in that territory. Regional system development in Ohio is not established by legislative authority. Instead, it is developed by geography, outreach and hospital networks.

b. What is the method and frequency for communication with coalition members?

Communication continues to be a challenge and a major barrier within Ohio for coalition building and overall system development.

Trauma-related meeting dates, along with time and location are listed on the ODPS website calendar. The staff of the Office of Research and Analysis (ORA) within the EMS Division electronically distributes a notice along with attachments and previous minutes 1-3 days prior to the Ohio Trauma Committee meeting to committee members and those individuals that have expressed interest. As of January 2013, the most recent posting of the [Ohio Trauma Committee meeting minutes](#) is March 2012. Ohio Trauma Committee attachments and agendas are not made publically available on the ODPS website. Lastly, no structured mechanism is in place to consistently inform trauma constituents of new protocols or changes within the system.

The ODPS website is located at <http://ems.ohio.gov/index.stm>. Trauma-related information, minutes and reference material is sporadic, incomplete and not in one area for reference. For this document, much of the information was not available per the website. Upon request of the Ohio Trauma Committee (summer 2012), EMS Division staff developed a site where workgroups could have their meeting minutes / information posted, specifically for the purpose of cross reference and

team development. Currently, the website lacks reference materials in which to engage individuals and promote coalition development.

Lastly, [Ohio's Sunshine Law](#), directly effects trauma-related communication and productivity within Ohio. The Ohio Sunshine Law has 2 components: 1) the Open Meeting Law and 2) the Public Records Law. In very general terms, the Open Meeting Law requires all meetings of a public body to be open to the public at all times. As a note, the Ohio Revised Code (ORC) defines the term "meeting" as "any prearranged discussion of the public business of the public body by a majority of its members". Therefore, according to ODPS legal staff, this law is pertinent not only to the Ohio Trauma Committee but also to all workgroups tasked with implementing the *Ohio Trauma Framework: 2010*. Understanding that this law is designed to promote transparency, it unintentionally delays decision-making as it requires face-to-face meetings without the benefits of telecommunications. Coalition building across the state for trauma-related activities is therefore affected by the nature of this law.

Lastly, the OIPP of ODH electronically communicates on a weekly basis to members interested in injury prevention. This comprehensive [electronic communication tool](#), which is distributed weekly, outlines injury prevention articles / links and activities on the regional, state and national level. In addition, it outlines Ohio legislative updates specific to injury prevention. This electronic system can easily be forwarded to pertinent individuals when a specific topic arises. Specific information on the OIPP is available per their website at <http://www.healthyohiprogram.org/vipp/oipp/oipp.aspx>. A similar communication system would be a great benefit to trauma system communication and development.

Question 2: Describe how the trauma system leadership mobilizes community partners to improve the trauma system through effective communication and collaboration.

As described above and in other sections of this document, the EMS Division has the responsibility of serving as the core for trauma system development and regulation. The ORA provided the following list of various organizations that have some association with trauma system development:

- Alliance of Ohio Trauma Registrars
- Brain Injury Association of Ohio
- Governor's Council on People with Disabilities
- Health Forum of Ohio
- Ohio Ambulance & Medical Transportation Association
- Ohio Association of Critical Care Transport
- Ohio Association of Professional Firefighters
- Ohio Chapter of the American Academy of Pediatrics
- Ohio Chapter of the American College of Emergency Physicians
- Ohio Chapter of the American College of Surgeons
- Ohio Children's Hospital Association
- Ohio Dental Association
- Ohio Fire Chiefs' Association
- Ohio Hospital Association
- Ohio Nurses Association
- Ohio Orthopedic Society
- Ohio Osteopathic Association

- Ohio Society of Physical Medicine & Rehabilitation
- Ohio Society of Trauma Nurse Coordinators
- Ohio State Coroners' Association
- Ohio State Council Emergency Nurses Association
- Ohio State Medical Association
- Ohio State Neurological Society
- Central Ohio Trauma System
- EMS for Children (Ohio and national)
- Governors' Highway Safety Association
- National Association of State EMS Officials
- National EMS Information System
- National EMSC Data Analysis Resource Center
- National Highway Traffic Safety Administration, Office of EMS
- National Trauma Data Bank
- Northeastern Ohio Regional Trauma Network
- Northern Ohio Trauma System
- Northwest Ohio Regional Trauma Registry
- Ohio Department of Health
- Ohio Injury Prevention Partnership
- Ohio State Fire Marshal
- Ohio Strategic Transportation Safety Plan Committee
- Ohio Traffic Records Coordinating Committee
- Ohio Traffic Safety Office
- Southern Ohio Regional Trauma System
- Tristate Trauma Coalition

No structured program or method of communication is currently utilized to mobilize these community partners into a collaborative effort.

a. How has the community been approached to identify injury control concerns?

As outlined in the Prevention and Outreach section (pg. 90) and throughout this entire document, the OIPP has taken the lead on injury control concerns and prevention issues in Ohio. They have worked diligently to maintain a unified focus on injury prevention and to utilize data which focuses on the needs of Ohio. There is a frequent call out to the community that anyone who is interested can participate. The OIPP have sought guidance from a variety of participants in an effort to coordinate and facilitate injury prevention efforts carried out by many state and local partners. These collaborative efforts have clearly advanced the cause of injury prevention, even during a time of minimal funding.

Data has served as a foundation for the OIPP, as a significant portion of their injury prevention efforts are based on epidemiology and the public health model. The OIPP collaborates with various trauma programs, since all verified trauma centers are required by the ACS to participate in injury prevention efforts / programs. Their website is strong and provides vital, easily accessible information, which makes them valuable to the community.

b. What key problems has the community identified?

According to the Ohio Trauma Committee, no community issues to date have been brought forward to the Ohio Trauma Committee in an organized manner for resolution.

c. How do stakeholders bring system challenges or deficiencies to the attention of the lead agency?

No formal system is established for stakeholders to bring trauma-related issues, whether system challenges or outright deficiencies, to the Ohio Trauma Committee. EMS issues recognized in the community are usually directed to the EMS Board.

Lead Agency and Human Resources

Benchmark 201: Comprehensive state statutory authority and administrative rules support trauma system leaders and maintain trauma system infrastructure, planning, oversight and future development.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-201.1) = The legislative authority (statutes and regulations) plans, develops, implements, manages, and evaluates the trauma system and its component parts, including identification of the lead agency and the designation of trauma facilities.	1	Y Goal 1
(I-201.4) = The lead agency has adopted clearly defined trauma system standards (e.g., facility standards, triage and transfer guidelines, and data collection standards) and has sufficient legal authority to ensure and enforce compliance.	1	Y Goal 1

Benchmark 204: Sufficient resources, including financial and infrastructure related, support system planning, implementation, and maintenance.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-204.1) = The trauma system plan clearly identifies the human resources and equipment necessary to develop, implement, and manage the trauma program, both clinically and administratively.	1	Y Goal 1
(I-204.2) = Financial resources exist that support the planning, implementation, ongoing management of the administrative and clinical care components of the trauma system.	1	Y Goal 1
(I-204.3) = Designated funding for trauma system infrastructure support (lead agency) is legislatively appropriated. Note: Although nomenclature concerning designated, appropriated, and general funds varies between jurisdictions, the intent of this indicator is to demonstrate long-term, stable funding for trauma system development, management, evaluation, and improvement.	4	N
(I-204.4) = Operational budgets (system administration and operations, facilities administration and operations, and EMS administration and operations) are aligned with the trauma system plan and priorities. Examples: Full-Time Equivalents (FTEs) per population to support the infrastructure; costs to improve the communication system.	1	Y Goal 1
(I-204.5) = The trauma system plan includes identification of additional resources (both manpower and equipment) necessary to respond to mass casualty incidents.	1	Y Goal 1

Lead Agency and Human Resources within the Lead Agency

Pertinent History:

The EMS Board became the principle trauma agency for trauma system development when legislators assigned authority for the pre-hospital component of the Ohio Trauma System to the EMS Board by statute in 2000 (ORC §4765.04). The Trauma Committee which is an advisory body, reports to the EMS Board, but no agency authority over definitive trauma care or rehabilitation exists. Prior to enactment of Am, Sub. HB 138, multiple strategies and actions were attempted to promote trauma system legislation. Attached is a [timeline](#) which outlines the historical perspective of various significant events within Ohio trauma system development.

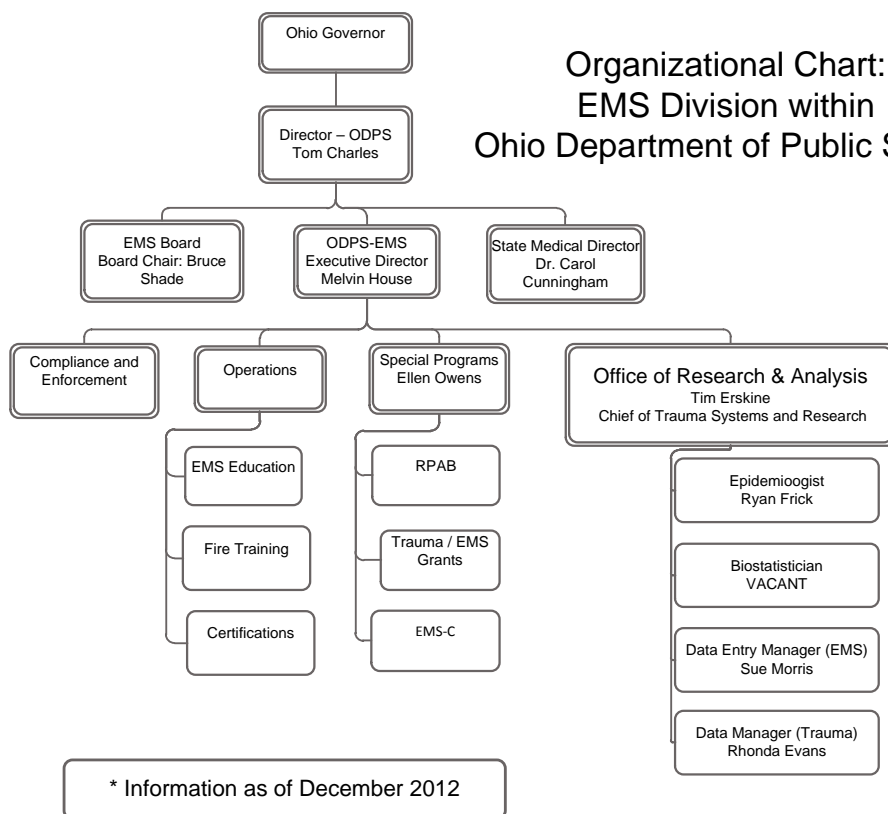

Question 1: Describe the number, position title, and percentage of full-time equivalency of all personnel within the lead agency or contract personnel who have roles or responsibilities to the trauma program.

Melvin House, Executive Director of the Emergency Medical Services (EMS) Division since June 2012, also serves as the chief executive officer of the EMS Board and works in collaboration with the EMS Board chair (voluntary, non-paid position). In the past 3 years, 3 Executive Directors have provided leadership and direction for the EMS Division and the staff within the Office of Research and Analysis (ORA). As a result of this frequent change in leadership and program direction, many trauma-related projects have had delayed implementation.

The ORA is administratively located within the Ohio Department of Public Safety (ODPS), specifically within the EMS Division. The ODPS is responsible for public safety through the following divisions: Bureau of Motor Vehicles, Emergency Management Agency, Emergency Medical Services, Homeland Security, Ohio State Highway Patrol, Investigative Unit and Office of Criminal Justice Services.

The organizational structure of ODPS and the ORA within the Ohio Executive Branch is as follows:

Organizational Chart: EMS Division within Ohio Department of Public Safety

The ORA staff is responsible for the execution of statutory responsibilities identified in ORC §4765, that relate to support of the trauma system. These responsibilities include Ohio Trauma Registry (OTR) (data management and reporting along with risk adjustment for all three modules: Trauma Acute Care Registry (TACR), Trauma Rehabilitation Registry (TRR) and Emergency Medical Services Incident Reporting System (EMSIRS), regional trauma triage guidelines and administrative support for committees (EMS Board, Ohio Trauma Committee, Trauma Registry Advisory Committee (TRAS), etc.).

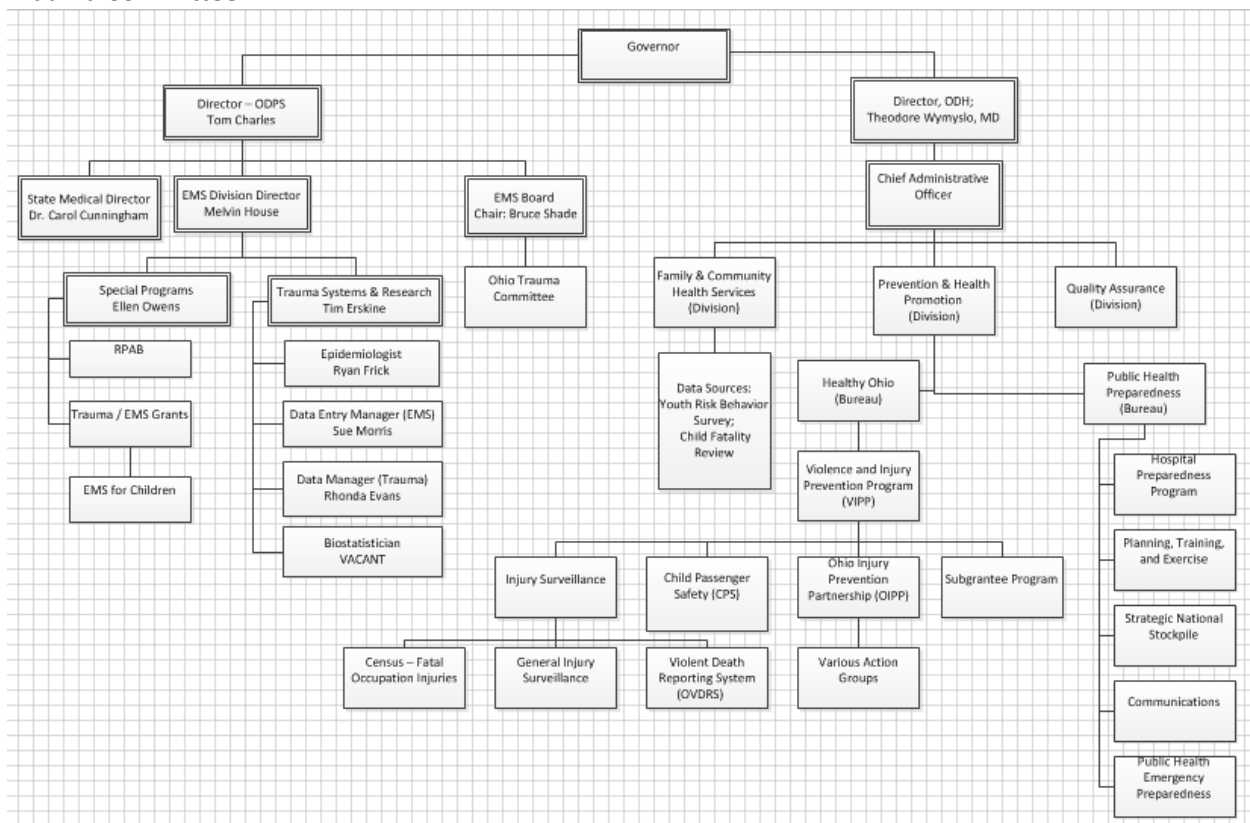

Currently, there are 5.0 trauma-related FTEs within the ORA, as outlined in the staffing diagram above. Historically, only 2.0 FTEs were allocated for trauma system development within ODPS. In August 2010, Nancie Bechtel RN, Executive Director of the Central Ohio Trauma System (COTS) and Co-chair of Trauma Registry Advisory Subcommittee (TRAS) developed a [white paper](#) outlining the need for additional FTEs for proper management and analysis of trauma registry data. With no action on the white paper by the EMS Board, concerned Ohio stakeholders approached legislative representative with this information, with the subsequent result of an additional 3.0 FTEs being allocated in 2010 to ODPS for trauma system development.

The following individuals are within the ORA. Tim Erskine, EMT-P is the [Chief of Trauma Systems and Research](#). The position is a 1.0 FTE with oversight responsibilities of 4 FTEs. Initially hired as the Trauma Data Manager in 2001, Mr. Erskine assumed his current position in January 2007. According to Mr. Erskine, 40% of the job is related to trauma, while the remaining 60% centers on injury data and research.

The following list of employees report to the Chief of Trauma Systems and Research:

- Ryan Frick, MPH, [Epidemiologist](#) (1.0 FTE); employed since 2012;
- [Biostatistician](#) position (1.0 FTE) – vacant; tentative posting scheduled for early 2013;
- Sue Morris, [Data Program Manager](#) (1.0 FTE) for EMSIRS; employed since March 2004;
- Rhonda Evans, [Trauma Data Manager](#) (1.0 FTE) for Trauma Registry; employed since January 2012.

The following organizational chart outlines the relationship between agencies within the Ohio Executive Branch that have trauma related areas of responsibility (ODH, ODPS) and the EMS Board and the Ohio Trauma Committee.

Question 2: Identify other personnel resources that support the trauma program activities of the lead agency (for example, epidemiology support from other units within the health department and public health interns).

There are other individuals within EMS Division that perform activities that support the lead trauma agency and trauma-related activities. A grants administrator (TBD; vacant due to retirement in Dec 2012) provides staff support for the Human Resource Committee which has oversight into the distribution of the EMS / Trauma grants (OAC §4765-5). Joe Stack, an ODPS staff member administratively supports the EMS-C program while the leadership of the Regional Physician Advisory Board (RPAB) is within the responsibilities of the state medical director (OAC §4765-3-02). Carol Cunningham, MD is the [State Medical Director](#) which supports both EMS and trauma-related issues. The job description for the state medical director is outlined in ORC §4765.03.

Question 3: Describe the adequacy of personnel resources available to the lead agency to sustain trauma program assessment, policy development, and assurance activities.

Before 2010, support for the lead trauma agency (LTA) and Ohio Trauma Committee consisted of 2 - 1.0 FTEs (Chief of Trauma Systems & Research and Trauma Data Manager). Initially, the limited number of personnel allowed only emphasis on the first phase (EMS) of trauma system development and the trauma registry. Eventually, with the lack of forward progress and the constant justification of understaffing, Ohio trauma system stakeholders successfully advocated for additional personnel. In 2010, an additional 3.0 FTEs were added to support the committee and both the EMS and trauma data registries. Currently 1 position is open, with the job description revised in 2013 to become a biostatistician position. However, even with the currently hired 4.0 FTEs, most of the energy spent on trauma-related tasks continues with an EMS focus. In addition, according to the Chief of Trauma Systems and Research, staff members are unable to lead or coordinate any committee, subcommittee or workgroup but are allowed to participate and take minutes. The current personnel have limited interaction with entities outside of the EMS boundaries, leading to a limited scope for trauma system development.

a. Identify impediments or barriers that hinder system development.

While progress has been slow over the years, there continues to be many opportunities for continued growth. In the state of Ohio, this progress depends on volunteer stakeholders that are dedicated to trauma system development. However, trauma-related efforts at the state level have been limited by authority constraints, structure, funding and staffing.

Authority constraints

In Ohio, no statutory authority exists over the entire trauma continuum of care. For more than a decade, the majority of actions have focused on the EMS component and the trauma registry, both of which are dictated by legislation. After the EMS phase of care or more specifically, when the patient reaches the hospital, the lead trauma agency has no authoritative responsibility over patient care, both acute care and rehabilitation. All initiatives after the EMS phase of care only exist within the context of a voluntary system of hospitals becoming ACS verified. Consequently, there is minimal integration of Ohio hospitals (i.e. clinical hospital care, performance improvement, outcome measures, etc.) with the EMS Board and the state trauma system.

Another authority constraint centers on the fact that regionalization has never been incorporated into Ohio legislation. Regional trauma systems do not have official representation or a seat on the Ohio Trauma Committee or EMS Board. Regional trauma systems, which vary greatly in their level of sophistication and action, operate independently. Some regions concentrate solely on trauma registry support, while others have added regional education and / or performance improvement to their repertoire. One regional trauma system has evolved into a complex program that has incorporated many aspects of trauma system development into their organizational structure. None of the regions interact in any formal capacity and there is no formal networking between the regional administrators. Then there is a distinct portion of Ohio that has no regional representation. More in-depth analysis of regional trauma systems provided within the Coalition Building and Community Support section (pg. 58) of this document.

The lead trauma agency is not explicitly defined within Ohio trauma legislation. While the EMS Board supports trauma, it clearly has many other areas of priority, such as EMS education, training

certification and disciplinary issues for fire / EMS personnel which are required by law. With all these other responsibilities, trauma is not a focus or a priority of the EMS Board. Even upon writing this document, a lack of consensus exists from EMS Board members on who is the lead trauma agency in the state of Ohio (i.e. EMS Board vs. Ohio Trauma Committee).

Structure

In reality, the Ohio Trauma Committee is an advisory committee and has minimal power in developing and implementing changes to the Ohio trauma system. Significant Ohio Trauma Committee actions require approval by the lead trauma agency, which is the EMS Board. Historically, trauma-related issues must be related to the EMS system or the trauma registry, with other issues not allowed by statutory authority. Interestingly, with the development of the *Ohio EMS 2015 Strategic Plan* and various trauma-related workgroups, the domain now extends beyond the EMS phase. It is unknown how much can actually be accomplished by these workgroups without statutory authority support.

Many silos exist within the various state agencies, which is a structural issue that hinders trauma system development. Injury prevention exists within the domain of the ODH. Trauma exists by statutory law within the ODPS. Ohio Hospital Association (OHA) has a Trauma Committee. Many voluntary groups exist, such as Ohio Society of Trauma Nurse Leaders (OSTNL), Alliance of Ohio Trauma Registrars (AOTR) and the Ohio chapter of the American College of Surgeons (ACS) Committee on Trauma. All of these committees exist and many have different views and direction related to trauma system development. Another example of the existence of silos is that resources, such as electronic data information, are frequently not optimally utilized between the various organizations. Currently, trauma-related data sources exist in various organizations, each independent and not linked together for optimal resource utilization.

Funding / Staffing

Funding issues continue to be a barrier to the development of the trauma system. The economic recession, with the subsequent stress on the state to decrease the budget, also hindered forward progress. According to the Chief of Trauma Systems and Research and at the time of writing this document, no budget exists for trauma system development within the ODPS. Consequently, most trauma-related actions or projects are met with lack of budget rationale as the reason for lack of forward progress.

Comprehensive trauma data is essential for many aspects of trauma system development. Many variables have hindered progress in Ohio with the following examples. A non-commercial trauma registry, developed by ODPS has been used since the inception of the registry. The EMS Division's Information Technology section is responsible for upgrading the registry to accommodate national data dictionary changes. Currently, the OTR is operating on the 2004 Ohio Trauma Data Dictionary (version 3), as the 2009, 2010 and 2012 data dictionary versions have not yet been reprogrammed at the state level. Even as many of the verified trauma centers have upgraded / revised their data collection, according to NTDB standards, they are unable to submit this revised data to the state. The elimination of the 48-hour rule for the registry is a positive step toward a comprehensive dataset. However, this recommendation was approved in July 2010 but to date; hospitals are unable to comply as the state database has not been reprogrammed to accept this additional data. At the time of writing, the purchase of a commercial trauma registry which has been pending since 2010, has been announced but is not yet operational.

In order to comply with trauma system evaluation, linkage of all 3 modules of the trauma database is essential. Probabilistic linkage software package and education was completed in 2004. To date, this technology has not been implemented by EMS Division staff. Impact of over-triage and under-triage to Ohio hospitals has been mandated by statutory authority since 2002; however, trauma registry changes (i.e. removal of the 48-hour rule) have not been implemented in order to accomplish this task. Validation of trauma data, especially in the acute care and rehabilitation sections has not been instituted. Lastly, in order for the Ohio trauma system to advance to the next level, confidentiality issues related to peer-review and system quality improvement will need to be addressed. Overall, the state holds a rich potential of EMS and trauma data that has not yet been validated and not fully transformed into useful information for guiding further policy development.

Trauma System Plan

Benchmark 203: The state lead agency has a comprehensive written trauma system plan based on national guidelines. The plan integrates the trauma system with EMS, public health, emergency preparedness and incident management. The written trauma system plan is developed in collaboration with community partners and stakeholders.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #	
(I-203.4) = The trauma system plan clearly describes the system design (including the components necessary to have an integrated and inclusive trauma system) and is used to guide system implementation and management. For example, the plan includes references to regulatory standards and documents and includes methods of data collection and analysis.	1	Yes	Goal 1

Trauma System Plan

Question 1: Describe the process for the development or revision of the trauma system plan.

In November 2007, the Ohio Society of Trauma Nurse Leaders (OSTNL) met to develop an assessment process for Ohio using the Model Trauma System Planning and Evaluation (MTSPE) / Benchmark, Indicators and Scoring (BIS) tools. At that time, the goal was to assess Ohio's current trauma system for strengths and weaknesses, as well as potential opportunities and threats for future development (SWOT analysis). A day-long retreat in March 2008, facilitated by OSTNL, led a wide range of Ohio stakeholders through the process of scoring Ohio's trauma system. More in-depth analysis is provided in the *Indicators as a Tool for System Assessment* section (pg. 22).

Following this analysis, the Ohio Trauma Committee organized a dedicated ad-hoc subcommittee (Trauma System Planning Subcommittee) whose purpose was to reorganize information gained from the MTSPE retreat into a functional trauma system plan. This committee was comprised of physicians, nurses, and hospital executives who began meeting in February 2009. During development of the new framework, trauma system plans from other states with advanced trauma systems were reviewed and incorporated as appropriate.

As a result of their evaluation, the Trauma System Planning Subcommittee produced a summary document: *A Framework for Improving Ohio's Trauma System* or often referred to as the [Ohio Trauma Framework: 2010](#). This document was approved by the EMS Board in October 2010 and includes the following key sections:

- Trauma system vision, values and goals;
- Trauma system introduction, including a broad history of trauma system development in Ohio;
- Trauma facts and system accomplishments;
- Summary of work leading to plan development;
- Trauma system plan.

The following key components of an integrated state trauma system were developed as goals within the Framework:

Trauma Goal 1: Leadership – Have a viable, active state lead agency with authority, responsibility and resources to plan, implement and evaluate an inclusive trauma system for Ohio.

Trauma Goal 2: Injury Prevention – Have a state trauma system that is an active partner in a state coordinated system for the reduction of injury-related morbidity and mortality.

Trauma Goal 3: Emergency/Disaster Preparedness – Have a trauma system prepared to respond to emergency and disaster situations in coordination with state disaster plans.

Trauma Goal 4: Pre-hospital Care – Evaluate and maintain guidelines specific to the transport of trauma patients that result in timely and safe delivery to trauma care.

Trauma Goal 5: Definitive Care – Acute Care Hospitals and Trauma Centers – Establish a statewide network of trauma centers, meeting minimum state standards for operation and provision of quality trauma care, in coordination with all other trauma system participants.

Trauma Goal 6: Definitive Care – Rehabilitation – Establish rehabilitation centers as active participants in Ohio’s trauma system, resulting in coordinated post-acute care for trauma victims.

Trauma Goal 7: Evaluation, Quality Management & Performance Improvement – Establish statewide and regional system evaluation, quality management, and performance improvement process.

Trauma Goal 8: Trauma System Registry Infrastructure – Evaluate and maintain an accurate and accessible injury data system, including a trauma registry, to support trauma system evaluation, performance improvement, public health planning, injury prevention, and outcomes research.

Trauma Goal 9: Professional Education and Public Information – Integrate trauma education and public information into all aspects of the trauma system.

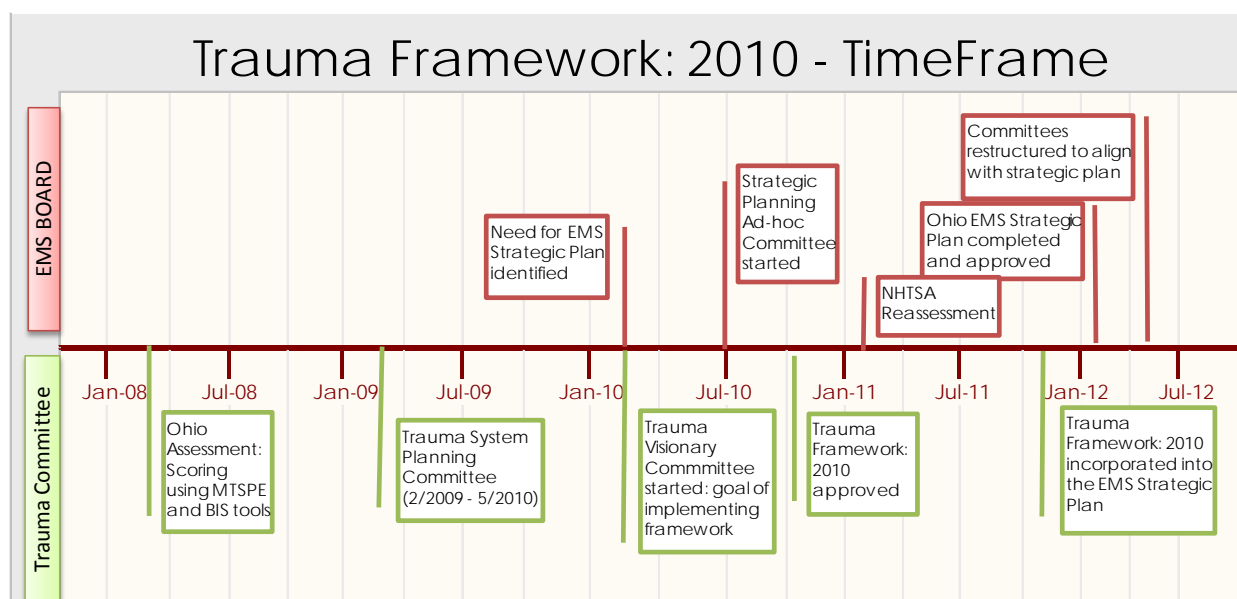

Trauma Goal 10: People with Functional Needs – Ensure that special needs and high-risk populations are identified and their specific needs accommodated.

Concurrent to development of the *Ohio Trauma Framework: 2010*, three additional activities directly affected the forward progress of the trauma system plan. In June 2010, the EMS Board developed a committee, the Trauma Visionary Committee (TVC), to specifically address issues related to implementation of the trauma plan. The TVC membership consisted of 5 EMS Board members, 5 Ohio Trauma Committee members and 2 ad-hoc members.

In February 2011, a National Highway Traffic Safety Administration (NHTSA) Tactical Team Re-assessment occurred, with the purpose of evaluating the state of EMS in Ohio and measure ongoing progress since the previous assessment (November 2001). This NHTSA report also validated weakness within the Ohio trauma system.

The last factor in the development of trauma system plan was the identified need for an EMS Board Strategic Plan. Consequently, an EMS Board Strategic Planning Ad-hoc Committee was established for development of long-term and short-term goals, based on the NHTSA report and mainly related to EMS issues. At that time, the Ohio Trauma Committee intervened and recommended the inclusion of the Ohio Trauma Framework: 2010 into the strategic plan.

Synopsis of trauma system plan development outlined below and developed by the PRQ authors in order to clarify order and timeframe of development.

Between 2009 and 2010, emphasis continued to be placed on trauma system development from a variety of sources. The Trauma System Planning Subcommittee quickly realized work on the trauma framework could continue indefinitely so as to develop a perfect plan. Therefore, in 2011, the Trauma System Plan Subcommittee acknowledged that the *Ohio Trauma Framework: 2010* was not in final / perfect form, had incomplete sections (i.e. Timeframe, Leadership, Partnership and Funding) and Measures of Success were not as succinct and defined as originally anticipated. However, the framework was developed as a guide with the purpose of being a dynamic and changeable document as progress continued. Therefore, the Ohio Trauma Committee chose to move forward in the best interest of increased integration with the EMS Board concepts and strategic plan.

Accordingly, in January 2012, the entire *Ohio Trauma Framework: 2010* document was incorporated as one of 11 strategic goals of the *Ohio EMS 2015 Strategic Plan* which was approved by the EMS Board. At that time, all committees of the EMS Board, except for the Ohio Trauma Committee which was legislatively mandated, were permanently disbanded. This provided the opportunity to re-organize the EMS Board Committee structure, making the committees parallel with the goals of the newly

implemented *Ohio EMS 2015 Strategic Plan* and allowing for improved utilization of EMS Division staff. As appropriate as this action was, the re-organization process resulted in a slowing of progress for many months in order to assign new chairs and allow for a learning curve for multiple new participants.

In the spring of 2012, the *Ohio Trauma Framework: 2010* section of the *Ohio EMS 2015 Strategic Plan* was subdivided into the following 10 trauma specific goals /workgroups with leadership of each workgroup determined. All of the workgroups report to the Ohio Trauma Committee and subsequently, to the EMS Board.

Trauma Goal 1:	Leadership – Steve Steinberg, MD
Trauma Goal 2:	Injury Prevention – Ohio Injury Prevention Partnership; ODH
Trauma Goal 3:	Emergency/Disaster Preparedness Plan – Carol Jacobson, OHA
Trauma Goal 4:	Pre-hospital Care - John Ross
Trauma Goal 5:	Definitive Care: Acute Care Hospitals and Trauma Centers – Michael Winthrop
Trauma Goal 6:	Definitive Care: Rehabilitation – Greg Nemunaitis MD
Trauma Goal 7:	Evaluation, Quality Management & PI–Nancie Bechtel RN
Trauma Goal 8:	Trauma System Registry Infrastructure – Deb Myers RN
Trauma Goal 9:	Professional Education and Public Information – Kathy Haley RN
Trauma Goal 10:	People with Functional Needs – Kitty Hevener

As these workgroups were only established in the spring of 2012, teamwork and accomplishments from these groups are only beginning. Many of the actions and measures of success within these goals are based on the continuum of trauma care, which extend from initial injury through rehabilitation. Historically in the area of Ohio trauma system development, statutory authority and influence from the EMS Board has only extended through the EMS phase of care and to the trauma registry. Concern exists among trauma leadership on whether future actions can be implemented, especially when these initiatives overstep the EMS boundary established by statutory authority.

a. Include the role of advisory and stakeholder groups in the process.

Throughout the history of trauma system development in Ohio, stakeholders have played a crucial role. Without Ohio's active constituents, the system would not exist as it is today. ODPS is required to conduct open meetings and obtain public input on decisions. At the March 2008 retreat (MTSPE evaluation), stakeholders from across the state were invited to attend. Attendance at this meeting included: Ohio Trauma Committee members (19 of 25), Ohio Trauma Committee liaisons (EMS Board, ODH), the State EMS Medical Director, ODPS staff (Public Information Officer, Chief Trauma Systems and Research, Legal Counsel, and Trauma Data Analyst). Additional stakeholders included: ODH representing the Injury Prevention Program, the Ohio Emergency Management Agency, the Ohio Fire Chiefs Association, the Ohio Hospital Association, the Ohio Ambulance and Medical Transportation Association and the OSTNL. As this was a consensus conference, input was obtained from all participants.

Once the *Ohio Trauma Framework: 2010* was drafted, a system of open forums and comments were solicited (July 2010) from the various stakeholders who had previously participated. These comments and suggestions were reviewed by the committee and incorporated into the document as appropriate.

Additional dialogue with constituents is anticipated in the future with the continual development of the trauma system plan in Ohio. Information that is obtained from this consultative visit by the ACS will be an additional and crucial tool that will also be used to guide future direction and interaction with stakeholders.

Question 2: Is there ongoing assessment of trauma resources and asset allocation within the system?

To date, no assessment of trauma resources and asset allocation within the trauma system has occurred in the state of Ohio. The EMS Board may have some concept on EMS resources that are needed, specifically based on the Priority 1 grant applications; however, details are currently not available for this document. The ultimate goal would be to develop a statewide repository of information that could be maintained on an ongoing basis and would be used within strategic planning.

Within Trauma Goal #1 of the *Ohio Trauma Framework: 2010*, one of the strategies is that a formal assessment of the needs of the various constituencies (i.e. media, public officials, general public, insurance providers and medical community) will be completed. More specifically, this workgroup has the responsibility of developing a needs assessment of the trauma system. Initial information related to the PRQ from the ACS report will provide some information on trauma resources and asset allocation; however this aspect will fall incomplete of a providing a comprehensive needs assessment.

Trauma Goal #3 of the *Ohio Trauma Framework: 2010* specifically address the state's ability to respond to disasters whether natural or man-made. Currently, at the state level, the Ohio Emergency Management Agency (EMA) manages all disaster related events and the ODH manages public health emergencies with both of these agencies working closely together. In 2010, each region in the state conducted an assessment of items available in the regional cache to place in a statewide database. The regional coordinators have the ability to request items to be shared between regions during an event. Annually, hospitals and county Emergency Management conduct a Hazard Vulnerability Assessment (HVA). The information gathered from the assessments is combined into a Regional Healthcare HVA. Purchasing decisions as well as gaps in planning can be identified based on the results. None of these assessments are legislated.

Beginning in March 2007, and at least once every two years thereafter, all verified trauma centers in Ohio confidentially provide information to ODH describing their preparedness and capacity to respond to disasters, mass casualties, and bioterrorism (ORC §3701.072; OAC §3701-3-16). Submitted information includes: the population of the region, a copy of existing emergency response plans, a copy of the plan that documents management when the capacity of center is exceeded, evidence of participation in disaster exercises, and the surge capacity process. In addition, trauma centers must submit on dates specified by ODH Director: number of registered beds; number of staffed beds ; number of critical care beds by category including adult, pediatric, and neonatal intensive care beds; minimum and maximum number of staffed critical care beds by category including adult, pediatric, and neonatal intensive care beds; number of operating room beds; minimum and maximum number of staffed operating room beds; minimum and maximum number of staffed emergency department beds ; the number of ambulatory and non-ambulatory patients that can be decontaminated per hour; minimum and maximum number of staffed burn beds; number of mechanical ventilation devices on site; and number of staffed negative air flow rooms available for the entire hospital and the emergency department. This collection of information may not be required within statutory authority in the near future.

Question 3: Describe the process used to determine trauma system standards and trauma system policies.

In Ohio, trauma system “standards” consist of five sections of trauma system rules that have been adopted by the ODPS. These sections include: 1) EMS committee / subcommittee structure, 2) pre-hospital Regional Physician Advisory Board (RPAB), 3) the registry system, 4) trauma triage criteria and 5) ACS verification as criteria for determining trauma hospitals.

Committee / subcommittee structure centers on the hierarchy for committee development and the authority structure of who makes decisions regarding trauma care. A second section centers on the RPAB, which is a regional advisory board consisting of physicians who specialize in EMS care and the subsequent structure, responsibilities and authority. RBAP regions review their trauma triage guidelines every three years with submission to the EMS Board if an amendment is required. One example of revision is the development of the geriatric triage component which led to revisions in the trauma triage rules in 2008. A third section centers on the registry information, specifically required reporting, risk adjustment, submission of data and failure to report. In addition, the Trauma Registry Advisory Committee (TRAS; revised to Workgroup #8) monitors national standards / trends related to trauma registry data collection and recommends changes. Trauma triage rules outline definition and determination of a trauma patient. The EMS Board reviews the trauma triage rules every three years for appropriateness. Lastly, verification by the ACS is mandated for a hospital to be considered a trauma center in Ohio.

The EMS Board is statutorily created and is authorized to promulgate rules. It continues to be responsible for the promulgation of rules and regulations pertaining to the development of the EMS and trauma system. As with all state rules, these are written in conjunction with the regulated community and any member of the public who provides input. The process involves review by the Joint Committee on Agency Rule Review (JCARR), a bicameral legislative body. New administrative rules can only be developed within the five areas which are allowed by statutory authority (i.e. EMS Board / trauma committee structure, RBAP, the trauma registry system and trauma triage protocols).

Ohio’s trauma system has few written policies and those that exist, focus on trauma registry reporting. According to the Chief of Trauma Systems and Research, no policies exist on the specifics of patient care or system development.

Regional Standards

As each regional trauma system is unique with different areas of focus and goals, variability exists on the development of regional trauma standards. These standards are voluntary and not supported by statutes. None of these trauma standards are recognized by the state trauma system.

Central Ohio Trauma System ([COTS](#)) has assumed leadership in trauma system standards and trauma system policies development. However, this influence is only pertinent for the central Ohio region. Assuming that policies are defined as a set of principles, rules and guidelines, COTS provides a forum for stakeholders to discuss system wide issues related to patient care to establish regional processes that are signed off by hospital CEOs, trauma surgeons, fire chiefs and health commissioners that directly improve the trauma and emergency services provided to patients in that region. Examples of this include the Emergency Patient Transport Plan and EMS patient destinations at Multiple-Casualty & Mass-Casualty Trauma Scenes. Special needs are addressed in the same manner and have resulted in plans such as the Central Region Burn Surge Disaster Plan, Pre-hospital Therapeutic Hypothermia for

Sudden Cardiac Arrest Victims, and regional EMS guidelines for activation of the Surgical Emergency Response Team.

Areas of emphasis for the Tri-State Trauma Coalition (TSTC), the regional system in the Cincinnati area, are in the areas of trauma registry education and disaster preparedness.

The Northern Ohio Trauma System (NOTS) which only began in January, 2010, involves hospitals affiliated with MetroHealth system. Goals for the NOTS include trauma registry, regional protocol development and education. The NOTS Protocol Committee is working toward standardization of care between the 3 trauma centers within the NOTS system with a blunt splenic protocol recently completed. Future projects include standardizing clinical protocols.

Southern Ohio Trauma System (SORTS), a committee within the Greater Dayton Area Hospital Association, has primary focus on trauma registry and reviewing select cases for performance improvement purposes. To date, no regional protocols are noted on their website.

The major areas of focus for Northeast Ohio Regional Trauma Network (NORTN), which represents the Akron region, are trauma registry, injury prevention and education. Protocols and standard development is not a part of their regional system.

Northwest Ohio Regional Trauma Network (NORTR), which began in 1999 and represents the northwest Ohio region, has a focus on data / trauma registry. Protocols and policies produced from that region are related to the operations of the trauma registry such as data submission deadlines, and late data.

a. How are they reviewed and evaluated?

Current trauma / EMS rules are reviewed by ODPS every five years to assess if they should be rescinded, amended, or continued without change. Evaluating the trauma system standards is much more difficult without a specific process identified and limited to only the EMS aspect of care.

b. What standards and policies exist for special populations, including rural and frontier regions.

Ohio trauma triage guidelines, established by expert opinion, exist for the geriatric and pediatric population. These guidelines serve as a baseline for regional trauma triage and can be escalated if requested by the region and approved by the EMS Board. [Pre-hospital pediatric standards of care](#) exist with most recent revision in January 2012. These [trauma triage guidelines](#) are not mandatory but meant to assist in the development of local protocols.

Ohio does not have any "frontier" regions as determined by census definitions, but there are certainly "rural" areas, most notably Appalachia and the northwest section of Ohio. See <http://www.oache.org/about/appohio.php> for a map developed by the Ohio Appalachian Regional Commission. The EMS Pinpoints (attachment from EMS section (pg. 101) of this document) shows the existence of EMS units throughout both Appalachian counties and northwest Ohio. At this time, specific standards and policies for the Appalachian community do not exist.

c. **How are specialized needs addressed, including burns, spinal cord injury, traumatic brain injury, and re-implantation?**

The state of Ohio does not have a statewide plan for traumatic brain injury (TBI), spinal cord injury (SCI) or re-implantation. Each hospital has its own policy to address patient care once received by EMS.

Under the trauma legislation (HB 138) burn patients are to be taken to appropriate burn care facilities. The America Burn Association (ABA), in conjunction with the ACS, performs verification of burn centers. Currently, in Ohio, there are 6 ABA verified burn centers, plus 2 non-verified centers. There is a state burn disaster plan, developed by Ohio Hospital Association (OHA). Transfer agreements between verified burns centers are a part of the disaster plan. The 6 ABA verified burn centers are located in Akron, Cleveland, Columbus and Cincinnati.

System Integration

Benchmark 203: The state lead agency has a comprehensive written trauma system plan based on national guidelines. The plan integrates the trauma system with EMS, public health, emergency preparedness, and incident management. The written trauma system plan is developed in collaboration with community partners and stakeholders.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-203.7) = The trauma system plan has established clearly defined methods of integrating the trauma system plan with the EMS, emergency, and public health preparedness plans.	1	Y Goal 1

Benchmark 208: The trauma, public health, and emergency preparedness systems are closely linked.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-208.1) = The trauma system and the public health system have established linkages, including programs with an emphasis on population-based public health surveillance and evaluation for acute and chronic traumatic injury and injury prevention.	2	Y Goal 2
(I-208.2) = The incident management and trauma systems have formal established linkages for system integration and operational management.	1	N

System Integration

Question 1: What is the trauma system's collaboration and integration with EMS, public health, and emergency management?

The Ohio trauma system is well integrated into public safety and EMS, as it structurally exists within the Ohio Department of Public Safety (ODPS). The EMS Board is the principle trauma agency and, as such, is responsible for promoting trauma care within the EMS phase. Integration is strong within public safety and continues into the area of disaster preparedness at the state level.

The Ohio Department of Health (ODH) espouses a strong public health approach to injury prevention as it works to reduce the burden of injury throughout the entire state. The ODH utilizes data to determine highest needs in the state and provides various strategies to achieve documented goals. See Injury Epidemiology section (pg. 9) of the document for further details and [Burden of Injury in Ohio: 2000 - 2010](#) publication. The trauma system exists in a sister public agency; however, there is some integration between the two organizations. An ORA staff member participates on Data Action Group within the OIPP. In addition, an injury prevention representative from ODH functions as a liaison to the Ohio Trauma Committee and provides injury updates, as needed.

At the state level, there is no mechanism for interaction and coordination of the current regional trauma systems. Some regional trauma systems integrate with community health programs and mobilize various community partnerships; however, such interaction is inconsistent among the regions and without integration at the state level.

a. Prevention programs

Application of injury prevention activities is sporadic across the state. The OIPP seeks to involve a broad membership; however not all trauma centers or acute care hospitals participate. Trauma centers are required to participate in injury prevention activities and education, but can choose to develop their own programs or utilize programs already developed at the state or national level. The ODH developed a variety of programs for trauma centers, health departments, pre-hospital personnel and any citizen of Ohio who requires injury prevention information. ODH has encouraged and directed building of these programs on public health principles such as collaboration, needs assessment and implementation of best practice (<http://www.healthyohioprogram.org/vipp/oipp/oipp.aspx>).

Local EMS can and do undertake injury prevention activities. Reports of these activities are anecdotal and no known statewide tabulation of them exists.

b. Mental health

There has been no formalized statewide integration between trauma systems and the mental health services in Ohio. Integration with mental health in Ohio remains a need. Again, as the system grows, this connection remains an opportunity for system enhancement.

c. Social services

There has been minimal integration at the state level between trauma systems and social services, except in the area of the Child Fatality Review (CFR), which is housed within ODH. An increased relationship with social services would benefit the larger picture of trauma system development.

Issues of child abuse and domestic violence are being addressed at the annual Association of Ohio EMS meeting in 2013. However, it is unknown how EMS interacts with either social services or police, nor how they fit into mandatory reporting laws.

d. Law enforcement

There has been minimal integration between trauma services and law enforcement at the state level in Ohio, except in the area of highway safety patrol and efforts to decrease unsafe driving practices.

e. Child protective services

This has not been an area of emphasis except in limited injury prevention efforts and the CFR. Opportunities for future integration at the state and local level remain.

f. Public safety (such as, fire, lifeguard, mountain rescue, and ski patrol)?

Public safety and the trauma systems are both housed with the ODPS. It is assumed that collaboration and integration exists between the divisions; however, there are no indications from the Ohio Trauma Committee minutes that this occurs. Public safety representatives, within the profession of fire and / or EMS, hold a seat on the EMS Board and such, are voting members.

Financing

Benchmark 204: Sufficient resources, including financial and infrastructure related, support system planning, implementation, and maintenance.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-204.2) = Financial resources exist that support the planning, implementation, and ongoing management of the administrative and clinical care components of the trauma system.	1	Y Goal 1
(I-204.3) = Designated funding for trauma system infrastructure support (lead agency) is legislatively appropriated. Note: Although nomenclature concerning designated, appropriated, and general funds varies between jurisdictions, the intent of this indicator is to demonstrate long-term, stable funding for trauma system development, management, evaluation and improvement.	4	N
(I-204.4) = Operational budgets (system administration and operations, facilities administration and operations, and EMS administration and operations) are aligned with the trauma system plan and priorities. (Ex. FTE's per population to support the infrastructure; costs to improve the communication system).	1	Y Goal 1

Benchmark 309: The financial aspects of the trauma systems are integrated into the overall performance improvement system to ensure ongoing fine-tuning and cost-effectiveness.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-309.1) = Cost data are collected and provided to the trauma system registry for each major component including prevention, prehospital, acute care, all-hazards response planning, and rehabilitation.	1	Y Goal 8
(I-309.2) = Collection and reimbursement data are submitted by each agency or institution on at least an annual basis. Common definitions exist for collection and reimbursement data and are submitted by each agency.	1	Y Goal 8
(I-309.3) = Cost, charge, collection, and reimbursement data are aggregated with other data sources including insurers and data system costs and are included in annual trauma system reports. Note: "Outside" financial data means costs that may not routinely be captured in trauma center or registry data, for example, transportation, communications, training, infrastructure, and the overall cost of readiness.	1	Y Goal 8

(I-309.4) = Financial data are combined with other cost, outcome, or surrogate measures, for example, years of potential life (YPLL), quality-adjusted life years (QALY), and disability-adjusted life years (DALY); length of stay, length of ICU stay, number of ventilator days; and others, to estimate and track true system costs and cost-benefits.	1	Y	Goal 7
--	---	---	--------

Financing

Pertinent History:

Historically, the EMS / Trauma fund was expanded with enactment of Sub. Senate Bill 138 of the 123rd Ohio General Assembly (2000) and is used solely to support the EMS / Trauma Grant Program. The EMS / Trauma fund is supported by Ohio seat belt fines. Goals of the EMS / Trauma fund includes: 1) enhance EMS service in Ohio by providing funding for training and equipment to under-supported EMS organizations in Ohio; and 2) fund trauma research in Ohio. Distributed yearly, the EMS Board has the right to establish priorities in the types of grant project eligible for funding and to determine the portion of grant funds that will be allocated for one or more of the priorities listed in ORC §4765.06. New legislation, House Bill 128 of the 129th Ohio General Assembly, created two additional funding priorities (Priority 5 and Priority 6) for the Ohio EMS / Trauma Grant Program. See Research section (pg. 176) of this document for details.

Multiple discussions have occurred in various venues regarding the long term funding source of seatbelt fines. With the overall increase in seatbelt compliance and a decrease in seatbelt fines, there is concern on the stability of that funding source. According to the *Ohio EMS 2015 Strategic Plan* and various EMS Board minutes, there is a high priority for the Emergency Medical (EMS) Division of ODPS and the EMS Board is to establish a stable and on-going funding source.

Question 1: How does the lead agency track and analyze internal trauma system finances?

Chief of Trauma Systems and Research provided the following information of “NA” to all aspects of Question 1 (including (a), (b) and (c)).

a. How does the advisory committee participate in the financial review process?

NA

b. How frequently are trauma system financial reports published?

NA

c. Which financial data are reported (lead agency data, health facility data, or both)?

NA

Question 2: What is the lead agency’s budget for the trauma system?

Chief of Trauma Systems and Research reports the state trauma budget and operations budget is zero. A request was made to the Executive Director EMS Division for additional budget information; however, information was not provided. At the time of the submission of this document, no other publicly available information on financing was identified.

According to the Chief of Trauma Systems and Research, occasional grants, including NHTSA Highway Safety Grants and the federal trauma system development grants were obtained until 2005. However, these funds were delegated for special projects not operational programs.

Question 3: What is the source of funding available to support the development, operations, and management of the trauma system (for example, general funds, dedicated funds)?

Once again, the Chief of Trauma Systems and Research noted that this answer should be reported as “NA” as there is no funding source for the management of the Ohio trauma systems.

Question 4: What financial incentives and disincentives exist to encourage trauma center participation in the trauma system?

There are no financial incentives or disincentives in the state of Ohio to encourage trauma center participation in the trauma system. The only financial disincentives are those that are incurred by each trauma center to run the on-going trauma program and to undergo the every three-year ACS review. Some regional trauma systems have fees for participation.

a. Specifically include arrangement for uncompensated and undercompensated care.

Am. Sub. Senate Bill 98 of the 119th Ohio General Assembly (1992) stated that total amount of uncompensated adult and pediatric trauma care provided annually by each facility that provides care to trauma victims should be included in data collection. Trauma registry data has not been able to provide comprehensive data on the topic of uncompensated care. Therefore, there is no special mechanism for uncompensated care in Ohio at this time.

Prevention and Outreach

Benchmark 207: The lead agency informs and educates state, regional, and local constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-207.2) = The trauma system leaders (lead agency, advisory committees, and others) inform and educate constituencies and policy makers through community development activities, targeted media messaging, and active collaborations aimed at injury prevention and trauma system development.	2	Y Goal 1

Benchmark 304: The jurisdictional lead agency, in cooperation with other agencies and organizations, uses analytic tools to monitor the performance of population-based prevention and trauma care services.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-304.1) = The lead agency, along with partner organizations, prepared annual reports on the status of injury prevention and trauma care in state, regional, or local areas. Note: Annual reports may be distributed electronically rather than, or in addition to, printed copies.	1	Y Goal 1

Benchmark 306: The lead agency ensures that the trauma system demonstrates prevention and medical outreach activities within its defined service area.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-306.2) = The trauma system is active within its jurisdiction in the evaluation of community-based activities and injury prevention and response programs.	1	Y Goal 2
(I-306.3) = The effect or impact of outreach program (medical and community training / support and prevention activities) is evaluated as part of a system performance improvement process. (Note: "Evaluation" implies both informal evaluation processes and more structured research.)	1	Y Goal 7

Prevention and Outreach

Pertinent History:

In November 2000, Amended Substitute House Bill 138 of the 123rd General Assembly authorized a statewide trauma system. Section 5 of that legislation required the Ohio Department of Health (ODH) to form a multi-disciplinary commission on the prevention of injury with particular emphasis on the pediatric and geriatric populations in Ohio. Following its deliberations, the Commission released its [Injury Prevention Commission Report](#) detailing the status of injury in Ohio and recommending future prevention activities. The report examined motor vehicle traffic crashes, falls, drowning and intentional injuries, including suicide, homicide and family violence. The consensus-based process used by the commission members to develop this report led to the identification of common, overarching themes. These themes provided the foundation for the core recommendations of this report and include.

Theme 1: Injuries are costly. Injury prevention saves lives and money.

Recommendations: A) Seek creative and collaborative solutions for funding injury prevention activities. B) Provide state funding that adequately addresses injury – a leading cause of morbidity and mortality in Ohio.

Theme 2: Improved injury surveillance efforts and program evaluation are needed.

Recommendations: A) Improve injury surveillance efforts. B) Promote the use of injury prevention guidelines and evaluation measures that are based upon current evidence-based research and literature.

Theme 3: Improved statewide coordination of programs is needed.

Recommendations: A) Continue to develop leadership and infrastructure to identify, promote, and respond to injury prevention needs at the state and local level. B) Coordinate and link EMS, trauma care and public health agencies with other injury prevention programs at the national, state and local levels to increase collaboration. C) Promote the use of community prevention programs – that are multifaceted, evidenced-based and use effective evaluation by public health agencies, trauma centers, emergency medical services and other programs.

Theme 4: Injuries disproportionately affect those living in poverty and the young and the old.

Recommendations: A) Promote injury prevention programs that focus on populations most at risk based on injury surveillance. Children and older adults living in poverty should be high priority.

Theme 5 : Alcohol use is an important risk factor for injury.

Recommendation: A) Fund and support initiatives that address prevention of alcohol and other drug related injuries. These initiatives should include education, legislation, coalition building, and screening and intervention by health care professionals.

Theme 6: Legislation can be an effective strategy for preventing injuries.

Recommendation: A) Enact or strengthen state and local legislation and policies which lead to the prevention of injuries.

In 2001, ODH also participated in a State and Territorial Injury Prevention Directors' Association (STIPDA) State Technical Assessment Team (STAT). The visit resulted in a recommendation for injury prevention

infrastructure within ODH. Since that time, there has been focused effort and growth toward increasing the internal capacity of ODH relative to injury prevention.

The Violence and Injury Prevention Program (VIPP) at the ODH is housed within the Bureau for Health Promotion and Risk Reduction in the Office of Healthy Ohio. The overall objective of the VIPP is to develop a comprehensive injury prevention program for the State of Ohio. Program objectives include:

- To coordinate surveillance systems that collect injury data.
- To assess the burden of injuries and violence and communicate that information for the purpose of action.
- To promote evidence-based, injury prevention interventions for at-risk populations.
- To coordinate and collaborate with partners in building program infrastructure.
- To encourage the adoption of evidence-based policies and programs that lead to the prevention of injury and violence.
- To provide technical support and training as needed.

In addition, in 2007, resulting from recommendations in the Report from the Ohio Commission on the Prevention of Injury, the Ohio Injury Prevention Partnership (OIPP) was created to review and analyze Ohio's injury data to determine injury priority areas. The OIPP represents a group of professionals encompassing a broad range of agencies and organizations concerned with addressing the prevention of injury. The OIPP is coordinated by the ODH with funds from the CDC. They advise and assist ODH and ODH's VIPP with establishing priorities and future direction regarding injury and violence prevention activities and policies in Ohio.

In 2010, ODH began the process of developing a state health assessment and state health improvement plan (SHIP). This is a statewide health plan conducted in collaboration with a wide-range of stakeholders and partners. Injury is one of the 10 priority areas selected for the SHIP. The goal of the injury priority is to promote public awareness, policy, programs and data that demonstrate that injury and violence are preventable. The OIPP's Leadership Team has been tasked with providing additional input regarding the injury priority area and has developed a [draft of strategies](#) to be implemented.

Question 1: List organizations dedicated to injury prevention within the region and the issues they address (for example, MADD, SADD, SafeKids Worldwide, Injury Free Coalition for Kids, American Trauma Society, university-based control programs).

Local Health Department Injury Prevention Programs	Primary Focus/Injury Prevention Activities
Allen County Health Department	Family Violence Prevention Team
Ashtabula County Health Department	Senior Driving Safety
Athens City/County Health Department	Sexual Assault Prevention Program, Child Abuse Prevention
Belmont County Board of Health	Child Passenger Safety Program
Brown County Health Department	School & Playground Safety Inspections
Carroll County General Health District	SafeKids Chapter, Ohio Buckles Buckeyes - Child Passenger Safety Program, sponsored by Carroll County HD & ODH
Champaign County Health District	Child Passenger Safety Program

Clermont County General Health District	Senior Safety Program funded by ODH (Fall Prevention), Safe Communities
Columbus Public Health	Child Injury Prevention, SafeKids
Columbiana County Health Department	Child Passenger Safety Program - Ohio Buckles Buckeyes
Crawford County General Health District	Child Passenger Safety Program - Ohio Buckles Buckeyes
Cuyahoga County Board of Health	Safe Routes to School - ODOT, Youth Risk Behavior Survey, Motorcycle safety
Darke County General Health District	Healthy Homes Healthy Environment Program
Delaware County General Health District	Fall Prevention, SafeKids, Child Passenger Safety, Bicycle Safety, Safe Communities
Erie County Health Department	Healthy Homes
Fairfield County	SafeKids, Water safety, Bicycle Safety, Pedestrian Safety, ATV safety, Youth Injury Prevention Project, Child Passenger Safety
Franklin County	SafeKids Chapter, Ohio Buckles Buckeyes, Child Passenger Safety
Franklin County Child Fatality Review	Child Injury Prevention
Fulton County	Child Passenger Safety, Bicycle Safety, Water Safety, Fire Safety, Poison Prevention, Halloween Safety
Greene County	Healthy Lifestyles Coalition, Safe Communities
Hamilton County	Fall prevention
Hancock County	Child Passenger Safety - Ohio Buckles Buckeyes
Henry County	Child Passenger Safety
Hocking County	Child Passenger Safety
Huron County	Child Passenger Safety, Child Injury Prevention, SafeKids, CDC Injury Prevention
Jefferson County	SafeKids - Child Passenger Safety
Lake County	Suicide Prevention, Child passenger Safety
Lawrence County	Child Passenger Safety
Licking County	Child Passenger Safety, Safe Communities
Lorain County	Child Abuse Prevention, Youth Drug & Alcohol Use Prevention
Lucas County	SafeKids - Bicycle Safety, Child Passenger Safety, Burn and Fire Prevention, Poison Prevention
Madison County	Child Passenger Safety - Ohio Buckles Buckeyes
Marietta City Health Department	SafeKids
Marion County	Creating Healthy Communities Coalition
Medina County	Child Passenger Safety
Mercer County	Child Passenger Safety

Miami County	Child Passenger Safety
Monroe County	Child Passenger Safety - Ohio Buckles Buckeyes
Morrow County	Child Passenger Safety - Ohio Buckles Buckeyes, Safety Communities
Noble County	Child Passenger Safety - Ohio Buckles Buckeyes
Perry County	Child Passenger Safety - Ohio Buckles Buckeyes
Preble County	Child Passenger Safety, Safe Communities, Child Abuse Prevention
Putnam County	Child Passenger Safety - Ohio Buckles Buckeyes
Richland County	Child Passenger Safety, Safe Communities, Teen Driver Safety, Summer Safety
Ross County	Safe Communities
Shelby County	Child Passenger Safety - Ohio Buckles Buckeyes, Bicycle Safety
Stark County	Shaken Baby Syndrome Program, SafeKids
Trumbull County	Child Passenger Safety
Tuscarawas County	Family Safety, SafeKids
Union County	Bicycle Safety, Pedestrian Safety, Motor Vehicle Safety, Child Passenger Safety, Sports Safety
Van Wert County	Child Passenger Safety - Ohio Buckles Buckeyes
Vinton County	Child Passenger Safety
Williams County	Child Passenger Safety - Ohio Buckles Buckeyes, Safe Communities
Wood County	Child Abuse Prevention
Trauma Centers Programs	Primary Focus/Injury Prevention Activities
Akron City Hospital	Bicycle Safety, Sports Safety
Akron Children's Hospital	SafeKids, Child Passenger Safety, Sports Injury Prevention Programs, Child Sexual Abuse Prevention
Akron General Medical Center	Injury Prevention Programs - not specified
Aultman Hospital	Injury Prevention Programs - not specified
Cincinnati Children's Hospital Medical Center	SafeKids, Child Passenger Safety, Bicycle, Home Safety, Teen Driving, Suicide Prevention
Dayton Children's Hospital	SafeKids, Child Passenger Safety, Bicycle Safety, Safe on Saturday, Sports Safety, Playground Safety
Fairview Hospital	Sports Injury Prevention
Grant Medical Center	Older Adult Fall Prevention, Driving Safety, Teen Driving, Violence Prevention
Hillcrest Hospital	Sports Injury Prevention
Kettering Medical Center	Injury Prevention Program - not specified
Lima Memorial Hospital	Injury Prevention Program - not specified

Med Central Health System - Mansfield	Motor Vehicle Safety, Fire Safety & Burns, Bicycle Safety, Toy Safety, Water Safety, Sports Safety, Fall Prevention, Firearms Safety
Mercy Medical Center - Canton	Sports Injury Prevention
Mercy St. Vincent Medical Center	Injury Prevention Program - not specified
MetroHealth Medical Center	Teen Driving, Motor Vehicle Safety
Miami Valley Hospital	Teen Driving, Drug & Alcohol Prevention, Violence Prevention
Mount Carmel West	Sports Injury Prevention
Nationwide Children's Hospital	Child Passenger Safety, Bicycle Safety, Sports Injury Prevention Programs
Ohio State University Medical Center	Fall Prevention
ProMedica Toledo Hospital	Injury Prevention Program - not specified
Rainbow Babies & Children Hospital	SafeKids, Child Passenger Safety, Bicycle, Skiing Helmets, Poison Outreach, Safe Communities, Safe Sitter, Pedestrian safety
Riverside Methodist Hospital	Injury Prevention Programs - not specified
St. Elizabeth Health Center	Injury Prevention for the Elderly, Violence Prevention, Firearm Safety, Drinking & Driving Prevention
St. Rita's Medical Center	Motorcycle Safety, Adult Health and Fall Prevention, Child Passenger Safety, Water Safety, Brain Injury Prevention for Athletes, Bicycle Safety
Toledo Children's Hospital	SafeKids, Child Passenger Safety, Bicycle, Pedestrian, Fire, Burn and Home Safety
University of Cincinnati Medical Center	Injury Prevention Program - not specified
University of Toledo Medical Center	Sports Injury Prevention Programs

Question 2: Describe how the trauma lead agency has funded and coordinated system-wide injury prevention or outreach activities.

The principle trauma agency (Ohio EMS Board) is not responsible for state-wide injury prevention initiatives. ODH's VIPP is responsible for coordination and implementation of injury prevention efforts throughout the state. See response to Question 2c for a description of the sources of VIPP funding.

As described in the Research Section (pg. 176) of this document, the Ohio EMS / Trauma Grant Program was created as a way to improve and enhance EMS and trauma patient care in the State of Ohio by providing research grant funds to eligible applicants. The Third Priority provides grants to entities that 1) research the cause, nature and effects of traumatic injuries; 2) educate the public about injury prevention; and 3) implement, test and evaluate injury prevention strategies.

The following are examples of Third Priority Grants that have been funded through the Ohio EMS Trauma Grant Program:

2008-2009 Injury Prevention Research Grants

- *Functional Outcomes after Geriatric Spinal Column Injuries*-St. Elizabeth's Trauma Services in collaboration with the Trauma Research Department and Rehabilitation Services, Youngstown, Ohio
- *Effect of Pre-hospital Therapeutic Hypothermia on Neurologic Outcome Following Sudden Cardiac Arrest* - The Ohio State University Medical Center, Columbus, Ohio
- *Increasing Motor Vehicle Restraint in the Hispanic Community: An Evaluation of a Train-the Trainer Approach in Churches* - Cincinnati Children's Hospital Medical Center, Cincinnati, Ohio
- *The Effect of Delay in Transfer to Advanced Trauma Center Care on Trauma Patient Outcome in Ohio* - Center for Injury Research and Policy, The Research Institute at Nationwide Children's Hospital, Columbus, Ohio
- *MRSA Colonization in EMS Personnel and Equipment as a Risk Factor for Secondary Injury in Ohio Trauma Patients* - The Ohio State University Research Foundation, Columbus, Ohio

2009 - 2010 Injury Prevention Research Grants

- *Injury Among Older Adults in Ohio* – Center for Injury Research and Policy, The Research Institute at Nationwide Children's Hospital, Columbus, Ohio
- *Teen Drivers Distracted by Handheld Digital Devices* - Toledo Children's Hospital, Toledo, Ohio
- *Prospective Evaluation of the Effect of Driving Simulation on Motor Vehicle Safety in Adolescents* - Injury Prevention Center of Greater Dayton, Miami Valley Hospital, Dayton, OH

2010 – 2011 Injury Prevention Research Grants

- *Factors Affecting Motor Vehicle Crashes in Ohio* – Center for Injury Research and Policy, The Research Institute at Nationwide Children's Hospital, Columbus, Ohio

2011 – 2012 Injury Prevention Grants

- No reports posted to the website

a. Which injuries (including pediatric injuries) have been identified and prioritized for intervention strategies?

The following Injury priority areas have been identified by the VIPP:

- child/youth injury;
- drug overdose ;
- falls among older adults.

The following are examples of programs being implemented by the VIPP to address these issues:

- Ohio Buckles Buckeyes (OBB) is a child passenger safety (CPS) program that provides child safety seats and booster seats to eligible low income families in all 88 Ohio counties.
- Prescription for Prevention: Stop the Epidemic is a comprehensive education and awareness campaign to combat the epidemic of prescription drug misuse, abuse and overdose.
- Local injury prevention grants through the CDC's Preventive Health and Health Services Block Grant (PHHSBG) provides more than \$600,000 annually to 9 local programs targeting injury. The following agencies received funding during the 2010-2013 grant cycle:

Agency	Focus Area	Target Population
Clermont County General Health District Senior Safety Program	Falls Among Older Adults	Age 65 and older
Delaware County General Health District	Falls Among Older Adults	Age 65 and older
Fairfield Department of Health	Unintentional Child/Youth Injury (Pedestrian and Bicycle Safety)	Children and youth
Hamilton County General Health District Fall Prevention Task Force	Falls Among Older Adults	Age 65 and older
Toledo Children's Hospital	Unintentional Child/Youth Injury (Pedestrian and Bicycle Safety)	Children and Youth
Public Health of Dayton and Montgomery County	Unintentional Prescription Drug Poisoning	Ages 35-54
Portsmouth City Health Department	Unintentional Prescription Drug Poisoning	Ages 35-54
Stark County Health Department	Unintentional Child/Youth Injury (Sports-related Injury among Youth)	Children and youth
Union County Health Department	Unintentional Child/Youth Injury (Sports-related Injury among Youth)	Children and youth

The OIPP has identified the following injury priority areas in its 2009-2012 Injury Plan:

1. **Traumatic Brain Injury (TBI) in Children and Youth**
2. **Prescription drug poisoning** – Due to the increase in drug overdose deaths, the ODH's VIPP created a subgroup, the Prescription Drug Abuse Action Group (PDAAG) to focus specifically on the epidemic of drug deaths in Ohio. The PDAAG is working to examine statewide data and produce materials to raise awareness about this issue.
3. **Motor vehicle traffic and pedestrian injury**
4. **Falls Among Older Adults** – Since falls disproportionately impact older Ohioans, the VIPP created The Ohio Older Adult Falls Prevention Coalition to focus specifically on falls among older adults. This Coalition released a [2010-2014 State Plan](#) and works with the Ohio Department of Aging and Health to observe Falls Prevention Awareness Day.
5. **Firearm related violence**

b. Identify any dedicated lead agency or other agency staff member (full- or part-time) responsible for injury prevention outreach and coordination for the trauma system.

As detailed above, ODH's VIPP is the primary agency responsible for injury prevention outreach and coordination.

c. What is the source of funding?

VIPP receives funding from the following sources:

- **CDC Preventive Health and Health Services Block Grant (PHHSBG)** - Federal funding for nine community-based Injury Prevention projects. See response to Question 2a for a list of these programs. Future funding is uncertain. If the PHHSBG is not reinstated by Congress, there will be no additional funding for these local injury prevention projects outside of child passenger safety.
- **CDC National Center for Injury Prevention and Control (NCIPC) – Core Injury Grant** – funds the OIPP/action groups and injury surveillance efforts.
- **CDC NCIPC – National Violent Death Reporting System (NVDRS) Grant** – funds the Ohio Violent Death Reporting System (OVDRS)
- **ODPS, Traffic Safety Office** – funds the Occupant Protection Regional Coordinators Program
- **State Highway Safety Fund** – Fines from child safety seat violations funds Ohio Buckles Buckeyes, the child safety seat program for low income families.
- **Department of Labor, Bureau of Labor Statistics** – Census of Fatal Occupational Injury (CFOI) – funds work-related injury fatality surveillance
- **General Revenue Fund** – from the state budget, provides the VIPP with a small amount of funding to cover program expenses that aren't fully covered by federal grants and provides required matching funds for CFOI.

Question 3: Explain the evaluation process for injury prevention projects that are conducted by the lead agency, trauma facilities, or other community-based organizations.

At the state level, the VIPP conducts surveillance activities and monitors fatal and non-fatal injury rates overtime. Each program/initiative is evaluated using specific measureable objectives that are related to the individual injury priority area they address. They also assess injury surveillance rates and risk factor information (e.g., bicycle helmet use, infant sleep position, etc.) and collect process evaluation data to assess how well state efforts are functioning over a period of time. The VIPP tracks the membership attrition and recruitment efforts of the OIPP.

Program outcomes across local injury prevention programs vary considerably.

a. Identify any gaps in injury prevention efforts for population groups in the state.

Current gaps in injury prevention efforts are largely due to a lack of adequate funding. For example, youth violence prevention efforts for males have not been developed, interventions are lacking to address statewide falls among older adults, and child injury prevention interventions for low income families are not sufficient. Since injury prevention efforts for the general populous are so under-funded, there is very little capacity to address these specialized populations.

Emergency Medical Services

Benchmark 302: The trauma system is supported by an EMS system that includes communications, medical oversight, pre-hospital triage, and transportation; the trauma system, EMS system, and public health agency are well integrated.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-302.1) = There is well-defined trauma system medical oversight integrating the specialty needs of the trauma system with the medical oversight for the overall EMS system. Note: The EMS system medical director and the trauma medical director may be the same person.	2	Y Goal 4
(I-302.2) = There is a clearly defined, cooperative, and ongoing relationship between the trauma specialty physician leaders (e.g., trauma medical director within each trauma center) and the EMS system medical director.	3	Y Goal 4
(I-302.3) = There is clear-cut legal authority and responsibility for the EMS system medical director including the authority to adopt protocols, to implement a performance improvement system, to restrict the practice of pre-hospital care providers, and to generally ensure medical appropriateness of the EMS system.	2	Y Goal 1
(I-302.4) = The trauma system medical director is actively involved with the development, implementation, and ongoing evaluation of system dispatch protocols to ensure they are congruent with the trauma system design. These protocols include, but are not limited to, which resources to dispatch, for example ALS vs. BLS, air-ground coordination, early notification of trauma care facilities, pre-arrival instructions, and other procedures necessary to ensure that resources dispatched are consistent with the needs of injured patients.	1	Y Goal 4
(I-302.5) = The retrospective medical oversight of the EMS system for trauma triage, communications, treatment, and transport is closely coordinated with the established performance improvement processes of the trauma system.	1	Y Goal 4
(I-302.7) = There is a universal access number for citizens to access the EMS / trauma system, with dispatch of appropriate medical resources. There is a central communication system for the EMS / trauma system to ensure field-to-facility bidirectional communications, inter-facility dialogue and all-hazards response communications among all system participants.	1	Y Goal 1
(I-302.8) = There are sufficient and well-coordinated transportation resources to ensure EMS providers arrive at the	1	Y Goal 4

scene promptly and expeditiously transport the patient to the correct hospital by the correct transportation mode.

Benchmark 310: The lead trauma authority ensures a competent workforce.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-310.1) = In cooperation with the pre-hospital certification and licensure authority, set guidelines for pre-hospital personnel for initial and ongoing trauma training, including trauma-specific courses and courses that are readily available throughout the state	5	Y Goal 4,9
(I-310.2) = In cooperation with the pre-hospital certification and licensure authority, ensure that pre-hospital personnel who routinely provide care to trauma patients have a current trauma training certificate, for example, PHTLS, BTLs, and others, or that trauma training needs are driven by the performance improvement process.	4	N Goal 9
(I-310.9) = Conduct at least one multidisciplinary trauma conference annually that encourages system and team approaches to trauma care.	1	N

Benchmark 311: The lead agency acts to protect the public welfare by enforcing various laws, rules, and regulations as they pertain to the trauma system.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-311.6) = Incentives are provided to individual agencies and institutions to see state or nationally recognized accreditation in areas that will contribute to overall improvement across the trauma system, for ex. Commission on Accreditation of Ambulance Services (CAAS) for pre-hospital agencies, Council on Allied Health Education Accreditation (CAHEA) for training programs, and ACS verification for trauma facilities.	1	Y Goal 1

Emergency Medical Services

Pertinent History:

A vital public service, the Emergency Medical Services (EMS) Division of the Ohio Department of Public Safety (ODPS) provides oversight for all emergency medical services provided to the citizens in the State of Ohio. Am. Sub. Senate Bill 98 of the 119th Ohio General Assembly (1992) established in law (ORC §4765.06) the EMS Division and moved EMS from the Ohio Department of Education to ODPS. In addition, the passage of SB 98 provided statutory authority for the establishment of an Emergency Medical Services Board (EMS Board), with the authority to oversee EMS and the certification and the training of EMS and fire personnel in Ohio (ORC §4765.1).

The EMS Board is comprised of twenty members nominated by a diverse group of entities representing all parts of EMS and fire throughout the State and including the EMS Division (ORC §4765.02). Each nominee must exhibit background and / or experience in EMS and are officially appointed by the Governor. The Executive Director of the EMS Division serves the EMS Board with reporting responsibilities to both the EMS Board Chair and the Director of ODPS. The EMS Division staff serves the EMS Board's administrative needs. All appointed EMS Board members serve a three year term without compensation except for reimbursement of expenses.

The EMS Board, in conjunction with the EMS Division, has statutory authority over the following activities:

- Establishing training and certification standards for the fire and EMS personnel;
- Establishing fire and EMS instructor training and certification standards;
- Accreditation of EMS programs of instruction and approval of EMS continuing education programs / chartering of firefighter and fire safety inspector programs of instruction;
- Oversight of Ohio's trauma system;
- Distribution of grant funds;
- Emergency Medical Services for Children (EMS-C);
- Regional Physician Advisory Boards (RPAB);
- Investigations to insure compliance with Chapter 4755 of the Ohio Revised Codes (ORC) and Ohio Administrative Codes (OAC);
- Collection and analysis of data submitted to the EMS Incident Reporting System (EMSIRS);
- Collection and analysis of data submitted to the Ohio Trauma Registry (OTR);
- Preparation of an EMS plan for the statewide regulation of EMS during periods of disaster.

Current EMS Board Members (as of February 2013):

Member	Representing	Term Expires	City
Melvin House <i>Chief Executive Officer</i>	Executive Director, EMS Division, ODPS	---	
Carol Cunningham, MD	State Medical Director	---	
Geoff Dutton	ODPS	---	

Bruce Shade <i>Chair</i>	Ohio Ambulance and Medical Transportation Association	2013	Willoughby OH
Daryl McNutt <i>Vice-Chair</i>	Ohio Fire Chief's Association	2015	Whitehouse OH
Pamela Bradshaw	Ohio Instructor Coordinators Society	2015	Wheelersburg OH
Deana Dahl-Grove, MD	Ohio Hospital Association	2014	Cleveland OH
James Davis	Ohio Association of Professional Firefighters	2013	Westerville OH
Matthew Dick	Ohio Association of EMS	2014	Delaware OH
Vickie Graymire	Ohio Nurses Association	2013	Columbus OH
Deanna Harris	Ohio State Firefighters Association	2013	Medina OH
William Mallory, Jr	Ohio Association of Professional Firefighters	2014	Lancaster OH
Mark Marchetta	At-Large, Affiliated with an EMS Organization	2015	Hopedale OH
Wendy Pomerantz	American Academy of Pediatricians, Ohio Chapter	2014	Cincinnati OH
Gary Redd	Ohio Association of Professional Firefighters	2015	Marion OH
Mark Resanovich	Ohio State Firefighters Association	2015	Uniontown OH
Brian Springer	American College of Emergency Physicians, Ohio Chapter	2013	Miamisburg OH
Steven Steinberg	American College of Surgeons, Ohio Chapter	2015	Columbus OH
Vacant	Ohio Fire Chief's Association		
Vacant	Ohio Hospital Association		
Vacant	Ohio State Firefighters Association		
Vacant	Ohio Association of Air Medical Services, Ohio Association of Critical Care Transport		

Question 1: Provide information on the last assessment of EMS, including assessor and date

The reassessment of EMS by the National Highway Traffic Safety Administration ([NHTSA](#)) Technical Assistance Team (TAT) was last conducted February 15-17, 2011. The assessors included:

- Christop Kaufmann, MD, MPH, FACS
- D. Randy Kuykendall
- W. Dan Manz
- Susan D. McHenry, MS
- Curtis Sandy, MD, FACEP
- Jolene R. Whitney, MPA

- a. Describe the EMS system, including the number and competencies (that is, ALS or BLS) of ground transporting agencies, non-transporting agencies, and air medical resources.

As of December 2012, the EMS Division reported there are approximately 42,000 certified EMS providers in the State of Ohio. Of the certified providers, approximately 2,100 are Emergency Medical Responders, 20,000 are Emergency Medical Technicians, 2,200 are Advanced Emergency Medical Technicians and 17,000 are Paramedics. The EMS Division is unable to provide the number of people actually providing emergency medical services from the list provided.

Delivery of EMS to the local level is provided by 1330 ground emergency and non-emergency ambulance services. A total of 1095 are transporting services with 27 providing basic life support (BLS); 38 providing intermediate life support; 5 exceeding scope of practice (ESoP) support and 632 providing advanced life support (ALS). There are 393 transporting services that have not provided to the EMS Division the level of service they provide. There are 235 non-transporting agencies with 32 providing BLS care; 4 providing intermediate life support and 32 providing ALS care. A total of 167 non-transporting units have not reported the level of care provided. These agencies are diverse, ranging from all volunteer to full-time multi-tiered urban response systems. The breakdown of departments consist of; all volunteer, 539; mix of paid and volunteer, 304; all paid, 375; and squads not reporting pay status, 111. Currently air medical resources are provided by 10 services, all providing ALS care.

In 2004, ORC §4766.02 created the Ohio Medical Transportation Board (OMTB) consisting of nine voting members and one non-voting member appointed by the governor with each member serving a two-year term and represent the following organizations:

- Ohio Ambulance Association – one voting member
- Owner or operators of private EMS organizations – two voting members (one must be a funeral director)
- A consumer of EMS not associated with any public or private EMS organizations – one voting member
- An official with a public EMS organization – one voting member
- Owners or operators of non-emergency medical service organizations that provide ambulette services only – two voting members
- Ohio Association of Critical Care Transport – two voting members (one member representing a ground-based service and one member representing an air-based service)
- A physician who is a member of the American College of Emergency Physicians – serves as chair and a non-voting member
- The Board also employs a full-time executive director and support staff to assist in implementing the functions of the Board

The organizations regulated by ORC §4766 include private emergency and non-emergency medical service providers who furnish, operate, conduct, maintain, advertise, engage in, or proposed or professes to engage in the business or service of transporting people who are seriously ill, injured, or otherwise incapacitated or who require the use of a wheelchair or are confined to a wheelchair; and, include air-medical providers. The OMTB's mission is to ensure through inspection, certification, and licensure that all non-emergency, emergency, and air-medical service organizations regulated by ORC §4766 and the rules promulgated thereunder, provide appropriate care and transportation for the citizens of Ohio.

The OMTB operates independently from the EMS Division. Whereas the OMTB regulates licensure

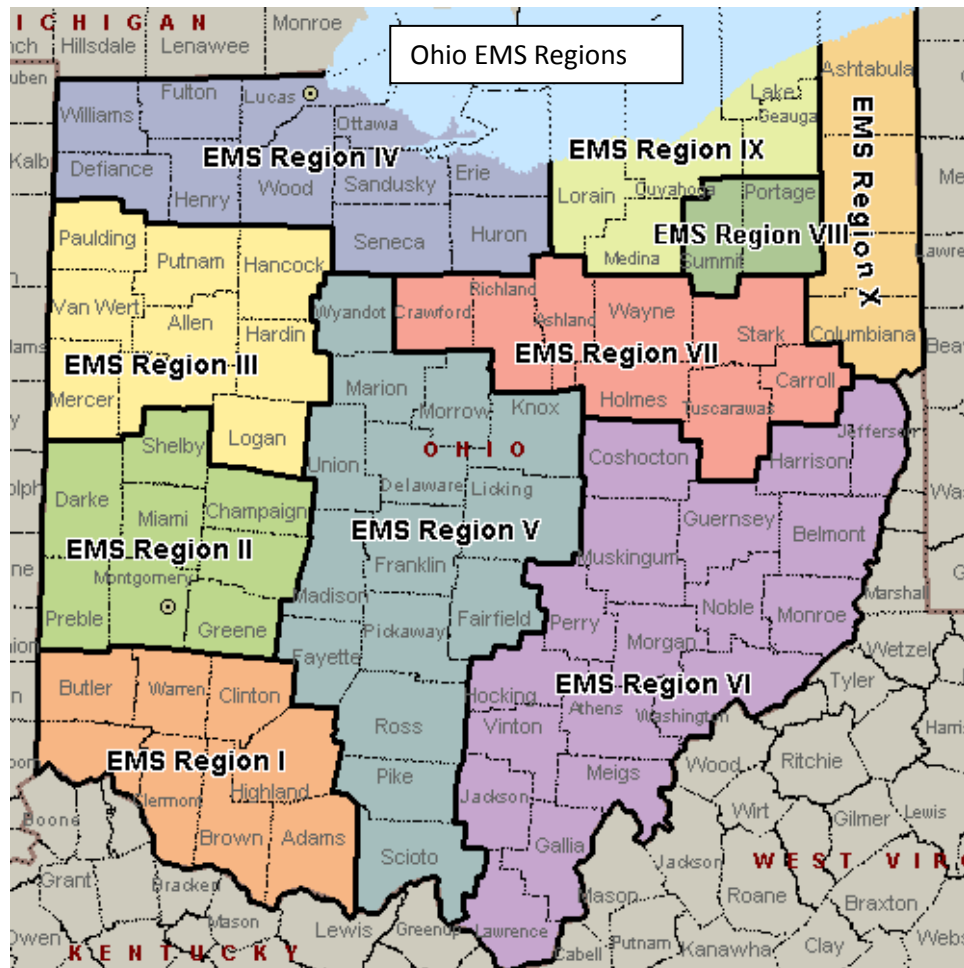

of organizations and permits equipment, the EMS Board licenses the employees of these organizations (i.e. paramedic, advanced emergency medical technician (AEMT) and emergency medical technician (EMT)). The EMS Board determines the scope of practice for the paramedic, AEMT and EMT and minimum staffing for ALS or BLS response. The EMS Division does not license or inspect EMS in the state who are not regulated by ORC §4766.

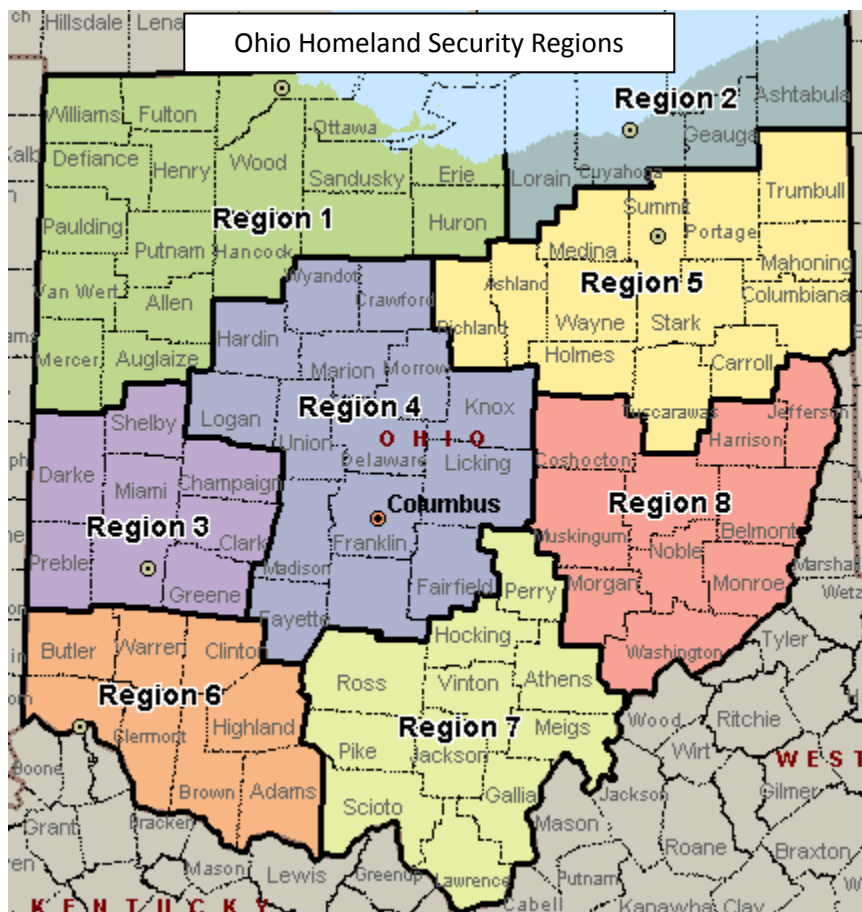

The NHTSA reassessment in 2011 recommended, “The legislature should reassign the current functions, authorities and resources of the Ohio Medical Transportation Board to the EMS Division as a step towards achieving a single lead EMS agency in Ohio.” The EMS Board has included merging the OMTB into the EMS Board in the *Ohio EMS 2015 Strategic Plan*. The merger is to establish government efficiency, eliminating consumer and constituent confusion, improving the medical system coordination and improvement in the disaster coordination. Currently there is a committee actively working with the ODPS legal service and the Assistant Attorney General for the OMTB to submit the new framework and transition plan into legislation. There is current pending legislation (HB 35) to combine both the EMS and OMTB boards. As a result of the pending legislation, the Governor has placed a hold on confirming appointments for the four current EMS Board vacancies. If the pending legislation is passed combining both boards there will be no change to the ORC regulatory authority over personnel or equipment.

The current proposal (HB 35) is for the blended EMS Board to consist of 20 members representing:

- Emergency physician
- Trauma surgeon
- Emergency pediatric physician
- Hospital administrator
- Registered nurse
- Career paid fire chief
- Volunteer fire chief
- EMS instructor
- EMS provider any level
- EMS provider any level
- EMS provider any level
- EMS provider any level
- Paramedic
- Paramedic
- Paramedic
- Owner/operator of private EMS service
- Mobile Intensive Care Unit Provider
- Air Medical EMS provider
- Ambulette operator
- Employee of ODPS

The State of Ohio is divided into 10 EMS regions that are not congruent with the 8 Homeland Security Planning regions. See the following two maps which outline both regions.

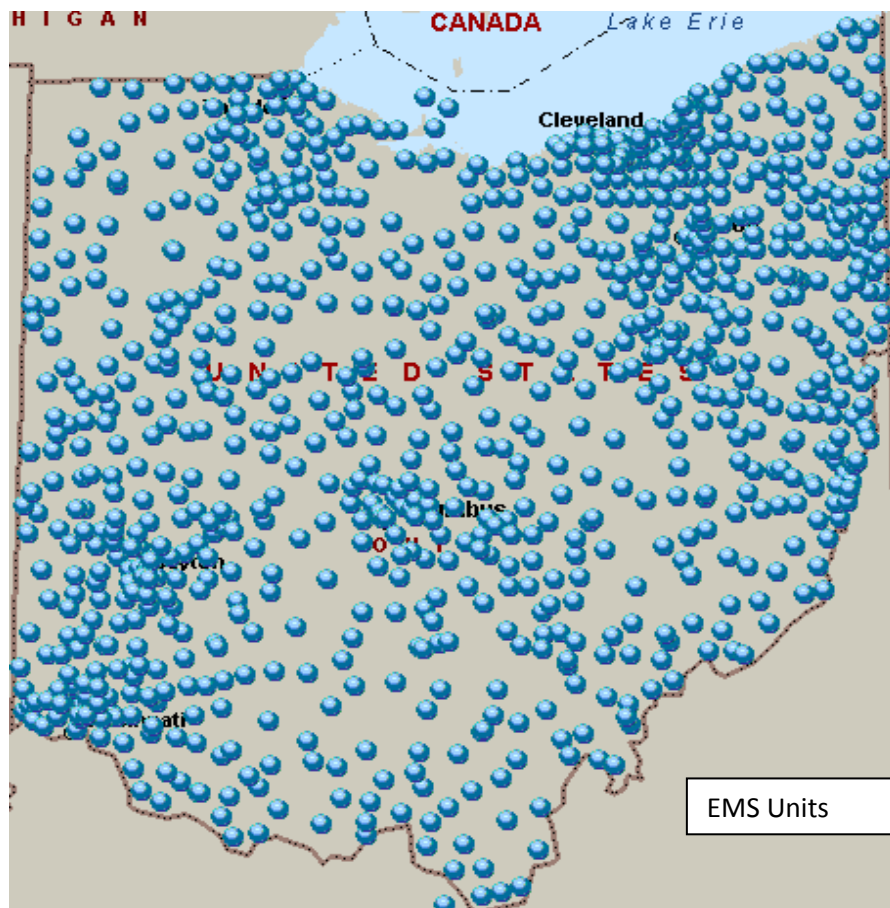

The motion to adopt / change the EMS regions to align with Homeland Security Planning regions was approved by the EMS Board in February 2012. A workgroup was established and met several times but has not provided input back to the EMS Board.

For each of the 10 EMS regions, the EMS Board, in accordance with ORC §4765.05, may appoint a Regional Physician Advisory Board (RPAB) or a regional director to oversee the delivery of pre-hospital EMS in that region. In accordance with OAC §4765-3-02 each RPAB shall be composed of no more than nine physicians who each possess knowledge and experience in or related to EMS, who work or reside in the region to be served, and who are board certified through a medical specialty board. Members are then appointed with terms not to exceed three years. The RPAB meetings are to occur at least four times annually or as often as necessary to carry out its duties. The chair of the RPAB or regional director is required to meet four times annually with the state medical director. There are no published minutes from these meetings and EMS Division was unable to provide these upon request. The RPAB or regional director assists the regions with development or recommendation of written medical protocols and in developing EMS continuing education programs, with equipment procurement, establishment of mutual aid agreements, with assistance in the maintenance of information, assistance in the identification of problems with provision of

EMS, and with the development of protocols for EMS medical directors. The RPAB has the responsibility to report protocol changes to the EMS Board as set forth in ORC §4765.40. This reporting is independent of the regional trauma system.

a. How are these resources allocated throughout the region to serve the population?

Statewide, the resources are allocated locally. There are no state mandates requiring any political entity to fund or provide EMS service. Each township or municipality determines its own needs and financial ability to provide service to residents. Townships or municipalities may decide to collaborate and merge resources to provide EMS service. In these cases a joint district may be formed and either the joint district or the county may control the resources and services. The following map outlines the EMS units in the state.

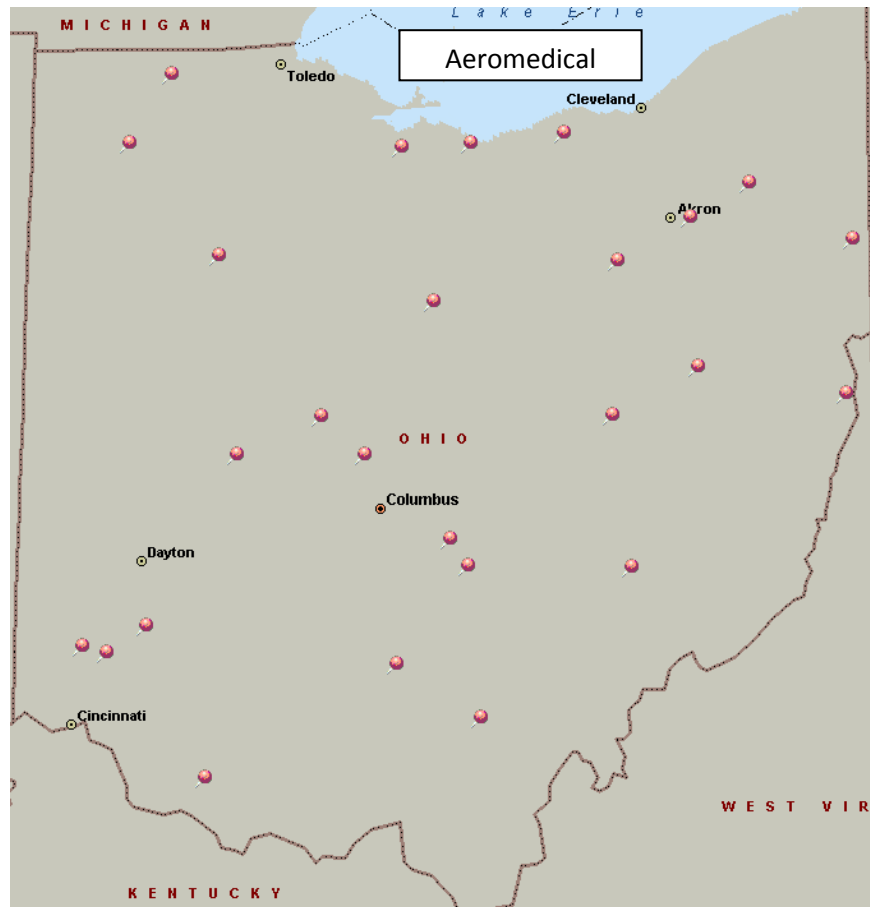

b. Describe the availability of enhanced 911 and wireless E-911 access in your region.

Statewide communication includes access through 911 services. Currently, enhanced wired and wireless E-911 services are available statewide in all 88 counties. Effective September 2012 the [Statewide Emergency Services Internet Protocol Steering Committee](#) was established by Am. Sub. House Bill 509 of the 129th Ohio General Assembly. This committee has been tasked to make available 911 services to the next generation of Voice over Internet Protocol (VoIP) users.

c. Identify any specialty pediatric transporting agencies and aeromedical resources.

Currently there is no means to distinguish the number of pediatric-only, private for-profit specialty transport services throughout the state. The OMTB directory currently lists 29 owner / operators of mobile intensive care units with the primary responsibility of intra-facility transfers and no response to EMS scenes. The 29 companies have a total of 494 units available for transport.

Statewide there are a total of 10 aeromedical transport services; 8 are headquartered in Ohio with two services headquartered out of state. There are a total of 33 bases for all ten services. All make a combination of inter-hospital and EMS scene transports.

The map below shows the mobile ICU units in Ohio.

e. Describe the availability of pediatric equipment on all ground transporting units.

Currently there is no statutory mandate or rule regarding pediatric equipment to be carried in not-for-profit ambulance services in the state. There was a recommendation from the EMS Board during an August 2009 meeting to adopt the *Equipment for Ambulances* as the recommended equipment list but not adopted into the official rules.

Emergency Medical Service for Children (EMS-C) in 2010/2011 completed a [survey](#) as a component of a Health Resources and Service Administration (HRSA) grant requirement looking specifically at on-line and off-line medical direction and pediatric equipment on ambulances. A total of 339 Ohio agencies were randomly selected to complete the survey. Surveys were sent to the EMS coordinator of each agency with follow-up to ensure a response. With 62% (210) of the agencies answering the survey, 201 that respond to 911 emergencies were included. Eighty-five percent were agencies with ALS-trained staff and the remaining 15% were agencies with BLS-trained staff. There were a total of 609 vehicles operated by the agencies that transported patients. The average percent of the recommended pediatric equipment carried on ambulances included 94.3% of the agencies with BLS-trained staff and 95.5% of the agencies with ALS-trained staff.

Question 2: Describe the procedures for online and off-line medical direction, including procedures for the pediatric population.

As defined in the ORC, all EMS agencies are required to have a medical director to provide medical oversight to the agency. Medical directors must carry a valid Ohio medical license and be actively involved in the provision of emergency care to patients. Medical oversight includes conducting performance improvement programs, education programs, and protocol updates. It is the responsibility of each regional RPAB or regional director to develop and recommend written medical protocols for EMS providers and provide guidance to local medical directors.

On behalf of the EMS Board, the RPABs were tasked with developing and drafting proposed treatment guidelines that EMS agencies could use in delivering the highest standard of care. The guidelines for both adult and pediatric patients are guidelines only and are not mandatory for Ohio EMS agencies. The guidelines were developed for all levels of providers including the emergency medical responder (EMR), emergency medical technician (EMT), advanced emergency medical technician (AEMT) and paramedic. It is the EMS Board's intent that each region and / or agency will review the protocols and use them to assist in the development of the agency or regional protocols. The most recent protocols were updated in February of 2012 to remain current with the most updated evidence available.

Individual medical directors for each agency may limit or ask that providers obtain medical control approval for certain treatments in both adult and pediatric populations. Each community has the ability to tailor and revise the protocol to fit their individual region or agency, but they must first ensure the providers remain with the approved [scope of practice](#) as outlined in OAC §4765-10-06. Medical directors are not permitted to expand the scope of practice but instead provide clarifications or define the limitations on services that are permitted. The EMS Board may allow providers to perform services beyond their scope of practice as part of an EMS Board approved research study. This must be in accordance with OAC §4765-6-04.

Am. Sub. House Bill 138 of the 123rd Ohio General Assembly requires EMS organizations to implement ongoing peer review and performance improvement to improve the availability and quality of EMS. As a component of the peer review and performance improvement, an EMS service needs to consider how to improve its ability to provide effective trauma care to all populations. Special attention is focused on the pediatric and geriatric patient populations and each squad is required to take into account the trauma care guidelines developed by the EMS Board. To assist the local medical directors with this task, the RPAB created a program in developing a [performance improvement program](#).

a. Describe how EMS and trauma medical direction and oversight are coordinated and integrated.

EMS providers administer the trauma triage protocol in the field as required by the OAC §4765-14. EMS providers use the criteria set forth in the rule, consistent with their certification, to evaluate whether an injured person qualifies as an adult or pediatric trauma patient in conjunction with the definition of trauma in ORC §4765.01. EMS medical directors are responsible for enforcing state or regional trauma triage protocols for EMS personnel under their medical direction through peer review or process improvement. There are no mandates to obtain trauma medical direction for either protocol development or enforcement of protocols.

It is the responsibility of the EMS Board to consult with the Ohio Trauma Committee, EMS organizations and personnel, RPAB, EMS instructors and persons who regularly provide medical direction to EMS personnel in the state for assistance in developing and implementing educational

opportunities regarding state and regional trauma triage protocols. The EMS Board may also enlist the EMS Division to participate as well.

Question 3: Describe the pre-hospital workforce competencies in trauma

In January 2009, the EMS Board adopted the National EMS Scope of Practice Model as the minimum guideline for EMS providers. Two years of discussion and input from EMS providers and EMS educators across the state paved the way for subsequent approval of the National Standard Curricula by the EMS Board in February 2012. Adaptation of the National EMS Scope of Practice Model also gave EMS the new provider titles (effective September 2011; ORC §4765.011) paired with an expanded set of psychomotor skills and scope of practice.

The EMS Board has outlined several steps to be completed prior to implementation of the new Standard Curricula and performance of any of the new psychomotor skills by a provider. The new Standard Curricula became effective February 6, 2012, although each program was required to read the entire ORC §4765 to ensure their compliance with the new standards. Programs were allowed to begin teaching the new curricula after February 6th if they met compliance, but were required by the EMS Board to follow the revised initial training and refresher curricula with all classes beginning September 1, 2012. EMS medical directors and EMS instructors are responsible for reviewing the new guidelines, psychomotor skill sets and implementing the following steps to include: education, training, competency, protocol development, performance improvement and continuing education.

In response to the changes, there are now State-approved refresher programs to facilitate the transition from old to new. Completion of these courses is in keeping with the National Registry of Emergency Medical Technicians (NREMT) Transition Policy. There will be EMS providers in various stages of transition from the former to the new Ohio EMS scope of practice for several years. There has been no definitive or estimated date for completion the transition.

a. Initial training and certification/licensure requirements

Initial training curriculum for all levels of providers follows the National Emergency Medical Services Education Standards set forth by National Highway Traffic and Safety Administration (NHTSA) and became effective in the State of Ohio September 2012 (OAC §4765).

The Emergency Medical Responder (EMR) curriculum (OAC §4765-12-05) consists of a minimum of 48 hours and contains 6 modules in the subject areas and objectives approved by the EMS Board. The EMR must demonstrate competency in the curriculum objectives through written and practical testing to receive a certificate of completion. <http://www.publicsafety.ohio.gov/links/NHTSA-%20EMR%20Instructional%20Guidelines.pdf>

The Emergency Medical Technician (EMT) curriculum (OAC §4765-15-05) consists of a minimum of 150 hours and contains 5 modules in the subject areas and objectives approved by the EMS Board. The EMT also completes 10 hours of clinical experience within the 150 hours. At the completion of the training program each student must pass a comprehensive course-ending examination with written and practical components, developed and administered by the EMS Board, which is based on the National Registry for Emergency Medical Technicians (NREMT) guidelines.

http://www.publicsafety.ohio.gov/links/ems_emt_b_curriculum.pdf

The Advanced EMT (AEMT) must first satisfy the prerequisite of successful completion of the EMT course. AEMT curriculum (OAC §4765-16-06) consists of a minimum of 200 hours and contains modules in the subject areas and objectives approved by the EMS Board. The AEMT must also demonstrate successful performance in 11 identified competencies. At the end of the training program each student must pass a comprehensive course-ending examination with a written and practical component, administered by the NREMT and recognized by the EMS Board.

The Paramedic curriculum (OAC §4765-17-04) follows the NHTSA National I Standard Curriculum. There are two prerequisites for the course including EMT certification and an anatomy and physiology course. The Paramedic curriculum is a combination of didactic, skills laboratory and clinical education. Completion is a minimum of 900 hours broken into 500 didactic instruction and laboratory practice and 400 hours of field clinical time. Upon completion of the course the examination, both written and practical, are administered by the NREMT and recognized by the EMS Board. <http://www.publicsafety.ohio.gov/links/NHTSA-Paramedic%20Instructional%20Guidelines.pdf>

b. Continuing education and recertification/re-licensure requirements

All providers must renew their certification every three years and the continuing education requirements are directed by OAC §4765 and vary depending on the provider level. Pursuant to ORC §4765, each course offered through an EMS training program or an EMS continuing education program, other than ambulance driving, shall be developed under the direction of a physician who specializes in emergency medicine. Each course that deals with trauma care shall be developed in consultation with a physician who specializes in trauma surgery.

In addition to the continuing education requirements, all providers during each 3-year certification cycle, are required by ORC §4765.16 to document completion of the Ohio Trauma triage course. The continuing education on trauma was developed under the direction of the Ohio Trauma Committee, EMS Board and the State Medical Director. The module can be taken at any initial or approved training programs or through the Ohio EMS online training program.

Continuing education requirements include:

EMR – OAC 4765-12-03

A minimum of 15 continuing education (CE) hours is required within the 3-year certification cycle. They must include at least one hour in each of the following topics: patient assessment; cardiopulmonary resuscitation; airway and oxygen administration; automated external defibrillation; illness and injury management; trauma issues; anaphylaxis and patient-assisted epinephrine administration. This requirement can be satisfied with the EMR refresher course approved September 2012, or current registration with NREMT at the first responder or equivalent level, or passing score within three attempts on an exam approved by the board. The exam may only be taken during the last six months of a First Responder's current certification period.

<http://www.publicsafety.ohio.gov/links/Ohio%20EMR%20Refresher%20Approved051612.pdf>

EMT – OAC 4765-15-03

A minimum of 40 CE hours is required within the 3-year certification cycle including at least six hours of pediatrics; two hours of geriatric and eight hours of trauma issues including completion of the trauma triage and transportation protocols. This requirement can be satisfied with the EMT refresher course; or current registration with NREMT at the EMT or equivalent level; or passing score within three attempts on an exam approved by the board. The exam may only be taken during the last six months of an EMT's current certification.

<http://www.publicsafety.ohio.gov/links/Ohio%20%20EMT%20Refresher%20Approved051612.pdf>

EMTA – OAC 4765-16-03

A minimum of 60 CE hours is required within the 3-year certification cycle which includes at least eight hours of pediatrics; four hours of geriatric and eight hours of trauma issues including completion of the trauma triage and transportation protocols. This requirement can be satisfied with the EMT refresher course which satisfies 40 of the 60 required hours plus 20 additional hours of CE; or current registration with NREMT at the EMTA or equivalent level; or passing score within three attempts on an exam approved by the board. The exam may only be taken during the last six months of an EMTA's current certification.

<http://www.publicsafety.ohio.gov/links/Ohio%20AEMT%20Refresher%20Approved051612.pdf>

Paramedic – OAC 4765-17-03

A minimum of 86 CE hours within the 3-year certification cycle is required, including at least twelve hours of pediatrics; four hours of geriatrics, six hours of emergency cardiac care and eight hours of trauma issues, and completion of the trauma triage and transportation protocols. This requirement can be satisfied with the Paramedic refresher course which satisfies 48 of the 86 required hours plus 38 additional hours of CE; or current registration with NREMT at the Paramedic or equivalent level; or passing score within three attempts on an exam approved by the board. The exam may only be taken during the last six months of a Paramedic's current certification.

<http://www.publicsafety.ohio.gov/links/Ohio%20Paramedic%20RefresherApproved051612.pdf>

c. Pediatric trauma training requirements for recertification

Pediatric trauma training is a mandatory requirement for recertification at any level. Current pediatric requirements in the three-year recertification cycle include:

- EMR – 1 hour of childbirth and pediatric issues
- EMT – 6 hours of pediatric issues
- AEMT – 8 hours of pediatric issues
- Paramedic – 12 hours of pediatric issues

Definitive Care Facilities

Benchmark-303: Acute care facilities are integrated into a resource-efficient, inclusive network that meets required standards and that provides optimal care for all injured patients.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-303.1) = The trauma system plan has clearly defined the roles and responsibilities of all acute care facilities treating trauma and of facilities that provide care to specialty populations (e.g. burn, pediatric, spinal cord injury, and others).	1	Y Goal 5

Benchmark 307: To maintain its state, regional, or local designation, each hospital will continually work to improve the trauma care as measured by patient outcomes

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-307.1) = The trauma system engages in regular evaluation of all licensed acute care facilities that provide trauma care to trauma patient and of designated trauma hospitals. Such evaluation involves independent external reviews.	1	N

Benchmark 310: The lead trauma authority ensures a competent workforce.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-310.3) = As part of the established standards, set appropriate levels of trauma training for nursing personnel who routinely care for trauma patients in acute care facilities.	1	Y Goal 5,9
(I-310.4) = Ensure that appropriate, approved trauma training courses are provided for nursing personnel on a regular basis.	1	Y Goal 5
(I-310.5) = In cooperation with the nursing licensure authority, ensure that all nursing personnel who routinely provide care to trauma patients have a trauma training certificate (e.g. ATCN, TNCC, or any national or state trauma nurse verification course). As an alternative after initial trauma course completion, training can be driven by the performance improvement process.	1	Y Goal 1,5
(I-310.8) = In cooperation with the physician licensure authority, ensure that physicians who routinely provide care to trauma patients have a current trauma training certificate of completion, (ex ATLS and others). As an alternative, physicians may maintain trauma competence through continuing medical education programs after initial ATLS completion.	1	Y Goal 1
(I-310.9) = Conduct at least one multidisciplinary trauma	1	N

conference annually that encourages system and team approaches to trauma care.			
(I-310.10) = As new protocols and treatment approaches are instituted within the system, structured mechanisms are in place to inform all personnel about the changes in a timely manner.	1	Y	Goal 9

Definitive Care Facilities

Pertinent History:

In Ohio, no state agency has statutory authority to verify / designate trauma centers. A hospital may operate as a trauma center if it has been verified by the American College of Surgeons (ACS) ([ORC §4765.01\(Q\)\(1\)](#)) or is operating under Ohio's Provisional Trauma Center Law (ORC §4765.01(Q)(2)). In Ohio, trauma center verification is voluntary. Any hospital within the state may pursue ACS verification. A regulatory relationship has not been established between the EMS Board and the ACS verified / provisionally designated trauma facilities across the state.

The intent of Substitute House Bill 138 of the 123rd General Assembly was to lay the groundwork for a statewide trauma system. As mentioned in other sections of this document, the emphasis of this legislation was on the pre-hospital phase of care, along with trauma registry development. In Ohio, statutory authority related to trauma system development does not extend beyond the EMS phase of care. Therefore, since legislation was enacted in 2002, actions to enhance the hospital portion of the trauma system have been constrained.

The following parameters of trauma system development related to definitive care facilities were placed in the Ohio Revised Code:

- Ohio facilities may not call themselves a “trauma center” unless approved for verification as a Level I, II, or III trauma center by the ACS or are operating under provisional designation IORC §4765.01(Q).
- “Trauma” (or “traumatic injury”) is defined as damage to or destruction of tissue that creates a risk of loss of life or limb, significant, permanent disfigurement or significant, permanent disability, and is caused by any of the following:
 - Blunt or penetrating injury;
 - Exposure to electromagnetic, chemical or radioactive energy;
 - Drowning, suffocation, or strangulation;
 - Deficit or excess of heat. (ORC §4765.01(N)).
- A patient that meets any of these requirements listed above in the pre-hospital setting is identified as a patient with a traumatic injury (ORC §3727.09 (A)–(E)).
- A hospital or physician may not admit or transfer a trauma patient to a hospital that is not an appropriate trauma center or failing to transfer a trauma patient to an appropriate trauma center.

Although these parameters are written into law, monitoring of compliance along with enforcement of these parameters does not exist in Ohio.

Within the [2011 report](#), NHTSA commented on the lack of an inclusive system within Ohio. This has generated discussion at the state level but no action has been taken.

Question 1: Describe the extent to which all acute care facilities participate in the trauma system.

State law (HB 138) requires that hospitals not represent themselves as trauma centers unless verified by the ACS, which specifically includes the fact that no hospital shall admit or transfer a trauma patient to a hospital that is not an appropriate trauma center. Since Ohio has a voluntary system, any hospital can

become a verified trauma center so long as hospitals comply with ACS standards. No monitoring of compliance to the law is currently in place at the state level.

All hospitals, whether verified trauma centers or non-verified facilities (i.e. termed “acute care hospitals” in Ohio), are required by law to submit pertinent data to the Ohio Trauma Registry (OTR). In addition, representatives from both trauma centers and non-trauma centers, maintain a voting seat on the Ohio Trauma Committee.

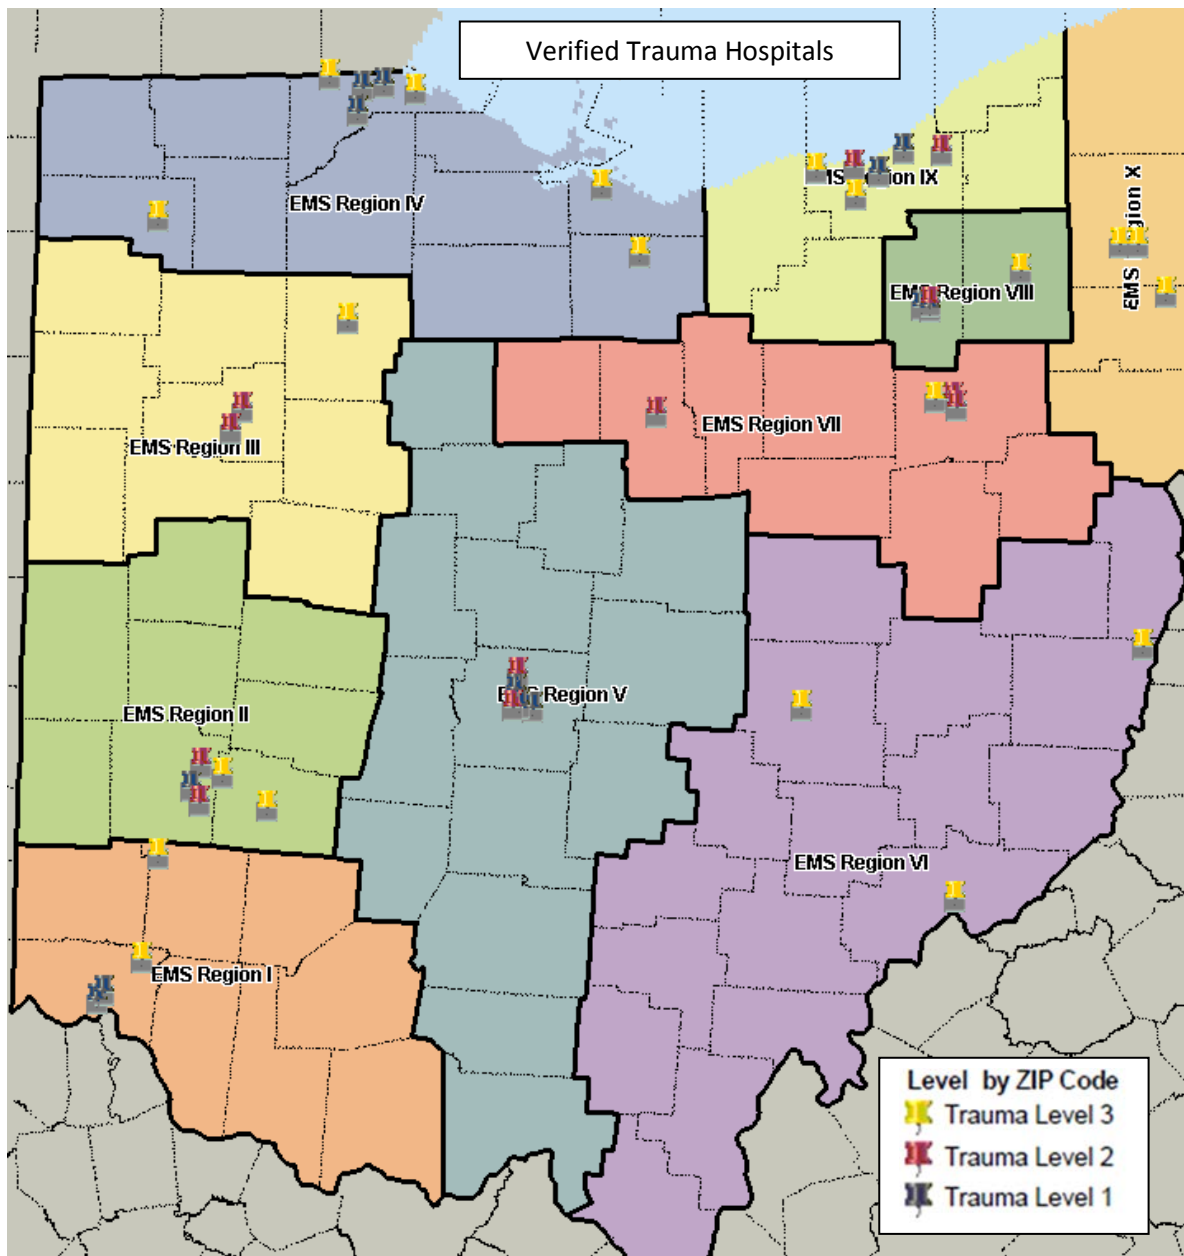

See the chart below which shows the number of trauma centers and acute care facilities in Ohio, as of December 2012, according to information obtained from ODPS.

Regions	Total # of Hospitals	Trauma Centers							Non-Trauma Centers
		TOTAL # Trauma Centers	Adult - Level 1	Adult - Level 2	Adult - Level 3	Peds - Level 1	Peds - Level 2	Provisional	
All Ohio	N=178	N=46 N=43 verified N=3 provisional	N=11	N=9	N=18	N=3	N=3*	N=3	N=133

No Regional Involvement	N=77	N=14	2	3	7	1		1 (level 3)	N=63

* One hospital is verified as both an adult and pediatric trauma center

In 1996, there were 16 ACS verified trauma centers (10 Level I and 6 Level II). This number increased to 20 verified Level I and II ACS verified trauma centers by the time legislation was enacted (2000). The first Level verified Level III trauma center was in December 2001. Currently, as outlined above, there are 46 ACS verified trauma centers (Level I = 11, level II = 9, level III = 18, pediatric level I = 3, pediatric level II = 3, provisional = 3) from 45 hospitals in Ohio.

See map below which displays the location and verification level of Ohio trauma centers.

Listed below is a chart for Ohio verified and provisional trauma centers and outlines: region, level of designation, patient volume / year (800-959.9 ICD-9 range), patient volume / year with ISS > 15, number of Emergency Department visits / year and number of injury-related Emergency Department visits / year. The total number may be elevated as transfers from one trauma center to another trauma center may be counted twice.

* Patients that are transferred may be counted more than one (i.e. transferring and receiving hospital)

Since enactment of HB 138 (2000), 9 Ohio hospitals have received ACS verification but subsequently withdrew or lost their verification status. Four of the nine hospitals were verified only during the year or two immediately following implementation of the law. Five hospitals had longer times of maintaining ACS verification, yet did not pursue re-verification due to variety of reasons. Years of verification, along with rationale for not maintaining verification status are listed below, if available.

Hospital	County	Verification Years since HB 138	Level	Rationale: Issues that had large impact
Good Samaritan Hospital	Montgomery	2002-05	2-Adult	Not available / unknown
Huron Hospital	Cuyahoga	2002-03; 2005-10	2-Adult	Not available / unknown
Lakewood Hospital	Cuyahoga	9/92- 9/11	2- Adult	Low patient volume; MD pay; malpractice cost; MD (neurosurgery and thoracic surgery) response times
Southeast Regional Medical Center	Guernsey	6/97-6/10	3-Adult	High costs with low Medicaid reimbursement; high number of uninsured patients; orthopedic coverage
Upper Valley Medical Center	Miami	5/98-3/03	3-Adult	MD costs; frequency of MD taking call out of house

a. Describe the availability and roles of specialty centers within the system (pediatric, burn, TBI, SCI)

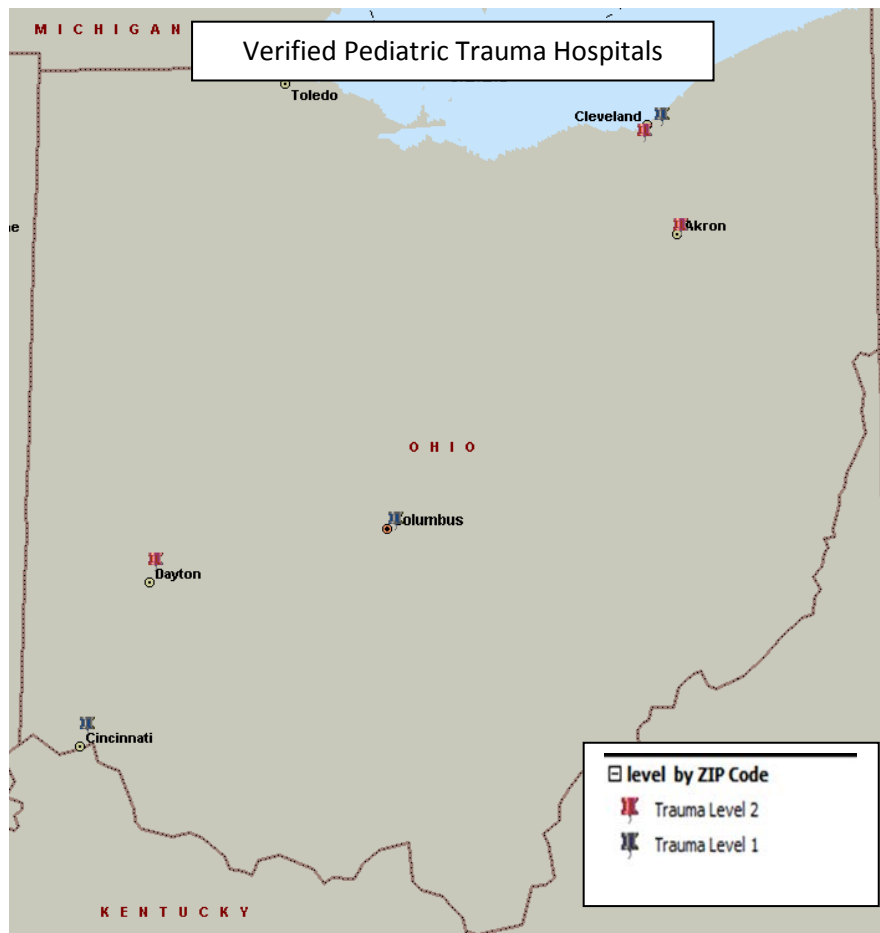

Pediatric

According to statutory authority in Ohio, pediatric is defined as children less than 16 years of age (ORC §4765.01(R)). Representatives from pediatric trauma centers are active within trauma system development at the state level.

Ohio is fortunate to have a large number of pediatric institutions in the state. There are five regional free standing pediatric institutions, verified as either a Level I or Level II pediatric trauma center and are as follows:

- Children's Medical Center of Akron, Level II, located in Akron, Ohio
- Children's Medical Center of Dayton, Level II, located in Dayton, Ohio
- Cincinnati Children's Hospital Medical Center, Level I, located in Cincinnati, Ohio
- Nationwide Children's Hospital, Level I, located in Columbus, Ohio
- University Hospital Rainbow Babies & Children's Hospital, Level I, located in Cleveland, Ohio

One adult Level I trauma center, MetroHealth Medical Center, is also a Level II pediatric verified center and is located in Cleveland making a total of 6 verified pediatric trauma centers in Ohio.

Patients transferred to these institutions utilize historic referral patterns that exist within the state. There has not been an analysis of appropriateness of pediatric trauma care / transfer patterns.

The verified pediatric trauma centers are located in the large urban regions of the state. Toledo (northwest Ohio) is a substantive urban area without an ACS verified pediatric trauma center. Southeastern Ohio, which is more rural than the remainder of Ohio and a part of the Appalachian Region, lacks close access to pediatric trauma care (Note: Thirty-two of the Ohio's eight-eight counties lie in Appalachia according to the Appalachian Regional Commission).

Burn

According to the American Burn Association (ABA), there are 6 verified burn centers in Ohio. They include the following:

- Akron Children's Hospital, Akron, Ohio;
- MetroHealth Medical Center, Cleveland, Ohio;
- Nationwide Children's Medical Center, Columbus, Ohio;
- Ohio State University, Columbus, Ohio;
- Shriners Burn Hospitals for Children, Cincinnati, Ohio;
- University Hospital, Cincinnati, Ohio.

There are transfer agreements between verified burn centers as part of Ohio disaster planning. In addition, Ohio has the luxury of having a free standing and nationally known non-profit hospital (Shriners Burn Hospitals for Children) dedicated to burn treatment and innovative burn research for children less than 18 years of age. Children from all over the mid-west region of the United States utilize this facility, if approved for treatment. A representative from the burn medical community is a voting member on the Ohio Trauma Committee. In addition, there are two additional non-verified burn centers in Ohio (Miami Valley Hospital and Mercy St. Vincent Medical Center). Data is not currently available on whether any of these burn centers are appropriately utilized.

Traumatic Brain Injury (TBI) / Spinal Cord Injury (SCI)

Ohio law is non-specific with regard to TBI/SCI. Statutory authority in Ohio mandates that injured patients be treated at an appropriate trauma center. Trauma patients with significant TBI can be managed by any of the Level I trauma centers in the state. Most of the Level II facilities also have significant expertise in the care of severely injured TBI patients, although some Level II facilities choose to transfer the most severely injured patients to a Level I for the neurosurgical and / or rehabilitation components. See the Rehabilitation section (pg. 139) for detailed information on Rehabilitation centers in Ohio. A representative from the rehabilitation medical community is a voting member on the Ohio Trauma Committee.

Question 2: Describe the roles of the non-designated acute care facilities in the trauma system.

As previously mentioned, acute care facilities must submit pertinent injury data to the Ohio Trauma Registry (OTR). Ohio law mandates that each acute care hospital have trauma care protocols related to initial stabilization and patient transfer agreements. At this time, it is unknown how many hospitals are in actual compliance with this as there is no formal monitoring at this point. At the current time, interaction between the state trauma system and acute care hospitals is minimal. The state trauma system does not generate any standard reports / information specific for the acute care hospitals. Transfer patterns between trauma hospitals and acute care hospitals are difficult to ascertain due to registry issues and the current 48-hour rule, which has been approved for deletion but not currently operationalized. See the Trauma Management Information Systems (MIS) section (pg. 158) for Ohio Trauma Registry (OTR) limitations.

According to triage criteria, EMS agencies within urban areas should be transporting the more severely injured or those that have a mechanism that may indicate significant injury to a verified trauma center. It is unknown whether that is actually happening. Some regional systems have attempted to evaluate this issue and have met with resistance due to HIPPA requirements and the sharing of hospital specific data. In more rural areas of Ohio and areas with longer driving distances, patients are frequently transported to the closest hospital. The eventual decision to transfer or not transfer to a verified center is the responsibility of the acute care hospital. Little is documented regarding acute care hospitals, as no authority exists for monitoring and enforcement of their actions. No audit system exists regarding appropriateness of initial transportation and transfers. The ramifications of not transferring severely injured can only be appreciated through impacts on the community reputation of the hospital and any criminal and/or civil suits that may arise in connection with individual patients.

The 2011 National Highway Traffic Safety Administration (NHTSA) report recommended that the state support the development of Level IV trauma centers, when this is appropriately endorsed by the American College of Surgeons (ACS) (NHTSA 2011 Report, pg. 29). According to the report, this would assist the state in the moving toward more of an inclusive trauma system.

a. Address their representation on the regional trauma committee.

There is a non-trauma center administrator who is a voting member of the Ohio Trauma Committee. In addition there are administrative and clinical representatives of trauma centers on the Ohio Trauma Committee (ORC §4765.04).

In areas without regional systems, acute care hospitals have minimal interaction with the state trauma system.

b. Do they submit registry and / or financial data?

Over the past 2 years and due to requests from the Ohio Trauma Committee, staff of the Office of Research and Analysis (ORA) has worked to increase Ohio Trauma Registry (OTR) submission compliance by verified trauma centers and acute care centers. As of November 2012, submission compliance for all Ohio hospitals is greater than 80%. The graph provides a summary of OTR data submission:

OTR Compliance

Hospital Reporting Compliance

To date, financial data submission from both verified trauma centers and non-trauma hospitals are legally mandated. However, this data submission is inconsistent in both volume and quality, while enforcement of data submission does not exist. At this point there have been no clear steps taken to improve the process, although this was previously discussed as an action item within the leadership workgroup (goal #1).

c. **What is their degree of engagement in the system-wide performance improvement process?**

Currently there is no system-wide performance improvement process that involves trauma centers or the acute care hospitals. See System-wide Evaluation and Quality Assurance section (pg. 153) of this document which outlines a first effort at evaluating Ohio transfer times and patterns, which would then include the acute care hospitals.

Question 3: Describe the process for verification and designation. Briefly outline the extent of authority granted to the lead trauma agency to receive applications and to verify, designate and de-designate regional trauma centers.

The statutory lead trauma agency (LTA) in Ohio does not exist. The principle trauma agency, ODPS has no authority to provide verification, designation or de-designation to Ohio trauma centers. Ohio facilities may not call themselves a “trauma center” unless approved for verification as a Level I, II, or III trauma center by the ACS. The ORA and the chair of the Ohio chapter of the ACS Committee on Trauma are informed when a hospital is undergoing the ACS verification process and when the final letter of approval (i.e. approval vs. failure) is received. No specific information on trauma center performance is made available to the ORA. Once this verification letter is received, ORA staff posts the information on the ODPS website. During the interim between ACS verification site visits, there is no process to monitor trauma centers for continued compliance of ACS trauma standards.

Question 4: Describe your standards for trauma center verification (including pediatric standards) and the extent to which they are aligned with national standards.

Ohio standards for trauma center verification are the ACS requirements, which are outlined in the *Resources for Optimal Care of the Injured Patient: 2006*. Verified trauma centers must comply with all changes to subsequent editions of this document / book.

a. Describe any waivers or program flexibility granted for centers not meeting verification requirements.

[Sub. Senate Bill 124](#) of the 124th Ohio General Assembly which passed in November 2002 and is otherwise known as the provisional designation bill (discussed below in Questions 5c), allows verified trauma centers an extension under state provisional designation if a focused review is necessary. Those that fail to maintain trauma center status should follow [policy](#) established by the EMS Board as they transition to a non-trauma center status.

b. Describe the process and frequency of use for de-designation of trauma centers.

Trauma centers in Ohio are either verified or fail to be verified by the ACS. The OAC stipulates the conditions under which a trauma center or hospital may be designated as a provisional trauma center for purposes of attaining verification (or re-verification). The responsibility of the state is to maintain records that such hospitals have met those conditions. ORA staff assists local EMS units in transporting patients to appropriate facilities by keeping the list of verified or provisionally designated centers current on their website (ORC §3727.101 and §3737.102).

Question 5: Outline how the geographic distribution and number of designated acute care facilities is aligned with patient care needs.

Geographic distribution of trauma centers has not been a consideration in Ohio's voluntary trauma system. The statute that authorizes the development of a trauma system does not give any state agency the authority to limit the number of participating trauma centers. Rather, the system has been developed such that any Ohio facility that is interested and passes ACS trauma verification will be listed as a verified trauma center in Ohio. Therefore, it is entirely possible that some Ohio regions may be over-represented by trauma centers while other regions may be under-represented.

Ohio has been extremely fortunate that a strong contingency of hospitals actively participate as ACS verified trauma centers. Even with 46 verified trauma centers, sections of Ohio continue to be under-represented. In the rural area of southeastern Ohio, there is a lack of trauma centers to support the regional population.

a. Describe the process by which additional trauma centers are brought into the system.

As population and injury patterns throughout the state change, it was expected that new trauma centers might develop. During establishment of the initial trauma system development, it was determined that new trauma hospital development may be difficult due to the state's definition of a trauma hospital, state EMS triage rules and criteria for trauma center verification by ACS. A need for provisional trauma center designation was identified. SB 124 which took effect in November 2002 provided a short-term solution to the complex problem of provisional designation. The primary

motivation for writing SB 124 was to address a lack of verified trauma centers in the southeast region of Ohio; however, it also is useful for verified centers that have fallen behind in their verification process or require a focused review.

Summary of this provisional verification bill is as follows. In order for a hospital to attain trauma center verification, it must undergo a consultative visit or re-verification by the ACS.

1. The CEO must certify in writing to the hospital's governing board that the hospital is committed and able to provide trauma care consistent with the level of verification being sought.
2. The hospital governing board must adopt a resolution stating that the hospital is committed and able to provide trauma care consistent with the level of verification that is being sought.
3. The hospital governing board must approve a written plan and timetable for obtaining the verification level being sought, including any actions for correcting deficiencies identified during the ACS review.
4. Status as a provisional center is terminated if the hospital withdraws its application or the hospital is not verified within 18 months after operating under provisional status (or 12 months if the hospital is being re-verified) (ORC §3727.101).

There is no authority for any group to monitor hospitals operating as a provisionally designated trauma center. There is no monitoring of hospitals to assure that they are providing an appropriate level of care or making an effort toward successful verification. There is no action or penalty set in statute or rule associated with non-compliance with the criteria for attaining provisional status. The Ohio Provisional designation process was intended to take place without a designating authority.

b. Describe the system response to the voluntary withdrawal of designation by acute care facilities.

Expounding upon OC 3727.102, staff at ORA outlined the [procedure](#) to follow when a hospital voluntary withdraws from being a trauma center. A survey is sent by the ORA to the withdrawing hospital requesting information on pertinent factors and rationale for their decision. This process was started in 2011 with results presented to the Ohio Trauma Committee. See chart under Question 1 of this section which summarizes the hospitals that have withdrawn.

c. Describe the mechanism for tracking and monitoring patient volume and flow between centers and how this influences the overall configuration of designated facilities.

The [ODPS Ohio Trauma Report 2010](#) outlines the volume of admitted injured patients during that calendar year that have a hospital stay of greater than 48 hours. As discussed in the Trauma MIS section (pg. 158), the > 48 hour rule has been dropped as a requirement by the EMS Board (July 2010); however, this change has not yet been implemented within the OTR. To date, there is no tracking and monitoring of patient volume and flow between centers. In 2011, the [Ohio Metrics](#) was developed to evaluate the trauma system and would provide some insight into patient flow. This document has not been implemented due to OTR limitations.

Question 6: Describe your system for assessing the adequacy of workforce resources available within participating centers.

The state has no formal system to assess the adequacy of workforce resources available within trauma centers other than the site review process within each hospital during the ACS verification. When a site

review takes place, the review team might make recommendations regarding the need for additional providers. This information is only available to the trauma center that is being reviewed.

There are no state requirements for education or training of hospital staff except as required during the ACS site review process. Trauma centers must have a surgeon present upon a patient's arrival (depending on type / level of resuscitation) or within 15 / 30 minutes of arrival (depending on level of trauma center).

No state rules exist to address the number of staff available at any given time or any patient / nurse ratio.

a. Address nursing and subspecialty needs (trauma or general surgery, intensivists, neurosurgeons, orthopedic surgeons, anesthesiologists, pediatric surgeons, and others, as required).

The state trauma system has not performed an assessment related to the availability of nursing and subspecialty needs, nor is there a plan to do so. A need assessment is included within Goal #1 of the *Ohio Trauma Framework: 2010*. Anecdotal information (discussions with hospitals, newspaper articles, etc.) indicates that urban areas have easier access to general surgeons and surgical subspecialties; however, even Ohio's largest hospitals have been plagued by shortages in certain subspecialty areas from time to time.

b. What human resource deficiencies have been identified, and what corrective actions have been taken?

To date, an evaluation of the human resource within the state has not been completed.

Question 7: Describe the educational standards and credentialing for emergency physicians and nursing staff, general surgeons, specialty surgeons, and critical care nurses caring for trauma patients in designated facilities.

The only educational standards and credentialing for emergency physicians, nursing staff, general surgeons, specialty surgeons and critical care nurses in Ohio are those that are required and outlined in the *Resources for Optimal Care of the Injured Patient: 2006* document.

a. What regional educational multidisciplinary conferences are provided to care providers? Who is responsible for organizing these events?

At the time of writing this document, the state of Ohio does not sponsor any type of regional educational multidisciplinary conferences related to trauma for care providers. However, trauma centers and / or regional trauma systems across the state sponsor multidisciplinary conferences.

System Coordination & Patient Flow

Benchmark 302: The trauma system is supported by an EMS system that includes communications, medical oversight, prehospital triage, and transportation; the trauma system, EMS system, and public health agency are well integrated.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #	
(I-302.6) = There are mandatory system-wide prehospital triage criteria to ensure that trauma patients are transported to an appropriate facility based on their injuries. These triage criteria are regularly evaluated and updated to ensure acceptable and system-defined rates of sensitivity and specificity for appropriately identifying a major trauma patient	3	N	
(I-302.7) = There is a universal access number for citizens to access the EMS / trauma system, with dispatch of appropriate medical resources. There is a central communications system for the EMS / trauma system to ensure field-to-facility bidirectional communications, interfacility dialogue, and all-hazards response communications among all system participants.	1	Y	Goal 1
(I-302.9) = There is a procedure for communication among medical facilities when arranging for interfacility transfers including contingencies for radio or telephone system failure.	2	Y	Goal 5

Benchmark 303: Acute care facilities are integrated into a resource-efficient, inclusive network that meets required standards and that provides optimal care for all injured patients.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #	
(I-303.4) = When injured patients arrive at a medical facility that cannot provide the appropriate level of definitive care, there is an organized and regularly monitored system to ensure that the patients are expeditiously transferred to the appropriate system-defined trauma facility.	2	Y	Goal 1

System Coordination and Patient Flow

Pertinent History:

The trauma adage of transporting the “right patient to the right place at the right time” continues as a goal for system coordination and patient flow. Numerous issues such as geography, weather, transport level of care, volunteer vs. paid EMS and family preference factor into the situation increasing the complexity of the decision-making. At the time of writing, there is no concrete evidence to grade Ohio’s performance in the area of system coordination and patient flow. Patient flow and care coordination plans may occur between individual hospitals or within the context of a regional trauma system; however, these still operate outside of the control and monitoring of the state trauma system. With probabilistic linkage of EMS Incident Reporting System (EMSIRS) and the Ohio Trauma Registry (OTR), the Ohio Trauma Committee looks to this linkage as a possible source of information regarding appropriate transport and patient flow.

Question 1: Describe the source of pre-hospital trauma triage protocols, and specify whether they are consistent with national guidelines.

The pre-hospital trauma triage protocols are written in Ohio rules (OAC §4765-1 and §4765-14). These protocols form a baseline upon which regional systems can expand, if desired. The Ohio trauma triage protocols were initially developed in 2001-02 by consensus of trauma experts within the state and by benchmarking with other state systems.

Statutory authority allows for regional variations to Ohio’s trauma triage protocols, as long as the following criteria are met:

- Ohio’s minimum triage criteria are met;
- The appropriate Regional Physician Advisory Board (RPAB) submits the variation to the EMS Board;
- The Ohio Trauma Committee has the opportunity to review and comment;
- The revised regional trauma triage protocols are approved by the EMS Board.

If the state trauma triage protocols are amended to include criteria that do not appear in a region’s protocols, such amendments are automatically applied to the region’s protocols until such time as the region amends their protocols (ORC §4765.40).

Completion of the Ohio Trauma Triage on-line course (1 hour credit) is required during each 3-year certification cycle for Ohio EMS providers to meet re-certification requirements (ORC §4765.16). The following are the trauma triage protocols for pediatrics (< 16 years), adults (16-69 years) and geriatric (70 years and older) and guide the determination of transport to a trauma center:

An adult trauma victim is a person between the ages of sixteen and sixty-nine years of age inclusive, exhibiting one or more of the following physiologic or anatomic conditions:

- Physiologic conditions
 - Glasgow coma scale less than or equal to thirteen;
 - Loss of consciousness greater than five minutes;
 - Deterioration in level of consciousness at the scene or during transport;
 - Failure to localize to pain;
 - Respiratory rate less than ten or greater than twenty-nine;
 - Requires endotracheal intubation;

- Requires relief of tension pneumothorax;
- Pulse greater than one hundred twenty in combination with evidence of hemorrhagic shock;
- Systolic blood pressure less than ninety, or absent radial pulse with carotid pulse present.
- Anatomic conditions
 - Penetrating trauma to the head, neck, or torso;
 - Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;
 - Injuries to the head, neck, or torso where the following physical findings are present:
 - Visible crush injury;
 - Abdominal tenderness, distention, or seatbelt sign;
 - Pelvic fracture;
 - Flail chest.
- Injuries to the extremities where the following physical findings are present:
 - Amputations proximal to the wrist or ankle;
 - Visible crush injury;
 - Fractures of two or more proximal long bones;
 - Evidence of neurovascular compromise.
- Signs or symptoms of spinal cord injury;
- Second degree or third degree burns greater than ten percent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway.

A pediatric trauma victim is a person under sixteen years of age exhibiting one or more of the following physiologic or anatomic conditions:

- Physiologic conditions
 - Glasgow coma scale less than or equal to thirteen;
 - Loss of consciousness greater than five minutes;
 - Deterioration in level of consciousness at the scene or during transport;
 - Failure to localize to pain;
 - Evidence of poor perfusion or evidence of respiratory distress or failure.
- Anatomic conditions
 - Penetrating trauma to the head, neck, or torso;
 - Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;
 - Injuries to the head, neck, or torso where the following physical findings are present:
 - Visible crush injury;
 - Abdominal tenderness, distention, or seatbelt sign;
 - Pelvic fracture;
 - Flail chest.
 - Injuries to the extremities where the following physical findings are present:
 - Amputations proximal to the wrist or ankle;
 - Visible crush injury:
 - Fractures of two or more proximal long bones;
 - Evidence of neurovascular compromise.
 - Signs or symptoms of spinal cord injury;
 - Second or third degree burns greater than ten percent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway.

A geriatric trauma victim is a person seventy years of age or older exhibiting one or more of the following causes of injury or physiologic or anatomic conditions: (Note: * **bold** indicates changes from adult triage criteria)

- Physiologic conditions
 - **Glasgow coma scale less than or equal to fourteen in a trauma patient with a known or suspected traumatic brain injury ***;
 - Glasgow coma score less than or equal to thirteen;
 - Loss of consciousness greater than five minutes;
 - Deterioration in level of consciousness at the scene or during transport;
 - Failure to localize to pain;
 - Respiratory rate less than ten or greater than twenty-nine;
 - Requires endotracheal intubation;
 - Requires relief of tension pneumothorax;
 - Pulse greater than one hundred twenty in combination with evidence of hemorrhagic shock;
 - **Systolic blood pressure less than one-hundred**, or absent radial pulse with carotid pulse present. *
- Anatomic conditions
 - Penetrating trauma to the head, neck, or torso;
 - Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;
 - Injuries to the head, neck, or torso where the following physical findings are present:
 - Visible crush injury;
 - Abdominal tenderness, distention, or seatbelt sign;
 - Pelvic fracture;
 - Flail chest.
 - Injuries to the extremities where the following physical findings are present:
 - Amputations proximal to the wrist or ankle;
 - Visible crush injury;
 - **Fracture of one proximal long bone sustained as a result of a motor vehicle crash;***
 - Fractures of two or more proximal long bones;
 - Evidence of neurovascular compromise.
 - Signs or symptoms of spinal cord injury;
 - Second degree or third degree burns greater than ten percent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway;
 - **Injury sustained in two or more body regions. ***
- Cause of injury *
 - **Pedestrian struck by a motor vehicle *;**
 - **Fall from any height, including standing falls, with evidence of a traumatic brain injury *.**

Statutory authority requires that Ohio's trauma triage protocols be reviewed and updated every three years by the EMS Board, in order to minimize over-triage and under-triage. These reviews are done through public hearings, public comment periods and current review of literature. As of this date, over and under triage information at the state level has not been assessed. These guidelines are not consistent with the Centers for Disease Control: Guidelines for Field Triage of Injured Patients Recommendation of the National Expert Panel on Field Triage (January 2009) or the triage information located in the ACS *Optimal Resources for the Care of the Injury Patient: 2006*. A motion to adopt CDC triage guidelines with the addition of geriatric additions suggested by the geriatric task force failed to pass

at the May 2011 Trauma Committee meeting. Rationale for this was that a geriatric set of criterion was not present in the CDC guidelines.

a. Describe how children and patients with severe TBI and SCI are triaged from the field to appropriate facilities.

Ohio has a strong contingency of pediatric verified trauma centers, with five of the six facilities being free-standing pediatric hospitals. As described above, children with any types of injuries are triaged according to the Ohio trauma triage protocol. In urban or high density regions where verified pediatric centers exist, EMS personnel frequently bypass the adult institutions and transport directly to the pediatric center; however, no data is available to validate this statement. In lower population density regions (more rural), it is believed that children are frequently transported to the adult Level II or III trauma center or to the acute care hospitals. Once again, no data is available to validate this statement. The primary triage of a child from the field to an appropriate center with varying level of severity has never been evaluated in Ohio, so information cited above is subjective.

The Ohio trauma triage criteria dictate that patients with severe TBI and SCI should be transported to an appropriate trauma center. The following chart defines the Ohio counties in four categories per 2010 census data, with details on percentage of land mass and population.

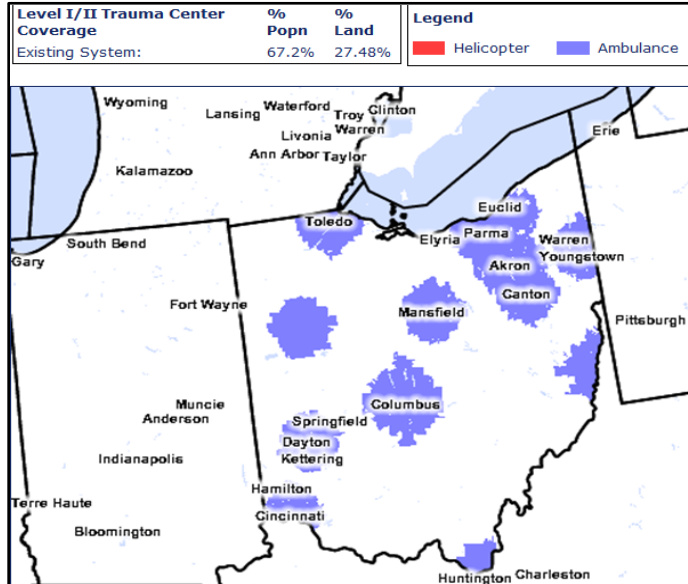

Ohio County Profile	Definition	% Land Mass	% Population
High Density	> 1000 people / sq mile	8.2%	41.5%
Medium High Density	300 - 999 people / sq mile	16.2%	24.7%
Medium Low Density	100 - 299 people / sq mile	39.0%	23.4%
Low Density	< 100 people / sq mile	36.6%	10.4%

In a high density setting, patients are usually triaged to the Level I or II center, bypassing other facilities; however, data is not available to validate that statement. However, 33.4 percent of Ohioans live in a rural community (i.e. as identified by census tracts of < 300 people per square mile) without the benefit of a level I trauma center nearby.

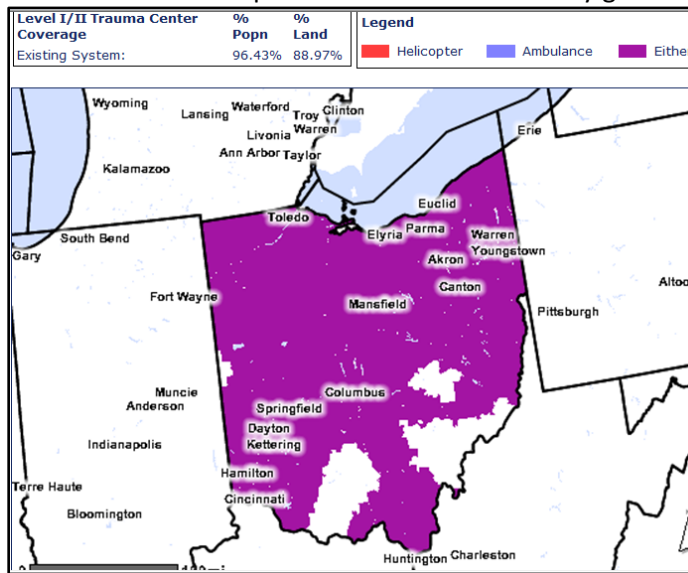

This is especially evident in the southeast region of Ohio. Therefore, transport of a severely injured adult could follow different scenarios depending on the various factors of geography, weather, level of transporting squad, etc. This is subjective discussion as no evaluation of field triage (i.e. appropriateness of transport, time of transport to definitive care) has been completed in the state of Ohio.

The following is a map that outlines regions in Ohio where transport to a Level I, II or III trauma center can be accomplished within 60 minutes by ground transport.

The following is a map that outlines regions in Ohio where transport to a Level I, II or III trauma center can be accomplished within 60 minutes by ground or air transport.

An [EMS / Trauma grant](#) completed in 2008 evaluated and researched the delay in transfer of severely injured pediatric trauma patients. This was a retrospective review of 748 children < 16 years of age with an inter-facility transfer to a verified pediatric trauma center in Ohio. Overall, 82% of the patients took greater than 2 hours for transfer, with a mean transfer time of approximately four hours. Perhaps even more critical was the finding that only 20% of those children with a severe injury (ISS \geq 155) were transferred to an appropriate pediatric trauma center within two hours of injury.

Question 2: Within the system, what criteria are used to guide the decision to transfer patient to an appropriate resource facility and are these criteria uniform across all centers?

The decision to transfer is left up to each hospital. To date, there has been no examination of data regarding the provision of care in appropriate facilities.

Question 3: Specify whether there are inter-facility transfer agreements to address the needs of each of the following:

By statutory authority, each hospital is mandated to have a hospital policy and procedure for the timely transport of the trauma patient (ORC §3727.09). In addition, each Ohio hospital is mandated to have a transfer agreement with an adult and a pediatric trauma center. There is no standardization of which patients to transfer. There is no current mechanism to monitor whether the transfer agreements exist or whether the transfer occurs.

- a. Transfer to an appropriate resource facility**
- b. TBI**
- c. SCI**
- d. Re-implantation**
- e. Burns**
- f. Children**
- g. Repatriation**

The answers to sections 3a-f are that, in each case, the decision to transfer is left up to each hospital. It is not known whether hospitals have in place legally mandated initial treatment guidelines and transfer agreements. Repatriation is not addressed in Ohio standards.

Question 4: Describe the system-wide policies addressing the mode of transport and the type and qualifications of transport personnel used for inter-facility transfers.

A Guide for Inter-facility Transport (NTHSA, April 2006) is listed on the ODPS website as a reference. ODPS and the EMS Board do not have any system-wide policies which address the mode of transport and the type of qualification of transport personnel using inter-facility transport for the injured patient. At the time of this writing, oversight of inter-facility transport is not within the domain of the EMS Board.

The Ohio Medical Transportation Board (OMTB) has legislative authority over private modes of transport (i.e. aeromedical, fixed wing, mobile intensive care units, ambulettes, etc.) and has policies which define the specific types of equipment required for inter-facility transports. Staffing requirements for each mode of transport are defined. However, no state-wide policies exist that address the mode of transport for a specific level of injury. In Ohio, referring physicians are responsible for determining the level of transport care that is needed.

Question 5: Specify whether there is a central communications system to coordinate inter-facility transfers. Describe how this system has access to information regarding resource availability with the region.

Ohio does not have a central communications system to coordinate inter-facility transfer. Inter-facility transfers are managed from hospital to hospital. No tools exist to assist with inter-facility transfer decision making. During a mass casualty incident (MCI), a state-wide communication system (Surge Net) exists in order to query hospitals regarding bed-capacity.

Rehabilitation

Benchmark 308: The lead agency ensures that adequate rehabilitation facilities have been integrated into the trauma system and that these resources are made available to all populations requiring them.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-308.1) = The lead agency has incorporated, within the trauma system plan and the trauma center standards, requirements for rehabilitation services, including inter-facility transfer of trauma patients to rehabilitation centers.	1	Y Goal 6
(I-308.2) = Rehabilitation centers and outpatient rehabilitation services provide data on trauma patients to the central trauma system registry that include final disposition, functional outcome, and rehabilitation costs and also participate in performance improvement processes.	2	Y Goal 6

Benchmark 103: A resource assessment for the trauma system has been completed and is regularly updated.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-103.1) = The trauma system has completed a comprehensive system status inventory that identifies the availability and distribution of current capabilities and resources.	1	Y Goal 1

Rehabilitation

Pertinent History:

To be verified by the American College of Surgeons (ACS), Ohio trauma centers are required to provide rehabilitative services, either through their own inpatient facility or to a freestanding rehabilitation hospital through a transfer agreement (Resources for Optimal Care of the Injured Patient 2006). As there is no statewide system that coordinates the transfer of patients to specialty rehabilitation facilities, each trauma center is responsible for this coordination of care.

Early in Ohio trauma system development, rehabilitation data was noted as an integral element. In response, the Trauma Rehabilitation Registry (TRR) was created as a separate module of the Ohio Trauma Registry (OTR) in 2005. Currently, some rehabilitation centers in Ohio submit data. However, rehabilitation data has not been submitted on a consistent basis by the rehabilitation hospitals as required by law (ORC §4765.06) and compliance has not been monitored nor enforced. See Trauma Management Information Systems (MIS) section (pg. 158) for details.

Question 1: Provide data about the number of rehabilitation beds and specialty rehabilitation services (SCI, TBI, and pediatric) available within the trauma system's geographic region. On average, how long do patients need to wait for these rehabilitation beds? Does the average wait vary by type of rehabilitation needed?

According to the website, rehabilitation in the state of Ohio is provided by 36 Commission on the Accreditation of Rehabilitation Facilities (CARF) accredited programs. Rehabilitation services are provided at many of the trauma centers as well as at private rehabilitation facilities. Based on data available, there are over 1,000 CARF inpatient rehabilitation beds and over 1,800 non-CARF inpatient rehabilitation beds. The average occupancy rate information in Ohio is not currently available. In addition, there is no information is available regarding average wait-times for a rehabilitation bed or whether average wait-times vary by type of rehabilitation needed. See chart below for synopsis of facilities.

‡ Data not available

Question 2: Describe how existing trauma system policies and procedures appropriately address treatment guidelines for rehabilitation in acute and rehabilitation facilities.

The Ohio trauma system policies and procedures do not address treatment guidelines for rehabilitation in acute and rehabilitation facilities.

Question 3: Identify the minimum requirements and qualifications that rehabilitation centers have established for the physician leaders (for example, medical director or SCI program, medical director of TBI program, and medical director of rehabilitation program).

OAC §3701-83-29, Personnel and Staffing Requirements – Inpatient Rehabilitation Facilities, requires that the medical director of an inpatient rehabilitation facility shall be a physician who has appropriate experience and training to provide rehabilitation physician services, as demonstrated by at least one of the following:

- Certification as a physiatrist by the American Board of Physical Medicine and Rehabilitation or the American Osteopathic Board of Rehabilitation Medicine;
- Formal residency in physical medicine and rehabilitation;
- Fellowship in rehabilitation for at least one year; or
- At least two years of experience in providing inpatient rehabilitation services.

Questions 4: Describe how rehabilitation specialists are integrated into trauma system planning and advisory groups.

Rehabilitation specialists are integrated into trauma system planning in a variety of ways. The composition of the Ohio Trauma Committee, as set forth in ORC §4765.04, requires that a physician who is certified by the American Board of Physical Medicine and Rehabilitation or American Osteopathic Board of Rehabilitation Medicine and actively provides rehabilitation care to trauma victims have an Ohio Trauma Committee seat. The current representative has been a member since 2000.

For many years, actions related to rehabilitation were not a focus of the Ohio Trauma Committee due to statutory authority limitations. However, with the development and implementation of Goal 6 of the *Ohio Trauma Framework: 2010* titled Definitive Care – Rehabilitation, a workgroup was recently established to address rehabilitation related issues that exist in the current trauma system. The Ohio Trauma Committee rehabilitation representative has assumed leadership of Workgroup 6 and has recruited assistance from experts in the field, including 2 physiatrists, a trauma surgeon, a PhD sociologist, rehabilitation coordinator/occupational therapist, data coordinator, patient advocate, city engineer, 2 nurses, and a trauma data manager for a pediatric and adult rehabilitation center. Initiation of this workgroup was in the summer 2012, therefore purpose, responsibilities and goals of the workgroup are in the early stages of development. At this time, it is unclear if statutory authority will allow rehabilitative actions to be implemented.

Lastly, the Trauma / EMS Grant Program Fourth Priority provide dedicated funds for rehabilitation research projects. The ORC §4765.07 states that “priority shall be given to entities that research, test, and evaluate procedures that promote rehabilitation, retraining, and reemployment of adult and pediatric trauma victims and social service support mechanisms for adult and pediatric trauma victims and their families.” Four rehabilitation research projects have been funded since 2009 and are as follows:

- Predictors of participation by children in life situations following traumatic Injury (Ohio State University Research Foundation, 2009)
- Teen-Online Problem Solving for Adolescent Brain Injury (Cincinnati Children’s Hospital, 2009)
- The Neural Substrates of Executive Function Skills following Adolescent TBI (Cincinnati Children’s Hospital 2009)
- Trauma and Rehabilitation Registry Merge (MetroHealth, 2012)

Most recently, [one study](#) was conducted to identify variables from the Trauma Registry that impact long-term outcomes for persons with traumatic injuries.

Additional Requested Information:

Listed below is a report that outlines the proportion of patients with SCI, TBI.

Spinal Cord Injuries

*Data Source: Ohio Trauma Registry. Only includes patients with an admission of greater than 48 hours.

Emergency Preparedness

Benchmark 104: An assessment of the trauma system's emergency preparedness has been completed, including coordination with the public health agency, EMS system, and the emergency management agency.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-104.1) = There is a resource assessment of the trauma system's ability to expand its capacity to respond to mass casualty incidents (MCIs) in an all-hazards approach.	4	N
(I-104.2) = There has been a consultation by external experts to assist in identifying current status and needs of the trauma system to be able to respond to MCIs.	3	N
(I-104.3) = The trauma system has completed a gap analysis based on the resource assessment for trauma emergency preparedness.	1	N

Benchmark 305: The lead agency ensures that its trauma system plan is integrated with, and complementary to, the comprehensive mass casualty plan for natural and manmade incidents, including an all-hazards approach to planning and operations.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-305.1) = The EMS, the trauma system, and the all-hazards medical response system have operational trauma and all-hazards response plans and have established an ongoing cooperative working relationship to ensure trauma system readiness to all-hazards events.	3	Y Goal 3
(I-305.2) = All-hazards events routinely include situations involving natural (e.g., earthquake), unintentional (e.g., school bus crash) and intentional (e.g., terrorist explosion) trauma-producing events that test the expanded response capabilities and surge capacity of the trauma systems	2	Y Goal 3
(I-305.3) = The trauma system, through the lead agency, has access to additional equipment, materials, and personnel for large-scale traumatic events. (Note: The lead agency will work with other appropriate national, state, regional, and local agencies to secure these additional resources.)	2	Y Goal 3

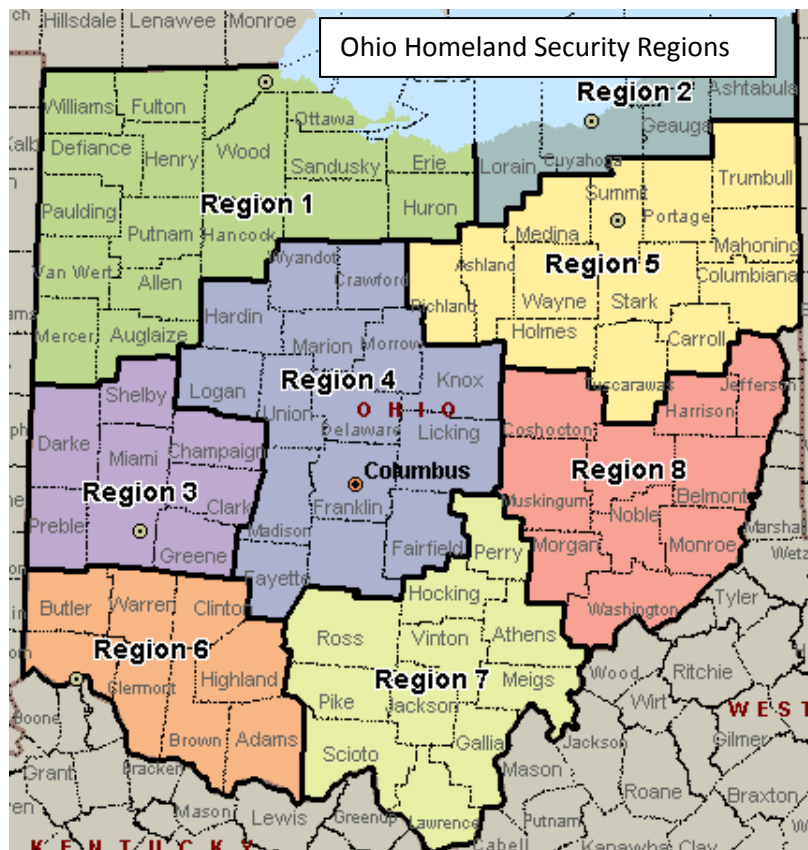

Emergency Preparedness

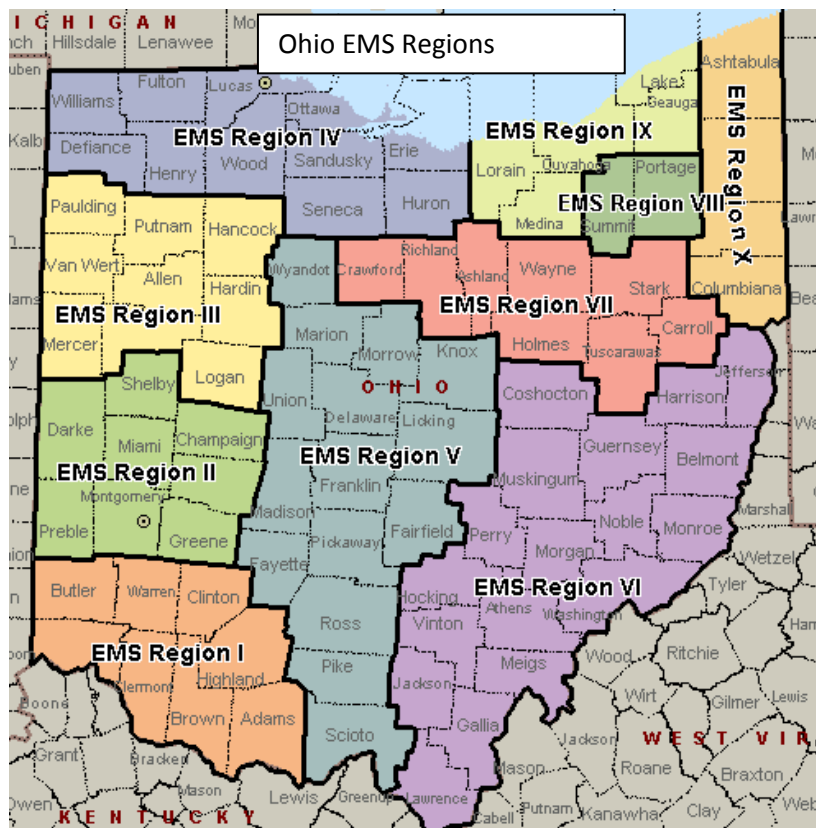

Pertinent history:

The Ohio Emergency Operations Plan ([Ohio EOP](#)) establishes a framework through which state agencies and other designated non-state agencies assist local communities to respond and recover from any type of disaster that affects the health, safety or welfare of the citizens of the state as mandated in ORC § 5502.22. Ohio EOP follows the Emergency Support Function structure as outlined in the U.S. Department of Homeland Security's National Response Framework (NRF) and incorporates the National Incident Management System (NIMS), which includes the Incident Command System (ICS).

The coordinating body for the Ohio EOP falls under the auspices of the Ohio Emergency Management Agency (EMA). Established under ORC § 5502.22, the Ohio EMA coordinates state-level assistance and resources during an emergency and prepares the state for all hazards through planning, training, exercises and funding activities at the state and local level. These activities include providing planning assistance and administering state and federal funding/grant assistance to individuals and governmental entities recovering from disaster damage and costs. The Executive Director of the Ohio EMA is responsible for all the coordinating activities.

The State is divided into 8 Homeland Security Planning regions that are not congruent with the 10 EMS regions.

A motion to adopt / change the EMS regions to align with Homeland Security Planning regions was approved by the EMS Board in February 2012. A workgroup was established, met several times but has not yet provided input back to the EMS Board. Each Homeland Security Planning region has a coordinator to collaborate with the county EMA, public health agencies and all hospitals in planning for events and the response. All events are handled on a local level initially; the state will not intervene unless requested by the local jurisdictions. Regional activity is variable, several regions had intact infrastructure for disaster coordination prior to the 2003 Health Resources and Services Administration (HRSA) grants. After 2003, Homeland Security Planning regions without an established infrastructure were required to participate in regional planning and writing of regional response plans. Within these regions, instead of a regional coordinator (independent of hospitals) a hospital incident liaison (HIL), hospital based employee acts as the coordinating center for the region.

The Ohio EOP is structured according to the Emergency Support Functions (ESF) that corresponds to the format of the NRF. In Ohio, the ESF is the primary mechanism through which Federal assistance to the state and state assistance to local governments is managed during emergencies. The ESFs detail the roles and responsibilities of state, federal and other public and private agencies that are charged with carrying-out functional missions to assist local jurisdictions in response to disasters.

Public Health and Medical Services fall under ESF-8, which addresses public health and medical services concerns during emergency events or incidents. The Ohio Department of Health (ODH) is the primary agency for ESF-8.

Upon request, the EMA could not provide a written organizational chart for Emergency Preparedness in the State of Ohio.

Question 1: When was the last assessment of trauma system preparedness resources conducted, and what were the significant findings of the assessment as they relate to emergency preparedness?

The last statewide formal assessment was conducted in 2008 by the Ohio Hospital Association through the regional coordinators. Since that assessment, annual Hazard Vulnerability Assessments (HVA) have been conducted on a regional level. At that level, all annual HVAs are collected so as to create a Regional Healthcare HVA. The results of the HVA are to identify gaps that may exist in planning and guide funding decisions. Each region has a plan in place to track resources annually and report findings to the state. Needs identified by individual hospitals are sent to the Regional Healthcare Coordinator (RHC) to request funding for the regional assets through the ODH. Federal grant funds over the last nine years have allowed the purchase of some but not all requested regional resources and gaps remain.

EMS works with the Homeland Security Planning Regions and participates in drills and exercises with local hospitals. This is done through the local emergency planning committee and run out of each county EMA. The regional coordinators assist in exercise coordination and the allocation of needed assets.

Question 2: What actions were taken to remediate or mitigate the gaps identified through tabletop or simulated responses in disaster drills among the acute care facilities participating in the system?

The ODH has contracted in the past through the Ohio Hospital Association (OHA) for large items that were identified as gaps statewide. Otherwise, the needs are assessed and addressed on a regional level. There is no state-wide algorithm of how to mitigate gaps.

Every exercise conducted by regions is conducted in Homeland Security Exercise and Evaluation Program (HSEEP) format which calls for an after action report and a corrective action plan. Hospitals and the region are responsible for addressing the corrective action plan items before they move forward with another exercise.

Through drills and/or tabletop exercises it was noted that HILs were utilizing caches for their own hospitals first. To mitigate this problem, the #2 priority for the 2013 fiscal year is to create a regional hospital coordinating center and formalize the coordination process in the regions without the infrastructure. In some regions the coordinating center is the regional hospital association. To date there is one region left to formalize the coordination process.

Question 3: What is the trauma system plan to accommodate a need for a surge in personnel, equipment, and supplies?

The hospitals in each of the regions have signed and are part of a Memorandum of Understanding (MOU) to share resources such as personnel, equipment and supplies during an emergency. Regional coordinators or HILs will generally assist the hospitals in facilitating this agreement by contacting the other hospitals in the region or the state for assets needed during an emergency. In so doing, they free the hospitals to concentrate on internal events. Agreements are being sought to move staff and equipment as needed to another facility not affected by the event. There is also a statewide agreement among many hospitals regarding specialized care such as pediatrics, burns, and trauma. Lastly, some

regions have robust regional caches to supplement needs during an event. A MOU exists between regions to share assets; however, unmet needs are funneled to the state for further review and action.

Question 4: How is the trauma system integrated into the state's incident command system and the communications center?

Hospitals in the state are asked to utilize a formalized hospital incident command system (HICS). HICS is the preferred system throughout Ohio. Hospitals have a web-based system throughout the state entitled SurgeNet. In the event of a local mass casualty incident (LMCI) – affected hospitals identify: (1) their emergency department's current capability of acceptance of caring for red, yellow, or green level patients; (2) whether an operating room is available in 30 minutes; and, (3) whether decontamination is available. Further, a hospital may enter inpatient bed capability based on the National Disaster Medical System (NDMS) 7 categories. Each hospital reports how many beds it can provide immediately (e.g., in case of a hospital evacuation), or can provide in 24, 48, or 72 hours based on the request. All regions in Ohio have SurgeNet capability for NDMS, but not all have LMCI capability. The State Emergency Operations Center (EOC) and the ODH has the capability to view this information for situational awareness and reporting.

If an incident is occurring in multiple regions, the regional coordinator or HIL has the ability to obtain resources through the state EOC EFS-8 desk.

Question 5: What strategies and mechanisms are in place to ensure adequate inter-hospital communication during an MCI?

The Ohio Office of Information Technology implemented the Multi-Agency Radio Communications Systems (MARCS), the 800 MHz radio system to provide communication statewide. The Ohio Emergency Management Agency has a redundancy for the MARCS with a deployable Transportable Communications System (TCS) which can be used to patch UHF and VHF. Hospitals have various modalities to communicate with the EMS community whether it is via radio or cell phone.

Although the MARCS and TCS are in every hospital for statewide use, each region has their own system to best communicate with the hospitals in that region. The Ohio Public Health Communication System can be utilized to advise all users at one time throughout the state that an incident has occurred. Requests, such as performing a bed counts, can be placed simultaneously with all users; whereas, with the MARCS radio each hospital would have to be called individually. In regions with pre-existing systems the MARCS is utilized as a redundant system.

There are gaps in the methods utilized by the state to communicate on a large scale. Keeping users up-to-date and reaching all potential users will always present challenges. Since MCI's are typically local or regional and not statewide, most regional systems have a previously established method for inter-hospital communications.

System-wide Evaluation and Quality Assurance

Benchmark 301: The trauma management information system (MIS) is used to facilitate ongoing assessment and assurance of system performance and outcomes and provides a basis for continuously improving the trauma system, including a cost-benefit analysis.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-301.1) = The lead trauma authority ensures that each member hospital of the trauma system collects and uses patient data, as well as provider data, to assess system performance and to improve quality of care. Assessment data are routinely submitted to the lead trauma authority.	3	N

Benchmark 304: The jurisdictional lead agency, in cooperation with other agencies and organizations, uses analytical tools to monitor the performance of population-based prevention and trauma care services.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-304.1) = The lead agency, along with partner organizations, prepared annual reports on the status of injury prevention and trauma care in state, regional, or local areas. Note: Annual reports may be distributed electronically rather than, or in addition to, printed copies.	1	Y Goal 1
(I-304.2) = The trauma MIS database is available for routine public health surveillance. There is concurrent access to the databases (ED, trauma, prehospital medical examiner, public health epidemiology) for the purpose of routine surveillance and monitoring of health status that occurs regularly and is a shared responsibility.	2	Y Goal 8

Benchmark 309: The financial aspects of the trauma systems are integrated into the overall performance improvement system to ensure ongoing fine-tuning and cost-effectiveness.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-309.4) = Financial data are combined with other cost, outcome, or surrogate measures, for example, years of potential life (YPLL), quality-adjusted life years (QALY), and disability-adjusted life years (DALY); length of stay, length of ICU stay, number of ventilator days; and others, to estimate and track true system costs and cost-benefits.	1	Y Goal 7

System-wide Evaluation and Quality Assurance

Pertinent History:

Ohio's trauma system has struggled to implement a system-wide evaluation and quality assurance program. A first attempt at developing a state performance improvement system for trauma was in July 2003. Summary is as follows:

- July 2003: Chair of Ohio Trauma Committee organized a State Trauma Performance Improvement (PI) workgroup;
- March 2004: List of indicators approved;
- May 2004: Statewide PI plan submitted to and approved by EMS Board;
- October 2004: Quarterly PI report draft presented to and approved by Ohio Trauma Committee;
- May 2005: EMS Board approved the format of the Quarterly PI report;
- September 2005: Discussion that the Ohio Trauma Committee's role was narrowly defined in Ohio Revised Code and that EMS Board /ODPS administration discourage trauma committee activities outside the scope of statutory authority of the EMS Board and the EMS Division;
- July 2006: Lack of hospital compliance for data submission noted to be hindering data for PI;
- January 2007: PI committee placed on hold.

In April 2012, in accordance with the *Ohio EMS 2015 Strategic Plan* and the *Ohio Trauma Framework 2010* (Trauma Goal # 7, pg. 28), a state Trauma Performance Improvement (PI) workgroup was re-established. The workgroup is tasked with developing and implementing a state Trauma PI system for injured patients in Ohio.

Question 1: What is the membership of the committee charged with ongoing monitoring and evaluating of the trauma system?

Membership of the committee is in the developmental stage.

a. To whom does it report its finding?

The chair of the Trauma PI workgroup is a member of the Ohio Trauma Committee and is scheduled to present a report of the Trauma PI workgroup's progress at each Ohio Trauma Committee meeting. A scorecard has been developed for each goal to depict progress on specific actions. The tentative plan is to update the scorecard after each meeting and to post it on the Ohio Department of Public Safety (ODPS) website along with committee minutes. As this PI committee is just developing, the exact structure for a state PI system has not been established. At time of writing, no reports have been generated.

b. How does it decide what parameters to monitor?

The Trauma PI Committee (Workgroup #7) is to identify, select and prioritize areas of interest. The committee is currently working on which areas within the scorecard will be addressed first. At the time of this writing, it is believed that transfer times and issues related to that topic will be the first priority for the PI committee.

c. What action is it empowered to take to improve trauma care?

Currently, the PI committee is empowered only to make recommendations to the Ohio Trauma Committee and EMS Board. While no agency has statutory authority over the hospital or rehabilitation components of the trauma system, data from the EMSIRS and OTR are to be used, within the confidentiality parameters established in the ORC (ORC §4765.06(C)), for research and for generating reports which highlight areas for needed improvement (OAC §4765-4-02).

Question 2: Describe the trauma system performance improvement efforts as they pertain to the system for the following groups of providers in the context of system integration:

a. Dispatch centers

To date, the Ohio Trauma Committee and EMS Board have not participated in any trauma system performance measures related to dispatch centers.

b. Pre-hospital provider agencies

The EMS Board is involved in pre-hospital performance improvement which is separate from the Ohio Trauma Committee. By statutory authority, each EMS organization is responsible to implement ongoing peer review and quality assurance programs designed to improve the availability and quality for the EMS services that it provides (ORC §4765.12). This performance information is kept confidential within the EMS organization, not monitored or evaluated outside the realm of the individual EMS agency. It is unknown if EMS PI issues are included in regional PI activities. There is no mandate to report any PI information back to the EMS Board nor is there an oversight process to ensure that PI is done.

c. Trauma centers

Currently, there is no statewide trauma PI. Trauma PI for verified trauma centers lies within the purview of ACS verification/re-verification.

Regional trauma systems have varied involvement in PI. The Southeast Ohio Regional Trauma System (SORTS) conducts a regional review of selected patients within the Dayton region. The Tri-State Trauma Coalition (TSTC) has a committee that is beginning to review regional data for opportunities for improvement. The Central Ohio Trauma System (COTS) is currently in the process of revising their regional PI program with a part-time staff person dedicated to regional PI development.

d. Other acute care and specialty facilities

To date, the Ohio Trauma Committee has not participated in any trauma system performance measures related to other acute care and specialty facilities. Barriers exist such as lack of probabilistic linkage between EMSIRS and OTR data and actual system to implement change outside of the verified trauma centers.

e. Rehabilitation centers

To date, the Ohio Trauma Committee has not analyzed any trauma system performance measures related to rehabilitation centers.

Questions 3: List the process and patient outcome measures that are tracked at the trauma system level, including measures for special populations

In 2010, the Trauma Visionary Committee (TVC) developed a [metrics scorecard](#) format, which was approved by the EMS Board in December 2011. The prime objective of an Ohio Metrics Scorecard is to evaluate the overall effectiveness of the trauma system and to facilitate future evolution of Ohio's trauma system. Consensus was obtained by the TVC members that the following elements were considered the essential parameters of a scorecard for system evaluation:

- Data is easily ascertained by either registry data or survey;
- Data is objective, reliable and sensitive to variation;
- Data is evaluative of system;
- Outcome results should be of Interest among public and policy makers;

The concept of this scorecard is to identify areas of largest need so that additional analysis can be performed, specific remedial actions instituted and re-measurement undertaken. To date, no Ohio Metric Scorecard reports, using Ohio Trauma Registry (OTR) data, have been generated. Limitations of the trauma registry, such as limited inclusion criteria, inability to probabilistically link databases, and non-compliance of reporting continue as issues that have hindered progress on utilization of this evaluation tool.

No specific measures for special populations were incorporated into the Ohio Metric Scorecard.

Question 4: As part of your system-wide performance improvement, specify whether each of the following is assessed on a regular basis:

- a. Time from arrival to a center and ultimate discharge to a facility capable of providing definitive care. If yes, specify the mean time to transfer**

Not assessed at this time.

- b. Proportion of patients with injury more severe than a predefined injury severity threshold (for example, ISS > 15, or other criteria) who receive definitive care at a facility other than a Level I or II trauma center (under-triage)**

Not assessed at this time.

- c. Proportion of patients with injury less severe than a predefined injury severity threshold (for example, ISS < 9) who are transferred from any facility to a Level I or II trauma center (over-triage)**

Not assessed at this time.

At time of writing, over-triage and under-triage are impossible to determine with the limitations of the trauma registry. With the purchase and implementation of the new commercial software for the trauma registry, there is hope that probabilistic linkage and reporting of data will occur.

Question 5: Describe how your system addresses problems related to significant over-triage or under-triage, both primary and secondary.

To date, no data related to monitoring of over-triage and under-triage has been generated. SB 138 mandated a review of both these parameters; however, data registry limitations have made this impossible. Parameters to monitor over-triage and under-triage are written in the Ohio Metrics Scorecard.

Trauma Management Information Systems

Benchmark 102: There is an established trauma management information system (MIS) for ongoing injury surveillance and system performance assessment.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-102.1) = There is an established injury surveillance process that can, in part, be used as an MIS performance measure. Trauma system works with EMS and public health to identify special at-risk populations.	4	Y Goal 8
(I-102.2) = Injury surveillance is coordinated with statewide and local community health surveillance.	1	Y Goal 8
(I-102.4) = There is a process to evaluate the quality, timeliness, completeness, and confidentiality of data.	1	Y Goal 8
(I-102.5) = There is an established method of collecting trauma financial data from all health care facilities and trauma agencies, including patient charges and administrative and system costs.	2	Y Goal 8

Benchmark 301: The trauma management information system (MIS) is used to facilitate ongoing assessment and assurance of system performance and outcomes and provides a basis for continuously improving the trauma system ,including a cost-benefit analysis.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-301.1) = The lead trauma agency authority ensures that each member hospital of the trauma system collects and uses patient data, as well as provider data, to assess system performance and to improve quality of care. Assessment data are routinely submitted to the lead trauma authority.	3	N
(I-301.2) = Pre-hospital care providers collect patient care and administrative data for each episode of care and not only provide these data to the hospital, but also have a mechanism to evaluate the data within their own agency including monitoring trends and identifying outliers.	3	N
(I-301.3) = Trauma registry, emergency department, pre-hospital, rehabilitation, and other databases are linked or combined to create a trauma system registry.	3	N
(I-301.4) = The lead agency has available for use the latest computer / technology advances and analytical tools for monitoring injury prevention and control components of the trauma system. There is reporting on the outcome of implemented strategies for injury prevention and control programs within the trauma system.	1	Y Goal 8

Trauma Management Information Systems (MIS)

Pertinent History:

With the passage of Am. Sub Senate Bill 98 of the 119th Ohio General Assembly (1992), the formation of a trauma registry and an emergency medical systems (EMS) incident reporting system within the Ohio Department of Public Safety (ODPS) was established in law (ORC §4765.06). Data collection for the Trauma Acute Care Registry (TACR), a component within the Ohio Trauma Registry (OTR) began in 1999. SB 98 delineated the following data points for collection: 1) information regarding the care of adult and pediatric trauma victims in this state; 2) reporting of adult and pediatric trauma-related deaths; 3) identification of adult and pediatric trauma patients; 4) monitoring of adult and pediatric trauma patient care data; 5) determination of the total amount of uncompensated adult and pediatric trauma care provided annually by each facility that provides care to trauma victims; and, 6) collection of any other information specified by the EMS Board. The Trauma Rehabilitation Registry (TRR), a second component / module incorporated within OTR, began data collection in 2005.

Data collection for the Emergency Medical Services Incident Reporting System (EMSIRS), a separate database from the OTR, began in January 2002. The purpose of this database is the collection of information regarding the delivery of emergency medical services in Ohio and the frequency at which the services are provided. EMS in the state is defined as a service that uses EMTs and paramedics rather than one that transports sick and injured individuals; hence, air medical services do not have a mandatory reporting requirement to this database. Some air medical services voluntarily submit data to the registry.

These three data sources - TACR, TRR and EMSIRS - combine to form the three main components of Trauma MIS in Ohio. A historical perspective (Appendix C, pg. 239) regarding the development of the Trauma MIS since 1999 has been created to show the progression.

The State of Ohio supports other databases that are pertinent to injury. These are housed within other agencies, such as Ohio Department of Health (ODH). The Ohio Hospital Association (OHA) collects hospital discharge data. Agreements exist between state agencies and OHA to share data, but these are not mandated by law.

The Injury Epidemiology section (pg. 9) of the document describes these additional databases, explaining their interaction or lack of interaction with the Trauma MIS. If needed, these databases can be queried and analyzed to provide additional information for a clearer understanding of the injuries within the state.

Question 1: Which agency has oversight of the MIS?

The Office of Research and Analysis (ORA) within the EMS Division and under the direction of the ODPS provides oversight for all three components of the Trauma MIS.

The Trauma Registry Advisory Subcommittee (TRAS) was created by the EMS Board in November 2000 (OAC §4765-4-02) to oversee the operation of TACR and to provide expertise to the ORA staff. TRAS is a subcommittee of the Ohio Trauma Committee, which is under the EMS Board. Composition of TRAS has evolved over the years. Currently, participants include trauma registrars, nurses, physicians, and an epidemiologist providing consistent expertise and direction regarding the TACR component. With the

committee restructuring in 2012, TRAS underwent minimal reorganization (Trauma Goal # 8 Workgroup), but continues to function with the aim of completely supporting the Trauma Registry infrastructure as laid out in the *Ohio Trauma Framework: 2010*.

An Incident Reporting System Advisory Committee (IRSAC) began in April 2002 for the purpose of supporting the EMSIRS dataset. In January 2012, this committee was permanently disbanded, as were all the committees in order to restructure and realign with the new strategic plan. With the committee restructuring, the responsibility of the EMSIRS dataset is now placed under the EMS Systems Committee of the EMS Board. No reports / updates regarding EMSIRS data have been reported at the EMS Board level since the transition of leadership to the EMS Systems Committee in April 2012.

a. Describe the roles and responsibilities of the lead agency in collecting and maintaining the data.

The EMS Board has ultimate responsibility and oversight for all aspects of the Trauma MIS. The Board has delegated these duties to the ORA and charged the EMS Division with maintaining the following data sources:

- TACR – The [Trauma Acute Care Registry](#) is a module of the OTR and houses cause of injury, treatment and outcome information on all seriously injured persons admitted to Ohio hospitals for more than 48 hours. With a 48-hour rule in place (See the answer to Question 3 below for more information regarding updates to the TACR), the TACR averages approximately 38,000 records / year with 78 data elements / patient record.
- TRR – The [Trauma Rehabilitation Registry](#) is a module of the OTR and houses admission and discharge assessment regarding functional impairment of trauma patients sent to inpatient rehabilitation facilities in Ohio. Approximately 1,000 records / year with 36 data elements / patient record are entered into the TRR.
- EMSIRS – The [EMS Incident Reporting System](#) houses information on all emergency runs in Ohio made by emergency medical services personnel. Approximately 1 million records / year are included with 80 data elements / patient record.

Currently there is no mechanism to cross reference or uniquely identify a patient throughout all three of these databases, from time of injury through rehabilitation.

There is no requirement or action regarding integration of the Trauma MIS with other injury related databases in Ohio (synopsis of other databases provided later in this section). One attempt at data integration with Ohio Death Certificates occurred in 2005 when a sample of imported death certificates from the ODH was matched to the OTR. This one-time process was fraught with technical and interpretive difficulties, such that ongoing matching has not been pursued

Trauma Acute Care Registry (TACR)

Decisions on content for the TACR module were developed between the years of 1993-1998. Data collection began in January 1999 for TACR. All health care facilities (i.e. hospitals, nursing facilities licensed or certified, inpatient rehabilitation facilities, ambulatory surgical facilities) that evaluate and /or treat injured individuals are required to submit data to the state (OAC §4765-4-03). Other entities such as the county coroners and other state / public agencies designated by the EMS Board that possess information regarding trauma care are also required to submit to the OTR (OAC §4765-4-03). This means that all trauma centers, in addition to most acute care (non-trauma verified) facilities are required to submit injury data. Facilities are required to submit discharged patient data to the OTR on patients that meet inclusion criteria on a quarterly basis, with [established dates](#) published on the ODPS website. Nursing facilities, ambulatory surgical facilities and coroner's office

have not been held accountable for trauma data submission. TACR inclusion criteria (Version 3: currently utilized and Version 6: most recently approved) are outlined below in Question 3.

Various methods are utilized for data submission to OTR. All trauma centers in the state utilize a commercial trauma registry product to collect data. Any hospital that treats patients which meet the inclusion criteria has the responsibility to electronically provide data to the state. For hospitals within a regional system, the data is submitted to the regional registries (N=6), with subsequent data submission to the OTR by the region. Verified trauma centers not within a region are responsible for direct submission of data to the OTR. Lastly, non-trauma centers not in a region are responsible to electronically submit data via the OPDS web-based system.

In order to prevent upload data errors, a system of logical failing edits is used. A computer-generated report which lists record failures is generated at the time of data submission. Each hospital has the opportunity to correct the issues and re-submit the record with a subsequent upload.

The ORA staff had attended TRAS and are currently attending the Trauma Goal # 8 Workgroup meeting (i.e. trauma registry), where TACR issues are addressed.

Trauma Rehabilitation Registry (TRR)

Decisions on content for the TRR module of the OTR were developed between the years of 2002-2004 by TRAS. Data collection by rehabilitation hospitals began in January 2005 with inclusion criteria outlined below in Question 3. Uploads for this data are included with the TACR data process. An ORA staff member is assigned to TRR for uploads to the OTR, quality checks and other maintenance of this dataset. Submission of data from rehabilitation facilities is on the same quarterly schedule as the TACR.

Emergency Medical Systems Incident Reporting System (EMSIRS)

Content and decisions related to EMSIRS began in 1999 with the decision to collect data on emergency runs only. Additionally, the group decided the National Highway Traffic Safety Administration's (NHTSA) uniform pre-hospital dataset would be used as the template for the Ohio dataset. Data collection for EMSIR-1 began in January 2002. A home-grown ODPS Information Technology section was developed for EMSIRS-1 and EMSIRS-2. As with TACR, two options were available, either an upload system for those agencies with existing applications or a reporting system into which users log into a secure website.

EMSIRS-1 began data collection in January 2002 and continued until December 31, 2012. EMSIRS-2 was originally planned to begin in 2005 but various problems with technology and funding delayed implementation. EMSIRS-2 began accepting data in January 2008, with an overlap period from 2008 through 2012. An ORA staff member is assigned to manage EMSIRS and is responsible for the data upload process. This person was also responsible for leading the Incident Reporting System Advisory Committee (IRSAC), which began in 2002 and was permanently disbanded in January 2012. The responsibility of the EMSIRS dataset now resides within the EMS System Committee of the EMS Board.

b. How are the completeness, timeliness, and quality of the data monitored?

Trauma Acute Care Registry (TACR)

Completeness: The submission process requires that 41 of the 78 TACR data fields (for each patient record) contain data. If the field contains an acceptable “not documented” value, the record passes. For example, there are hospitals in the state which choose to not report complications and have the export set to default a return of “not documented” or “none”. The hospital will receive notification when a specific data field is incomplete. It is then the responsibility of each hospital to correct the data or the case is not included. There is no reported tracking of incomplete submissions. There is no significant penalty for not submitting data in a timely or accurate manner. The only impact to an institution for not contributing data is that the institution is acknowledged at the Ohio Trauma Committee meeting and they are ineligible to access ODPS grant monies. In some recent instances, a letter has been addressed to the CEO of the hospital regarding compliance.

Timeliness: Prior to 2009, no system for monitoring timely submission of data by hospitals to TACR existed. In 2009, two policies were developed by ORA staff to address a regional deficiency ([Procedure for OTR Compliance Determination](#) and [Policy on Notification of Non-Compliance](#); however, these policies were not implemented state-wide. Once it was noted that compliance was not being addressed state-wide (March 2011), the Ohio Trauma Committee requested procedures begin to contact facilities regarding lack of data submission. Currently, if a facility is persistently behind in data submission, the facility must submit a [request for an extension](#) and outline the justification and plan of correction for return to compliance. As of 2011, hospital compliance for timeliness of reporting is reviewed / discussed at Ohio Trauma Committee. The compliance report from November 2012 Ohio Trauma Committee is shown below:

OTR Compliance

Hospital Reporting Compliance

Quality: In 2004, the office of ORA hired a private consultant firm to conduct a validity assessment of the TACR component of the OTR. Money for this project was secured through the Governor's Highway Safety Office to cover the data collection portion. One thousand charts from 28 Ohio hospitals were re-abstracted for specific pre-identified data elements by independent contracted abstractors. To avoid bias, abstractors were not permitted to compare data which had been previously abstracted and submitted to the OTR. As per the contract, all information on the abstracted data from 1,000 charts was submitted to ORA staff by September 2004. The next step in this project was to compare the abstracted data with the TACR data in order to validate quality / accuracy of data. Data comparisons between the two datasets were never completed. Lack of money, lack of time and lack of expertise within the office were cited as reasons. No recommendations have been cited or implemented as a result of this work.

To date, the state has not implemented any cross-check processes for quality and / or accuracy of data being collected / submitted except for the system of failing edits when a "required field" is left blank.

In Ohio, trauma registrars are an integral component for assuring quality of data abstraction and therefore, data submission. The Alliance of Ohio Trauma Registrars (AOTR) is a voluntary organization open to everyone; however, membership is mainly comprised of persons representing verified trauma centers or data managers from regional repositories. These regional representatives technically represent their regional membership which includes verified and non-verified centers. As regional systems are sporadic across the state, not all community hospitals are represented within AOTR. AOTR meetings are held bi-monthly, in Columbus, with the goal of improving consistency in coding and data management. Also included within AOTR meetings are:

- Networking with peers;
- Review of variables within registry;
- Mentoring of new trauma registrars;
- Discussing changes at NTDB which will impact practice;
- Educational offerings.

Trauma Rehabilitation Registry (TRR)

Completeness: There is a system with logical failing edits that is conveyed to the rehabilitation facilities when data is missing. It is the responsibility of each hospital to correct the data or, subsequently, the case is not submitted. If data is not corrected and re-submitted, this could result in an undercounting of information.

Timeliness: It is currently unknown how many rehabilitation facilities should be reporting as the number of rehabilitation facilities in the state is unknown. OTR indicates that eighteen facilities are currently submitting data to the TRR. Compliance for reporting data is not being monitored.

Quality: Other than the logical edits that are returned to the facilities for correction, no other process for assuring the quality of the data has been implemented at the state level.

EMSIRS

Completeness: Logic edits allow monitoring of EMSIRS data for completeness after it is uploaded.

Timeliness: According to the ORA, 778 EMS squads are reporting. It is estimated that 1,094 EMS squads should be reporting; however, the total number is unknown. A report is automatically generated the day after submission which notes the number of runs reported by each reporting EMS agency. This report identifies which EMS agencies have submitted or are behind in the submission process.

Quality: Other than logical edits that are returned to the agencies for correction, no other quality process has been implemented at the state level.

Question 2: Specify which of the following data sources are linked to the information system. Describe the method of linkage (for example, probabilistic or deterministic).

Ohio has struggled for many years with the issue of linking the three data components of the Trauma MIS. Documentation indicates that as early as April 2001 (Ohio Trauma Committee minutes) a unique identifier system or probabilistic linkage is an essential tool required to merge the three components of OTR. This discussion has continued over the years in Ohio Trauma Committee, Trauma Registry Advisory Subcommittee (TRAS) and most recently, within the Trauma Visionary Committee (TVC) in 2011 without resolution.

LinkSolve, a probabilistic software package was purchased by ODPS and noted to be available for OTR usage in May 2004 (Ohio Trauma Committee minutes). LinkSolve training was completed in November 2004 by ODPS staff (Ohio Trauma Committee minutes). In 2005 the ODPS received a NHTSA 408 grant to fund an individual to assist with the probabilistic linkage project and an ICD mapping project (Ohio Trauma Committee minutes May 2005). Despite this funding, LinkSolve has yet to be utilized. To date, probabilistic linkage has not occurred among the three components of the OTR, which makes it impossible to follow a patient from injury to rehabilitation.

Datasets which contain trauma-related data but are housed outside of the OTR exist in the state of Ohio. These datasets are not linked to the OTR. The chart below, derived from the Safe States Alliance 2007 Recommendations for Injury Surveillance in State Health Departments and revised by OIPP in March 2011 outlines core aspects of current Ohio datasets commonly utilized for state injury surveillance. Few linkages between datasets exist.

Core Injuries, Injury Risk Factors, and Data Sets for State Injury Surveillance

Dataset Owner	Safe States Core Data Sets											Other Data Sets			
	Ohio Department of Health				Ohio Hospital Association		NHTSA	Local	Ohio Department of Public Safety			ODJFS		Poison Center Calls

Abbreviations: FARS= Fatal Analysis Reporting System data, BRFSS = Behavioral Risk Factor Surveillance System, YRBS= Youth Risk Behavior Survey, OTR = Ohio Trauma Registry, EMSIRS= Emergency Medical Services Incident Reporting System, OPS=Occupant Protection Survey, OIBRS=Ohio Incident Based Reporting System, UCR=Uniform Crime Reporting, SACWIS=Statewide Automated Child Welfare Information System, OTSO=Ohio Traffic Safety Office, OCJS=Office of Criminal Justice Services, ODJFS=Ohio Department of Job and Family Services, Poison Center Data -Rainbow Babies & Children's Hospital, Nationwide Children's Hospital, Cincinnati Children's Hospital Medical Center)

**BRFSS/YRBS should be reviewed annually for inclusion of injury variables

*not considered a Core Data set

() Parenthesis indicates data sets that are considered supplementary

SB=seat belt, BH=bicycle helmet, CR=child restraint

Question 3: What are the regional trauma registry inclusion criteria?

TACR Inclusion Criteria:

The trauma registry inclusion criteria are the first section of the Trauma Data Dictionary. Each regional trauma registry system includes the state criteria as a baseline, but has the option of collecting

additional data points for their own region development. The list below outlines the history of Trauma Data Dictionary timelines regarding major changes in inclusion criteria, content, and dates of approval:

Date	Version	EMS Board Approval	Implemented at state level?	Change to inclusion criteria?	Major points within revision
1998	1	Yes	Yes	NA	Initial version
Jan 2003	2	Yes	Yes	No	Increased clarity within definition(s)
July 2004	3	Yes (January 2005)	Yes (current website version)	Transfer definition clarified	
Nov 2009	4	Never taken to EMS Board	No	No	Consensus with NTDB
Dec 2010	5	Yes	No	Removal of 48-hour criteria; isolated hip fracture definition changed	
Oct 2012	6	Yes	No	None	Minor NTDB changes

Version 6 of the Trauma Data Dictionary, which contains the most recent version of the TACR Inclusion Criteria, was approved for implementation by the EMS Board in October 2012. However, as the state is currently operating under Version 3, the state registry is unable to accept patients with this updated inclusion criteria (i.e. removal of 48-hour rule and revised definition of hip fractures) until a commercial state trauma registry software is purchased and the system is operational.

The following is the TACR Patient Inclusion Criteria (Version 3) that is currently being utilized to determine which patient data is to be submitted to the state OTR:

1. Patient's first or initial admission for at least 48 hours, and who meet one of the following inclusion criteria; OR
2. Patients who transfer into or out of any hospital, regardless of their length of stay, and who meet one of the following inclusion; OR
3. Patients that arrive dead on arrival (DOA) and who meet one of the following inclusion criteria; OR
4. Patients that die after receiving any evaluation or treatment while on hospital premises, and who meet one of the following inclusion criteria:

Inclusion Criteria

ICD-9-CM Diagnosis Codes on discharge from acute care hospital		
ICD-9-CM Diagnosis Codes		ICD-9-CM Diagnoses Descriptions
800.00 – 819.1		Fractures
821.00 – 904.9		Fractures, dislocations/sprains, intracranial injury, internal injury of thorax, abdomen and pelvis, open wounds, injury to blood vessels
911.0, 911.1, 912.0, 912.1		Abrasions/friction burns to trunk, shoulder and upper arm
916.0, 916.1, 919.0, 919.1		Abrasions / friction burns hip, thigh, leg, ankle, other or multiple sites
920 – 929.9		Contusions and crush injury
940.0 – 959.9		Burns, injury to nerves and spinal cord, traumatic complications and unspecified injury
987.9		Smoke inhalation
991.0 – 991.6		Frostbite, hypothermia and external effects of cold
994.0, 994.1, 994.7, 994.8		Asphyxiation, strangulation, drowning, and electrocution
995.50 – 995.59		Child maltreatment and abuse
OR		
ICD-9-CM Diagnoses		E-CODE
348.4	Uncal herniation	AND WITH ANY OF THE FOLLOWING External Cause Codes (E-Codes)
348.5	Cerebral Edema	
348.8	Pneumocephalus	
372.72	Subconjunctival hemorrhage	
518.5	Traumatic ARDS	
784.7	Epistaxis	
		E800 – E848.8 E878 – E905.0 E906.0 – E928.8 E950.0 – E998.9

Codes separated by a hyphen indicate a range of codes including both codes AND all codes in between. Example 800.0 – 801.5
 Codes separated by a comma indicate a single code. Example 901.1, 901.2, 901.8

ICD-9-CM Diagnoses Codes EXCLUDED	
820.0 – 820.9	Isolated hip fracture
905 – 909	Late effects of injury
910.0 – 910.9, 911.2 – 911.7, 912.2 – 912.9, 913.0 – 913.9, 914.0 – 914.9, 915.0 – 915.9, 916.2 – 916.9, 917.0 – 917.9, 918.0 – 918.9, 919.2 – 919.9	Superficial Abrasions, blisters, insect bites
930 – 939	Foreign bodies
External Cause Codes EXCLUDED	
E849 – E849.9	Place of occurrence
E850 – E869.9	Poisonings
E870 – E879.9	Misadventures during surgical and medical care
E905.1 – E905.9	Venomous animals and plants (except snakes)
E929 – E929.9	Late effects of Accidental Injury
E930 – E949	Drugs, medicinal and biological substances causing adverse effects in therapeutic use

Effective Date July 1, 2004

Multiple issues exist which have resulted in the OTR continuing to use the Version 3 (2004) Inclusion Criteria. The OTR inclusion criteria of 48-hours hospital admission, which has been in place since the inception of the registry and unique to Ohio, has hindered the ability to comprehensively evaluate over and under-triage. This has been a topic of discussion within the Ohio Trauma Committee for many years. In the fall of 2005, an ORA project was attempted, specifically to evaluate removal of the 48-hour rule. This issue continued to languish in open discussions until November 2009, when the Ohio Trauma Committee approved a recommendation by TRAS, to remove the 48-hour rule. This action would allow

data from all injured Ohioans to be submitted to the OTR, thus making it a more comprehensive representation of injury in Ohio.

The request was submitted to the ORA, within ODPS in November 2009. Since the OTR is a home grown data collection system, ODPS Information Technology staff is required for any technical changes or upgrades to the system. The program changes were never implemented on the state homegrown dataset due to the lack of funding for programmer work. Staff of the ORA began the process of pursuing a commercial software package for the OTR in December 2010. It was announced in December 2012 that ODPS purchased a commercial software package. Allowances to disregard data submission deadline for 2013 have been instituted until this new state commercial software is implemented and functioning. At that time, the following Inclusion Criteria (Version 6) listed below will be utilized.

PATIENT INCLUSION CRITERIA (Version 6)

To be included in the Trauma Acute Care Registry (TACR),

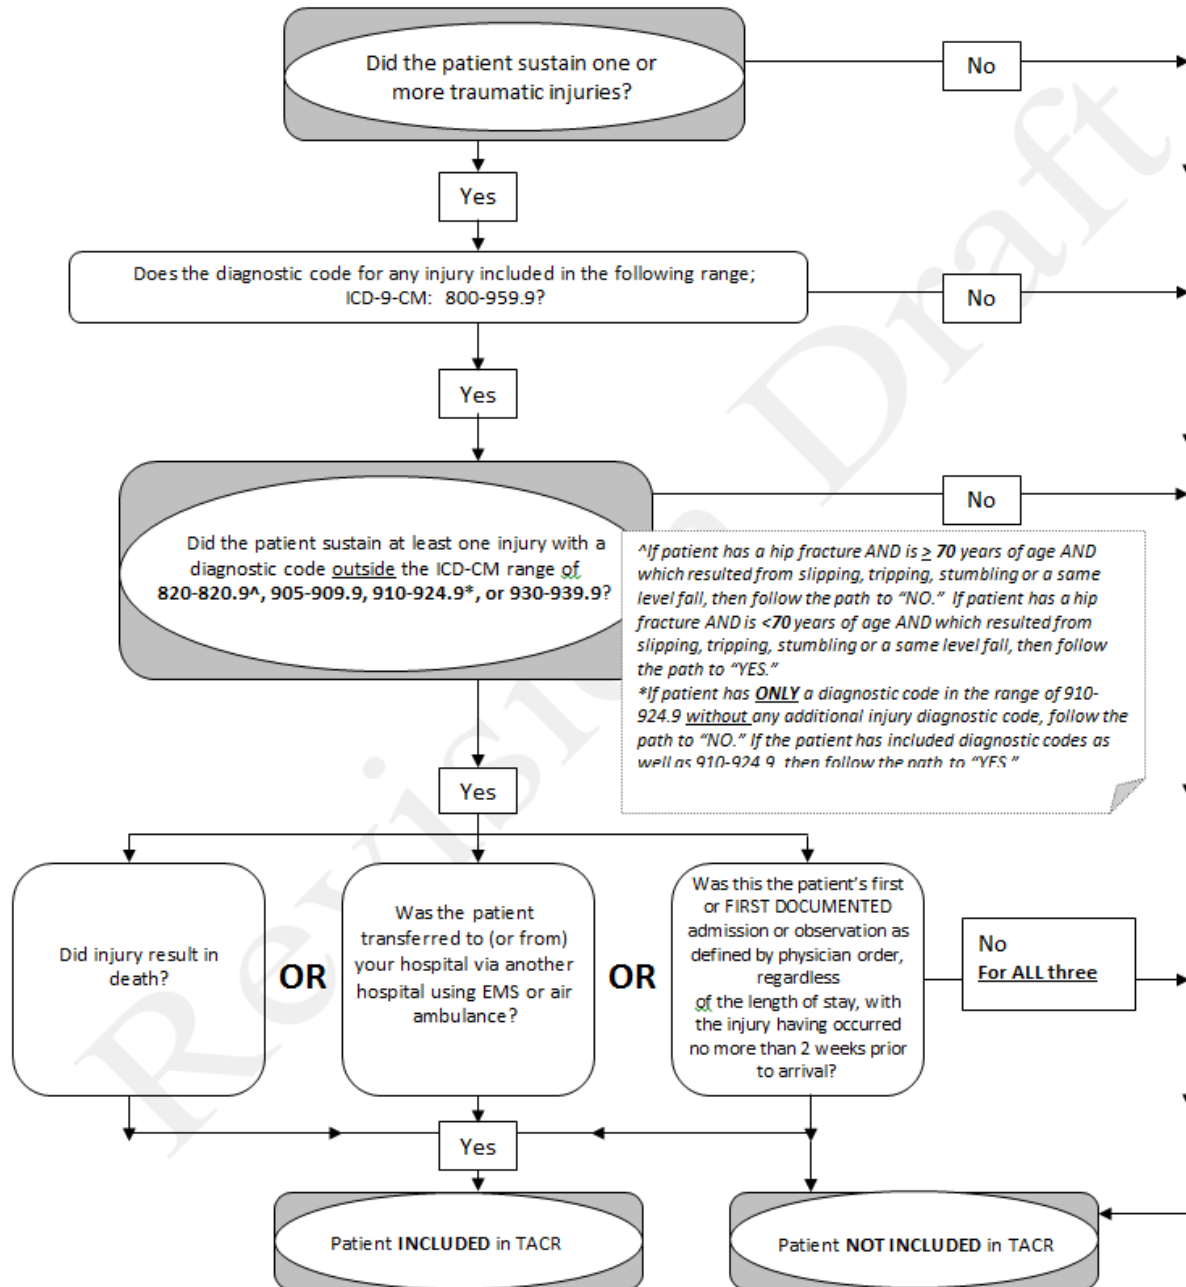

1. The patient must incur at least one of the injury diagnostic codes defined in the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) in the range of 800 – 959.9, 987.9, 991.0-991.6, 994.0, 994.1, 994.7, 994.8, 995.50 - 995.59.
2. The patient **MUST ALSO**:
 - Be admitted for the first time to a hospital or hospital observation unit as defined by a physician order regardless of the length of stay, with the injury having occurred no more than two (2) weeks prior to arrival; **AND/OR**
 - Be transferred via EMS transport (including air ambulance) from one hospital to another hospital regardless of the patient's hospital length of stay; **AND/OR**
 - Have an outcome of death resulting from the traumatic injury (independent of hospital admission or hospital transfer status).

PATIENT EXCLUSION CRITERIA (Version 6)

Patients with the following isolated ICD-9-CM codes are **EXCLUDED** from the TACR:

- **820.0-820.9, isolated** hip fracture in patients **≥ 70 years of age AND** which result from slipping, tripping, stumbling or a same level fall;
- **905-909.9**, late effects of injury;
- **910-924.9**, superficial injuries, including blisters, contusions, abrasions and insect bites (but exclude 910-924.9 if that is the **ONLY** injury identified. Patients who have an injury within the Inclusion ICD-9-CM range as well as a 910-924.9 injury, **WOULD** be included in the registry.); **AND/OR**
- **930-939.9**, foreign bodies.

Ohio Trauma Acute Care Registry Inclusion/Exclusion Criteria

With unknown timeframe for the state to move forward in making changes to the OTR, Trauma Goal # 8 Workgroup members (formally TRAS) who participate in regional registries, decided to move forward with implementing Version 6 Data Dictionary / Inclusion Criteria in January 2013. Hospitals within these regional systems now submit the approved data set (according to Version 6) to the regional trauma registries. Some of the regional registries (i.e. NORTR, NORTN) have already been collecting information on trauma patients within the ranges shown below without a length of stay rule. Export to the state OTR, however, is per the Version 3 Data Dictionary / Inclusion Criteria until the new system is implemented.

TRR Inclusion Criteria:

The TRR module inclusion criteria, implemented in January 2005, are as follow:

Version 1.0 Effective January 1, 2005

Ohio Trauma Registry Inpatient Rehabilitation Facility Patient Inclusion Criteria

Patient's first or initial admission to an inpatient rehabilitation facility who meet one of the following inclusion criteria;

1. Patients whose acute care hospitalization included any of the inclusion criteria; **OR**
2. Patients who have an Impairment Group Code on admission listed in the table on page 4 Inclusion Criteria

ICD-9-CM Diagnosis Codes on discharge from acute care hospital		
ICD-9-CM Diagnosis Codes		ICD-9-CM Diagnoses Descriptions
800.00 – 819.1		Fractures
821.00 – 904.9		Fractures, dislocations/sprains, intracranial injury, internal injury of thorax, abdomen and pelvis, open wounds, injury to blood vessels
911.0, 911.1, 912.0, 912.1		Abrasions/friction burns to trunk, shoulder and upper arm
916.0, 916.1, 919.0, 919.1		Abrasions / friction burns hip, thigh, leg, ankle, other or multiple sites
920 – 929.9		Contusions and crush injury
940.0 – 959.9		Burns, injury to nerves and spinal cord, traumatic complications and unspecified injury
987.9		Smoke inhalation
991.0 – 991.6		Frostbite, hypothermia and external effects of cold
994.0, 994.1, 994.7, 994.8		Asphyxiation, strangulation, drowning, and electrocution
995.50 – 995.59		Child maltreatment and abuse
OR		
ICD-9-CM Diagnoses		E-CODE
348.1	Anoxic Brain Injury	E800 – E848.8
348.4	Uncal herniation	E878 – E905.0
348.5,	Cerebral Edema	E906.0 – E928.8
348.8	Pneumocephalus	E950.0 – E998.9
372.72	Subconjunctival hemorrhage	
518.5	Traumatic ARDS	
784.7	Epistaxis	
		AND WITH ANY OF THE FOLLOWING External Cause Codes (E-Codes)

Acute Care Hospitalization ICD-9-CM Diagnoses Codes EXCLUDED	
820.00 – 820.9	Isolated hip fracture
905.0 – 909.9	Late effects of injury
910.0 – 910.9, 911.2 – 911.7, 912.2 – 912.9, 913.0 – 913.9, 914.0 – 914.9, 915.0 – 915.9, 916.2 – 916.9, 917.0 – 917.9, 918.0 – 918.9, 919.2 – 919.9	Blisters, insect bites
930 – 939	Foreign bodies
Acute Care Hospitalization External Cause Codes EXCLUDED	
E849.0 – E849.9	Place of occurrence
E850.0 – E869.9	Poisonings
E870.0 – E879.9	Misadventures during surgical and medical care
E905.1 – E905.9	Venomous animals and plants (except snakes)
E929.0 – E929.9	Late effects of Accidental Injury
E930.0 – E949.9	Drugs, medicinal and biological substances causing adverse effects in therapeutic use

Version 1.0 Effective January 1, 2005

Adult Impairment Group Code on Admission to Rehabilitation Facility			
Brain Dysfunction		Orthopedic Disorders	
02.1	Non-traumatic injury *	08.12	Status Post Bilateral Hip Fractures
* must be associated with an acceptable E-code.		08.2	Status Post Femure (shaft) Fracture
		08.3	Status Post Pelvic Fracture
		08.4	Status Post Major Multiple Fractures
02.21	Traumatic, open injury		
02.22	Traumatic, closed injury		
Spinal Cord Dysfunction, Traumatic			
004.210	Paraplegia, unspecified	Amputation of Limb (trauma related)	
04.211	Paraplegia, incomplete	05.1	Unilateral Upper Limb above the elbow (AE)
04.212	Paraplegia, complete	05.2	Unilateral Upper Limb below the elbow (BE)
04.220	Quadriplegia, Unspecified	05.3	Unilateral Lower Limb above the knee (AK)
04.2211	Quadriplegia, Incomplete C1-4	05.4	Unilateral Lower Limb below the knee (BK)
04.2212	Quadriplegia, Incomplete C5-8	05.5	Bilateral Lower Limb above the knee (AK/AK)
04.2221	Quadriplegia, Complete C1-4	05.6	Bilateral Lower Limb above/below the knee (AK/AK)
04.2222	Quadriplegia, Complete C5-8	05.7	Bilateral Lower Limb below the knee (BK/BK)
04.230	Other Traumatic Spinal Cord Dysfunction	05.9	Other amputation
Major Multiple Trauma		Burns	
14.1	Brain + Spinal Cord Injury	11	Burns
14.2	Brain + Multiple Fracture/Amputation		
14.3	Spinal Cord + Multiple Fracture/amputation		
14.9	Other multiple trauma		

Pediatric Impairment Group Code on Admission to Rehabilitation Facility			
Traumatic Brain Dysfunction		Burns	
2.21	Traumatic, open injury	7.1	Burns
2.22	Traumatic, closed injury		
2.9	Unspecified traumatic brain injury	Orthopedic Disorders	
2.11	Anoxic/Hypoxic Encephalopathy	Orthopedic Conditions	
Traumatic Spinal Cord Dysfunction		5.11	Status Post Unilateral Hip Fracture
4.21	Incomplete Traumatic Paraplegia	5.12	Status Post Femure (shaft) Fracture
4.22	Complete Traumatic Paraplegia	5.13	Status Post Pelvic Fracture
4.23	Unspecified Traumatic Paraplegia	5.14	Status Post Major Multiple Fractures
4.24	Incomplete Traumatic Tetraplegia Quadriplegia, C1-4	Amputation of Limb (trauma related)	
4.25	Incomplete Traumatic Tetraplegia Quadriplegia, C5-8	5.21	Unilateral Upper Extremity above the elbow
4.26	Complete Traumatic Tetraplegia Quadriplegia, C1-4	5.22	Unilateral Upper Extremity below the elbow
4.27	Complete Traumatic Tetraplegia Quadriplegia, C5-8	5.23	Unilateral Lower Extremity above the knee
4.29	Unspecified Traumatic Tetraplegia Quadriplegia	5.24	Unilateral Lower Extremity below the elbow
		5.25	Bilateral Lower Extremity above the knee
Major Multiple Trauma		5.26	Bilateral Lower Ext. above/below the knee
6.1	Brain + Spinal Cord Injury	5.27	Bilateral Lower Extremity below the knee
6.2	Brain + Multiple Fracture/Amputation	5.29	Other amputation
6.3	Spinal Cord + Multiple Fracture/amputation		
6.9	Other multiple trauma		

Question 4: Which stakeholders had a role in selecting the data elements for inclusion in the regional registry?

Stakeholders involved in the initial design of the data elements for inclusion within the OTR included physicians, nurses, registrars, and EMS personnel. Over the past decade, any modifications to the OTR have been the responsibility of the TRAS with the main constituency as physicians, nurses, registrars, epidemiologists, and ORA staff. Currently, all recommendations from Workgroup # 8 (formally) TRAS are forwarded to Ohio Trauma Committee for additional input and then submitted to the EMS Board for final approval and subsequent implementation.

a. From what source(s) were the data field definitions derived?

The initial Data Dictionary for the TACR resulted from the Traumabase[®] data collection guidelines and a minimal listing of data points established in rule (OAC §4765-4-03). Over time, the data dictionary has been modified to incorporate additional variables, updated definitions and to add additional response options. In 2009, the Data Dictionary was updated to be in alignment with the National Trauma Data Bank (NTDB) standards. At that time, several variables, which were not previously required (i.e. including information on trauma team activation, procedures and complications), were added. It is now the responsibility of Workgroup #8 (formally TRAS) to meet yearly and review the updated NTDB requirements and make recommendations, if needed, for data dictionary revisions.

An ad-hoc TRAS subcommittee developed a Rehabilitation Data Dictionary, which included rehabilitation specific inclusion criteria for the data registry and rehabilitation specific field definitions. Information was obtained by benchmarking with other states and obtaining input from rehabilitation experts within the state. The Rehabilitation Data Dictionary was approved in July 2004 by the EMS Board and implemented in January 2005. To date, there has been neither review nor update of the field definitions.

The original definitions for EMSIRS-1 were derived from the 1992 Uniform Pre-hospital Dataset (UPDS) by the Ohio Systems Management Committee from 1999 through 2000. The Systems Management Committee, which later became the Incident Reporting Systems Advisory Committee (IRSAC) in April 2002, updated the dataset for EMSIRS-2. Components and definitions of EMSIRS-2 are aligned with the National EMS Information System (NEMSIS). This EMSIRS-2 revised dataset was approved by the EMS Board in May, 2005 and was incorporated with required reporting in 2008.

b. What pediatric data elements are captured?

Data elements within the OTR are based on the NTDB standards. All variables are required for patients of all ages. The variables that are unique to the pediatric population and included by TRAS agreement are the following:

- Passenger safety restraints;
- Pre-existing conditions for children.

Question 5: What local or system-wide reports are routinely generated and at what frequency?

The following volume reports or State Annual Reports (2001-2, 2003, 2009 and 2010) have been posted on the ODPS website:

- TACR
 - 2001 – 2002 Trauma Annual Report
 - 2003 Trauma Annual Report
 - 2009 Trauma Annual Report
 - [2010 Trauma Annual Report](#)
 - Physical Toll of Violence – 2011
 - Biennial Report on Incidence of Traumatic Brain Injury in Ohio: 2007- 2009
- TRR
 - NONE
- EMSIRS:
 - EMS Benchmark 2003
 - EMS Benchmark 2004
 - EMS Benchmark 2005
 - EMS Benchmark 2006
 - EMS Benchmark 2007
 - [EMS Benchmark 2008](#)

No standing reports are developed by the state for the EMS Board, Ohio Trauma Committee, and Trauma Visionary Committee or for regional committees. At this point, no aggregate reports for verified trauma centers are posted or distributed. Most reports tend to be requested on an *ad hoc* basis by individual facilities, regional systems, ODPS staff, etc. Attached is a synopsis of the data reports generated from the Trauma MIS since 2003 (with exception of unavailable data in 2005).

Some regional trauma systems publish annual reports to their regional membership and other interested parties (COTS; NORTR; NORTN, TSTC).

Question 6: Are data contributed to the National Trauma Data Bank (NTDB) or other outside agencies? If so, please specify which agencies?

The OTR, as outlined in statutory law, prohibits non-risk adjusted data to be released. As a result, OTR is unable to submit data to NTDB. Therefore, in Ohio, it is the responsibility of individual hospitals, primarily verified trauma centers, to submit their own non-risk adjusted data to the NTDB on a timely basis. In at least one Ohio region (COTS), the regional registry submits individual hospital data to NTDB.

Opinions vary on the pros and cons of the OTR submitting data to NTDB for Ohio trauma centers. Some facilities would prefer to send their own data as they receive comparison reports directly from the NTDB. It is unclear if these comparison reports would occur if group data was submitted by the state trauma registry. Secondly, as it is an ACS requirement for verification that trauma centers submit their data, facilities can verify their own participation if they take ownership of this process.

The negative aspects of the OTR not submitting directly to NTDB centers on whether or not the state of Ohio will continue to pursue participation in the Trauma Quality Improvement System (TQIP) at the state level or an alternative method of risk adjustment of trauma data. This would require a law change that would permit non-risk adjusted data from the OTR to be sent to the NTDB with the assurance that individual patient information would not be disclosed. The precedent to allow non-risk-adjusted data to be sent to a national data center was accomplished through a change in statutory law regarding the EMSIRS database in July 2012 (ORC §4765.06(G)). Until then, Ohio was one of the few states in the country that did not submit non-risk adjusted EMS data to the NEMSIS data system. The change in law (July 2012) did not extend to trauma data.

Research

Benchmark 301: The trauma management information system (MIS) is used to facilitate ongoing assessment and assurance of system performance and outcomes and provides a basis for continuously improving the trauma system including, a cost-benefit analysis.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-301.4) = the lead agency has available for use the latest in computer / technology advances and analytic tools for monitoring injury prevention and control components of the trauma system. There is reporting on the outcome of implemented strategies for injury prevention and control programs within the trauma system.	1	Y Goal 8

Benchmark 306: The lead agency ensures that the trauma system demonstrates prevention and medical outreach activities within its defined service area.

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-306.1) = The trauma system has developed mechanisms to engage the general medical community and other system participants in their research findings and performance improvement efforts.	1	Y Goal 7
(I-306.3) = The effect or impact of outreach program (medical community training / support and prevention activities) is evaluated as a part of a system performance improvement process. Note: "Evaluation" implies both informal evaluation processes and more structured research	1	Y Goal 7

Benchmark 307: To maintain its state, regional, or local designation, each hospital will continually work to improve the trauma care as measured by patient outcomes

MTSPE Indicator	Ohio Score (2008)	In Ohio Framework and if yes, goal #
(I-307.2) = The trauma system implements and regularly reviews a standardized report on patient care outcomes as measured against national norms. Note: This process may include clinical and bench research.	1	Y Goal 7

Research

Pertinent History:

The 123rd General Assembly, with the passage of Am. Sub H.B. 138, tasked the EMS Board with producing seven reports on a variety of topics related to EMS and Trauma. Serving as the administrative arm of the EMS Board, the EMS Division contracted with several organizations with the appropriate expertise to produce studies and / or research that would assist the EMS Board in responding to this mandate. A final report was presented to the Governor Taft and the 125th General Assembly in November 2003. These have become known as the [Seven Special Studies](#).

The following are descriptions of the seven studies completed:

1. The status and needs of emergency medical services and pediatric trauma care provided between this state and other jurisdictions and methods to improve specialized care to pediatric trauma victims. Completed by Nationwide Children's Hospital, grant award: \$185,371.
2. The status and needs of emergency medical services and adult trauma care provided between this state and other jurisdictions; and methods to improve care to geriatric trauma victims. Completed by Riverside Methodist Hospital, Senior Health Services, grant award: \$65,366.
3. The feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study shall include an analysis of the cost of acquiring, maintaining, and using such devices, potential sources of funding and training required to ensure effective use of the devices. Completed by St. Vincent Mercy Medical Center, grant award: \$61,442.
4. Methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner. Completed by the Central Ohio Trauma System & Ohio State Coroner's Association, award amount: \$87,500.
5. Methods to increase advanced trauma life support, basic trauma life support, and pre-hospital trauma life support training among appropriate health care providers, particularly in rural areas of the state. Completed by the Ohio Chapter, American College of Surgeons & Ohio Society of Trauma Nurse Coordinators, grant award: \$49,320.
6. The roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in this state, and methods to enhance those roles. Completed by the Hospital Council of Northwest Ohio, grant award: \$65,500.
7. The causes and impact of trauma on minority populations in this state and methods to improve emergency medical services and trauma care for those populations. This study shall be conducted in cooperation with the Commission on Minority Health. Completed by Nationwide Children's Hospital, grant award: \$49,545.

Early in the development of the state trauma system, leadership recognized the need to conduct research as a way of furthering system development. Based on the results of these studies, there was consensus among the EMS Board members that additional research was indicated and would require additional funding. The EMS Board believes that a comprehensive EMS and Trauma research "agenda" is of great value.

Since the completion of the Seven Special Studies, the role of the EMS Division related to research has been accomplished predominantly through the EMS / Trauma Grant Program.

Question 1: Describe the current procedures and processes investigators must follow to request access to the trauma system registry.

- Data can be requested by contacting the EMS Data Center at 800-233-0785 or via email EMSdata@dps.state.oh.us. A detailed information sheet is available through the EMS website to assist investigators with available information and reports. Investigators are encouraged to review the available trauma data dictionaries: the Emergency Medical Services Incident Reporting System (EMSIRS), the Trauma Acute Care Registry (TACR), and/ or the Trauma Rehabilitation Registry (TRR) in order to request the appropriate data specific to their research or project needs. Once a request is received, the EMS Data Center staff contact the investigator to ensure generation of the correct report and adherence to the confidentiality provisions of the Ohio Revised Code.(ORC 4765.06)
- Individuals requesting public records are permitted by Ohio's Sunshine Law to specify the format of their report and the method of its delivery. The requestor is responsible for charges associated with compiling large files or the cost to copy to a CD, as well as shipping and handling of non-standard envelopes.
- Investigators are to cite the Ohio Department of Public Safety, Division of Emergency Medical Services as the source for any publications that utilize this data.

Question 2: What are the mechanisms used to ensure patient confidentiality when regional trauma registry data are used by investigators?

The Ohio Sunshine Laws is the collective name for the Public Records Act and the Open Meetings Act. The Ohio Public Records Act entitles Ohio citizens to access records from government entities. The EMS Data Center processes data requests from the three registries: EMSIRS, Trauma Acute Care Registry and the Trauma Rehabilitation Registry. (See <http://www.ohioattorneygeneral.gov/legal/sunshine-laws>.)

The EMS Data Center must comply with the Sunshine Laws when considering data requests but cannot release any information which identifies or even tends to identify either the provider or the recipient of care. The data collected by the EMS Data Center contains personal medical information and is considered a combination of public and confidential information. The determination of what is public and what is confidential data is made by the staff of the EMS Data Center and the EMS Division's Custodian of Records in accordance with ORC §149.43 and ORC §4765.06. The data provided to researchers by the EMS Data Center contains only public information. Confidential information is excluded from the data released to researchers.

Question 3: Provide examples of where research was conducted for the purpose of providing evidence that the processes of care and outcome of injured patients in the system's region are within acceptable standards.

All Level I verified trauma centers are required by the American College of Surgeons (ACS) to conduct research at their own institutions. These trauma centers utilize data from their own trauma registries and databases to support research initiatives, the scope and nature of which vary, but in some instances have examined trauma care within the state. Trauma centers throughout the state have also collaborated on research projects.

The Ohio EMS Board appointed the Grants Committee to oversee and make recommendations for the administration of the EMS / Trauma Grants Program. The primary goal of the EMS / Trauma Grant Program is to enhance EMS service in Ohio by providing funding for training and equipment to local EMS organizations in Ohio. The grant program has been expanded to include funding of trauma-related research in three areas: injury prevention, trauma rehabilitation and trauma medical procedures. The Program is administered within the Division by the Grants Administrator. The Grants Administrator works closely with the EMS Board's Grants Committee to ensure that all grant funds are distributed fairly, in a timely manner, and in accordance with the direction provided by the EMS Board.

Section §4765.07 of the Ohio Revised Code defines the priority distribution of funds for Ohio's EMS / Trauma Grant Program. The program is divided into six different focus areas, identified by their priority. New legislation, H.B. 128 of the 129th General Assembly, created two additional funding priorities (Priority 5 and Priority 6)) to the original four specified in HB 138 for the Ohio EMS Grant Program. The current priorities available are:

- Priority 1: EMS Training and Equipment Grants;
- Priority 2: Trauma Procedures Research Grants;
- Priority 3: Injury Prevention Research Grants;
- Priority 4: Trauma Rehabilitation and Retraining Research Grants;
- Priority 5: EMS Board Research Grants;
- Priority 6: Assistance to Paramedic Programs Grants.

Funding for trauma system research has been limited to money obtained from Ohio seatbelt fines and allocated to the EMS / Trauma Grant Program for research and EMS equipment. This program has funded research projects that examine the processes of care and outcome of injured patients within the state. These research grants have resulted in numerous publications in peer-reviewed journals.

The following are examples of research projects that have been funded by the EMS / Trauma Grant Program over the past three years:

- **Defining Trauma Outcomes through an Investigation of Associations between Trauma and Rehabilitation Registry Data (Trauma Research Grant 2011-2012).** Their research revealed that trauma data, especially ISS and GCS, is a necessary component of research and quality projects when trying to understand the long-term outcomes of persons with traumatic injuries. They also suggest that the quality and effectiveness of trauma systems and care can be enhanced by merging of Trauma and Rehabilitation registries. A comprehensive Trauma System that links EMS, trauma and rehabilitation registry data, will have the ability to fully assess the quality of care delivered through a continuum of services. This will also enable the State to evaluate an integrated Trauma system that is able to define long-term outcomes for individuals that sustain traumatic injuries.
Grant recipient: MetroHealth Medical Center, Physical Medicine and Rehabilitation Department.
- **Evaluation of Pediatric Trauma Triage Criteria for Highest Activation (EMS Injury Prevention Research Grant 2010-2011).** The goal of this study was to prospectively evaluate the correlation of triage criteria, including those mandated by the ACS, with the need for immediate resources provided by a trauma resuscitation team. The results revealed that the ACS-6 mandated criteria performed well in the context of over-triage and under-triage rates. Small revisions of the ACS-6 criteria for the pediatric population may potentially have some benefits. It was also suggested that

additional education on assessment of GCS in the pediatric population and /or interpretation of pre-hospital information may assist with appropriate highest level of trauma team activation. *Grant recipient: Cincinnati Children's Hospital Medical Center, Trauma Service.*

- **Evaluation of Trauma Triage Criteria for Medical Transport of Adults and Children (EMS Trauma Research Grant 2010-2011).** This study examined the mandated trauma triage criteria by looking at which criteria were useful in predicting the benefit of air transport of adult patients to a Level I trauma center and to extend analysis to the pediatric population as well. This research revealed that a minority of patients from their injured cohort of air medical transported patients has serious injuries that required the resources immediately available at a Level I trauma center. In addition, mechanism of injury was not a good indicator of trauma mortality or trauma center resource utilization. *Grant recipient: The Ohio State University Medical Center.*
- **Assessment of Factors Associated with the Delayed Transfer of Pediatric Trauma Patients: An EMS and Emergency Physician Survey (EMS Injury Prevention Research Grant 2009-2010).** The goal of this study was to clarify the existing trauma system knowledge and resource barriers impacting the rapid and appropriate transfer of injured children to designated trauma centers in the State of Ohio. The results of these surveys suggest that both EMS providers as well as ED physicians across the state may benefit from a more complete understanding of the current trauma triage criteria. The results also show that providers' having limited pediatric experience is associated with lower quality of care for children. The researchers suggest that the use of simulation programs to train providers in the management of high risk but low frequency events. Distance from a pediatric trauma center was identified as an important issue for providers not transporting to a pediatric trauma center. The researchers feel that it is important to develop the state's trauma system (i.e. additional education and telemedicine opportunities, supporting the development of more level 3 trauma centers, and more efficient and appropriate use of air transport) to ensure that these children receive timely and high quality care at the first institution where they are brought to. *Grant recipient: Cincinnati Children's Hospital Medical Center, Trauma Service.*

Question 4: How has the research been used to modify policy or practice within the system?

One example of how research has been utilized to modify the system is the work done by the Geriatric Trauma Task Force. In 2007, the Geriatric Trauma Task Force was created by the Ohio Trauma Committee to develop age-specific criteria to triage elderly trauma victims to trauma centers. The Task Force utilized Ohio Trauma Registry data and the EMS Incident Reporting System to define characteristics of the geriatric patient. A literature search was also conducted to identify triage criteria specific to geriatric trauma patients. Based on the results of their research, the Task Force presented several potential triage criteria to the Ohio Trauma Committee.

In its final report, the Geriatric Trauma Task Force recommended that trauma patients ≥ 70 years be defined as having geriatric trauma. They should be triaged for evaluation in a trauma center for:

- GCS < 15 in the presence of known or suspected traumatic brain injury;
- Systolic BP < 100 mmHg;
- Multiple body regions injured;
- Fall from any height with evidence of traumatic brain injury;
- Pedestrian struck by motor vehicle;
- Known or suspected proximal long bone fracture sustained in a motor vehicle crash.

Thy also recommended geriatric trauma patients should be given special consideration for evaluation at a trauma center if they have diabetes, cardiac disease, pulmonary disease (COPD), a clotting disorder (including taking anticoagulants), and an immunosuppressive disorder or require dialysis.

This effort resulted in the creation of a separate geriatric trauma triage criteria for the state. The EMS Board accepted changes in October 2008 and the new triage rules were implemented December 29, 2008.

Question 5: What resources (for example, personnel and fiscal) are available to the lead agency to assist in conducting system research?

The Office of Research and Analysis (ORA), housed within the Ohio EMS Division, provides the Ohio Trauma Registry data to investigators on a case by case basis. The scope and nature of the research projects can vary greatly, from simply just wanting the aggregate numbers to more in depth requests. The attached, [Summary of Research Data Requests \(2007\)](#), is the most current summary available according to ORA staff.

System research has not been conducted by of the EMS Board, nor has it been conducted by the Office of Research and Analysis (ORA).

THE EMS / Trauma Grant Program, as described above, does enable outside researchers to conduct trauma research but the trauma system has not been specifically targeted as a priority area. The source of this funding is from Ohio seat belt fines. It has declined in recent years owing to improved compliance with Ohio seat belt laws and may not be a reliable source of future research funding. Below is a breakdown of grant disbursements since 2002.

OHIO EMS GRANT PROGRAMS						
	Training & Equipment	Injury Prevention & Prevention Research	Trauma Research	Trauma Rehabilitation	Total	
	Priority 1	Priority 2	Priority 3	Priority 4		
Award Year 2002-2003	\$ 5,800,000.00	0	0	0	\$ 5,800,000.00

American College of Surgeons
State of Ohio Trauma System Consultative Site Review

State Focused Questions

The following questions were provided by the Ohio Trauma Committee.

1. Describe how Ohio can exercise more authority and or accountability for the trauma system without statute defining a lead trauma agency.
2. Help us understand ways Ohio could measure outcomes related to the trauma system without integration of risk adjusted data and effective registry interfaces.
3. After analyzing Ohio's trauma system infrastructure, please describe a sample model for integration of regional trauma systems and regional physician advisory boards into the state system.
4. Can you provide ideas for funding sources for Ohio's trauma system based on your experiences with other state trauma systems.
5. If Ohio were to form a statewide performance improvement collaborative, please explain potential barriers, benefits, and methods.
6. Ohio does not have a trauma medical director who is dedicated solely towards trauma system development. Explain what impact this position may have on the system. Can a statewide system be effective without a trauma medical director who is not a surgeon? What benefits can be realized by the addition of a trauma medical director to Ohio's trauma system?

Appendix A

Chapter 4765: DIVISION OF EMERGENCY MEDICAL SERVICES

4765.01 [Effective Until 3/22/2013] Division of emergency medical services definitions.

As used in this chapter:

(A) “First responder” means an individual who holds a current, valid certificate issued under section 4765.30 of the Revised Code to practice as a first responder.

(B) “Emergency medical technician-basic” or “EMT-basic” means an individual who holds a current, valid certificate issued under section 4765.30 of the Revised Code to practice as an emergency medical technician-basic.

(C) “Emergency medical technician-intermediate” or “EMT-I” means an individual who holds a current, valid certificate issued under section 4765.30 of the Revised Code to practice as an emergency medical technician-intermediate.

(D) “Emergency medical technician-paramedic” or “paramedic” means an individual who holds a current, valid certificate issued under section 4765.30 of the Revised Code to practice as an emergency medical technician-paramedic.

(E) “Ambulance” means any motor vehicle that is used, or is intended to be used, for the purpose of responding to emergency medical situations, transporting emergency patients, and administering emergency medical service to patients before, during, or after transportation.

(F) “Cardiac monitoring” means a procedure used for the purpose of observing and documenting the rate and rhythm of a patient’s heart by attaching electrical leads from an electrocardiograph monitor to certain points on the patient’s body surface.

(G) “Emergency medical service” means any of the services described in sections 4765.35, 4765.37, 4765.38, and 4765.39 of the Revised Code that are performed by first responders, emergency medical technicians-basic, emergency medical technicians-intermediate, and paramedics. “Emergency medical service” includes such services performed before or during any transport of a patient, including transports between hospitals and transports to and from helicopters.

(H) “Emergency medical service organization” means a public or private organization using first responders, EMTs-basic, EMTs-I, or paramedics, or a combination of first responders, EMTs-basic, EMTs-I, and paramedics, to provide emergency medical services.

(I) “Physician” means an individual who holds a current, valid certificate issued under Chapter 4731. of the Revised Code authorizing the practice of medicine and surgery or osteopathic medicine and surgery.

(J) “Registered nurse” means an individual who holds a current, valid license issued under Chapter 4723. of the Revised Code authorizing the practice of nursing as a registered nurse.

(K) “Volunteer” means a person who provides services either for no compensation or for compensation that does not exceed the actual expenses incurred in providing the services or in training to provide the services.

(L) “Emergency medical service personnel” means first responders, emergency medical service technicians-basic, emergency medical service technicians-intermediate, emergency medical service technicians-paramedic, and persons who provide medical direction to such persons.

(M) “Hospital” has the same meaning as in section 3727.01 of the Revised Code.

(N) “Trauma” or “traumatic injury” means severe damage to or destruction of tissue that satisfies both of the following conditions: (1) It creates a significant risk of any of the following: (a) Loss of life; (b) Loss of a limb; (c) Significant, permanent disfigurement; (d) Significant, permanent disability. (2) It is caused by any of the following: (a) Blunt or penetrating injury; (b) Exposure to electromagnetic, chemical, or radioactive energy; (c) Drowning, suffocation, or strangulation; (d) A deficit or excess of heat.

(O) “Trauma victim” or “trauma patient” means a person who has sustained a traumatic injury.

(P) “Trauma care” means the assessment, diagnosis, transportation, treatment, or rehabilitation of a trauma victim by emergency medical service personnel or by a physician, nurse, physician assistant, respiratory therapist, physical therapist, chiropractor, occupational therapist, speech-language pathologist, audiologist, or psychologist licensed to practice as such in this state or another jurisdiction.

(Q) “Trauma center” means all of the following: (1) Any hospital that is verified by the American college of surgeons as an adult or pediatric trauma center; (2) Any hospital that is operating as an adult or pediatric trauma center under provisional status pursuant to section 3727.101 of the Revised Code; (3) Until December 31, 2004, any hospital in this state that is designated by the director of health as a level II pediatric trauma center under section 3727.081 of the Revised Code; (4) Any hospital in another state that is licensed or designated under the laws of that state as capable of providing specialized trauma care appropriate to the medical needs of the trauma patient.

(R) “Pediatric” means involving a patient who is less than sixteen years of age.

(S) “Adult” means involving a patient who is not a pediatric patient.

(T) “Geriatric” means involving a patient who is at least seventy years old or exhibits significant anatomical or physiological characteristics associated with advanced aging.

(U) “Air medical organization” means an organization that provides emergency medical services, or transports emergency victims, by means of fixed or rotary wing aircraft.

(V) “Emergency care” and “emergency facility” have the same meanings as in section 3727.01 of the Revised Code.

(W) “Stabilize,” except as it is used in division (B) of section 4765.35 of the Revised Code with respect to the manual stabilization of fractures, has the same meaning as in section 1753.28 of the Revised Code.

(X) “Transfer” has the same meaning as in section 1753.28 of the Revised Code.

(Y) “Firefighter” means any member of a fire department as defined in section 742.01 of the Revised Code.

(Z) “Volunteer firefighter” has the same meaning as in section 146.01 of the Revised Code.

(AA) “Part-time paid firefighter” means a person who provides firefighting services on less than a full-time basis, is routinely scheduled to be present on site at a fire station or other designated location for purposes of responding to a fire or other emergency, and receives more than nominal compensation for the provision of firefighting services.

Effective Date: 09-17-2002; 04-05-2007

4765.01 [Effective 3/22/2013] Division of emergency medical services definitions

As used in this chapter:

(A) “First responder” means an individual who holds a current, valid certificate issued under section 4765.30 of the Revised Code to practice as a first responder.

(B) “Emergency medical technician-basic” or “EMT-basic” means an individual who holds a current, valid certificate issued under section 4765.30 of the Revised Code to practice as an emergency medical technician-basic.

(C) “Emergency medical technician-intermediate” or “EMT-I” means an individual who holds a current, valid certificate issued under section 4765.30 of the Revised Code to practice as an emergency medical technician-intermediate.

(D) “Emergency medical technician-paramedic” or “paramedic” means an individual who holds a current, valid certificate issued under section 4765.30 of the Revised Code to practice as an emergency medical technician-paramedic.

(E) “Ambulance” means any motor vehicle that is used, or is intended to be used, for the purpose of responding to emergency medical situations, transporting emergency patients, and administering emergency medical service to patients before, during, or after transportation.

(F) “Cardiac monitoring” means a procedure used for the purpose of observing and documenting the rate and rhythm of a patient’s heart by attaching electrical leads from an electrocardiograph monitor to certain points on the patient’s body surface.

(G) “Emergency medical service” means any of the services described in sections 4765.35, 4765.37, 4765.38, and 4765.39 of the Revised Code that are performed by first responders, emergency medical technicians-basic, emergency medical technicians-intermediate, and paramedics. “Emergency medical service” includes such services performed before or during any transport of a patient, including transports between hospitals and transports to and from helicopters.

(H) “Emergency medical service organization” means a public or private organization using first responders, EMTs-basic, EMTs-I, or paramedics, or a combination of first responders, EMTs-basic, EMTs-I, and paramedics, to provide emergency medical services.

(I) “Physician” means an individual who holds a current, valid certificate issued under Chapter 4731. of the Revised Code authorizing the practice of medicine and surgery or osteopathic medicine and surgery.

(J) “Registered nurse” means an individual who holds a current, valid license issued under Chapter 4723. of the Revised Code authorizing the practice of nursing as a registered nurse.

(K) “Volunteer” means a person who provides services either for no compensation or for compensation that does not exceed the actual expenses incurred in providing the services or in training to provide the services.

(L) “Emergency medical service personnel” means first responders, emergency medical service technicians-basic, emergency medical service technicians-intermediate, emergency medical service technicians-paramedic, and persons who provide medical direction to such persons.

(M) “Hospital” has the same meaning as in section 3727.01 of the Revised Code.

(N) “Trauma” or “traumatic injury” means severe damage to or destruction of tissue that satisfies both of the following conditions: (1) It creates a significant risk of any of the following: (a) Loss of life; (b) Loss of a limb; (c) Significant, permanent disfigurement; (d) Significant, permanent disability. (2) It is caused by any of the following: (a) Blunt or penetrating injury; (b) Exposure to electromagnetic, chemical, or radioactive energy; (c) Drowning, suffocation, or strangulation; (d) A deficit or excess of heat.

(O) “Trauma victim” or “trauma patient” means a person who has sustained a traumatic injury.

(P) “Trauma care” means the assessment, diagnosis, transportation, treatment, or rehabilitation of a trauma victim by emergency medical service personnel or by a physician, nurse, physician assistant, respiratory therapist, physical therapist, chiropractor, occupational therapist, speech-language pathologist, audiologist, or psychologist licensed to practice as such in this state or another jurisdiction.

(Q) “Trauma center” means all of the following: (1) Any hospital that is verified by the American college of surgeons as an adult or pediatric trauma center; (2) Any hospital that is operating as an adult or pediatric trauma center under provisional status pursuant to section 3727.101 of the Revised Code; (3) Until December 31, 2004, any hospital in this state that is designated by the director of health as a level II pediatric trauma center under section 3727.081 of the Revised Code; (4) Any hospital in another state that is licensed or designated under the laws of that state as capable of providing specialized trauma care appropriate to the medical needs of the trauma patient.

(R) “Pediatric” means involving a patient who is less than sixteen years of age.

(S) “Adult” means involving a patient who is not a pediatric patient.

(T) “Geriatric” means involving a patient who is at least seventy years old or exhibits significant anatomical or physiological characteristics associated with advanced aging.

(U) “Air medical organization” means an organization that provides emergency medical services, or transports emergency victims, by means of fixed or rotary wing aircraft.

(V) “Emergency care” and “emergency facility” have the same meanings as in section 3727.01 of the Revised Code.

(W) “Stabilize,” except as it is used in division (B) of section 4765.35 of the Revised Code with respect to the manual stabilization of fractures, has the same meaning as in section 1753.28 of the Revised Code.

(X) “Transfer” has the same meaning as in section 1753.28 of the Revised Code.

(Y) “Firefighter” means any member of a fire department as defined in section 742.01 of the Revised Code.

(Z) “Volunteer firefighter” has the same meaning as in section 146.01 of the Revised Code.

(AA) “Part-time paid firefighter” means a person who provides firefighting services on less than a full-time basis, is routinely scheduled to be present on site at a fire station or other designated location for purposes of responding to a fire or other emergency, and receives more than nominal compensation for the provision of firefighting services.

(BB) “Physician assistant” means an individual who holds a valid certificate to practice as a physician assistant issued under Chapter 4730. of the Revised Code.

Amended by 129th General Assembly File No. 161, HB 284, § 1, eff. 3/22/2013. Effective Date: 09-17-2002; 04-05-2007

4765.011 Designation as EMR, EMT, or AEMT.

(A) With respect to the following individuals who receive certificates to practice issued under this chapter, all of the following apply: (1) A first responder shall be also known as an emergency medical responder or EMR; (2) An emergency medical technician-basic or EMT-basic shall be also known as an emergency medical technician or EMT, respectively; (3) An emergency medical technician-intermediate or EMT-I shall be also known as an advanced emergency medical technician or AEMT, respectively.

(B) With respect to the provisions of this chapter and all other provisions of the Revised Code that refer to the individuals specified in division (A) of this section, all of the following apply: (1) A reference to a first responder is deemed to be a reference to an emergency medical responder or EMR; (2) A reference to an emergency medical technician-basic or EMT-basic is deemed to be a reference to an emergency medical technician or EMT, respectively; (3) A reference to an emergency medical technician-intermediate or EMT-I is deemed to be a reference to an advanced emergency medical technician or AEMT, respectively.

4765.02 State board of emergency medical services.

There is hereby created the state board of emergency medical services within the division of emergency medical services of the department of public safety. The board shall consist of the members specified in this section who are residents of this state. The governor, with the advice and consent of the senate, shall appoint all members of the board, except the employee of the department of public safety designated by the director of public safety under this section to be a member of the board. In making the appointments, the governor shall appoint only members with background or experience in emergency medical services or trauma care and shall attempt to include members representing urban and rural areas, various geographical regions of the state, and various schools of training. One member of the board shall be a physician certified by the American board of emergency medicine or the American osteopathic board of emergency medicine who is active in the practice of emergency medicine and is actively involved with an emergency medical service organization. The governor shall appoint this member from among three persons nominated by the Ohio chapter of the American college of emergency physicians and three persons nominated by the Ohio osteopathic association. One member shall be a physician certified by the American board of surgery or the American osteopathic board of surgery who is active in the practice of trauma surgery and is actively involved with emergency medical services. The governor shall appoint this member from among three persons nominated by the Ohio chapter of the American college of surgeons and three persons nominated by the Ohio osteopathic association. One member shall be a physician certified by the American academy of pediatrics or American osteopathic board of pediatrics who is active in the practice of pediatric emergency medicine and actively involved with an emergency medical service organization. The governor shall appoint this member from among three persons nominated by the Ohio chapter of the American academy of pediatrics. One member shall be the administrator of an adult or pediatric trauma center. The governor shall appoint this member from among three persons nominated by the OHA: the association for hospitals and health systems, three persons nominated by the Ohio osteopathic association, three persons nominated by the association of Ohio children's hospitals, and three persons nominated by the health forum of Ohio. One member shall be the administrator of a hospital that is not a trauma center. The governor shall appoint this member from among three persons nominated by OHA: the association for hospitals and health systems, three persons nominated by the Ohio osteopathic association, three persons nominated by the association of Ohio children's hospitals, and three persons nominated by the health forum of Ohio. One member shall be a registered nurse who is in the active practice of emergency nursing. The governor shall appoint this member from among three persons nominated by the Ohio nurses association and three persons nominated by the Ohio state council of the emergency nurses association. One member shall be the chief of a fire department that is also an emergency medical service organization in which more than fifty per cent of the persons who provide emergency medical services are full-time paid employees. The governor shall appoint this member from among three persons nominated by the Ohio fire chiefs' association. One member shall be the chief of a fire department that is also an emergency medical service organization in which more than fifty per cent of the persons who provide emergency medical services are volunteers. The governor shall appoint this member from among three persons nominated by the Ohio fire chiefs' association. One member shall be a person who is certified to teach under section 4765.23 of the Revised Code or, if the board has not yet certified persons to teach under that section, a person who is qualified to be certified to teach under that section. The governor shall appoint this member from among three persons nominated by the Ohio emergency medical technician instructors association and the Ohio instructor/coordinators' society. One member shall be an EMT-basic, one shall be an EMT-I, and one shall be a paramedic. The governor shall

appoint these members from among three EMTs-basic, three EMTs-I, and three paramedics nominated by the Ohio association of professional fire fighters and three EMTs-basic, three EMTs-I, and three paramedics nominated by the northern Ohio fire fighters. One member shall be an EMT-basic, one shall be an EMT-I, and one shall be a paramedic whom the governor shall appoint from among three EMTs-basic, three EMTs-I, and three paramedics nominated by the Ohio state firefighter's association. One member shall be a person whom the governor shall appoint from among an EMT-basic, an EMT-I, and a paramedic nominated by the Ohio association of emergency medical services. The governor shall appoint one member who is an EMT-basic, EMT-I, or paramedic affiliated with an emergency medical services organization. One member shall be a member of the Ohio ambulance association whom the governor shall appoint from among three persons nominated by the Ohio ambulance association. One member shall be a physician certified by the American board of surgery, American board of osteopathic surgery, American osteopathic board of emergency medicine, or American board of emergency medicine who is the chief medical officer of an air medical agency and is currently active in providing emergency medical services. The governor shall appoint this member from among three persons nominated by the Ohio association of air medical services. The governor may refuse to appoint any of the persons nominated by one or more organizations under this section, except the employee of the department of public safety designated by the director of public safety under this section to be a member of the board. In that event, the organization or organizations shall continue to nominate the required number of persons until the governor appoints to the board one or more of the persons nominated by the organization or organizations. The director of public safety shall designate an employee of the department of public safety to serve as a member of the board at the director's pleasure. This member shall serve as a liaison between the department and the division of emergency medical services in cooperation with the executive director of the board. Initial appointments to the board by the governor and the director of public safety shall be made within ninety days after November 12, 1992. Of the initial appointments by the governor, five shall be for terms ending one year after November 12, 1992, six shall be for terms ending two years after November 12, 1992, and six shall be for terms ending three years after November 12, 1992. Within ninety days after the effective date of this amendment, the governor shall appoint the member of the board who is the chief medical officer of an air medical agency for an initial term ending November 12, 2000. Thereafter, terms of office of all members appointed by the governor shall be for three years, each term ending on the same day of the same month as did the term it succeeds. Each member shall hold office from the date of appointment until the end of the term for which the member was appointed. A member shall continue in office subsequent to the expiration date of the member's term until the member's successor takes office, or until a period of sixty days has elapsed, whichever occurs first. Each vacancy shall be filled in the same manner as the original appointment. A member appointed to fill a vacancy occurring prior to the expiration of the term for which the member's predecessor was appointed shall hold office for the remainder of the unexpired term. The term of a member shall expire if the member ceases to meet any of the requirements to be appointed as that member. The governor may remove any member from office for neglect of duty, malfeasance, misfeasance, or nonfeasance, after an adjudication hearing held in accordance with Chapter 119. of the Revised Code. The members of the board shall serve without compensation but shall be reimbursed for their actual and necessary expenses incurred in carrying out their duties as board members. The board shall organize by annually selecting a chair and vice-chair from among its members. The board may adopt bylaws to regulate its affairs. A majority of all members of the board shall constitute a quorum. No action shall be taken without the concurrence of a majority of all members of the board. The board shall meet at least four times annually and at the call of the chair. The chair shall call a meeting on the request of the executive director or the medical director of the board or on the written request of five members. The board shall maintain written or electronic records of its meetings. Upon twenty-four hours' notice from a member of the board, the member's

employer shall release the member from the member's employment duties to attend meetings of the full board. Nothing in this paragraph requires the employer of a member of the board to compensate the member for time the member is released from employment duties under this paragraph, but any civil immunity, workers' compensation, disability, or similar coverage that applies to a member of the board as a result of the member's employment shall continue to apply while the member is released from employment duties under this paragraph.

Effective Date: 11-03-2000

4765.03 Executive director duties.

(A) The director of public safety shall appoint a full-time executive director for the state board of emergency medical services. The executive director shall be knowledgeable in emergency medical services and trauma care and shall serve at the pleasure of the director of public safety. The director of public safety shall appoint the executive director from among three persons nominated by the board. The director of public safety may refuse, for cause, to appoint any of the board's nominees. If the director fails to appoint any of the board's nominees, the board shall continue to nominate groups of three persons until the director does appoint one of the board's nominees. The executive director shall serve as the chief executive officer of the board and as the executive director of the division of emergency medical services. The executive director shall attend each meeting of the board, except the board may exclude the executive director from discussions concerning the employment or performance of the executive director or medical director of the board. The executive director shall give a surety bond to the state in such sum as the board determines, conditioned on the faithful performance of the duties of the executive director's office. The executive director shall receive a salary from the board and shall be reimbursed for actual and necessary expenses incurred in carrying out duties as executive director. The executive director shall submit a report to the director of public safety at least every three months regarding the status of emergency medical services in this state. The executive director shall meet with the director of public safety at the director's request.

(B) The board shall appoint a medical director, who shall serve at the pleasure of the board. The medical director shall be a physician certified by the American board of emergency medicine or the American osteopathic board of emergency medicine who is active in the practice of emergency medicine and has been actively involved with an emergency medical service organization for at least five years prior to being appointed. The board shall consider any recommendations for this appointment from the Ohio chapter of the American college of emergency physicians, the Ohio chapter of the American college of surgeons, the Ohio chapter of the American academy of pediatrics, the Ohio osteopathic association, and the Ohio state medical association. The medical director shall direct the executive director and advise the board with regard to adult and pediatric trauma and emergency medical services issues. The medical director shall attend each meeting of the board, except the board may exclude the medical director from discussions concerning the appointment or performance of the medical director or executive director of the board. The medical director shall be employed and paid by the board and shall be reimbursed for actual and necessary expenses incurred in carrying out duties as medical director.

(C) The board may appoint employees as it determines necessary. The board shall prescribe the duties and titles of its employees.

4765.04 Firefighter and fire safety inspector training committee - trauma committee - other committees and subcommittees.

(A) The firefighter and fire safety inspector training committee of the state board of emergency medical services is hereby created and shall consist of the members of the board who are chiefs of fire departments, and the members of the board who are emergency medical technicians-basic, emergency medical technicians-intermediate, and emergency medical technicians-paramedic appointed from among persons nominated by the Ohio association of professional fire fighters or the northern Ohio fire fighters and from among persons nominated by the Ohio state firefighter's association. Each member of the committee, except the chairperson, may designate a person with fire experience to serve in that member's place. The members of the committee or their designees shall select a chairperson from among the members or their designees. The committee may conduct investigations in the course of discharging its duties under this chapter. In the course of an investigation, the committee may issue subpoenas. If a person subpoenaed fails to comply with the subpoena, the committee may authorize its chairperson to apply to the court of common pleas in the county where the person to be subpoenaed resides for an order compelling compliance in the same manner as compliance with a subpoena issued by the court is compelled.

(B) The trauma committee of the state board of emergency medical services is hereby created and shall consist of the following members appointed by the director of public safety:

(1) A physician who is certified by the American board of surgery or American osteopathic board of surgery and actively practices general trauma surgery, appointed from among three persons nominated by the Ohio chapter of the American college of surgeons, three persons nominated by the Ohio state medical association, and three persons nominated by the Ohio osteopathic association;

(2) A physician who is certified by the American board of surgery or the American osteopathic board of surgery and actively practices orthopedic trauma surgery, appointed from among three persons nominated by the Ohio orthopedic society and three persons nominated by the Ohio osteopathic association;

(3) A physician who is certified by the American board of neurological surgeons or the American osteopathic board of surgery and actively practices neurosurgery on trauma victims, appointed from among three persons nominated by the Ohio state neurological society and three persons nominated by the Ohio osteopathic association;

(4) A physician who is certified by the American board of surgeons or American osteopathic board of surgeons and actively specializes in treating burn victims, appointed from among three persons nominated by the Ohio chapter of the American college of surgeons and three persons nominated by the Ohio osteopathic association;

(5) A dentist who is certified by the American board of oral and maxillofacial surgery and actively practices oral and maxillofacial surgery, appointed from among three persons nominated by the Ohio dental association;

- (6) A physician who is certified by the American board of physical medicine and rehabilitation or American osteopathic board of rehabilitation medicine and actively provides rehabilitative care to trauma victims, appointed from among three persons nominated by the Ohio society of physical medicine and rehabilitation and three persons nominated by the Ohio osteopathic association;
- (7) A physician who is certified by the American board of surgery or American osteopathic board of surgery with special qualifications in pediatric surgery and actively practices pediatric trauma surgery, appointed from among three persons nominated by the Ohio chapter of the American academy of pediatrics and three persons nominated by the Ohio osteopathic association;
- (8) A physician who is certified by the American board of emergency medicine or American osteopathic board of emergency medicine, actively practices emergency medicine, and is actively involved in emergency medical services, appointed from among three persons nominated by the Ohio chapter of the American college of emergency physicians and three persons nominated by the Ohio osteopathic association;
- (9) A physician who is certified by the American board of pediatrics, American osteopathic board of pediatrics, or American board of emergency medicine, is sub-boarded in pediatric emergency medicine, actively practices pediatric emergency medicine, and is actively involved in emergency medical services, appointed from among three persons nominated by the Ohio chapter of the American academy of pediatrics, three persons nominated by the Ohio chapter of the American college of emergency physicians, and three persons nominated by the Ohio osteopathic association;
- (10) A physician who is certified by the American board of surgery, American osteopathic board of surgery, or American board of emergency medicine and is the chief medical officer of an air medical organization, appointed from among three persons nominated by the Ohio association of air medical services;
- (11) A coroner or medical examiner appointed from among three people nominated by the Ohio state coroners' association;
- (12) A registered nurse who actively practices trauma nursing at an adult or pediatric trauma center, appointed from among three persons nominated by the Ohio association of trauma nurse coordinators;
- (13) A registered nurse who actively practices emergency nursing and is actively involved in emergency medical services, appointed from among three persons nominated by the Ohio chapter of the emergency nurses' association;
- (14) The chief trauma registrar of an adult or pediatric trauma center, appointed from among three persons nominated by the alliance of Ohio trauma registrars;
- (15) The administrator of an adult or pediatric trauma center, appointed from among three persons nominated by OHA: the association for hospitals and health systems, three persons nominated by the Ohio osteopathic association, three persons nominated by the association of Ohio children's hospitals, and three persons nominated by the health forum of Ohio;

(16) The administrator of a hospital that is not a trauma center and actively provides emergency care to adult or pediatric trauma patients, appointed from among three persons nominated by OHA: the association for hospitals and health systems, three persons nominated by the Ohio osteopathic association, three persons nominated by the association of Ohio children's hospitals, and three persons nominated by the health forum of Ohio;

(17) The operator of an ambulance company that actively provides trauma care to emergency patients, appointed from among three persons nominated by the Ohio ambulance association;

(18) The chief of a fire department that actively provides trauma care to emergency patients, appointed from among three persons nominated by the Ohio fire chiefs' association;

(19) An EMT or paramedic who is certified under this chapter and actively provides trauma care to emergency patients, appointed from among three persons nominated by the Ohio association of professional firefighters, three persons nominated by the northern Ohio fire fighters, three persons nominated by the Ohio state firefighters' association, and three persons nominated by the Ohio association of emergency medical services;

(20) A person who actively advocates for trauma victims, appointed from three persons nominated by the Ohio brain injury association and three persons nominated by the governor's council on people with disabilities;

(21) A physician or nurse who has substantial administrative responsibility for trauma care provided in or by an adult or pediatric trauma center, appointed from among three persons nominated by OHA: the association for hospitals and health systems, three persons nominated by the Ohio osteopathic association, three persons nominated by the association of Ohio children's hospitals, and three persons nominated by the health forum of Ohio;

(22) Three representatives of hospitals that are not trauma centers and actively provide emergency care to trauma patients, appointed from among three persons nominated by OHA: the association for hospitals and health systems, three persons nominated by the Ohio osteopathic association, three persons nominated by the association of Ohio children's hospitals, and three persons nominated by the health forum of Ohio. The representatives may be hospital administrators, physicians, nurses, or other clinical professionals. Members of the committee shall have substantial experience in the categories they represent, shall be residents of this state, and may be members of the state board of emergency medical services. In appointing members of the committee, the director shall attempt to include members representing urban and rural areas, various geographical areas of the state, and various schools of training. The director shall not appoint to the committee more than one member who is employed by or practices at the same hospital, health system, or emergency medical service organization. The director may refuse to appoint any of the persons nominated by an organization or organizations under this division. In that event, the organization or organizations shall continue to nominate the required number of persons until the director appoints to the committee one or more of the persons nominated by the organization or organizations. Initial appointments to the committee shall be made by the director not later than ninety days after November 3, 2000. Members of the committee shall serve at the pleasure of the director, except that any member of the committee who ceases to be qualified for the position to which the member was appointed shall cease to be a member of the committee. Vacancies on the committee shall be filled in the same manner as original appointments. The members of the committee shall serve without compensation but shall be reimbursed for actual and

necessary expenses incurred in carrying out duties as members of the committee. The committee shall select a chairperson and vice-chairperson from among its members. A majority of all members of the committee shall constitute a quorum. No action shall be taken without the concurrence of a majority of all members of the committee. The committee shall meet at the call of the chair, upon written request of five members of the committee, and at the direction of the state board of emergency medical services. The committee shall not meet at times or locations that conflict with meetings of the board. The executive director and medical director of the state board of emergency medical services may participate in any meeting of the committee and shall do so at the request of the committee. The committee shall advise and assist the state board of emergency medical services in matters related to adult and pediatric trauma care and the establishment and operation of the state trauma registry. In matters relating to the state trauma registry, the board and the committee shall consult with trauma registrars from adult and pediatric trauma centers in the state. The committee may appoint a subcommittee to advise and assist with the trauma registry. The subcommittee may include persons with expertise relevant to the trauma registry who are not members of the board or committee.

(C) The state board of emergency medical services may appoint other committees and subcommittees as it considers necessary.

(D) The state board of emergency medical services, and any of its committees or subcommittees, may request assistance from any state agency. The board and its committees and subcommittees may permit persons who are not members of those bodies to participate in deliberations of those bodies, but no person who is not a member of the board shall vote on the board and no person who is not a member of a committee created under division (A) or (B) of this section shall vote on that committee.

(E) Sections 101.82 to 101.87 of the Revised Code do not apply to the committees established under division (A) or (B) of this section.

Effective Date: 03-22-2001; 04-05-2007

4765.05 Prehospital emergency medical services regions.

(A) As used in this section, “prehospital emergency medical services” means an emergency medical services system that provides medical services to patients who require immediate assistance, because of illness or injury, prior to their arrival at an emergency medical facility.

(B) The state board of emergency medical services shall divide the state geographically into prehospital emergency medical services regions for purposes of overseeing the delivery of adult and pediatric prehospital emergency medical services. For each prehospital emergency medical services region, the state board of emergency medical services shall appoint either a physician to serve as the regional director or a physician advisory board to serve as the regional advisory board. The state board of emergency medical services shall specify the duties of each regional director and regional advisory board. Regional directors and members of regional advisory boards shall serve without compensation, but shall be reimbursed for actual and necessary expenses incurred in carrying out duties as regional directors and members of regional advisory boards.

(C) Nothing in this section shall be construed to limit in any way the ability of a hospital to determine the market area of that hospital.

4765.06 Emergency medical services incidence reporting system - state trauma registry.

(A) The state board of emergency medical services shall establish an emergency medical services incidence reporting system for the collection of information regarding the delivery of emergency medical services in this state and the frequency at which the services are provided. All emergency medical service organizations shall submit to the board any information that the board determines is necessary for maintaining the incidence reporting system.

(B) The board shall establish a state trauma registry to be used for the collection of information regarding the care of adult and pediatric trauma victims in this state. The registry shall provide for the reporting of adult and pediatric trauma-related deaths, identification of adult and pediatric trauma patients, monitoring of adult and pediatric trauma patient care data, determination of the total amount of uncompensated adult and pediatric trauma care provided annually by each facility that provides care to trauma victims, and collection of any other information specified by the board. All persons designated by the board shall submit to the board any information it determines is necessary for maintaining the state trauma registry. At the request of the board any state agency possessing information regarding adult or pediatric trauma care shall provide the information to the board. The board shall maintain the state trauma registry in accordance with rules adopted under section 4765.11 of the Revised Code.

Rules relating to the state trauma registry adopted under this section and section 4765.11 of the Revised Code shall not prohibit the operation of other trauma registries and may provide for the reporting of information to the state trauma registry by or through other trauma registries in a manner consistent with information otherwise reported to the state trauma registry. Other trauma registries may report aggregate information to the state trauma registry, provided the information can be matched to the person that reported it. Information maintained by another trauma registry and reported to the state trauma registry in lieu of being reported directly to the state trauma registry is a public record and shall be maintained, made available to the public, held in confidence, risk adjusted, and not subject to discovery or introduction into evidence in a civil action as provided in section 149.43 of the Revised Code and this section. Any person who provides, maintains, or risk adjusts such information shall comply with this section and rules adopted under it in performing that function and has the same immunities with respect to that function as a person who performs that function with respect to the state trauma registry.

(C) The board and any employee or contractor of the board or the department of public safety shall not make public information it receives under Chapter 4765. of the Revised Code that identifies or would tend to identify a specific recipient of emergency medical services or adult or pediatric trauma care.

(D) Not later than two years after November 3, 2000, the board shall adopt and implement rules under section 4765.11 of the Revised Code that provide written standards and procedures for risk adjustment of information received by the board under Chapter 4765. of the Revised Code. The rules shall be developed in consultation with appropriate medical, hospital, and emergency medical service organizations and may provide for risk adjustment by a contractor of the board. Except as provided in division (G) of this section, before risk adjustment standards and procedures are implemented, no member of the board and no employee or contractor of the board or the department of public safety shall make public information received by the board under Chapter 4765. of the Revised Code that

identifies or would tend to identify a specific provider of emergency medical services or adult or pediatric trauma care. Except as provided in division (G) of this section, after risk adjustment standards and procedures are implemented, the board shall make public such information only on a risk adjusted basis.

(E) The board shall adopt rules under section 4765.11 of the Revised Code that specify procedures for ensuring the confidentiality of information that is not to be made public under this section. The rules shall specify the circumstances in which deliberations of the persons performing risk adjustment functions under this section are not open to the public and records of those deliberations are maintained in confidence. Nothing in this section prohibits the board from making public statistical information that does not identify or tend to identify a specific recipient or provider of emergency medical services or adult or pediatric trauma care.

(F) No provider that furnishes information to the board with respect to any patient the provider examined or treated shall, because of this furnishing, be deemed liable in damages to any person or be held to answer for betrayal of a professional confidence in the absence of willful or wanton misconduct. No such information shall be subject to introduction in evidence in any civil action against the provider. No provider that furnishes information to the board shall be liable for the misuse or improper release of the information by the board or any other person.

No person who performs risk adjustment functions under this section shall, because of performing such functions, be held liable in a civil action for betrayal of professional confidence or otherwise in the absence of willful or wanton misconduct.

(G) The board may transmit data that identifies or tends to identify a specific provider of emergency medical services care and has not been risk-adjusted from the emergency medical services incident reporting system directly to the national emergency medical services information system, pursuant to a written contract between the board and the federal agency that administers the national emergency medical services information system, which shall ensure to the maximum extent permitted by federal law that such agency shall use such data solely for inclusion in the national emergency medical services information system and shall not disclose such data to the public, through legal discovery, a freedom of information request, or otherwise, in a manner that identifies or tends to identify a specific provider of emergency medical services care.

Amended by 129th General Assembly File No. 95, SB 243, § 1, eff. 7/3/2012. Effective Date: 11-03-2000
4765.07 Administrative rules for grant program.

(A) The state board of emergency medical services shall adopt rules under section 4765.11 of the Revised Code to establish and administer a grant program under which grants are distributed according to the following priorities:

(1) First priority shall be given to emergency medical service organizations for the training of personnel, for the purchase of equipment and vehicles, and to improve the availability, accessibility, and quality of emergency medical services in this state. In this category, the board shall give priority to grants that fund training and equipping of emergency medical service personnel.

(2) Second priority shall be given to entities that research, test, and evaluate medical procedures and systems related to adult and pediatric trauma care.

(3) Third priority shall be given to entities that research the causes, nature, and effects of traumatic injuries, educate the public about injury prevention, and implement, test, and evaluate injury prevention strategies.

(4) Fourth priority shall be given to entities that research, test, and evaluate procedures that promote the rehabilitation, retraining, and reemployment of adult or pediatric trauma victims and social service support mechanisms for adult or pediatric trauma victims and their families.

(5) Fifth priority shall be given to entities that conduct research on, test, or evaluate one or more of the following: (a) Procedures governing the performance of emergency medical services in this state; (b) The training of emergency medical service personnel;

(c) The staffing of emergency medical service organizations.

(6) For grants distributed for the grant award years occurring not later than the award year ending June 30, 2017, sixth priority shall be given to entities that operate paramedic training programs and are seeking national accreditation of the programs.

(B) To be eligible for a grant distributed pursuant to division (A)(6) of this section, an applicant for the grant shall meet all of the following conditions:

(1) Hold a certificate of accreditation issued by the board under section 4765.17 of the Revised Code to operate a paramedic training program;

(2) Be seeking initial national accreditation of the program from an accrediting organization approved by the board; (3) Apply for the national accreditation on or after February 25, 2010.

(C) The grant program shall be funded from the trauma and emergency medical services fund created by section 4513.263 of the Revised Code.

Amended by 129th General Assembly File No. 127, HB 487, § 101.01, eff. 9/10/2012.

Amended by 129th General Assembly File No. 27, HB 128, § 1, eff. 9/23/2011. Effective Date: 11-03-2000

4765.08 Statewide emergency medical services plan - statewide regulation of emergency medical services during periods of disaster.

The state board of emergency medical services shall prepare a statewide emergency medical services plan and shall revise the plan as necessary. The board shall prepare a plan for the statewide regulation of emergency medical services during periods of disaster. The plan shall be consistent with the statewide emergency medical services plan required under this section and with the statewide emergency operations plan required under section 5502.22 of the Revised Code. The board shall submit the plan to the emergency management agency created under section 5502.22 of the Revised Code. The board shall cooperate with the agency in any other manner the agency considers necessary to develop and implement the statewide emergency operations plan.

Effective Date: 12-02-1996

4765.09 Recommendations for operation of ambulance and emergency medical service organizations.

The state board of emergency medical services shall prepare recommendations for the operation of ambulance service organizations, air medical organizations, and emergency medical service organizations. Within thirty days following the preparation or modification of recommendations, the board shall notify the board of county commissioners of any county, the board of township trustees of any township, the board of trustees of any joint ambulance district, or the board of trustees of any joint emergency medical services district in which there exist ambulance service organizations, air medical organizations, or emergency medical service organizations of any board recommendations for the operation of such organizations. The recommendations shall include, but not be limited to:

- (A) The definition and classification of ambulances and medical aircraft;
- (B) The design, equipment, and supplies for ambulances and medical aircraft, including special equipment, supplies, training, and staffing required to assist pediatric and geriatric emergency victims;
- (C) The minimum number and type of personnel for the operation of ambulances and medical aircraft;
- (D) The communication systems necessary for the operation of ambulances and medical aircraft;
- (E) Reports to be made by persons holding certificates of accreditation or approval issued under section 4765.17 of the Revised Code and certificates to practice issued under section 4765.30 of the Revised Code to ascertain compliance with this chapter and the rules and recommendations adopted thereunder and to ascertain the quantity and quality of ambulance service organizations, air medical organizations, and emergency medical service organizations throughout the state.

Effective Date: 11-03-2000

4765.10 State board - powers and duties.

- (A) The state board of emergency medical services shall do all of the following:
 - (1) Administer and enforce the provisions of this chapter and the rules adopted under it;
 - (2) Approve, in accordance with procedures established in rules adopted under section 4765.11 of the Revised Code, examinations that demonstrate competence to have a certificate to practice renewed without completing a continuing education program;
 - (3) Advise applicants for state or federal emergency medical services funds, review and comment on applications for these funds, and approve the use of all state and federal funds designated solely for emergency medical service programs unless federal law requires another state agency to approve the use of all such federal funds;
 - (4) Serve as a statewide clearinghouse for discussion, inquiry, and complaints concerning emergency medical services;
 - (5) Make recommendations to the general assembly on legislation to improve the delivery of emergency medical services;

(6) Maintain a toll-free long distance telephone number through which it shall respond to questions about emergency medical services;

(7) Work with appropriate state offices in coordinating the training of firefighters and emergency medical service personnel. Other state offices that are involved in the training of firefighters or emergency medical service personnel shall cooperate with the board and its committees and subcommittees to achieve this goal.

(8) Provide a liaison to the state emergency operation center during those periods when a disaster, as defined in section 5502.21 of the Revised Code, has occurred in this state and the governor has declared an emergency as defined in that section.

(B) The board may do any of the following:

(1) Investigate complaints concerning emergency medical services and emergency medical service organizations as it determines necessary;

(2) Enter into reciprocal agreements with other states that have standards for accreditation of emergency medical services training programs and for certification of first responders, EMTs-basic, EMTs-I, paramedics, firefighters, or fire safety inspectors that are substantially similar to those established under this chapter and the rules adopted under it;

(3) Establish a statewide public information system and public education programs regarding emergency medical services; (4) Establish an injury prevention program.

Effective Date: 11-03-2000

4765.101 Complaint and investigation of violations.

(A) The state board of emergency medical services shall investigate any allegation that a person has violated this chapter or a rule adopted under it. Any person may submit to the board a written complaint regarding an alleged violation of this chapter or a rule adopted under it. In the absence of fraud or bad faith, no person submitting a complaint to the board or testifying in an adjudication hearing conducted in accordance with Chapter 119. of the Revised Code with regard to such an alleged violation shall be liable to any person in damages in a civil action as a result of submitting the complaint or providing testimony.

(B) In investigating an allegation, the board may do any of the following: (1) Administer oaths; (2) Order the taking of depositions; (3) Issue subpoenas; (4) Compel the attendance of witnesses and production of books, accounts, papers, records, documents, and testimony.

(C) A subpoena for patient record information shall not be issued without consultation with the attorney general's office and approval of the executive director of the board. Before issuance of a subpoena for patient record information, the executive director shall determine whether there is probable cause to believe that the complaint filed alleges a violation of this chapter or any rule adopted under it and that the records sought are relevant to the alleged violation and material to the investigation. The subpoena may apply only to records that cover a reasonable period of time surrounding the alleged violation.

(D) On failure to comply with any subpoena issued by the board and after reasonable notice to the person being subpoenaed, the board may move, pursuant to the Rules of Civil Procedure, for an order compelling the production of persons or records.

(E) A subpoena issued by the board may be served by a sheriff, the sheriff's deputy, or an investigator for the division of emergency medical services of the department of public safety. Service of a subpoena issued by the board may be made by delivering a copy of the subpoena to the person named in it, reading it to the person, or leaving it at the person's usual place of residence. When the person being served is an individual authorized by this chapter to practice emergency medical services, service of the subpoena may be made by certified mail, restricted delivery, return receipt requested, and the subpoena shall be deemed served on the date delivery is made or on the date that the person refuses to accept delivery.

Effective Date: 01-18-2007

4765.102 Investigative information confidential.

(A) As used in this section, "licensing agency" means any entity that has the authority pursuant to Title XLVII of the Revised Code to issue a license, and any other agency of this or another state, other than the Ohio supreme court, that has the authority to issue a license that authorizes an individual to engage in an occupation or profession. "Licensing agency" includes an administrative officer that has authority to issue a license that authorizes an individual to engage in an occupation or profession.

(B) Except as provided in divisions (C) and (D) of this section and section 4765.111 of the Revised Code, all information the state board of emergency medical services receives pursuant to an investigation, including information regarding an alleged violation of this chapter or rules adopted under it or a complaint submitted under division (A) of section 4765.101 of the Revised Code, is confidential, and is not subject to discovery in any civil action, during the course of the investigation and any adjudication proceedings that result from the investigation. Upon completion of the investigation and any resulting adjudication proceedings, the information is a matter of public record for purposes of section 149.43 of the Revised Code.

(C) The board may release information otherwise made confidential by division (B) of this section to law enforcement officers or licensing agencies of this or another state that are prosecuting, adjudicating, or investigating the holder of a certificate issued under this chapter or a person who allegedly engaged in the unauthorized provision of emergency medical services. A law enforcement officer or licensing agency with information disclosed by the board under this division shall not divulge the information other than for the purpose of an adjudication by a court or licensing agency to which the subject of the adjudication is a party.

(D) If an investigation conducted under section 4765.101 of the Revised Code requires a review of patient records, the investigation and proceedings related to it shall be conducted in such a manner as to protect patient confidentiality. The board shall not make public the name or any other identifying information about a patient unless proper consent is given in accordance with rules adopted by the board. If the patient is less than eighteen years of age, the board shall obtain consent from the patient's parent, guardian, or custodian.

Effective Date: 01-18-2007

4765.11 Administrative rules for administration.

(A) The state board of emergency medical services shall adopt, and may amend and rescind, rules in accordance with Chapter 119. of the Revised Code and division (C) of this section that establish all of the following: (1) Procedures for its governance and the control of its actions and business affairs;

(2) Standards for the performance of emergency medical services by first responders, emergency medical technicians-basic, emergency medical technicians-intermediate, and emergency medical technicians-paramedic;

(3) Application fees for certificates of accreditation, certificates of approval, certificates to teach, and certificates to practice, which shall be deposited into the trauma and emergency medical services fund created in section 4513.263 of the Revised Code;

(4) Criteria for determining when the application or renewal fee for a certificate to practice may be waived because an applicant cannot afford to pay the fee;

(5) Procedures for issuance and renewal of certificates of accreditation, certificates of approval, certificates to teach, and certificates to practice, including any procedures necessary to ensure that adequate notice of renewal is provided in accordance with division (D) of section 4765.30 of the Revised Code;

(6) Procedures for suspending or revoking certificates of accreditation, certificates of approval, certificates to teach, and certificates to practice;

(7) Grounds for suspension or revocation of a certificate to practice issued under section 4765.30 of the Revised Code and for taking any other disciplinary action against a first responder, EMT-basic, EMT-I, or paramedic;

(8) Procedures for taking disciplinary action against a first responder, EMT-basic, EMT-I, or paramedic;

(9) Standards for certificates of accreditation and certificates of approval;

(10) Qualifications for certificates to teach;

(11) Requirements for a certificate to practice;

(12) The curricula, number of hours of instruction and training, and instructional materials to be used in adult and pediatric emergency medical services training programs and adult and pediatric emergency medical services continuing education programs;

(13) Procedures for conducting courses in recognizing symptoms of life-threatening allergic reactions and in calculating proper dosage levels and administering injections of epinephrine to adult and pediatric patients who suffer life-threatening allergic reactions;

(14) Examinations for certificates to practice;

- (15) Procedures for administering examinations for certificates to practice;
- (16) Procedures for approving examinations that demonstrate competence to have a certificate to practice renewed without completing an emergency medical services continuing education program;
- (17) Procedures for granting extensions and exemptions of emergency medical services continuing education requirements;
- (18) Procedures for approving the additional emergency medical services first responders are authorized by division (C) of section 4765.35 of the Revised Code to perform, EMTs-basic are authorized by division (C) of section 4765.37 of the Revised Code to perform, EMTs-I are authorized by division (B)(5) of section 4765.38 of the Revised Code to perform, and paramedics are authorized by division (B)(6) of section 4765.39 of the Revised Code to perform;
- (19) Standards and procedures for implementing the requirements of section 4765.06 of the Revised Code, including designations of the persons who are required to report information to the board and the types of information to be reported;
- (20) Procedures for administering the emergency medical services grant program established under section 4765.07 of the Revised Code;
- (21) Procedures consistent with Chapter 119. of the Revised Code for appealing decisions of the board;
- (22) Minimum qualifications and peer review and quality improvement requirements for persons who provide medical direction to emergency medical service personnel;
- (23) The manner in which a patient, or a patient's parent, guardian, or custodian may consent to the board releasing identifying information about the patient under division (D) of section 4765.102 of the Revised Code;
- (24) Circumstances under which a training program or continuing education program, or portion of either type of program, may be taught by a person who does not hold a certificate to teach issued under section 4765.23 of the Revised Code;
- (25) Certification cycles for certificates issued under sections 4765.23 and 4765.30 of the Revised Code and certificates issued by the executive director of the state board of emergency medical services under section 4765.55 of the Revised Code that establish a common expiration date for all certificates.
- (B) The board may adopt, and may amend and rescind, rules in accordance with Chapter 119. of the Revised Code and division (C) of this section that establish the following: (1) Specifications of information that may be collected under the trauma system registry and incidence reporting system created under section 4765.06 of the Revised Code; (2) Standards and procedures for implementing any of the recommendations made by any committees of the board or under section 4765.04 of the Revised Code; (3) Requirements that a person must meet to receive a certificate to practice as a first responder pursuant to division (A)(2) of section 4765.30 of the Revised Code; (4) Any other rules necessary to implement this chapter.

(C) In developing and administering rules adopted under this chapter, the state board of emergency medical services shall consult with regional directors and regional physician advisory boards created by section 4765.05 of the Revised Code and emphasize the special needs of pediatric and geriatric patients.

(D) Except as otherwise provided in this division, before adopting, amending, or rescinding any rule under this chapter, the board shall submit the proposed rule to the director of public safety for review. The director may review the proposed rule for not more than sixty days after the date it is submitted. If, within this sixty-day period, the director approves the proposed rule or does not notify the board that the rule is disapproved, the board may adopt, amend, or rescind the rule as proposed. If, within this sixty-day period, the director notifies the board that the proposed rule is disapproved, the board shall not adopt, amend, or rescind the rule as proposed unless at least twelve members of the board vote to adopt, amend, or rescind it.

This division does not apply to an emergency rule adopted in accordance with section 119.03 of the Revised Code.

Amended by 128th General Assembly File No. 9, HB 1, § 101.01, eff. 10/16/2009. Effective Date: 11-03-2000; 01-18-2007; 2008 SB175 09-12-2008
4765.111 Disciplinary proceedings.

Except as provided in this section or sections 4765.112 to 4765.116 of the Revised Code, the state board of emergency medical services shall conduct disciplinary proceedings regarding the holder of a certificate issued under this chapter in accordance with rules adopted by the board under section 4765.11 of the Revised Code. The board and a holder of a certificate are the parties to a hearing conducted under this chapter. Either party may submit a written request to the other party for a list of witnesses and copies of documents intended to be introduced at the hearing. The request shall be in writing and shall be served not less than thirty-seven days prior to the commencement of the hearing, unless the hearing officer or presiding board member grants an extension of time to make the request. Not later than thirty days before the hearing, the responding party shall provide the requested list of witnesses and copies of documents to the requesting party, unless the hearing officer or presiding board member grants an extension of time to provide the list and copies. Failure to timely provide a list or copies requested in accordance with this section shall result in exclusion from the hearing of the witnesses, testimony, or documents.

Effective Date: 01-18-2007

4765.112 Suspension of certificate without hearing.

(A) The state board of emergency medical services, by an affirmative vote of the majority of its members, may suspend without a prior hearing a certificate to practice issued under this chapter if the board determines that there is clear and convincing evidence that continued practice by the certificate holder presents a danger of immediate and serious harm to the public and that the certificate holder has done any of the following:

- (1) Furnished false, fraudulent, or misleading information to the board;
- (2) Engaged in activities that exceed those permitted by the individual's certificate;

(3) In a court of this or any other state or federal court been convicted of, pleaded guilty to, or been the subject of a judicial finding of guilt of, a judicial finding of guilt resulting from a plea of no contest to, or a judicial finding of eligibility for intervention in lieu of conviction for, a felony or for a misdemeanor committed in the course of practice or involving gross immorality or moral turpitude.

(B) Immediately following the decision to impose a summary suspension, the board, in accordance with section 119.07 of the Revised Code, shall issue a written order of suspension, cause it to be delivered to the certificate holder, and notify the certificate holder of the opportunity for a hearing. If timely requested by the certificate holder, a hearing shall be conducted in accordance with section 4765.115 of the Revised Code.

Effective Date: 01-18-2007

4765.113 Reconsideration of suspension based on conviction.

If the state board of emergency medical services imposes a suspension on the basis of a conviction, judicial finding, or plea as described in division (A)(3) of section 4765.112 of the Revised Code that is overturned on appeal, the certificate holder, on exhaustion of the criminal appeal process, may file with the board a petition for reconsideration of the suspension along with appropriate court documents. On receipt of the petition and documents, the board shall reinstate the certificate holder's certificate to practice.

Effective Date: 01-18-2007

4765.114 Certificate automatically suspended for certain offenses.

(A) A certificate to practice emergency medical services issued under this chapter is automatically suspended on the certificate holder's conviction of, plea of guilty to, or judicial finding of guilt of any of the following: aggravated murder, murder, voluntary manslaughter, felonious assault, kidnapping, rape, sexual battery, gross sexual imposition, aggravated arson, aggravated burglary, aggravated robbery, or a substantially equivalent offense committed in this or another jurisdiction. Continued practice after the suspension is practicing without a certificate.

(B) If the state board of emergency medical services has knowledge that an automatic suspension has occurred, it shall notify, in accordance with section 119.07 of the Revised Code, the certificate holder of the suspension and of the opportunity for a hearing. If timely requested by the certificate holder, a hearing shall be conducted in accordance with section 4765.115 of the Revised Code.

Effective Date: 01-18-2007

4765.115 Suspension orders - administrative hearing - disposition.

(A) A suspension order issued under section 4765.112 or automatic suspension under section 4765.114 of the Revised Code is not subject to suspension by a court prior to a hearing under this section or during the pendency of any appeal filed under section 119.12 of the Revised Code.

(B) A suspension order issued under section 4765.112 or automatic suspension under section 4765.114 of the Revised Code remains in effect, unless reversed by the state board of emergency medical services, until a final adjudication order issued by the board pursuant to this section becomes effective.

(C) Hearings requested pursuant to section 4765.112 or 4765.114 of the Revised Code shall be conducted under this section in accordance with Chapter 119. of the Revised Code.

(D) A hearing under this section shall be held not later than forty-five days but not earlier than forty days after the certificate holder requests it, unless another date is agreed to by the certificate holder and the board.

(E) After completion of an adjudication hearing, the board may adopt, by an affirmative vote of the majority of its members, a final adjudication order that imposes any of the following sanctions:

(1) Suspension of the holder's certificate to practice; (2) Revocation of the holder's certificate to practice; (3) Issuance of a written reprimand;

(4) A refusal to renew or a limitation on the holder's certificate to practice. The board shall issue its final adjudication order not later than forty-five days after completion of an adjudication hearing. If the board does not issue a final order within that time period, the suspension order is void, but any final adjudication order subsequently issued is not affected.

(F) Any action taken by the board under this section resulting in a suspension from practice shall be accompanied by a written statement of the conditions under which the certificate to practice may be reinstated. Reinstatement of a certificate suspended under this section requires an affirmative vote by the majority of the members of the board.

(G) When the board revokes or refuses to reinstate a certificate to practice, the board may specify that its action is permanent. An individual subject to permanent action taken by the board is forever ineligible to hold a certificate of the type revoked or refused, and the board shall not accept from the individual an application for reinstatement of the certificate or for a new certificate.

Effective Date: 01-18-2007

4765.116 Procedure where hearing not timely requested.

If a certificate holder subject to a suspension order issued by the state board of emergency medical services under section 4765.112 or an automatic suspension order under section 4765.114 of the Revised Code fails to make a timely request for a hearing, the following apply:

(A) In the case of a certificate holder subject to a summary suspension order, the board is not required to hold a hearing, but may adopt, by an affirmative vote of a majority of its members, a final order that contains the board's findings. In the final order, the board may order any of the sanctions listed in division (E) of section 4765.115 of the Revised Code.

(B) In the case of a certificate holder subject to an automatic suspension order, the board may adopt, by an affirmative vote of a majority of its members, a final order that permanently revokes the holder's certificate to practice.

Effective Date: 01-18-2007

4765.12 Guidelines for care of trauma victims by emergency medical service personnel - conduct of peer review and quality assurance programs by emergency medical service organizations.

(A) Not later than two years after the effective date of this section, the state board of emergency medical services shall develop and distribute guidelines for the care of trauma victims by emergency medical service personnel and for the conduct of peer review and quality assurance programs by emergency medical service organizations. The guidelines shall be consistent with the state trauma triage protocols adopted in rules under sections 4765.11 and 4765.40 of the Revised Code and shall place emphasis on the special needs of pediatric and geriatric trauma victims. In developing the guidelines, the board shall consult with entities with interests in trauma and emergency medical services and shall consider any relevant guidelines adopted by national organizations, including the American college of surgeons, American college of emergency physicians, and American academy of pediatrics. The board shall distribute the guidelines, and amendments to the guidelines, to each emergency medical service organization, regional director, regional physician advisory board, certified emergency medical service instructor, and person who regularly provides medical direction to emergency medical service personnel in this state.

(B) Not later than three years after the effective date of this section, each emergency medical service organization in this state shall implement ongoing peer review and quality assurance programs designed to improve the availability and quality of the emergency medical services it provides. The form and content of the programs shall be determined by each emergency medical service organization. In implementing the programs, each emergency medical service organization shall consider how to improve its ability to provide effective trauma care, particularly for pediatric and geriatric trauma victims, and shall take into account the trauma care guidelines developed by the state board of emergency medical services under this section. Information generated solely for use in a peer review or quality assurance program conducted on behalf of an emergency medical service organization is not a public record under section 149.43 of the Revised Code. Such information, and any discussion conducted in the course of a peer review or quality assurance program conducted on behalf of an emergency medical service organization, is not subject to discovery in a civil action and shall not be introduced into evidence in a civil action against the emergency medical service organization on whose behalf the information was generated or the discussion occurred. No emergency medical service organization on whose behalf a peer review or quality assurance program is conducted, and no person who conducts such a program, because of performing such functions, shall be liable in a civil action for betrayal of professional confidence or otherwise in the absence of willful or wanton misconduct.

Effective Date: 11-03-2000

4765.15 Continuing education - approval and accreditation.

A person seeking to operate an emergency medical services training program shall submit a completed application for accreditation to the state board of emergency medical services on a form the board shall prescribe and furnish. The application shall be accompanied by the appropriate application fee established in rules adopted under section 4765.11 of the Revised Code. A person seeking to operate an emergency medical services continuing education program shall submit a completed application for approval to the board on a form the board shall prescribe and furnish. The application shall be

accompanied by the appropriate application fee established in rules adopted under section 4765.11 of the Revised Code. The board shall administer the accreditation and approval processes pursuant to rules adopted under section 4765.11 of the Revised Code. In administering these processes, the board may authorize other persons to evaluate applications for accreditation or approval and may accept the recommendations made by those persons. The board may cause an investigation to be made into the accuracy of the information submitted in any application for accreditation or approval. If an investigation indicates that false, misleading, or incomplete information has been submitted to the board in connection with any application for accreditation or approval, the board shall conduct a hearing on the matter in accordance with Chapter 119. of the Revised Code.

Effective Date: 11-03-2000

4765.16 Continuing education - development.

(A) All courses offered through an emergency medical services training program or an emergency medical services continuing education program, other than ambulance driving, shall be developed under the direction of a physician who specializes in emergency medicine. Each course that deals with trauma care shall be developed in consultation with a physician who specializes in trauma surgery. Except as specified by the state board of emergency medical services pursuant to rules adopted under section 4765.11 of the Revised Code, each course offered through a training program or continuing education program shall be taught by a person who holds the appropriate certificate to teach issued under section 4765.23 of the Revised Code.

(B) A training program for first responders shall meet the standards established in rules adopted by the board under section 4765.11 of the Revised Code. The program shall include courses in both of the following areas for at least the number of hours established by the board's rules:

- (1) Emergency victim care;
- (2) Reading and interpreting a trauma victim's vital signs.

(C) A training program for emergency medical technicians-basic shall meet the standards established in rules adopted by the board under section 4765.11 of the Revised Code. The program shall include courses in each of the following areas for at least the number of hours established by the board's rules: (1) Emergency victim care; (2) Reading and interpreting a trauma victim's vital signs; (3) Triage protocols for adult and pediatric trauma victims; (4) In-hospital training; (5) Clinical training; (6) Training as an ambulance driver. Each operator of a training program for emergency medical technicians-basic shall allow any pupil in the twelfth grade in a secondary school who is at least seventeen years old and who otherwise meets the requirements for admission into such a training program to be admitted to and complete the program and, as part of the training, to ride in an ambulance with emergency medical technicians-basic, emergency medical technicians-intermediate, and emergency medical technicians-paramedic. Each emergency medical service organization shall allow pupils participating in training programs to ride in an ambulance with emergency medical technicians-basic, advanced emergency medical technicians-intermediate, and emergency medical technicians-paramedic.

(D) A training program for emergency medical technicians-intermediate shall meet the standards established in rules adopted by the board under section 4765.11 of the Revised Code. The program shall include, or require as a prerequisite, the training specified in division (C) of this section and courses in each of the following areas for at least the number of hours established by the board's rules: (1) Recognizing symptoms of life-threatening allergic reactions and in calculating proper dosage levels and administering injections of epinephrine to persons who suffer life-threatening allergic reactions, conducted in accordance with rules adopted by the board under section 4765.11 of the Revised Code; (2) Venous access procedures; (3) Cardiac monitoring and electrical interventions to support or correct the cardiac function.

(E) A training program for emergency medical technicians-paramedic shall meet the standards established in rules adopted by the board under section 4765.11 of the Revised Code. The program shall include, or require as a prerequisite, the training specified in divisions (C) and (D) of this section and courses in each of the following areas for at least the number of hours established by the board's rules: (1) Medical terminology; (2) Venous access procedures; (3) Airway procedures; (4) Patient assessment and triage; (5) Acute cardiac care, including administration of parenteral injections, electrical interventions, and other emergency medical services; (6) Emergency and trauma victim care beyond that required under division (C) of this section; (7) Clinical training beyond that required under division (C) of this section.

(F) A continuing education program for first responders, EMTs-basic, EMTs-I, or paramedics shall meet the standards established in rules adopted by the board under section 4765.11 of the Revised Code. A continuing education program shall include instruction and training in subjects established by the board's rules for at least the number of hours established by the board's rules.

Effective Date: 11-03-2000; 01-18-2007

4765.17 Issuing certificate of accreditation or certificate of approval.

(A) The state board of emergency medical services shall issue the appropriate certificate of accreditation or certificate of approval to an applicant who is of good reputation and meets the requirements of section 4765.16 of the Revised Code. The board shall grant or deny a certificate of accreditation or certificate of approval within one hundred twenty days of receipt of the application. The board may issue or renew a certificate of accreditation or certificate of approval on a provisional basis to an applicant who is of good reputation and is in substantial compliance with the requirements of section 4765.16 of the Revised Code. The board shall inform an applicant receiving such a certificate of the conditions that must be met to complete compliance with section 4765.16 of the Revised Code.

(B) Except as provided in division (C) of this section, a certificate of accreditation or certificate of approval is valid for up to five years and may be renewed by the board pursuant to procedures and standards established in rules adopted under section 4765.11 of the Revised Code. An application for renewal shall be accompanied by the appropriate renewal fee established in rules adopted under section 4765.11 of the Revised Code.

(C) A certificate of accreditation or certificate of approval issued on a provisional basis is valid for the length of time established by the board. If the board finds that the holder of such a certificate has met the conditions it specifies under division (A) of this section, the board shall issue the appropriate certificate of accreditation or certificate of approval.

(D) A certificate of accreditation is valid only for the emergency medical services training program or programs for which it is issued. The holder of a certificate of accreditation may apply to operate additional training programs in accordance with rules adopted by the board under section 4765.11 of the Revised Code. Any additional training programs shall expire on the expiration date of the applicant's current certificate. A certificate of approval is valid only for the emergency medical services continuing education program for which it is issued. Neither is transferable.

(E) The holder of a certificate of accreditation or a certificate of approval may offer courses at more than one location in accordance with rules adopted under section 4765.11 of the Revised Code.

Amended by 128th General Assembly File No. 9, HB 1, § 101.01, eff. 10/16/2009. Effective Date: 01-14-1993

4765.18 Grounds for suspension or revocation of certificate.

The state board of emergency medical services may suspend or revoke a certificate of accreditation or a certificate of approval issued under section 4765.17 of the Revised Code for any of the following reasons:

(A) Violation of this chapter or any rule adopted under it;

(B) Furnishing of false, misleading, or incomplete information to the board;

(C) The signing of an application or the holding of a certificate of accreditation by a person who has pleaded guilty to or has been convicted of a felony, or has pleaded guilty to or been convicted of a crime involving moral turpitude;

(D) The signing of an application or the holding of a certificate of accreditation by a person who is addicted to the use of any controlled substance or has been adjudicated incompetent for that purpose by a court, as provided in section 5122.301 of the Revised Code;

(E) Violation of any commitment made in an application for a certificate of accreditation or certificate of approval;

(F) Presentation to prospective students of misleading, false, or fraudulent information relating to the emergency medical services training program or emergency medical services continuing education program, employment opportunities, or opportunities for enrollment in accredited institutions of higher education after entering or completing courses offered by the operator of a program;

(G) Failure to maintain in a safe and sanitary condition premises and equipment used in conducting courses of study;

(H) Failure to maintain financial resources adequate for the satisfactory conduct of courses of study or to retain a sufficient number of certified instructors;

(I) Discrimination in the acceptance of students upon the basis of race, color, religion, sex, or national origin. Effective Date: 11-12-1992

4765.22 Applying to teach in emergency medical services training program or
emergency medical services continuing education program.

A person seeking a certificate to teach in an emergency medical services training program or an emergency medical services continuing education program shall submit a completed application for certification to the state board of emergency medical services on a form the board shall prescribe and furnish. The application shall be accompanied by the appropriate application fee established in rules adopted under section 4765.11 of the Revised Code.

Effective Date: 11-12-1992

4765.23 Teaching certificate - issuance - renewal - suspension or revocation.

The state board of emergency medical services shall issue a certificate to teach in an emergency medical services training program or an emergency medical services continuing education program to any applicant who it determines meets the qualifications established in rules adopted under section 4765.11 of the Revised Code. The certificate shall indicate each type of instruction and training the certificate holder may teach under the certificate.

A certificate to teach shall have a certification cycle established by the board and may be renewed by the board pursuant to rules adopted under section 4765.11 of the Revised Code. An application for renewal shall be accompanied by the appropriate renewal fee established in rules adopted under section 4765.11 of the Revised Code.

The board may suspend or revoke a certificate to teach pursuant to rules adopted under section 4765.11 of the Revised Code.

Amended by 128th General Assembly File No. 9, HB 1, § 101.01, eff. 10/16/2009. Effective Date: 11-12-1992

4765.24 Continuing education - certificate of completion.

The operator of an accredited training program for first responders shall issue a certificate of completion in first responder training to each student who successfully completes the training program described in division (B) of section 4765.16 of the Revised Code. The operator of an accredited training program for emergency medical technicians-basic shall issue a certificate of completion in emergency medical services training-basic to each student who successfully completes the EMT- basic program described in division (C) of section 4765.16 of the Revised Code. The operator of an accredited training program for emergency medical technicians-intermediate shall issue a certificate of completion in emergency medical services training-intermediate to each student who successfully completes the EMT-I program described in division (D) of section 4765.16 of the Revised Code. The operator of an accredited training program for emergency medical technicians- paramedic shall issue a certificate of completion in emergency medical services training-paramedic to each student who successfully completes the training program described in division (E) of section 4765.16 of the Revised Code. The operator of an approved emergency medical services continuing education program shall issue the appropriate certificate of completion in emergency medical services continuing education to each student who successfully completes a continuing education program described in division (F) of section 4765.16 of the Revised Code.

Effective Date: 10-01-1996

4765.28 Applying for certificate to practice.

A person seeking a certificate to practice as a first responder, emergency medical technician-basic, emergency medical technician-intermediate, or emergency medical technician-paramedic shall submit a completed application for certification to the state board of emergency medical services on a form the board shall prescribe and furnish. Except as provided in division (B) of section 4765.29 of the Revised Code, the application shall include evidence that the applicant received the appropriate certificate of completion pursuant to section 4765.24 of the Revised Code. The application shall be accompanied by the appropriate application fee established in rules adopted under section 4765.11 of the Revised Code, unless the board waives the fee on determining pursuant to those rules that the applicant cannot afford to pay the fee.

Effective Date: 10-01-1996

4765.29 Examination.

(A) The state board of emergency medical services shall provide for the examination of applicants for certification to practice as first responders, emergency medical technicians-basic, emergency medical technicians-intermediate, and emergency medical technicians-paramedic. The examinations shall be established by the board in rules adopted under section 4765.11 of the Revised Code. The board may administer the examinations or contract with other persons to administer the examinations. In either case, the examinations shall be administered pursuant to procedures established in rules adopted under section 4765.11 of the Revised Code and shall be offered at various locations in the state selected by the board. Except as provided in division (B) of this section, an applicant shall not be permitted to take an examination for the same certificate to practice more than three times since last receiving the certificate of completion pursuant to section 4765.24 of the Revised Code that qualifies the applicant to take the examination unless the applicant receives another certificate of completion that qualifies the applicant to take the examination.

(B) On request of an applicant who fails three examinations for the same certificate to practice, the board may direct the applicant to complete a specific portion of an accredited emergency medical services training program. If the applicant provides satisfactory proof to the board that the applicant has successfully completed that portion of the program, the applicant shall be permitted to take the examination.

Effective Date: 10-01-1996

4765.30 Qualifications for certificate to practice.

(1) The state board of emergency medical services shall issue a certificate to practice as a first responder to an applicant who meets all of the following conditions: (a) Except as provided in division (A)(2) of this section, is a volunteer for a nonprofit emergency medical service organization or a nonprofit fire department; (b) Holds the appropriate certificate of completion issued in accordance with section 4765.24 of the Revised Code; (c) Passes the appropriate examination conducted under section 4765.29 of the Revised Code; (d) Is not in violation of any provision of this chapter or the rules adopted under it; (e) Meets any other certification requirements established in rules adopted under section 4765.11 of the Revised Code.

(2) The board may waive the requirement to be a volunteer for a nonprofit entity if the applicant meets other requirements established in rules adopted under division (B)(3) of section 4765.11 of the Revised Code relative to a person's eligibility to practice as a first responder.

(B) The state board of emergency medical services shall issue a certificate to practice as an emergency medical technician- basic to an applicant who meets all of the following conditions: (1) Holds a certificate of completion in emergency medical services training-basic issued in accordance with section 4765.24 of the Revised Code; (2) Passes the examination for emergency medical technicians-basic conducted under section 4765.29 of the Revised Code; (3) Is not in violation of any provision of this chapter or the rules adopted under it; (4) Meets any other certification requirements established in rules adopted under section 4765.11 of the Revised Code.

(C) The state board of emergency medical services shall issue a certificate to practice as an emergency medical technician- intermediate or emergency medical technician-paramedic to an applicant who meets all of the following conditions: (1) Holds a certificate to practice as an emergency medical technician-basic; (2) Holds the appropriate certificate of completion issued in accordance with section 4765.24 of the Revised Code; (3) Passes the appropriate examination conducted under section 4765.29 of the Revised Code; (4) Is not in violation of any provision of this chapter or the rules adopted under it; (5) Meets any other certification requirements established in rules adopted under section 4765.11 of the Revised Code.

(D) A certificate to practice shall have a certification cycle established by the board and may be renewed by the board pursuant to rules adopted under section 4765.11 of the Revised Code. Not later than sixty days prior to the expiration date of an individual's certificate to practice, the board shall notify the individual of the scheduled expiration. An application for renewal shall be accompanied by the appropriate renewal fee established in rules adopted under section 4765.11 of the Revised Code, unless the board waives the fee on determining pursuant to those rules that the applicant cannot afford to pay the fee. Except as provided in division (B) of section 4765.31 of the Revised Code, the application shall include evidence of either of the following: (1) That the applicant received a certificate of completion from the appropriate emergency medical services continuing education program pursuant to section 4765.24 of the Revised Code; (2) That the applicant has successfully passed an examination that demonstrates the competence to have a certificate renewed without completing an emergency medical services continuing education program. The board shall approve such examinations in accordance with rules adopted under section 4765.11 of the Revised Code.

(E) The board shall not require an applicant for renewal of a certificate to practice to take an examination as a condition of renewing the certificate. This division does not preclude the use of examinations by operators of approved emergency medical services continuing education programs as a condition for issuance of a certificate of completion in emergency medical services continuing education.

4765.301 Criminal records check.

(A) An appointing authority may request the superintendent of BCII to conduct a criminal records check with respect to any person who is under consideration for appointment or employment as an emergency medical technician-basic, an emergency medical technician-intermediate, or an emergency medical technician-paramedic.

(B) (1) The appointing authority may request that the superintendent of BCII obtain information from the federal bureau of investigation as a part of the criminal records check requested pursuant to division (A) of this section. (2) An appointing authority authorized by division (A) of this section to request a criminal records check shall provide to each person for whom the appointing authority intends to request a criminal records check a copy of the form prescribed pursuant to division (C)(1) of section 109.578 of the Revised Code and a standard impression sheet to obtain fingerprint impressions prescribed pursuant to division (C)(2) of section 109.578 of the Revised Code, obtain the completed form and impression sheet from the person, and forward the completed form and impression sheet to the superintendent of BCII at the time the criminal records check is requested. (3) Any person subject to a criminal records check who receives a copy of the form and a copy of the impression sheet pursuant to division (B)(2) of this section and who is requested to complete the form and provide a set of fingerprint impressions shall complete the form or provide all the information necessary to complete the form and shall provide the impression sheet with the impressions of the person's fingerprints. If a person fails to provide the information necessary to complete the form or fails to provide impressions of the person's fingerprints, the appointing authority shall not appoint or employ the person as an emergency medical technician-basic, an emergency medical technician-intermediate, or an emergency medical technician-paramedic.

(C) (1) Except as otherwise provided in division (C)(2) of this section, an appointing authority shall not appoint or employ a person as an emergency medical technician-basic, an emergency medical technician-intermediate, or an emergency medical technician-paramedic if the appointing authority has requested a criminal records check pursuant to division (A) of this section and the criminal records check indicates that the person previously has been convicted of or pleaded guilty to any of the following: (a) A felony; (b) A violation of section 2909.03 of the Revised Code; (c) A violation of an existing or former law of this state, any other state, or the United States that is substantially equivalent to any of the offenses described in division (C)(1)(a) or (b) of this section. (2) Notwithstanding division (C)(1) of this section, an appointing authority may appoint or employ a person as an emergency medical technician-basic, an emergency medical technician-intermediate, or an emergency medical technician-paramedic if all of the following apply: (a) The appointing authority has requested a criminal records check pursuant to division (A) of this section. (b) The criminal records check indicates that the person previously has been convicted of or pleaded guilty to any of the offenses described in division (C)(1) of this section. (c) The person meets rehabilitation standards established in rules adopted under division (E) of this section. (3) If an appointing authority requests a criminal records check pursuant to division (A) of this section, the appointing authority may appoint or employ a person as an emergency medical technician-basic, an emergency medical technician-intermediate, or an emergency medical technician-paramedic conditionally until the criminal records check is completed and the appointing authority receives the results. If the results of the criminal records check indicate that, pursuant to division (C)(1) of this section, the person subject to the criminal records check is disqualified from appointment or employment, the appointing authority shall release the person from appointment or employment.

(D) The appointing authority shall pay to the bureau of criminal identification and investigation the fee prescribed pursuant to division (C)(3) of section 109.578 of the Revised Code for each criminal records check conducted in accordance with that section. The appointing authority may charge the applicant who is subject to the criminal records check a fee for the costs the appointing authority incurs in obtaining the criminal records check. A fee charged under this division shall not exceed the amount of fees the appointing authority pays for the criminal records check. If a fee is charged under this division, the appointing authority shall notify the applicant at the time of the applicant's initial application for appointment or employment of the amount of the fee and that, unless the fee is paid, the applicant will not be considered for appointment or employment.

(E) The appointing authority shall adopt rules in accordance with Chapter 119. of the Revised Code to implement this section. The rules shall include rehabilitation standards a person who has been convicted of or pleaded guilty to an offense listed in division (C)(1) of this section must meet for the appointing authority to appoint or employ the person as an emergency medical technician-basic, an emergency medical technician-intermediate, or an emergency medical technician- paramedic.

(F) An appointing authority that intends to request a criminal records check for an applicant shall inform each applicant, at the time of the person's initial application for appointment or employment, that the applicant is required to provide a set of impressions of the person's fingerprints and that the appointing authority requires a criminal records check to be conducted and satisfactorily completed in accordance with section 109.578 of the Revised Code.

(G) As used in this section: (1) "Appointing authority" means any person or body that has the authority to hire, appoint, or employ emergency medical technicians-basic, emergency medical technicians-intermediate, or emergency medical technicians-paramedic. (2) "Criminal records check" has the same meaning as in section 109.578 of the Revised Code. (3) "Superintendent of BCII" has the same meaning as in section 2151.86 of the Revised Code.

Effective Date: 04-09-2003

4765.31 Continuing education - extension or exemption.

(A) Except as provided in division (B) of this section, a first responder, emergency medical technician-basic, emergency medical technician-intermediate, and emergency medical technician-paramedic shall complete an emergency medical services continuing education program or pass an examination approved by the state board of emergency medical services under division (A) of section 4765.10 of the Revised Code prior to the expiration of the individual's certificate to practice. Completion of the continuing education requirements for EMTs-I or paramedics satisfies the continuing education requirements for renewing the certificate to practice as an EMT-basic held by an EMT-I or paramedic.

(B) (1) An applicant for renewal of a certificate to practice may apply to the board, in writing, for an extension to complete the continuing education requirements established under division (A) of this section. The board may grant such an extension and determine the length of the extension. The board may authorize the applicant to continue to practice during the extension as if the certificate to practice had not expired. (2) An applicant for renewal of a certificate to practice may apply to the board, in writing, for an exemption from the continuing education requirements established under division (A) of this section. The board may exempt an individual or a group of individuals from all or any part of the

continuing education requirements due to active military service, unusual circumstance, emergency, special hardship, or any other cause considered reasonable by the board.

(C) Decisions of whether to grant an extension or exemption under division (B) of this section shall be made by the board pursuant to procedures established in rules adopted under section 4765.11 of the Revised Code.

Effective Date: 10-01-1996

4765.32 Certificates issued under prior law.

A current, valid certificate of accreditation issued under the provisions of former section 3303.11 or 3303.23 of the Revised Code shall remain valid until one year after the expiration date of the certificate as determined by the provisions of those sections and shall confer the same privileges and impose the same responsibilities and requirements as a certificate of accreditation issued by the state board of emergency medical services under section 4765.17 of the Revised Code. A certificate to practice as an emergency medical technician-ambulance that is valid on November 24, 1995, shall be considered a certificate to practice as an emergency medical technician-basic. A certificate to practice as an advanced emergency medical technician-ambulance that is valid on November 24, 1995, shall be considered a certificate to practice as an emergency medical technician-intermediate.

Effective Date: 11-03-2000

4765.33 Disciplinary actions.

The state board of emergency medical services may suspend or revoke certificates to practice issued under section 4765.30 of the Revised Code, and may take other disciplinary action against first responders, emergency medical technicians-basic, emergency medical technicians-intermediate, and emergency medical technicians-paramedic pursuant to rules adopted under section 4765.11 of the Revised Code.

Effective Date: 10-01-1996

4765.35 [Effective Until 3/22/2013] Authorized services by first responders.

(A) A first responder shall perform the emergency medical services described in this section in accordance with this chapter and any rules adopted under it.

(B) A first responder may provide limited emergency medical services to patients until the arrival of an emergency medical technician-basic, emergency medical technician-intermediate, or emergency medical technician-paramedic. In an emergency, a first responder may render emergency medical services such as opening and maintaining an airway, giving mouth to barrier ventilation, chest compressions, electrical interventions with automated defibrillators to support or correct the cardiac function and other methods determined by the board, controlling of hemorrhage, manual stabilization of fractures, bandaging, assisting in childbirth, and determining triage of trauma victims.

(C) A first responder may perform any other emergency medical services approved pursuant to rules adopted under section 765.11 of the Revised Code. The board shall determine whether the nature of any such service requires that a first responder receive authorization prior to performing the service.

(D) (1) Except as provided in division (D)(2) of this section, if the board determines under division (C) of this section that a service requires prior authorization, the service shall be performed only pursuant to the written or verbal authorization of a physician or of the cooperating physician advisory board, or pursuant to an authorization transmitted through a direct communication device by a physician or registered nurse designated by a physician. (2) If communications fail during an emergency situation or the required response time prohibits communication, a first responder may perform services subject to this division, if, in the judgment of the first responder, the life of the patient is in immediate danger. Services performed under these circumstances shall be performed in accordance with the written protocols for triage of adult and pediatric trauma victims established in rules adopted under sections 4765.11 and 4765.40 of the Revised Code and any applicable protocols adopted by the emergency medical service organization with which the first responder is affiliated.

Effective Date: 11-03-2000

4765.35 [Effective 3/22/2013] Authorized services by first responders

(A) A first responder shall perform the emergency medical services described in this section in accordance with this chapter and any rules adopted under it.

(B) A first responder may provide limited emergency medical services to patients until the arrival of an emergency medical technician-basic, emergency medical technician-intermediate, or emergency medical technician-paramedic. In an emergency, a first responder may render emergency medical services such as opening and maintaining an airway, giving mouth to barrier ventilation, chest compressions, electrical interventions with automated defibrillators to support or correct the cardiac function and other methods determined by the board, controlling of hemorrhage, manual stabilization of fractures, bandaging, assisting in childbirth, and determining triage of trauma victims.

(C) A first responder may perform any other emergency medical services approved pursuant to rules adopted under section 4765.11 of the Revised Code. The board shall determine whether the nature of any such service requires that a first responder receive authorization prior to performing the service.

(D) (1) Except as provided in division (D)(2) of this section, if the board determines under division (C) of this section that a service requires prior authorization, the service shall be performed only pursuant to the written or verbal authorization of a physician or of the cooperating physician advisory board, or pursuant to an authorization transmitted through a direct communication device by a physician, physician assistant designated by a physician, or registered nurse designated by a physician. (2) If communications fail during an emergency situation or the required response time prohibits communication, a first responder may perform services subject to this division, if, in the judgment of the first responder, the life of the patient is in immediate danger. Services performed under these circumstances shall be performed in accordance with the written protocols for triage of adult and pediatric trauma victims established in rules adopted under sections 4765.11 and 4765.40 of the Revised Code and any applicable protocols adopted by the emergency medical service organization with which the first responder is affiliated.

Amended by 129th General Assembly File No. 161, HB 284, § 1, eff. 3/22/2013. Effective Date: 11-03-2000

4765.36 [Effective Until 3/22/2013] Authorized services in hospital.

In a hospital, an emergency medical technician-basic, emergency medical technician-intermediate, or emergency medical technician-paramedic may perform emergency medical services only under the direction and supervision of a physician or registered nurse designated by a physician and only in the hospital's emergency department or while moving a patient between the emergency department and another part of the hospital.

Effective Date: 11-24-1995

4765.36 [Effective 3/22/2013] Authorized services in hospital

In a hospital, an emergency medical technician-basic, emergency medical technician-intermediate, or emergency medical technician-paramedic may perform emergency medical services if the services are performed in accordance with both of the following conditions:

(A) Only in the hospital's emergency department or while moving a patient between the emergency department and another part of the hospital;

(B) Only under the direction and supervision of one of the following: (1) A physician;

(2) A physician assistant designated by a physician; (3) A registered nurse designated by a physician.

Amended by 129th General Assembly File No. 161, HB 284, § 1, eff. 3/22/2013. Effective Date: 11-24-1995

4765.37 [Effective Until 3/22/2013] Authorized services by EMT-basic.

(A) An emergency medical technician-basic shall perform the emergency medical services described in this section in accordance with this chapter and any rules adopted under it by the state board of emergency medical services.

(B) An emergency medical technician-basic may operate, or be responsible for operation of, an ambulance and may provide emergency medical services to patients. In an emergency, an EMT-basic may determine the nature and extent of illness or injury and establish priority for required emergency medical services. An EMT-basic may render emergency medical services such as opening and maintaining an airway, giving positive pressure ventilation, cardiac resuscitation, electrical interventions with automated defibrillators to support or correct the cardiac function and other methods determined by the board, controlling of hemorrhage, treatment of shock, immobilization of fractures, bandaging, assisting in childbirth, management of mentally disturbed patients, initial care of poison and burn patients, and determining triage of adult and pediatric trauma victims. Where patients must in an emergency be extricated from entrapment, an EMT-basic may assess the extent of injury and render all possible emergency medical services and protection to the entrapped patient; provide light rescue services if an ambulance has not been accompanied by a specialized unit; and after extrication, provide additional care in sorting of the injured in accordance with standard emergency procedures.

(C) An EMT-basic may perform any other emergency medical services approved pursuant to rules adopted under section 4765.11 of the Revised Code. The board shall determine whether the nature of any such service requires that an EMT-basic receive authorization prior to performing the service.

(D) (1) Except as provided in division (D)(2) of this section, if the board determines under division (C) of this section that a service requires prior authorization, the service shall be performed only pursuant to the written or verbal authorization of a physician or of the cooperating physician advisory board, or pursuant to an authorization transmitted through a direct communication device by a physician or registered nurse designated by a physician. (2) If communications fail during an emergency situation or the required response time prohibits communication, an EMT- basic may perform services subject to this division, if, in the judgment of the EMT-basic, the life of the patient is in immediate danger. Services performed under these circumstances shall be performed in accordance with the protocols for triage of adult and pediatric trauma victims established in rules adopted under sections 4765.11 and 4765.40 of the Revised Code and any applicable protocols adopted by the emergency medical service organization with which the EMT-basic is affiliated.

Effective Date: 11-03-2000

4765.37 [Effective 3/22/2013] Authorized services by EMT-basic

(A) An emergency medical technician-basic shall perform the emergency medical services described in this section in accordance with this chapter and any rules adopted under it by the state board of emergency medical services.

(B) An emergency medical technician-basic may operate, or be responsible for operation of, an ambulance and may provide emergency medical services to patients. In an emergency, an EMT-basic may determine the nature and extent of illness or injury and establish priority for required emergency medical services. An EMT-basic may render emergency medical services such as opening and maintaining an airway, giving positive pressure ventilation, cardiac resuscitation, electrical interventions with automated defibrillators to support or correct the cardiac function and other methods determined by the board, controlling of hemorrhage, treatment of shock, immobilization of fractures, bandaging, assisting in childbirth, management of mentally disturbed patients, initial care of poison and burn patients, and determining triage of adult and pediatric trauma victims. Where patients must in an emergency be extricated from entrapment, an EMT-basic may assess the extent of injury and render all possible emergency medical services and protection to the entrapped patient; provide light rescue services if an ambulance has not been accompanied by a specialized unit; and after extrication, provide additional care in sorting of the injured in accordance with standard emergency procedures.

(C) An EMT-basic may perform any other emergency medical services approved pursuant to rules adopted under section 4765.11 of the Revised Code. The board shall determine whether the nature of any such service requires that an EMT-basic receive authorization prior to performing the service.

(D) (1) Except as provided in division (D)(2) of this section, if the board determines under division (C) of this section that a service requires prior authorization, the service shall be performed only pursuant to the written or verbal authorization of a physician or of the cooperating physician advisory board, or pursuant to an authorization transmitted through a direct communication device by a physician, physician assistant designated by a physician, or registered nurse designated by a physician.

(2) If communications fail during an emergency situation or the required response time prohibits communication, an EMT- basic may perform services subject to this division, if, in the judgment of the EMT-basic, the life of the patient is in immediate danger. Services performed under these circumstances shall be performed in accordance with the protocols for triage of adult and pediatric trauma victims established in rules adopted under sections 4765.11 and 4765.40 of the Revised Code and any applicable protocols adopted by the emergency medical service organization with which the EMT-basic is affiliated.

Amended by 129th General Assembly File No. 161, HB 284, § 1, eff. 3/22/2013. Effective Date: 11-03-2000

4765.38 [Effective Until 3/22/2013] Authorized services by EMT-intermediate.

(A) An emergency medical technician-intermediate shall perform the emergency medical services described in this section in accordance with this chapter and any rules adopted under it.

(B) An EMT-I may do any of the following: (1) Establish and maintain an intravenous lifeline that has been approved by a cooperating physician or physician advisory board; (2) Perform cardiac monitoring; (3) Perform electrical interventions to support or correct the cardiac function; (4) Administer epinephrine; (5) Determine triage of adult and pediatric trauma victims; (6) Perform any other emergency medical services approved pursuant to rules adopted under section 4765.11 of the Revised Code.

(C) (1) Except as provided in division (C)(2) of this section, the services described in division (B) of this section shall be performed by an EMT-I only pursuant to the written or verbal authorization of a physician or of the cooperating physician advisory board, or pursuant to an authorization transmitted through a direct communication device by a physician or registered nurse designated by a physician. (2) If communications fail during an emergency situation or the required response time prohibits communication, an EMT-I may perform any of the services described in division (B) of this section, if, in the judgment of the EMT-I, the life of the patient is in immediate danger. Services performed under these circumstances shall be performed in accordance with the protocols for triage of adult and pediatric trauma victims established in rules adopted under sections 4765.11 and 4765.40 of the Revised Code and any applicable protocols adopted by the emergency medical service organization with which the EMT-I is affiliated.

(D) In addition to, and in the course of, providing emergency medical treatment, an emergency medical technician- intermediate may withdraw blood as provided under sections 1547.11, 4506.17, and 4511.19 of the Revised Code. An emergency medical technician-intermediate shall withdraw blood in accordance with this chapter and any rules adopted under it by the state board of emergency medical services.

Amended by 128th General Assembly File No. 50, SB 58, § 1, eff. 9/17/2010. Effective Date: 11-03-2000
4765.38 [Effective 3/22/2013] Authorized services by EMT-intermediate

(A) An emergency medical technician-intermediate shall perform the emergency medical services described in this section in accordance with this chapter and any rules adopted under it.

(B) An EMT-I may do any of the following: (1) Establish and maintain an intravenous lifeline that has been approved by a cooperating physician or physician advisory board; (2) Perform cardiac monitoring; (3) Perform electrical interventions to support or correct the cardiac function; (4) Administer epinephrine; (5) Determine triage of adult and pediatric trauma victims; (6) Perform any other emergency medical services approved pursuant to rules adopted under section 4765.11 of the Revised Code.

(C) (1) Except as provided in division (C)(2) of this section, the services described in division (B) of this section shall be performed by an EMT-I only pursuant to the written or verbal authorization of a physician or of the cooperating physician advisory board, or pursuant to an authorization transmitted through a direct communication device by a physician, physician assistant designated by a physician, or registered nurse designated by a physician. (2) If communications fail during an emergency situation or the required response time prohibits communication, an EMT-I may perform any of the services described in division (B) of this section, if, in the judgment of the EMT-I, the life of the patient is in immediate danger. Services performed under these circumstances shall be performed in accordance with the protocols for triage of adult and pediatric trauma victims established in rules adopted under sections 4765.11 and 4765.40 of the Revised Code and any applicable protocols adopted by the emergency medical service organization with which the EMT-I is affiliated.

(D) In addition to, and in the course of, providing emergency medical treatment, an emergency medical technician- intermediate may withdraw blood as provided under sections 1547.11, 4506.17, and 4511.19 of the Revised Code. An emergency medical technician-intermediate shall withdraw blood in accordance with this chapter and any rules adopted under it by the state board of emergency medical services.

Amended by 129th General Assembly File No. 161, HB 284, § 1, eff. 3/22/2013. Amended by 128th General Assembly File No. 50, SB 58, § 1, eff. 9/17/2010. Effective Date: 11-03-2000
4765.39 [Effective Until 3/22/2013] Authorized services by emergency medical technician-paramedic.

(A) An emergency medical technician-paramedic shall perform the emergency medical services described in this section in accordance with this chapter and any rules adopted under it.

(B) A paramedic may do any of the following: (1) Perform cardiac monitoring; (2) Perform electrical interventions to support or correct the cardiac function; (3) Perform airway procedures; (4) Perform relief of pneumothorax; (5) Administer appropriate drugs and intravenous fluids; (6) Determine triage of adult and pediatric trauma victims; (7) Perform any other emergency medical services, including life support or intensive care techniques, approved pursuant to rules adopted under section 4765.11 of the Revised Code.

(C) (1) Except as provided in division (C)(2) of this section, the services described in division (B) of this section shall be performed by a paramedic only pursuant to the written or verbal authorization of a physician or of the cooperating physician advisory board, or pursuant to an authorization transmitted through a direct communication device by a physician or registered nurse designated by a physician. (2) If communications fail during an emergency situation or the required response time prohibits communication, a paramedic may perform any of the services described in division (B) of this section, if, in the paramedic's judgment, the life of the patient is in immediate danger. Services performed under these circumstances shall be performed in accordance with the protocols for triage of adult and

pediatric trauma victims established in rules adopted under sections 4765.11 and 4765.40 of the Revised Code and any applicable protocols adopted by the emergency medical service organization with which the paramedic is affiliated.

(D) In addition to, and in the course of, providing emergency medical treatment, emergency medical technician-paramedic may withdraw blood as provided under sections 1547.11, 4506.17, and 4511.19 of the Revised Code. An emergency medical technician-paramedic shall withdraw blood in accordance with this chapter and any rules adopted under it by the state board of emergency medical services.

Amended by 128th General Assembly File No. 50, SB 58, § 1, eff. 9/17/2010. Effective Date: 11-03-2000
4765.39 [Effective 3/22/2013] Authorized services by emergency medical technician-paramedic

(A) An emergency medical technician-paramedic shall perform the emergency medical services described in this section in accordance with this chapter and any rules adopted under it.

(B) A paramedic may do any of the following: (1) Perform cardiac monitoring; (2) Perform electrical interventions to support or correct the cardiac function; (3) Perform airway procedures; (4) Perform relief of pneumothorax; (5) Administer appropriate drugs and intravenous fluids; (6) Determine triage of adult and pediatric trauma victims; (7) Perform any other emergency medical services, including life support or intensive care techniques, approved pursuant to rules adopted under section 4765.11 of the Revised Code.

(C) (1) Except as provided in division (C)(2) of this section, the services described in division (B) of this section shall be performed by a paramedic only pursuant to the written or verbal authorization of a physician or of the cooperating physician advisory board, or pursuant to an authorization transmitted through a direct communication device by a physician, physician assistant designated by a physician, or registered nurse designated by a physician. (2) If communications fail during an emergency situation or the required response time prohibits communication, a paramedic may perform any of the services described in division (B) of this section, if, in the paramedic's judgment, the life of the patient is in immediate danger. Services performed under these circumstances shall be performed in accordance with the protocols for triage of adult and pediatric trauma victims established in rules adopted under sections 4765.11 and 4765.40 of the Revised Code and any applicable protocols adopted by the emergency medical service organization with which the paramedic is affiliated.

(D) In addition to, and in the course of, providing emergency medical treatment, an emergency medical technician-paramedic may withdraw blood as provided under sections 1547.11, 4506.17, and 4511.19 of the Revised Code. An emergency medical technician-paramedic shall withdraw blood in accordance with this chapter and any rules adopted under it by the state board of emergency medical services.

Amended by 129th General Assembly File No. 161, HB 284, § 1, eff. 3/22/2013. Amended by 128th General Assembly File No. 50, SB 58, § 1, eff. 9/17/2010. Effective Date: 11-03-2000
4765.391 Administration of immunizations for influenza to firefighters or emts.

(A) The medical director or cooperating physician advisory board of each emergency medical service organization may authorize one or more emergency medical technicians-paramedic within the organization to administer immunizations for influenza to either of the following: (1) A full-time paid firefighter, part-time paid firefighter, or volunteer firefighter; (2) An emergency medical technician-basic, emergency medical technician-intermediate, or paramedic.

(B) The medical director or cooperating physician advisory board of each emergency medical service organization shall establish written protocols and training necessary for a paramedic to administer an immunization for influenza under this section. A paramedic administering an immunization under this section shall do so in accordance with the protocols and training.

(C) For each immunization administered under this section, the paramedic administering the immunization shall, not later than thirty days after the immunization is administered, do either of the following: (1) Provide notice of the immunization administration to the board of health of the city or general health district in which the individual receiving the immunization resides or, if there is no board of health for that district, the authority having the duties of a board of health under section 3709.05 of the Revised Code; (2) Submit the immunization administration information to the state immunization registry maintained by the department of health.

Added by 129th General Assembly File No. 104, HB 244, § 1, eff. 8/15/2012.

4765.40 Written protocols for triage of adult and pediatric trauma victims.

(A) (1) Not later than two years after the effective date of this amendment, the state board of emergency medical services shall adopt rules under section 4765.11 of the Revised Code establishing written protocols for the triage of adult and pediatric trauma victims. The rules shall define adult and pediatric trauma in a manner that is consistent with section 4765.01 of the Revised Code, minimizes overtriage and undertriage, and emphasizes the special needs of pediatric and geriatric trauma patients. (2) The state triage protocols adopted under division (A) of this section shall require a trauma victim to be transported directly to an adult or pediatric trauma center that is qualified to provide appropriate adult or pediatric trauma care, unless one or more of the following exceptions applies: (a) It is medically necessary to transport the victim to another hospital for initial assessment and stabilization before transfer to an adult or pediatric trauma center; (b) It is unsafe or medically inappropriate to transport the victim directly to an adult or pediatric trauma center due to adverse weather or ground conditions or excessive transport time; (c) Transporting the victim to an adult or pediatric trauma center would cause a shortage of local emergency medical service resources; (d) No appropriate adult or pediatric trauma center is able to receive and provide adult or pediatric trauma care to the trauma victim without undue delay; (e) Before transport of a patient begins, the patient requests to be taken to a particular hospital that is not a trauma center or, if the patient is less than eighteen years of age or is not able to communicate, such a request is made by an adult member of the patient's family or a legal representative of the patient. (3) (a) The state triage protocols adopted under division (A) of this section shall require trauma patients to be transported to an adult or pediatric trauma center that is able to provide appropriate adult or pediatric trauma care, but shall not require a trauma patient to be transported to a particular trauma center. The state triage protocols shall establish one or more procedures for evaluating whether an injury victim requires or would benefit from adult or pediatric trauma care, which procedures shall be applied by emergency medical service personnel based on the patient's medical needs. In developing state trauma triage protocols, the board shall consider relevant model triage rules and shall consult with the commission on minority health, regional directors, regional physician advisory boards, and appropriate medical, hospital, and emergency medical service organizations. (b) Before the joint committee on agency rule review considers state triage protocols for trauma victims proposed by the state board of emergency medical services, or amendments thereto, the board shall send a copy of the proposal to the Ohio chapter of the American college of emergency physicians, the Ohio chapter of the American college of surgeons, the Ohio chapter of the American

academy of pediatrics, OHA: the association for hospitals and health systems, the Ohio osteopathic association, and the association of Ohio children's hospitals and shall hold a public hearing at which it must consider the appropriateness of the protocols to minimize overtriage and undertriage of trauma victims. (c) The board shall provide copies of the state triage protocols, and amendments to the protocols, to each emergency medical service organization, regional director, regional physician advisory board, certified emergency medical service instructor, and person who regularly provides medical direction to emergency medical service personnel in the state; to each medical service organization in other jurisdictions that regularly provide emergency medical services in this state; and to others upon request.

(B) (1) The state board of emergency medical services shall approve regional protocols for the triage of adult and pediatric trauma victims, and amendments to such protocols, that are submitted to the board as provided in division (B)(2) of this section and provide a level of adult and pediatric trauma care comparable to the state triage protocols adopted under division (A) of this section. The board shall not otherwise approve regional triage protocols for trauma victims. The board shall not approve regional triage protocols for regions that overlap and shall resolve any such disputes by apportioning the overlapping territory among appropriate regions in a manner that best serves the medical needs of the residents of that territory. The trauma committee of the board shall have reasonable opportunity to review and comment on regional triage protocols and amendments to such protocols before the board approves or disapproves them. (2) Regional protocols for the triage of adult and pediatric trauma victims, and amendments to such protocols, shall be submitted in writing to the state board of emergency medical services by the regional physician advisory board or regional director, as appropriate, that serves a majority of the population in the region in which the protocols apply. Prior to submitting regional triage protocols, or an amendment to such protocols, to the state board of emergency medical services, a regional physician advisory board or regional director shall consult with each of the following that regularly serves the region in which the protocols apply: (a) Other regional physician advisory boards and regional directors; (b) Hospitals that operate an emergency facility; (c) Adult and pediatric trauma centers; (d) Professional societies of physicians who specialize in adult or pediatric emergency medicine or adult or pediatric trauma surgery; (e) Professional societies of nurses who specialize in adult or pediatric emergency nursing or adult or pediatric trauma surgery; (f) Professional associations or labor organizations of emergency medical service personnel; (g) Emergency medical service organizations and medical directors of such organizations; (h) Certified emergency medical service instructors. (3) Regional protocols for the triage of adult and pediatric trauma victims approved under division (B)(2) of this section shall require patients to be transported to a trauma center that is able to provide an appropriate level of adult or pediatric trauma care; shall not discriminate among trauma centers for reasons not related to a patient's medical needs; shall seek to minimize undertriage and overtriage; may include any of the exceptions in division (A)(2) of this section; and supersede the state triage protocols adopted under division (A) of this section in the region in which the regional protocols apply. (4) Upon approval of regional protocols for the triage of adult and pediatric trauma victims under division (B)(2) of this section, or an amendment to such protocols, the state board of emergency medical services shall provide written notice of the approval and a copy of the protocols or amendment to each entity in the region in which the protocols apply to which the board is required to send a copy of the state triage protocols adopted under division (A) of this section.

(C) (1) The state board of emergency medical services shall review the state triage protocols adopted under division (A) of this section at least every three years to determine if they are causing overtriage or undertriage of trauma patients, and shall modify them as necessary to minimize overtriage and undertriage. (2) Each regional physician advisory board or regional director that has had regional triage

protocols approved under division (B)(2) of this section shall review the protocols at least every three years to determine if they are causing overtriage or undertriage of trauma patients and shall submit an appropriate amendment to the state board, as provided in division (B) of this section, as necessary to minimize overtriage and undertriage. The state board shall approve the amendment if it will reduce overtriage or undertriage while complying with division (B) of this section, and shall not otherwise approve the amendment.

(D) No provider of emergency medical services or person who provides medical direction to emergency medical service personnel in this state shall fail to comply with the state triage protocols adopted under division (A) of this section or applicable regional triage protocols approved under division (B)(2) of this section.

(E) The state board of emergency medical services shall adopt rules under section 4765.11 of the Revised Code that provide for enforcement of the state triage protocols adopted under division (A) of this section and regional triage protocols approved under division (B)(2) of this section, and for education regarding those protocols for emergency medical service organizations and personnel, regional directors and regional physician advisory boards, emergency medical service instructors, and persons who regularly provide medical direction to emergency medical service personnel in this state.

Effective Date: 11-03-2000

4765.41 Local written protocols.

The medical director or cooperating physician advisory board of each emergency medical service organization shall establish written protocols to be followed by first responders, emergency medical technicians-basic, emergency medical technicians- intermediate, and emergency medical technicians-paramedic in performing emergency medical services when communications have failed or the required response prevents communication and the life of the patient is in immediate danger. Those protocols shall be consistent with applicable trauma triage protocols adopted under division (A) or approved under division (B)(2) of section 4765.40 of the Revised Code, but may direct to an adult or pediatric trauma center emergency victims that the applicable trauma triage protocols do not require to be transported to an adult or pediatric trauma center.

Effective Date: 11-03-2000

4765.42 Names of medical director or members of cooperating physician advisory board.

Each emergency medical service organization shall give notice of the name of its medical director or the names of the members of its cooperating physician advisory board to the state board of emergency medical services. The notice shall be made in writing.

Effective Date: 11-12-1992

4765.43 Ambulance staffing.

(A) During each emergency run made by an ambulance that is equipped for emergency medical services, the emergency medical service organization operating the ambulance shall staff the ambulance in accordance with this section. For purposes of determining the applicable staffing requirements, both of the following apply: (1) An emergency run consists of components that are distinguished between the period during which the ambulance is traveling to the scene of an emergency and, if applicable, the period during which the ambulance is transporting a patient from the scene of the emergency. (2) In the case of an emergency medical service organization that utilizes a combination of volunteer and paid first responders, emergency medical service technicians-basic, emergency medical service technicians-intermediate, or emergency medical service technicians-paramedic, the organization is considered to be substantially utilizing volunteers in a particular week when the paid individuals, taken as a whole, are scheduled for a total of not more than one hundred ninety-two hours in that week.

(B) With respect to the driver of an ambulance during an emergency run, both of the following apply: (1) The driver must be at least eighteen years of age and hold a valid driver's license. (2) The driver must meet at least one of the following criteria: (a) Hold a valid certificate issued under section 4765.30 of the Revised Code to practice as a medical first responder, EMT, advanced EMT, or paramedic; (b) Hold a valid fire training certificate issued pursuant to section 4765.55 of the Revised Code to provide services as a firefighter; (c) Be employed and in good standing as a sworn sheriff, deputy sheriff, constable, police officer, marshal, deputy marshal, or highway patrol trooper in this state; (d) Have successfully completed either the emergency vehicle operations course approved by the national highway traffic safety administration or an equivalent course approved by the state board of emergency medical services.

(C) With respect to the component of an emergency run during which the ambulance is traveling to the scene of the emergency, the ambulance shall be staffed by at least one EMT, advanced EMT, or paramedic. This individual may serve as the driver.

(D) With respect to the component of an emergency run during which a patient is being transported, the ambulance shall be staffed as follows: (1) If the emergency medical service organization utilizes only paid individuals or utilizes volunteers on a basis that is not considered to be substantially utilizing volunteers, the ambulance shall be staffed by at least two EMTs, advanced EMTs, or paramedics. One of these individuals may serve as the driver. (2) If the emergency medical service organization is substantially utilizing volunteers or utilizes only volunteers, the ambulance shall be staffed by at least two EMTs, advanced EMTs, or paramedics or by at least one first responder and one EMT, advanced EMT, or paramedic. One of these individuals may serve as the driver, but if the staffing requirement is being met by utilizing a medical first responder, the medical first responder shall serve as the driver.

Amended by 129th General Assembly File No. 95, SB 243, § 1, eff. 7/3/2012. Amended by 129th General Assembly File No. 27, HB 128, § 1, eff. 9/23/2011. Effective Date: 11-24-1995; 2008 SB129 12-30-2008 4765.431 [Repealed].

4765.48 Prosecutions - injunctions.

The attorney general, the prosecuting attorney of the county, or the city director of law shall, upon complaint of the state board of emergency medical services, prosecute to termination or bring an action for injunction against any person violating this chapter or the rules adopted under it. The common pleas court in which an action for injunction is filed has the jurisdiction to grant injunctive relief upon a showing that the respondent named in the complaint is in violation of this chapter or the rules adopted under it.

Effective Date: 11-12-1992

4765.49 [Effective Until 3/22/2013] Emergency medical personnel and agencies - immunity.

(A) A first responder, emergency medical technician-basic, emergency medical technician-intermediate, or emergency medical technician-paramedic is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the individual's administration of emergency medical services, unless the services are administered in a manner that constitutes willful or wanton misconduct. A physician or registered nurse designated by a physician, who is advising or assisting in the emergency medical services by means of any communication device or telemetering system, is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the individual's advisory communication or assistance, unless the advisory communication or assistance is provided in a manner that constitutes willful or wanton misconduct. Medical directors and members of cooperating physician advisory boards of emergency medical service organizations are not liable in damages in a civil action for injury, death, or loss to person or property resulting from their acts or omissions in the performance of their duties, unless the act or omission constitutes willful or wanton misconduct.

(B) A political subdivision, joint ambulance district, joint emergency medical services district, or other public agency, and any officer or employee of a public agency or of a private organization operating under contract or in joint agreement with one or more political subdivisions, that provides emergency medical services, or that enters into a joint agreement or a contract with the state, any political subdivision, joint ambulance district, or joint emergency medical services district for the provision of emergency medical services, is not liable in damages in a civil action for injury, death, or loss to person or property arising out of any actions taken by a first responder, EMT-basic, EMT-I, or paramedic working under the officer's or employee's jurisdiction, or for injury, death, or loss to person or property arising out of any actions of licensed medical personnel advising or assisting the first responder, EMT-basic, EMT-I, or paramedic, unless the services are provided in a manner that constitutes willful or wanton misconduct.

(C) A student who is enrolled in an emergency medical services training program accredited under section 4765.17 of the Revised Code or an emergency medical services continuing education program approved under that section is not liable in damages in a civil action for injury, death, or loss to person or property resulting from either of the following: (1) The student's administration of emergency medical services or patient care or treatment, if the services, care, or treatment is administered while the student is under the direct supervision and in the immediate presence of an EMT-basic, EMT-I, paramedic, registered nurse, or physician and while the student is receiving clinical training that is required by the program, unless the services, care, or treatment is provided in a manner that constitutes

willful or wanton misconduct; (2) The student's training as an ambulance driver, unless the driving is done in a manner that constitutes willful or wanton misconduct.

(D) An EMT-basic, EMT-I, paramedic, or other operator, who holds a valid commercial driver's license issued pursuant to Chapter 4506. of the Revised Code or driver's license issued pursuant to Chapter 4507. of the Revised Code and who is employed by an emergency medical service organization that is not owned or operated by a political subdivision as defined in section 2744.01 of the Revised Code, is not liable in damages in a civil action for injury, death, or loss to person or property that is caused by the operation of an ambulance by the EMT-basic, EMT-I, paramedic, or other operator while responding to or completing a call for emergency medical services, unless the operation constitutes willful or wanton misconduct or does not comply with the precautions of section 4511.03 of the Revised Code. An emergency medical service organization is not liable in damages in a civil action for any injury, death, or loss to person or property that is caused by the operation of an ambulance by its employee or agent, if this division grants the employee or agent immunity from civil liability for the injury, death, or loss.

(E) An employee or agent of an emergency medical service organization who receives requests for emergency medical services that are directed to the organization, dispatches first responders, EMTs-basic, EMTs-I, or paramedics in response to those requests, communicates those requests to those employees or agents of the organization who are authorized to dispatch first responders, EMTs-basic, EMTs-I, or paramedics, or performs any combination of these functions for the organization, is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the individual's acts or omissions in the performance of those duties for the organization, unless an act or omission constitutes willful or wanton misconduct.

(F) A person who is performing the functions of a first responder, EMT-basic, EMT-I, or paramedic under the authority of the laws of a state that borders this state and who provides emergency medical services to or transportation of a patient in this state is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the person's administration of emergency medical services, unless the services are administered in a manner that constitutes willful or wanton misconduct. A physician or registered nurse designated by a physician, who is licensed to practice in the adjoining state and who is advising or assisting in the emergency medical services by means of any communication device or telemetering system is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the person's advisory communication or assistance, unless the advisory communication or assistance is provided in a manner that constitutes willful or wanton misconduct.

(G) A person certified under section 4765.23 of the Revised Code to teach in an emergency medical services training program or emergency medical services continuing education program, and a person who teaches at the Ohio fire academy established under section 3737.33 of the Revised Code or in a fire service training program described in division (A) of section 4765.55 of the Revised Code, is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the person's acts or omissions in the performance of the person's duties, unless an act or omission constitutes willful or wanton misconduct.

(H) In the accreditation of emergency medical services training programs or approval of emergency medical services continuing education programs, the state board of emergency medical services and any person or entity authorized by the board to evaluate applications for accreditation or approval are not liable in damages in a civil action for injury, death, or loss to person or property resulting from their

acts or omissions in the performance of their duties, unless an act or omission constitutes willful or wanton misconduct.

(I) A person authorized by an emergency medical service organization to review the performance of first responders, EMTs- basic, EMTs-I, and paramedics or to administer quality assurance programs is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the person's acts or omissions in the performance of the person's duties, unless an act or omission constitutes willful or wanton misconduct.

Effective Date: 03-19-2003; 04-05-2007

4765.49 [Effective 3/22/2013] Emergency medical personnel and agencies – immunity

(A) A first responder, emergency medical technician-basic, emergency medical technician-intermediate, or emergency medical technician-paramedic is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the individual's administration of emergency medical services, unless the services are administered in a manner that constitutes willful or wanton misconduct. A physician, physician assistant designated by a physician, or registered nurse designated by a physician, any of whom is advising or assisting in the emergency medical services by means of any communication device or telemetering system, is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the individual's advisory communication or assistance, unless the advisory communication or assistance is provided in a manner that constitutes willful or wanton misconduct. Medical directors and members of cooperating physician advisory boards of emergency medical service organizations are not liable in damages in a civil action for injury, death, or loss to person or property resulting from their acts or omissions in the performance of their duties, unless the act or omission constitutes willful or wanton misconduct.

(B) A political subdivision, joint ambulance district, joint emergency medical services district, or other public agency, and any officer or employee of a public agency or of a private organization operating under contract or in joint agreement with one or more political subdivisions, that provides emergency medical services, or that enters into a joint agreement or a contract with the state, any political subdivision, joint ambulance district, or joint emergency medical services district for the provision of emergency medical services, is not liable in damages in a civil action for injury, death, or loss to person or property arising out of any actions taken by a first responder, EMT-basic, EMT-I, or paramedic working under the officer's or employee's jurisdiction, or for injury, death, or loss to person or property arising out of any actions of licensed medical personnel advising or assisting the first responder, EMT-basic, EMT-I, or paramedic, unless the services are provided in a manner that constitutes willful or wanton misconduct.

(C) A student who is enrolled in an emergency medical services training program accredited under section 4765.17 of the Revised Code or an emergency medical services continuing education program approved under that section is not liable in damages in a civil action for injury, death, or loss to person or property resulting from either of the following: (1) The student's administration of emergency medical services or patient care or treatment, if the services, care, or treatment is administered while the student is under the direct supervision and in the immediate presence of an EMT-basic, EMT-I, paramedic, registered nurse, physician assistant, or physician and while the student is receiving clinical training that is required by the program, unless the services, care, or treatment is provided in a manner

that constitutes willful or wanton misconduct; (2) The student's training as an ambulance driver, unless the driving is done in a manner that constitutes willful or wanton misconduct.

(D) An EMT-basic, EMT-I, paramedic, or other operator, who holds a valid commercial driver's license issued pursuant to Chapter 4506. of the Revised Code or driver's license issued pursuant to Chapter 4507. of the Revised Code and who is employed by an emergency medical service organization that is not owned or operated by a political subdivision as defined in section 2744.01 of the Revised Code, is not liable in damages in a civil action for injury, death, or loss to person or property that is caused by the operation of an ambulance by the EMT-basic, EMT-I, paramedic, or other operator while responding to or completing a call for emergency medical services, unless the operation constitutes willful or wanton misconduct or does not comply with the precautions of section 4511.03 of the Revised Code. An emergency medical service organization is not liable in damages in a civil action for any injury, death, or loss to person or property that is caused by the operation of an ambulance by its employee or agent, if this division grants the employee or agent immunity from civil liability for the injury, death, or loss.

(E) An employee or agent of an emergency medical service organization who receives requests for emergency medical services that are directed to the organization, dispatches first responders, EMTs-basic, EMTs-I, or paramedics in response to those requests, communicates those requests to those employees or agents of the organization who are authorized to dispatch first responders, EMTs-basic, EMTs-I, or paramedics, or performs any combination of these functions for the organization, is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the individual's acts or omissions in the performance of those duties for the organization, unless an act or omission constitutes willful or wanton misconduct.

(F) A person who is performing the functions of a first responder, EMT-basic, EMT-I, or paramedic under the authority of the laws of a state that borders this state and who provides emergency medical services to or transportation of a patient in this state is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the person's administration of emergency medical services, unless the services are administered in a manner that constitutes willful or wanton misconduct. A physician, physician assistant designated by a physician, or registered nurse designated by a physician, any of whom is licensed to practice in the adjoining state and who is advising or assisting in the emergency medical services by means of any communication device or telemetering system, is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the person's advisory communication or assistance, unless the advisory communication or assistance is provided in a manner that constitutes willful or wanton misconduct.

(G) A person certified under section 4765.23 of the Revised Code to teach in an emergency medical services training program or emergency medical services continuing education program, and a person who teaches at the Ohio fire academy established under section 3737.33 of the Revised Code or in a fire service training program described in division (A) of section 4765.55 of the Revised Code, is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the person's acts or omissions in the performance of the person's duties, unless an act or omission constitutes willful or wanton misconduct.

(H) In the accreditation of emergency medical services training programs or approval of emergency medical services continuing education programs, the state board of emergency medical services and any person or entity authorized by the board to evaluate applications for accreditation or approval are not liable in damages in a civil action for injury, death, or loss to person or property resulting from their acts

or omissions in the performance of their duties, unless an act or omission constitutes willful or wanton misconduct.

(I) A person authorized by an emergency medical service organization to review the performance of first responders, EMTs- basic, EMTs-I, and paramedics or to administer quality assurance programs is not liable in damages in a civil action for injury, death, or loss to person or property resulting from the person's acts or omissions in the performance of the person's duties, unless an act or omission constitutes willful or wanton misconduct.

Amended by 129th General Assembly File No. 161, HB 284, § 1, eff. 3/22/2013. Effective Date: 03-19-2003; 04-05-2007

4765.50 Unauthorized practice.

(A) Except as provided in division (D) of this section, no person shall represent that the person is a first responder, an emergency medical technician-basic or EMT-basic, an emergency medical technician-intermediate or EMT-I, or an emergency medical technician-paramedic or paramedic unless appropriately certified under section 4765.30 of the Revised Code.

(B) (1) No person shall operate an emergency medical services training program without a certificate of accreditation issued under section 4765.17 of the Revised Code. (2) No person shall operate an emergency medical services continuing education program without a certificate of approval issued under section 4765.17 of the Revised Code.

(C) No public or private entity shall advertise or disseminate information leading the public to believe that the entity is an emergency medical service organization, unless that entity actually provides emergency medical services.

(D) A person who is performing the functions of a first responder, EMT-basic, EMT-I, or paramedic under the authority of the laws of a jurisdiction other than this state, who is employed by or serves as a volunteer with an emergency medical service organization based in that state, and provides emergency medical services to or transportation of a patient in this state is not in violation of division (A) of this section. A person who is performing the functions of a first responder, EMT- basic, EMT-I, or paramedic under a reciprocal agreement authorized by section 4765.10 of the Revised Code is not in violation of division (A) of this section.

(E) On and after November 3, 2002, no physician shall purposefully do any of the following: (1) Admit an adult trauma patient to a hospital that is not an adult trauma center for the purpose of providing adult trauma care; (2) Admit a pediatric trauma patient to a hospital that is not a pediatric trauma center for the purpose of providing pediatric trauma care; (3) Fail to transfer an adult or pediatric trauma patient to an adult or pediatric trauma center in accordance with applicable federal law, state law, and adult or pediatric trauma protocols and patient transfer agreements adopted under section 3727.09 of the Revised Code.

Effective Date: 09-17-2002

4765.51 [Effective Until 3/22/2013] Registered nurses.

Nothing in this chapter prevents or restricts the practice, services, or activities of any registered nurse practicing within the scope of his practice.

Effective Date: 11-12-1992

4765.51 [Effective 3/22/2013] Registered nurses and physician assistants

Nothing in this chapter prevents or restricts the practice, services, or activities of any registered nurse practicing within the scope of the registered nurse's practice.

Nothing in this chapter prevents or restricts the practice, services, or activities of any physician assistant practicing in accordance with a physician supervisory plan approved under section 4730.17 of the Revised Code or the policies of the health care facility in which the physician assistant is practicing.

Amended by 129th General Assembly File No. 161, HB 284, § 1, eff. 3/22/2013. Effective Date: 11-12-1992

4765.55 Fire service training programs.

(A) The executive director of the state board of emergency medical services, with the advice and counsel of the firefighter and fire safety inspector training committee of the state board of emergency medical services, shall assist in the establishment and maintenance by any state agency, or any county, township, city, village, school district, or educational service center of a fire service training program for the training of all persons in positions of any fire training certification level approved by the executive director, including full-time paid firefighters, part-time paid firefighters, volunteer firefighters and, fire safety inspectors in this state. The executive director, with the advice and counsel of the committee, shall adopt rules to regulate those firefighter and fire safety inspector training programs, and other training programs approved by the executive director. The rules may include, but need not be limited to, training curriculum, certification examinations, training schedules, minimum hours of instruction, attendance requirements, required equipment and facilities, basic physical requirements, and methods of training for all persons in positions of any fire training certification level approved by the executive director, including full-time paid firefighters, part-time paid firefighters, volunteer firefighters, and fire safety inspectors. The rules adopted to regulate training programs for volunteer firefighters shall not require more than thirty-six hours of training. The executive director, with the advice and counsel of the committee, shall provide for the classification and chartering of fire service training programs in accordance with rules adopted under division (B) of this section, and may take action against any chartered training program or applicant, in accordance with rules adopted under divisions (B)(4) and (5) of this section, for failure to meet standards set by the adopted rules.

(B) The executive director, with the advice and counsel of the firefighter and fire safety inspector training committee of the state board of emergency medical services, shall adopt, and may amend or rescind, rules under Chapter 119. of the Revised Code that establish all of the following: (1) Requirements for, and procedures for chartering, the training programs regulated by this section; (2) Requirements for, and requirements and procedures for obtaining and renewing, an instructor certificate to teach the training programs and continuing education classes regulated by this section; (3) Requirements for, and requirements and procedures for obtaining and renewing, any of the fire training certificates regulated by this section; (4) Grounds and procedures for suspending, revoking, restricting, or refusing to issue or renew any of the certificates or charters regulated by this section, which grounds shall be limited to one of the following: (a) Failure to satisfy the education or training

requirements of this section; (b) Conviction of a felony offense; (c) Conviction of a misdemeanor involving moral turpitude; (d) Conviction of a misdemeanor committed in the course of practice; (e) In the case of a chartered training program or applicant, failure to meet standards set by the rules adopted under this division. (5) Grounds and procedures for imposing and collecting fines, not to exceed one thousand dollars, in relation to actions taken under division (B)(4) of this section against persons holding certificates and charters regulated by this section, the fines to be deposited into the trauma and emergency medical services fund established under section 4513.263 of the Revised Code; (6) Continuing education requirements for certificate holders, including a requirement that credit shall be granted for in- service training programs conducted by local entities; (7) Procedures for considering the granting of an extension or exemption of fire service continuing education requirements; (8) Certification cycles for which the certificates and charters regulated by this section are valid.

(C) The executive director, with the advice and counsel of the firefighter and fire safety inspector training committee of the state board of emergency medical services, shall issue or renew an instructor certificate to teach the training programs and continuing education classes regulated by this section to any applicant that the executive director determines meets the qualifications established in rules adopted under division (B) of this section, and may take disciplinary action against an instructor certificate holder or applicant in accordance with rules adopted under division (B) of this section. The executive director, with the advice and counsel of the committee, shall charter or renew the charter of any training program that the executive director determines meets the qualifications established in rules adopted under division (B) of this section, and may take disciplinary action against the holder of a charter in accordance with rules adopted under division (B) of this section.

(D) The executive director shall issue or renew a fire training certificate for a firefighter, a fire safety inspector, or another position of any fire training certification level approved by the executive director, to any applicant that the executive director determines meets the qualifications established in rules adopted under division (B) of this section and may take disciplinary actions against a certificate holder or applicant in accordance with rules adopted under division (B) of this section.

(E) Certificates issued under this section shall be on a form prescribed by the executive director, with the advice and counsel of the firefighter and fire safety inspector training committee of the state board of emergency medical services.

(F)(1) The executive director, with the advice and counsel of the firefighter and fire safety inspector training committee of the state board of emergency medical services, shall establish criteria for evaluating the standards maintained by other states and the branches of the United States military for firefighter, fire safety inspector, and fire instructor training programs, and other training programs recognized by the executive director, to determine whether the standards are equivalent to those established under this section and shall establish requirements and procedures for issuing a certificate to each person who presents proof to the executive director of having satisfactorily completed a training program that meets those standards. (2) The executive director, with the committee's advice and counsel, shall adopt rules establishing requirements and procedures for issuing a fire training certificate in lieu of completing a chartered training program .

(G) Nothing in this section invalidates any other section of the Revised Code relating to the fire training academy. Section 4765.11 of the Revised Code does not affect any powers and duties granted to the executive director under this section.

Effective Date: 11-03-2000; 04-05-2007

4765.56 Effect of child support default on certificate to practice.

On receipt of a notice pursuant to section 3123.43 of the Revised Code, the state board of emergency medical services shall comply with sections 3123.41 to 3123.50 of the Revised Code and any applicable rules adopted under section 3123.63 of the Revised Code with respect to a certificate to practice issued pursuant to this chapter.

Effective Date: 03-22-2001

4765.57 Disposition of fetal death remains.

(A) As used in this section, “fetal death” has the same meaning as in section 3705.01 of the Revised Code.

(B) Emergency medical service personnel shall dispose of the product of a fetal death in the manner set forth for the disposition of fetal remains in the “emergency medical technician-basic: national standard curriculum.”

Effective Date: 2008 SB175 09-12-2008

4765.58 [Effective 3/22/2013] Compliance with law regarding sanctions for human trafficking.

The state board of emergency medical services shall comply with section 4776.20 of the Revised Code. Added by 129th General Assembly File No. 169, HB 247, § 1, eff. 3/22/2013.

4765.99 Penalty.

Whoever violates division (A), (B), or (C) of section 4765.50 of the Revised Code is guilty of a minor misdemeanor on a first offense. On each subsequent offense, such person is guilty of a misdemeanor of the fourth degree.

Effective Date: 11-12-1992

Appendix B

Ohio Trauma System: Historical Perspective

Date	Action
Prior to 1982	EMS Advisory Panel (EMS personnel and fire chiefs) existed within Ohio Department of Education
1982	Cleveland Medical Association of Medicine introduced resolution to the house of delegates from the Ohio State Medical Association (OSMA) calling for establishment of state-wide trauma system
1983 – 1985	Ohio COT task force developed with collaboration from OSMA; guideline for trauma system development proposed; not adopted
1988	Ohio Society of Trauma Nurse Coordinators (later Ohio Society of Trauma Nurse Leaders) created
1990	NHTSA assessment – recommendations assisted development of SB 98 (1992)
1992	Ohio Alliance of Trauma Registrars (OATR) began meeting
Nov 1992	SB 98 effective, created the Division of EMS under ODPS; created EMS Board; established Trauma Care Advisory Group (TCAG-later Trauma Committee); mandated the formation of a trauma registry; required formation of an EMS incident reporting system; required a report on the development of a state-wide trauma system; development of Regional Physician Advisory Boards (RPAB)
Jan 1993	18 members of EMS Board seated; TCAG members selected with Dr. Richard Fratianne as chair
Oct 1994	ODPS received grant from HRSA for trauma system development
Nov 1994	Trauma Standards and Accreditation Draft Document developed by Trauma Committee, submitted to legislature as required by SB 98
March 1995 – Dec 1996	Trauma Liaison (Sally Jo Zuspan) hired by DEMS to help establish trauma systems
May 1995	Trauma Committee drafted Ohio Trauma Systems Proposal (OTSP) outlining essential components of trauma system
Oct 1995	Trauma forums held throughout Ohio to address trauma concerns
Nov 1995	Development of Trauma Systems seminar held to generate consensus on issues
Dec 1995	16 ACS verified trauma centers (10 level I, 6 level II)
Nov 1995 - Feb 1996	ODPS contracted Udell Research Associates (Dr. John Udell) to analyze Ohio 1993 injury data (via OHA hospital discharge data); OHA partial compliance with request led to incomplete report
April 1996	Columbus Dispatch first published articles on trauma system
May 1996	EMS Board approved OTSP(see May 1995) but supported a voluntary system only
Aug 1996	Trauma Committee membership expanded; work groups developed; second article published in Columbus Dispatch
Nov 1996	Trauma Registry rules passed; Representative Schuck expressed interest in trauma legislation
Dec 1996	Trauma Liaison position of ODPS terminated; new position changed to Trauma Liaison / RAP administrative assistant
1997-1999	DEMS eliminated trauma position; Ohio Committee on Trauma (Ohio COT) hired Sally Jo Zuspan as lobbyist
Feb 1997	Columbus Dispatch published large series of articles on trauma systems; American Medical News published article contrasting the efforts of Oregon vs.

	Ohio in trauma system development
Feb 1997	Representative Schuck pledges to introduce trauma legislation; Rep Schuck meets with several trauma surgeons to start drafting legislation
March 1997	OSTNL, ONA, ENA, AORN develop a joint position paper supporting state trauma legislation
May 1997	Trauma Committee votes to proceed with trauma legislation; EMS Board votes down motion to proceed with trauma legislation
Aug 1997	Governor supports trauma legislation; meets with ODPS, ODH Directors and Rep Schuck
1998	The Central Ohio Trauma System (COTS) was formally established as the first regional trauma consortium
Jan 1998	HB 681 introduced by Rep Schuck
May 1998	HB 681 (Trauma legislation) died in committee.
1999	Ohio Trauma Registry established within ODPS /DEMS (home grown system); scope limited to patients with greater than 48-hour hospital admit
Jan 1999	Letter writing campaign for legislation
	# of Trauma Centers before legislation: 20 ACS verified trauma centers (at least 11 level I)
July 2000	Amended HB 138 (23 rd General Assembly) signed into law. Beginning November 3, 2002, hospitals cannot represent themselves as trauma centers unless they are verified by the ACS; regional protocols for the triage and initial stabilization / treatment of seriously injured patients must be developed; broadened the membership of the EMS Board with trauma representation; revised Trauma Committee to support the EMS Board in its work; integrity of trauma registry data was increased by adding risk adjustment parameters and confidentiality protections; funding thought trauma / EMS grant program; special studies analysis to provide information for further trauma system development
Fall 2000	State Trauma Program Manager within ODPS (Mike Glenn) hired
Nov 2000	Re-organization of Trauma Committee; Joe Luria MD- first chair; Trauma Registry Advisory Subcommittee (TRAS) re-organized and placed as subcommittee under Trauma Committee (approval by EMS Board)
2001	Tri-State Trauma Coalition (TSTC) formally established as regional system in southwest region
June 2001	OHA / Ohio Committee on Trauma collaborated to sponsor a day-long seminar on becoming a Level III trauma center
October 2001	Data Program Manager for EMSIRS / Trauma Registry (Tim Erskine) hired
October 2001	EMS Director Module (on-line education) developed
October 2001	AIS 3 day coding class held for trauma registrars across state
Nov 2001	NTHSA re-assessment done for ODPS
Dec 2001	First Ohio Level III trauma center verified by ACS
Nov 2000 – Nov 2002	Ohio Trauma Committee developed recommendations and placed into legislative rules for field triage to trauma centers and trauma registry risk adjustment.
2002-2003	Regional trauma triage approvals
April - Nov, 2002	Workgroup of representatives from ODH, ODPS, Trauma Committee, EMS Board and OHA developed a Final Report on Provisional Trauma Center Designation. Submitted to ODH (Nick Baird) in Nov 2002
April 2002	5 module EMS Medical Director course developed by ACEP available on line
Oct 2002	OHA developed template of model transfer as required ORC
Nov 2002	Passage of SB 124 which incorporating an eighteen month provisional trauma center designation status that allows hospitals to operate as trauma centers

	while completes the ACS verification process
Nov 2002	HB 138 into effect
July 2003	Seven special studies returned to Trauma Committee with 1-2 page synopsis developed; Grant funding with distribution of funds began
July 2003	Trauma Committee developed State Trauma PI Workgroup to develop system for trauma PI at state level
Sept 2003	State Medical Director with DEMS appointed (JD Polk, DO)
Oct 2003	The EMS Board has approved the proposal to conduct a project collecting trauma data on patients admitted for less than 48 hours; TRAS will be leading this effort in 2004
Nov 2003	7 Commission Reports on EMS and Trauma Topics (7 Special Studies) sent to Governor Taft and the 125 th General Assembly; 1-2 page synopsis / study
March 2004	State PI Indicators (from Trauma Committee PI Workgroup) approved for implementation by Trauma Committee; approved by EMS Board April 2004
July 2004	State Medical Director appointed (Carol Cunningham MD) replacing Dr. Polk
Nov 2004	Ohio's received a federal grant for the CODES (Crash Outcome Data Evaluation System) projects
Nov 2004	Public health council adopted rules require a trauma center to report information to the director of health describing the trauma center's preparedness and capacity to respond to MCI and bioterrorism.
May 2005	Approval by Trauma Committee for regional PI reports to be placed on website
July 2005	Geriatric Workgroup started – chair Howard Werman, MD
Jan 2007	Hiring freeze at state level. Tim Erskine replaced Mike Glenn as ODPS position of Chief, Trauma Systems and Research
2007	Funding of National HRSA Trauma / EMS grants to states eliminated
Sept 2007	Approval of Geriatric Trauma Triage report – Trauma Committee Nov 2007; EMS Board Dec 2007
Oct 2007	2 hour required CE for trauma triage education approved
Nov 2007	Ohio Injury Community Planning Group (now OIPP) under ODH started meeting
March 2008	MTPSE assessment at state level led by OSTNL
Oct 2008	EMS Board accepted recommended changes, to include geriatric trauma triage
Dec 2008	Pre-hospital Geriatric Triage Rules passed and in effect
Jan 2009	Adoption of National EMS Scope of Practice as minimal standards (check on this)
Feb 2009	Subcommittee began meeting to begin development of Trauma System Plan
April 2009	2 hour web-based CE for Trauma Triage Rules available on-line
Sept 2009	4-year grant of \$273,727/year received by the Department of Health's Violence and Injury Prevention Program from the CDC to develop the Ohio Violent Death Reporting System (OH-VDRS). Ohio becomes the 18th state
Dec 2009	Geriatric Task Force Report published, approved by EMS Board
Feb 2010	The following tasks have been assigned by the EMS Board to the Trauma Committee: Work to develop a process for validation of the information in the trauma registry to assure that the data is accurate; make any specific recommendations for change in the handling of data; research the specific opportunities and ways to merge the data in specific registries; and research the staffing of other state's trauma systems.
June 2010	Trauma Visionary Committee started (5 EMS Board, 5 Trauma Committee members)
July 2010	Open forum / comments completed on Ohio Trauma Framework
Oct 2010	Final approval Trauma Framework (i.e. Trauma System Plan) by EMS Board

Feb 2011	NHTSA Technical Team Re-assessment completed
Feb 2011	EMS Board approved grant (priority 2) to fund a state ACS trauma system review (for 2012-13)
March 2011	Initial consideration / work on developing a joint registry (EMS, Trauma, Rehab)
Sept 2011	New titles of Emergency Medical Responder (EMR), EMT, Advanced EMT, and Paramedic will go into effect in Ohio by law.
Nov 2011	3 year required review of trauma triage rules due
Dec 2011	Metrics scorecard approved by Trauma Committee (ie to measure trauma system development)
Jan 2012	EMS Board adopted the Ohio EMS 2015 Strategic Plan, which includes Trauma Framework within content. All committees (with exception of Trauma Committee which is written in ORC) were sunsetted in order for re-organization
Feb 2012	EMS Board voted to realign the RPAB regions to match the current Department of Homeland Security regions
March 2012	New chairs of the 10 trauma workgroups established
July 2012	Grant awarded by state to begin process for ACS Trauma System review

Appendix C

Updated: February 2013

Data Management Timeline: Historical Perspective

OTR (Ohio Trauma Registry) Reporting System)		EMSIRS (EMS Incident
1992	SB 98 established the formation of an Ohio trauma registry (OTR)	SB 98 established formation of EMS incident reporting system
Jan 1997	Consensus conference to define registry inclusion criteria	
1998	TACR (Trauma Acute Care Registry) Data Dictionary (Version 1) developed (Note: TACR = a module within OTR)	
1999	OTR established within EMS Division (home grown system); Data collection started with scope limited to > 48 -hour hospital admits	Systems Management Committee (SMC) began working on data collection system
Jan 1999	Approval of TACR inclusion criteria by EMS Board	
Nov 2000	Trauma Registry Advisory Subcommittee (TRAS) formalized under Trauma Committee; Dr. Barry Knotts chair	
April 2001	Recommendation by TRAS that unique identifier is needed to merge the EMSIRS and OTR databases	
July 2001		Rules for EMSIRS established
Sept 2001	AIS coding class offered for Ohio trauma registrars	EMSIRS-1 entered in beta-testing phase
Oct 2001	Tim Erskine hired as Data Manager within DEMS for OTR / EMSIRS	
Jan 2002	Change of OTR to web-based system	EMSIRS-1 went online; data entry started
April 2002		IRSAC (Incident Reporting Systems Advisory Committee) first meeting
Jan 2003	TACR Data Dictionary (Version2) approval by EMS with changes implemented	Project underway by IRSAC to identify all EMS squads
May 2003	TRR (Trauma Rehabilitation Registry) Data Dictionary (Version 1) developed (Note: TRR = a module within OTR)	
July 2003	Initial attempt at establishment of Trauma PI Committee	NHTSA Uniform Prehospital Data Set (UPDS) released by NEMSIS
Oct 2003	Proposal to conduct a project collecting trauma data on pts admitted less than 48-hours; EMS Board approval	Tentative plan to change to EMSIRS – 2 on January 2005
May 2004	Software (LinkSolve) for probabilistic / data	Consultants from NEDARC conducted

	linkage available for OTR / EMSIRS	a 1-day SWOT analysis of EMSIRS data system
June 2004	< 48-hour LOS (length of stay) project with data collection dates revised to fall 2005; Incomplete data with no report generated from project	Revised EMSIRS-2 data set approved by EMS Board
July 2004	Revision to TACR Data Dictionary (Version 3); EMS Board approval with changes implemented (Jan 2005)	
Sept 2004	TACR Validation Study (funded by Governors Highway Safety Office grant) – data collection by outside consultation completed and sent to ODPS; no further action completed on project by EMS Division grant	
Oct 2004	2001-2002 OTR Annual Data Report approved by the EMS Board; placed on website	
Nov 2004	LinkSolve training (probabilistic linkage) completed by DEMS staff	
Jan 2005	TRR available online with data entry started	Implementation for EMSIRS-2 delayed first to 2006, then changed to 2008
April 2005	48-hour LOS study attempted but terminated due to lack of participation / data	A combined meeting of IRSAC and TRAS.
May 2005	One set of death certificate data received which was determined to be of no value	
March 2006		Decision to keep TRAS and IRSAC separate entities
Nov 2006	NHTSA 408 grant received; funding used to hire programming assistance for probabilistic linkage project and the ICD mapping project	
Jan 2007	ICDMAP-90 noted to be obsolete; DEMS investigating other options to ICDMAP-90 for assigning severity scores.	
Nov 2007	The EMS Board approved Trauma Committee's suggestion to develop a system that a unique identifier for trauma patient be tracked through the data systems	
Jan 2008		EMSIRS-2 online; data entry started
Sept 2008	Plan developed for adding unique identifier, yet ODPS issues with IT bureaucracy slowing progress.	
May 2009	No time frame to implementation of unique identifier project due to 2 reasons: 1) ODPS programming schedule is behind and 2) money is not available	
Nov 2009	TRAS recommended that the 48-hour rule be removed; No vote from Trauma Committee	

	while DEMS staff investigating with OHA.	
Nov 2009	TACR Data Dictionary revisions (Version 4) completed to bring the data elements into alignment with NTDB. Changes to OTR database never implemented at state level	
March 2010	Nancie Bechtel named co-chair of TRAS	
July 2010	Trauma Committee dropped the 48-hour rule from the Trauma Registry inclusion criteria. (Note: not implemented yet due to registry issues)	
Aug 2010	Memo by TRAS leadership demonstrating need for trauma registry staff support	
Oct 2010	Approval by EMS Board to allow DEMS to move forward to acquire NHTSA 408 grant money for the purchase of commercial database software	
Dec 2010	TACR Data Dictionary revision (Version 5) approved. Never implemented into OTR by ODPS.	
Dec 2010	TRAS workgroup assembled to assist with creation of RFP	
Jan 2011	Presentations from 5 commercial software vendors. Scoring system developed by TRAS membership	
March 2011	Recommendation by TRAS made to the Executive Director to contract with Digital Innovations as the commercial software vendor.	
March 2011	Initial list of non-compliant hospitals not submitting TACR information developed and presented to trauma committee	
June 2011	2009 TACR Annual Report completed; placed on website	
Sept 2011	Procedure used to select the software vendor was considered invalid. Letter received from Executive Director EMS Division and EMS Board chair which outlined rationale for delay and need to restart selection process from beginning.	
Sept 2011	Revised policy for addressing non-compliant with data reporting and request for extensions	
Sept 2011	2010 TACR Annual Report released and placed on website	
Oct 2011		IRSAC to begin work on the EMSIRS-3 data dictionary which is needed for NEMSIS.

Dec 2011		IRSAC suggests the software being purchased for the Trauma Registry should include the NEMSIS fields
Jan 2012	TRAS disbanded by EMS Board	
March 2012	Goal # 8 Workgroup with Deb Myers RN- chair of workgroup	
April 2012		IRSAC disbanded. Authority over EMSIRS to reside within the EMS Systems Development committee
July 2012		Legislation change which will allow EMS data to be submitted to NEMSIS
Oct 2012	TACR Data Diction (Version 6) approved.	
Jan 2013		Moved to National EMS Information System (NEMSIS – Version 3) compliant dataset by January 1, 2013.

Introduction

This annual report from the Ohio Trauma Registry (OTR) presents an overview of the data about traumatic injuries in Ohio in 2010. The purpose of this report is to provide information to healthcare professionals as well as to the public about the current state of care for seriously injured patients treated at hospitals throughout Ohio.

The OTR is operated and maintained by the Ohio Department of Public Safety, Division of Emergency Medical Services. The State of Ohio's Emergency Medical Services (EMS) Board has statutory authority over the OTR and supervises its operation via the EMS Board's Trauma Committee and the Trauma Registry Advisory Subcommittee.

This report was produced by the Ohio Department of Public Safety, Division of Emergency Medical Services, Office of Research and Analysis. Questions or comments concerning the report should be directed to the Office of Research and Analysis at 800-233-0785 (toll free) or EMSData@dps.state.oh.us.

Executive Summary

The Ohio Trauma Registry (OTR) began collecting data on January 1, 1999. This report represents data from the year 2010. This report is intended to give the reader a strong sense of the type and amount of data available in the OTR. The Ohio Revised Code and the Ohio Administrative Code prohibit the release of data that would identify or tend to identify a provider or recipient of trauma care.

- The data in the OTR are prescribed by the Patient Inclusion Criteria (Appendix A). To be included in the OTR, patients must be admitted to the hospital for at least 48 hours or transferred into the hospital, with an injury-related ICD-9 code. Patients that die after receiving any evaluation or treatment while on hospital premises, as well as patients who are transferred out of the hospital, are also included.
- Between January 1, 1999 and December 31, 2010, a total of 396,066 records were submitted to the OTR. This report includes the 36,797 records that were submitted in 2010. Because patients who are transferred between hospitals generate multiple records, the number of records submitted to the OTR is greater than the number of individual patients.
- Of the 28,491 patients included in this report, 95.8% survived to discharge.
- 30.8% of the patients included in this report were geriatric patients (age 70 or older), while 12.5% of the patients were pediatric patients (age 15 or younger).
- 55.4% of the total trauma patients in 2010 were males while 44.6% were females.
- Except for the 0-4 and 10-14 year old age ranges, males had a higher case fatality rate than females of the same age.
- 90.5% of the injuries reported to the OTR in 2010 were the result of blunt trauma.
- 52.9% of the injuries reported to the OTR in 2010 were caused by falls, while an additional 15.3% were caused by motor vehicle collisions. Of the injuries reported to the OTR that resulted in in-hospital death in 2010, 37.7% were caused by falls, 17.2% were caused by motor vehicle collisions, and 13.3% were caused by assault.
- Injuries caused by drowning/submersion or firearms had the highest case fatality rate of 32.5 per 100 patients and 28.2 per 100 patients respectively.
- 89% of the injuries reported to the OTR in 2010 were unintentional. Self-inflicted injuries had the highest case fatality rate at 26%.
- Over time, the overall mortality for patients included in the OTR has remained steady around 4%. After a small drop from 6% in 2003, mortality among patients treated in a trauma center in Ohio has since remained steady around 5%. Mortality among patients treated at non-trauma centers in Ohio has been steadily trending downward from 2.5% in 2000 to 2.2% in 2010.

Limitations of the Data

There are a number of issues that need to be considered when reading this report. These are listed here in no specific order.

- **48-Hour Rule:** To be included in the OTR, patients must be admitted to the hospital for at least 48 hours or transferred into the hospital with an injury-related ICD-9 code. Patients that die after receiving any evaluation or treatment while on hospital premises, as well as patients who transfer out of the hospital, are also included.
- **Accuracy:** External validation of the data in OTR has not been performed; therefore, the accuracy of the data contained in this report is limited to the accuracy of the data submitted to OTR by the individual hospitals.
- **Age:** Patient date of birth is reported to OTR, age is not. Age is calculated by the Office of Research and Analysis using the difference between date of birth and date of arrival at the hospital. A very small number of records (n=7) do not have a date of birth recorded. Age is therefore not calculable on these records. Date of arrival at hospital is chosen for this calculation as a substantially larger number of records (n = 86) do not have a date of injury recorded.
- **Death Data:** In OTR, data on patients who die as a result of their injuries is limited to in-hospital deaths. Persons pronounced dead at the scene and not transported to the hospital are not reported to OTR.
- **OTR participation:** Submission of trauma patient data to OTR is statutorily required by Ohio Revised Code §4765.06. However, a small number of hospitals did not contribute data to this report. A list of contributing hospitals can be found in Appendix F.
- **Out-of-state patients:** OTR data includes patients who were injured in neighboring states and transported to an Ohio hospital. These records do not include county of injury data.
- **Records vs. Patients:** Because patients who are transferred between hospitals generate a separate trauma record at each hospital in which they receive treatment, the number of records submitted to the OTR will be greater than the number of individual trauma patients. To account for some patients having multiple records for the same incident, care has been taken to note whether a graph or table is using records or patients as the population.
- **Rounding:** Because of rounding, percentages displayed in graphs and tables will not always total 100%.
- **Trauma Center vs. Non-Trauma Center Data:** This report contains data submitted by all hospitals, regardless of whether or not the hospital is a trauma center. Because they employ specially trained trauma registry personnel, trauma center data tends to be more detailed and precise. However, the data from non-trauma centers gives a broader view of trauma care in Ohio and adds richness and depth to this report. This additional data is something many other states lack; therefore, comparisons with other states should be undertaken with caution.

Registry Characteristics

Records by Calendar Year: 1999 - 2010

	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	Total
Records	24,220	24,490	22,516	27,733	33,844	35,347	36,296	33,587	39,820	40,756	40,660	36,797	396,066

Trauma Records by Year

The total number of records reported to the Ohio Trauma Registry (OTR) has increased over time from 24,220 records in 1999 to 36,797. As of December 31, 2010, a total of 396,066 records had been submitted to the OTR.

The overall annual increase in records submitted to OTR is thought to be a result of system maturation, increased hospital participation, as well as increasing computerization of hospital medical records. Such computerization allows for easier and more accurate identification of eligible patients. This supposition has not been verified and requires further study.

Records by Trauma Center Type

2010		
	# of Records	% of Records
Level 1 TC	15,386	41.8%
Level 2 TC	5,214	14.2%
Level 3 TC	3,172	8.6%
NTC	13,025	35.4%
Total	36,797	100.0%

Records by Trauma Center Type:

In 2010, non-trauma centers accounted for 35.4% of records submitted to the Ohio Trauma Registry. Level 1 trauma centers accounted for the largest portion of records submitted to the Ohio Trauma Registry with 41.8%.

Patient Characteristics

Patients by Month: 2010

2010		
	# of Patients	% of Patients
January	2,169	7.6%
February	1,934	6.8%
March	2,083	7.3%
April	2,137	7.5%
May	2,449	8.6%
June	2,214	7.8%
July	2,827	9.9%
August	2,828	9.9%
September	2,676	9.4%
October	2,697	9.5%
November	2,316	8.1%
December	2,161	7.6%
Total	28,491	100.0%

Patients by Month:

The month listed in this chart reflects the month that the patient arrived at the hospital and not necessarily the month during which the injury occurred. The number of patients admitted to the hospital in 2010 peaked in July and August and was lowest in February. The number of patients was calculated by subtracting the number of records with the following two classifications from the total number of records submitted:

1. "ED Disposition" equal to "Transfer to another Ohio hospital" or "Transfer to an out-of-state hospital"
2. "Discharge Disposition" equal to "Transfer to another Ohio hospital" or "Transfer to an out-of-state hospital"

Patients by Age Group: 2010

**7 patients were excluded due to lack of calculable age*

2010		
Age	# of Patients	% of Patients
0-4	1,306	4.6%
5-9	937	3.3%
10-14	1,031	3.6%
15-19	1,626	5.7%
20-24	1,649	5.8%
25-34	2,623	9.2%
35-44	2,466	8.7%
45-54	3,339	11.7%
55-64	3,091	10.8%
65-74	2,812	9.9%
75-84	3,976	14.0%
85+	3,628	12.7%
Unknown	7	0.0%
Total	28,491	100.0%

Number of Patients by Age

The 75-84 year old age group, which included 3,976 patients (14.0%), had the most patients reported. As a group, patients 0-14 years of age accounted for 3,274 (11.5%) of the overall patients reported.

Adult, Pediatric, and Geriatric Count: 2010

**7 patients were excluded due to lack of a calculable age*

2010		
Age Group	# of Patients	% of Patients
Pediatric	3,560	12.5%
Adult	16,156	56.7%
Geriatric	8,768	30.8%
Unknown	7	0.0%
Total	28,491	100.0%

Adult vs Pediatric vs Geriatric Patients

The Ohio Revised Code has established that pediatric trauma patients are those age 15 or younger and that geriatric patients are those age 70 and older. Trauma patients age 16-69 are considered adults. In 2010, 12.5% of the patients reported were age 15 or younger and 30.8% were age 70 and older.

Patients by Age & Sex: 2010

**7 patients were excluded due to unknown age and/or sex*

2010					
Age Group	Males	Females	Male %	Female %	Total # Pts
0-4	810	496	62.0%	38.0%	1,306
5-9	563	374	60.1%	39.9%	937
10-14	731	300	70.9%	29.1%	1,031
15-19	1,184	442	72.8%	27.2%	1,626
20-24	1,227	422	74.4%	25.6%	1,649
25-34	1,956	667	74.6%	25.4%	2,623
35-44	1,752	714	71.0%	29.0%	2,466
45-54	2,246	1,093	67.3%	32.7%	3,339
55-64	1,733	1,358	56.1%	43.9%	3,091
65-74	1,253	1,559	44.6%	55.4%	2,812
75-84	1,388	2,588	34.9%	65.1%	3,976
85+	938	2,690	25.9%	74.1%	3,628
Unknown	6	1	85.7%	14.3%	7
Total	15,787	12,704	55.4%	44.6%	28,491

Patients by Age and Sex

Overall, 55.4% of the patients reported were male, while 44.6% were female. Males accounted for more than 50% of the patients reported up until age 65. At ages greater than 65, females accounted for the majority of the patient population.

Incidence of Injury by Age and Sex

**7 patients were excluded due to unknown age and/or sex*

2010

Age Group	Males	Females	Total
0-4	2.20	1.40	1.81
5-9	1.91	0.82	1.38
10-14	2.99	1.17	2.10
15-19	2.91	1.05	2.00
20-24	2.75	0.89	1.83
25-29	2.52	0.91	1.71
30-34	2.43	1.01	1.71
35-39	2.57	1.01	1.78
40-44	2.87	1.29	2.08
45-49	2.76	1.38	2.06
50-54	2.17	1.48	1.82
55-59	1.47	0.93	1.19
60-64	2.47	2.00	2.22
65-69	2.91	2.81	2.86
70-74	3.60	4.12	3.88
75-79	5.01	6.18	5.68
80-84	7.89	10.33	9.38
85-89	11.24	14.77	13.57
90+	17.45	21.06	20.12
Total	2.80	2.15	2.47

Incidence of Injury by Age and Sex:

Incidence of injury is calculated as the number of injuries that occur for every 1000 people at risk. For the purposes of this report, the entire Ohio population is considered the population at risk. The incidence of injury sharply increases in both sexes after age 70. This increase is especially pronounced among females.

Patients by Trauma Center Level

2010					
	Level 1 TC	Level 2 TC	Level 3 TC	NTC	Total
# of Pts.	15,176	4,890	2,098	6,327	28,491

Patients by Trauma Center Level:

In 2010, 77.8% of trauma patients received definitive care at a trauma center. Level 1 trauma centers provided definitive care for 15,176 patients, representing 53.3% of all trauma patients in Ohio in 2010.

Number of Patients by Population Density: 2010

2010	
Population Density	Number of Patients
High Density	11,726
Medium-High Density	6,007
Medium-Low Density	5,812
Low Density	2,545
Other	2,401
Total	28,491

Patients by Population Density:

Counties with a population density >1000 people per square mile were considered “High Density.” Counties with a population density between 300 and 999 people per square mile were considered “Medium-High Density.” Counties with a population density between 100 and 299 people per square mile were considered “Medium-Low Density.” Counties with a population density <100 people per square mile were considered “Low Density.” The “Other” category includes any records with missing county data or out-of-state county data. As expected, the majority of patients come from highly populated counties, while more sparsely populated counties contribute relatively few patients.

The list of counties by population density can be found in Appendix J.

Transfers by Trauma Center Level

2010				
	Scene	Transfer	Total	% Transferred In
Level 1 TC	7,641	7,535	15,176	49.7%
Level 2 TC	3,260	1,630	4,890	33.3%
Level 3 TC	2,050	48	2,098	2.3%
NTC	5,524	803	6,327	12.7%
Total	18,475	10,016	28,491	35.2%

Transfers by Trauma Center Level:

Almost half of the trauma patients seen at level 1 trauma centers were transferred from another facility. Overall, 35.2% of trauma patients were transferred at least once before receiving definitive care.

Injury Characteristics

Injury Type: 2010

2010		
Injury Type	# of Patients	% of Patients
Blunt	25,780	90.5%
Penetrating	1,957	6.9%
Burns	624	2.2%
Asphyxia	130	0.5%
Total	28,491	100.0%

Injury Type

Blunt injuries accounted for the vast majority of injuries reported to the OTR in 2010 (90.5%), while penetrating injuries only accounted for 6.9% of all injuries and burns accounted for an additional 2.2%.

Intent of Injury: 2010

2010		
Intent	# of Patients	% of Patients
Unintentional	25,474	89.4%
Assault	2,417	8.5%
Self-Inflicted	461	1.6%
Undetermined	117	0.4%
Legal Intervention	22	0.1%
Total	28,491	100.0%

Intent of Injury

The intent by which the injury was sustained is derived from the ICD-9-CM *External Cause of Injury Codes* (E-codes) (see Appendix C). Within the total number of patients reported to the OTR in 2010, 89.4% were injured unintentionally.

Payor Mix: 2010

2010		
Payment Source	# of Patients	% of Patients
Private Insurance	8,908	31.3%
Medicare	8,025	28.2%
Medicaid	3,347	11.7%
Workers' Compensation	598	2.1%
Self-pay	2,740	9.6%
Not Documented	4,873	17.1%
Total	28,491	100.0%

Payor Mix

Payor mix is reported as the primary source of payment documented during the patient's hospitalization. It can give a rough estimate of how trauma care is reimbursed, but it does not reflect the final source of revenue to the hospital, as this is sometimes not known for many months post-discharge. Of the total number of records reported to the OTR, 31.3% had commercial insurance coverage. In terms of anticipated reimbursement, 42.0% of the hospitals expected payment from Medicare, Medicaid, or Worker's Compensation, with the vast majority of these reported as Medicare.

Mechanisms of Injury: 2010

2010		
Mechanism of Injury	# of Patients	% of Patients
Fall	15,065	52.9%
Motor Vehicle Collision (MVC)	4,347	15.3%
Assault	1,709	6.0%
Struck by or against	1,624	5.7%
Transport, other	1,041	3.7%
Motorcycle Collision (MCC)	931	3.3%
Pedestrian	603	2.1%
Pedal Cyclist	602	2.1%
Fire/Burn	503	1.8%
Cut/Pierce	472	1.7%
Other	1,594	5.6%
Total	28,491	100.0%

Mechanism of Injury

Of the patient records submitted, 52.9% of all patients suffered injury due to a fall and 15.3% were injured as a result of a motor vehicle collision. In this graph, the mechanism of injury is reported as the External Cause of Injury code or E-code. The Centers for Disease Control and Prevention place E-codes into groupings reflective of similar causes of injury. More information about E-codes and E-code groupings can be found in Appendix C. The “Other” category consists of a large number of E-codes, including such things as injuries sustained on a train and boating injuries.

Outcomes

Patient Outcome: 2010

2010		
Outcome	# of Patients	% of Patients
Alive	27,308	95.8%
Dead	1,183	4.2%
Total	28,491	100.0%

Outcome

In 2010, 4.2% of the patients reported to the OTR died. Please note that these data only reflect patients treated in the hospital; deaths occurring outside a medical facility are not included in this analysis.

Number of Deaths by Age: 2010

**7 patients were excluded due to lack of a calculable age*

2010		
Age Group	# of Deaths	Total # Patients
0-4	56	1,306
5-9	11	937
10-14	15	1,031
15-19	66	1,626
20-24	95	1,649
25-34	130	2,623
35-44	80	2,466
45-54	114	3,339
55-64	127	3,091
65-74	111	2,812
75-84	190	3,976
85+	186	3,628
Unknown	2	7
Total	1,183	28,491

Deaths by Age

More patients (190) died in the 75-84 year old age group than in any other group. This represents 16.1% of all deaths reported. It should be noted that this data reflects deaths occurring in the hospital setting (ED or inpatient). Trauma patients that die at the scene of an injury or following discharge from the hospital are not included in this report.

Case Fatality Rate by Age: 2010

**7 patients were excluded due to lack of a calculable age*

2010			
Age Group	# of Deaths	Total # Patients	Case Fatality Rate
0-4	56	1,306	4.3
5-9	11	937	1.2
10-14	15	1,031	1.5
15-19	66	1,626	4.1
20-24	95	1,649	5.8
25-34	130	2,623	5.0
35-44	80	2,466	3.2
45-54	114	3,339	3.4
55-64	127	3,091	4.1
65-74	111	2,812	3.9
75-84	190	3,976	4.8
85+	186	3,628	5.1
Unknown	2	7	28.6
Total	1,183	28,491	4.2

Case Fatality Rate:

The case fatality rate is calculated as the number of deaths in each age group divided by the total number of patients in each age group, and then multiplied by 100. The case fatality rate represents the number of deaths for every 100 patients. The 5-9 year old age group had the lowest case fatality rate (1.2) while the 20-24 year old age group had the highest case fatality rate (5.8).

Case Fatality Rate by Age and Sex: 2010

**7 patients were excluded due to unknown age and/or sex*

2010									
Age Group	Males			Females			Total		
	Lived	Died	CFR	Lived	Died	CFR	Lived	Died	CFR

85+	852	86	9.2	2,590	100	3.7	3,442	186	5.1
Unknown	5	1	16.7	-	1	100.0	5	2	28.6
Total	14,986	801	5.1	12,322	382	0.0	27,308	1183	4.2

Case Fatality Rate:

After age 14, males tend to have a higher case fatality rate, which increases sharply starting at age 45. Women tend to have a lower case fatality rate which remains static until age 74, after which it increases sharply. The case fatality rate presented is a crude rate and does not adjust for any other factors such as injury severity or type.

Mechanisms of Injury for Deaths: 2010

2010		
Mechanism of Injury	# of Patients	% of Patients
Fall	446	37.7%
Motor Vehicle Collision (MVC)	204	17.2%
Assault	157	13.3%
Firearm	89	7.5%
Motorcycle Collision (MCC)	67	5.7%
Pedestrian	52	4.4%
Drowning/Submersion	25	2.1%
Transport, Other	24	2.0%
Struck By or Against	19	1.6%
Fire/Burn	13	1.1%
Other	87	7.4%
Total	1,183	100.0%

Deaths by Mechanism of Injury

Analysis of the patients who died in the hospital in 2010 shows that falls were responsible for 40.0% of in-hospital mortality. Motor vehicle collisions were responsible for 15.4% of in-hospital deaths, and 13.6% of in-hospital mortality was due to assault. It is important to recognize that patients who die at the scene are not reported by the hospitals. These data reflect only patients who died in the hospital.

Case Fatality Rate by Mechanism of Injury: 2010

2010				
Mechanism of Injury	Lived	Died	Total	Case Fatality Rate
Assault	1,552	157	1,709	9.2
Cut/Pierce	470	2	472	0.4
Drowning/Submersion	52	25	77	32.5
Fall	14,619	446	15,065	3.0
Fire/Burn	490	13	503	2.6
Firearm	227	89	316	28.2
Machinery	220	4	224	1.8
Motorcycle Collision (MCC)	864	67	931	7.2
Motor Vehicle Collision (MVC)	4,143	204	4,347	4.7
Pedal Cyclist	593	9	602	1.5
Pedestrian	551	52	603	8.6
Struck By or Against	1,605	19	1,624	1.2
Transport, Other	1,017	24	1,041	2.3
Other	905	72	977	7.4
Total	27,308	1,183	28,491	4.2

Case Fatality Rate:

Firearm injuries and injuries due to drowning/submersion had the highest case fatality rates (28.2 per 100 patients and 32.5 per 100 patients respectively). Assault had the next highest case fatality rate (9.2 per 100 patients).

Case Fatality Rate by Injury Severity Score: 2010

**1477 patients without a reported ISS were excluded*

2010				
ISS	Lived	Died	Total	Case Fatality Rate
1-9	18,648	220	18,868	1.2
10-14	3,801	108	3,909	2.8
15-24	2,375	163	2,538	6.4
25+	1,055	644	1,699	37.9
Unknown	1,429	48	1,477	3.2
Total	27,308	1,183	28,491	4.2

Case Fatality Rate by Injury Severity Score:

This graph primarily reflects patients treated at a trauma center because non-trauma center facilities generally do not report an ISS. As expected, the case fatality rate increases as the severity of the injury increases.

Case Fatality Rate by Intent of Injury: 2010

2010				
Intent	Lived	Died	Total	Case Fatality Rate
Unintentional	24,570	904	25,474	3.5
Assault	2,253	164	2,417	6.8
Self Inflicted	365	96	461	20.8
Legal Intervention	19	3	22	13.6
Undetermined	101	16	117	13.7
Total	27,308	1,183	28,491	4.2

Case Fatality Rate by Intent of Injury:

Self-inflicted injuries had the highest case fatality rate (20.8 per 100 patients) while unintentional injuries had the lowest case fatality rate (3.5 per 100 patients).

Hospital Days by Mechanism of Injury: 2010

2010		
Mechanism of Injury	# of Hospital Days	% of Total Hospital Days
Fall	84,186	51.9%
MVC	27,523	17.0%
Assault	10,275	6.3%
MCC	6,714	4.1%
Struck By or Against	6,616	4.1%
Transport, Other	5,092	3.1%
Pedestrian	4,317	2.7%
Fire/Burn	4,008	2.5%
Pedal Cyclist	2,541	1.6%
Cut/Pierce	2,249	1.4%
Other	8,632	5.3%
Total	162,153	100.0%

Hospital Days by Mechanism of Injury

The total number of hospital days reported for patients in 2010 was 162,153. Falls accounted for 51.9% of hospital days reported to the OTR and motor vehicle collisions accounted for 17.0%. There were 8,632 hospital days attributed to patient records that were coded with a variety of other Mechanism of Injury codes, which are aggregated here as “Other”.

Hospital Days by Mechanism of Injury: 2010

2010		
Mechanism of Injury	# of Hospital Days	% of Total Hospital Days
Fall	84,186	51.9%
MVC	27,523	17.0%
Assault	10,275	6.3%
MCC	6,714	4.1%
Struck By or Against	6,616	4.1%
Transport, Other	5,092	3.1%
Pedestrian	4,317	2.7%
Fire/Burn	4,008	2.5%
Pedal Cyclist	2,541	1.6%
Cut/Pierce	2,249	1.4%
Other	8,632	5.3%
Total	162,153	100.0%

Hospital Days by Mechanism of Injury:

Falls accounted for the highest percentage of hospital days (51.9%), while motor vehicle collisions accounted for the second highest percentage of hospital days (17.0%).

Hospital Days by Injury Severity Score: 2010

**1477 patients without a reported ISS were excluded
Percentages may not add up to 100% due to rounding

2010		
ISS Group	Hospital Days	% of Total Hospital Days
1-9	88,350	54.5%
10-14	25,419	15.7%
15-24	22,775	14.0%
25+	17,362	10.7%
Unknown	8,247	5.1%
Total	162,153	100.0%

Hospital Days by Injury Severity Score:

Minor injuries accounted for the majority of all hospital days. As the ISS increased, the proportion of total hospital days decreased. There were 1,477 patients for whom an ISS was not recorded, and this accounted for 8,247 hospital days.

Hospital Days by Injury Severity Score: 2010

**1477 patients without a reported ISS were excluded*

2010		
ISS Group	Hospital Days	% of Total Hospital Days
1-9	88,350	54.5%
10-14	25,419	15.7%
15-24	22,775	14.0%
25+	17,362	10.7%
Unknown	8,247	5.1%
Total	162,153	100.0%

Hospital Length of Stay by Injury Severity Score:

Minor injuries accounted for the majority of all hospital days. As the ISS increased, the proportion of total hospital days decreased.

Emergency Department Disposition: 2010

2010		
ED Disposition	# of Patients	% of Patients
Floor	7,983	29.9%
ICU	3,000	11.2%
OR	1,146	4.3%
Step-Down	1,524	5.7%
Observation	170	0.6%
Morgue	245	0.9%
Transfer	7,901	29.6%
NA	4,736	17.7%
Total	26,705	100.0%

Emergency Department Disposition

This graph only includes data for patients who arrived directly from the scene of the injury. It shows the first patient care area to which the patient was sent after they were discharged from the emergency department in the first hospital in which they received treatment. Of the total number of patients, 29.9% were admitted to the floor (i.e. a regular medical/surgical hospital room), 15.5% were sent directly to the operating room or an intensive care unit, and 29.6% were transferred to another hospital. The OTR data reflects that 17.7% were reported as not applicable, indicating that the initial care was not in the emergency department (e.g. a direct admission).

Hospital Discharge Disposition: 2010

**Percentages may not add up to 100% due to rounding*

2010		
Discharge Disposition	# of Patients	% of Patients
Home	7,875	29.5%
Home with Assistance	675	2.5%
Morgue	879	3.3%
Extended Care Facility	4,885	18.3%
Rehabilitation Facility	984	3.7%
Transfer	8,226	30.8%
Jail/Prison	126	0.5%
Against Medical Advice	67	0.3%
Other	2,988	11.2%
Total	26,705	100.0%

Hospital Disposition

This reflects hospital disposition from the first hospital that provided treatment to the patient. According to the OTR data, 32.0% of patients were discharged home and 30.8% of patients were transferred to another facility. This data reflects where patients were discharged after being admitted to the hospital, in contrast to the previous page, which reflected where patients were discharged from the emergency department.

Case Fatality Rate by Population Density: 2010

2010				
Population Density	Lived	Died	Total	Case Fatality Rate
High Density	11,178	548	11,726	4.7
Medium-High Density	5,767	240	6,007	4.0
Medium-Low Density	5,574	238	5,812	4.1
Low Density	2,450	95	2,545	3.7
Other	2,339	62	2,401	2.6
Total	27,308	1,183	28,491	4.2

Case Fatality Rate by Population Density:

Patients coming from counties with high population density had the highest case fatality rate (4.7 per 100 pati). Patients coming from counties with medium-low population density had the second highest case fatality rate (4.1 per 100 patients). This chart reflects crude case fatality rates and is unadjusted for severity or any other variables.

The list of counties by population density can be found in Appendix J.

Overall Case Fatality Rate by Year: 1999-2010

2010				
Year	Lived	Died	Total	Case Fatality Rate
1999	18,750	784	19,534	4.0
2000	19,448	842	20,290	4.1
2001	16,914	770	17,684	4.4
2002	20,860	1,207	22,067	5.5
2003	26,253	1,203	27,456	4.4
2004	26,776	1,143	27,919	4.1
2005	27,151	1,251	28,402	4.4
2006	24,245	1,148	25,393	4.5
2007	29,688	1,401	31,089	4.5
2008	30,603	1,473	32,076	4.6
2009	30,445	1,356	31,801	4.3
2010	27,308	1,183	28,491	4.2
Total	298,441	13,761	312,202	4.4

Overall Case Fatality Rate by Year:

This graph shows the overall crude case fatality rate by year for patient records contained in the OTR. With the exception of a small escalation in 2002, the case fatality rate for trauma patients in Ohio has remained relatively steady.

Trauma Center Case Fatality Rate by Year: 2000-2010

2010				
Year	Lived	Died	Total	Case Fatality Rate
2000	8,008	554	8,562	6.5
2001	6,613	433	7,046	6.1
2002	12,122	879	13,001	6.8
2003	19,071	1,022	20,093	5.1
2004	17,906	941	18,847	5.0
2005	21,597	1,095	22,692	4.8
2006	19,557	997	20,554	4.9
2007	23,592	1,274	24,866	5.1
2008	24,427	1,341	25,768	5.2
2009	24,920	1,265	26,185	4.8
2010	21,123	1,041	22,164	4.7
Total	198,936	10,842	209,778	5.2

Trauma Center Case Fatality Rate by Year:

This graph reflects the crude case fatality rate for all trauma patients seen at a trauma center between 2000 and 2010. The case fatality rate remained steady from 2000-2002 at slightly above 6 per 100 patients. In 2003 there was a drop to approximately 5 per 100 patients and that rate remained steady through 2010.

Non-Trauma Center Case Fatality Rate by Year: 2000-2010

2010				
Year	Lived	Died	Total	Case Fatality Rate
2000	11,440	288	11,728	2.5
2001	10,301	337	10,638	3.2
2002	8,738	328	966	3.6
2003	7,182	181	7,363	2.5
2004	8,870	202	9,072	2.2
2005	5,554	156	5,710	2.7
2006	4,688	151	4,839	3.1
2007	6,096	127	6,223	2.0
2008	6,176	132	6,308	2.1
2009	5,525	91	5,616	1.6
2010	6,185	142	6,327	2.2
Total	80,755	2,135	82,890	2.6

Non-Trauma Center Case Fatality Rate by Year;

This graph reflects the crude case fatality rate for all trauma patients treated at a non-trauma center from 2000-2010. Over time, the mortality rate for non-trauma centers has declined from 2.5 per 100 patients in 1999 to 2.2 per 100 patients in 2010.

ED Deaths at Trauma Centers

	ED Deaths	Non-ED Deaths	Total Deaths	% Deaths in ED
Level 1 TC	139	639	778	17.9%
Level 2 TC	41	165	206	19.9%
Level 3 TC	15	42	57	26.3%
Total	195	846	1,041	18.7%

ED Deaths at Trauma Centers:

In 2010, 81.3% of inpatient trauma deaths in trauma centers in Ohio occurred outside of the Emergency Department (ED).

ED Deaths at Level 1 Trauma Centers

	ED Deaths	Non-ED Deaths	Total Deaths	% Deaths in ED
Level 1 TC	139	639	778	17.9%
Level 2 TC	41	165	206	19.9%
Level 3 TC	15	42	57	26.3%
Total	195	846	1,041	18.7%

ED Deaths at Level 1 Trauma Centers:

In 2010, 82.1% of inpatient trauma deaths that occurred in level 1 trauma centers occurred outside of the ED.

ED Deaths at Level 2 Trauma Centers

	ED Deaths	Non-ED Deaths	Total Deaths	% Deaths in ED
Level 1 TC	139	639	778	17.9%
Level 2 TC	41	165	206	19.9%
Level 3 TC	15	42	57	26.3%
Total	195	846	1,041	18.7%

ED Deaths at Level 2 Trauma Centers:

In 2010, 80.1% of inpatient trauma deaths that occurred in level 2 trauma centers in Ohio occurred outside of the ED.

ED Deaths at Level 3 Trauma Centers

	ED Deaths	Non-ED Deaths	Total Deaths	% Deaths in ED
Level 1 TC	139	639	778	17.9%
Level 2 TC	41	165	206	19.9%
Level 3 TC	15	42	57	26.3%
Total	195	846	1,041	18.7%

ED Deaths at Level 3 Trauma Centers:

In 2010, 73.7% of inpatient trauma deaths that occurred in level 3 trauma centers occurred outside of the ED.

ED Deaths at Non-Trauma Centers

	ED Deaths	Non-ED Deaths	Total Deaths	% Deaths in ED
Level 1 TC	139	639	778	17.9%
Level 2 TC	41	165	206	19.9%
Level 3 TC	15	42	57	26.3%
NTC	68	74	142	47.9%
Total	263	920	1183	22.2%

ED Deaths at Non-Trauma Centers:

In 2010, 52.1% of inpatient trauma deaths that occurred in non-trauma centers occurred outside of the ED.

Geographic Characteristics

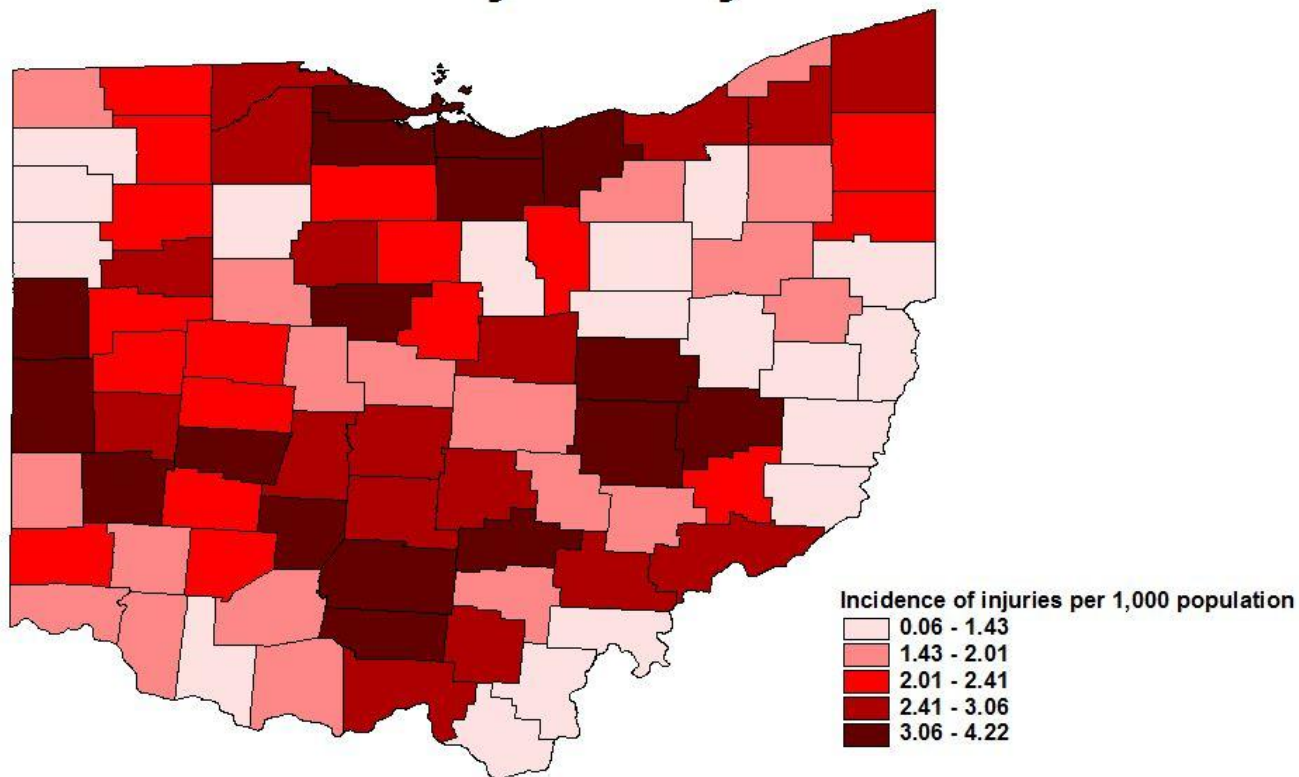

Number of Injuries by County

Number of Injuries by County:

This map reflects a basic count of injuries in each county. Darker shades of red reflect a higher number of injuries.

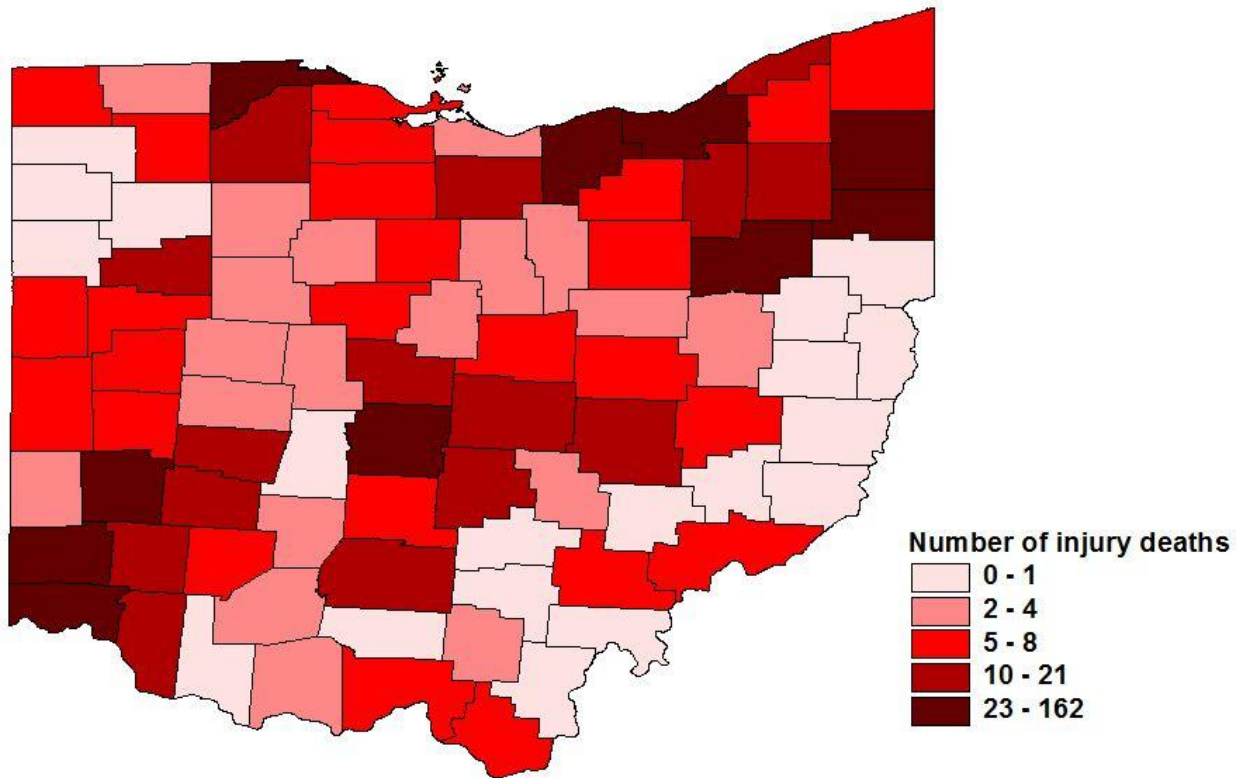

Incidence of Injuries/1,000 Population by County

Incidence of Injuries by County:

This map reflects the crude incidence of injury per 1000 population by county. Darker shades of red reflect higher incidence rates.

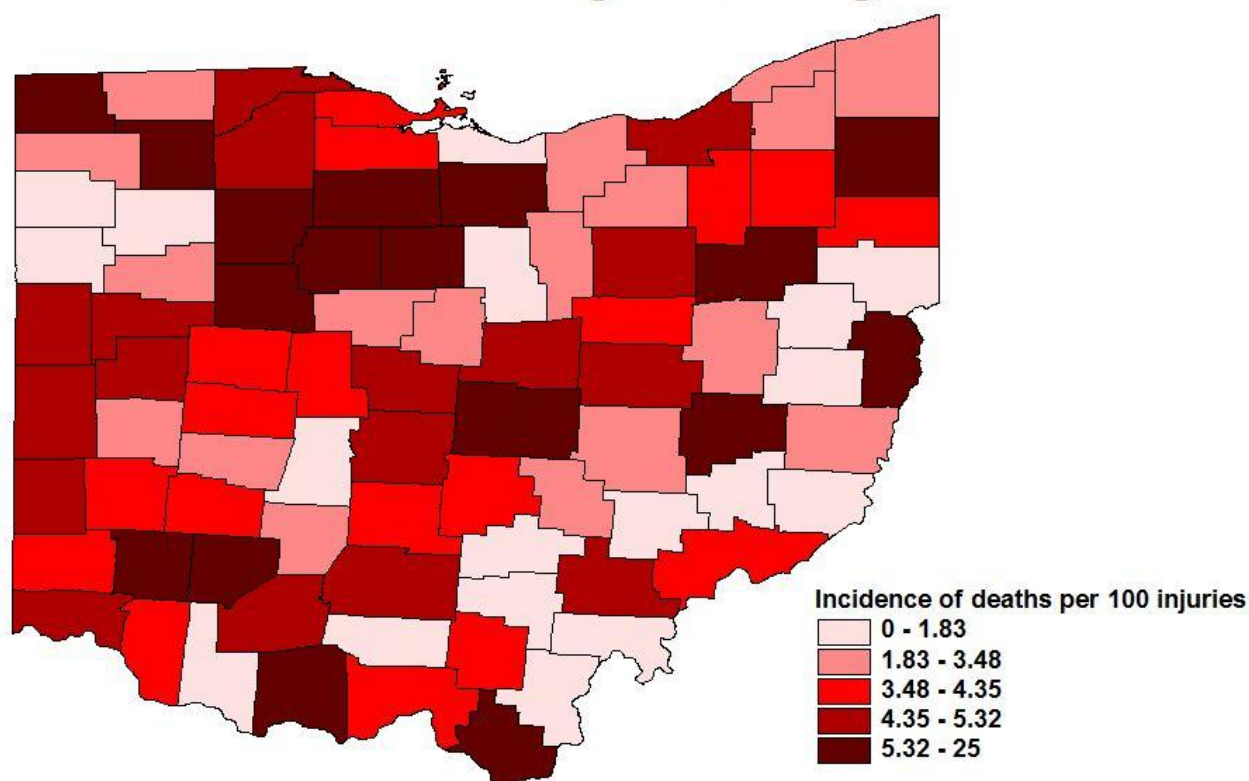

Number of Injury Deaths by County

Number of Injury Deaths:

This map reflects the number of deaths that resulted from injury in each county. Darker shades of red reflect a higher number of injury deaths.

Incidence of Deaths/100 Injuries by County

Incidence of Injury Deaths by County:

This map reflects the crude incidence of injury per 1000 population by county. Darker shades of red reflect higher incidence rates.

Appendix A: Patient Inclusion/Exclusion Criteria

The State Board of EMS has established these criteria for inclusion of records in the OTR:

1. Patient's first or initial admission for at least 48 hours, and who meet one of the following inclusion criteria; **or**
2. Patients who transfer into or out of any hospital, regardless of their length of stay, and who meet one of the following inclusion criteria; **or**
3. Patients that arrive dead on arrival (DOA) and who meet one of the following inclusion criteria; **or**
4. Patients that die after receiving any evaluation or treatment while on hospital premises, **and** who meet one of the following inclusion criteria:

Inclusion Criteria

ICD-9-CM Diagnosis Codes on discharge from acute care hospital			
ICD-9-CM Diagnosis Codes		ICD-9-CM Diagnoses Descriptions	
800.00 – 819.1		Fractures	
821.00 – 904.9		Fractures, dislocations/sprains, intracranial injury, internal injury of thorax, abdomen and pelvis, open wounds, injury to blood vessels	
911.0, 911.1, 912.0, 912.1		Abrasions/friction burns to trunk, shoulder and upper arm	
916.0, 916.1, 919.0, 919.1		Abrasions / friction burns hip, thigh, leg, ankle, other or multiple sites	
920 – 929.9		Contusions and crush injury	
940.0 – 959.9		Burns, injury to nerves and spinal cord, traumatic complications and unspecified injury	
987.9		Smoke inhalation	
991.0 – 991.6		Frostbite, hypothermia and external effects of cold	
994.0, 994.1, 994.7, 994.8		Asphyxiation, strangulation, drowning, and electrocution	
995.50 – 995.59		Child maltreatment and abuse	
OR			
ICD-9-CM Diagnoses		AND WITH ANY OF THE FOLLOWING External Cause Codes (E-Codes)	E-CODE
348.1	Anoxic Brain Injury		E800 – E848.8
348.4	Uncal herniation		E878 – E905.0
348.5,	Cerebral Edema		E906.0 – E928.8
348.8	Pneumocephalus		E950.0 – E998.9
372.72	Subconjunctival hemorrhage		
518.5	Traumatic ARDS		
784.7	Epistaxis		
ICD-9-CM Diagnoses Codes EXCLUDED			
820.00 – 820.9		Isolated hip fracture	
905.0 – 909.9		Late effects of injury	
910.0 – 910.9, 911.2 – 911.7, 912.2 - 912.9. 913.0 - 913.9, 914.0 - 914.9, 915.0 - 915.9, 916.2 - 916.9, 917.0 - 917.9, 918.0 - 918.9, 919.2 - 919.9		Blisters, insect bites	
930 – 939		Foreign bodies	
External Cause Codes EXCLUDED			
E849.0 – E849.9	Place of occurrence		
E850.0 – E869.9	Poisonings		
E870.0 – E879.9	Misadventures during surgical and medical care		
E905.1 – E905.9	Venomous animals and plants (except snakes)		
E929.0 – E929.9	Late effects of Accidental Injury		
E930.0 – E949.9	Drugs, medicinal and biological substances causing adverse effects in therapeutic use		
Codes separated by a hyphen indicate a range of codes including both codes AND all codes in between. Example 800.0 – 801.5 Codes separated by a comma indicate a single code. Example 901.1, 901.2, 901.8

Other specified, classifiable ⁴	E846-E848, E914-E915, E918, E921.0-9, E922.4, E923.0-9, E925.0-E926.9, E928.3, E929.0-5	E955.5, 6, 9, E958.0, 4	E960.1, E965.5-9, E967.0-9, E968.4, 6, 7	E985.5, 6, E988.0, 4	E971, E978, E990-E994, E996, E997.0-2
Other specified, NEC	E928.8, E929.8	E958.8, E959	E968.8, E969	E988.8, E989	E997, E995, E997.8, E998, E999
Unspecified	E887, E928.9, E929.9	E958.9	E968.9	E988.9	E976, E997.9
All injury	E800-E869, E880-E929	E950-E959	E960-E969	E980-E989	E970-E978, E990-E999

¹ Includes legal intervention (E970-E978) and operations of war (E990-E999).

² Three 4th-digit codes (.4 [occupant of street car], .5 [rider of animal], .8 [other specified person]) are not presented separately because of small numbers. However, because they are included in the overall motor vehicle traffic category, the sum of these categories can be derived by subtraction.

³ E968.5 (assault by transport vehicle), E906.5 (bite from unspecified animal), E922.4 (unintentional injury [gunshot wound] with BB/pellet), E955.6 (suicide attempt/intentionally self-inflicted injury [gunshot wound] with BB/pellet gun), E968.6 (assault [gunshot wound] with BB/pellet gun), E985.6 (undetermined intent injury [gunshot wound] with BB/pellet gun), E928.3 (unintentional human bite), and E968.7 (assault by human bite), are specific to the ICD-9-CM and, therefore, only apply to morbidity coding.

⁴ E849 (place of occurrence) has been excluded from the matrix. For mortality coding, an ICD-9-CM E849 code should never be first-listed E code and should only appear as an additional code to specify the place of occurrence of the injury incident.

E-Code groupings from the Centers for Disease Control and Prevention's National Center for Health Statistics

Appendix D: Barell Injury Diagnosis Matrix

The Barell Injury Diagnosis Matrix (complete name: Barell Injury Diagnosis Matrix, Classification by Body Region and Nature of the Injury) standardizes data selection and reports, using a two dimensional array (matrix) that includes all *International Classification of Diseases* (ICD)-9-CM codes describing trauma. It serves as a basic tool in epidemiological and clinical analyses of injury data.

The matrix displays nature of injury in columns and body region in rows placing each ICD-9-CM code in the range from 800-995 in a unique cell location in the matrix. Each cell includes the codes associated with a given injury. The matrix rows and columns can be easily collapsed to get broader groupings or expanded if more specific sites are required.

The full matrix is too complex to reprint here legibly. It can be found at the website of the Centers for Disease Control and Prevention's National Center for Health Statistics in the section on the International Collaborative Effort on Injury Statistics.

Appendix H: Glossary

Barell Matrix: A system of classification of injury by body region and the nature of the injury.

CDC: Centers for Disease Control and Prevention

E-Code: External cause of injury code

ED: Emergency Department

EMS: Emergency Medical Services

Floor: A general medical-surgical room or bed in a hospital. Generally advanced patient monitoring is not performed on a floor bed.

GSW: Gunshot Wound

ICD-9-CM: International Classification of Disease, 9th Revision, Clinical Modification.

ICU: Intensive Care Unit

ISS: Injury Severity Score. A system for scoring the overall severity of injuries. Ranging from 1-75, an ISS of greater than 15 is generally considered a severe injury.

LOS: Length of Stay

MCC: Motorcycle Collision

MOI: Mechanism of Injury

MVC: Motor Vehicle Collision

Observation: A level of hospital care most frequently utilized for lower acuity, short stays, or during an intermediate period while a decision is being made to admit or release the patient.

OR: Operating Room.

OTR: Ohio Trauma Registry

Outcome: Used to describe the patient's outcome; alive or dead.

Step-Down: An intermediate level of care between the "floor" and the ICU.

Appendix I: Ohio Revised Code

§4765.06: Emergency medical services incidence reporting system—state trauma registry.

(B) The board shall establish a state trauma registry to be used for the collection of information regarding the care of adult and pediatric trauma victims in this state. The registry shall provide for the reporting of adult and pediatric trauma-related deaths, identification of adult and pediatric trauma patients, monitoring of adult and pediatric trauma patient care data, determination of the total amount of uncompensated adult and pediatric trauma care provided annually by each facility that provides care to trauma victims, and collection of any other information specified by the board. All persons designated by the board shall submit to the board any information it determines is necessary for maintaining the state trauma registry. At the request of the board any state agency possessing information regarding adult or pediatric trauma care shall provide the information to the board. The board shall maintain the state trauma registry in accordance with rules adopted under section 4765.11 of the Revised Code. Rules relating to the state trauma registry adopted under this section and section 4765.11 of the Revised Code shall not prohibit the operation of other trauma registries and may provide for the reporting of information to the state trauma registry by or through other trauma registries in a manner consistent with information otherwise reported to the state trauma registry. Other trauma registries may report aggregate information to the state trauma registry, provided the information can be matched to the person that reported it. Information maintained by another trauma registry and reported to the state trauma registry in lieu of being reported directly to the state trauma registry is a public record and shall be maintained, made available to the public, held in confidence, risk adjusted, and not subject to discovery or introduction into evidence in a civil action as provided in section 149.43 of the Revised Code and this section. Any person who provides, maintains, or risk adjusts such information shall comply with this section and rules adopted under it in performing that function and has the same immunities with respect to that function as a person who performs that function with respect to the state trauma registry.

(C) The board and any employee or contractor of the board or the department of public safety shall not make public information it receives under Chapter 4765. of the Revised Code that identifies or would tend to identify a specific recipient of emergency medical services or adult or pediatric trauma care.

(D) Not later than two years after the effective date of this amendment, the board shall adopt and implement rules under section 4765.11 of the Revised Code that provide written standards and procedures for risk adjustment of information received by the board under Chapter 4765. of the Revised Code. The rules shall be developed in consultation with appropriate medical, hospital, and emergency medical service organizations and may provide for risk adjustment by a contractor of the board. Before risk adjustment standards and procedures are implemented, no member of the board and no employee or contractor of the board or the department of public safety shall make public information received by the board under Chapter 4765. of the Revised Code that identifies or would tend to identify a specific provider of emergency medical services or adult or pediatric trauma care. After risk adjustment standards and procedures are implemented, the board shall make public such information only on a risk adjusted basis.

(E) The board shall adopt rules under section 4765.11 of the Revised Code that specify procedures for ensuring the confidentiality of information that is not to be made public under this section. The rules shall specify the circumstances in which deliberations of the persons performing risk adjustment functions under this section are not open to the public and records of those deliberations are maintained in confidence. Nothing in this section prohibits the board from making public statistical information that does not identify or tend to identify a specific recipient or provider of emergency medical services or adult or pediatric trauma care.

(F) No provider that furnishes information to the board with respect to any patient the provider examined or treated shall, because of this furnishing, be deemed liable in damages to any person or be held to answer for betrayal of a professional confidence in the absence of willful or wanton misconduct. No such information shall be subject to introduction in evidence in any civil action against the provider. No provider that furnishes information to the board shall be liable for the misuse or improper release of the information by the board or any other person. No person who performs risk adjustment functions under this section shall, because of performing such functions, be held liable in a civil action for betrayal of professional confidence or otherwise in the absence of willful or wanton misconduct.

Effective Date: 11-03-2000

Appendix J: Counties by Population Density Designation

High Density (>1000 people per square mile)	Medium-High Density (300-999 people per square mile)	Medium-Low Density (100-299 people per square mile)	Low Density (<100 people per square mile)

THE OHIO VIOLENCE AND INJURY PREVENTION PROGRAM OVERVIEW

Injury is the leading cause of death for Ohioans ages 1 to 44 and the 5th-leading cause of death overall. The goal of the Ohio Violence and Injury Prevention Program (VIPP) is to continue development of a comprehensive injury prevention program by establishing and sustaining a solid infrastructure that includes statewide injury surveillance to inform and evaluate public policy, as well as comprehensive injury prevention programs.

The VIPP strives to:

- Coordinate surveillance systems that collect injury data.
- Assess the burden of injuries and violence, and communicate information for the purpose of action.
- Promote evidence-based injury prevention interventions for at-risk populations.
- Coordinate and collaborate with partners in building program infrastructure.
- Encourage the adoption of policies and programs that lead to the prevention of injuries.
- Provide technical support and training as needed.
- *Ultimately, make Ohio a safer place to live, work and play by reducing death and disability associated with intentional and unintentional injury.*

The VIPP is working to develop a comprehensive injury prevention program for the State of Ohio. Current VIPP initiatives include:

Ohio Injury Prevention Partnership (OIPP) – The OIPP is a group of professionals representing a broad range of agencies and organizations concerned with building Ohio’s capacity to address the prevention of injury, particularly related to the group’s identified priority areas of falls among older adults, prescription drug abuse and overdose, child injury and violence prevention (suicide and firearm related). The OIPP was convened in November 2007 and is coordinated by ODH with funds from the Centers for Disease Control and Prevention (CDC) National Center for Injury Prevention and Control (NCIPC). The OIPP helps to improve statewide collaboration around injury prevention and will assist ODH with establishing priorities and future directions regarding injury and violence prevention in Ohio.

Local Injury Prevention Grant Program – Through the CDC’s Preventive Health and Health Services Block Grant (PHHSBG), the VIPP provides funding annually to local programs targeting injury. The goal of this grant program is to reduce injury and injury-related deaths to Ohioans through the development of comprehensive, multi-faceted, population-based programs at the local level that address the risks associated with injuries. The nine currently-funded projects (2010-2013 cycle) focus on the following injury priorities: unintentional child/youth injury; falls among older adults; and unintentional prescription drug poisoning.

Child Passenger Safety (CPS) Program – With fines collected through enforcement of Ohio’s child restraint law (Ohio Revised Code Section 4511.81), ODH’s CPS Program provides child safety seats to eligible low-income families in all Ohio counties. The overall goal of this program is to increase

Ohio Violence and Injury Prevention Program, Ohio Department of Health

the availability of child safety seats and booster seats for low income families in Ohio and to increase proper use and correct installation of child safety seats. ODH distributes approximately 45-60 seats to each of the 88 counties per year based on the availability of funds. The CPS Program works in coordination with regional occupant protection coordinators funded by the Ohio Department of Public Safety who serve as liaisons between ODH and the county seat distribution contacts.

Surveillance Activities

- **Injury Surveillance** – The injury surveillance program assesses the burden of overall injury and specific types of injury in Ohio through the examination of multiple data sets including hospital discharge, death certificates, and other sources of injury-related data. Using these data, the VIPP monitors trends and emerging injury issues, produces annual reports and responds to requests for data.
- **Census of Fatal Occupational Injuries (CFOI)** – With funding from the Bureau of Labor Statistics and the Ohio general revenue fund, the CFOI Program provides the public, employers and safety personnel with comprehensive data surrounding fatal occupational-related injuries in Ohio. Data are collected from several sources including death certificates, workers' compensation reports, Occupational Safety and Health Administration (OSHA) reports, traffic crash records, agricultural injury reports and media clippings. The data are collated at the national level and used to establish occupational safety policies and programs.
- **Ohio Violent Death Reporting System (OH-VDRS)** – In September 2009, the CDC awarded a grant to the VIPP to participate in the National Violent Death Reporting System (NVDRS), enabling Ohio to address a critical need in the state: the collection and analysis of high quality data on violent death. With this funding, the VIPP collects and links Vital Statistics data; coroner data from the 88 county coroners; and local law enforcement data to better understand the circumstances surrounding and contributing to violent deaths in Ohio. These data will ultimately be used to develop recommendations regarding the prevention of violent death in Ohio. The NVDRS operates in 18 states, combining data on violent deaths including homicides, suicides, legal intervention deaths, unintentional firearm injury deaths, and deaths of undetermined intent.

Please visit the VIPP website for more information, resources and program updates.

EXECUTIVE SUMMARY

This report reviews injuries for Ohioans from 2000 to 2010. Data for this report were derived from Ohio Hospital Association hospital inpatient discharge and emergency department (ED) datasets and Ohio death certificate files.

Fatalities:

- 7,156 people died from an injury in Ohio in 2010. On average, 20 people die from an injury every day statewide.
- The death rate for injuries increased 33 percent between 2000 and 2010.
- The leading causes of injury death in 2010 were unintentional poisoning, suicide, motor vehicle traffic crashes, and falls. The risk profile for the leading causes of injury varies by segment of the population. The following groups are disproportionately at risk for the leading causes of injury death.
 1. Unintentional poisoning: Males, ages 25-54, and whites
 2. Suicide: Males, ages 25-54, and whites
 3. Motor vehicle traffic crashes: Males, ages 15-24 and ages 85 or older
 4. Falls: Ages 85 or older
- Death rates increased rapidly for poisoning, suicides, and fall related injuries while rates have decreased for motor vehicle traffic related injuries between 2000 and 2010.

Hospitalizations:

- 72,485 injury related hospitalizations occurred in Ohio in 2010. On average, 199 hospitalizations occur in Ohio every day.
- The injury hospitalization rate changed very little between 2002 and 2010.
- The leading causes of injury hospitalizations were falls, self-harm, motor vehicle traffic crashes, and unintentional poisoning. The risk profile for the leading causes of injury hospitalizations varies by segment of the population. The following groups were identified as at risk.
 1. Falls: Females and ages 85 or older
 2. Self-harm: Females and ages 15-44
 3. Motor vehicle traffic crashes: Males and ages 15-24
 4. Unintentional poisoning: Ages 45 or older
- Hospitalization rates increased for self-harm and unintentional poisoning related injuries while rates associated with motor vehicle traffic related injuries decreased between 2002 and 2010. Rates of fall related hospitalizations increased between 2002 and 2003 then remained the same between 2003 and 2010.

Emergency Department Visits (ED):

- 1.36 million ED visits in Ohio were associated with injuries in 2010. On average, 3,726 visits were made to emergency departments every day in Ohio.
- The injury ED visit rate changed very little between 2002 and 2010.
- The leading causes of injury ED visits were falls, motor vehicle traffic crashes, assaults, and unintentional poisoning. The risk profile for the leading causes of injury ED visits varies by segment of the population. The following groups were identified as at risk.
 1. Falls: Females and ages 85 or older
 2. Motor vehicle traffic crashes: Females and ages 15-34
 3. Assaults: Males and ages 15-34
 4. Unintentional poisoning: Ages 1-4
- ED visit rates increased for injuries associated with falls, motor vehicle traffic, assaults, and unintentional poisoning.

Social and Economic Costs:

- Injury related deaths, hospitalizations, and ED visits cost Ohio an estimated \$13 billion in 2010. The estimate includes costs associated with medical care and worker productivity.
- Costs associated with injuries increased 21 percent between 2002 and 2010.
- The leading cause of injury costs in 2010 were falls (\$2.6 billion), motor vehicle traffic (\$2.3 billion), unintentional poisoning (\$2.0 billion), suicide or self-harm (\$1.7 billion), and homicides or assaults (\$1.3 billion).
- Rapid increases in costs were found among unintentional poisoning (117 percent), falls (40 percent), and suffocation (15 percent) while a significant decrease in costs occurred among injuries associated with motor vehicle traffic crashes (20 percent).
- Injuries were associated with over 109,000 years of potential life lost each year which is the leading cause of potential life loss in Ohio.

Violence and Injury Prevention:

The Ohio Department of Health (ODH) is funded by the Centers for Disease Control and Prevention to build capacity related to the prevention and control of injuries and to develop or strengthen injury surveillance programs. ODH coordinates a statewide group of injury prevention stakeholders, the Ohio Injury Prevention Partnership, to build capacity to address the leading causes of injury in Ohio. The group has identified falls among older adults, drug poisonings, child injury and violence prevention (suicide and firearm related) as priority areas.

SECTION 1: INTRODUCTION AND OVERVIEW: INJURY DEFINED

The National Safety Council defines **INJURY** as:

Physical harm or damage to the body resulting from an energy exchange, usually acute mechanical (e.g., motor vehicle crash, falls), chemical (e.g., poisoning), thermal (e.g., fire/burn) or other environmental energy (e.g., hyperthermia, suffocation, drowning) that exceeds the body's tolerance.

Injuries can further be classified by the intent or purposefulness of occurrence in two categories: intentional and unintentional injuries. Intentional injuries are purposely inflicted and often associated with violence. These include child and elder maltreatment, domestic violence, sexual assault, aggravated assault, homicide, and suicide. Unintentional injuries include those that occur without intent of harm and are not purposely inflicted.

In this report, we will examine the burden of unintentional injury as well as injury resulting from intentional acts such as self harm and assaults. The term “unintentional injury” will be used to describe what may commonly be referred to as an accident. The term accident implies a random act; however, most injuries are predictable and preventable. Like diseases, injuries follow recognizable patterns that can be studied and used to inform prevention strategies such as policy and behavior change.

Injuries may be classified by the:

- Mechanism or source of the energy transfer (e.g., motor vehicle, firearms, falls).
- Outcome or result of the transfer of injury (e.g., traumatic brain injury, poisoning, burns).
- Intention of the acts causing the injury (e.g., suicide, abuse, homicide).
- Events/activities or locations that precede them (e.g., playground-related, occupational-related, agricultural-related).

Overlap among these categories exists; for example, motor vehicle-related injuries cause traumatic brain injury. Firearm-related injuries include suicide, homicide and unintentional acts. Playground-related injuries involve falls, strangulation, struck-by and other mechanisms of injury.

The first step in understanding injury is to collect and analyze data. Through the epidemiological study of injury, we can address questions such as “How many people die from violent injury in Ohio each year? Who is most likely to die in a fall? What age groups are most affected by poisoning? By answering these questions, injury data can also lead to important prevention strategies. This report was created to help answer these questions and to provide data to help inform prevention strategies and policies.

INJURY MECHANISMS

The cause, or mechanism, describes the way in which the person sustained the injury; how the person was injured; or the process by which the injury occurred. The cause of injury is the **underlying cause**, rather than the direct cause. The underlying cause is what starts the chain of events that leads to an injury. The direct cause is what produces the actual physical harm. The underlying and direct causes can be the same or different. For example, if a person cuts his or her finger with a knife, the cut is both the underlying and direct cause. However, if a child falls and hits his head on a coffee table, the fall is the underlying cause (the action that starts the injury event), and the contact with the table is the direct cause (the action that causes the actual physical harm). If we can prevent the underlying cause, we can stop the injury from occurring in the first place. In other words, without the underlying cause, there would be no direct cause.

Throughout this report, fatal injuries are defined as a death with any injury listed as the underlying cause of death on the death certificate and non-fatal injuries are defined as an injury listed in the primary diagnostic field of the hospital inpatient or emergency department record. Intent and mechanism of injuries were based on the International Classification of Diseases (ICD) which is a system designed to promote international comparability of statistics. It provides a way to classify medical terms reported by physicians, medical examiners, and coroners on death certificates and data from physician offices and hospital inpatient and outpatient records so they can be grouped together for statistical purposes. The following ICD mechanism groups were used in this report. A list of ICD-9 (ED and hospitalization) and ICD-10 (deaths) codes may be found in Appendix 4 and 5.

Cause of Injury Categories

1. **Cut/pierce/stab:** Injury resulting from an incision, slash, perforation, or puncture by a pointed or sharp instrument, weapon, or object. This category does not include injury from being struck by or against a blunt object (such as the side of a night stand) or bite wounds; these injuries fall in the category "struck by/against."
2. **Drowning/submersion:** Suffocation (asphyxia) resulting from submersion in water or another liquid.
3. **Fall:** Injury received when a person descends abruptly due to the force of gravity and strikes a surface at the same or lower level.
4. **Fire/burn/smoke inhalation:** Severe exposure to flames, heat, or chemicals that leads to tissue damage in the skin or places deeper in the body; injury from smoke inhalation to the upper airway, lower airway, or lungs.

Ohio Violence and Injury Prevention Program, Ohio Department of Health

5. **Firearm gunshot:** A penetrating force injury resulting from a bullet or other projectile shot from a powder-charged gun. This category includes gunshot wounds from powder-charged handguns, shotguns, and rifles. This category does not include injury caused by a compressed air-powered paint gun or a nail gun, which falls in the "other specified" category.
6. **Foreign body:** Injury resulting from entrance of a foreign body into or through the eye or other natural body opening that does not block an airway or cause suffocation (asphyxia). Examples include pebble or dirt in eye, BB in ear, or small children's toys in esophagus.
7. **Suffocation:** Inhalation, aspiration, or ingestion of food or other object that blocks the airway or causes suffocation (asphyxia); intentional or unintentional mechanical suffocation due to hanging, strangulation, lack of air in a closed place, plastic bag or falling earth. This category does not include injury resulting from a foreign body that does not block the airway (see foreign body).
8. **Machinery:** Injury that involves operating machinery, such as drill presses, fork lifts, large power-saws, jack hammers, and commercial meat slicers. This category does not include injury involving machines not in operation, falls from escalators or moving sidewalks, or injuries from powered lawn mowers or other powered hand tools or home appliances.
9. **Natural / environmental:** Injury resulting from exposure to adverse natural and environmental conditions (such as severe heat, severe cold, lightning, sunstroke, large storms, and natural disasters) as well as lack of food or water.
10. **Bite / sting:** Injury from a poisonous or non-poisonous bite or sting through the skin, other than a dog bite. This category includes human bite, cat bite, snake or lizard bite, insect bite, stings from coral or jellyfish, or bites and stings by other plants and animals.
11. **Other specified causes:** Injury associated with any other specified cause that does not fit another category. Some examples include causes such as electric current, electrocution, explosive blast, fireworks, and overexposure to radiation, welding flash burn, or animal scratch.
12. **Overexertion:** Working the body or a body part too hard, causing damage to muscle, tendon, ligament, cartilage, joint, or peripheral nerve (e.g., common cause of strains, sprains, and twisted ankles). This category includes overexertion from lifting, pushing, or pulling or from excessive force.
13. **Poisoning:** Ingestion, inhalation, absorption through the skin, or injection of so much of a drug, toxin (biologic or non-biologic), or other chemical that a harmful effect results, such as drug overdoses. This category does not include harmful effects from normal therapeutic drugs (i.e., unexpected adverse effects to a drug administered correctly to treat a condition) or bacterial illnesses.

- 14. Struck by / against or crushed:** Injury resulting from being struck by (hit) or crushed by a human, animal, or inanimate object or force other than a vehicle or machinery; injury caused by striking (hitting) against a human, animal, or inanimate object or force other than a vehicle or machinery.
- 15. Transportation-related causes:** Injury involving modes of transportation, such as cars, motorcycles, bicycles, and trains. This category is divided into five subcategories according to the person injured: motor vehicle occupant, motorcyclist, pedal cyclist, pedestrian, and other transport. This category also involves another factor--whether the injury occurred in traffic (on a public road or highway).
- 16. Unknown/unspecified cause:** Injury for which the report does not provide enough information to describe the cause of injury.

“Injury is probably the most under recognized major public health problem facing the nation today, and the study of injury represents unparalleled opportunities for reducing morbidity and mortality and for realizing significant savings in both financial and human terms—all in return for a relatively modest investment.”

From: Injury Prevention: Meeting the Challenge, The National Committee for Injury

SECTION 2: THE OVERALL BURDEN OF INJURY IN OHIO

INJURY AS A CAUSE OF DEATH IN COMPARISON TO OTHER PUBLIC HEALTH ISSUES

Injuries are a serious public health problem throughout the lifespan in Ohio. Injuries were consistently in the top five leading causes of death for most age groups in 2009 (Table 2.1). Unintentional injuries are the 5th-leading cause of death overall and the leading cause of death for ages 1-44. Homicides were one of the 5 leading causes of death for ages 1-9 and 15-44 while suicides were one of the 5 leading causes of death for ages 10-54.

Table 2.1 Five Leading Causes of Death Number of deaths by age groups, Ohio 2009											
Rank	<1	1-4	5-9	10-14	15-24	25-34	35-44	45-54	55-64	65+	All Ages

Source: CDC WISQARS

--- Number suppressed due to counts less than 10

Ohio Violence and Injury Prevention Program, Ohio Department of Health

Among those aged 1 to 44, injuries caused more deaths than all infectious and non-communicable diseases (e.g., heart disease, cancer, stroke, diabetes, Alzheimer's, liver disease, etc.) combined (see Figure 2.1).

¹Source: ODH Office of Vital Statistics

Another way to explore the burden of injury in relation to other causes of death throughout the lifespan is shown in Figure 2.2 below. This figure demonstrates the proportion of all 2010 deaths in a particular age group that were accounted for by injury. Injuries accounted for a substantial percentage of all deaths among ages 1-44. They were associated with the greatest proportion of deaths among those ages 15-34 years. For the ages 15-24, if all injury deaths were prevented, 72 percent of all deaths in this age group would be eliminated. Injuries were associated with a smaller percentage of deaths among infants less than 1 year and adults ages 45 or older. For young children ages 1 to 4 years, 43 percent of deaths were caused by injuries, and for children ages 5 to 14, more than one-third of all deaths in 2010 were injury-related. From age 25 on, the proportion of deaths due to injury steadily decreased down to 2 percent for older Ohioans as the number of deaths from chronic diseases and other causes increases.

In contrast, fatal injury rates decreased from birth through age 14 then increased from ages 15 to 34 and was similar among ages 35-74. Fatal injury rates increased dramatically among adults ages 75 or older. So while the proportion of all deaths due to injury decreases with age after 24 years, the impact of injury across the lifespan continues to be significant as death rates rise.

YEARS OF POTENTIAL LIFE LOST (YPLL)

Another measure of the burden of injury is Years of Potential Life Lost (YPLL), or life lost by a premature death. YPLL involves estimating the average time a person would have lived had he or she not died prematurely. This measure is used to help quantify social and economic loss owing to premature death, especially for specific causes of death affecting younger age groups. According to the CDC WISQARS web-based query system, injuries were the leading contributor to YPLL for Ohio in 2009 (See Figure 2.3). Approximately 109,000 YPLL were attributed to all injuries. Unintentional injuries contributed 65,239 YPLL followed by suicides (24,287 years) and homicides (16,675).

SECTION 2A: OVERVIEW OF INJURY IN OHIO

Ohio Injury Pyramid, 2010

¹Source: Ohio Department of Health, Vital Statistics ²Source: Ohio Hospital Association

BURDEN OF INJURY:

Injuries are a significant public health problem in Ohio. On average in Ohio in 2010, there was more than one injury-related hospitalization every 7 minutes and an emergency department visit every 23 seconds, amounting to more than 72,000 hospitalizations and 1.36 million ED visits (Table 2.2). In addition, there was an average of nearly 20 injury-related deaths per day to Ohioans in 2010.

All injuries include unintentional causes such as motor vehicle traffic, drowning, poisoning as well as homicides and suicides.

Table 2.2 Ohio Average Injury Frequency, 2010

Injury-related	Total 2010 Number	Per Day	Per Hour	Per Minute	Seconds....
ED Visits	1,360,000	3,726	155	2.6	An ED visit every 23 seconds
Hospitalizations	72,485	199	8	A hospitalization every 7 minutes	
Deaths	7,156	20	A death every 1 hour 23 minutes		

These injuries impact the state on a variety of levels. Injuries can lead to declines in physical health, well-being, and quality of life ranging from several days to many years. The large volume and treatment charges of injuries have taken a heavy toll on Ohio's health care systems. In 2010, fatal and non-fatal injuries cost Ohio \$13.4 billion in medical care and work loss. If these costs were equally divided among all Ohioans, injuries would cost every man, woman and child more than \$1,200 per year.

Fortunately injuries can be prevented through a combination of changes in individual behavior, the physical and social environment, as well as the implementation of policies aiming to reduce risk for injury.

The following sections of this report present information on specific types of injuries, the number of Ohioans affected, trends over time, and the economic impact on health care systems.

DEATHS:

In 2010, 7,156 Ohioans or roughly 20 per day died from an injury or violence-related cause. The death rate for injuries was 60.0 per 100,000 (see Figure 2.4). Males were more likely than females to die from an injury (82.0 versus 35.4 per 100,000). Injury fatality rates varied by age group with the highest rates found among adults ages 75 or older (see Figure 2.5). The highest fatal injury rates were found among African Americans (62.6 per 100,000) and whites (60.4 per 100,000) while lower rates were found among Hispanics (39.3 per 100,000). Table 2.3 highlights these injury risk profiles.

Table 2.3: All Injury Death Risk Profile, Ohio, 2010		
	2010 At Risk Groups	Annual trend since 2000
Overall		+33%
Sex	Males	Males (largest increase)
Age	75 or older	85 or older (largest increase)
Race and ethnicity	Blacks	Whites (largest increase)

TRENDS:

Since 2000, fatal injury rates have increased 33 percent from 45 per 100,000 in 2000 to 60 per 100,000 in 2010 (see Figure 2.4). The death rate increased by an average of 1.5 deaths per 100,000 per year. The average annual increase was greater among males (+1.7 per 100,000) than females (0.95 per 100,000). Death rates increased among most age groups, with the largest increases by age found among adults aged 85 or older (+4.5 per 100,000 per year) followed by ages 45-54 (3.2 per 100,000 per year) (see Figure 2.6).

Ohio Violence and Injury Prevention Program, Ohio Department of Health

These increases are largely attributable to rising drug overdose rates and falls among older adults. A decrease in rates was found among children ages 5-14 (-0.4 per 100,000 per year). Fatal rates increased by an average of 1.6 per 100,000 per year for whites while rates remained the same for other race and ethnic groups. See tables 1a and 1b located at the end of this section for more detailed information on the number and rate of injury fatalities in Ohio.

Figure 2.7. Number and age adjusted rate for all injury hospitalizations by year, Ohio, 2002-2010

Source: Ohio Hospital Association

HOSPITALIZATIONS:

Over 72,000 hospitalizations resulted from injuries in Ohio in 2010. The injury hospitalization rate was 588 per 100,000 (Figure 2.7). Overall males (614 per 100,000) were more likely to be hospitalized for an injury than females (545 per 100,000). For both males and females, the rate of hospitalizations decreased from birth to 14 years of age and then steadily increased with age among individuals 15 or older with the highest rates found among older adults 75 or older. From birth to age 64, hospitalization rates were higher among males than females. This pattern was reversed among adults aged 65 or older with higher rates found among females (see Figure 2.8). This trend is attributable to growing rates of fall-related injury among older females. Table 2.4 highlights these injury risk profiles.

Table 2.4 All Injury Hospitalization Risk Profile

	2010 At Risk Groups	Annual trend since 2002
Overall		+5%
Sex	Males	Males (largest increase)
Age	75 or older	85 or older (largest increase)

TRENDS:

Since 2002, injury hospitalization rates have increased 5 percent from 561 per 100,000 in 2002 to 588 per 100,000 in 2010. The average increase was 4.6 hospitalizations per 100,000 per year. The average annual increase was larger among males (+5.6 per 100,000) compared to females (4.1 per 100,000). Injury hospitalization rates increased among most age groups with the largest increase found among adults ages 85 or older (40 per 100,000 per year). A decrease in hospitalization rates occurred among children ages 5-14 (-4 per 100,000) while rates among children 4 years or less, ages 15-24 and 35-44 did not follow a linear trend (see Figure 2.9). See Tables 2a and 2b for more detailed information located at the end of this section on the number and rate of all injury hospitalizations.

*Interpret with caution, does not follow linear trend

Figure 2.10. Number and age adjusted rate for all injury-related ED visits by year, Ohio, 2002-2010

Source: Ohio Hospital Association

EMERGENCY DEPARTMENT VISITS:

Nearly 1.36 million emergency department visits resulted from injuries in 2010. The injury ED visit rate was 12,181 per 100,000 (see Figure 2.10). The rate of ED visits was slightly higher among males compared to females (12,739 versus 11,567 per 100,000). ED visit rates increased with age from birth through age 34, steadily decreased from ages 35 to 64, and subsequently increased among adults 65 or older. From birth to age 54, ED visit rates were higher among males than females. This pattern was reversed among adults aged 55 or older with higher rates found among females (see Figure 2.11) due to higher rates of fall-related injury among older females. Table 2.4 highlights these injury risk profiles.

Table 2.4 All Injury ED Visit Risk Profile		
	2010 At Risk Groups	Annual trend since 2002
Overall		+8%
Sex	Males	Females (largest increase)
Age	15-34	85 or older (largest increase)

TRENDS:

Injury ED visit rates resulting from all injuries increased 8 percent from 11,518 per 100,000 in 2002 to 12,495 in 2010. The average annual increase was 137 per 100,000 per year. The average annual increase was 185 per 100,000 among females while the trend for males did not follow a linear pattern. ED visit rates increased among almost all age groups with the largest increase found among adults aged 85 or older (479 per 100,000) (see Figure 2.12). See Tables 3a and 3b located at the end of this section for more detailed information on the number and rate of all injury ED visits.

INJURY MECHANISM

Table 2.6 provides the leading mechanisms for fatal injuries and injuries treated as hospital inpatient care and in the emergency department in 2010. Poisoning, falls, transportation, firearms, and suffocation were the leading causes of injury death for Ohioans of all ages.

Of non-fatal injuries with an external cause of injury code (E-Code), falls, poisoning, transportation, struck by or against, and firearms were leading causes of injury hospitalization while falls, struck by or against, transportation, overexertion, and cut/pierce were the leading causes of injury treated in emergency departments.

Please note that these data include all intents (i.e., unintentional, homicide, suicide, undetermined). Intent will be specified in later sections of the report.

External Cause of Injury Coding (E-Code) Limitations

A substantial percentage of hospital inpatient (38%) and emergency department (26%) records did not list an external cause mechanism. This missing information is an important limitation to our ability to accurately describe the burden of injuries in Ohio by mechanism and to design efforts to prevent injuries from occurring in the future.

Table 2.6: Leading Causes of Injury Death¹, Hospitalization² and ED Visits² by Mechanism, Ohio, 2010

RANK	DEATHS ¹ 2010	HOSPITALIZATIONS ² 2010	ED VISITS ² 2010
1	Poisoning (27.4%)	Falls (32.0%)	Falls (23.2%)
2	Transportation (17.7%)	Poisoning (12.3%)	Struck by/against (12.9%)
3	Falls (16.5%)	Transportation (7.8%)	Transportation (9.4%)
4	Firearm (15.8%)	Struck by/against (2.5%)	Overexertion (9.1%)
5	Suffocation (9.3%)	Firearm (1.3%)	Cut/Pierce (5.7%)
6	Not specified (4.5%)	Cut/Pierce (1.1%)	Other specified (3.2%)
	All other mechanisms (11.0%)	All other mechanisms (5.2%)	All other mechanisms (10.6%)
MISSING E-CODE		37.8%	25.9%

Sources: 1 ODH Office of Vital Statistics, 2 Ohio Hospital Association

Figure 2.13 presents this same information in chart format. The chart format clearly illustrates the problem of missing E-codes in hospital and ED data where the mechanism of injury is simply missing in more than one-third of the hospitalized injuries and more than one-fourth of the ED visits.

Figure 2.13. Leading Causes of Injury-related Death, Hospitalization, and ED Visits by Mechanism, Ohio, 2010

INJURY ACROSS THE LIFESPAN

Age is a significant factor affecting the occurrence, severity and type of injury. As demonstrated in the table below, risk for different type of injury varies across the lifespan.

YOUNG OHIOANS:

Injury is the leading cause of death and disability for children. Their dynamic cognitive and development abilities play a significant role in their vulnerability to injury.

While fatal injury risk varies greatly as children age (see Table 2.7), non-fatal risk is much less variable. Falls are the leading cause of non-fatal (ED and hospitalizations) injury for children birth to age 9. Falls remain the leading cause of injury-related hospitalization through age 15 when self-harm and motor vehicle traffic crashes surpass them. Falls remain the 2nd-leading cause of injury-related ED visits from ages 10 to 24.

Infants

During the first year of life, risk of death due to injury is higher than any other age group until age 24 (Figure 2.2). Suffocation and homicide are the leading causes of injury death to infants while falls and assault lead to the most injury-related hospitalizations. Falls and unintentional struck by/against cause the greatest number of injury-related ED visits among Ohio infants.

Children

For young children ages 1 to 4, homicide, drowning, motor vehicle traffic and fire/burn are the leading causes of injury death in Ohio. As described above, falls are the leading cause of injury-related hospitalization and ED visits for young children. Poisoning and fire/burn are the 2nd- and 3rd-leading causes of injury-related hospitalizations, respectively for this age group. Struck by/against is the 2nd cause of injury-related ED visits.

For children ages 5 to 9, motor vehicle traffic and homicide are the two leading causes of injury death. Falls are the leading cause of non-fatal injury for both ED visits and hospitalizations. Motor vehicle traffic crashes are the 2nd-leading causes of injury-related hospitalizations and struck by/against is the second leading cause of injury related ED visits.

Teens and Young Adults

For ages 10-24, motor vehicle traffic crashes remain the leading cause of injury-related death followed by suicide and then homicide. Self-harm, motor vehicle traffic crashes and falls are the three-leading causes of injury-related hospitalization in order. Struck-by against followed by falls are the leading causes of injury-related ED visits for ages 10 -24.

ADULTS

Adults have significant risks for injury. Over the past decade, rates have been increasing largely due to the prescription drug abuse epidemic leading to fatal drug overdoses. For ages 25 – 54, unintentional poisoning (drug overdose), suicide and motor vehicle traffic cause the most injury fatalities. Most injury-related hospitalizations are caused by self-harm, falls and motor vehicle traffic among this age group. Falls, overexertion and struck-by/against are the three-leading causes of injury-related ED visits.

For ages 55-64, suicide emerges as the leading cause of injury death. Falls and motor vehicle traffic are the two-leading causes for non-fatal injury-related hospitalizations and ED visits.

OLDER ADULTS

Older adults have the highest rates of injury death. As with children, anatomical, physiological and cognitive changes help to explain the heightened risk. Sight, balance and coordination wane with age leading to an increased risk for falls. In addition, increasing use of medications and possible drug interactions may also be a risk factor for falls. Falls are the leading cause of injury-related death, hospitalization and ED visits for older Ohioans aged 65 and older. In 2010, older adults accounted for 14 percent of Ohio's population while accounting for 82 percent of the fatal falls.

Reaction times increase leading to risk for motor vehicle crashes, the 2nd-leading cause of injury-related death, hospitalization and ED visits. Poor sight or decreased mental capacity and memory may lead to unintentional drug overdoses or poisonings. In addition, physical changes may lead to greater severity of injury and less resiliency.

Older adults may also be socially isolated and depressed leading to risk for substance abuse or self-harm/suicide.

Table 2.7 provides a detailed listing of leading causes of fatal and non-fatal injury by intent, mechanism and age group.

Leading Causes of Injury by Age Group Summary, Ohio, 2006-10

Age Group	Fatal ¹	Non-fatal ²
Infants (< 1 year)	Suffocation*	Falls*
Toddlers (1-4 years)	Homicide	Falls*
Children (5 to 9 years)	Motor vehicle traffic*	Falls*
Tweens to Young Adults (10-24 years)	Motor vehicle traffic*	Struck-by/against* (e.g., in sports)
Adults (25 – 64 years)	Poisoning*	Falls*
Older Adults (65+)	Falls*	Falls*

SECTION 3: UNINTENTIONAL INJURIES

Figure 3.1: Distribution of Injury-related death, hospitalization and ED visits by mechanism, Ohio, 2010

In 2010, unintentional injuries accounted for two-thirds of all fatal injuries (including suicide, homicide and undetermined cases). Among discharges with an external cause of injury code, most injuries treated in hospitals were unintentional (80 percent of inpatient injuries and 94 percent of emergency department visits). The leading mechanism for unintentional injuries differed by severity (Figure 3.1). The leading cause of fatal unintentional injuries was poisoning (33%) followed by falls (23%) and transportation (23%). The leading mechanisms were the same for inpatient-related injuries however the distribution and rank of the mechanisms changed. Falls accounted for nearly two-thirds of injury related hospitalizations and was followed by transportation (12%) and poisoning (8%). These mechanisms represented a much smaller percentage of emergency department discharges (47 percent combined). Notably, being struck by or against (16%), overexertion (12%), and cutting or piercing (9 percent) were leading mechanisms of emergency department discharges that did not represent a sizeable proportion of fatal injuries or inpatient discharges.

SECTION 3.1: UNINTENTIONAL POISONINGS

CHAPTER HIGHLIGHTS:

Patterns:

- Unintentional poisonings are one of the leading causes of fatal and non-fatal injuries.
- Higher rates of death and ED visits were found among males compared to females.
- Poisoning severity distinctly varied by age with the highest rates of death found among ages 45-54, hospitalizations among older adults ages 45 or older, and ED visits among children ages 1-4.
- Prescription medication and controlled substances are implicated in most unintentional poisoning deaths and hospitalizations. Approximately one-half of poisoning-related ED visits were associated with food and other non-drug substances; whereas drugs and medications have caused over 90 percent of unintentional poisoning deaths and hospitalizations.

Trends:

- Deaths, hospitalizations and ED visit rates have increased rapidly.
- Largest increases in death and hospitalization rates were found among ages 45-54. Largest increase in ED visit rates were found among children ages 1-4.

Figure 3.2. Number and age adjusted rate of unintentional poisoning deaths by year, Ohio, 2000-2010

Source: Ohio Department of Health, Office of Vital Statistics

DEATHS:

In 2010, 1,639 Ohioans died from an unintentional poisoning. The 2010 unintentional poisonings fatality rate was 14.2 per 100,000 (see Figure 3.2). The rate of unintentional poisoning fatalities was higher among males (18.6 per 100,000) compared to females (10.0 per 100,000). Rates increased with age up to 45-54 year olds, and decreased among ages 55 and older (Figure 3.3). Whites had a higher rate than Blacks or Hispanics. See Table 3.1 for an unintentional poisoning death risk profile. Drugs and medicinal substances contributed to nearly all (94 percent) of the poisoning deaths in 2010 (Figure 3.4).

Table 3.1. Unintentional Poisoning Death Risk Profile

	2010 At Risk Groups	Annual trend since 2000
Overall		+264%
Sex	Males	Males (largest increase)
Age	45-54	45-54 and 25-34 (largest increases)
Race and ethnicity	Whites	Whites (largest increase)

TRENDS:

Fatal unintentional poisoning rates have quadrupled from 3.9 per 100,000 in 2000 to 14.2 per 100,000 in 2010 (Figure 3.2). Unintentional poisoning is now the leading cause of injury-related death in Ohio, surpassing motor vehicle traffic in 2006 and continuing the trend through 2010. Rates increased rapidly among both males and females. Fatality rates increased across most age groups with the largest increases observed among adults aged 45-54 and 25-34. Contrasting trends in drug poisoning deaths were found by race. In 2000, rates were higher among blacks than whites. Rates among whites increased by 1.2 deaths per 100,000 throughout the study period while rates among blacks increased in 2000-2006 then decreased in 2006-2010. Ultimately death rates among whites surpassed blacks in 2008 and remained higher in 2009-2010. Drugs and medications contributed to nearly all unintentional poisoning deaths throughout the study period. See Tables 4a-b located at the end of this section for more detailed information on the number and rate of unintentional poisoning fatalities.

HOSPITALIZATIONS:

Over 2,800 hospitalizations resulted from unintentional poisonings in Ohio in 2010. The poisoning hospitalization rate was 24 per 100,000 (Figure 3.5). The hospitalization rate was similar for males and females and rates of hospitalizations varied by age. Starting at age 15, rates increased through age 54 then decreased among 55-74 year olds and increased among ages 75 or older (Figure 3.6). Rates of hospitalizations for males and females were similar among all age groups except for adults 85 or older with higher rates found among males (data not shown). Ninety-two percent of hospitalizations resulted from unintentional poisoning by a drug or medicinal substance (Figure 3.7).

Table 3.2 Unintentional Poisoning Hospitalization Risk Profile

	2010 At Risk Groups	Annual Trend since 2002
Overall		+46%
Sex	Similar for males and females	Similar for males and females
Age	75-84	45-64 (largest increase)

TRENDS:

Unintentional poisoning hospitalizations rates increased 46 percent from 16 per 100,000 in 2002 to 24 per 100,000 in 2010. Rates increased by an average of 1 per 100,000 per year. The increase in hospitalizations was similar among males and females. Hospitalization rates increased among most age groups with the largest increases found among ages 45-64 (2 per 100,000). Most poisonings were caused by drugs or medications throughout the study period (data not shown). See Tables 5a-c located at the end of this section for more detailed information on the number and rate of unintentional poisoning hospitalizations.

EMERGENCY DEPARTMENT VISITS:

Over 13,000 ED visits resulted from unintentional poisonings in 2010. The ED visit rate was 121 per 100,000 (Figure 3.8). The rate of unintentional poisoning ED visits was slightly higher among males compared to females (129 versus 113 per 100,000). ED visit rates were the highest among children ages 1-4 years (Figure 3.9). See Table 3.3 for an unintentional poisoning ED visit risk profile. Approximately one-half of unintentional poisoning ED visits resulted from drug, medication or biological substances and the other half resulted from foodstuff and other non-drug substances (Figure 3.10).

Table 3.3 Unintentional Poisoning ED Visit Risk Profile

	2010 At Risk Groups	Annual trend since 2002
Overall		+48%
Sex	Males	Males (largest increase)
Age	1-4	1-4 (largest increase)

TRENDS:

The rate of unintentional poisoning ED visits increased 48 percent from 82 per 100,000 in 2002 to 121 per 100,000 in 2010. The average annual increase was 5 ED visits per 100,000 per year. The annual increase was slightly higher among males (6 per 100,000) compared to females (4 per 100,000). ED visit rates increased across all age groups with the largest annual increases found among most age groups with the largest increase found among children ages 1-4 (14 per 100,000). The number of ED visits increased for both drug and non-drug substances. The number of ED visits resulting from drug, medicinal, and biologic substances increased by an average of 373 while foodstuff and other non-drug substances increased by an average of 160 per year. The number of ED visits resulting from drug related poisoning surpassed non-drug substances in 2008 and remained higher through 2010. See Tables 6a-c for more detailed information on the number and rate of unintentional poisoning ED visits.

SECTION 3.1A: UNINTENTIONAL DRUG POISONINGS (OVERDOSES)

BACKGROUND INFORMATION

- Drugs/medications are involved with 95% of unintentional poisoning deaths.
- Drugs/medications are involved with 92% of unintentional poisoning hospitalizations.
- Drug overdose death rates increased 319 percent in the past decade in Ohio.
- Drug poisonings are now the leading cause of injury death in Ohio.

Please note that the terms drug poisoning and overdose will be used interchangeably in this report.

From 2000 to 2010, unintentional drug overdose (poisoning) deaths have increased more than 319% and are now the leading cause of injury death in Ohio surpassing motor vehicle traffic, suicide, homicide, firearms and falls. On average, an Ohioan suffers an unintended drug overdose every six hours leading to four deaths per day in this state alone. This epidemic is largely driven by abuse and misuse of prescription pain medication (opioids). In 2010, 45 percent of Ohio unintentional overdose deaths involved prescription opioids. These medications led to more deaths than any other legal or illicit substance including heroin and cocaine combined. Factors contributing to this epidemic include:

- Changes in clinical pain management guidelines encouraging the use of opioids as a result of pain treatment advocacy groups and pharmaceutical companies leading to state law changes.
- Release of new, long-acting opioids into the market (e.g., OxyContin, Duragesic)
- Aggressive marketing of opioids by pharmaceutical companies to primary care physicians
- Use of methadone as a pain medication
- Widespread prescribing, abuse and diversion of these medications

These factors led to rapid increases in the prescribing of prescription opioids for chronic pain. From 1997 to 2010, the total distribution of opioid grams (in morphine milligram equivalent grams) per 100,000 Ohioans increased 670 percent (Source: DEA ARCOS reports). The increasing use of prescription opioids has led to increased risk for opioid dependency and addiction and subsequent diversion of medications as those affected find ways to obtain the drugs.

Admissions for prescription opioid substance abuse treatment have closely followed increased prescribing trends and overdose death rates. In the past decade, admissions have increased more than 750 percent in Ohio (Source: Treatment Episode Data System, SAMHSA). Ohio's fatal overdose epidemic is the result of the increased exposure to these highly addictive and powerful medications with essentially the same active ingredient as heroin.

This epidemic is not limited to Ohio. In 2008, there were 14,800 prescription painkiller deaths across the United States. For every 1 death, there are 10 treatment admissions for abuse, 130 people who abuse or are dependent and 825 nonmedical users leading to significant direct and indirect costs.

PROGRAMMATIC EFFORTS TO ADDRESS DRUG POISONING

- **Surveillance of drug overdose trends and patterns** and providing data on the Ohio Drug Overdose webpage: <http://www.healthyohioprogram.org/vipp/drug/dpoison.aspx>
- **Coordination of the Prescription Drug Abuse Action Group (PDAAG)** The PDAAG is an ongoing state-level work group comprised of over 100 member organizations dedicated to reducing prescription drug abuse, misuse and overdose in Ohio. The PDAAG serves as a conduit for information sharing, networking and the development of state-level recommendations to address the issue. The PDAAG is an action group of the Ohio Injury Prevention Partnership (OIPP) described in the report introduction.
- **Conducting a social marketing campaign: *Prescription for Prevention: Stop the Epidemic* (P4P) (www.p4pohio.org)**. P4P is a multi-level social marketing campaign to combat the epidemic of prescription drug overdose that includes coalition establishment and support in high risk counties, public education and outreach, TV and radio public service announcements, peer-to-peer programs in schools and education at work sites.
- **Funding two pilot projects in Scioto and Montgomery Counties from 2010-2013** with funding from the CDC's Preventive Health and Health Services Block Grant. These projects engage in activities such as coalition development, education of healthcare prescribers and service providers, formation of a poison death review committee, policy development and implementation of public education and awareness campaigns.
- **Providing start-up support and resources for Scioto County's naloxone distribution program: Project DAWN** (Deaths Avoided with Naloxone) <http://bit.ly/projectdawn>; the first of its kind in the State.
- **Encouraging excess drug disposal solutions and methods** such as take back events and permanent drug disposal drop boxes through the development of take-back guidelines and support for permanent drop boxes.
- **Collaboration with other state organizations to plan conferences, summits and educational opportunities.**
- Providing support for the Governor's Opiate Cabinet Action Team, Prescriber Education Workgroup including **development of Emergency and Acute Care Opioid and Other Controlled Substances Prescribing Guidelines** and other responsible prescribing guidelines.

Figure 3.11: Number and age adjusted rate of unintentional drug poisoning deaths by year, Ohio, 2000-2010

Source: Ohio Department of Health, Office of Vital Statistics

DEATHS:

In 2010, 1,544 Ohioans died from unintentional drug poisoning with a fatality rate of 13.4 per 100,000 (Figure 3.11). The rate of unintentional drug poisoning fatalities was higher among males (17.5 per 100,000) compared to females (9.5 per 100,000). Rates of unintentional poisoning fatalities began increasing at age 15 and peaked among adults age 54 then decreased among adults 55 or older. Whites had a rate of 14.6 per 100,000 followed by blacks (10.3 per 100,000) and Hispanics (8.0 per 100,000). See Table 3.4 for an unintentional drug poisoning death risk profile.

Table 3.4 Unintentional Drug Poisoning Death Risk Profile

	2010 At Risk Groups	Annual trend since 2000
Overall		+319%
Sex	Males	Similar for males and females
Age	45-54	45-54 (largest increase)
Race and ethnicity	Whites	Whites (largest increase)

TRENDS:

Since 2000, fatal unintentional drug poisoning rates have increased 319 percent from 3.6 per 100,000 in 2000 to 13.4 per 100,000 in 2010. A rapid increase in rates was found among males and females. Fatality rates increased among ages 25-64 with the largest increase found among ages 25-34 and 45-54 (2.0 per 100,000 per year). Although whites exhibit the largest rate increase over time, 329 percent, Black, Non-Hispanics have had higher rates in seven of the last eleven years. It is not until 2008, that whites exceed rates among blacks.

The top six drug categories that were coded on the death certificate as contributing to the unintentional drug poisoning death are presented on the right. The categories are presented as the five-year average number of deaths for comparison purposes for 2000 to 2010 in Table 3.5.

1. The category with the highest number of average occurrences is “other or unspecified drug included”*, which groups all instances where an unspecified drug (e.g., multiple drug use, poly-substance use) was listed on the death certificate as contributing to an individual’s death. This drug category indicates multiple drugs were involved in the death. This category increased by 67 percent from the 2000 - 2005 average of 504 occurrences to the 2006- 2010 average of 842. From 2006 to 2010, approximately 60 percent of the unintentional overdoses included *other/unspecified* drugs.

2. The second drug category, all opioids, includes prescription opioids as well as heroin. Fatal unintentional overdoses involving all opioids increased by 82 percent from the 2000 - 2005 average of 337 occurrences to the 2006- 2010 average of 613. From 2006 to 2010, 43 percent of the unintentional overdoses included *all opioids*.

3. The third drug category, prescription opioids includes commonly-prescribed narcotic pain medications such as hydrocodone, oxycodone, fentanyl, morphine, codeine, methadone, etc. This category increased by 81 percent from the 2000 - 2005 average of 254 occurrences to the 2006- 2010 average of 460. From 2006 to 2010, one-third of the unintentional overdoses involved a prescription opioid. This percentage has been increasing and is 45 percent for 2010.

4. The fourth drug category includes only instances where only “other/unspecified drug(s)” were listed as the cause of death for the individual. The first drug category “Other/Unspecified Included” differs from this category in that specific drugs may have been included in addition to other/unspecified. The unspecified only drug category increased 83 percent from the 2000 - 2005 average of 186 occurrences to the 2006- 2010 average of 341. In nearly one in four (24 percent) of the overdoses, no specific drug is indicated on the death certificate.

5. Fatal unintentional overdoses involving cocaine increased by 35 percent from the 2000 - 2005 average of 159 occurrences to the 2006- 2010 average of 215. Cocaine was mentioned in 15 percent of the unintentional overdoses from 2006 to 2010.

Table 3.5 Unintentional Drug Poisoning Deaths by Drug Type ^{1,2}			
Drug Category	2000-2005 Annual Ave.	2006-2010 Annual Ave.	Percent of all 2006-10 Overdoses
Other/Unspecified Drug Included ³	504	842	60%
All Opioids	337	613	43%
Prescription Opioids	254	460	33%
Other/Unspecified Drug Only ⁴	186	341	24%
Cocaine	159	215	15%
Heroin	100	224	16%
All Overdoses*	708	1,411	

¹Source: ODH Office of Vital Statistics

²Multiple drugs may be involved in any death.

³includes all instances where ‘other/unspecified’ is included as contributing to death; may also be included with specific drugs.

⁴includes only those instances where no other drug than ‘other/unspecified’ is included as contributing to death.

Ohio Violence and Injury Prevention Program, Ohio Department of Health

6. Fatal unintentional overdoses involving heroin increased from an average of 100 annual occurrences in 2000-2005 to an average of 224 annual occurrences in 2006-2010. In 2006-2010, 15 percent of the unintentional overdoses involved heroin.

Notice that the rank order of the drug category occurrences did not change from the 2000-2005 average to the 2006- 2010 average. As stated above, all of the drug category occurrences increased, however, cocaine only increased by 35 percent while other/unspecified drug only, other/unspecified drug included, prescription opioids and all opioids were all above 80 percent. Also stated above is that the drug categories, except for other/unspecified drug only, are not mutually exclusive, so that multiple drugs can be listed on the death certificate as contributing to the death.

MULTIPLE DRUG USE

After examining the types of drugs involved in unintentional drug poisonings, the emphasis now turns to the number of substances involved in the death. In addition to rapidly rising opioid use, multiple drug use is another key contributing factor in this epidemic. Presenting the number of drugs/medications listed on the death certificate, Figure 3.12 displays the percentage of single and multiple unintentional drug poisoning deaths for Ohio in 2010. Grouped into categories, 360 or nearly one fourth (23 percent) of the decedents had only one drug listed **while the remaining three fourths (77%) involved more than one substance**. Twenty nine percent (448) of decedents had 2 drugs/medications. The largest category with 45 percent (691) had 3 to 5 drugs/medications while the smallest group, with 3 percent of the individuals, had 6 to 7 drugs/medications. None of the death certificates indicated over 7 drugs were involved in the deaths.

Figure 3.12: Number of drugs involved in unintentional drug poisoning deaths, Ohio, 2010

Source: Ohio Department of Health, Office of Vital Statistics

Figure 3.13. Number and age adjusted rate for unintentional drug poisoning hospitalizations by year, Ohio, 2002-2010

Source: Ohio Hospital Association

HOSPITALIZATIONS:

Over 2,700 hospitalizations resulted from unintentional drug poisonings in Ohio in 2010 (Figure 3.13). Nearly all (92 percent) of the hospitalizations for unintentional poisoning were related to drug/medications. For both males and females, the number of drug poisoning-related hospitalizations decreased with age from 0-14 years, steadily increased between ages 15 and 54, and remained elevated among ages 55 or older (Figure 3.14). See Table 3.6 for an unintentional drug poisoning hospitalization risk profile.

Table 3.6 Unintentional Drug Poisoning Hospitalization Risk Profile

	2010 At Risk Groups	Annual trend since 2002
Overall		+57%
Sex	Similar for males and females	Similar for males and females
Age	45 or older	45-54 (largest increase)

TRENDS:

Unintentional drug poisoning hospitalization rates for unintentional drug poisonings have increased from 14 per 100,000 in 2002 to 22 per 100,000 in 2010. Rates increased on average by 1 hospitalization per 100,000 per year. The increase was similar for males and females. The hospitalization rate increased across almost all age groups, with the largest increase found among adults ages 45-54 (2 per 100,000 per year). Trends among ages 0-14 and 85 or older did not follow a linear trend. See Tables 8a and 8b located at the end of this section for more detailed information on the number and rate of hospitalizations resulting from unintentional drug poisoning.

Figure 3.14. Unintentional drug poisoning hospitalization rate by age group and sex, Ohio, 2010

Source: Ohio Hospital Association

DRUGS AND MEDICATION:

Between 2007 and 2010, the most common drugs involved in unintentional poisoning were opioids (889 per year), prescription opioids (841 per year), alcohol (523 per year), benzodiazepines (498 per year), cocaine (307 per year), tranquilizers (287 per year), methadone (189 per year) and heroin (133 per year). An increase in the annual number of poisonings was found for almost all drug categories. The largest increases were found for methadone (73 percent), all opioids (51 percent), and prescription opioids (51 percent). In contrast, the annual number of poisonings involving cocaine remained the same in 2002-2006 and 2007-2010.

Consistent with death data, all opioids and prescription opioids were involved in the greatest percentage (33 percent or one-third) of hospitalizations for unintentional drug overdose. Among specific opioids, methadone was involved in a higher percentage of the unintentional overdoses than heroin. Prescription opioids and

Table 3.7 Drug Involvement in Unintentional Drug Poisoning Hospitalizations: Risk Profile

Drug Category	2002-2006 Annual Ave.	2007-2010 Annual Ave.	Percent of all 2007-2010 Drug Poisonings
All opioids	587	889	33%
Prescription opioid	557	841	31%
Alcohol	408	523	19%
Benzodiazepines	341	498	18%
Cocaine	307	307	11%
Tranquilizers	201	287	11%
Methadone	87	189	7%
Heroin	86	133	5%
All Drug Poisoning Hospitalizations	2,162	2,731	

Ohio Violence and Injury Prevention Program, Ohio Department of Health

benzodiazepines were involved in 31 and 18 percent, respectively, of the hospitalized unintentional overdoses.

See table 8c at the end of this section for more detailed information on the number of drugs and medications involved with unintentional poisonings.

EMERGENCY DEPARTMENT VISITS:

Approximately 7,200 ED visits resulted from unintentional drug poisonings in 2010 resulting in a rate of 64 visits per 100,000 Ohioans (Figure 3.15). The rate of unintentional drug poisoning-related ED visits was similar among males and females for ages 0-74. Among ages 75 or older, rates were higher for males compared to females. The highest rate of ED visits was found among children ages 1-4 years (264 per 100,000) while the lowest number of ED visits was found among children ages 5-14 (24 per 100,000) (Figure 3.16). See Table 3.8 for an unintentional drug poisoning ED visit risk profile.

Table 3.8 Unintentional Drug Poisoning ED Visit Risk Profile		
	2010 At Risk Groups	Annual trend since 2002
Overall		+73%
Sex	Similar for males and females	Similar for males and females
Age	1-4 years	1-4 years (largest increase)

TRENDS:

Since 2002, the rate of unintentional drug poisoning-related ED visits nearly doubled from 37 per 100,000 in 2002 to 64 per 100,000 in 2010. The average annual increase was 4 per 100,000 per year. The increase was similar among males and females. Drug poisoning-related ED visit rates increased among all age groups with the largest increases found among children ages 1-4 (14 per 100,000 per year). See Tables 9a and 9b located

Ohio Violence and Injury Prevention Program, Ohio Department of Health

at the end of this section for more detailed information on the number and rate of unintentional drug poisoning ED visits.

DRUGS AND MEDICATION:

From 2007 to 2010, the most common drugs involved with ED visits resulting from unintentional drug poisonings included opioids (1,185 per year), prescription opioids (909 per year), benzodiazepines (635 per year), tranquilizers (557 per year), methadone (475 per year) and heroin (442 per year). The number of ED visits increased rapidly among most drug categories. Compared to annual averages in 2002-2006, the most rapid increase was found among visits associated with the use of Methadone (265 percent) and Heroin (149 percent).

See Table 9c located at the end of this section for more detailed information on trends in the type of drugs associated with unintentional drug poisoning ED visits.

Table 3.9 Unintentional Drug Poisoning ED Visit Risk Profile			
Drug Category	2002-2006 Annual Ave.	2007-2010 Annual Ave.	Percent of all ED Visits for Drug Poisoning, 2007-2010
All opioids	662	1,185	17%
Prescription opioids	509	909	13%
Benzodiazepines	442	635	9%
Tranquilizers	330	557	8%
Methadone	130	475	7%
Heroin	178	442	6%
Alcohol	325	377	5%
Total ED Visits for Drug Poisoning	5,170	6,919	

PAIN MEDICATION USE:

According to the 2010, Ohio Behavioral Risk Factor Surveillance Survey (BRFSS), one third of adults in Ohio reported using pain medications in the last 12 months. The use of pain medication varied across segments of the population. Females were more likely to report use than males. Adults who were widowed, separated, or divorced were more likely to use than married couples. Substantial differences in pain medication use were found by socioeconomic groups. College graduates were less likely to use pain medications than other educational attainment categories. Adults living below or near the federal poverty level were more likely to report usage than individuals 200 percent or more above poverty.

While opioid pain medications are controlled substances that should be accessible only through prescriptions by legitimate prescribers, studies have shown these medications are commonly diverted and used by people for whom they are not prescribed. Nationwide, most nonmedical users of pain relievers reported accessing the drugs through someone else. The most common source was a friend or relative (71 percent) with most getting the pain relievers for free (55 percent), some buying them (11 percent) and a small proportion taking them without asking (5 percent). Only 1 in 5 reported obtaining pain relievers through one (17 percent) or more doctors (2 percent) (see Figure 3.17).

Ohio Violence and Injury Prevention Program, Ohio Department of Health

In Ohio, the most common prescription pain medications reported were drugs with the active ingredients of hydrocodone (e.g., Vicodin, Lortabs), oxycodone (e.g., OxyContin, Percocet) and medications with other active ingredients. In addition, 21 percent of adults with a prescription and 14 percent of adults without a prescription did not know the active ingredient.

Findings from the survey suggest that the majority of adults with a prescription had leftover medication.

Among those with leftover medication, most either kept it (69 percent) or disposed of it (28 percent). Secure

storage and proper disposal of unused medication is an important public health issue because it can reduce access to unintended users and reduce the environmental threat to natural resources.

While prescription opioid medication is commonly used to manage pain, the active ingredients in the medication have highly addictive properties structurally similar to heroin. It is recommended using the medication as directed by a physician in order to avoid addiction and possible overdose. Findings from the survey found that 5 percent of those with a prescription did not use as directed and 4 percent of all adults used pain medication for recreation or non-medical use. Based on the overwhelming and escalating prescription drug abuse problem facing Ohio, these figures are likely under-reported. See Tables 10a-d for more detailed information about self-reported prescription medication use.

Table 3.10 Most common pain medications reported by active ingredient¹

Active ingredient	With a prescription	Without a prescription
Hydrocodone	34%	31%
Oxycodone	20%	29%
Other drug	18%	16%
Don't know	21%	14%

SECTION 3.2: MOTOR VEHICLE TRAFFIC CRASHES

CHAPTER HIGHLIGHTS:

Patterns:

- Motor vehicle crashes were one of the leading causes of fatal and non-fatal unintentional injuries.
- Males were more likely to experience fatal injury and hospitalization than females.
- Young drivers and older adults were most likely to experience an injury.
- Most adults reported regular seat belt use while less than half of high school students reported regular seat belt use.

Trends:

- Death and hospitalization rates are on the decline while ED visit rates increased slightly.
- Fatal and non-fatal injury rates have decreased the most among ages 15-34.
- Percentage of adults who reported always using their seat belt increased from 76 percent in 2002 to 83 percent in 2010. These self-reported data are consistent with observational seat belt use data as well.

DEATHS:

In 2010, 1,155 deaths resulted from unintentional motor vehicle traffic crashes. The fatality rate was 9.8 per 100,000 (Figure 4.1). Fatality rates among males were nearly three times higher than females (14.7 compared to 5.7 per 100,000). The largest number of deaths occurred among ages 15-24 years while the highest rates of fatalities were found among adults age 85 or older (Figure 4.2). Motor vehicle traffic fatalities varied by race and ethnic groups. The highest rates were found among white, non-Hispanics (10.1 per 100,000) followed by Hispanics (8.3 per 100,000) and black, non-Hispanics (8.2 per 100,000). See Table 4.1 for an unintentional motor vehicle traffic death risk profile.

Table 4.1 Unintentional Motor Vehicle Traffic Crash Death Risk Profile		
	2010 At Risk Groups	Annual trend since 2000
Overall		-15%
Sex	Males	Similar for males and females
Age	85 or older	15-24 (largest decrease)
Race and ethnicity	Whites	Whites (largest decrease)

TRENDS:

Fatalities resulting from unintentional motor vehicle traffic crashes decreased 15 percent from 11.5 per 100,000 in 2000 to 9.8 per 100,000 in 2010. The average decrease was -0.3 deaths per 100,000 per year. The decrease in death rates was similar among males and females. Decreases were found in several age groups with the largest decrease among ages 15-24 (-0.8 per 100,000 per year). Rates among ages 25-34, 45-74, and 85 or older did not follow a linear trend. Decreases in rates were found among whites (-0.3 per 100,000 per year) while rates among blacks did not follow a consistent pattern. See Tables 11a-b located at the end of this section for more detailed information about the number and rates of unintentional motor vehicle crashes in Ohio.

Figure 4.2. Number and rates of unintentional motor vehicle traffic related death rates by age group, Ohio, 2010

Source: Ohio Department of Health, Vital Statistics

*Rate suppressed due to fewer than 20 deaths

PERSON INJURED:

In 2010, the person injured in approximately one-half (588 deaths) was unspecified. The most common specified fatally injured persons were car occupants (259 deaths), motorcyclists (150 deaths), and pedestrians (108 deaths) (see Table 11c). The number of car occupant deaths decreased by 20 deaths per year while deaths of motorcyclists increased by 5 per year. The number of deaths with an unspecified person and pedestrian deaths did not follow a consistent trend. See Table 11c located at the end of this section for more detailed information on the number of persons fatally injured in motor vehicle traffic crashes in Ohio.

Source: Ohio Department of Health, Vital Statistics

Figure 4.4. Number and age adjusted rate of hospitalizations for unintentional motor vehicle traffic related injury by year, Ohio, 2002-2010

Source: Ohio Hospital Association

HOSPITALIZATIONS:

Nearly 4,800 inpatient hospitalizations resulted from unintentional motor vehicle traffic-related injury in Ohio in 2010. The motor vehicle traffic related hospitalization rate was 41 per 100,000 (Figure 4.4). The hospitalization rate was higher for males (52 per 100,000) compared to females (30 per 100,000). The highest rates were found among individuals 15-24 years (64 per 100,000) and 25-34 years (55 per 100,000). The lowest rates were found among children 14 years of age or less (Figure 4.5). See Table 4.2 for an unintentional motor vehicle traffic crash hospitalization risk profile.

Table 4.2 Unintentional Motor Vehicle Traffic Crash Hospitalization Risk Profile

	2010 At Risk Groups	Annual trend since 2002
Overall		-34%
Sex	Males	Males (largest decrease)
Age	15-24	15-24 (largest decrease)

TRENDS:

As with deaths, hospitalizations resulting from unintentional motor vehicle traffic-related injury decreased 34 percent from 63 per 100,000 in 2002 to 41 per 100,000 in 2010. The average decrease was 3 hospitalizations per 100,000 per year. The decrease in hospitalizations was slightly higher among males (4 per 100,000) than females (3 per 100,000). Hospitalization rates decreased among ages 15 and older with the largest decrease occurring among ages 15-24 (7 per 100,000). See Tables 12a-b located at the end of this section for more detailed information on the number and rate of unintentional motor vehicle traffic crash hospitalizations.

Figure 4.5. Hospitalization rates from unintentional motor vehicle traffic crashes by age group and sex, Ohio, 2010

Source: Ohio Hospital Association

*Rate suppressed due to fewer than 20 Hospitalizations

NATURE OF CRASH:

The most common causes of motor vehicle traffic hospitalizations were a collision with another motor vehicle, loss of control (not on a highway), and a traffic crash of an unspecified nature. These categories combined account for nearly 75 percent of hospitalizations associated with motor vehicle traffic crashes each year. The number of hospitalizations for each of these categories has decreased from 2002 - 2010 with the largest decreases associated with collisions with other motor vehicles (204 per year). Hospitalizations resulting from motor vehicle traffic crashes associated with loss of control, not on highway (88 per year), and unspecified nature (70 per year) also experienced more modest decreases during this time period (Figure 4.6). See table 12c located at the end of this section for more detailed information on the number of hospitalizations by nature of traffic crash.

Figure 4.6. Number of hospitalizations resulting from unintentional motor vehicle traffic crashes by nature of crash, Ohio, 2002-2010

Source: Ohio Hospital Association

PERSON INJURED:

In 2010, most hospitalizations after a motor vehicle traffic crash were occupants of the vehicle. Approximately one-half of hospitalizations were the driver of the vehicle and nearly one in five were passengers in the vehicle or a motorcycle driver or passenger. Eight percent of the hospitalizations involved pedestrians injured in motor vehicle traffic crashes (Figure 4.7).

The decrease in motor vehicle traffic hospitalizations has been driven by decreases in hospitalizations among drivers (261 per year), passengers (107 per year), and pedestrians (33 per year). See tables 12d located at the end of this section for more detailed information on the number of persons injured in motor vehicle traffic related hospitalizations.

Figure 4.7. Number of hospitalizations resulting from unintentional motor vehicle traffic crashes by the person injured, Ohio, 2002-2010

Source: Ohio Hospital Association

EMERGENCY DEPARTMENT VISITS:

Approximately 104,000 emergency department (ED) visits resulted from unintentional motor vehicle traffic crash-related injury in 2010. The ED visit rate was 928 per 100,000 (Figure 4.8). The rate of unintentional motor vehicle traffic ED visits was higher among females (1,019 per 100,000) compared to males (839 per 100,000). ED visit rates were similar among children and teens ages 14 or younger but increased dramatically among driving-aged youth ages 15-24. Rates decreased with age among adults 25 or older (Figure 4.9). See Table 4.3 for an unintentional motor vehicle traffic crash ED visit risk profile.

Table 4.3 Unintentional Motor Vehicle Traffic Crash ED Visit Risk Profile		
	2010 At Risk Groups	Annual trend since 2002
Overall		+16%
Sex	Females	Females (largest increase)
Age	15-44	25-34 (largest increase)

TRENDS:

Since 2002, the rate of ED visits resulting from motor vehicle traffic crash-related injury increased from 803 per 100,000 in 2002 to 928 per 100,000 in 2010. The average annual increase was 11 per 100,000 per year. Rates increased 14 per 100,000 annually among females while rates did not follow a linear trend for males. The largest increase in annual rates was found among adults ages 25-34. See Tables 13a and 13b located at the end of this section for more detailed information on the number and rate of unintentional motor vehicle traffic crash ED visits.

Figure 4.9. ED visit rates per 100,000 resulting from unintentional motor vehicle traffic crash-related injury by age group and sex, Ohio, 2010

Source: Ohio Hospital Association

NATURE OF CRASH:

The most common causes of motor vehicle traffic crash-related ED visits were collision with another motor vehicle (68 percent), loss of control (8 percent), and collision on a highway (5 percent). These coding categories combined account for 81 percent of ED visits associated with motor vehicle traffic crashes each year. The number of ED visits associated with collisions on highways and collisions with pedestrians increased, but the other types of crashes did not follow a linear trend. See Table 13c located at the end of this section for more detailed information on the number and percentage of ED visits by nature of motor vehicle traffic crashes.

Figure 4.10. Distribution of ED visits resulting from motor vehicle traffic crashes by nature of crash, Ohio, 2010

Source: Ohio Hospital Association

PERSON INJURED IN CRASH:

Most motor vehicle traffic-related ED visits involved an injury to either the driver (58 percent) or the passenger (28 percent) of the motor vehicle. In addition, 6 percent of ED visits were associated with an injury to an unspecified person and 3 percent were associated with injuries to pedestrians and persons riding a motorcycle. The largest increases in the number of ED visits were among passengers (378 per year), motorcyclists (119 per year), and pedestrians (97 per year). See Table 13d located at the end of this section for more detailed information on the number and percentage of persons injured in motor vehicle ED visits.

SECTION 3.2A: TEEN DRIVERS

*SOURCE: OHIO TRAFFIC CRASH STATISTICS, 2011

While the number of injuries treated in health care facilities has decreased over the past decade, motor vehicle traffic crashes among teen drivers remains a public health and safety issue. In 2011, nearly 290,000 motor vehicle traffic crashes were reported to the Ohio Department of Public Safety. Of these crashes, 67,829 or 14 percent involved drivers ages 16-20. The crashes ranged in severity with 124 resulting in death, nearly 19,000 resulting in injury, and approximately 48,000 resulting in property damage. Teen drivers were disproportionately involved in crashes compared to all other age groups. Teenage males were more likely to be involved in a crash than females.

RISK FACTORS

There are many well-known factors that raise a driver's risk of being killed or injured in a crash:

- **Speed** – Among Ohio drivers of all age groups in 2010:
 - 156 fatal crashes were caused by speeding or driving at unsafe speeds.
 - 5,306 crashes resulting in injuries were caused by speeding or driving at unsafe speeds.
 - 9,376 crashes resulting in property damage were caused by speeding or driving at unsafe speeds.
- **Alcohol** - Among Ohio drivers ages 16-20 in 2010:
 - 36 fatal crashes were caused by alcohol impaired drivers.
 - 91 percent of fatal crashes involved a driver ages 16-20 with a blood alcohol concentration of 0.08 or higher.

Ohio Violence and Injury Prevention Program, Ohio Department of Health

- 7 percent of high school students in Ohio reported driving a car or other vehicle when they had been drinking alcohol in 2011. No differences in the percentage of students reporting episodes of drinking and driving were found by sex while students in grade 12 were more likely to drive after drinking alcohol (13 percent) than students in grade 10 (4 percent).
- **Lack of seat belt use** -
 - Only 29 percent of occupants aged 16-20 who were killed in traffic crashes were restrained.
 - 10 percent of high school students in Ohio reported “never” or “rarely” wearing a seat belt when driving a car. Males were more likely to “never” or “rarely” wear a seat belt (13 percent) than females (6 percent). No differences were found by grade level.
- **Driving at night** – The fatal crash rate of 16-year-olds is nearly twice as high at night.¹
- **Driver distractions** such as talking on a cell phone and carrying multiple peer passengers are risky. Teen passengers and cell phones are two distractions proven to kill teens.² Two or more peer passengers more than triples the risk of a fatal crash with a teen at the wheel.³ The risk is not just for the driver. Most teen passengers who die in crashes are riding with a teen driver.

SECTION 3.2B: YOUTH SEAT BELT USE

Figure 4.12. Percentage of high school students who reported always wearing a seatbelt when riding in a motor vehicle, Ohio, 1999, 2003, 2005, 2007, and 2011

Source: Ohio Youth Risk Behavior Survey

SELF REPORTED SEAT BELT USE:

Approximately 4 in 10 high school students reported “always” using a seat belt when they ride in a motor vehicle in 2011 (Figure 4.12). Reported seat belt use was similar for males (37 percent) and females (41 percent). Reported seat belt use increased by grade level with students in grade 12 (44 percent) being more likely to “always” use seat belts than students in grade 9 (35 percent). White students (42 percent) were more likely report “always” using a seat belt than African American (27 percent) or Hispanic (30 percent) students.

TRENDS IN SEAT BELT USE:

The percentage of high school students who “always” reported wearing a seat belt has not changed since 1999. Seat belt use patterns by sex, grade, race or ethnicity did not change during the period. See Tables 4a-b located on the following page for more detailed information on the reported seat belt use among high school students in Ohio.

Ohio Violence and Injury Prevention Program, Ohio Department of Health

SECTION 3.2c: ADULT SEAT BELT USE

Figure 4.13. Percentage of adults who reported always using a seat belt when riding in a motor vehicle, Ohio, 2002, 2006, 2008 and 2010

Source: Ohio Behavioral Risk Factor Surveillance System

SELF REPORTED SEAT BELT USE:

Approximately 8 in 10 adults reported “always” using a seat belt when they ride in a motor vehicle in 2010 (Figure 4.13). Several important patterns were found in frequent seat belt use. Females were more likely to report “always” wearing a seat belt (86 percent) compared to males (79 percent). Adults ages 55 or older were more likely to report “always” wearing a seat belt than adults ages 44 or younger. No differences were found by education, household poverty, employment, or marital status.

TRENDS:

The percentage of adults who reported “always” using a seat belt increased from 76 percent in 2002 to 83 percent in 2010 (Figure 4.13). Significant increases were observed in both males and females as well as adults aged 35 or older, completing post secondary education, household incomes well above poverty, married couples, and currently employed. See Tables 15a-b located on the following page for more details about self-reported seat belt use among adult Ohioans.

SECTION 3.3: PEDESTRIAN INJURIES

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- The highest fatality rates were found among adults ages 75-84 and blacks.
- The highest rates of non-fatal pedestrian injuries occurred among youth and adults ages 15-24.
- Most fatal and non-fatal pedestrian injuries resulted from motor vehicle traffic crashes.

Trends:

- Death and ED visit rates have largely remained the same over time.
- Hospitalization rates have increased 31 percent since 2002.
- Most fatal and non-fatal pedestrian injuries were associated with motor vehicle traffic crashes throughout the study period.

Figure 5.1. Number and age adjusted rate of pedestrian deaths by year, Ohio, 2000-2010

Source: Ohio Department of Health, Vital Statistics

DEATHS:

In 2010, 139 deaths resulted from pedestrian injuries. The death rate was 1.2 per 100,000 (Figure 5.1). Death rates were two times higher among males (1.7 per 100,000) compared to females (0.8 per 100,000). The highest death rates were found among adults 75-84 years (2.6 per 100,000) and 45-54 years (1.8 per 100,000) (Figure 5.2). Fatality rates among blacks (2.0 per 100,000) were two times higher than whites (1.1 per 100,000). See Table 5.1 for a pedestrian injury death risk profile. Approximately 80 percent of pedestrian fatalities were associated with motor vehicle traffic and 15 percent were associated with non-traffic situations while 5 percent were unspecified (Figure 5.3).

Table 5.1 Pedestrian Death Risk Profile		
	2010 At Risk Groups	Annual trend since 2000
Overall		Inconsistent
Sex	Males	Inconsistent
Age	75-84	45-54 (+0.07/100,000)
Race and ethnicity	Blacks	Whites (-0.05/100,000)

TRENDS:

Pedestrian fatality rates decreased slightly from 1.25 per 100,000 in 2000 to 1.20 per 100,000 in 2010 (Figure 5.1). The annual rate changes were inconsistent over time for both males and females. Slight increases were found in average annual rates among ages 45-54 years (0.07 per 100,000 per year) and 15-24 years (0.03 per 100,000 per year) while a slight decrease was found among ages 55-64 years (-0.03 per 100,000 per year). Fatality rates decreased on average by -0.05 per 100,000 per year among whites while rates did not follow a consistent trend among blacks. See Tables 16a-c located at the end of this section for more detailed information on the number and rate of pedestrian deaths in Ohio.

HOSPITALIZATIONS:

In 2010, 450 hospitalizations resulted from pedestrian injuries. The hospitalization rate was 3.9 per 100,000 (Figure 5.4). Rates among males were two times higher than females (5.6 versus 2.8 per 100,000). For males, hospitalization rates increased from birth through age 24 then decreased among ages 25-34 and leveled off ages 35 or older. For females, hospitalizations were fairly consistent across the lifespan (Figure 5.5). See Table 5.2 for a pedestrian injury hospitalization risk profile. Nearly 90 percent of pedestrian injuries were associated with motor vehicle traffic crashes (Figure 5.6).

Table 5.2 Pedestrian Injury Hospitalization Risk Profile		
	2010 At Risk Groups	Annual trend since 2002
Overall		-35%
Sex	Males	Females (largest decrease)
Age	15-24	75-84 and 5-14 (largest decreases)

TRENDS:

Hospitalization rates decreased from 6.0 per 100,000 in 2010 to 3.9 per 100,000 in 2002 (Figure 5.4). The average annual decrease was -0.2 per 100,000 per year. Rates decreased -0.2 per 100,000 per year among females while rates among males did not follow a consistent trend. Hospitalization rates decreased among all age groups with the largest decreases found among ages 75-84 (0.5 per 100,000 per year) and children ages 5-14 (0.4 per 100,000 per year). The number of hospitalizations associated with motor vehicle traffic crashes decreased 28 per year while non-traffic related hospitalizations did not follow a consistent trend over time. See Tables 17a-c located at the end of this section for more detailed information on unintentional pedestrian injury hospitalizations.

EMERGENCY DEPARTMENT VISITS:

In 2010, roughly 4,000 ED visits resulted from pedestrian injuries. The ED visit rate was 35.5 per 100,000 (Figure 5.7). The rate of ED visits was higher among males (42 per 100,000) than females (29 per 100,000). For both males and females, ED visit rates increased with age from birth through age 24 then steadily decreased after age 25 (Figure 5.8). See Table 5.3 for a pedestrian injury ED visit risk profile. Approximately 81 percent of pedestrian injury related ED visits were associated with motor vehicle traffic crashes. Nearly 12 percent of ED visits were associated with motor vehicle non-traffic crashes and 7 percent involved other road vehicles (Figure 5.9).

Table 5.3 Pedestrian Injury ED Visit Risk Profile

	2010 At Risk Groups	Annual trend since 2002
Overall		+24%
Sex	Males	Males (largest increase)
Age	15-24	15-24 (largest increase)

TRENDS:

ED visit rates increased from 29 per 100,000 in 2002 to 36 per 100,000 in 2010 (Figure 5.7). The average annual increase was 1.0 per 100,000 per year. The average annual increase was two times higher among males (1.7 per 100,000 per year) than females (0.9 per 100,000 per year). Increases in rates were found among ages 15-64 with the largest increase found among ages 15-24 (2.5 per 100,000 per year). Rates among children and adults ages 65 or older did not follow a linear trend. ED visits resulting from motor vehicle traffic crashes increased on average by 97 ED visits per year. Non-traffic and other road crashes did not follow a consistent trend over time. See Tables 18a-c for more detailed information on the number and rate of ED visits associated with unintentional pedestrian injuries.

SECTION 3.4: PEDAL CYCLE INJURIES

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- Males were 8 times more likely than females to die from pedal cycle related injury.
- Approximately one pedal cycle related hospitalization occurs each day in Ohio.
- 39 visits are made to an emergency department every day in Ohio for a pedal cycle related injury.
- Male children ages 5-14 are most likely to experience a non-fatal pedal cycle injury.
- Most non-fatal pedal cycle injuries resulted from collisions with other road vehicles.
- Only 50% of children under 18 years of age frequently wear a helmet when riding a pedal cycle.

Trends:

- 223 pedal cycle related deaths have occurred in Ohio since 2000.
- Hospitalizations increased 33 percent in 2002-2008 then decreased 26 percent in 2008-2010.
- ED visits increased 9 percent in 2002-2010.
- Males were likely to experience a non-fatal pedal cycle injury throughout study period.
- Adults ages 45-54 were most likely to experience a hospitalization and children ages 5-14 were more likely to experience an ED visit.
- Most non-fatal pedal cycle injuries resulted from collisions with other road vehicles throughout the study period.

Figure 6.1. Number of pedal cycle deaths by sex, Ohio, 2000-2010

Source: Ohio Department of Health, Vital Statistics

DEATHS:

Since 2000, 223 deaths have resulted from pedal cycle injuries. The annual death rate for the period was 0.2 per 100,000. Males were 8 times more likely to die from a pedal cycle related injury than females. Little variation was found across age groups among ages 5-64. Pedal cycle deaths were very uncommon among children younger than 5 or adults ages 65 or older. Death rates were similar among whites and blacks while pedal cycle related deaths were rare among other race and ethnic groups. See Table 6.1 for a pedal cycle death risk profile. Nearly all deaths (92 percent) involved a motor vehicle traffic crash. See Tables 19a-c located at the end of this section for more detailed information on pedal cycle related deaths in Ohio.

	At Risk Groups
Sex	Males
Age	Similar across age groups
Race and ethnicity	Similar among whites and blacks

Figure 6.2. Number and age adjusted rate for pedal cycle injury hospitalizations by year, Ohio, 2002-2010

Source: Ohio Hospital Association

HOSPITALIZATIONS:

Approximately 450 hospitalizations resulted from pedal cycle injuries in 2010. The hospitalization rate was 3.8 per 100,000 (Figure 6.2). Males were 4 times more likely than females to be hospitalized due to pedal cycle injury. Hospitalization rates fluctuated throughout the lifespan with the highest rates found among children ages 5-14 and adults ages 45-74 (Figure 6.3). See Table 6.2 for a pedal cycle hospitalization risk profile. Most hospitalizations resulted from collisions with other road vehicles (76 percent) and motor vehicle traffic crashes (24 percent) (Figure 6.4).

Table 6.2 Pedal Cycle Hospitalization Risk Profile		
	2010 At Risk Groups	Annual Trend Since 2002
Overall		No change
Sex	Males	Similar for males and females
Age	45-54	45-54 (largest increase)

TRENDS:

The hospitalization rate for pedal cycle injuries did not change between 2002 and 2010 (Figure 6.2). Rates among males were consistently higher than females during the study period. In 2002-2009, the highest rates of hospitalization were found among children ages 5-14 years. A large decrease in rates among children ages 5-14 occurred from 2009 to 2010. In contrast, a steady rise in hospitalization rates was found among adults ages 45-74 in 2002-2010. Continued monitoring and evaluation is needed to understand the reasons for the decrease in rates by age group. Most hospitalizations resulted from collisions with other road vehicles and motor vehicle traffic crashes throughout the study period. See Tables 20a-c located at the end of this section for more information on hospitalizations resulting from pedal cycle injuries.

EMERGENCY DEPARTMENT VISITS:

In 2010, approximately 12,000 ED visits resulted from pedal cycle injuries. The ED visit rate was 115 per 100,000 (Figure 6.5). Males were more likely than females to experience an ED visit throughout the lifespan (Figure 6.6). The highest rates were found among children ages 5-14. See Table 6.3 for a pedal cycle injury ED visit risk profile. Nearly all ED visits were associated with a collision with any other road vehicle (91 percent) or motor vehicle traffic (9 percent) (Figure 6.7).

Table 6.3 Pedal Cycle Injury ED Visit Risk Profile

	2010 At Risk Groups	Annual trend since 2002
Overall		+8%
Sex	Males	Males (largest increase)
Age	5-14	15-24 (largest increase)

TRENDS:

ED visit rates resulting from pedal cycle injuries increased from 106 per 100,000 in 2002 to 115 per 100,000 in 2010 (Figure 6.5). The average annual increase was 2.8 per 100,000 per year. The average annual increase was greater among males (4.0 per 100,000 per year) than females (1.7 per 100,000 per year). The highest rates of ED visits were found among children ages 5-14 throughout the study period. The largest annual increases were found among youth and young adults ages 15-24 (6 per 100,000 per year) and adults ages 45-54 (4.4 per 100,000 per year). Almost all ED visits were associated with a collision with any other road vehicle throughout the study period. ED visits involving motor vehicle traffic collisions increased by 38 visits per year while trends in other road crashes and non-traffic crashes did not follow a linear pattern. See Table 21a-c located at the end of this section for more information on ED visits associated with pedal cycle injuries.

SECTION 3.4A: YOUTH BICYCLE HELMET USE

Figure 6.8. Percentage of children less than 18 years of age who wear a helmet when riding a bicycle, by frequency of helmet use, Ohio, 2010

Source: Ohio Behavioral Risk Factor Surveillance System

BICYCLE HELMET USE:

Research has shown wearing a bicycle helmet reduces an individual's risk for traumatic head and brain injuries¹. In 2010, approximately 50 percent of Ohio adults reported the oldest child in their household infrequently (e.g. "never", "rarely" or "sometimes") wears a helmet when riding a bicycle. The frequency of bicycle helmet use varied by levels of household income and county economic development. Adults from households with income levels below poverty and slightly above poverty (less than 200 percent) were more likely to report their children infrequently wears a helmet compared to households with income 200 percent or more above poverty. Adults from rural and Appalachian counties were more likely report their children infrequently use bicycle helmets compared to adults from metropolitan counties. See Tables 22a-b located at the end of this section for more detailed information on bicycle helmet use among children less than 18 years of age in Ohio. See Appendix 10 and 11 for more detailed information on household poverty and county economic development definitions.

SECTION 3.5: FALLS

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- Falls are one of the leading causes of fatal and non-fatal unintentional injuries in Ohio.
- Most fatal and non-fatal injuries caused occur among adults age 65 or older.
- Most non-fatal injuries result from slipping or tripping on an object on the same level, on a different level, and steps or stairs. A substantial percentage of non-fatal fall related injuries do not specify the cause of the fall.

Trends:

- Death rates have increased 115 percent since 2000 and ED visit rates increased 54 percent since 2002.
- Hospitalization rates have not changed since 2003.
- Most non-fatal injuries resulted from slipping or tripping on an object on the same level, on a different level, and steps or stairs throughout the study period.

Figure 7.1. Number and age adjusted rate of unintentional fall deaths by year, Ohio, 2000-2010

Source: Ohio Department of Health, Vital Statistics

DEATHS:

Nearly 1,200 deaths resulted from unintentional falls in 2010. The fall death rate was 8.6 per 100,000 (Figure 7.1). Males were more likely to die from a fall than females (10.5 versus 7.2 per 100,000). Fall fatality rates increased with age with the highest rates found among adults ages 85 or older (Figure 7.2). Whites were more likely to experience a fall related death (8.8 per 100,000) than blacks (6.3 per 100,000). See Table 7.1 for an unintentional falls death risk profile. Approximately one-half of fall related deaths had an unspecified cause. Other leading mechanisms included other fall from the same level (27 percent) and stairs or steps (10 percent) (Figure 7.3).

Table 7.1 Unintentional Falls Death Risk Profile		
	2010 At Risk Groups	Annual trend since 2000
Overall		+115%
Sex	Males	Males (largest increase)
Age	85 or older	85 or older (largest increase)
Race and ethnicity	Whites	Whites (largest increase)

TRENDS:

Fall related fatality rates increased 115 percent from 4.0 per 100,000 in 2000 to 8.6 per 100,000 in 2010. The average annual increase in rates was 0.4 per 100,000 per year. The increase in rates was greater among males (0.5 per 100,000 per year) than females (0.4 per 100,000 per year). The highest rates of fall fatalities were found among adults ages 85 or older throughout the period. The rates increased by an average of 11 per 100,000 per year. Rates were consistently higher among whites than blacks throughout the period. Rates among whites increased by an average of 0.5 per 100,000 per year while rates among blacks did not follow a linear trend. The largest increases in the number of fall fatalities were found among falls with an unspecified

Ohio Violence and Injury Prevention Program, Ohio Department of Health

cause (39 per year) and other falls on the same level (23 per year). See Tables 22a-c located at the end of the section for more detailed information on fall related fatalities.

Source: Ohio Department of Health, Vital Statistics

Figure 7.4. Number and age adjusted rate for unintentional fall hospitalizations by year, Ohio, 2002-2010

Source: Ohio Hospital Association

HOSPITALIZATIONS:

In 2010, approximately 23,000 hospitalizations resulted from unintentional falls. The hospitalization rate was 176 per 100,000 (Figure 7.4). Overall hospitalization rates decreased with age from birth through age 14 and then increased with age among individuals 15 years or older. The highest rates were found among adults ages 75 or older (Figure 7.5). Hospitalization rates varied by sex with higher rates found among males from birth through age 54 while rates were higher among females among adults 55 or older. See Table 7.2 for an unintentional fall hospitalization risk profile.

Table 7.2 Unintentional Falls Hospitalization Risk Profile		
	2010 At Risk Groups	Annual trend since 2002
Overall		No change
Sex	Females	Similar for males and females
Age	75 or older	85 or older (largest increase)

The most common causes of fall related hospitalizations were tripping or slipping on the same level (37 percent), falling from an object at a different level (11 percent), and falling from or on stairs or steps (10 percent). Approximately 37 percent of falls did not have a specified cause (Figure 7.6).

TRENDS:

Hospitalizations resulting from unintentional falls largely remained the same in 2003-2010 (Figure 7.4). The pattern in hospitalizations did not follow a consistent trend for males or females. Hospitalization rates increased by an average of 44 per 100,000 per year among adults ages 85 or older while rates did not change or follow a consistent trend for all other age groups. The number of hospitalizations resulting from slipping, tripping, or stumbling on the same level increased by an average of 263 per year and falls resulting from other or unspecified mechanism increased by 159 per year. See Tables 24a-c located at the end of this section for more detailed information on the number and rate of unintentional fall related hospitalizations.

Source: Ohio Hospital Association

EMERGENCY DEPARTMENT VISITS:

In 2010, 312,911 ED visits were associated with unintentional falls. The ED visit rate was 2,711 per 100,000 (Figure 7.7). The rate of ED visits was higher among males from birth through age 14 and higher among females among individuals aged 15 or older. The highest rates of fall related ED visits were found among children ages 1-4 years and adults 75 or older (Figure 7.8). See Table 7.3 for an unintentional falls ED visit risk profile.

The most common causes of fall related ED visits were from slipping or tripping on the same level (36 percent), steps or stairs (14 percent), and from a different level (13 percent). In addition, 34 percent of falls had an unspecified cause (Figure 7.9).

Table 7.3 Unintentional Falls ED Visit Risk Profile		
	2010 At Risk Groups	Annual Trend since 2002
Overall		+54%
Sex	Females	Females (largest increase)
Age	75 or older	85 or older (largest increase)

TRENDS:

ED visits associated with unintentional falls increased 54 percent from 1,766 per 100,000 in 2002 to 2,771 per 100,000 in 2010 (Figure 7.7). The average annual increase was 126 per 100,000 per year. The increase in falls was higher among females (142 per 100,000 per year) compared to males (109 per 100,000). Rates increased among all age groups with the largest increases found among ages 85 or older (426 per 100,000 per year). The observed increase was largely driven by the substantial increase in falls caused by slipping or tripping on the same level (+5,933 per year), other or unspecified falls (4,795 per year) and stairs or steps (2,142 per year). See Tables 25a-c located at the end of this section for more detailed information on the number and rate of ED visits associated with unintentional falls.

SECTION 3.6: FALLS AMONG ADULTS AGES 65 OR OLDER

CHAPTER HIGHLIGHTS:

Patterns:

- Hip fractures are associated with 40 percent of fall related hospitalizations.
- 1 in 6 adults over the age of 45 reported a fall in the last 3 months.
 - Adults ages 45-54, retirees, and income levels near or below poverty were the most likely to report a fall.
- Among those who fell, 1 in 3 adults were injured by the fall.
 - Retirees and adults with incomes at or below poverty were the most likely to report a fall related injury.

Trends:

- The percentage of fall related hospitalizations with a hip fracture decreased since 2003.
- The percentage of adults who reported a fall in the last 3 months has not changed since 2006. However the percentage of adults who reported 4 or more falls has significantly increased.
- The percentage of adults who reported a fall-related injury has not changed since 2006.

Figure 7.10. Hospitalizations rates resulting from unintentional falls and percentage of falls with a hip fracture among adults 65 or older, by year, Ohio, 2002-2010

Source: Ohio Hospital Association

FALLS AND HIP FRACTURES AMONG OLDER ADULTS:

In 2010, 16,363 fall-related hospitalizations occurred among adults ages 65 or older. The age specific hospitalization rate was 1,026 per 100,000. Of the fall-related hospitalizations, 6,696 or 40 percent caused a hip fracture (Figure 7.10).

Fall related hospitalization rates remained the same since 2003 while the percentage of falls causing a hip fracture slightly decreased from 47 percent in 2003 to 40 percent in 2010 (Figure 7.10). The decrease in the percentage of fall related hip fractures is likely attributable to the decrease in external cause of injury coding rates. See Table 26a located at the end of this section for more details on hip fractures among adults ages 65 or older.

Figure 7.11. Percentage of adults aged 65 or older who reported a fall in the last 3 months, Ohio, 2006, 2008, and 2010

Source: Ohio Behavioral Risk Factor Surveillance System

FALL PATTERNS AND TRENDS:

Falls and health care resources associated with treating falls among older adults is a significant public health issue in Ohio. Nearly 300,000 or 17 percent of adults aged 65 or older reported a fall in the last 3 months in 2010 (Figure 7.11). Among those who reported a fall in the last 3 months, 61 percent fell one time, 31 percent fell 2 or 3 times, and 8 percent reported 4 or more falls.

Since 2006, the percentage of adults aged 65 or older who reported a fall in the last 3 months has not changed (Figure 7.11). See table 26a located at the end of this section for more detailed information on the prevalence of falls among adults ages 65 or older.

Figure 7.12. Percentage of adults aged 65 or older who reported a fall related injury among those who fell in the last 3 months, Ohio, 2006, 2008, and 2010

Source: Ohio Behavioral Risk Factor Surveillance System

FALL RELATED INJURY PATTERNS AND TRENDS:

Among adults who reported a fall in the last 3 months, approximately 100,000 or 34% reported an injury caused by a fall in 2010 (Figure 7.12). The percentage of adults who reported a fall related injury did not change significantly since 2006. See Table 26b located at the end of this section for more detailed information about and fall related injuries.

SECTION 3.6: SUFFOCATIONS

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS, 2010

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- Highest rates of fatal and non-fatal unintentional suffocations were found among children less than 5 years of age and adults 85 or older.
- Most fatal suffocations were caused by a non-food object for all ages while most fatal suffocations among infants occurred in a bed.
- Most non-fatal suffocations were caused by a non-food object for both children and adults.
- 29% of mothers reported unsafe sleeping practices with their infants.

Trends:

- Death and ED visit rates did not follow a consistent linear trend.
- Hospitalization rates have increased 46 percent since 2002.
- Death rates among infants increased 73 percent from 2000-2002 to 2008-2010.
- Fatal suffocations in bed and from food objects increased since 2000.
- Food and non-food objects have caused most non-fatal suffocations since 2002.
- 1 in 3 mothers reported unsafe sleep practices with their infants throughout the study period.

Figure 8.1. Number and age adjusted rate for unintentional suffocation deaths by year, Ohio, 2002-2010

Source: Ohio Hospital Association

DEATHS:

In 2010, 265 deaths resulted from unintentional suffocations in Ohio. The death rate was 2.1 per 100,000 (Figure 8.1). Males were more likely to die from suffocation than females (2.6 versus 1.8 per 100,000). The distribution of suffocation deaths varied by age. The highest rates were found among children less than 1 year (34.1 per 100,000) and adults ages 85 or older (30.6 per 100,000) (Figure 8.2). Suffocation fatality rates were similar among whites and blacks. See Table 8.1 for an unintentional suffocation death risk profile.

Nearly one-half of fatal suffocations were caused by the ingestion of non-food objects (49 percent). Food objects caused 22 percent of suffocations and 12 percent of suffocations were in bed (Figure 8.3).

Table 8.1 Unintentional Suffocation Death Risk Profile

	2010 At Risk Groups	Annual trend since 2000
Overall		Inconsistent trend
Sex	Males	Inconsistent trend
Age	< 1 yr	< 1 year (+2/100,000)
Race and ethnicity	Similar among whites and blacks	Inconsistent trend

TRENDS:

The suffocation death rate did not follow a consistent trend since 2000 (Figure 8.1). Death rates among males were consistently higher than females throughout the study period. Fatality rates among children less than 1 year and adults ages 85 or older were consistently higher than other age groups. The suffocation fatality rate for children less than 1 year of age increased while rates fluctuated up and down for other age groups. Non-food objects, food objects, and suffocation in bed were the most common mechanisms of suffocation throughout the study period. The number of fatal suffocations in bed and resulting from food objects

Ohio Violence and Injury Prevention Program, Ohio Department of Health

increased while suffocations resulting from ingestion of non-food objects fluctuated during the study period. See Tables 27a-c located at the end of this section for more detailed information on the number and rate of suffocation deaths in Ohio.

Source: Ohio Hospital Association

HOSPITALIZATIONS:

In 2008-2010, 325 hospitalizations resulted from unintentional suffocations. The suffocation hospitalization rate was 0.9 per 100,000 (Figure 8.4). The hospitalization rate was similar for males and females. The highest rates of hospitalizations were found among infants less than 1 year of age (7.3 per 100,000), children 1-4 years (4.0 per 100,000), and adults 85 or older (3.2 per 100,000). The lowest rates were found among individuals 5-54 years of age (Figure 8.5). Between 2008 and 2010, the majority of hospitalizations were caused by the ingestion or inhalation of a non-food object (54 percent) followed by ingestion or inhalation of a food object (41 percent) causing obstruction of the respiratory tract. Approximately 5 percent of hospitalizations were caused by unintentional mechanical suffocation.

Table 8.2 Unintentional Suffocation Hospitalization Risk Profile		
	2008-2010 At Risk Groups	Annual trend since 2002
Overall		+24%
Sex	Similar for males and females	Males (largest increase)
Age	< 1 year	1-4 (largest increase)

TRENDS:

Hospitalization rates resulting from unintentional suffocations increased 24 percent from 0.75 per 100,000 in 2002-2004 to 0.93 per 100,000 in 2008-2010. An increase was found among males while rates did not change among females. Hospitalization rates increased among children ages 5-14 or younger and adults ages 45-54 65-74 while rates decreased among adults ages 75-84. The distribution in the causes of the suffocation changed between 2002-2004 and 2008-2010. Suffocations resulting from non-food objects increased and surpassed food objects as the leading cause of suffocation related hospitalizations (Figure 8.6). See Tables 28a-c for more detailed information on the number and rate of unintentional suffocation hospitalizations.

Source: Ohio Hospital Association

Figure 8.7. Number and age adjusted rate for unintentional suffocation ED visits by year, Ohio, 2002-2010

Source: Ohio Hospital Association

EMERGENCY DEPARTMENT VISITS:

Approximately 400 emergency department (ED) visits resulted from unintentional suffocations in 2010. The ED visit rate was 3.8 per 100,000 (Figure 8.7). The rate of unintentional suffocation ED visits was slightly higher among males compared to females (4.1 versus 3.4 per 100,000). The distribution of ED visits by age is bimodal with the highest rates occurring among children 4 years of age or younger and adults ages 85 or older. Rates of ED visits among individuals between ages 5 and 74 were low (Figure 8.8). See Table 8.3 for an unintentional suffocation ED visit risk profile.

The majority of the suffocation ED visits resulted from inhalation or ingestion of a non-food (50 percent) or a food object (44 percent) that caused an obstruction in the respiratory tract. Approximately 5 percent were caused by an unintentional mechanical obstruction (Figure 8.9).

Table 8.3 Unintentional Suffocation ED Visit Risk Profile		
	2010 At Risk Groups	Annual Trend since 2002
Overall		Inconsistent trend
Sex	Males	Similar for males and females
Age	0-4 yrs	Inconsistent trend

TRENDS:

ED visit rates resulting from unintentional suffocations fluctuated throughout the study period but did not follow a consistent linear trend. This pattern was consistent among males and females as well as across all age groups. The distribution in the cause of the suffocation resulting in an ED visit did not change between 2002 and 2010. Food and non-food objects caused approximately 95 percent of suffocations throughout the study period. See Tables 29a-c located at the end of this section for more detailed information on the number and rate of unintentional suffocation ED visits.

SECTION 3.6A: INFANT SLEEP RELATED SUFFOCATION

Figure 8.10. Number of unintentional suffocation deaths among infants by age in months, Ohio, 2000-2010

Source: Ohio Department of Health, Vital Statistics

FINDINGS FROM DEATH CERTIFICATES

Nearly 500 infants less than 1 year of age died from an unintentional suffocation between 2000 and 2010. Most of the deaths occurred among males and infants aged 3 months or younger (see Figure 8.10). While most infant suffocation deaths occurred among whites, the death rate among black infants (66 per 100,000) was three times higher than among white infants (22 per 100,000). See Table 8.4 for an infant unintentional suffocation death risk profile.

Sixty-seven percent (329 deaths) of the fatal suffocations occurred in a bed. Approximately 20 percent of the suffocation deaths were unspecified and 8 percent were caused by other listed threats to breathing. See Table 30 located at the end of this section for more detailed information on the number of infant suffocation deaths in Ohio.

Table 8.4 Infant Unintentional Suffocation Death Risk Profile

FINDINGS FROM CHILD FATALITY REVIEW

Approximately 1,000 deaths among infants less than 1 year of age were reviewed by child fatality review teams in Ohio in 2006-2009. Sleep-related deaths (including those attributed to sudden infant death syndrome or SIDS) accounted for 14 percent (153 deaths) of the total infant deaths reviewed. Sleep related deaths were the second leading cause of death reviewed after prematurity. Fifty-eight percent of sleep related deaths occurred on locations considered to be unsafe such as adult beds and couches. Approximately one-half of the deaths occurred to infants who were sharing a sleeping surface with someone at the time of

Ohio Violence and Injury Prevention Program, Ohio Department of Health

the death. See Ohio Child Fatality Review Eleventh Annual Report for more detailed information on findings from child fatality review teams.

Figure 8.11. Distribution of hospitalizations resulting from unintentional suffocations by object among infants, Ohio, 2002-2010

HOSPITALIZATIONS:

Between 2002 and 2010, 103 hospitalizations resulted from an unintentional infant suffocation. Fifty-five percent of hospitalizations occurred among males while 45 percent were among females. Most suffocations were caused by a non-food object (66 percent) followed by a food object (29 percent) and a mechanical suffocation (5 percent) (Figure 8.11). Mechanical suffocations included suffocations that took place in a bed or cradle, were caused by a plastic bag, resulted from a lack of air in a closed place, or other specified means. See Table 31 located at the end of this section for more detailed information on unintentional suffocations among infants in Ohio.

Figure 8.12. Distribution of ED visits resulting from unintentional suffocations by object among infants, Ohio, 2002-2010

EMERGENCY DEPARTMENT VISITS:

Between 2002 and 2010, 484 ED visits resulted from an unintentional suffocation among infants. The percentage of ED visits resulting from infant suffocations was similar among males (47 percent) than females (53 percent). Most ED visits resulting from infant suffocations were caused by a non-food object (58 percent) while 40 percent resulted from a food object and 2 percent resulted from a mechanical suffocation (Figure 8.12). See Table 32 for more detailed information on ED visits resulting from unintentional suffocations among infants.

SECTION 3.6B: SAFE SLEEPING PRACTICES

The American Academy of Pediatrics has developed recommendations for safe infant sleep practices and safe sleep environments. These recommendations include placing babies in a supine (back) sleep position in a crib free from toys, blankets, soft bedding and pillows. The supine position increases pulmonary function and oxygenation compared to the prone (stomach) position. Removing objects in the crib reduces the risk of the infant suffocating on those objects.²

The Ohio Pregnancy Risk Assessment Monitoring System (PRAMS) assesses infant sleep practices among women who have had a live birth. In 2009, 71 percent of women surveyed reported placing their infants in a supine sleep position. The percentage of women who reported putting their infants in a supine sleeping position varied by socio-demographic characteristics. The lowest rates of infant supine sleeping were found among mothers younger than 20 years of age, African Americans, unmarried, and completed less than 12 years of education.³ Infant sleep practices also varied by region in Ohio with highest percentage of supine sleeping found in the Toledo Region (77 percent) and the lowest percentage found in the Columbus Region (62 percent).⁴

Since 2004, the percentage of mothers placing their infants in a supine sleeping position has increased slightly from 66 percent in 2004 to 71 percent in 2009 (see Figure 8.13).⁵ See PRAMS Data Summary, 2004-2009 for more detailed information on safe sleeping practices reported by mothers in Ohio.

SECTION 3.7: DROWNING

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS, 2010

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- Highest rates of fatal and non-fatal drowning were found among children less than 5 years of age.
- Rates of fatal or non-fatal drowning were higher among males than females.
- Nearly one-half of fatal drowning occurred in natural bodies of water.
- Unintentional drowning was the most common cause of non-fatal drowning.

Trends:

- Fatal and non-fatal drowning rates have not followed a consistent linear trend.
- Highest rates of fatal and non-fatal drowning were consistently found among children less than 5 years of age.
- Natural bodies of water were the most common location for fatal drowning since 2000.
- Unintentional drowning was most common cause of non-fatal drowning throughout the study period.

Figure 9.1. Number and age adjusted rate for unintentional drowning deaths by year, Ohio, 2002-2010

Source: Ohio Hospital Association

DEATHS:

In 2010, 93 people died from an unintentional drowning in Ohio. The drowning fatality rate was 0.83 per 100,000 (Figure 9.1). The fatality rate was 3 times higher among males (1.25 per 100,000) compared to females (0.42 per 100,000). The highest fatality rate was found among children ages 1-4 years at 2.2 per 100,000 which were 3 times higher than other age groups (Figure 9.2). Fatality rates were 50 percent higher among blacks (1.2 per 100,000) than whites (0.8 per 100,000). See Table 9.1 for an unintentional drowning death risk profile.

The most common place of occurrence for drowning was in a natural body of water (47 percent) followed by swimming pools (17 percent) (see Figure 9.3). Of note, 27 percent of drowning occurred in an unspecified location.

Table 9.1 Unintentional Drowning Death Risk Profile		
	2010 At Risk Groups	Annual trend since 2000
Overall		Inconsistent trends
Sex	Males	Inconsistent trends
Age	1-4 yrs	Inconsistent trends
Race and ethnicity	Blacks	Inconsistent trends

TRENDS:

Between 2000 and 2010, unintentional drowning fatality rates did not follow a consistent linear trend. Inconsistent trends were found by gender, age, and race or ethnicity. The number of fatal drowning in natural bodies of water increased on average by 2 drownings per year while the number of unspecified drowning decreased on average by 2 drownings per year. See Tables 34a-c located at the end of this section for more detailed information on the number and rates of unintentional drowning in Ohio.

HOSPITALIZATIONS:

Between 2002 and 2010, 378 hospitalizations resulted from unintentional drowning (Figure 9.4). The drowning hospitalization rate was 0.39 per 100,000. The hospitalization rate was two times higher for males (0.54 per 100,000) than females (0.23 per 100,000). The highest rates were found among infants less than 1 year of age (2.0 per 100,000) and children 1-4 years (2.9 per 100,000) (see Figure 9.5). The majority of drowning (95 percent) were caused by unintentional drowning (Figure 9.6). See Tables 35a-c located at the end of this section for more detailed information on the number and rate of unintentional drowning hospitalizations.

EMERGENCY DEPARTMENT VISITS:

One hundred eighty nine ED visits were associated with unintentional drowning in 2010. The ED visit rate was 1.7 per 100,000 (Figure 9.7). Males were more likely than females to visit an ED for a drowning. ED visits increased from birth through age 4 and then steadily decreased after age 5 (Figure 9.8). See Table 9.3 for an unintentional drowning ED visit risk profile. Unintentional drowning caused 92 percent of visits and water transport was associated with 8 percent of visits (Figure 9.9).

Table 9.3 Unintentional Drowning ED Visit Risk Profile

	2010 At Risk Groups	Trend since 2002
Overall		Did not change
Sex	Males	Males (-12%)
Age	1-4 years	1-4 years (+37%)

TRENDS:

ED visits resulting from unintentional drowning fluctuated throughout the study period with a high of 2.2 per 100,000 in 2006 and a low of 1.5 per 100,000 in 2007. Males and children ages 1-4 years were highest risk groups throughout the study period. The distribution in the causes of drowning related ED visits did not change over time. See Tables 36a-c located at the end of this section for more detailed information on the number and rate of unintentional drowning ED visits.

SECTION 3.8: BURNS

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS, 2010

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- Highest rates of fatal burns were found among ages 85 or older while the highest rates of non-fatal burns were found among children less than 5 years of age.
- Fatal and non-fatal burn rates were higher among males than females.
- Most fatal burns were caused by an uncontrolled fire while touching hot objects was the most common cause of non-fatal burns.

Trends:

- Death rates did not follow a consistent linear pattern in 2000-2010.
- Hospitalization rates have decreased 43 percent while ED visit rates increased 17 percent since 2002.
- Largest increase in fatal burns was found among adults ages 75-84 and largest increase in ED visits was found among children less than 5 years of age.
- Most fatal burns were caused by an uncontrolled fire and touching hot objects were most common cause of non-fatal burns throughout the study period.

Figure 10.1. Number and age adjusted rate for unintentional burn deaths by year, Ohio, 2002-2010

Source: Ohio Department of Health, Office of Vital Statistics

DEATHS:

In 2010, 130 deaths resulted from unintentional burns. The burn fatality rate was 1.1 per 100,000 (Figure 10.1). Burn fatality rates were higher among males (1.3 per 100,000) than females (0.9 per 100,000). Rates decreased with age among ages 0-24 and increased with age among ages 25 or older. The highest death rates were found among ages 85 or older (Figure 10.2). The burn death rate was 1.2 per 100,000 for whites while rates were suppressed for other race and ethnic groups due to less than 20 deaths. Death rates were generally higher among blacks than whites in previous years when the number of deaths exceeded 20 for blacks. Nearly 84 percent of fatal burns were caused by an uncontrolled fire (Figure 10.3). See Table 10.1 for an unintentional burn death risk profile.

Table 10.1 Unintentional Burn Death Risk Profile		
	2010 At Risk Groups	Annual trend since 2000
Overall		Inconsistent trend
Sex	Males	Inconsistent trends
Age	85 or older	75-84 (largest increase)
Race and ethnicity	Blacks	Inconsistent trends

TRENDS:

From 2000 to 2010, the unintentional burn death rate did not follow a consistent linear trend. Rates varied from a high of 1.24 per 100,000 in 2001 to a low of 0.92 per 100,000 in 2004. Slight increases were found among ages 75-84 (+0.1 per 100,000 per year) and ages 55-64 (+0.03 per 100,000 per year) while a slight decrease was found among children ages 1-4 years (-0.2 per 100,000 per year). Rates did not follow a consistent linear trend among males or females nor by race or ethnic group. See Tables 37a-c located at the end of this section for more detailed information on the number and rate of unintentional burn deaths in Ohio.

HOSPITALIZATIONS:

In 2010, 439 hospitalizations resulted from unintentional burns. The burn hospitalization rate was 3.8 per 100,000 (Figure 10.4). The hospitalization rate was higher for males. The highest rates were found among children 1-4 years (see Figure 10.5). The majority of burns were caused by touching hot objects (54 percent) followed by ignition of materials (18 percent) and conflagration (16 percent) (Figure 10.6). See Table 10.2 for an unintentional burn hospitalization risk profile.

Table 10.2 Unintentional Burn Hospitalization Risk Profile

	2010 At Risk Groups	Annual Trend since 2002
Overall		-43%
Sex	Males	Females (Inconsistent)
Age	1-4	1-14 (Inconsistent)

TRENDS:

Hospitalizations resulting from unintentional burns decreased 43 percent from 6.7 per 100,000 in 2002 to 3.8 per 100,000 in 2010. Rates decreased by an average of -0.2 per 100,000 per year. Rates among males decreased on average by -0.4 per 100,000 per year while rates among females did not follow a consistent trend. Hospitalization rates decreased among ages 15-84 with the largest average annual decrease found among adults ages 75-84 (-0.6 per 100,000). Rates among children ages 1-14 did not follow a consistent trend and cell sizes were too small to complete a trend analysis of infants and adults ages 85 or older. Burns caused by ignition of materials decreased by an average of 10 hospitalizations per year while the number of hospitalizations resulting from the other leading causes of burns did not follow a consistent trend. See Tables 38a-c located at the end of this section for more detailed information on the number and rate of unintentional burn hospitalizations.

EMERGENCY DEPARTMENT VISITS:

Nearly 14,000 ED visits were associated with unintentional burns in 2010. The ED visit rate was 125 per 100,000 (Figure 10.7). Males were more likely than females to visit the ED for a burn which was consistent throughout the lifespan. For both males and females, the highest rates of ED visits were found among birth through age 4 and ages 15-34 (Figure 10.8). Touching hot objects caused 78 percent of ED visits resulting from burns (Figure 10.9). See Table 10.3 for an unintentional burn ED visit risk profile.

Table 10.3 Unintentional Burn ED Visit Risk Profile		
	2010 At Risk Groups	Annual Trend since 2002
Overall		+17%
Sex	Males	Females (largest increase)
Age	1-4 yrs	1-4 yrs (largest increase)

TRENDS:

Between 2002 and 2010, ED visit rates resulting from unintentional burns increased 17 percent from 107 per 100,000 in 2002 to 125 per 100,000 in 2010. Rates increased by an average of 2.3 per 100,000 per year. An increase was found among females (+2.6 per 100,000 per year) while rates among males did not follow a consistent trend. An increase was found among most age groups with largest average annual increases occurring among children ages 1-4 (+6.4 per 100,000 per year) and infants less than 1 year (5.7 per 100,000 per year). ED visits resulting from burns caused by touching hot objects increased by an average of 180 ED visits per year and burns caused by controlled fires increased by an average of 24 per year. ED visits resulting from other types of fires decreased by an average of 13 visits per year. Other leading causes of burns did not follow a consistent trend. See Tables 39a-c located at the end of this section for more detailed information about unintentional burn ED visits.

SECTION 4: INTENTIONAL INJURIES

Intentional injuries were responsible for nearly 2,000 deaths, 7,700 hospitalizations, and 58,000 ED visits in 2010. The distribution of intentional injuries varies by severity. Approximately 3 out of every 4 intentional injury deaths and hospitalizations were associated with suicide or self-harm behaviors while 8 in 10 intentional injury ED visits were associated with assaults.

SECTION 4.1: SUICIDES AND SELF-HARM

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS, 2010

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- Suicide rates were 4 times higher among males while females were more likely to experience a non-fatal self-harm injury than males.
- Highest rates of suicide were found among adults ages 45-54.
- Highest rates of non-fatal self-harm related injuries were among ages 15-44.
- Most suicides involved the use of a firearm and self-harm related injuries were caused by poisoning.

Trends:

- Suicide rates have increased 27 percent since 2000.
- Hospitalization and ED visit rates increased in 2002-2007 and then leveled off in 2007-2010.
- Most suicides involved the use of a firearm while poisoning was associated with most self-harm hospitalizations and ED visits throughout the study period.

Figure 11.1. Number and age adjusted rate for suicides by year, Ohio, 2002-2010

Source: Ohio Department of Health

DEATHS:

In 2010, 1,420 deaths resulted from a suicide in Ohio. The suicide rate was 12.1 per 100,000 (see Figure 11.1). Suicide rates were 4 times higher among males (20 per 100,000) compared to females (5 per 100,000). Rates among males increased among ages 15-34, leveled off between ages 35-84 and then increased among ages 85 or older. Among females, the highest rates were found among ages 45-54 (see Figure 11.2). See Table 11.1 for a suicide risk profile.

Approximately one-half of suicides resulted from firearms. Other leading mechanisms included hanging (26 percent) and poisoning (17 percent).

Table 11.1 Suicide Risk Profile

	2010 At Risk Groups	Annual trend since 2000
Overall		+27%
Sex	Males	Females (largest increase)
Age	45-54	45-54 (largest increase)
Race and ethnicity	Whites	Whites (largest increase)

TRENDS:

The suicide rate increased 27 percent from 9.5 per 100,000 in 2000 to 12.1 per 100,000 in 2010 (Figure 11.1). The average annual increase was 0.2 per 100,000 per year. Suicide rates increased among females (0.2 per 100,000 per year) while rates among males did not follow a consistent trend. Rates increased among adults ages 45-64 while rates decreased among adults 75-84. Rates did not follow a consistent trend among other age groups. Suicide rates increased among whites (0.3 per 100,000 per year) while rates did not follow a consistent trend among blacks. The number of suicides resulting from hanging increased by an average of 14 deaths per year while the number of suicides resulting from other mechanisms did not follow a consistent trend (Figure 11.3). See Tables 40a-c located at the end of this section for more detailed information on the number and rate of suicides in Ohio.

Source: Ohio Hospital Association

HOSPITALIZATIONS:

In 2010, nearly 5,400 hospitalizations resulted from self-harm. The self-harm hospitalization rate was 48.5 per 100,000 (Figure 11.4). The rate was higher among females (57 per 100,000) than males (40 per 100,000). For both males and females, hospitalization rates were highest among ages 15-54 then decreased among ages 55 and older (Figure 11.5). See Table 11.2 for a self-harm hospitalization risk profile.

Roughly 92 percent of hospitalizations were associated with poisoning (Figure 11.6).

Table 11.2 Self-Harm Hospitalization Risk Profile

	2010 At Risk Groups	Annual trend Since 2002
Overall		+29%
Sex	Females	Similar for males and females
Age	15-44 yrs	45-54 (largest increase)

TRENDS:

Hospitalization rates increased 29 percent from 37.7 per 100,000 in 2002 to 48.5 per 100,000 in 2010 (Figure 11.4). The average annual increase was 1.4 per 100,000 per year. The increase in rates was similar among males and females. Rates increased among ages 15-64 with the largest average increase found among adults ages 45-54 (3 per 100,000 per year). Rates among children ages 5-14 and adults ages 65-84 did not follow consistent trend. The number of self-harm hospitalizations resulting from poisoning increased by an average of 170 per year. Trends in other mechanisms did not following a consistent pattern over time. See Tables 41a-c located at the end of this section for more detailed information on the number and rates of self-harm related hospitalizations in Ohio.

Figure 11.7. Number and age adjusted rate for self-harm related ED visits by year, Ohio, 2002-2010

Source: Ohio Hospital Association

EMERGENCY DEPARTMENT VISITS:

Over 9,000 ED visits were associated with self-harm in 2010. The ED visit rate was 85 per 100,000 (Figure 11.7). Females were more likely than males to visit the ED. The highest rates of ED visits were among ages 15-24 and a steadily decrease in rates were found after age 25 (Figure 11.8). See Table 11.3 for a self-harm ED visit risk profile.

Most self-harm related ED visits were associated with poisonings (51 percent) and cutting or piercing (30 percent). Approximately 14 percent of self-harm related ED visits did not have a specified mechanism.

Table 11.3 Self-Harm ED Visit Risk Profile

	2010 At Risk Groups	Trend since 2002
Overall		+53%
Sex	Females	Similar for males and females
Age	15-24	15-24 (largest increase)

TRENDS:

Between 2002 and 2010, the rate of ED visits resulting from self-harm increased 53 percent from 55 per 100,000 to 85 per 100,000 in 2010. Rates increased by an average of 4 per 100,000 per year. The increase was similar among males and females. ED visit rates increased among all age groups with the largest increases found among ages 15-24 (12 per 100,000 per year). The number of self-harm related ED visits resulting from cutting or piercing, poisoning, and other or unspecified mechanisms increased. The number of ED visits resulting from cutting or piercing increased by an average of 157 per year. An annual increase of 137 was found for poisoning while other and unspecified increased by an average of 88 ED visits per year (Figure 11.9). See Tables 42a-c located at the end of this section for more detailed information on self-harm related ED visits.

Source: Ohio Youth Risk Behavior Survey

*Rates suppressed due to poor response rates

SELF-HARM BEHAVIORS AMONG YOUTH:

In 2011, approximately 1 in 7 or 14 percent of high school students reported to have seriously considered suicide in the past 12 months (Figure 11.10). Female (18%) were more likely to report suicide ideation than males (11%). Suicide ideation was reported more frequently by 9th graders and Hispanics compared students in other grades and race or ethnic group.

Approximately 1 in 10 or 9 percent of high school students reported to have attempted suicide in the past 12 months (Figure 11.10). The percentage of students who reported at least one suicide attempt was similar by sex and race or ethnic groups. Ninth grade students were nearly 3 times more likely to report a suicide attempt than students in the 12th grade.

In 2011, 1 in 25 or 4 percent of high school students reported an injury resulting from a suicide attempt in the last 12 months (Figure 11.10). The percentage of students who reported at least one suicide attempt related injury was similar by sex and race or ethnic groups. Ninth grade students were 2 times more likely to report a suicide attempt related injury than students in grades 10, 11 or 12.

TRENDS:

The percentage of students who reported suicide ideation decreased from 1993 to 2007 and then increased between 2007 and 2011. The percentage of students who reported suicide attempts and injuries resulting from suicide attempts did not change significantly since 1993. See Tables 43a-c located at the end of this section for more detailed information about self-harm behaviors among high school students in Ohio.

SECTION 4.2: HOMICIDES AND ASSAULTS

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS, 2010

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- Significant disparities were found in homicide rates by race and sex. Blacks were 10 times more likely to die from homicides than whites. Males were 4 times more likely to die from homicides than females.
- Highest rates of homicides and assaults were found among males ages 15-34.
- Firearms were the most common cause of homicide and assault related hospitalizations while fighting was the most common cause of assault related ED visits.
- 1 in 3 high school students reported being in a physical fight during the last 12 months.

Trends:

- Disparities in homicide rates by race and sex have increased since 2000.
- Hospitalization rates increased slightly while ED visits increased 50 percent.
- The largest increases in homicides and assault related ED visits were found among males ages 25-34
- Firearms were the most common cause of homicide and assault related hospitalizations while fighting was the most common cause of assault related ED visits throughout the study period.
- Percentage of high school students who reported being in a physical fight decreased since 1997.

Figure 12.1 Number and age adjusted rate for homicides by year, Ohio, 2000-2010

Source: Ohio Department of Health, Office of Vital Statistics

DEATHS:

In 2010, 554 homicides occurred in Ohio. The homicide rate was 5.0 per 100,000 (Figure 12.1). Rates varied significantly by sex, age, and race. Homicide rates were 4 times higher among males (8.0 per 100,000) compared to females (2.1 per 100,000). The highest rates were found among ages 25-34 (11.3 per 100,000) followed by ages 15-24 (9.1 per 100,000). A significant disparity in rates was found by race. Blacks were 10 times more likely to die from a homicide than whites (22.7 per 100,000 compared to 2.2 per 100,000). See Table 12.1 for homicide risk profile.

The most common mechanisms associated with homicides were firearms (70 percent) followed by sharp objects (10 percent) and hanging (4 percent). Approximately 9 percent of homicides had an unspecified mechanism.

Table 12.1 Homicide Risk Profile		
	2010 At Risk Groups	Annual Trend since 2000
Overall		Inconsistent
Sex	Males	Males (largest increase)
Age	25-34	25-34 (largest increase)
Race and ethnicity	Blacks	Blacks (largest increase)

TRENDS:

Homicide rates increased from 4.0 per 100,000 in 2000 to 5.0 per 100,000 in 2010. While an increase in rates was observed, results from the trend analysis indicate that rates did not follow a consistent linear pattern throughout the period. Disparities in homicide rates increased by sex and race. Males were 2 times more likely than females to die from a homicide in 2000 and were 4 times more likely to die from a homicide than females in 2010 (data not shown). Blacks were 6 times more likely than whites to die from a homicide in 2000 and were 10 times more likely than whites to die from a homicide in 2010 (Figure 12.2). Firearms were the most common mechanism associated with homicides throughout the study period. The number of homicides associated with firearms increased by an average of 17 per year while homicides resulting from sharp objects,

Ohio Violence and Injury Prevention Program, Ohio Department of Health

hanging, and other means did not follow a consistent trend (Figure 12.3). See Tables 44a-c located at the end of the section for more detailed information on homicides.

Source: Ohio Department of Health, Office of Vital Statistics

Figure 12.4. Number and age adjusted rate for assault related hospitalizations by year, Ohio, 2002-2010

Source: Ohio Hospital Association

HOSPITALIZATIONS:

In 2010, approximately 2,300 hospitalizations resulted from assaults. The assault hospitalization rate was 21.3 per 100,000 (see Figure 12.4). The rate was 6 times higher among males (37 per 100,000) than females (6 per 100,000). Among males, the highest hospitalization rates were found among ages 15-34. Among females, the highest rates were found among infants less than 1 year of age (Figure 12.5). See Table 12.2 for an assault hospitalization risk profile.

The leading mechanisms associated with assault related hospitalizations were firearms or explosives (27 percent), fights or brawls (24 percent), and cutting or piercing (14 percent). An additional 31 percent of hospitalizations listed other or unspecified mechanisms (Figure 12.6).

TRENDS:

The assault related hospitalization rate increased slightly from 20.5 per 100,000 in 2002 to 21.3 per 100,000 in 2010. While a slight increase was found, rates did not follow a consistent pattern. Inconsistent patterns were also found among males, females, and all age groups. Firearms, fights, cuts or pierces, and other or unspecified means were the most common mechanisms associated with assault related hospitalizations throughout the study period. However, none of the leading mechanisms followed a consistent trend. See Tables 45a-c located at the end of this section for more detailed information about assault related hospitalizations in Ohio.

Table 12.2 Assault Hospitalization Risk Profile

	2010 At Risk Groups	Annual Trend Since 2002

Figure 12.7. Number and age adjusted rate for assault related ED visits by year, Ohio, 2002-2010

Source: Ohio Hospital Association

EMERGENCY DEPARTMENT VISITS:

Approximately 48,000 ED visits were associated with assaults in 2010. The ED visit rate was 444 per 100,000 (Figure 12.7). ED visit rates were higher among than females throughout the lifespan. ED visits increased from birth through age 24 and then steadily decreased after age 25 (Figure 12.8). See Table 12.3 for an assault ED visit risk profile.

Nearly one-half of assault related ED visits were associated with fights or brawls (43 percent) and 42 percent were associated with other or unspecified reasons.

Table 12.3 Assault ED Visit Risk Profile

	2010 At Risk Groups	Annual Trend since 2002
Overall		+50%
Sex	Males	Males (largest increase)
Age	15-24	25-34 (largest increase)

TRENDS:

Assault related ED visits increased 50 percent from 296 per 100,000 in 2002 to 444 per 100,000 in 2010. Rates increased by an average of 20 per 100,000 per year. The average annual increase was slightly larger among males (26 per 100,000 per year) than females (20 per 100,000 per year). The largest annual increases were found among ages 25-34 (48 per 100,000 per year) and ages 15-24 (44 per 100,000). The largest annual increases in the number of ED visits resulted from other or unspecified means (1,056) and fights or brawls (623 per year). The number of ED visits resulting cuts or pierces did not follow a consistent linear trend (Figure 12.9). See Tables 46a-c located at the end of this section for more detailed information on assault related ED visits.

PHYSICAL FIGHTING AMONG HIGH SCHOOL STUDENTS

In 2011, Approximately 1 in 3 high school students reported being in a physical fight in the last 12 months (Figure 12.10). Males were more likely than females to report physical fighting (38 percent versus 24 percent). Students in 9th grade (28 percent) were more likely to report being in a physical fight than students in 12th grade (21 percent). Hispanic students (45 percent) were more likely to report being in a physical fight than white, non-Hispanic students (29 percent) (Figure 12.11). See Table 12.4 for a youth physical fight risk profile.

Since 1997, the percentage of students who reported being in a physical fight decreased 16 percent. The largest decreases in physical fighting were reported among female, 10th grade, and black non-Hispanic students (Figure 12.10).

Table 12.4 Youth Physical Fighting Risk Profile		
	2011 At Risk Groups	Trend since 1997
Overall	31%	Decrease (-16%)
Sex	Males	Females (-19%)
Grade	9 th grade	10 th grade (-20%)
Race and ethnicity	Hispanic	Blacks (-26%)

In 2011, approximately 1 in 12 or 9 percent of high school students reported being in a physical fight on school property in the last 12 months (Figure 12.10). Males were nearly two times more likely than females to report being in physical fight (11 percent versus 6 percent). Students in 9th grade (13 percent) were approximately 2 times more likely to report being in a physical fight than students in 12th grade (6 percent). Black non-Hispanic students (13 percent) were more likely to report being in a physical fight than white, non-Hispanic students (8 percent) (Figure 12.12).

Fighting on school property followed a similar trend as physical fighting among youth as a whole with a 31 percent decrease since 1997.

SECTION 4.3: FIREARMS

*SOURCE: OHIO DEPARTMENT OF HEALTH, VITAL STATISTICS, 2010

† SOURCE: OHIO HOSPITAL ASSOCIATION

CHAPTER HIGHLIGHTS:

Patterns:

- 3 people die from a firearm fatality in Ohio each day.
- Males were more likely to experience a fatal or non-fatal injury than females.
- Blacks were 6 times more likely to die from a firearm related injury than whites.
- Highest rates of fatal and non-fatal injuries were found among persons age 15-34.
- Among households with a firearm, nearly one-half reported the firearm was in an unlocked location.

Trends:

- Firearm related fatalities increased 26 percent since 2000.
- Hospitalization and ED visit rates increased from 2002 to 2006 then decreased between 2006 and 2010.
- Fatal and non-fatal firearm injury rates were consistently higher among males and ages 15-34.
- Fatal injury rates were consistently higher among blacks compared to other race or ethnic groups.

Figure 13.1. Number and age adjusted death rate for firearm related injuries by year, Ohio, 2002-2010

Source: Ohio Department of Health, Office of Vital Statistics

DEATHS:

In 2010, 1,131 people died from a firearm related injury in Ohio. The firearm related fatality rate was 9.8 per 100,000 (Figure 13.1). Males were 6 times more likely to die from a firearm related injury than females (17.6 per 100,000 versus 2.6 per 100,000). The age distribution of firearm related fatalities differed by sex. Among males, the highest rates were found among ages 25-34 and 85 or older. Among females, the highest rates were found ages 15-44 (Figure 13.2). The highest fatality rates were found among ages 25-34 (17 per 100,000) and 15-24 (13 per 100,000). Blacks (22 per 100,000) were 6 times more likely to die from a firearm related injury than whites (3.7 per 100,000). See Table 13.1 for a firearm death risk profile. Most firearm related deaths were associated with suicides (63 percent) and homicides (34 percent).

Table 13.1 Firearm Death Risk Profile		
	2010 At Risk Groups	Annual Trend since 2000
Overall		+26%
Sex	Males	Males (largest increase)
Age	25-34	25-34 (largest increase)
Race and ethnicity	Blacks	Blacks (largest increase)

TRENDS:

Firearm related death rates increased 26 percent from 7.8 per 100,000 in 2000 and 9.8 per 100,000 in 2010. The average annual increase was 0.15 per 100,000 per year. Rates increased by an average of 0.2 per 100,000 per year among males while rates did not follow a consistent trend among females. The largest increases in rates were found among ages 25-34 (0.5 per 100,000 per year) and ages 35-44 (0.2 per 100,000 per year). A decrease in rates was found among older adults ages 75-84 (0.4 per 100,000 per year). Increases were found among both blacks and whites with a larger annual increase found among blacks (0.6 per 100,000 per year). The number of firearm related homicides increased by an average of 14 per year while the number of firearm

Ohio Violence and Injury Prevention Program, Ohio Department of Health

related suicides did not follow a consistent pattern (Figure 13.3). See Tables 48a-c located at the end of this section for more detailed information on firearm related deaths in Ohio.

Figure 13.4. Number and age adjusted rate for firearm related hospitalizations by year, Ohio, 2002-2010

Source: Ohio Hospital Association

HOSPITALIZATIONS:

In 2010, approximately 900 hospitalizations were associated with firearms. The hospitalization rate was 8.4 per 100,000 (Figure 13.4). The rate was over 10 times higher among males (15.5 per 100,000) than females (1.4 per 100,000). Among males and females, the highest hospitalization rates were found among ages 15-24 (25 per 100,000) followed by ages 25-34 (18 per 100,000) (Figure 13.5). See Table 13.2 for an assault hospitalization risk profile. Approximately 68 percent of firearm related hospitalizations were associated with assaults and 20 percent were related to unintentional mechanisms (Figure 13.6).

Table 13.2 Assault Hospitalization Risk Profile

	2010 At Risk Groups	Annual Trend Since 2002
Overall		Increase then decrease
Sex	Males	Females (largest decrease)
Age	15-34	15-24 (largest increase)

TRENDS:

Rates of firearm related hospitalizations increased between 2002 and 2006 then decreased from 2006 to 2010. A slight decrease was found among females (-0.1 per 100,000 per year) while rates among males did not follow a consistent pattern. An increase in rates was found among ages 25-34 (0.3 per 100,000 per year) while rates among other age groups did not follow a consistent trend over time. The distribution of assault related hospitalizations by mechanism remained the same throughout the study period. See Tables 49a-c located at the end of this section for more detailed information about assault related hospitalizations in Ohio.

Figure 13.7. Number and age adjusted rate for firearm related ED visits by year, Ohio, 2002-2010

Source: Ohio Hospital Association

EMERGENCY DEPARTMENT VISITS:

Approximately 2,100 ED visits were associated with firearms in 2010. The ED visit rate was 19.3 per 100,000 (Figure 13.7). Males were 7 times more likely than females to visit the ED for a firearm related injury. For both males and females, ED visits increased from birth through age 24 and then steadily decreased after age 25 (Figure 13.8). The highest rates occurred among ages 15-24. See Table 13.3 for a firearm ED visit risk profile. Over half of ED visits were associated with unintentional mechanisms (58 percent) and 31 percent resulted from assaults.

Table 13.3 Firearm ED Visit Risk Profile

	2010 At Risk Groups	Annual trend since 2002
Overall		Increase then decrease
Sex	Males	Females (largest increase)
Age	15-24	Inconsistent trends

TRENDS:

ED visit rates resulting from firearm related injuries increased between 2002 and 2006 then decreased from 2007 to 2010. Rates among females increased slightly (0.2 per 100,000 per year) while rates among males did not follow consistent trend. Rates did not follow a consistent trend among any age group. The number of ED visits associated unintentional mechanisms increased by an average of 41 per year while the number of ED visits resulting from assaults increased in 2002-2006 and then decreased in 2007-2010 (Figure 13.9). See Tables 50a-c located at the end of this section for more detailed information on self-harm related ED visits.

FIREARMS AND STORAGE PRACTICES IN HOMES:

According to the results from the Behavioral Risk Factor Surveillance System, an estimated 1.7 million or 37 percent of households in Ohio reported a firearm in their home. Males were more likely to report a firearm in their home than females (43 percent versus 31 percent). Respondents from households above the federal poverty level (39 percent) were more likely to report a firearm in their home than respondents below the poverty level (25 percent). Respondents from suburban (40 percent), rural (44 percent) or Appalachian (53 percent) counties were more likely to have a firearm in their home compared to respondents from households from metropolitan (28 percent) counties. The percentage of respondents with a firearm in their home was similar across all age groups (Table 13.4). See Tables 51a for more detailed information on the percentage of adults who reported a firearm in their home.

Table 13.4 Firearm Storage Risk Profile		
	Firearm in home	Unlocked firearm in home
Overall	1.7 million*	800,000*
Sex	Males	Males
Age	Similar for all ages	45 or older
Household income	Above poverty	Similar for all income levels
Economic development	Rural and Appalachian	Similar for all county groups
*Households in Ohio		

Among households with a firearm, nearly 800,000 or one-half (46 percent) reported their firearm was in an unlocked location. Males were more likely to report an unlocked firearm in their home than females (50 percent versus 40 percent). Adults ages 45 or older were more likely report unlocked firearms in their home than adults less than 45 years of age. No differences were found by poverty levels or county economic development level (Table 13.4). See Table 51b located at the end of this section for more detailed information on the percentage of adults who reported an unlocked firearm in their home.

SECTION 5: TRAUMATIC BRAIN INJURIES (TBIs)

CHAPTER HIGHLIGHTS:

Patterns:

- Males were more likely to experience fatal and non-fatal TBI than females.
- Highest rates of fatal and non-fatal TBIs were found among ages 85 or older.
- Falls were the most common causes of fatal and non-fatal TBIs.

Trends:

- Rates of fatal TBIs did not change over time.
- TBI related hospitalizations increased from 2002-2007 then decreased from 2007-2010.
- ED visit rates increased 78 percent in 2002-2010.
- Largest increases in fatal and non-fatal TBI rates were found among adults ages 85 or older.
- Fatal and non-fatal fall related TBI rates have increased while motor vehicle traffic crash related TBI rates have decreased.

Figure 14.1. Number and age adjusted death rate for traumatic brain injuries by year, Ohio, 2000-2010

Source: Ohio Department of Health, Vital Statistics

DEATHS:

Approximately 2,100 Ohioans died from a traumatic brain injury (TBI) in 2010. The death rate was 17.4 per 100,000 (Figure 14.1). Rates were 3 times higher among males (27.4 per 100,000) than females (8.7 per 100,000). Among both males and females, the highest rates of deaths occurred among adults ages 75 or older (Figure 14.2). The highest rates of TBI deaths occurred among blacks (19.4 per 100,000) followed by whites (17.0 per 100,000), other races (12.1 per 100,000) and Hispanics (11.6 per 100,000). See Table 14.1 for TBI risk profile. The most common mechanisms associated with TBI deaths were falls (28 percent), suicides (27 percent), motor vehicle traffic crashes (21 percent), and homicides (10 percent).

Table 14.1 Traumatic Brain Injury Death Risk Profile		
	2010 At Risk Groups	Annual Trend since 2000
Overall		Inconsistent trend
Sex	Males	Inconsistent trend
Age	75 or older	85 or older (largest increase)
Race and ethnicity	Blacks	Inconsistent trends

TRENDS:

TBI death rates did not follow a consistent linear trend over the study period. Inconsistent trends were also found among males, females, all race and ethnic groups. Consistent trends were found among some age groups with the largest increases found among older adults. Rates increased on average by 5 deaths per 100,000 per year among adults ages 85 or older and 1 death per 100,000 per year among ages 75-84. The number of TBI deaths associated with falls (37 per year) and suicide (10 per year) increased while the number of deaths associated with motor vehicle traffic crashes decreased (-20 per year) (Figure 14.3). See Tables 52a-

Ohio Violence and Injury Prevention Program, Ohio Department of Health

c located at the end of this section for more detailed information on the number and rate of TBI deaths in Ohio.

Source: Ohio Hospital Association

HOSPITALIZATIONS:

In 2010, approximately 7,900 hospitalizations were associated with traumatic brain injuries (TBI). The hospitalization rate was 62.5 per 100,000 (Figure 14.4). The rate was 2 times higher among males (90 per 100,000) than females (43 per 100,000). For both males and females, the highest hospitalization rates were found among ages 75 or older (Figure 14.5). See Table 14.2 for a TBI hospitalization risk profile. The most common mechanisms associated with TBI were falls (26 percent) and motor vehicle crashes (21 percent). In addition, 40 percent of hospitalizations did not have external cause of injury listed.

Table 14.2 TBI Hospitalization Risk Profile

	2010 At Risk Groups	Annual Trend Since 2002
Overall		Increased then decreased
Sex	Males	Increased then decreased
Age	75 or older	85 or older (largest increase)

TRENDS:

Hospitalization rates appeared to increase in 2002-2007 then decrease in 2007-2010. Rates among males followed the same pattern while rates among females increased in 2002-2008 then decreased in 2008-2010. Trend patterns varied by age group. A decrease in rates was found among ages 5-14 (1 per 100,000 per year) and ages 15-24 (2 per 100,000 per year) while an increase was found among ages 45 or older. The largest annual increase was found among adults ages 85 or older (14 per 100,000 per year). The mechanisms of TBI related hospitalizations shifted between 2002 and 2010. The number of hospitalizations associated with motor vehicle traffic crashes decreased by 146 per year while the number of hospitalizations associated with falls and without an external cause of injury code increased by 85 per year and 165 per year, respectively (Figure 14.6). See Tables 53a-c located at the end of this section for more detailed information about TBI related hospitalizations in Ohio.

Figure 14.7. Number and age adjusted rate for traumatic brain injury related ED visits by year, Ohio, 2002-2010

Source: Ohio Hospital Association

EMERGENCY DEPARTMENT VISITS:

Nearly 93,000 emergency department (ED) visits were associated with traumatic brain injuries (TBI) in 2010. The ED visit rate was 820 per 100,000 (Figure 14.7). Overall, males were more likely to experience a TBI related ED visit than females (886 versus 747 per 100,000). However, this pattern changed by age group. Among ages 54 or younger, ED visit rates were higher among males compared to females while rates were higher among females compared to males among ages 55 or older. For both males and females, TBI related ED visits followed a bimodal age distribution with the highest rates of ED visits found among infants less than 1 year of age and adults ages 85 or older (Figure 14.8). See Table 14.3 for TBI ED visit risk profile. The most common mechanisms associated with ED visits were falls (36 percent), being struck by or against (14 percent), and motor vehicle traffic crashes (11 percent). In addition, 23 percent of TBI related ED visits did not have an external cause of injury code.

Table 14.3 TBI ED Visit Risk Profile

	2010 At Risk Groups	Annual Trend Since 2002
Overall		+78%
Sex	Males	Similar for males and females
Age	85 or older	85 or older (largest increase)

TRENDS:

Rates of TBI related ED visits increased 78 percent from 461 per 100,000 in 2002 to 820 per 100,000 in 2010. The average annual increase was 53 per 100,000 per year. The increase in rates was similar for both males and females. Rates increased among all age groups with the largest increase found among adults ages 85 or older (180 per 100,000 per year). The distribution of ED visits by mechanism shifted during the study period. Increases in the number of ED visits were found among falls (2,755 per year), being struck by or against (927 per year), sports or recreation activities (360 per year) and motor vehicle traffic crashes (334 per year) (Figure

Ohio Violence and Injury Prevention Program, Ohio Department of Health

14.9). The number of ED visits without an external cause code appeared to decrease in 2002-2005 then increase in 2005-2010. See Tables 54a-c located at the end of this section for more detailed information on the number and rate of TBI related ED visits.

SECTION 6: ECONOMIC BURDEN OF INJURIES

ECONOMIC BURDEN:

Injuries cost Ohio an estimated \$13.4 billion or \$1,163 per resident in 2010. Fatal injuries cost \$6.7 billion which includes \$76 million associated with medical care and \$6.6 billion related to work loss. Hospitalizations resulting from injuries cost \$3.0 billion which includes \$900 million in medical care and \$2.1 billion associated with work loss. ED visits associated with injuries cost \$3.7 billion which includes \$800 in medical care and \$2.9 billion in work loss.

Unintentional injuries were associated with the largest share of injury cost at \$10.3 billion or 77 percent. Other injuries making a significant contribution to the cost of injuries were suicide and self-harm behaviors (\$1.7 billion or 12 percent) and homicides and assaults (\$1.3 billion or 10 percent). Approximately \$135 million was associated with undetermined intents and 29 million (less than 1 percent) resulted from legal interventions (see Figure 55a).

Among unintentional injuries, mechanisms associated with highest costs were falls (\$2.6 billion or 19 percent), motor vehicle traffic crashes (\$2.3 billion or 17 percent), and poisoning (\$2.0 billion or 15 percent). Other mechanisms making significant contributions to the cost of injuries were burns (\$212 million), pedestrian (\$183 million), suffocation (\$152 million), pedal cycling (\$138 million), and drowning (\$117 million) (see Figure 55a). Of note, the cost for a substantial percentage of hospitalizations (38 percent) and ED visits (25 percent) is unknown because the injuries do not have an external cause code. This limitation leads to an underestimate in the true cost of injuries by mechanism in Ohio.

In addition to unintentional mechanisms, significant costs were associated with traumatic brain injuries and firearms. Traumatic brain injuries were associated with \$3.2 billion and firearms were associated with \$1.4 billion in 2010.

Figure 55b. Costs (in billions)* associated with injury deaths, hospitalizations, and ED visits, by mechanism and year, Ohio, 2002-2010

*Based on estimates published on CDC WISQARS. Costs are reported in 2005 U.S. dollars

TRENDS:

The cost of injuries has increased 21 percent from \$11 billion in 2002 to \$13.4 in 2010. The increase in the cost of injuries has largely been driven by costs associated with deaths and emergency department visits. Costs associated with deaths increased 20 percent from \$5.6 billion in 2002 to \$6.7 billion in 2010. ED visits increased 43 percent from \$2.6 billion in 2002 to \$3.7 billion in 2010. Costs associated with hospitalizations remained similar (see Figure 55b).

Costs associated with unintentional injuries increased 25 percent from 8.2 billion in 2002 to \$10.3 billion in 2010. Costs associated with intentional injuries increased 11 percent from \$2.6 billion in 2002 to \$2.9 billion in 2010 while costs associated with undetermined intents and legal interventions increased 31 percent and 33 percent respectively.

Among the leading causes of injuries, increases in costs were found among unintentional poisonings (117 percent), falls (40 percent), suicide/self-harm (12 percent), and homicides/assaults (10 percent). In contrast, decreases in costs were found among motor vehicle traffic crashes (20 percent), drowning (9 percent), pedestrian injuries (7 percent), burns (5 percent), and pedal cycle injuries (1 percent).

Costs associated with traumatic brain injuries increased 22 percent from \$2.6 billion in 2002 to \$3.2 billion in 2010 while costs associated with firearms increased 7 percent from \$1.3 billion in 2002 to \$1.4 in 2010. See table 55a for more detailed information on costs associated with injuries in Ohio.

SECTION 7: APPENDICES

APPENDIX 1: DATA SOURCES

This report uses data from behavioral risk factor surveys, hospital discharge records and death certificates to study patterns and trends in injuries among Ohio residents. The following is brief summary of each data source referenced in this report.

Cost of Injuries

The medical and work loss cost of injuries was estimated by the Centers for Disease Control and Prevention (CDC). Cost estimates for fatal and non-fatal injuries can be queried on the CDC's Web-based Injury Statistics Query and Reporting System Web (WISQARS).

http://www.cdc.gov/injury/wisqars/pdf/WISQARS_Cost_Methods-a.pdf

Death Records

Death records are maintained by ODH's Office of Vital Statistics. Death certificates provide limited information about circumstances of injury circumstances or contributing factors. Both injuries and their external causes were classified according to the 10th Revision of the International Classification of Diseases (ICD-10). See Appendix 3 for a complete list of external cause of injury codes by mechanism and intent.

<http://dwhouse.odh.ohio.gov/datawarehousev2.htm>

Hospital Discharge Records

Hospital discharge records are collected and maintained by the Ohio Hospital Association (OHA) from information provided by member hospitals. Both injuries and their external causes were classified according to the 9th Revision of the International Classification of Diseases, Clinical Modification (ICD-9-CM). For hospitalizations, a case was defined as an Ohio resident with an injury listed in the primary diagnosis field. For ED visits, a case was defined as an Ohio resident with an injury listed in the primary diagnosis field or a valid external cause of injury code any of the 15 diagnosis fields. Injury mechanisms for both hospitalizations and ED visits were based on the first listed external cause of injury. See Appendix 2 for a complete list external cause of injury codes by mechanism and intent.

<http://www.ohanet.org/>

Leading Causes of Death

The data source for WISQARS Fatal Injury Data is the National Vital Statistics System (NVSS) operated by the National Center for Health Statistics. WISQARS provides death counts and death rates for the United States and by state, county, age, race, Hispanic ethnicity, sex, and leading cause of death, injury intent, and injury mechanism categories. WISQARS can be used to query death data for the years 1999 - 2009, of which the underlying cause of death is specified using ICD-10 codes.

http://www.cdc.gov/injury/wisqars/leading_causes_death.html

Ohio Violence and Injury Prevention Program, Ohio Department of Health

Ohio Behavioral Risk Factor Surveillance System (BRFSS)

The Ohio Behavioral Risk Factor Surveillance System (BRFSS) is a random digit dial telephone survey of non-institutionalized adults aged 18 years of older. The BRFSS has been conducted annually by the Ohio Department of Health since 1984. The survey collects information on the prevalence of health behaviors, health care usage, and disease diagnosis associated with the leading cause of disease, injury and death in the United States. Results from the survey are weighted to represent the age, sex, race, and ethnic composition of Ohio.

<http://www.odh.ohio.gov/healthstats/brfss/behrisk1.aspx>

Ohio Population Estimates

The National Center for Health Statistics releases bridged-race population estimates of the resident population of the United States for use in calculating vital rates. These estimates result from bridging the 31 race categories used in Census 2000 and Census 2010. The bridged-race population estimates are produced under a collaborative arrangement with the U. S. Census Bureau.

http://www.cdc.gov/nchs/nvss/bridged_race.htm

Ohio Pregnancy Risk Assessment Monitoring System (PRAMS)

The Pregnancy Risk Assessment Monitoring System (PRAMS) is a population-based survey designed to examine maternal behaviors and experiences before, during and after a woman's pregnancy, and during the early infancy of her child. The Centers for Disease Control and Prevention initiated PRAMS in 1987 in an effort to reduce infant mortality and the incidence of low birth weight. PRAMS were implemented in Ohio in 1999.

<http://www.odh.ohio.gov/healthstats/pramshs/prams1.aspx>

Ohio Traffic Crash Reports

The Ohio Department of Public Safety compiles statistical data on crashes that occur on Ohio's roads and highways. Crash data is available in the form of annual reports. Users can also develop customized queries of the data online.

http://ohiohighwaysafetyoffice.ohio.gov/otso_annual_crash_facts.stm

Ohio Youth Risk Behavior Survey (YRBS)

The Ohio Youth Risk Factor Survey (YRBS) is an anonymous paper and pencil survey of high school students enrolled in public and non-public schools. The YRBS has been conducted in Ohio since 1993 and is collaborative project between the Ohio Departments of Education and Health. The survey collects information on the prevalence of health behaviors, health care usage, and disease diagnosis associated with the leading cause of disease, injury and death in the United States. Results from the survey are weighted to represent the age, sex, race, and ethnic composition of Ohio.

http://www.odh.ohio.gov/odhprograms/chss/ad_hlth/youthrsk/youthrsk1.aspx

APPENDIX 2: ANALYTIC METHODS

This analysis was limited to descriptive statistics, which were generated through the use of Statistical Analysis System (SAS) Version 9.1, Cary, N.C. The data were analyzed using injury surveillance guidelines from the Centers for Disease Control and Prevention (CDC).

Deaths:

- Injury deaths were defined as a death with the underlying cause of death listed as an injury. Traumatic brain injury deaths were defined as deaths with an injury as underlying cause of death and a traumatic brain injury listed in one of the multiple cause of death fields. See Appendix 4 for a list of ICD-10 codes for injury mechanisms and Appendix 6 for a list of mechanism subcategories.
- Deaths included in this report were restricted to Ohio residents.
- Rates were calculated by dividing the number of injuries by the number of Ohio residents. Population estimates were based on estimates from the National Center for Health Statistics. Rates were age adjusted to the 2000 U.S. standard population.

Hospitalizations:

- Discharge dataset includes nonfederal, acute care, or inpatient facilities. The dataset does not include Veterans' Affairs and other federal hospitals, rehabilitation centers, or psychiatric hospitals.
- Injury hospitalizations were defined as an inpatient visit with an injury listed in the primary discharge diagnosis field. See Appendix 5 for a list of ICD-9-CM codes for injury mechanisms and Appendix 7 for a list of mechanism subcategories.
- Datasets include readmissions, transfers, and deaths occurring in the hospital.
- Hospitalizations included in this report were restricted to Ohio residents.
- The external cause of injury code used in the analysis was the first listed cause of the discharge diagnosis fields. If the codes E000-E030, E849, E967, E869.4, E870-E879, or E930-E949 were the first listed codes then the next valid external cause code was used.
- Rates were calculated by dividing the number of injuries by the number of Ohio residents. Population estimates were based on estimates from the National Center for Health Statistics. Rates were age adjusted to the 2000 U.S. standard population.

Emergency Department Visits:

- Discharge dataset includes nonfederal, acute care, or inpatient facilities. The dataset does not include Veterans' Affairs and other federal hospitals, rehabilitation centers, or psychiatric hospitals.

Ohio Violence and Injury Prevention Program, Ohio Department of Health

- Injury ED visits were defined as an ED visit with an injury listed in the primary discharge diagnosis field or a valid external cause of injury code in any of the discharge diagnosis fields. See Appendix 5 for a complete list of ICD-9-CM codes.
- ED visits included in this report were restricted to Ohio residents.
- Persons who are treated at an ED and later admitted to a hospital are removed from the ED dataset, and therefore are not included in any analysis of ED data.
- The external cause of injury code used in the analysis was the first listed cause of the discharge diagnosis fields. If the codes E000-E030, E849, E967, E869.4, E870-E879, or E930-E949 were the first listed codes then the next valid external cause code was used.
- Rates were calculated by dividing the number of injuries by the number of Ohio residents. Population estimates were based on estimates from the National Center for Health Statistics. Rates were age adjusted to the 2000 U.S. standard population.

Trend Analysis for Deaths, Hospitalizations and Emergency Department Visits:

- Trend analysis for annual injury death, hospitalization, and ED visit rates was conducted in Microsoft Excel. Annual injury rates were plotted and a linear trend line was drawn to minimize the distance between the trend line and data point. The goodness of fit for the linear trend line was determined by the R-squared value. Linear trends were defined as a trend line with an R-squared value of 0.5 or higher. Non-linear trends were defined as a trend line with an R-squared value of less than 0.5. The slope and goodness of fit of the trend line were reported in the data tables. Non-linear trends were labeled with (NL) next to the slope.

Poverty Status and County Urbanity Classifications:

- County urbanity was derived from county of residence reported by Ohio Behavioral Risk Factor Surveillance System respondents. County urbanity classifications were based on a combination of proximity and connectedness to urban core economic development area and definitions of Appalachian counties established by the Appalachian Development Commission. See Appendix 11 for a map with county classifications.
- Poverty status was derived from household income and household composition reported by Ohio Behavioral Risk Factor Surveillance System respondents. Respondents were grouped into categories based on the 2010 Federal Poverty Guidelines. See Appendix 12 for household income and composition thresholds.

Cost of Injuries:

- Fatal Injury costs were calculated by multiplying the number of injury deaths in Ohio by the average cost associated the death for Ohio published on the CDC's

Ohio Violence and Injury Prevention Program, Ohio Department of Health

WISQARS website. See Appendix 8 for average cost estimates by mechanism and intent.

- Non-fatal injury costs for hospitalizations were calculated by multiplying the number of hospitalizations by the average cost associated with hospitalizations for the United States published on the CDC's WISQARS website. See Appendix 9 for average cost estimates by mechanism and intent.
- Non-fatal injury costs for ED visits were calculated by multiplying the number of ED visits by the average cost associated with ED visits for the United States published on the CDC's WISQARS website. See Appendix 10 for average cost estimates by mechanism and intent.
- Total injury costs were calculated by adding the estimated costs for injury deaths, hospitalizations and ED visits.

APPENDIX 3: LIMITATIONS OF INJURY SURVEILLANCE DATA

Death Certificate Data:

- The cause of death reported on the death certificate is based on the underlying cause of death determined by a physician or coroner. While physicians and coroners are well trained to investigate and determine causes of death, a standardized process for investigating and determining causes of death does not exist in Ohio. This lack of uniformity may lead to differences in how underlying causes of death are classified and pose limitations for comparing rates across local jurisdictions.

Hospital Discharge Data:

- In each year of the study period, approximately 30 percent of injuries treated in the as inpatients and emergency departments were not assigned an external cause code (E-code). This most likely resulted in an underestimate of total costs and incidence rates, because not all mechanism and intents for injuries could be identified and included in the analysis by mechanism.
- Of the non-fatally injured, only those who sought medical care were captured for this analysis.
- Discharges, not individuals, were the unit of measurement, thereby resulting in duplication when readmissions for the same initial event occurred. The inclusion of readmissions would lead to an overestimate of incidence rates.
- Race and ethnicity are largely incomplete in the hospital discharge data and were not included in the analysis.
- Ohio residents treated in out-of-state hospitals are not consistently included, thereby affecting rates, particularly of border counties.
- Severity of injury is assumed based on type of medical treatment received (i.e., inpatient treatment is for more severe injuries than ED visits).

Behavioral Risk Factor Data:

- Data from the Pregnancy Risk Assessment Monitoring System (PRAMS), Ohio Youth Risk Behavior Survey (YRBS) and Behavioral Risk Factor Surveillance System (BRFSS) are based on self-reported behaviors by respondents. The accuracy of self-reported data depends on the respondents' ability to recall and willing to report the information. Self-reported data can lead to overestimates or underestimates of the true prevalence in the population depending on the topic being asked.
- Results from Ohio YRBS represent a random sample of students enrolled in high schools in Ohio. The results do not represent high school age youth who have dropped out of school.
- Results from the Ohio BRFSS represent a random sample of non-institutionalized adults ages 18 or older in Ohio with a landline in their home. The BRFSS excludes institutionalized adults and adults living in cell phone only households.

Appendix 6: Fatal Injury Mechanism Subcategories

Mechanism:	ICD-10 Codes:
Drug Poisoning	
Drug Types	
Heroin	T40.1
Methadone	T40.3
Cocaine	T40.5
All opioids	T40.0-T40.4, T40.6
Prescription opioids	T40.2-T40.4, T40.6
Barbituates	T42.3
Benzodiazepine	T42.4
Other and unspecified	T50.9
Motor Vehicle Traffic Crashes:	
Occupant injured	
Pedestrian	V02-V04 (0.1), V09.2, V09.3
Pedal cycle	V10-18 (0.4, 0.5, and 0.9), V19 (0.4-0.9)
Motorcycle	V20-28 (0.4, 0.5, and 0.9), V29 (0.4-0.9)
Three wheeled vehicle	V30-38 (0.5-0.9), V39 (0.4-0.9)
Car	V40-48 (0.5-0.9), V49 (0.4-0.6)
Pickup truck or van	V50-58 (0.5-0.9), V59 (0.4-0.6)
Heavy transport vehicle	V60-68 (0.5-0.9), V69 (0.4-0.6)
Bus	V70-78 (0.5-0.9), V79 (0.4-0.6)
Other or unspecified	V80-88 (0.0-0.3), V89 (0.2-0.3)
Falls:	
Same level	W01 and W03
Carried by other persons	W04
Wheelchair	W05
Bed	W06
Chair	W07
Other furniture	W08
Playground	W09
Stairs or steps	W10
Ladder or scaffolding	W11 and W12
From/out of building	W13
Tree	W14
Cliff	W15
Jumping or diving in water (not drowning)	W16
Other fall from different level	W17
Other fall from same level	W18
Unspecified	W19
Pedestrian:	
Motor vehicle traffic	V00-V05 (0.1), V09.2, V09.3
Non-motor vehicle traffic	V00-V05 (0.0), V09.0, V09.1
Unspecified	V00-V05 (0.9), V09.9
Pedal Cycle:	
Motor vehicle traffic	V10-V19 (0.4, 0.5, and 0.9)

Ohio Violence and Injury Prevention Program, Ohio Department of Health

Non-motor vehicle traffic	V10-V19 (0.0-0.2)
Suffocation:	
In bed	W75
Other suffocation	W76
Cave-in, falling earth	W77
Inhalation of gastric contents	W78
Ingestion of food	W79
Ingestion of other objects	W80
Low oxygen environment	W81
Other specified	W83
Unspecified	W84
Drowning:	
Bath tub	W65 and W66
Swimming pool	W67 and W68
Natural body of water	W69 and W70
Other	W73
Unspecified	W74
Fire and burns:	
Uncontrolled fire	X00 and X01
Controlled fire	X02 and X03
Flammable material	X04
Nightwear	X05
Other clothing	X06
Other fire	X07
Unspecified fire	X08
Hot water	X09
Other hot fluids	X11
Household appliances	X12
Hot heating appliances	X15
Other hot metals	X16
Unspecified substance	X19
Suicide	
Poisoning	X60-69
Hanging	X70
Drowning	X71
Firearm	X72-74
Explosive material	X75
Smoke, fire, or flames	X76
Steam or hot vapors	X77
Sharp or blunt object	X78-79
Jumping	X80-81
Motor vehicle crash	X82
Other means	X83
Unspecified means	X84
Sequelae of suicide	Y87.0

Fight or brawl	E960.0
Rape	E960.1
Corrosive substance	E961
Poisoning	E962
Hanging	E963
Drowning	E964
Firearms	E965
Cutting or piercing	E966
Perpetrator of abuse	E967
Other and unspecified	E968
Late affects of assault	E969
Traumatic Brain Injury:	
Falls	E880-888
Motor vehicle traffic crashes	E810-819
Motor vehicle non-traffic crashes	E820-829
Pedal cycle	E800-809(0.3), E810-825(0.6), E826.1, E829.1, E827.1, E828.1, E829.1
Pedestrian	E800-809(0.2), E810-825(0.7), E826.0, E827.0, E828.0, E829.0
Assaults	E960-969
Self-harm	E950-959
Sports and recreation	E886.0, E917.0, E917.5
Struck by/against	E849.4, E883.0, E884.0, E885.3, E885.4, E902.2, E910.0-E910.2, E922.2, E922.4, E922.5, E987.2
	E885.0-E885.2
	E916, E917

Appendix 8: Fatal Injury Costs

Average costs associated with fatal injuries by intent and mechanism, Ohio, 2005 U.S. dollars

Intent	Medical Care	Work Loss
Unintentional	11,634	837,333
Suicide	2,926	1,064,570
Homicide	6,901	1,362,975
Undetermined	6,804	989,746
Legal Intervention	4,755	1,321,443
Unintentional mechanisms		
Falls	20,728	251,529
MV traffic	9,547	1,095,338
Drowning	3,905	1,127,124
Fire/burn	19,095	780,015
Poisoning	3,957	1,191,574
Pedal	17,645	1,118,621
Pedestrian	11,972	987,488
Suffocation	14,259	540,573
All intents		
Traumatic brain injuries	6,433	465,960
Firearms	3,769	1,160,514

Appendix 9: Injury Hospitalization Costs

Average costs associated with injury hospitalizations by intent and mechanism, United States, 2005

Intent	Medical Care	Work Loss
Unintentional	21,996	47,781
Suicide	8,183	17,012
Homicide	20,154	119,478
Undetermined		
Legal Intervention	16,807	72,992
Unintentional mechanisms		
Falls	19,672	35,628
MV traffic	40,825	79,625
Drowning	35,106	283,010
Fire/burn	18,247	51,981
Poisoning	9,621	3,024
Pedal	39,672	96,557
Pedestrian	42,814	87,372
Suffocation	37,898	25,925
All intents		
Traumatic brain injuries	61,017	99,667
Firearms	14,716	79,615

Appendix 10: Injury Emergency Department Visit Costs

Average costs associated with injury ED visits by intent and mechanism, United States, 2005

Intent	Medical Care	Work Loss
Unintentional	786	2,877
Suicide	959	3,086
Homicide	1,187	868
Legal Intervention	946	2,634
Unintentional mechanisms		
Falls	954	456
MV traffic	661	2,922
Drowning	676	556
Fire/burn	517	1,108
Poisoning	1,186	3,255
Pedal	1,035	3,496
Pedestrian	1,087	2,597
Suffocation	931	2,775
All intents		
Traumatic brain injuries	1,650	8,610
Firearms	849	3,200

Appendix 11: County Urbanity Classifications

The map describes county urbanity classification used in this report. Counties were classified as urban if they had an urban core that served as a center of economic activity for surrounding counties. Counties were considered suburban if they were located adjacent to an urban county and strongly connected with economic activity in the urban county. Rural counties do not have an urban core and not strongly connected to an adjacent urban county. The Appalachian classification was based on the Appalachian Development Commission with the exception of Mahoning and Trumbull counties. Mahoning County was classified as an urban county and Trumbull was considered to be a suburban county in the report.

Appendix 12: 2010 Federal Poverty Guidelines

Family Size:	Annual Household Income Threshold		
	Below Poverty	Less than 200% above poverty	200% or more above poverty
1	\$10,830	\$10,831-21,659	\$21,660+
2	\$14,570	\$14,571-29,139	\$29,140+
3	\$18,310	\$18,131-36,259	\$36,260+
4	\$22,050	\$22,051-44,009	\$44,100+
5	\$25,790	\$25,791-51,579	\$51,580+
6	\$29,530	\$29,531-59,059	\$59,060+
7	\$33,270	\$33,271-66,539	\$66,540+
8	\$37,010	\$37,011-74,019	\$74,020+

Violence and Injury Prevention Program

2010 OHIO DRUG OVERDOSE DATA: GENERAL FINDINGS¹

- Drug overdose deaths continue to be a public health crisis in Ohio with a 372 percent increase from 1999 to 2010. (See Figure 1.)
- Unintentional drug overdoses caused **1,544** deaths to Ohio residents in 2010. **This is the highest number of deaths on record for drug overdose** and surpasses the previous highest number (1,475) in 2008 by 5 percent
- This is equivalent to 4 Ohioans dying every day or one Ohioan dying every 6 hours.
- Unintentional drug overdose continues to be the leading cause of injury-related death in Ohio, ahead of motor vehicle traffic crashes, suicide and falls. This trend began in 2007 and continues through 2010.
- Prescription drugs are involved in most of the unintentional drug overdoses and have largely driven the rise in deaths. Pain medications (opioids) and multiple drug use are the largest contributors to the epidemic. (see Figure 2.)

¹ Source: Ohio Department of Health; Center for Public Health Statistics and Informatics

The Ohio Department of Health and other partners are responding to the crisis through coordinated efforts. A description of ODH's efforts can be found on page 4.

Additional data, resources and background information are available at:
<http://www.healthyohioprogram.org/vipp/drug/dpoison.aspx>

¹Source: Ohio Department of Health, Office of Vital Statistics,
Center for Public Health Statistics and Informatics

2010 OHIO DRUG OVERDOSE DATA: SPECIFIC DRUG INVOLVEMENT:

- **Prescription opioids (pain medications) are associated with more fatal overdoses than any other prescription or illegal drug including cocaine and heroin combined.** Nearly half (45 percent*) of fatal unintentional overdoses involved prescription opioids in Ohio in 2010, compared to 39 percent in 2009 (see Figure 2).
 - More than one-fourth (431; 28 percent*) of the overdoses involved commonly-prescribed opioids such as oxycodone, hydrocodone and morphine (data not shown).
 - Ten percent* of the overdoses involved methadone (prescription opioid) (see Table 1).
- Approximately two-thirds (979; 63 percent*) of the drug overdoses involved **any opioid** (prescription or heroin) in 2010, compared to 55 percent (783) in 2009.
- **Heroin-involved deaths** have continued to increase from 16 percent (233) in 2008 to 20 percent (283) in 2009 to a high of 22 percent* of all drug overdoses (338) in 2010.
- **Deaths involving benzodiazepines** have also increased from 212* (15 percent) in 2009 to 300 (19 percent*) in 2010.
- **Multiple drug use** is a major contributing factor to the overdose epidemic. In 2010, two-thirds (66 percent*) of drug overdoses involved multiple substances.

***In approximately one-fourth (22 percent) of the cases, no specific drug is identified in the death certificate data. As such, we assume that the reported drugs are likely under-estimates of their true contribution to the burden of fatal drug overdose in Ohio.**

¹ Source: Ohio Department of Health; Center for Public Health Statistics and Informatics

² Multiple substances are usually involved in overdose deaths.

*Includes involvement of prescription opioids and/or heroin

**at least two substances were involved

***no specific drug was identified

Violence and Injury Prevention Program

2010 OHIO DRUG OVERDOSE DATA: SPECIFIC DRUG INVOLVEMENT:

Table 1. Unintentional drug poisoning deaths of Ohio residents by specific drug(s) as mentioned on the death certificate and by year, 2000-2010^{1,2,3}

1 Source: ODH, Center for Public Health Statistics & Informatics in partnership with the Violence and Injury Prevention Program

2 Total includes out of state deaths of Ohio residents for all years

3 Individual drugs do not add up to totals as more than 1 drug may be coded on the death certificate for 1 death.

4 Data completeness varies from year to year for residents who died out of state.

* Includes prescription opioids and heroin

**Includes all instances where 'T50.9' (other/unspecified) is included as contributing to death

***Includes only those instances where no other drug than T50.9 (other/unspecified) is included as contributing to death

National Data: (Source: CDC)

- According to the Centers for Disease Control and Prevention (CDC) prescription painkiller overdoses (opioids including hydrocodone, oxycodone, methadone, morphine, etc.) killed nearly 15,000 people in the U.S. in 2008. This is more than three times the 4,000 people killed by these drugs in 1999.
- The quantity of prescription painkillers sold to pharmacies, hospitals, and doctors' offices was four times larger in 2010 than in 1999.
- Enough prescription painkillers were prescribed in 2010 to medicate every American adult around-the-clock for a month.

Violence and Injury Prevention Program

CONTRIBUTING FACTORS

- Key factors leading to this epidemic include 1) changes in clinical pain management guidelines in the late 1990's (i.e., Federation of State Medical Boards releases *Model Guidelines for the Use of Controlled Substances for the Treatment of Pain*; Ohio Revised Code 4731.21 Drug Treatment of Intractable Pain) and 2) aggressive marketing by pharmaceutical companies of new, extended-release prescription opioids to physicians (*Source: FDA Warning Letters*). These factors initially led to rapidly increasing use of prescription opioids within health care settings.
- From 1997 to 2007, there was a 506 percent increase in the amount of prescription opioid grams per 100,000 population distributed to retail pharmacies in Ohio (*Source: DEA ARCOS*).
- In 2010, there was an average of 67 doses of opioids dispensed for every Ohio resident. In Scioto County, incidentally having the highest fatal overdose rate in the State, this ratio was nearly twice as high with 123 doses for every Scioto County resident (*Source: Ohio Board of Pharmacy, Ohio Automated Rx Reporting System*).
- Additional societal and medical trends that lead to this problem include marketing of medications directly to consumers, over-prescribing, substance abuse, widespread diversion of medications, deception of providers including doctor shopping and prescription fraud, illegal online "pharmacies," unscrupulous providers (e.g., "pill mills"), overmedication and mixing medications, and improper storage and disposal of excess medications.

WHAT IS ODH DOING TO ADDRESS THE PROBLEM?

- **Surveillance of drug overdose trends and patterns** and providing data on the [Ohio Drug Poisoning website](#).
- **Coordination of the Prescription Drug Abuse Action Group (PDAAG)** in conjunction with ODADAS. The PDAAG is an ongoing state-level work group comprised of over 100 member organizations dedicated to reducing prescription drug abuse, misuse and overdose in Ohio. The PDAAG serves as a conduit for information sharing, networking and the development of state-level recommendations to address the issue.
- **Conducting a social marketing campaign: *Prescription for Prevention: Stop the Epidemic* (P4P)** (<http://www.p4pohio.org>). P4P is a multi-level social marketing campaign to combat the epidemic of prescription drug overdose that includes coalition establishment and support in high risk counties, public education and outreach, TV and radio public service announcements, peer-to-peer programs in schools and education at work sites.
- **Funding two pilot projects in Scioto and Montgomery Counties from 2010-2013** with funding from the CDC's Preventive Health and Health Services Block Grant. These projects engage in activities such as coalition development, education of healthcare prescribers and service providers, formation of a poison death review committee, policy development and implementation of public education and awareness campaigns.
- **Providing start-up support and resources for Scioto County's naloxone distribution program: DAWN** (Deaths Avoided with Naloxone) <http://bit.ly/projectdawn>; the first of its kind in the State.
- **Encouraging excess drug disposal solutions and methods** such as take back events and permanent drug disposal drop boxes through the development of take-back guidelines and support for permanent drop boxes.
- **Collaboration with other state organizations to plan conferences, summits and educational opportunities.**
- Providing support for the Governor's Opiate Cabinet Action Team, Prescriber Education Workgroup including development of Emergency and Acute Care Opioid and Other Controlled Substances Prescribing Guidelines.

For complete information on what ODH is doing to address the issue, please visit:
<http://www.healthyohioprogram.org/vipp/drug/dpoison.aspx>

OHIO

Special Emphasis Report: Infant and Early Childhood Injury, 2010

Injury is a Leading Cause of Death in Children

Injuries are a major public health problem across the United States and in Ohio. They are the leading cause of death and disability for Ohio children aged 1 to 5 and a leading cause of death for infants.

In 2010, 155 Ohio children ages 0 to 5 years died as a result of injury, or more than one child every two days. As tragic as they are, deaths are only the tip of the iceberg. For every injury death to an Ohio child in this age range, there were 10 injury-related hospital stays, and 742 injuries treated and released from an emergency department (ED) in 2010. These numbers do not include those treated at home or in a physician's office.

Injuries are not accidents! Most child injuries follow predictable patterns and can fortunately be prevented using evidence-based strategies. Prevention strategies using multiple approaches such as education and training as well as policy, systems, engineering or environmental change are most effective.

Figure 1: Annual Injuries among Children Ages 0-5 Years, Ohio, 2010

Figure 2: Percent of Injury Deaths, Hospitalizations and Emergency Department Visits among Children Ages 0-5 Years, by Sex, Ohio, 2010

Childhood Injury by Sex

Male children are more likely to experience fatal and nonfatal injuries than female children.

- 54% of injury deaths occurred among males.
- 60% of injury hospitalizations occurred among males.
- 57% of injury ED visits occurred among males.

This document was produced in conjunction with CDC's Core Violence and Injury Prevention Program under Cooperative Agreement 11-1101.

OHIO

Special Emphasis Report: Infant and Early Childhood Injury, 2010

Injury-Related Death

Injury Deaths in Infants

- The leading causes of injury death among infants were unintentional suffocation in bed (42%), homicide (19%), other unintentional suffocation (16%), and transportation (7%).
- All other unintentional causes* contributed to 9% of injury deaths
- Deaths of undetermined intent led to 8% of injury deaths.

**Other unintentional causes include fire/burns, natural causes, and other specified causes.*

Figure 3: Injury Deaths among Infants Less than 1 Year, Ohio, 2010

Injury Deaths in Young Children

- The leading causes of injury death among young children were homicides (19%), unintentional drowning (18%), transportation (18%), and fire/burns (15%).
- All other unintentional causes* contributed to 15% of injury deaths.
- Deaths of undetermined intent led to 9% of injury deaths.

**Other unintentional causes include falls, poisoning, struck by/against, and natural causes.*

Figure 4: Injury Deaths in Children Ages 1 – 5 Years, Ohio, 2010

OHIO

Special Emphasis Report: Infant and Early Childhood Injury, 2010

Injury-Related Hospitalizations

Figure 5: Injury-Related Hospital Discharges among Infants <1 Year, Ohio, 2010

Injury Hospitalizations in Infants

- 337 hospitalizations resulted from injuries among infants less than 1 year of age in 2010.
- The leading causes of injury hospitalizations among infants were falls (17%), assaults (11%), and fire/burn (3%).
- A combination of other unintentional causes* accounted for 13% of hospitalizations.
- Approximately one-half of hospitalizations did not have an external cause of injury recorded.

**Other unintentional causes include drowning, cuts/pierces, foreign body, natural causes, poisoning, struck by, suffocation, and transport.*

***E-codes = External cause of injury*

Injury Hospitalizations in Young Children

- 1,208 hospitalizations resulted from injuries among children 1-5 years of age in 2010.
- The leading causes of injury hospitalizations among children were falls (11%), poisoning (10%), fire/burn (5%) and transport (4%).
- A combination of other unintentional causes* accounted for 10% of hospitalizations.
- Approximately one-half of hospitalizations did not have an external cause of injury recorded.

**Other unintentional causes include drowning, cuts/pierces, foreign body, natural causes, struck by, and suffocation.*

***E-codes = External cause of injury*

Figure 6: Injury-Related Hospital Discharges among Children Ages 1 – 5 Years, Ohio, 2010

OHIO

Special Emphasis Report: Infant and Early Childhood Injury, 2010

Injury-Related Emergency Department Visits

- There were 10,026 injury-related ED visits among infants less than 1 year old and 104,988 among children ages 1-5 years. Combined, that is the equivalent of 13 children aged 5 years and younger receiving ED treatment for an injury every hour in Ohio.
- The leading causes of injury related ED visits were similar among infants and children. The leading causes of injury were unintentional falls (26%), being struck by or against (11%), natural environment (6%), and transportation related injuries (4%).
- A combination of other unintentional causes was associated with 16% of ED visit injuries. These causes included overexertion, being caught between two objects, and other specified*.
- Approximately one-quarter of ED visits did not have an external cause of injury code (E-codes), thus limiting the ability to identify the type of injury involved.

Ohio Child Injury Prevention Activities

The Ohio Department of Health's Violence and Injury Prevention Program (VIPP) is engaged in state-level activities to address child injuries in Ohio.

Prevention:

- **Child Passenger Safety (CPS)**- The VIPP promotes CPS in Ohio by coordinating the Ohio Buckles Buckeyes program. With a coordinator in each of Ohio's 88 counties, eligible low income families receive training, child safety seats and support to ensure children ride safely on every trip.
- **Local Injury Prevention Grants** - The VIPP also provides grant funding to support four local child injury prevention programs focused on pedestrian and bicycle safety and youth sports safety.

Surveillance: VIPP conducts statewide surveillance through death certificates, inpatient hospitalizations, and ED visits.

Partnerships: The VIPP coordinates the Ohio Injury Prevention Partnership's (OIPP) Child Injury Action Group (CIAG). The CIAG is a multi-disciplinary statewide coalition of organizations concerned with the prevention of injury to Ohio children and youth. The CIAG has identified and is addressing five priority areas including: teen driving safety, bicycle and wheeled sports helmets, infant safe sleep, sports-related traumatic brain injury, and child passenger safety.

Accomplishments/Successes: The CIAG completed a five-year state strategic plan and moved into its implementation phase with the completion of action plans for each of the five priority areas. The CIAG developed a website for members to track activities and update action plans ohiociaag.org. The CIAG has offered mini-grants to local projects focused on one of the five priority areas in the plan to build capacity for child injury prevention activities within the state and increase engagement with the strategic plan.

Ohio Help Me Grow Program

The Help Me Grow Program is Ohio's birth to age 3 system that provides trans-disciplinary and family-centered services for expectant parents, newborns, infants, toddlers, and their families. The program includes both Early Intervention and Home Visiting, with the goal to:

- Link families with needed services to enhance their infant or toddler's health, development, and safety;
- Teach parenting education around child development, appropriate discipline, home environment safety and readiness for kindergarten; and
- Connect with families as early in pregnancy and infancy as possible to have the greatest impact possible on the development of the parent's skills and the child's development.

Professional development is provided to ensure that professionals who work with children and families have evidence-based and up-to-date information. The Ohio Department of Health, Bureau for Children with Developmental and Special Health Needs administers the program in collaboration with all 88 counties throughout the state.

Notes: Data are provided by the Ohio Department of Health, Office of Vital Statistics (death data) and the Ohio Hospital Association (hospital and ED data).

All injuries are considered unintentional unless specified otherwise. Reference to any commercial entity or product or service on this page should not be construed as an endorsement by the Government of the company or its products or services.

Released December, 2012

2012 Edition

**OHIO INJURY PREVENTION
PARTNERSHIP**

This Page Intentionally Left Blank

Dear Ohio Decision Maker,

Thank you for taking the time to review the 2012 edition of Preventing Injuries in Ohio: A Resource for State Policy Makers. The goal of this document is to inform you of the burden of injury and provide evidence-based policy recommendations to improve the health and safety of all Ohioans.

In Ohio, injury (intentional & unintentional) is the leading cause of death and disability for Ohioans ages 1 through 44. In fact, injury (including homicide and suicide) is the third-leading cause of death for all Ohio residents following only heart disease and cancer. In 2009, more than 550 Ohioans died each month as a result of injury. That's more than the equivalent of fatalities from one large jet crash each month in Ohio alone.

In addition to fatal injuries, non-fatal injuries result in significant medical and societal costs. Every day, on average, there are 3,200 emergency department (ED) visits and 193 hospitalizations among Ohioans who were injured seriously enough to require medical attention. These numbers translate into significant costs for Ohio's health care system. Over \$1.6 billion in ED charges and \$2.3 billion in hospitalization charges are incurred each year in Ohio as a result of injury. Of the millions of Ohioans who survive these injuries, many suffer long-term consequences which lead to even greater societal costs amounting to billions of dollars more annually in worker compensation claims, lost productivity, rehabilitation and criminal justice system expenses.

Adoption of evidence-based prevention policies can reduce injury-related deaths and prevent higher costs of dealing with the long-term consequences of injury. Over the past 20 years, injury prevention policies have saved thousands of lives. For example, policies promoting increased seat belt use have resulted in a significant reduction in motor vehicle crash fatalities. Recognized by the Centers for Disease Control and Prevention (CDC) as a "winnable battle," motor vehicle traffic crash deaths in Ohio decreased 31 percent from 1999 to 2009. Evidence-based injury prevention policies, such as seat belt laws, have the ability to reduce death and disability and improve the overall health and safety of our state. As policy makers, we trust that you are aware of the crucial role you play in ensuring that all Ohioans live injury free.

Thank you for your interest in learning how to help every Ohioan live his or her life to its fullest potential by reducing the burden of injury. If you have any questions or need additional information, please contact us at OhioInjuryPrevention@gmail.com.

Vince Caraffi

Ohio Injury Prevention Partnership

ABOUT THE OHIO INJURY PREVENTION PARTNERSHIP

Mission: To prevent injuries in Ohio using data and collaborative partnerships.

Vision: Working together to create a safe and injury-free Ohio.

The Ohio Injury Prevention Partnership (OIPP) is a group of professionals representing a broad range of agencies and organizations concerned with building Ohio's capacity to address the prevention of injury, particularly related to the group's identified priority areas of:

- Falls among older adults
- Prescription drug abuse and overdose
- Child/Youth Injury with a specific focus on:
 - o Motor vehicle traffic crashes
 - o Traumatic brain injury
 - o Infant suffocation
- Intentional injury including:
 - o Suicide
 - o Firearm-related violence

The OIPP was convened in November 2007 and is coordinated by the Ohio Department of Health (ODH) with funds from the Centers for Disease Control and Prevention (CDC), National Center for Injury Prevention and Control (NCIPC). OIPP action groups have been developed to create and implement action plans to address injury priorities, promote policy and systems change, and improve the quality and accessibility of statewide data. For more information on becoming a member of the OIPP or one of its action groups, please visit: www.healthyohioprogram.org/vipp/oipp/oipp.aspx.

ACKNOWLEDGEMENT

We would like to thank the Johns Hopkins Center for Injury Research and Policy for developing "Preventing Injury in Maryland: A Resource for State Policy Makers," which served as the model for this document. For more information about the Center please visit: <http://www.jhsph.edu/injurycenter>.

DISCLAIMER

The policies featured in this publication do not necessarily reflect the views of the Ohio Department of Health or any other state agency. Allowable activities related to contact with public policy makers vary by state; therefore it is important to consult internal agency rules, state laws, and (where applicable) federal laws to ensure full compliance.

YOUTH BICYCLE SAFETY

[illegible]

Bicycles are associated with more childhood injuries than any other consumer product except the automobile.¹

HOW DOES IT IMPACT THE U.S.?

- Between 2001 and 2007, 131 children and teens died each year from bicycle-related injuries in the United States.²
- In 2009, 272,377 children under the age of 18 sustained a bicycle-related injury.³
- Bicycle-related head injuries, most notably traumatic brain injuries (TBIs), are expensive because these injuries can endure and may require treatment for a lifetime.⁴ In one year, the U.S. incurred more than \$799 million in direct medical costs as a result of bicycle-related emergency department visits and hospitalizations for children under the age of 18.⁵

HOW DOES IT IMPACT OHIO?

- More than five Ohioans under the age of 18 died each year from bicycle-related TBIs from 1999 to 2007.⁶
- From 2002 to 2009, 7,629 young Ohioans were treated in emergency departments and 723 were hospitalized for bicycle-related TBIs.⁷
- Emergency department visits and hospitalizations for youth bicycle-related TBIs cost Ohioans more than \$28 million dollars in direct medical costs between 2002 and 2009.⁸

HOW DO WE ADDRESS THIS PROBLEM?

- Bicycle helmets are 85- to 88-percent effective in mitigating head and brain injuries, making the use of helmets the single most effective way to reduce head injuries and fatalities resulting from bicycle crashes. Universal bicycle helmet use by children ages 4 to 15 would prevent 39,000 to 45,000 head injuries, and 18,000 to 55,000 scalp and facial injuries annually.⁹
- In a recent survey, only 46.7 percent of Ohioans indicated that the oldest child in the household always or nearly always wore a helmet when bicycling, while 43.1 percent indicated that the oldest child seldom or never did.¹⁰
- Helmets significantly reduce the costs associated with bicycle-related head injuries. The purchase of a \$10 bicycle helmet saves approximately \$50 in direct medical costs. In addition, every bicycle helmet saves health insurers \$57 and auto insurers \$17.¹¹
- Bicycle helmet legislation is effective at increasing helmet use among cyclists, particularly in younger age groups, as well as decreasing head injury rates.^{12 13} In California, a bicycle helmet law, which led to an increase in helmet use, resulted in an 18.2 percent reduction in the proportion of TBIs among young bicyclists.¹⁴
- To date, 21 states, the District of Columbia, and at least 200 local governments (including 24 in Ohio) have enacted bicycle helmet laws. Most laws cover bicyclists under the age of 16.¹⁵

CONCUSSION IN YOUTH SPORTS

[illegible]

CONCUSSION IN YOUTH SPORTS

A concussion is a type of traumatic brain injury (TBI) caused by a bump, blow, or jolt to the head or body. The injury can range from mild to severe and can disrupt the way the brain normally works. Brain injury is the leading cause of sports-related death in children.¹

HOW DOES IT IMPACT THE U.S.?

- Each year, U.S. emergency departments treat an estimated 135,000 sports- and recreation-related TBIs, including concussions, among children ages 5 to 18.²
- In one year, hospitalizations and emergency department visits for TBIs cost the U.S. more than \$2.6 billion in direct medical costs.³
- Among children and youth ages 5 to 18 years, the five leading sports or recreational activities that account for concussions include: bicycling, football, basketball, playground activities and soccer.⁴
- During the last decade (2001-2009), emergency department visits for sports- and recreation-related TBIs, including concussions, increased by 60 percent among children and adolescents.⁵

HOW DOES IT IMPACT OHIO?

- On average, nearly 4,000 Ohio youth were treated in emergency departments for sports- and recreation-related TBIs each year between 2002 and 2009.⁶
- In Ohio, emergency department visits for sports-related TBIs increased 142 percent from 2002 to 2009.⁷
- Between 2002 and 2009, sports-related TBIs cost Ohioans more than \$25.8 million in emergency department treatment charges and \$4.1 million in hospitalization costs.⁸

HOW DO WE ADDRESS THIS PROBLEM?

- An athlete who returns to play before they are fully healed risks a greater chance of sustaining a second concussion. Repeat or later concussions can cause permanent brain damage, paralysis, and even death. Children and teens are more likely to get a concussion and take longer to recover than adults.⁹
- The Centers for Disease Control and Prevention (CDC), the National Football League (NFL) and the National Collegiate Athletic Association (NCAA) recommend the adoption of policies designed to prevent and properly treat concussions among youth athletes containing the following three elements: 1) parents, coaches and athletes must be educated about the dangers of concussions prior to the start of the season; 2) athletes suspected of having a concussion must be removed from a game or practice and not be permitted to return to play and; 3) a licensed health care professional must clear an athlete to return to play in the subsequent days or weeks. As of October 2011, 31 states have enacted laws containing these three provisions.¹⁰
- Mandatory coach training is essential, as coaches are on the front lines of youth athletics and, in the absence of athletic trainers, make decisions about whether a child can continue to play after a potential injury. Coaches as well as parents, athletes, and officials need to know how concussions can occur, recognize all the signs and symptoms and understand the long-term consequences of repeated concussions. Free online trainings on concussion management are available from the Centers for Disease Control and Prevention and the National Federation of State High School Associations.

FALLS AMONG OLDER ADULTS

[illegible]

FALLS AMONG OLDER ADULTS

Falls and fall-related injuries seriously affect older adults' quality of life and present a substantial burden to the health care system. The need to address this issue will continue to grow as the number of Americans age 65 and older is expected to double in the next 25 years due to increased life expectancy and aging of the baby boomer population.

HOW DOES IT IMPACT THE U.S.?

- One in three adults age 65 and older falls each year. Of those who fall, 20 to 30 percent suffer moderate to severe injuries that make it hard for them to get around or live independently, and increase their risk of early death.^{1 2 3}
- Falls are the leading cause of injury death for older Americans. In 2007, 18,334 people 65 and older died from a fall.⁴
- In 2009, emergency departments treated 2.2 million nonfatal fall injuries among older adults; more than 582,000 of these patients had to be hospitalized.⁵
- In 2000, the total direct medical costs of all fall injuries for people 65 and older exceeded \$19 billion. By 2020, the annual direct and indirect cost of fall injuries is expected to reach \$54.9 billion.⁶

HOW DOES IT IMPACT OHIO?

- Falls are the leading cause of injury-related emergency department visits, hospitalizations and deaths for Ohioans age 65 and older. On average, 2.3 older Ohioans suffered fatal falls each day in 2009.^{7 8} There were also an average of 1.9 fall-related hospitalizations per hour, a fall-related emergency department visit every eight minutes and a fall every 2.5 minutes.^{9 10}
- Older Ohioans accounted for 14 percent of the Ohio population in 2009, but represented 82 percent of the fatal falls.
- From 2000 to 2009, Ohioans age 65 and older experienced a 125 percent increase in the number of fatal falls.¹¹
- Annual medical costs for fall-related hospitalizations in Ohio total \$298.5 million or \$26 for every Ohio resident.¹²

HOW DO WE ADDRESS THIS PROBLEM?

- Falls are not a normal part of aging. Proven strategies exist to reduce the risk of falls among older adults. Such interventions include: home modifications to reduce environmental hazards, regular vision screenings, vitamin D supplements, medication management including reducing the total number of prescriptions, raising low blood pressure, and exercise for balance, gait and strength training such as Tai Chi or physical therapy.^{13 14}
- Some states including Virginia, Georgia and Pennsylvania have enacted changes to their tax code to promote safe and accessible homes for older adults. The Virginia Livable Homes Tax Credit provides state tax credits for building, purchasing, or modifying homes that incorporate accessibility and visitability features.¹⁵
- The Ohio Department of Health and the Ohio Department of Aging fund local activities such as A Matter of Balance, a fall risk reduction program for older adults; however, funding is limited and no dedicated funding source currently exists to maintain these programs on a long-term basis.

PRESCRIPTION DRUG OVERDOSE

[illegible]

PRESCRIPTION DRUG OVERDOSE

Due to the alarming increase of prescription drug abuse, drug overdose deaths now outnumber traffic crash fatalities nationwide and in Ohio.¹ Prescription opioids (pain relievers) such as OxyContin® and hydrocodone (Vicodin®) are involved in more drug overdose deaths than heroin and cocaine combined.²

HOW DOES IT IMPACT THE U.S.?

- Prescription drug overdoses killed nearly 15,000 people in the US in 2008. This is more than three times the number of people killed by these drugs in 1999.³
- Nearly half a million emergency department visits in 2009 were due to people misusing or abusing prescription painkillers.⁴
- Enough prescription opioids were prescribed in 2010 to medicate every American adult around-the-clock for a month.⁵

HOW DOES IT IMPACT OHIO?

- In 2009, an average of four Ohioans died each day due to a drug overdose.⁶
- From 1999 to 2009, Ohio's death rate due to drug overdose increased 335 percent. The increase in deaths has been driven largely by prescription opioids.⁷
- Prescription opioids were involved in at least four out of 10 (39 percent) fatal drug overdoses in Ohio in 2009, more than heroin and cocaine combined.⁸
- Fatal and non-fatal drug poisonings cost Ohioans \$3.6 billion annually or \$303 per Ohio resident.⁹ On average, overdose-related hospitalizations in Ohio cost an average of \$10,488 per stay.¹⁰

HOW DO WE ADDRESS THIS PROBLEM?

- Naloxone is a medication that is administered by emergency medical professionals to reverse respiratory depression caused by an opioid overdose.¹¹ Several states have removed legal and regulatory barriers to allow for the implementation of Naloxone Prescription Programs (NPPs), which provide overdose training and take-home doses of Naloxone to those who are deemed high-risk for an overdose.¹² Since 1996, more than 53,000 laypersons have been trained by NPPs resulting in more than 10,000 overdose reversals using Naloxone.¹³ Naloxone has no potential for misuse or abuse and studies show that side effects are extremely rare.¹⁴
- The optimal response to an overdose is to seek medical attention immediately. However, there remains reluctance on the part of bystanders to seek immediate medical attention for fear of police harassment and/or prosecution for drug possession.^{15 16} To address this issue, several states have enacted laws that provide limited immunity from prosecution for drug possession to individuals who contact emergency medical services and those experiencing an overdose.¹⁷
- Screening, Brief Intervention and Referral to Treatment (SBIRT) is an effective, cost-saving approach to the delivery of early intervention and treatment services for persons with substance use disorders, as well as those who are at risk of developing these disorders.^{18 19} In order to reimburse for SBIRT, states must activate billing codes to allow for Medicaid to pay for SBIRT services. Currently, Ohio Medicaid does not reimburse for drug and alcohol abuse screenings. A survey conducted by the National Association of State Medicaid Directors in 2009 revealed that 15 states have activated SBIRT billing codes in their respective Medicaid programs.

TEEN DRIVING SAFETY

[illegible]

In Ohio and across the country, motor vehicle crashes kill more teens than any other cause of death.

HOW DOES IT IMPACT THE U.S.?

- Motor vehicle crashes are the leading cause of death for U.S. teens, accounting for more than one in three deaths in this age group. In 2009, eight teens died each day from a traffic crash.^{1 2}
- In 2008, more than 350,000 teens were treated in emergency departments for injuries suffered in motor vehicle crashes, amounting to an average of 40 ED visits per hour.³
- In one year alone, crash-related injuries and deaths among teens ages 15 to 19 cost more than \$14 billion in medical care and productivity losses.⁴

HOW DOES IT IMPACT OHIO?

- In Ohio, motor vehicle crashes kill more teens than any other cause of death.
- In 2010, 114 Ohioans ages 16 to 20 were killed and more than 16,000 were injured in motor vehicle crashes.⁵
- In one year, motor vehicle crash-related injuries and deaths among young Ohioans ages 16 to 20 cost more than \$1.9 billion in direct medical care expenses or more than \$164 for every Ohio resident.⁶

HOW DO WE ADDRESS THIS PROBLEM?

- Strengthening of the Graduated Drivers Licensing (GDL) system to include extended learner periods, nighttime restrictions, and passenger restrictions are proven interventions to reduce teen crash rates.^{7 8}
- The single most effective GDL provision appears to be the extension of the learner's period when this extension delays the time at which unsupervised driving is permitted.⁹ A six-month delay (16 to 16½) of licensure has shown to reduce fatal crash rates by 7 percent; a one-year delay (16 to 17) lowered the risk by 13 percent.¹⁰
- From 2006 to 2010, more than half (57.6 percent) of fatal crashes in Ohio involving teenage drivers had one or more passengers in the vehicle.¹¹ A review of national data found that the risk of fatal injury for a 16- or 17-year-old driver significantly increases with the number of passengers in the vehicle.¹² Ohio law does not limit the number of passengers a teen driver is allowed to transport at any given time.
- Enactment of a primary seat belt law for Ohio teens should be a priority when addressing teen driver safety. Primary seat belt laws allow police officers to pull over and ticket drivers solely for a safety belt violation and are associated with increased seat belt use among teens and lower occupant fatality rates.^{13 14 15} Primary enforcement laws for teen drivers are essential because Ohio teens are less likely to wear their seat belts putting them at greater risk for injury and death. Of those killed in a crash in 2010, only 29.4 percent of teens were wearing a seat belt compared to the state average of 38.6 percent.¹⁶ States with secondary enforcement laws, such as Ohio, could increase belt use by as much as 10 percentage points and improve public safety considerably by upgrading to primary enforcement.¹⁷ At a minimum, 18 Ohio lives would be saved each year.¹⁸

INFANT SAFE SLEEP

[illegible]

Infant deaths due to suffocation result when the child is in a place or position where he or she is unable to breathe. The majority of these suffocations happen to infants while they are in unsafe sleeping environments.¹

HOW DOES IT IMPACT THE U.S.?

- From 1997 to 2007, an average of 618 infants² died each year as a result of unintentional suffocation.³
- More than 84,000 infants sustained injuries as a result of unintentional suffocation between 2001 and 2009.⁴
- In 2005, infant suffocation injuries and deaths cost the U.S. more than \$800 million dollars in medical costs and lost productivity.⁵

HOW DOES IT IMPACT OHIO?

- Suffocation is the leading cause of injury death for infants in Ohio. In 2008, an average of three Ohio infants suffered a sleep-related fatality every week.⁶
- According to Ohio Child Fatality Review data, sleep-related deaths accounted for 15 percent (166) of the 1,104 total reviews for infant deaths in 2008, more than any single cause of death except prematurity. Sixty-six percent (109) of the sleep-related deaths occurred in locations considered unsafe, such as in adult beds and on couches. Sixty-two percent (103) occurred to infants who were sharing a sleeping surface (bed sharing) with someone else at the time of death.⁷
- In one year, infant sleep-related fatalities cost Ohioans more than \$51 million in medical care and productivity loss.⁸

HOW DO WE ADDRESS THIS PROBLEM?

- Most infant suffocation occurs in the sleeping environment. Infants should be placed on their backs to sleep in bare cribs that meet safety standards of the Consumer Product Safety Commission (CPSC) and the Juvenile Products Manufacturers Association (JPMA).⁹
- Babies should not sleep on beds, sofas, car seats (overnight), recliners, chairs, soft surfaces, bouncy chairs, or baby swings.¹⁰
- Education is essential to reducing the number of sleep-related infant fatalities. Safe sleep education laws aimed at providing educational materials to new parents and child care providers have been implemented in other states and similar laws have been adopted in Ohio to educate parents on other infant safety issues. For example, Claire's Law (SB 144, 127th GA) requires the development and distribution of educational materials regarding Shaken Baby Syndrome to expectant and new parents.
- Infant product manufacturers have a responsibility to promote safe products and environments to parents. Other policy efforts to prevent infant sleep suffocation are aimed at preventing the sale of unsafe consumer products, such as new and second-hand cribs that do not meet the CPSC/JPMA safety requirements, and preventing the marketing of unsafe sleep environments to parents.

CHILD PASSENGER SAFETY

[illegible]

Nearly half of U.S. children 14 and under who died in automobile crashes were completely unrestrained.¹ Properly installed car seats and booster seats can save countless young lives.

HOW DOES IT IMPACT THE U.S.?

- Motor vehicle crashes are the leading cause of death for children ages 3 to 14.²
- From 1999 to 2007, 3,882 children ages 7 years and younger died as occupants in motor vehicle crashes, and approximately 770,000 were injured.³
- In one year, motor vehicle-related fatalities and injuries of children under the age of 8 resulted in more than \$586 million in direct medical costs.⁴

HOW DOES IT IMPACT OHIO?

- From 2006 to 2009, motor vehicle crashes remained the leading cause of injury death for Ohio children ages 5 to 9 and the third-leading cause for ages 1 to 4.⁵
- From 1999 to 2007, 58 Ohioans under the age of 8 were killed as occupants in traffic crashes.⁶
- In 2010, 8,091 young passengers were injured in motor vehicle crashes in Ohio.⁷
- A five-year review of child fatalities related to motor vehicle crashes in Ohio (2004-2008) determined that only 29 percent of fatally-injured youth occupants were properly restrained.⁸

HOW DO WE ADDRESS THIS PROBLEM?

- Child restraints (car seats and booster seats) are the most effective strategy for preventing injury and death to children involved in car crashes. From 1975 to 2009, approximately 9,310 lives have been saved by the use of child restraints. However, only 50 percent of children ages 4 to 7 are appropriately restrained in child safety seats.⁹
- Child restraints are also cost effective. Every \$46 child safety seat saves \$330 in insurance and tax payments, including \$160 in auto insurance costs, \$100 in health costs, and \$70 in taxes.¹⁰
- Primary enforcement laws, which allow police officers to pull over and ticket solely for a child passenger safety violation, are effective at increasing restraint use.¹¹ Ohio is only one of four states where proper booster seat use is considered a secondary offense, which means that a police officer cannot stop and ticket a driver for the sole offense of not having a child properly restrained.¹² Lack of a primary provision is cited as one of the top barriers to the enforcement of booster seat and other child restraint laws, as it creates uncertainty among law enforcement.¹³
- Increasing the minimum child restraint fine would provide additional resources to state programs that provide education and distribute child safety seats to low-income families in Ohio.
- Ohio law exempts child care providers from having to secure a child in a booster seat when transported in a regulated vehicle that is used by a licensed child care center. Removing this exemption could protect thousands more young Ohioans, as booster seats have been shown to lower the risk of injury to children in crashes by 59 percent, compared with the use of vehicle safety belts.¹⁴

SUICIDE PREVENTION

[illegible]

Suicide is a serious public health problem that can have lasting harmful effects on individuals, families, and communities. People may consider suicide when they are hopeless and cannot see any other solution to their problems. Often it is related to serious depression, alcohol or substance abuse, or a major stressful event.¹ While the causes of suicide are complex and determined by multiple factors, the goal of suicide prevention is to reduce risk factors and increase protective factors.

HOW DOES IT IMPACT THE U.S.?

- In 2007, suicide was the 10th leading cause of death in the U.S., accounting for 34,598 fatalities and costing Americans approximately \$100 million in direct medical costs.²
- An estimated 11 nonfatal suicide attempts occur per every suicide death. Men and older adults are more likely to have fatal attempts than are women and youth. More than 395,000 attempted suicides were reported in 2007.³
- Firearms, suffocation, and poisonings/drug overdose are the most common methods of suicide. However, men and women differ in the method used. From 2002 to 2006, the greatest percentage of suicides among males occurred by firearms (57.7 percent) while the greatest percentage of suicides among females occurred by poisoning (38.8 percent).⁴

HOW DOES IT IMPACT OHIO?

- 1,341 Ohioans took their own lives in 2009 and at least 14,000 attempted suicide.^{5 6}
- In one year, suicides cost Ohio more than \$1 billion dollars in direct medical costs and lost productivity or \$86 per Ohio resident.⁷
- Suicide is the second leading cause of death for Ohioans age 10 to 34.⁸
- On average, more than half (51 percent) of suicides in Ohio are firearm-related, while 22 percent result from suffocation/hanging and 19 percent from poisoning/overdose.⁹

HOW DO WE ADDRESS THIS PROBLEM?

- For U.S. youth between the ages of 10 and 24, suicide is the third leading cause of death. It results in approximately 4,400 lives lost each year. Recognizing that educators and other school personnel are in a prime position to identify the signs of suicide and help prevent it, 19 states either mandate or encourage suicide prevention training and screening programs in schools. Currently, Ohio does not have any such requirement.¹⁰
- Reducing the odds that an attempter will use highly lethal means is an important part of a comprehensive approach to suicide prevention. Ohio is one of only seven states that does not call for reducing access to lethal means as part of its statewide suicide prevention plan.¹¹
- Suicide risk increases significantly with the presence of a firearm in the home.¹² Policies that encourage proper firearm storage, including the use of gun locks, have been shown to reduce gun-related suicides, particularly among youth.^{13 14}

CHILD MALTREATMENT

[illegible]

Child maltreatment includes all types of abuse and neglect of a child under the age of 18 by a parent, caregiver, or another person in a custodial role.¹ Children who are abused or neglected are at higher risk for health problems as adults. These problems include alcoholism, depression, drug abuse, eating disorders, obesity, high-risk sexual behaviors, smoking, suicide, and certain chronic diseases leading to great societal costs and decreased quality of life for these survivors.²

HOW DOES IT IMPACT THE U.S.?

- Approximately 702,000 children were identified as abused or neglected in the United States during 2009. This is about 1,900 children each day across the U.S.³
- An estimated 1,770 U.S. children died from abuse and neglect in 2009.⁴
- One study estimated that one in five U.S. children experience some form of child maltreatment: approximately 1 percent were victims of sexual assault; 4 percent were victims of child neglect; 9 percent were victims of physical abuse; and 12 percent were victims of emotional abuse.⁵
- In 2007, child maltreatment resulted in more than \$33 billion in direct costs in the U.S. (i.e. hospitalizations, child welfare services, mental health care and law enforcement).⁶

HOW DOES IT IMPACT OHIO?

- Ohio's maltreatment fatality rates have been increasing. From 1998 to 2009, Ohio's rate has increased 53 percent.⁷
- In 2009, Ohio public children services agencies investigated 79 child deaths resulting from maltreatment. This equates to a young Ohioan dying from abuse or neglect every 5 days.⁸
- During calendar year 2009, investigations by public children services agencies in Ohio revealed that 31,270 children were identified as victims of maltreatment. This is the equivalent of 86 children per day.⁹
- Of the child maltreatment cases reported in Ohio in 2009, nearly half (48 percent) were neglected, 37.5 percent suffered physical abuse, 19.4 percent endured sexual abuse, 6.5 percent were subject to psychological maltreatment and 1.5 percent were medically neglected.¹⁰
- In one year, child maltreatment cost the state of Ohio more than \$632 million in direct medical care, mental health care, and public program (police, fire, social work) costs.¹¹

HOW DO WE ADDRESS THIS PROBLEM?

- Prevention efforts should ultimately reduce risk factors and increase protective factors, such as a combination of individual, relational, community, and societal factors.¹²
- Greater investments are needed in evidence-based programs that stop abuse before it occurs, such as early childhood home visitation by professionals (e.g. nurses, social workers, etc.) who provide assistance for children in the first two to three years of life and their parents/guardians. Such programs should identify high-risk families and encourage interventions that focus on strengthening parenting skills, increasing knowledge and understanding of child development, increasing awareness of and access to resources, reducing isolation and developing positive coping skills.¹³
- Child maltreatment prevention services should be emphasized during the first few months of an infant's life when the risk for homicide is at its highest.¹⁴

ATV SAFETY

[illegible]

An ATV (all-terrain vehicle) is an off-road, motorized vehicle having three or four low pressure tires, a straddle seat for the operator, and handlebars for steering control.¹ ATV-related injuries commonly occur due to rollovers, collisions with stationary objects and falling from the vehicle.²

HOW DOES IT IMPACT THE U.S.?

- In 2009, approximately 131,900 people were treated in U.S. emergency departments for ATV-related injuries.³
- Between 2000 and 2009, more than 1,300 children younger than 16 years died as a result of ATV-related injuries.⁴
- ATVs are associated with a significant and increasing number of hospitalizations for children. Total pediatric hospitalizations for ATV injuries have increased 150 percent from an estimated 1,618 in 1997 to 4,039 in 2006.⁵

HOW DOES IT IMPACT OHIO?

- Ohio ranks in the top 15 states nationally in the number of deaths caused by ATVs.⁶
- Between 2007 and 2009, 65 Ohioans died as a result of ATV-related injuries.⁷
- Since 1982, more than 75 children in Ohio under the age of 16 have died as a result of ATV use.⁸
- Each year, there are more than 10,000 hospital visits for injuries related to ATV use in Ohio.⁹

HOW DO WE ADDRESS THIS PROBLEM?

- Compared to helmeted riders, riders who operate an ATV without helmets are more likely to receive significant injuries to the head, face and neck.¹⁰ Helmet use by ATV riders can reduce the risk of death by 42 percent and the risk of non-fatal head injuries by 64 percent.¹¹ In 2006, only one out of four (26 percent) Ohio ATV users reported always wearing a helmet when they rode.¹²
- The American Academy of Orthopaedic Surgeons (AAOS), the Orthopaedic Trauma Association (OTA), and the Pediatric Orthopaedic Society of North America (POSNA) recommend several policies to reduce ATV-related injuries and fatalities, including prohibiting the use of ATVs by children under 12, requiring helmet and proper eye protection use (on public and private land), prohibiting passengers from riding on ATVs, requiring safety education certification, and prohibiting the use of ATVs between sundown and sunrise.¹³
- The increasing size and speed of today's ATVs are also likely contributing to more serious injuries. In a recent study, all of the children who were treated for ATV injuries had been driving adult sized-ATVs.¹⁴ The AAOS also recommends that ATVs with a 90cc or greater engine size should not be used by children under the age of 16, as young riders do not have the adequate physical strength or size to control such vehicles, nor do they have the cognitive abilities or judgment necessary to make safe decisions in handling these powerful machines.
- A June 2006 poll of registered Ohio voters found strongest support for restricting use of ATVs by children (81 percent), requiring mandatory safety classes (81 percent), prohibiting passengers (78 percent) and requiring helmets (77 percent).¹⁵

FALL-RELATED INJURY AMONG OLDER ADULTS IN OHIO

Falls are particularly harmful to older adults. Falls and fall-related injury seriously affect older adults' quality of life and present a substantial burden to the Ohio health-care system. They surpass all other mechanisms of injury as a cause of ED visits, hospitalization and death. The following data provide clear justification of the need for fall prevention efforts.

Figure 1. Number of fall-related deaths,¹ Hospitalizations,² ED visits,² and self-reported injured fallers^{3,4} And self-reported fallers,^{3,5} for ages 65 and older, Ohio, 2010

¹Source: ODH Office of Vital Statistics, 2010 data ²Source: Ohio Hospital Association, 2010 data ³Source: BRFSS Survey, 2010

⁴Self-reported fallers (estimated) whose fall in preceding 3 months resulted in a doctor's visit or restricted activities for at least one day ⁵BRFSS respondents who reported experiencing a fall in the preceding 3 months

Fatal and medically-treated falls represent only a proportion of all falls among older adults. Falls have significant consequences on quality of life.

- As reported in the 2010 Behavioral Risk Factor Surveillance Survey (BRFSS) results, 17.3% of Ohio respondents aged 65 and older indicated that they fell during the previous three months, projecting to a total of approximately 291,693 persons who suffered at least one fall. More than one-third of those who fell (34%), or an estimated 105,009 older Ohioans, reported sustaining an injury that resulted in a doctor visit or restricted activity (*Figure 1*).
- The psychological consequences of any fall, whether injury-causing or not, can be severe, resulting in fear and decreased quality of life from self-imposed restriction of activities, social isolation and depressive symptoms. These "near-miss" falls can increase risk for future falls if they are not adequately assessed and managed by a health care professional.

Older adults are disproportionately affected by fall-related injury.

- Falls are the leading cause of injury-related ED visits, hospitalizations and deaths for Ohioans aged 65 and older.^{1,2} Fall-related ED visit and hospitalization rates for Ohioans 65 years and older are higher than rates for all other injuries combined.¹
- Ohioans 65 and older accounted for approximately 83% of fatal falls in 2010; while they represent only 14% of the population (*Figure 2*.)
- Risk for suffering serious injury after a fall increases dramatically with advancing age (*Figure 7*). Females 85 years and older account for half of fatal falls, while they account for only 3% of the female population.¹

Figure 2. Distribution of fatal falls compared to population by age group, 65+ years vs <65 years, Ohio 2010¹

FALL-RELATED INJURY AMONG OLDER ADULTS IN OHIO

- Falls among older adults have reached epidemic proportions and rates continue to rise.
- From 2000 to 2010, Ohioans aged 65 and older experienced a 163% increase in the number of fatal falls and 145% increase in the fall death rate (Figure 3).
- On average, 2.6 older Ohioans suffered fatal falls each day in 2010 (Figure 3).

Figure 3. Annual number and rate per 100,000 of fatal falls by year, ages 65+, Ohio 2000-2010¹

- Older males are at greater risk for suffering a fatal fall, even though there are a greater number of fatal falls among older females (Figure 4).
- Older females have higher non-fatal fall-related injury rates than males (Figure 7).

Figure 4. Number and rate per 100,000 of fatal falls, ages 65+, by year, sex, Ohio, 2000-2010¹

- In 2010, there were 4.1 fall-related ED visits for every 100 Ohio older adults (*data not shown*) and 10 fall-related hospitalizations for every 1,000 Ohio older adults (Figure 5).
- Fall-related hospitalizations and hospitalization rates increased 27% and 18% respectively from 2002 to 2010 (Figure 5).

Figure 5. Number and rate per 100,000 of fall-related hospitalizations by year, ages 65+, Ohio, 2002-2010²

COSTS ASSOCIATED WITH FALL-RELATED INJURY AMONG OLDER OHIOANS

Falls are Costly!

- In 2009 in Ohio, direct treatment charges for fall-related hospitalizations totaled \$645 million. These charges represent nearly two-thirds (63%) of the \$1 billion in charges for the five leading causes of injury combined (*Figure 4.*)
- Direct medical costs represent only a fraction (8%) of the total cost of falls among older adults in Ohio - **\$4.2 billion** in 2003 (*Table 1*).
- 63% of hip fractures and 26% of traumatic brain injuries (TBIs) in 2009 in Ohio resulted from falls (data not shown).¹

Figure 6. Total charges (in millions) for inpatient treatment of leading causes of injury, by type of injury, Ohio, 2009¹

Table 1. Average Annual Cost of Non-fatal, Hospital-admitted Falls Among Older Adults, Ages 65+ Ohio, 2003¹

	65+ yrs Total	Percent of All	Percent of Ohio population
Incidence of Fall-related Hospital Admissions	19,137²	71%	14%
Medical	\$ 327 million	67%	
Work-Loss	\$ 116 million	22%	
Quality-of-Life	\$ 3.7 billion	72%	
Total Costs	\$ 4.2 billion	68%	

¹Source: Children's Safety Network Economics & Data Analysis Resource Center, ²incidence based on HCUP survey data

The likelihood of falling and the severity of fall-related injury increases with age, and therefore the risk for hospitalization and death.

- Average age increases when comparing fall-related ED visits (38 years), inpatient hospitalizations (70 years) and deaths (76 years). Younger Ohioans are more likely to be treated in an ER for fall-related injuries and not to require an overnight stay in the hospital.¹
- Average length of stay in days also increases with age.¹
- More than 90 percent of fall-related hip fractures occur among those 65 years and older, and approximately 40 percent of fall-related inpatient hospitalizations among those 65 and older involved a hip fracture.¹
- Ohio's 65+ population is projected to increase by 100 people per day for the next 14 years.

¹Source: Ohio Hospital Association

FALL-RELATED INJURY AMONG OLDER OHIOANS

Older females have higher risk for non-fatal fall-related injury.

- In 2010 hospitalization rates ranged from lows of 11.4 per 100,000 for females aged 5-14 to highs of 3,469 per 100,000 for females 85 and older (*Figure 7*).
- From ages 65 and older, female risk for fall-related injury skyrockets, with the disparity between male and female rates widening with advancing age. In numbers of fall-related hospitalizations, there were 1.9 women treated for every man among 65-74-year-olds and there was a 3.6 to 1 female/male ratio for those aged 85 years and older (*Figure 7*).

Figure 7. Average annual fall-related inpatient hospitalization rates, by age group, sex, Ohio, 2010¹

¹Source: Ohio Hospital Association

Older adults with poor health status and those who are isolated are at greater risk.

- The number of health problems and the risk of falling increase proportionately (*Figure 8*).
- BRFSS respondents with diabetes, stroke as well as those using special equipment and having a sedentary lifestyle had a higher prevalence of falls in the past three months than those without (*Ohio BRFSS Survey 2010*).
- Social isolation is a risk factor for fatal falls. Married elders are significantly less likely to die from a fall than the unmarried (*ODH Office of Vital Statistics*).

Figure 8. Number of health problems and risk for falling among adults age 65 and older¹

¹Source: Tinetti et al., 1988

Additional resources for prevention of falls among older adults are needed.

Due to the large and growing burden of fall-related injury in Ohio, especially among older Ohioans over 65 years, additional resources are needed at both the state and local level to implement evidence-based prevention initiatives.

Falls are not a normal part of aging. There are simple steps that older adults can take to reduce their risk for a fall. Additional resources including checklists and brochures are available from the CDC at:

TRAFFIC SAFETY FACTS

Research Note

DOT HS 811 552

Revised February 2012

2010 Motor Vehicle Crashes: Overview

In 2010, 32,885 people died in motor vehicle traffic crashes in the United States—the lowest number of fatalities since 1949 (30,246 fatalities in 1949) (see Figure 1). This was a 2.9-percent decline in the number of people killed, from 33,883 in 2009, according to NHTSA's 2010 Fatality Analysis Reporting System (FARS). In 2010, an estimated 2.24 million people were

injured in motor vehicle traffic crashes, compared to 2.22 million in 2009 according to NHTSA's National Automotive Sampling System (NASS) General Estimates System (GES). This slight increase (1.0% increase) in the estimated number of people injured is not statistically significant from the number of people injured in crashes in 2009.

Fatalities and Fatality Rate per 100M VMT by Year

1949–1974: National Center for Health Statistics, HEW, and State Accident Summaries (Adjusted to 30-Day Traffic Deaths by NHTSA)
FARS 1975–2009 (Final) 2010 Annual Report File (ARF); Vehicle Miles Traveled (VMT): Federal Highway Administration.

Figure 2
People Injured and Injury Rate per 100M VMT by Year

NASS GES 1988–2010; Vehicle Miles Traveled (VMT): Federal Highway Administration.

Fatality and Injury Rates

The fatality rate per 100 million vehicle miles traveled (VMT) fell to a historic low of 1.10 in 2010 (Table 1). The overall injury rate remained the same from 2009 to 2010. The 2010 rates are based on VMT estimates from the Federal Highway Administration's (FHWA) August 2011 Traffic Volume Trends (TVT). Overall 2010 VMT increased by 1.6 percent from 2009 VMT—from 2,953,501 million to 2,999,974 million. VMT data will be updated when FHWA releases the 2010 Annual Highway Statistics.

Source: FARS, GES, and FHWA VMT (August 2011 TVT)

Occupants and Nonoccupants

The large decrease in fatalities among passenger vehicle occupants was partially negated by increases in fatalities of other occupants and pedestrians, as shown in Table 2 below. There were 1,260 fewer passenger vehicle occupant fatalities in 2010 than in 2009, with very similar distribution of the decrease between passenger cars and light trucks. After experiencing a large (26%) decrease in fatalities from 2008 to 2009, large-truck occupants increased the greatest percentage in 2010 (up 6% from 2009). Motorcyclist fatalities increased slightly in 2010 to 4,502 accounting for 14 percent of total fatalities for the year. This increase in motorcycle fatalities for the

year picks up the overall increasing trend over the last 13 years that saw a one-year decline in 2009. The greatest increases in the estimated number of injured people from 2009 to 2010 are among passenger car occupants and pedestrians. The greatest decrease in the estimated number of injured people is among motorcyclists, with an 8.9-percent decrease (decline of 8,000 people).

Alcohol-Impaired-Driving Fatalities

Alcohol-impaired-driving fatalities (fatalities in crashes involving a driver or motorcycle rider (operator) with a blood alcohol concentration (BAC) of .08 grams per deciliter (g/dL) or greater) declined by 4.9 percent in 2010 (Table 3) accounting for 31 percent of overall fatalities. The number of alcohol-impaired drivers in fatal crashes declined for most vehicle types with the largest decline was among drivers of pickup trucks (8.1%). Although the percentage increase in the number of

*Total includes occupants of buses and other/unknown occupants not shown in table.

Changes in injury estimates shown in **bold** are statistically significant.

alcohol-impaired large-truck drivers is high (13%) the actual number of alcohol-impaired large-truck drivers is a very small percentage of the overall drivers involved in alcohol-impaired crashes.

Crash Type

The number of motor vehicle crashes, by crash type and severity, is presented in Table 4. The total number of police-reported traffic crashes declined from 2009 to 2010, as both fatal and non-fatal crashes declined. While non-fatal crashes declined, the number of injury crashes increased 1.6 percent from 2009 to 2010. The estimated changes in each type of crash were not statistically significant. Because FARS data is a census of fatal crashes no significance testing is required.

Table 4
Number of Crashes, by Crash Type

Crash Type	2009	2010	Change	% Change
Fatal Crashes	30,862	30,196	-666	-2.2%
Non-Fatal Crashes	5,474,000	5,389,000	-85,000	-1.6%

Source: FARS 2009 (Final), 2010 (ARF)

Restraint Use and Time of Day

Among fatally injured passenger vehicle occupants, more than half (51%) of those killed in 2010 were unrestrained (Table 5). Of those occupants killed during the night 61 percent were unrestrained, compared to 42 percent during the day. Most of the change in passenger vehicle occupant fatalities occurred in nighttime

Table 5

Restraint Used	4,393	38	4,124	39	-269	-6.1%
Restraint Not Used	7,237	62	6,523	61	-714	-9.9%

Source: FARS 2009 (Final), 2010 (ARF);

Day: 6 a.m. to 5:59 p.m.; Night: 6 p.m. to 5:59 a.m.; Total fatalities include those at unknown time of day; unknown restraint use has been distributed proportionally across known use.

crashes—983 of the 1,260 (78%). Among the 983 decline in nighttime fatalities a large proportion (73%) was among unrestrained passenger vehicle occupants.

Fatal Crashes Involving Large Trucks

There was an 8.7-percent increase in the number of people killed in crashes involving large trucks. Fatalities in large-truck crashes increased in all categories—large-truck occupants, occupants of other vehicles and non-occupants. The greatest percentage increase can be seen in the number of large-truck occupants killed in multivehicle crashes, 16 percent. This is in contrast to a 9.1-percent increase in fatalities of other vehicle occupants involved in those multivehicle crashes.

Table 6
People Killed in Large-Truck Crashes

Type	2009	2010	Change	% Change
Truck Occupants	499	529	+30	+6.0%
Single-Vehicle	333	337	+4	+1.2%
Multivehicle	166	192	+26	+16%
Other Vehicle Occupants	2,558	2,790	+232	+9.1%
Nonoccupants	323	356	+33	+10%
Total	3,380	3,675	+295	+8.7%

Source: FARS 2009 (Final), 2010 (ARF)

Crash Location

Fatalities in rural crashes declined by 6.7 percent (Table 7); those in urban crashes increased slightly by 0.3 percent. Roadway departure crashes declined by 3.9 percent and intersection crashes declined by 7.1 percent. Following are the definitions used for roadway departure and intersection crashes as defined by FHWA.

Table 7
People Killed in Motor Vehicle Traffic Crashes, by Roadway Function Class, Roadway Departure, and Relation to Junction

	2009	2010	Change	% Change
Total	33,883	32,885	-998	-2.9%
Roadway Function Class				
Rural	19,323	18,026	-1,297	-6.7%
Urban	14,501	14,546	+45	+0.3%
Roadway Departure*				
Roadway Departure	18,052	17,389	-663	-3.7%
Relation to Junction				
Intersection*	7,278	6,758	-520	-7.1%

Source: FARS 2009 (Final), 2010 (ARF)

*See definitions in text.

Roadway Departure crash: A non-intersection crash in which a vehicle crosses an edge line, a centerline, or leaves the traveled way. Includes intersections at interchange areas.

Types of crashes fitting the definition: Non-intersection fatal crashes in which the first event for at least one of the involved vehicles: ran-off-road (right or left); crossed the centerline or median; went airborne; or hit a fixed object.

Intersection: Non-interchange — intersection or intersection-related.

Other Highlights

- When looking at the time of day of crashes, 86 percent of the total decline in fatalities could be seen in nighttime crashes (day: 6 a.m. to 5:59 p.m.; night: 6 p.m. to 5:59 a.m.). Of the 998 fewer fatalities in 2010, there were 857 fewer fatalities in nighttime crashes.
- Just over three-quarters (78% in crashes with known day of week) of the overall decline in fatalities came from a decline in weekend (6 p.m. Friday through 5:59 a.m. Monday) crash fatalities—a decline of 769 weekend fatalities.
- With respect to motorcyclist fatalities, fatalities among motorcyclists 50 and older increased by 119, whereas fatalities among motorcyclists under 50 declined by 84.
- Age discrepancies can be seen in overall fatalities as well. Fatalities of people 55 and older increased by 409, whereas fatalities of people under 55 decreased by 1,391.
- In 2010, there were 117 fewer children under the age 16 killed in motor vehicles crashes, a 7.6-percent decline from 2009. The majority of those fatalities were from a reduction in child occupant fatalities (107 fewer in 2010 than 2009).
- Broadening the view to the most recent five years to look at the trend in young drivers, fatalities from crashes with young drivers (16 to 20 years old) have declined at a faster rate than overall fatalities between 2006 and 2010. There has been a 39-percent decrease in fatalities in young driver-involved crashes compared to a 23-percent decrease in overall fatalities during the 2006 to 2010 time period.

State by State Distribution of Fatalities

Table 8 compares the total number of fatalities for 2009 and 2010, the change in the number of total fatalities, and the percentage change for each State, the District of Columbia, and Puerto Rico. Thirty-one States, the District of Columbia, and Puerto Rico had reductions in the number of fatalities. Four States had reductions of over 100 fatalities, led by California with 375 fewer fatalities in 2010 than in 2009. Florida (-115), Louisiana (-114), and Texas (-106) were the other States with more than 100 fewer fatalities in 2010. Five States saw increases of more than 50 overall fatalities from 2009 to 2010. Connecticut had the greatest increase in the number of fatalities, going up 95 fatalities or 42 percent. Michigan (70), Pennsylvania (68), Indiana (61), and Ohio (58) were the other States that had increases in overall fatalities of more than 50.

Additional State-level data is available at NCSA's State Traffic Safety Information Web site <http://www-nrd.nhtsa.dot.gov/departments/nrd-30/ncsa/STSI/USA%20WEB%20REPORT.HTM>

NHTSA's Fatality Analysis Reporting System is a census of all crashes of motor vehicles traveling on public roadways in which a person died within 30 days of the crash. Data for the National Automotive Sampling System General Estimates System comes from a nationally representative sample of police-reported motor vehicle crashes of all types, from property-damage-only to fatal.

The information in this Research Note represents an overview of the 2010 FARS and GES files. Additional information and details will be available at a later date.

Appendix A

The National Automotive Sampling System (NASS) General Estimates System (GES) data file was made available to the public in December 2011. Shortly after posting the file, a coding error was discovered that led to subsequent investigation to identify other potential coding errors in the system. Additional coding errors were found and have been corrected. There were 8 data elements (vehicle trailing, vehicle configuration, body type, cargo body type, jackknife, vehicle model, vehicle model year, and vehicle identification number) corrected

for 842 vehicles out of 81,406 vehicles on the 2010 NASS GES file.

This change in coding has resulted in slight changes in some estimates from GES, thus the revision to this Research Note from the December 2011 publication. The table below shows changes in Table 2 from the Research Note. The table contains the data as it appeared in the December 2011 publication and as it appears in this February 2012 publication. This data also appears in some of the text throughout the document.

	People Injured, December 2011 Research Note			People Injured, February 2012 Research Note		
	Injured	Change from '09	% Change	Injured	Change from '09	% Change
Total	2,243,000	+26,000	+1.2%	2,239,000	+22,000	+1.0%
Passenger Vehicles	1,990,000	+14,000	+0.7%	1,986,000	+10,000	+0.5%
Passenger Cars	1,258,000	+42,000	+3.5%	1,253,000	+37,000	+3.0%
Light Trucks	732,000	-27,000	-3.6%	733,000	-26,000	-3.4%
Large Trucks	19,000	+2,000	+12%	20,000	+3,000	+18%
Motorcycles	82,000	-8,000	-8.9%	82,000	-8,000	-8.9%
Pedestrians	70,000	+11,000	+19%	70,000	+11,000	+19%
Pedalcyclists	51,000	+1,000	+2.0%	52,000	+1,000	+2.0%
Other/Unknown	8,000	+1,000	—	8,000	+1,000	—

The following table shows revisions to Table 4 of the Research Note. Again, it contains data as it appeared in the December 2011 publication and the revised data

included in this February 2012 publication. The whole table is not included, only those figures that changed.

	People Injured, December 2011 Research Note			People Injured, February 2012 Research Note		
	Injured	Change from '09	% Change	Injured	Change from '09	% Change
Injury Crashes	1,546,000	+29,000	+1.9%	1,542,000	-25,000	+1.6%
Property-Damage Only	3,843,000	-114,000	-2.9%	3,847,000	-110,000	-2.8%

In addition to the revisions to GES, the roadway departure crash figures were updated to reflect revisions to FHWA's criteria. In the December 2011 Research Note, fatalities associated with roadway departure in 2010 was

17,346. The revised figure for fatalities in 2010 is 17,389. Table 7 in this document shows the revised fatality figure, change figure, and percentage-change figure.

Number of fatal work injuries, 1992–2011*

Number of fatal work injuries

The 2011 preliminary total of 4,609 fatal work injuries represents a slight decrease from the final count of 4,690 fatal work injuries reported for 2010.

*Data for 2011 are preliminary. Data for prior years are revised and final.
NOTE: Data from 2001 exclude fatal work injuries resulting from the September 11 terrorist attacks.
SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Rate of fatal work injuries, 2006–2011*

Fatal work injury rate
(per 100,000 full-time equivalent workers)

The preliminary rate of fatal work injuries in 2011 was 3.5 fatal work injuries per 100,000 full-time equivalent workers, down from the 2010 final rate of 3.6.

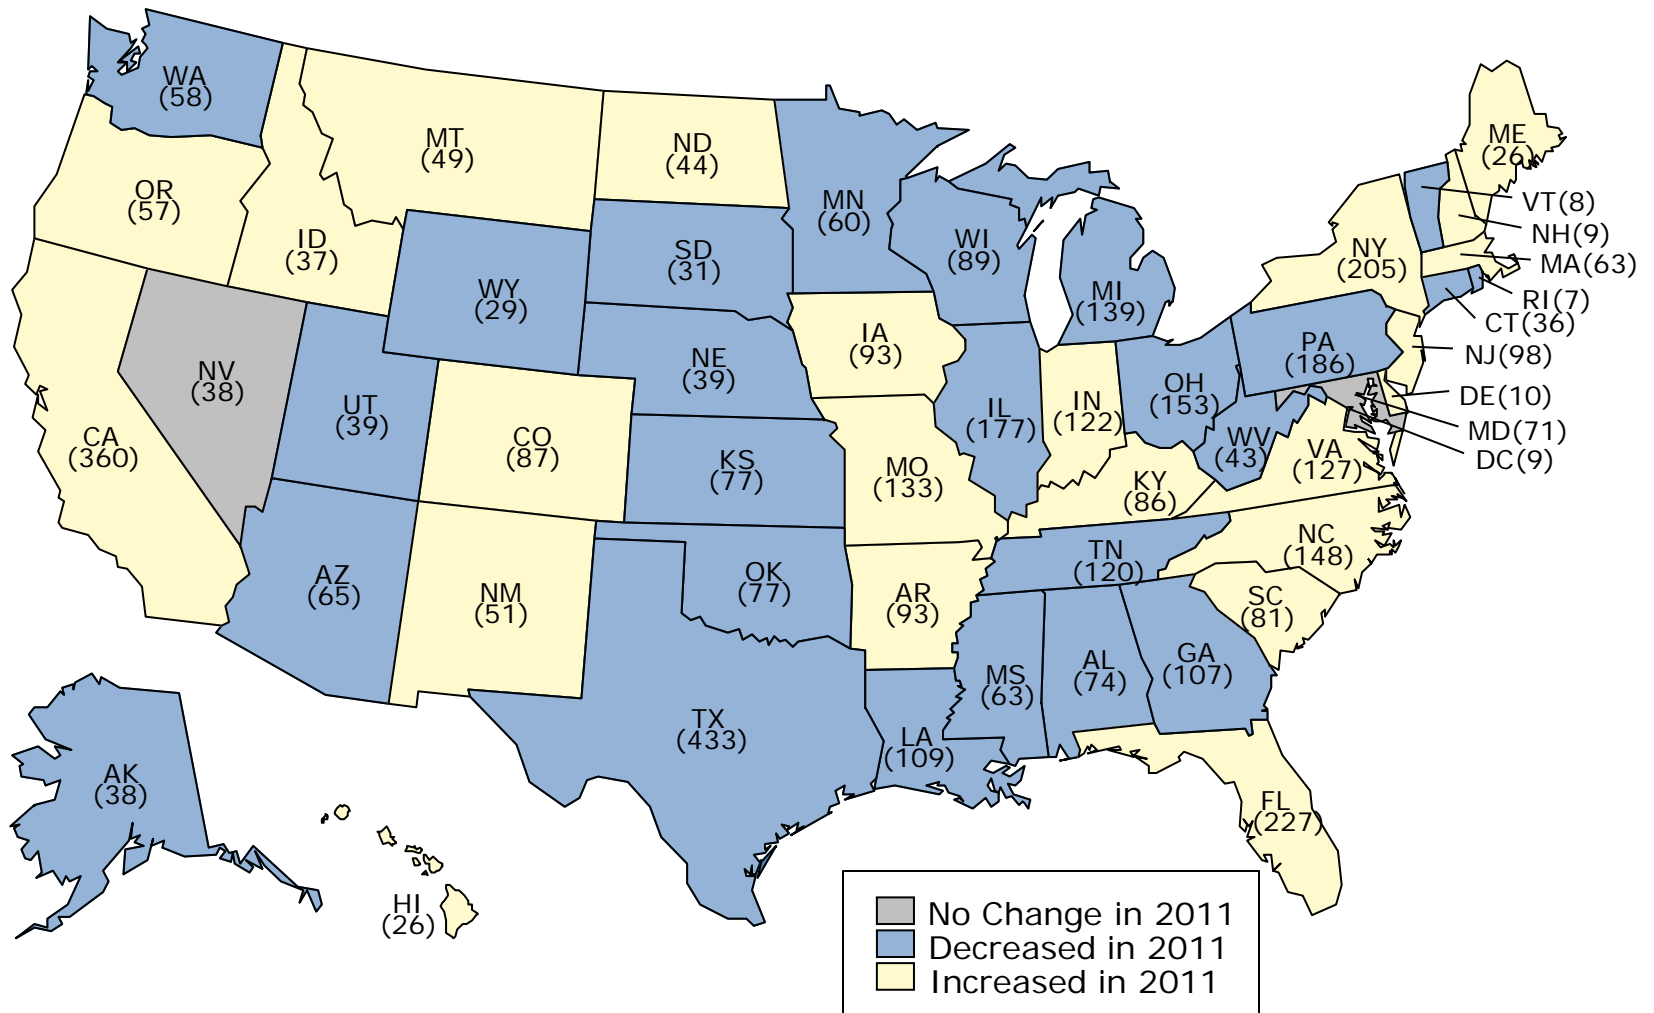

*Data for 2011 are preliminary. Data for prior years are revised and final.

Rate = (Fatal work injuries/Total hours worked by all workers) x 200,000,000 where 200,000,000 = base for 100,000 full-time equivalent workers (FTEs) working 40 hours per week, 50 weeks per year. The total hours worked figures are annual average estimates of total at work multiplied by average hours for civilians, 16 years of age and older, from the Current Population Survey (CPS).

In 2008, CFI implemented a new methodology, using hours worked for fatal work injury rate calculations rather than employment. For additional information on the fatal work injury rate methodology changes please see <http://www.bls.gov/iif/oshnotice10.htm>.

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, Current Population Survey, Census of Fatal Occupational Injuries, and U.S. Census Bureau, 2012.

Number of fatal work injuries, by state, 2011*

Twenty-three states had more fatal injuries in 2011 than in 2010. Twenty-five states and the District of Columbia had fewer fatal workplace injuries in 2011 compared to 2010. Two states saw no change between the two years.

Fatal occupational injuries by major event, 2011*

More fatal work injuries resulted from transportation incidents than from any other event. Roadway incidents alone accounted for nearly one out of every four fatal work injuries in 2011.

*Data for 2011 are preliminary.

NOTE: Event data for 2011 are not comparable to prior years due to the implementation of the revised Occupational Injury and Illness Classification System (OIICS) 2.01. See http://www.bls.gov/iif/osh_notice11.htm. Percentages may not add to 100 due to rounding.

SOURCE: U.S. Bureau of Labor Statistics. U.S. Department of Labor. 2012.

Fatal falls to lower level by height of fall, 2011*

In 2011, falls to lower level accounted for 541 fatal work injuries. Of those cases where height of fall was known, 57 percent involved falls of 20 feet or less.

*Data for 2011 are preliminary.

NOTE: Event data for 2011 are not comparable to prior years due to the implementation of the revised Occupational Injury and Illness Classification System (OIICS) 2.01. See http://www.bls.gov/iif/osh_notice11.htm. Percentages may not add to 100 due to rounding.

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Fatal transportation incidents by type, 2011*

Roadway incidents accounted for the greatest number of work-related transportation fatalities. Of these, 512 deaths resulted from a roadway collision with another vehicle. Pedestrian vehicular incidents constituted the second greatest number transportation-related fatal injuries.

*Data for 2011 are preliminary.

NOTE: Event data for 2011 are not comparable to prior years due to the implementation of the revised Occupational Injury and Illness Classification System (OIICS) 2.01. See http://www.bls.gov/iif/osh_notice11.htm. Percentages may not add to 100 due to rounding.

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

How workers died in multiple-fatality incidents, 2011*

Total workers = 354

Transportation incidents accounted for nearly three out of five workers killed in multiple-fatality events. Homicides accounted for the second greatest number of workers lost in multiple-fatality incidents.

*Data for 2011 are preliminary.
NOTE: Event data for 2011 are not comparable to prior years due to the implementation of the revised Occupational Injury and Illness Classification System (OIICS) 2.01. See http://www.bls.gov/iif/osh_notice11.htm. Percentages may not add to 100 due to rounding.
SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Fatal work injuries and hours worked, by gender of worker, 2011*

Fatal work injuries = 4,609

Hours worked = 258,293,285,000

A disproportionate share of fatal work injuries involved men relative to their hours worked in 2011.

*Fatal injury data for 2011 are preliminary.

SOURCE: U.S. Department of Labor, Bureau of Labor Statistics, Current Population Survey, and Census of Fatal Occupational Injuries, 2012.

Distribution of fatal injury events, by gender of worker, 2011*

A higher percentage of fatal work injuries involving women resulted from roadway incidents and homicides as compared to men. A higher percentage of fatal work injuries involving men resulted from contact with objects and equipment and exposure to harmful substances or environments.

*Data for 2011 are preliminary.

NOTE: Event data for 2011 are not comparable to prior years due to the implementation of the revised Occupational Injury and Illness Classification System (OIICS) 2.01. See http://www.bls.gov/iif/osh_notice11.htm. Percentages may not add to 100 due to rounding.

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Work-related homicides by gender of decedent and assailant type, 2011*

For women, assailants were most likely to be relatives. Of these, nearly all were spouses or domestic partners. Robbers were the most common type of work-related homicide assailant for men and the second-most common for women.

*Data for 2011 are preliminary.

NOTE: Event data for 2011 are not comparable to prior years due to the implementation of the revised Occupational Injury and Illness Classification System (OIICS) 2.01. See http://www.bls.gov/iif/osh_notice11.htm. Percentages may not add to 100 due to rounding.

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Number of fatal work injuries involving Hispanic or Latino workers, 1997-2011*

Number of fatal work injuries

Fatal work injuries involving Hispanic or Latino workers increased in 2011 after four consecutive years of decline. Sixty-nine percent of fatally-injured Hispanic or Latino workers in 2011 were born outside of the United States.

*Data for 2011 are preliminary. Data for prior years are revised and final.
NOTE: Data from 2001 exclude fatal work injuries resulting from the September 11 terrorist attacks.
SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Fatal injuries involving foreign-born workers, by country or region of birth, 2011*

Workers born in Mexico accounted for the largest portion (41 percent) of foreign-born workers who died from work-related injuries in the United States in 2011.

Fatal work injury rates, by age group, 2011*

Fatal work injury rates for workers 45 years of age and older were higher than the overall U.S. rate, and the rate for workers 65 years of age and older was more than 3 times the rate for all workers.

*Data for 2011 are preliminary.

NOTE: Fatal injury rates exclude workers under the age of 16 years, volunteers, and resident military. For additional information on the fatal work injury rate methodology changes please see <http://www.bls.gov/iif/oshnotice10.htm>.

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Number and rate of fatal occupational injuries, by industry sector, 2011*

Transportation and warehousing surpassed construction in having the highest number of fatal injuries in 2011. The agriculture, forestry, fishing, and hunting sector had the highest fatal work injury rate.

*Data for 2011 are preliminary.

NOTE: All industries shown are private with the exception of government, which includes fatal injuries to workers employed by governmental organizations regardless of industry. Fatal injury rates exclude workers under the age of 16 years, volunteers, and resident military. The number of fatal work injuries represents total published fatal injuries before the exclusions. For additional information on the fatal work injury rate methodology changes please see <http://www.bls.gov/iif/oshnotice10.htm>.

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Fatal occupational injuries in the private sector mining industry, 2003–2011*

Number of fatal work injuries

Fatal work injuries in the private mining industry decreased by 10 percent in 2011 after increasing the previous year from a series low in 2009. Fatalities in the oil and gas industry accounted for 71 percent of the fatal work injuries in the mining sector in 2011.

*Data for 2011 are preliminary. Data for prior years are revised and final.

NOTE: Oil and gas extraction industries include oil and gas extraction (NAICS 21111), drilling oil and gas wells (NAICS 213111), and support activities for oil and gas operations (NAICS 213112).

SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Number and rate of fatal occupational injuries, by major civilian occupation group, 2011*

Although transportation and material moving occupations had the highest number of fatal work injuries in 2011, the major occupational group with the highest fatal work injury rate was farming, fishing, and forestry occupations.

*Data for 2011 are preliminary.
NOTE: Fatal injury rates exclude workers under the age of 16 years, volunteers, and resident military. The number of fatal work injuries represents total published fatal injuries before the exclusions. For additional information on the fatal work injury rate methodology changes please see <http://www.bls.gov/iif/oshnotice10.htm>.
SOURCE: U.S. Bureau of Labor Statistics, U.S. Department of Labor, 2012.

Occupations with high fatal work injury rates, 2011*

Fatal work injury rates were highest for fishers, logging workers, and aircraft pilots and flight engineers in 2011.

*Data for 2011 are preliminary.

NOTE: Fatal injury rates exclude workers under the age of 16 years, volunteers, and resident military. The number of fatal work injuries represents total published fatal injuries before the exclusions. For additional information on the fatal work injury rate methodology changes please see <http://www.bls.gov/iif/oshnotice10.htm>.

*Healthy People 2010

**Child Maltreatment Annual Reports: Reports from the States to the National Child Abuse and Neglect Data Systems – National statistics on child abuse and neglect. http://www.acf.hhs.gov/programs/cb/stats_research/index.htm#can

CHILD MALTREATMENT FATALITIES

Deaths due to maltreatment represent the most extreme and tragic scenario of abuse. At 2.91 deaths per 100,000 children ages birth to 18, Ohio's 2009 child maltreatment fatality rate exceeded the national rate (2.34 per 100,000) by 24 percent. In 2009, Ohio public children services agencies investigated 79 child deaths, which were identified to be the result of maltreatment. This equates to one child dying from abuse or neglect every 4.6 days in Ohio. Since 1998, Ohio's and the nation's maltreatment fatality rates have been generally increasing. Ohio's rate has increased 53 percent and the national rate has increased 46 percent from 1998 to 2009.

Figure 1.1. National and Ohio maltreatment death rates (per 100,000) of children <18 years by year, 1998-2009

CHILD MALTREATMENT CASES

During calendar year 2009, investigations by public children services agencies in Ohio revealed that 31,270 or 11.5 per 1,000 Ohio children under 18 years of age were identified as victims of maltreatment. **This is the equivalent of 86 children each day.** Although Ohio's rate of maltreatment has been decreasing since 2001, it still exceeded the national rate in 2009 by 24 percent. Approximately 693,174 or 9.3 per 1,000 children birth to 18 years were identified as abused or neglected in the United States during 2009. **This is approximately 1,900 children each day on average across the U.S.** It is also important to note that these figures represent only identified maltreatment that was reported to children's services. Therefore, they are an under-representation of the total amount of child maltreatment prevalent throughout Ohio and the U.S.

Figure 1.2 Ohio and national child maltreatment rates per 1,000 children birth to 18 years by year, 2001-2009

FIRST-TIME VICTIMS

The majority of these maltreatment cases investigated are first-time victims. In Ohio, the percent of cases that involve first-time victims has been increasing from 2005 to 2009.

Figure 1.3. Number and Percent of First time victims, Ohio, 2005-09

MALTREATMENT TYPE

Of the Ohio cases, nearly half (48 percent) were neglected, 37.5 percent suffered physical abuse, 19.4 percent endured sexual abuse, 6.5 percent were subject to psychological maltreatment and 1.5 percent were medically neglected. Please note, totals exceed 100 percent because children may be exposed to more than one form of maltreatment.

Figure 1.4. Child maltreatment by type of abuse, Ohio children <18 years, 2009

RISK FACTOR: CAREGIVER DOMESTIC VIOLENCE

Twenty-four percent of Ohio child maltreatment victims had a caregiver risk factor of domestic violence, compared with 9 percent among non-victims of maltreatment.

Figure 1.5. Percentage of child maltreatment victims and nonvictims with caregiver risk factor of domestic violence (DV) risk factor, Ohio and U.S., 2009*

RECEIVING IN-HOME SERVICES

In-home services include all services—except foster care or removal from the home—that are provided to families while the child is living in the home. Services may be provided directly in the home or in a professional setting. Approximately 8,647 Ohio victims received in-home services in 2009. This accounted for one-fourth of the Ohio children who were found to be victims, compared to 39 percent nationally. More than 23,900 non-victims in Ohio received in-home services in 2009. This accounted for 18 percent of non-victims in Ohio.

Figure 1.6. Number and Proportion of Victims, Non-victims Receiving In-home Services, Ohio vs. U.S., 2009

RELATIONSHIP OF PERPETRATOR TO VICTIM

In 7 out of 10 cases, parents were the perpetrators of child maltreatment in Ohio during 2009. “Other relatives” were the next most common (10%) relationship where maltreatment occurred.

Figure 1.7. Proportional distribution of the relationship of perpetrator to Victim, Ohio, 2009

AGE GROUP

Children 3 years and younger accounted for one in three cases (32 percent), while children aged 4-7 years accounted for approximately one in four cases (23 percent), *Figure 1.8*.

Figure 1.8. Proportion of child maltreatment cases of Ohio children ages birth to 18 by age group, 2009

Child maltreatment rates decrease with age. In Ohio during 2009, *Figure 1.9*, the rates for age groups <1, 1-3, 4-7, 8-11, 12-15 and 16-17 years were 26.2, 14.3, 12.2, 9.5, 9.4 and 6.8 per 1,000 Ohio children in the same age group, respectively. The rate for infants <1 year was 288 percent greater than the rate for ages 16-17.

Figure 1.9. Child maltreatment rates (per 1,000), Ohio children ages birth to 18, by age group, 2009

SEX

In 2009, Ohio victims included more females (53.1%) than males (46.3%). Sex was unknown in 0.6 percent of cases. Maltreatment rates by sex were 12.5 and 10.4 per 1,000 female and male children birth to 18 years respectively, *Figure 1.10*.

Figure 1.10. Maltreatment rates (per 1,000) Ohio children ages birth to 18 years, by sex, 2009

RACE/ETHNICITY

Examining race/ethnicity of cases, 53.1 percent were white, 19.5 percent were African American, 2.8 percent were Hispanic and 24.5 percent were unknown. This bar chart shows that Pacific Islander (n=18) and African-American children (n=6,083) had the highest rates of victimization at 18.6 and 15.5 per 1,000 children of the same race or ethnicity, respectively, *Figure 1.11*. Asian children (n=35) and American Indian/Alaska Native (n=20) had the lowest.

Figure 1.11. Ohio child maltreatment rates by race and ethnicity, 2009

PREVENTIVE SERVICES

In 2009, 46,531 Ohio children received child maltreatment services.

The Task Force on Community Preventive Services recommends early childhood home visitation programs based on strong evidence of their effectiveness in reducing child maltreatment among high-risk families.

OHIO INJURY PREVENTION PARTNERSHIP

Child Injury Action Group

Strategic Plan 2011-2016

DRAFT 11-17-11

Introduction:

The Child Injury Action Group (CIAG) is an action group of the Ohio Injury Prevention Partnership and consists of representatives from various disciplines including: children's hospitals, local health departments, businesses, state agencies, professional associations and universities. Through a data-driven prioritization process, the CIAG has identified the five strategic priority areas that are contained in this plan. In addition to utilizing a data-driven approach, the CIAG also considered feasibility, partnerships, funding and other resources when drafting this plan. Strategic priorities include: teen driving safety, bicycle and wheeled sports helmets, infant sleep-related suffocation, sports-related traumatic brain injury, and child restraint/booster seat law review/revision. With limited funding, the CIAG strives to make an impact through policy, systems and environmental changes. As resources become available, individual-based interventions will be considered. Subcommittees have been formed by interest area to address objectives and activities listed in this plan. Further documentation of those activities is available in the action plans for each subcommittee. While this five-year plan is intended to serve as guidance for CIAG activities for that timeframe, the members of the CIAG intend to address other relevant, timely child injury issues as the need arises.

Using this Plan:

This strategic plan covers the timeframe of 2011-2016 and includes five strategic priorities. Each priority begins with a description of the issue and a broad goal statement. Objectives are associated with each strategic priority and are numbered sequentially. Each objective allows for several tracking fields:

- **Group Members:** Refers to the CIAG group members who have taken responsibility for the objective
- **Status:** Indicates the overall status of the objective according to the following color coded key: **Not Begun**, **Planning**, **In Progress**, **Complete**
- **Schedule:** Provides an overview of the action planning cycle for this objective. Action plans will be developed for each objective with further detail regarding timeline and accountability.
- **Measure of Success:** Provides a broad "critical success factor" associated with the objective that can be used to assess overall success regarding the implementation of the action plan and achievement of the objective.

Priority 1: Teen Driving

In Ohio, motor vehicle crashes kill more teens than any other cause of death. In 2010, 114 youth occupants aged 16 – 20 were killed and 16,041 were injured in crashes, according to the 2010¹ Ohio Traffic Crash Report. These figures represent 11.5 percent and 15.1 percent of the total motor vehicle-related deaths and injuries, respectively, among Ohioans of all ages in 2010. Of the deaths, 73 were to drivers and 41 to passengers. In 2010, 160 youthful drivers aged 16-20 were involved in fatal crashes, 18,946 were involved in injury crashes and 48,378 were involved in property damage crashes.

Speed, alcohol use, driving at night and distractions including cell phones/texting and multiple passengers are all risk factors for motor vehicle crashes among teens. Graduated driver's license (GDL) laws have been proven an effective way to reduce death and injury for teen drivers. A strong GDL is designed to maximize a new drivers experience while minimizing the risk.

Most GDL laws include a three-step approach including: supervised driving with a parent or other adult for at least 12 months, with practice at nighttime and in inclement weather. Teens are at a very low risk when they drive with an adult. The second phase should include restrictions during the provisional stage, when the teen is just beginning to drive without an adult including passenger limits and restricted driving hours. After successful completion of the second phase, the teen is a fully licensed driver.

Goal: *Reduce motor vehicle traffic-related death and injury to teen occupants aged 16 – 20 from a baseline of 14.0 deaths per 100,000² and 1,975.3 injuries³ per 100,000 by 10% by Sept. 30, 2016.*

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
1.1 Create CIAG teen driving subcommittee by soliciting new members with an interest in this topic by December 31, 2011.					12/31/2011	
1.2 Create a formal partnership with Ohio Teen Safe Driving Coalition to accomplish objectives 1.3 and 1.4 by September 30, 2011.					9/30/2011	
1.3 Partner with the Ohio Teen Safe Driving Coalition to promote and support legislative changes to the GDL by December 31, 2014.					12/31/2014	
1.4 Integrate safe teen driving messaging into existing					12/31/2016

³ Ohio Hospital Association

programs for teens and identify existing avenues for reaching parents with safe teen driving messages across the state by December 31, 2016.						
--	--	--	--	--	--	--

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
1.5 Identify gaps in existing educational materials and pursue resources to develop as needed, a set of approved educational materials to make available on the CIAG section of the OIPP Web site, by December 31, 2012.					12/31/2012	
1.6 Build partnerships with Ohio Department of Public Safety Driver Training Program and/or private driving schools and provide recommendations for driver training program standards by December 31, 2016.					12/31/2016	

Priority 2: Bicycle and Wheeled Sports Helmets

Each year, about 200 Ohio children between the ages of 5 and 15 are admitted as hospital inpatients for injuries they received while riding a bicycle and thousands more are treated in emergency departments (EDs). An average of five Ohio children in this age range die from bicycle-related injuries each year. Among Ohio children aged 5 to 14 from 2002 to 2005, falls from skateboards, roller skates and non-motorized scooters resulted in 10,440 ED visits and 112 hospital inpatient admissions.

From 2002-2009, ED visits for bicycle and wheeled recreation related traumatic brain injury (TBI) increased 64 percent in Ohio. A total of 9,383 Ohio youth were treated in EDs and 723 were hospitalized for bicycle and other wheeled recreation related TBIs from 2002-2009. Bicycle-related injuries were responsible for the greatest proportion of hospitalizations for sports/recreation TBIs. ED visits and hospitalizations for bicycle/wheeled recreation related TBIs from 2002-2009 in Ohio were associated with more than \$32.2 million in treatment charges. During this time period, 5 to 14 year olds were responsible for 76 percent of the ED visits and 73 percent of the hospitalizations for bicycle/wheeled recreation-related TBIs.³

Prevention of TBIs is key. Helmets are 85 to 88 percent effective in mitigating head and brain injuries, making the use of helmets the single most effective way to reduce bicycle and other wheeled sports related TBIs. Yet, helmet use among Ohio youth remains low. In 2008, only 46.7% of BRFSS respondents indicated that the oldest child in the household always or nearly always wore a helmet when cycling, while 43.1% indicated that the oldest child seldom or never did.⁴

Helmet laws and ordinances combined with community helmet distribution and education programs have shown the best results in increasing helmet use and reducing bicycle-related injury.⁵

Goal: Increase bicycle helmet use (always or nearly always use) from a baseline of “46.7”% to “55”% for Ohioans 18 years and younger by July 31, 2016.⁴

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
2.1 Create CIAG teen bicycle helmet and wheeled sports subcommittee by soliciting new members with an interest in this topic by December 31, 2011.					12/31/2011	
2.2 Create a formal partnership with Ohio Chapter AAP statewide collaborative to accomplish objectives 2.3-2.7 by December 31, 2011.					12/31/2011	
2.3 Promote and support the introduction of state legislation for required bicycle helmets in children under 18 by July 31, 2016.					7/31/2016	

⁴ Ohio Behavioral Risk Factor Surveillance System, 2008

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
2.4 Establish baseline helmet usage rates to support bicycle helmet state initiative and to support tracking and evaluation efforts by actively participating in data gathering via survey or direct observations by December 31, 2011.					12/31/2011	
2.5 Recognize and promote State Helmet Awareness Day on September 21, 2011, and on an annual basis through the OIPP-CIAG.					Ongoing	
2.6 Develop partnerships with the Ohio Department of Education, State PTA, and Ohio Education Association to promote and support <i>bicycle helmets-to-schools</i> campaigns by December 31, 2012.					12/31/2012	
2.7 Support efforts to distribute helmets and educate pediatricians and their staff on helmet use and appropriate fitting of helmets by July 31, 2013.					7/31/2013	
2.8 Increase the proportion of Ohio children whose communities are covered by a local bicycle/wheeled-sports helmet ordinance by 7% from baseline of 15% by July 31, 2016.					7/31/2016	

Priority 3: Infant Sleep-related Suffocation

Suffocation is the leading cause of injury death for infants. From 2006-2009, there were 228 infant unintentional suffocation deaths in Ohio⁶. According to 2009 Ohio Child Fatality Review data, 93% (50) of the 54 asphyxia deaths to infants less than 1 year were sleep-related. 14% of the reviews for infant deaths from all causes were sleep-related, more than from any other single cause of death except prematurity.⁷

Promoting a safe sleep environment for infants is an important step in preventing infant suffocation. Current best practice recommends placing infants to sleep on their back in a bare crib. In 2009, 58% (88) of infant deaths occurred in adults beds, on couches or chairs, while only 28% (43) occurred in cribs or bassinets.⁷ More than half (51%, 78 deaths) of the infants were sharing a sleep surface with an adult, another child or both at the time of death.

Infants are at greatest risk of sleep-related suffocation during their first 6 months; 87% (133) of the infant sleep-related deaths in 2009 occurred during this early age. Therefore, it is critical that parents of newborns be provided with current best practice information on a safe sleep environment.

Goal: *Reduce unintentional sleep-related deaths for infants aged 0 to 12 months from 38.0 per 100,000 by 10% by Sept. 30, 2016.*

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
3.1 Create CIAG infant sleep-related suffocation subcommittee by soliciting new members with an interest in this topic by December 31, 2011.					12/31/2011	
3.2 Promote and support amending Claire's Law to include safe sleep policies and parent education policies in birthing hospitals and licensed child care centers by December 31, 2016.					12/31/2016	
3.3 Partner with at least one baby product retailer to promote safe sleep to customers by December 31, 2014.					12/31/2014	
3.4 Ensure that prenatal care providers and pediatric health care providers are promoting and distributing current safe sleep messages and materials by December 31, 2014.					12/31/2014	
3.5 Collaborate with other organizations to conduct a statewide safe sleep campaign December 31, 2013.					12/31/2013	

⁶ Ohio Department of Health, Office of Vital Statistics

⁷ 2009 Ohio Child Fatality Review Data

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
3.6 Partner with the Early Childhood Advisory Council to enact a policy requiring all identified state agencies with a role in parent education, early intervention, or child care to follow and promote current safe sleep recommendations by December 31, 2014.					12/31/2014	

Priority 4: Sports-related Traumatic Brain Injury (TBI)

On average from 2002-2009, nearly 4,000 Ohio youth were treated in emergency departments for sports/recreation (S/R) related TBIs each year, with a dramatic rise from 2,859 in 2002 to 6,040 in 2009, a total increase of 111 percent. Sports-related TBIs alone were associated with both the greatest number of emergency department visits each year as well as the greatest increase, 142 percent from 2002-09.

A concussion is a TBI caused by a blow, bump, or jolt to the head or by any fall or hit that “jars” the brain. Children should be removed from play following a suspected TBI/concussion until they can be evaluated by a qualified medical professional. An appropriate licensed health professional will be able to determine how serious the TBI/concussion is and when it is safe for a child to return to sports and other daily activities. No child should be allowed to return to activity on the same day he/she sustains a TBI/concussion or if he/she has any remaining symptoms.

Returning to play too early and experiencing repeated TBI may cause Second Impact Syndrome (SIS) or Post-Concussion Syndrome (PCS). SIS is a catastrophic condition that occurs when a second blow to the head happens before the child has completely recovered from a concussion. This second impact causes brain swelling, resulting in severe consequences such as brain damage, paralysis, and even death. PCS is the condition of having long-term concussion symptoms; risk for PCS is increased if a person sustains a second brain injury before the first one has healed.

Educating parents, coaches and players on the signs and symptoms of concussion/TBI and the dangers of returning to play too quickly or without medical evaluation is a key activity.

Goal: *Monitor the impact of state policy changes related to sports/recreation, physical activity and injury prevention on medically consulted SR TBI emergency department visits to establish a baseline. In 2009, 6,040 youth aged 18 and under were treated for SR TBI in emergency departments.*

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
4.1 Create CIAG sports-related TBI subcommittee by soliciting new members with an interest in this topic by December 31, 2011					12/31/2011	
4.2 Promote and support legislation requiring the following: 1) youth athletes in school and recreational leagues to be removed from practice or play if they are suspected of sustaining a concussion; 2) requiring any athlete suspected of sustaining a concussion to be cleared by an appropriate licensed health professional before returning to play; and 3) education requirements for coaches, parents and athletes on recognizing the signs and symptoms of a possible concussion by					12/31/2012	

December 31, 2012.						
--------------------	--	--	--	--	--	--

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
4.3 Identify, adapt and develop sport-related “recognition and prevention of traumatic brain injury” educational materials for coaches, parents, players and appropriate licensed health professionals to be posted to the ODH website by December 31, 2012.					12/31/2012	
4.4 Identify existing grant opportunities and inform the educational and recreational sports communities of their availability by December 31, 2012.					12/31/2012	

Priority 5: Child Restraint Law Review and Revision

From 2006-09, motor vehicle crashes remained the leading cause of injury death for Ohio children ages 5 to 9 and the third-leading cause for ages 1 to 4.⁸ From 1999 to 2007, at least 58 Ohio children under the age of 8 were killed as occupants in motor vehicle traffic crashes.⁹

Proper use of child safety seats and booster seats is one of the most important preventive measures to reduce motor vehicle-related death and injury; yet it remains a challenge in Ohio. Using a booster seat instead of a seat belt alone reduces the risk of death in a crash by 59%.¹⁰ In 2007, Ohio's booster seat use rate for children aged 4 to 7 was only 18%, one of the lowest in the country.¹¹

The CDC Task Force on Community Preventive Services recommends primary child restraint laws based on strong evidence of their effectiveness. This means that law enforcement are able to stop and cite drivers for failure to properly restrain a child in a child restraint or booster seat as required by law. Proper enforcement combined with education and safety seat distribution programs provide the greatest evidence of success in reducing these preventable deaths among children.

Goal: *Establish an Ohio-specific baseline for child restraint use for ages birth to 8 years when data becomes available. As part of a national effort, increase age appropriate child restraint use for ages birth to 12 months from 86 to 95 percent restrained in rear-facing child safety seats. As part of a national effort, increase age appropriate child restraint use for ages 1 to 3 years from 72 to 79 percent restrained in front-facing child safety seats. As part of a national effort, increase age appropriate child restraint use for ages 4 to 7 years from 43 to 47 percent restrained in booster seats.*

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
5.1 The CIAG will form a child passenger safety (CPS) subcommittee to address Ohio child restraint/booster seat legislation by September 1, 2011.					9/1/2011	
5.2 Review current statewide child restraint/booster seat law to identify existing gaps in the law by December 31, 2011.					12/31/2011	
5.3 Introduce a pilot training program with Ohio State Highway Patrol to integrate training on enforcement of child restraint law into training academy curriculum by July 1, 2012.					7/1/2012	

⁸ ODH Office of Vital Statistics

⁹ CDC WISQARS

¹⁰ National Highway Traffic Safety Administration

¹¹ Partners for Child Passenger Safety Study, Children's Hospital of Philadelphia

Objective	Group Members	Status	Schedule			Measure of Success
			Action Plan Due	Begin	End	
5.4 Educate law enforcement agencies to increase enforcement of current law and amount of money collected from child restraint/booster seat fines by 15 percent statewide by June 30, 2013.					6/30/2013	
5.5 Promote and support identified changes to the current child restraint/booster seat law by December 31, 2014.					12/31/2014	

2010 – 2014 Plan

Ohio Injury Prevention Partnership

OHIO OLDER ADULT FALLS PREVENTION COALITION STATE PLAN

OHIO DEPARTMENT OF HEALTH

614/466-3543
www.odh.ohio.gov

Ted Strickland/Governor

Alvin D. Jackson, M.D./Director of Health

January 7, 2011

Dear Partner in Injury Prevention,

The Ohio Department of Health, Violence and Injury Prevention Program (VIPP), is pleased to present:

Preventing Falls among Older Adults. Falls represent a serious threat to public health and safety. They are particularly harmful to older adults as the likelihood of falling and the consequences of a fall increase dramatically with age.

Falls are the leading cause of injury-related ER visits, hospitalizations and deaths for Ohioans aged 65 and older. According to the VIPP's *Burden of Injury from Unintentional Falls in Ohio*, falls among Ohioans 65 years and older accounted for \$4.2 billion, more than two-thirds (68 percent), of the total annual cost of nonfatal, hospital-admitted falls. In 2008, this group accounted for more than 80 percent of fall-related deaths while they represent only 14 percent of the population.

Through a Centers for Disease Control and Prevention Core Injury grant, the Ohio VIPP established the Ohio Injury Prevention Partnership (OIPP) in November of 2007. The purpose of the OIPP is to bring together a group of multi-disciplinary professionals from across the state to identify priority injury issues and develop strategies to address them. Falls among older adults are one of the OIPP's priorities and the members recommended the formation of a specific group to address the issue. In November of 2009 the *Ohio Older Adults Falls Prevention Coalition* was formed and a statewide partnership worked together to complete this state plan.

The five year plan addresses falls among older adults from a multi-faceted approach to include: education/awareness, infrastructure, policy, interventions/risk assessment and monitoring trends, prevention, management, rehabilitation and long-term care. Implementation of this plan will require collaboration with a wide range of partners and agencies including public health, aging networks and health care professionals that endeavor to reduce falls and fall-related injuries for older Ohioans.

I wish to express my gratitude to the coalition members who devoted their time toward the completion of this important document. I wish to particularly acknowledge our partner, the Ohio Department of Aging, for their expertise and resources in addressing falls among older adults. I also thank the Ohio Public Health Association and the Delaware County General Health District for their outstanding contributions to the completion of the plan.

Falls are not a normal part of aging. This myth must be dispelled so older Ohioans can live strong, independent, productive and healthy lives. We consider this blue print an important "*Call to Action*" in addressing this issue in a coordinated, systematic and evidence-based manner at the state level and hope that you will join with us to implement the plan.

Sincerely,

Alvin D. Jackson, M.D.
Director, Ohio Department of Health

Ohio Department of Health Violence and Injury Prevention Program

The VIPP at ODH is developing a comprehensive injury prevention program for the State of Ohio. The VIPP strives:

- To coordinate surveillance systems that collect injury data.
- To assess the burden of injuries and violence, and communicate information for the purpose of action.
- To promote evidence-based injury prevention interventions for at-risk populations.
- To coordinate and collaborate with partners in building program infrastructure.
- To encourage the adoption of policies and programs that lead to the prevention of injuries.
- To provide technical support and training as needed.
- *Ultimately, to make Ohio a safer place to live, work and play by reducing death and disability associated with intentional and unintentional injury.*

VIPP Initiatives:

For more details on these activities, please visit our website at:

- Injury Surveillance Activities
 - General Injury Surveillance
 - Census of Fatal Occupational Injuries (CFOI)
 - Ohio Violent Death Reporting System (OH-VDRS)

Public Health Injury Surveillance and Prevention Program Grant

ODH presently receives funding from the CDC for the Public Health Injury Surveillance and Prevention Program. The goal of the program is to establish and sustain a solid infrastructure for injury prevention that includes statewide injury surveillance to inform and evaluate public policy, as well as comprehensive injury prevention and control programs.

This funding is used to:

- Strengthen the infrastructure for injury prevention in Ohio.
- Improve injury surveillance.
- Influence and evaluate policy relative to the prevention of injuries.
- Increase collaboration in the field of injury prevention.

ODH has received funding from the CDC for core injury surveillance and prevention activities since 2000.

Ohio Injury Prevention Partnership (OIPP)

The OIPP is a group of professionals representing a broad range of agencies and organizations concerned with building Ohio's capacity to address the prevention of injury. Led by the Ohio Department of Health (ODH), Violence and Injury Prevention Program (VIPP) with funds from the CDC, the OIPP improves statewide collaboration related to injury prevention, and assists ODH with establishing priorities and future directions for injury and violence prevention in Ohio. Current priority areas include child/youth injury, drug poisoning, violence and falls among older adults.

Mission: To prevent injuries in Ohio using data and collaborative partnerships.

Vision: Working together to create a safe and injury free Ohio.

Ohio Older Adult Falls Prevention Coalition

With support from the CDC's Preventive Health and Health Services Block Grant and the Core Injury Grant, and in close collaboration with ODH and the OIPP, the Ohio Older Adult Falls Prevention Coalition was formed in November 2009. The coalition is comprised of professionals from a wide range of multi-disciplinary agencies and organizations throughout Ohio. The function of the coalition is to identify statewide priorities related to the prevention of falls among older adults which can lead communities to address areas of greatest need for their populations; determine broad focus areas, goals, objectives and activities to guide communities and the state in addressing these issues; and to monitor progress in each of five priority areas. The priority areas are education/awareness, infrastructure, policy, interventions/risk assessment and evaluation/monitoring trends.

Mission: The mission of the Ohio Older Adult Falls Prevention Coalition is to reduce the risk of falls through partnerships, education and policy.

Vision: Older Ohioans will have fewer falls and fall-related injuries, maximizing their independence and quality of life.

Falls Among Older Ohioans - Ages 65 and Older

Taken from ODH report: *Burden of Injury From Unintentional Falls in Ohio, 2002-05 and Fall-Related Injury Among Older Adults in Ohio Factsheet, 2010*

Falls are particularly harmful to older adults. Falls and fall-related injuries seriously affect older adults' quality of life and present a substantial burden to the Ohio health-care system. They easily surpass all other mechanisms of injury as a cause of ER visits, hospitalization and death. Important findings related to falls among older adults include:

Falls among older adults have reached epidemic proportions and rates continue to rise.

- From 2000 to 2008, Ohioans aged 65 and older experienced a 141 percent increase in the number of fatal falls and 132 percent increase in the fall death rate. On average, 2.4 older Ohioans suffered fatal falls each day in 2008.¹
- In 2007, there were nearly four (3.7) fall-related ER visits for every 100 Ohio older adults (*data not shown*) and nearly 11 (10.6) fall-related hospitalizations for every 1,000 Ohio older adults. Fall-related ER visit and hospitalization rates also increased 61 percent and 57 percent respectively from 2002 to 2007.²

Older adults account for a disproportionate share of fall-related injury.

- Falls are the leading cause of injury-related ER visits, hospitalizations and deaths for Ohioans aged 65 and older.^{1,2} Fall-related ER visit and hospitalization rates for Ohioans 65 years and older are higher than rates for all other injuries combined.¹
- Ohioans 65 and older accounted for approximately 82 percent of fatal falls in 2008; while they represent only 14 percent of the population.¹

The likelihood of falling and the severity of fall-related injury increases with age, and therefore the risk for hospitalization and death also rise with age.

- Average age increases when comparing fall-related ER visits (38 years), inpatient hospitalizations (70 years) and deaths (76 years). Younger Ohioans are more likely to be treated in an ER for fall-related injuries and not to require an overnight stay in the hospital.^{1,2}
- Average length of stay in days also increases with age.²
- More than 90 percent of fall-related hip fractures occur among those 65 years and older, and nearly half (48.7 percent) of fall-related inpatient hospitalizations among those 65 and older involved a hip fracture.²

Age and gender play a large role in determining risk for type of fall.

- From ages 65 and older, female risk for fall-related injury skyrockets, with the disparity between male and female rates widening with advancing age. In numbers of fall-related hospitalizations, there were two women treated for every man among 65-74-year-olds and there was a 4:1 female/male ratio for those aged 85 years and older.²

Older adults with poor health status and those who are isolated are at greater risk of falling.

- The number of health problems and the risk of falling increase proportionately. Behavioral Risk Factor Surveillance Survey (BRFSS) respondents with diabetes, eye disease, obesity, heart disease or stroke had a higher prevalence of falls in the past three months than those without.³
- Social isolation is a risk factor for fatal falls. Married elders are significantly less likely to die from a fall than the unmarried.¹

Fatal and medically-treated falls represent only a proportion of all falls among older adults.

- As reported in the 2006 BRFSS results, 14.3 percent of Ohio respondents aged 65 and older indicated that they fell during the previous three months, projecting to a total of approximately 215,000 persons who suffered at least one fall.³
- Nearly one-third of those who fell (31.6 percent), or an estimated 67,500 older Ohioans, reported sustaining an injury that resulted in a doctor visit or restricted activity.³

Falls among older adults are costly.

- On average annually in Ohio, direct treatment charges for fall-related hospitalizations total \$298.5 million. These charges represent nearly half (45 percent) of the \$650 million in charges for all leading causes of injury combined.⁴
- Direct medical costs represent only a fraction (8 percent) of the total cost of falls among older adults in Ohio - \$4.2 billion in 2003.⁴

Despite these staggering statistics, falls are not a normal part of aging. There are evidence-based strategies designed to reduce the risk of falling. This plan is an attempt to promote these strategies systematically throughout Ohio.

Introduction

Fall-related injury is a significant public health problem among older adults because of its frequency, the morbidity associated with falls and the costs of the resulting health care.⁵ CDC reports that in the US, 30 percent of older adults aged 65 or older living in the community and more than 50 percent of those living in residential care facilities or nursing homes fall every year. This rate rises with age, with functional impairment and disability being highest in those older than 90 years. Among older adults, falls are the leading cause of injury deaths and the most common cause of nonfatal injuries and hospital admissions for trauma. In 2000, CDC found that traumatic brain injury accounted for 46 percent of fatal falls among older adults. Most fractures among older adults are caused by falls. The most common fractures are of the spine, hip, forearm, leg, ankle, pelvis, upper arm and hand. And astonishingly, in 2000, direct medical costs totaled \$179 million for fatal falls and \$19 billion for nonfatal fall injuries.

ODH reports that falls among older adults in Ohio have reached epidemic proportions, and account for a disproportionate share of fall-related injuries.⁶ In 2008, older adults accounted for 20 percent of all fall-related ER visits, and 71 percent of fall-related inpatient discharges and 82 percent of deaths, while they only represented 14 percent of the overall Ohio population.⁶

From 2002-2007, there were approximately 78,300 inpatient hospitalizations coded for fall-related injury among adults aged 65 and older in Ohio. When examining non-medically-treated falls, this number increases to more than 215,000 according to the 2006 Ohio BRFSS. Of survey respondents aged 65 and older, 14.3 percent indicated that they had fallen in the previous three months. Nearly one third, 31.6 percent (69,217), of those who fell reported that they had sustained an injury that resulted in a doctor visit or restricted activity during the previous three months. For both males and females, the estimated prevalence of falling for ages 65-74 was lower than ages 75 and older (11.4 percent versus 17.2 percent overall.)⁶

Many studies have agreed that the risk of falling and incurring an injury from a fall is greater in older adults with poor health status. And as the number of health issues increases so does the likelihood of falling. Older adults with chronic conditions that lead to altered sensory or motor systems are particularly vulnerable to falls.⁶ Other fall-related risks include prescription drug interactions, impaired cognitive function, use of alcohol, history of falls and reduced visual cues, among others.

Falls and fall-related injuries cause significant mortality, disability, direct and indirect costs, including loss of independence and quality-of-life.⁷ Many people who fall, even those who are not injured, develop a fear of falling. This fear may cause them to limit their activities, leading to reduced mobility and physical fitness, therefore increasing their actual risk of a future fall. These injuries impose an enormous burden on individuals, society and the nation's health care system. Falls among older adults are extremely costly. The total medical costs for nonfatal, hospital-admitted falls for older adults aged 65 or older in Ohio was \$327.3 million in 2003.⁶

The topic of fall prevention is especially important at this time because Ohio, like the rest of the US, is aging and the impact of these injuries will continue to increase. The Administration on Aging reports in the Profile of Older Americans 2008 that the older population--persons 65 years or older--numbered 37.9 million in 2007, will increase to 40 million by the end of 2010 (a 15 percent increase) and then to 55 million in 2020 (a 36 percent increase for that decade). By 2030, there will be about 72.1 million older persons, almost twice their number in 2007.

Goal 1: Education/Awareness for Older Adult Falls Prevention

1. To improve the fall prevention knowledge and behaviors among seniors and caregivers through community education and awareness efforts.

Objectives	Activities	Implementation Timeframe	Expected Outcomes	Partners	Funding Implications
1.1 To increase the knowledge of risk factors, prevalence, consequences, and prevention strategies among community members and seniors.	1.1.1 Develop Web content for ODH's injury prevention Web site that provides tools for risk assessment and prevention tips.	From 2010-2011	Material will be recommended for ODH website and posted on OPHA website	ODH, OPHA, coalition member organizations	May need additional funding to add a Fall Prevention-specific page to the OPHA website
	1.1.2. Link with partnered organizations and agencies' Web sites.	Ongoing 2010-2014	Organizational partner websites will be listed on OPHA and ODH websites	All coalition member organizations	Current funding or in-kind resources
	1.1.3. Offer 4-5 regional conferences on fall risk factors and prevention strategies.	From 2011-2012	Conferences will be held and evaluations summarized	All coalition member organizations and others as identified	Additional funding will be needed to support these conferences
	1.1.4 Identify and engage state and local health/aging organizations and agencies to discuss and integrate fall prevention awareness, risk assessment and intervention strategies based on the venue where older Ohioans reside.	From 2010-2014	Additional agencies/ organizations will participate in state or local Fall Prevention Coalitions	All coalition member organizations	Current funding

1.2 To increase the knowledge of fall risk factors and prevention strategies among caregivers and health care providers.	1.2.1. Identify county champions representing each of Ohio's counties.	From 2010-2014	List of champions will be available and posted to Web sites, including counties represented	All coalition member organizations and local partners	Current funding and in-kind resources from existing network
	1.2.2 Provide awareness, risk assessment and intervention information to "2-1-1" information centers" across the state through county champions.	From 2010 - 2014	Information will be disseminated; feedback data on Web site "hits" or places shared will be requested	United Way agencies and AIRS information systems; all coalition member organizations	Additional funding may be needed to collect and summarize these data
	1.2.3 Develop a toolkit/press kit for use throughout Ohio and link to it online.	From 2010-2014	Toolkit will be developed and posted online; can be shared by e-mail	All coalition member organizations, ODH, ODA	Current funding and in-kind resources; some additional funding may be needed to print some toolkit items for those without Internet access and to address multiple languages

1.3 To increase knowledge of risk factors and prevention strategies among policy makers.	1.3.1. Hold legislative fall prevention educational event at the statehouse.	From 2011-2014	Fall Prevention Awareness Day event will take place at the statehouse annually	All coalition member organizations	Funding will be needed to support this activity
	1.3.2 Obtain proclamation from Governor declaring Fall Prevention Awareness Week/Day.	From 2010-2014	Proclamations/ resolutions will be obtained and shared on Web sites, via e-mail and through the media	ODH/ODA/ OPHA	Current funding
1.4 Identify systems that have health/aging association meetings.	1.4.1 Engage state associations to distribute fall prevention information.	From 2010-2014	Lists of potential organizations/ associations will be developed; letters of commitment to be sent/returned	All coalition member organizations, other associations as identified	May require additional funding to coordinate this effort and produce summary

Goal 2. Infrastructure

1. To create a sustainable system which identifies needs, existing resources and gaps.

Objectives	Activities	Implementation Timeframe	Expected Outcomes	Partners	Funding Implications
1.1 To perform system-level needs assessment and review available data.	1.1.1 Identify or develop valid, reliable needs assessment tool at state and local levels.	From 2010 - 2011	A tool is identified and a process is developed to use it.	ODA/ODH/ selected coalition members	Current funding and in-kind efforts of Coalition members
	1.1.2 Identify existing assessment data.	From 2010 - 2011	Data sets identified and listed	ODA/ODH/ selected coalition members	Current funding and in-kind efforts of Coalition members
	1.1.3 Review resulting assessment of the needs of professionals, older adults and caregivers to gather their points of views.	From 2011 - 2012	Report on needs identified is produced and shared	ODA/ODH/ selected coalition members	Current funding and in-kind efforts of Coalition members
	1.1.4 Identify both real and perceived, quantitative and qualitative needs as determined by key stakeholders in the community.	From 2011 - 2012	Stakeholder input is obtained, considered and included in report	All coalition member organizations and others to be identified.	Additional funding may be needed

1.2 To perform resources assessment by identifying risk factors and related state resources.	1.2.1 Determine how the data are to be gathered; who will gather the data; and analyze the validity of the data.	From 2010-2011	Assessment tool developed and process identified to collect/analyze data	Key informants/ coalition member organizations, hospitals, etc.	Current funding
	1.2.2 Identify and list resources focused on medication management, fear of falling, sensory impairments, etc.	From 2010-2011	Resource list compiled and shared	Pharmacy, medical, vision, speech and hearing and other health professionals and organizations	Current funding
	1.2.3. Identify and list resources focused on physical activity/mobility and environment.	From 2010-2011	Resource list compiled and shared	State and local public health, PT/OT orgs, universities, researchers, YM/WCAs, and other coalition members, builders associations, city planners and county commissioners	Current funding

2. To develop strategies to fill the gaps in order to reduce the number of falls and fall-related injuries.

2.1 Identify gaps and connect them with resources.	2.1.1 Develop resource guides of who is doing what and where (e.g. Central Ohio - see Web site example).	From 2011-2013	Resource guides developed and shared – online preferred	Coalition member organizations, information and referral organizations (ADRCs and 211 systems)	Additional funding may be needed to collect and update the guide
	2.1.2 Share and update resource information with colleagues in education/awareness capacities (to meet Alliance of Information and Referral Systems standards)	From 2011-2014	Web resource “go-to” site developed, updated and promoted	Coalition member organizations and other identified organizations	Funding will be needed to monitor quality of resources listed and to provide frequent updates; can link to Admin on Aging Funding already in place
2.2 Facilitate sustainability by identifying local champions for this work.	2.2.1 Identify point people for fall prevention at each Area Agency on Aging Region.	December 2010	List of point persons will be provided and shared	ODA and AAAs	Current funding and in-kind
	2.2.2 Identify county-specific champions for fall prevention efforts.	December 2010	List of champions will be provided and shared	ODH, AAAs, EMAs, local coalitions, local senior centers and others	Current funding and in-kind

2.2.3 Institutionalize funding mechanisms for maintaining efforts to support fall prevention efforts at the state and local level.

From 2010-2014

Funding committee to be formed; grant applications will be submitted; legislative funding will be considered

Coalition member organizations and other organizations identified

Additional funding will be needed in various venues and for various populations and partner efforts

Goal 3: Policy

1. To provide information to organizational, local and state leaders resulting in legislation, regulations, and policies that address falls prevention interventions.

Objectives	Activities	Implementation Timeframe	Expected Outcomes	Partners	Funding Implications
1.1 Develop falls prevention agenda.	1.1.1. Assemble falls advocacy group.	From 2010 – 2011	Advocacy group identified	Selected coalition member organizations	Current funding
	1.1.2. Identify and prioritize falls issues annually that could be addressed by policy initiatives.	From 2010 – 2014	Propose policy initiatives and/or support them	All coalition member organizations and others to be identified	Current funding to propose, possible additional funding to implement
	1.1.3 Identify local champions.	From 2010 – 2011	List of local champions we can contact for support	All coalition member organizations and others to be identified	Current funding
	1.1.4 Charge falls policy advocacy group participants with advocating through his/her agency/organization, etc.	From 2010 – 2014	Log of phone calls, e-mails, releases pertaining to policy advocacy	All coalition member organizations and others to be identified	Current funding or software update funds

	1.1.5 Draft annual policy advocacy agenda in the form of a “white paper” in conjunction with needs and resource assessments and overall OIPP policy initiatives.	From 2010 - 2014	Annual white papers are produced and shared	Coalition work groups and other constituents	Current funding
1.2 Annually compile federal, state and local statutes, etc.	1.2.1 Identify current rules, regulations, ordinances, etc. that support or are contrary to falls prevention tenets.	From 2010 – 2014	Key legislation identified and addressed through action steps	All coalition member organizations and Policy Advocacy Group	Funding needed to staff this activity and perform follow-up
	1.2.2 Identify proposed legislation currently being considered.	From 2010 – 2014	Proposed legislation identified; coalition involved in review and recommends action steps	All coalition member organizations and Policy Advocacy Group	Funding needed to staff this activity and perform follow-up
	1.2.3 Identify key legislation for consideration in Ohio.	From 2010 - 2014	Proposed legislation identified; coalition involved in review and recommends action steps	All coalition member organizations and Policy Advocacy Group	Funding needed to staff this activity and perform follow-up
1.3 Develop strategies for approaching legislators and other stakeholders.	1.3.1 Identify stakeholders at federal, state and local levels.	From 2010 – 2014	List of stakeholders and legislators to be contacted	ODH, ODA, OPHA, other coalition member organizations	Current funding

1.3.2 Identify supporters/ adversaries of mandates.	From 2010 – 2014	Supporters identified and detractors educated	ODH, ODA, OPHA, other coalition member organizations	Current funding
1.3.3 Develop key messages regarding falls to address legislators/policy makers.	From 2010 – 2014	Educational materials and data developed for policy use	ODH, ODA, OPHA, other coalition member organizations	Funding needed to staff activity to develop materials and keep them current and locally pertinent
1.3.4. Provide/develop recommendations to legislators/policy makers.	From 2010 – 2014	Recommendations included in annual white papers are included in state and local policies	ODH, ODA, OPHA, other coalition member organizations	Funding needed to staff this activity and to monitor outcomes
1.3.5 Meet with stakeholders on their own turf, etc. to discuss falls prevention.	From 2010 – 2014	At least six meetings or contacts are held per year	Policy Advocacy group members, coalition member organizations and identified champions	Funding to support travel expenses and possibly staff
1.3.6 Create messages that public can use to advocate with stakeholders.	From 2010 - 2014	Advocacy messages and materials developed and updated annually	Policy Advocacy Group and other coalition member organizations	Current funding

1.4 Educate public sector, key organizations and stakeholders about falls.	1.4.1. Develop public relations program that incorporates social marketing concepts/principles.	From 2010 – 2014	Media materials will be developed and shared	ODA, ODH, OPHA	Funding to produce media materials and public education items
	1.4.2 Conduct trainings at appropriate public/private clubs, organizations, etc.	From 2010 – 2014	Conduct a minimum of 10 events per year	Policy Advocacy Group and/or other coalition member organizations, ODH, ODA, OPHA	Funding needed to support travel expenses, material development, etc.
	1.4.3 Invite legislators/stakeholders to regional falls prevention education events.	From 2011 - 2014	List of legislators and other stakeholders invited and attending various coalition events	Policy Advocacy Group and/or other coalition members, ODH, ODA, OPHA	Funding needed for space/logistics and materials and speaker fees for these events
1.5 Promote state wide advocacy initiatives driven by falls state advocacy group.	1.5.1 Create framework for local/community organizations.	From 2010 – 2014	Number of local communities that adopted some fall initiatives as recommended by advocacy group	Advocacy Group and other coalition member organizations; engage public relations offices of ODA/ODH	Funding needed for media time and advertising

	1.5.2 Act as a resource for local/community organizations.	From 2010 - 2014	Maintain online toolkit materials and log contacts from local organization and/or public;	Policy Advocacy Group	Current funding
1.6 Propose at least one fall prevention related legislation policy to be considered for adoption.	1.6.1 Identify potential policy issues that could be addressed by legislation.	By 12/31/2014	Proposed legislation is assigned a Senate or House Bill number with bipartisan sponsorship	Policy Advocacy Group, OPHA	Current funding to support promotion of legislation

Goal 4: Interventions/Risk Assessment

1. To create an easy and accessible tool box for health care providers, older adults and caregivers to utilize in order to reduce the risk of falls.

Objectives	Activities	Implementation Timeframe	Expected Outcomes	Partners	Funding Implications
1. 1 Provide information for health care providers.	1.1.1 Develop or identify risk assessment and intervention tools.	From 2010-2011	Tool kit of various risk assessment screening items will be available	All coalition member organizations and other identified associations	Current funding and in-kind resources
	1.1.2 Develop or identify resource guide of intervention and risk assessment tools.	From 2011-2012	Guides will be available with information specific to various areas of the state	All coalition member organizations and others as identified	Current funding and in-kind resources
	1.1.3 Provide information on training opportunities for best practices.	From 2010- 2014	Training and continuing education opportunities will be included in organization's annual meetings, announced in newsletters and journals, posted on Web site calendars	All coalition member organizations and others as identified	Funding may be required to provide some trainings by the coalition

1.2 Provide information for Client/Caregivers.	1.2.1. Develop or identify and distribute self-use risk assessments such as home and medicine assessments; as well as intervention services.	From 2010-2013	Materials identified and disseminated, posted to Web sites, printed as needed	All coalition member organizations and others as identified	Current funding and in-kind resources
	1.2.2. Identify places/businesses that can assist in distributing these items, in addition to Web resources.	From 2010-2013	Business partners identified, promoted and recognized; items posted to Web sites	All coalition member organizations & businesses identified	Current funding and in-kind resources
	1.2.3. Develop or identify and distribute risk and intervention resource guide for public use.	From 2010-2014	Guides developed including information specific to various areas of the state, posted to Web sites, shared with business partners	All coalition member organizations and other partners as identified	Funding may be needed to print materials for public use
1.3 Provide information for the general public.	1.3.1 Assure that risk assessment and intervention resources are included in public education. Campaign materials to be developed.	From 2011-2014	Risk assessment and intervention resources will be included in public education and social marketing campaign materials	All Coalition member organizations, media partners and other partners as identified	Funding will be needed or leveraged to fully implement this activity

Goal 5. Monitoring Trends for Fall-Related Data

1.To capture quality falls-related data in order to monitor trends.

Objectives	Activities	Implementation Timeline	Expected Outcomes	Partners	Funding Implications
1.1 Partner to assess the quality of existing data sources and opportunities for linkage, etc.	1.1.1 Inventory current sources of injury data in Ohio (death, risk factor, fatality review, ED and inpatient hospital, EMS, Trauma, crime, traffic crash, poison control, brain injury, etc.) for reporting information about injuries from falls and fall risk factors.	From 2010 – 2011	Fall data sources will be identified and published	ODH Injury Program, ODA, OIPP Data Action Group	Current Funding
	1.1.2 Produce recommendations about the inclusion in injury-related or fall-related questions on behavior risk surveys, hospital/nursing home/assisted living forms, physician office intake forms and EMS guidance documents, etc.	From 2011 – 2012	Printed list of recommended questions to be included in patient assessments	ODH Injury Program, ODH Division of Quality, coalition member organizations, local coalition members, county champions	Current Funding

1.2 Identify gaps in data/ information and work to fill them.	1.1.3 Identify methods to determine the impact of injuries on high-risk groups and communities (e.g., YPLL, costs, outcomes).	From 2011 - 2012	Improved quality of falls data from various reporting sources	OIPP Data Action Group, ODH Injury Program, coalition member organizations, local coalitions, CDC data sources	Current Funding
	1.1.4 Monitor the implementation of fall prevention reporting recommendations.	From 2011 and ongoing through 2014	Improved quality of falls data from various reporting sources	ODH Injury Program, ODH Quality Division, other coalition member organizations responsible for data collection, nursing homes, etc.	Current Funding
	1.2.1 Survey stakeholders/ partners to identify additional data elements needed to better evaluate trends in falls and fall-related injuries and fatalities.	From 2010 – 2011	Additional data elements will be determined and a summary of the survey will be produced	Coalition member organizations, local health departments/ coalitions, ODH BRFSS, Division of Quality and Injury Program	Current Funding

	1.2.2 Determine or develop ways to obtain additional data elements.	From 2011 – 2012	Guidance document will be produced, new partners or data sources identified	ODH Injury Program and Division of Quality, other partners as appropriate	Current Funding
1.3 Establish baselines.	1.3.1 Review the existing data and establish baselines for added measures (HP 2020).	From 2011 -1 2012	Baselines will be established and published for existing and added measures	ODH Injury Program, ODH Quality Division, OIPP Data Action Group, local coalitions and other data source partners as identified	Current Funding
1.4 Partner to improve the quality of external cause of injury coding (e-coding) in hospital and discharge data.	1.4.1 Implement recommendations from the MMWR report to improve e-coding in Ohio hospital data.	Throughout 2011	Guidance document or position paper will be produced to encourage improved use of e-coding	Coalition member organizations, ODH Injury Program and local coalitions	Current funding, may require additional funding for training on e-coding related to fall data
	1.4.2 Provide procedure guidelines for continuous quality improvement once e-coding is in place.	From 2011-2013	Guidance document will be produced for distribution	OHA, Hospital RHIT Association, ODH Injury Program, ODPS, OIPP Data Work Group	Current funding, may require additional funding for training

1.4.3 Provide data, standards and training to clinicians, coders and administrators for improving the recording of injury circumstance information in medical records.	From 2013-2014	Increase the proportion of injury discharges that are e-coded	Ohio Hospital Association, Hospital RHIT Association, ODH Injury Program, ODPS, OIPP Data Work Group	Additional funding may be required for training
1.4.4 Produce reports for clinicians and coders to demonstrate the value of their efforts.	2014 and ongoing	Increase the proportion of injury discharges that are e-coded	Ohio Hospital Association, Hospital RHIT Association, ODH Injury Program, ODPS, OIPP Data Work Group	Current funding, may require additional funding for distribution

2. Develop mechanisms to make the data more accessible and user friendly.

2.1 Increase the availability of statewide and community-specific data for planning, surveillance and evaluation.	2.1.1 Produce reports/fact sheets on the injury and fall priority areas.	From 2011 and ongoing	Reports/Fact sheets produced annually	All coalition member organizations	Current and in-kind funding
	2.1.2 Develop multiple methods of dissemination to enhance the timeliness and accessibility.	From 2011 and ongoing	Amount and method of dissemination is captured in database	All coalition member organizations	Current funding
	2.1.3. Explore ways to promote access to Web based data resources, especially to underserved communities.	From 2010 and ongoing	Proposal for web-based data resource is produced and list of potential funding sources produced	All coalition member organizations	In-kind with pursuit of additional funding
2.2 Review data and report trends every five years.	2.2.1 Updated burden of falls report produced.	By 2013	Report is produced and publicized	All coalition member organizations	Additional funding may be required

Evidence-based Interventions and Resources

Prevention of Falls Among Older Adults – Multi-Factorial Interventions

Effective fall prevention programs for older adults include the following components:

- Medical Management (Risk Assessment by a Health Professional)
- Balance and Mobility (Physical Activity)
- Environmental resources provide information on evidence-based fall prevention programs.

CDC Fall Prevention Activities

Ohio's EMS Data Systems

Ohio's EMS Data Systems: Purpose

- To reliably inform performance improvement, education, research and system design of the state's EMS and trauma systems.

Ohio's EMS Data Systems: Components

- EMS Incident Reporting System
- Ohio Trauma Registry – Acute Care
- Ohio Trauma Registry – Rehabilitation

Ohio's EMS Data Systems: Components

- EMS Incident Reporting System
 - Collects data from EMS agencies on all requests for emergency medical service
 - Online January 1, 2002
 - 8,366,610 records
 - 978 EMS agencies reporting
 - \approx 1,000,000 records annually

Ohio's EMS Data Systems: Components

■ EMS Incident Reporting System

□ Data collected (80 data elements):

■ Incident demographics

- Date, time, place of incident
- All EMS times from 911 call to return to service

■ Patient demographics

■ Patient assessment

■ Treatment

- Procedures, medications

■ Disposition

Ohio's EMS Data Systems: Components

- Ohio Trauma Registry – Acute Care
 - Collects data from all inpatient hospitals on patients admitted for treatment of injuries.
 - Currently limited to “severe injuries” (48-hour rule)
 - Online January 1, 1999
 - 404,553 records
 - 194 hospitals reporting
 - ≈45,000 records annually

Ohio's EMS Data Systems: Components

- Ohio Trauma Registry – Acute Care
 - Data collected (77 data elements):
 - Patient Demographics
 - Cause of injury
 - Place, work-relatedness, motivation
 - EMS assessment / treatment
 - ED assessment / treatment
 - Inpatient course
 - Vent days, ICU LOS, complications

Ohio's EMS Data Systems: Components

- Ohio Trauma Registry – Acute Care
 - Data collected:
 - Diagnoses
 - Severity
 - Operative procedures
 - Discharge status / disposition
 - Autopsy information

Ohio's EMS Data Systems: Components

- Ohio Trauma Registry – Rehabilitation
 - Collects data from all inpatient rehab facilities on patients admitted for rehabilitation following injury
 - Online January 1, 2005
 - 6,183 records
 - 30 facilities reporting
 - \approx 1,000 records annually

Ohio's EMS Data Systems: Components

- Ohio Trauma Registry – Rehabilitation
 - Data collected (36 data elements):
 - Patient demographics
 - Disability assessment on admission
 - Disability assessment on discharge
 - Discharge status and disposition

EMSdata@dps.state.oh.us

2011 Youth Risk Behavior Surveillance Survey (YRBSS) Ohio's Students

Ohio Injury Prevention Partnership
August 17, 2012

What is the YRBSS?

Developed in 1990 by the Centers for Disease Control and Prevention (CDC)

Designed to measure prevalence of youth behaviors that contribute to leading causes of death, disease and injury

Conducted every two years in schools with grades 9 through 12

What is the YRBSS?

Consists of 99 multiple choice questions

- At least 58 questions must be “core” CDC questions, which cannot be changed
- Additional 41 questions are selected from CDC standard question list

Ohio has kept most questions from year to year
resulting in trend data

What is its History?

- 1993-1999: Ohio Department of Education (ODE)
- 2001 survey was not completed due to requests from the Ohio legislature
- 2003- present : Moved to Ohio Department of Health from ODE
- Weighted data in 1997, 1999, 2003, 2007, 2011
 - Non-weighted survey years 1995 and 2009

How is the Sample Selected?

August thru October - a school data file is created to list all eligible Ohio schools with grades 9 through 12

Sample size based on:

- Size of the eligible population
- Estimate of student response rate
- Desired precision of results
- Staff resources

Survey administered January through May

How is the Sample Selected?

- Student response rate determined by average daily attendance and parental consent
- Passive consent is used unless school districts request active consent
- Overall response rate of 60 percent is needed for weighted data
- Schools receive a monetary incentive

How are Students Selected?

- Students are selected by class
- Each student has an equal opportunity of being selected (random selection)
- Classes selected are required by all students, e.g. English or 3rd period classes
- Student identity is anonymous

Who Participated in the 2011 YRBSS?

- 51 public and non-public schools were selected
- 40 agreed to participate and successfully administered the survey
- 1,442 usable surveys make up the 2011 data
- School response rate = 78 percent
- Student response rate = 77 percent

Reporting the Results

Gender

- Female - 49%
- Male - 51%

Grade levels

- 9th Grade – 27%
- 10th Grade – 25%
- 11th Grade – 24%
- 12th Grade – 23%
- Ungraded or other grade – 1%

Reporting the Results

Race and Ethnicity

- Black or African American – 15%
- White – 78%
- Other Races* – 1%
- Multiple Races – 2% (non-Hispanic)
- Multiple Races – 3% (Hispanic)
- Hispanic/Latino – 1%

*American Indian/Alaska Native, Asian and Native Hawaiian/Other Pacific Islander

Reporting the Results

1. Unintentional Injury, Violence and Bullying
2. Suicide
3. Mental Health
4. Tobacco Use Prevention
5. Alcohol and **Other Drug Use**
6. Unintended Pregnancy, Prevention and **Sexual Violence**
7. Physical Activity
8. Nutrition
9. Obesity Prevention
10. Sleep
11. Positive Youth Development

Today's Presentation

Unintentional
Injury

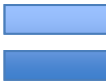

Violence

Prescription
Drug Use

Data Presentation

- Trend data where available – 1993-2011
- Symbols used:
 - Increase 
 - Decrease 
 - No significant change 
- Policy drives system & environmental change

Unintentional Injury

- **Never or rarely wore a seat belt** when riding in a care driven by someone else **decreased** from **20%** in 1993 to **17%** in 2011.
- Rode in a car or other vehicle **driven by someone who had been drinking alcohol declined** from **36.8%** in 1993 to **21.0%** in 2011.
- **Drove a car or other vehicle when the had been drinking alcohol declined** from **11.5%** in 1993 to **7.2%** in 2011.

Percentage of High School Students Who Rarely or Never Wore a Seat Belt,* 2011

* When riding in a car driven by someone else.

Percentage of High School Students Who Rode in a Car or Other Vehicle Driven by Someone Who Had Been Drinking Alcohol,* 2011

* One or more times during the 30 days before the survey.

Percentage of High School Students Who Drove a Car or Other Vehicle When They Had Been Drinking Alcohol,* 2011

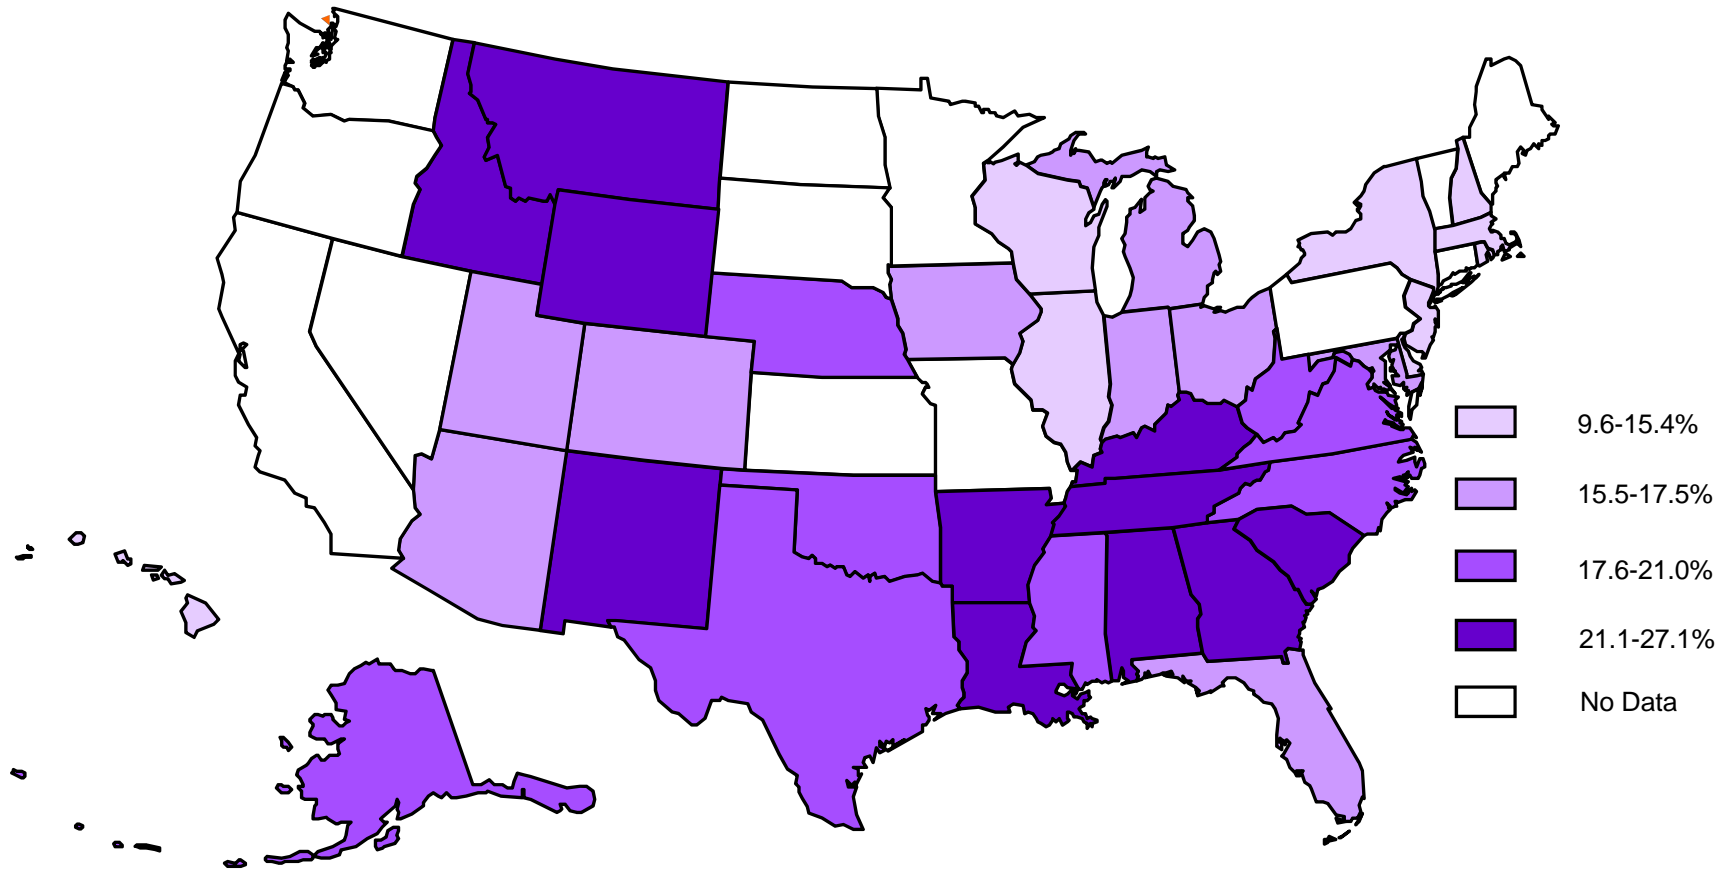

* One or more times during the 30 days before the survey.

Violence

- Carried a **weapon** on one or more of the past 30 days **decreased** from **22%** in 1993 to **13%** in 2003.
 - **Increased** thereafter to **16%** in 2011.
- **Physical fight** one or more times during the past twelve months **decreased** from **44%** in 1993 to **32%** in 2003.
 - **Leveled off** after that point (**31%** in 2011)

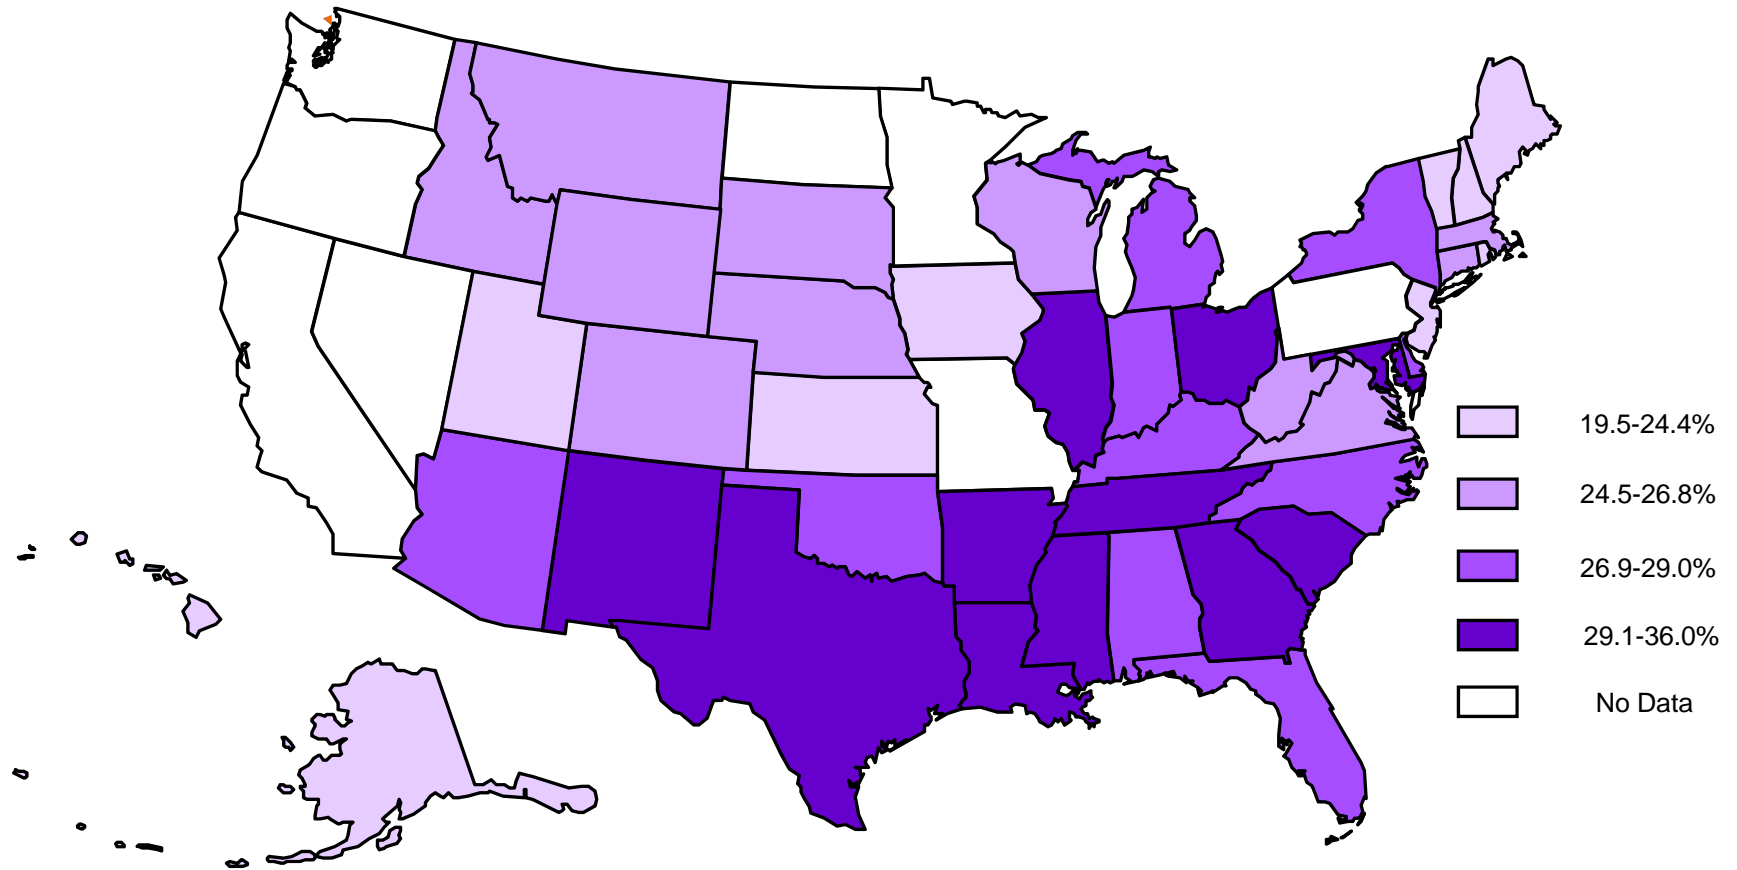

Percentage of High School Students Who Carried a Weapon,* 2011

* For example, a gun, knife, or club on at least 1 day during the 30 days before the survey.

Percentage of High School Students Who Were in a Physical Fight,* 2011

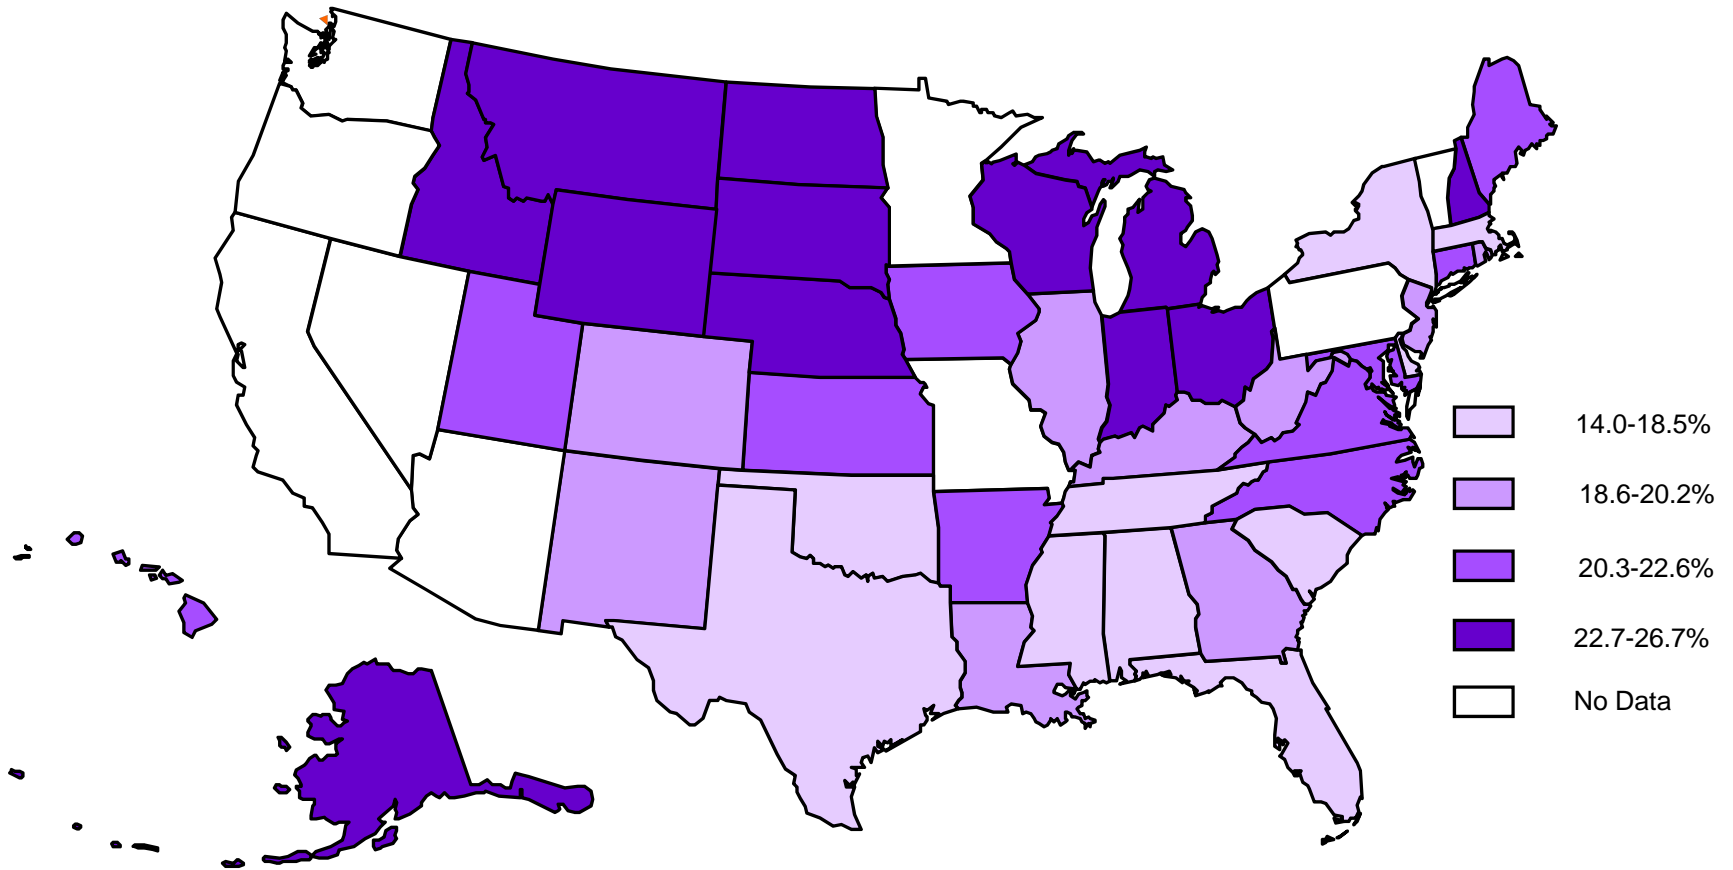

* One or more times during the 12 months before the survey.

Bullying

- **23%** of students in 2011 reported being bullied on school grounds.
- **14%** of students reported in 2011 being bullied away from school property.
- **15%** of students in 2011 reported being electronically bullied.

Percentage of High School Students Who Were Bullied on School Property,* 2011

* During the 12 months before the survey.

Percentage of High School Students Who Were Electronically Bullied,* 2011

* During the 12 months before the survey.

Suicide

- **Considered attempting suicide** during the past 12 months decreased (**28.1%** to **14.3%** between 1993 and 2011).

- **Attempted suicide did not significantly change** across the period (**10.6** in 1993 and **9.1%** in 2011).

- **Suicide attempts resulting in injury did not significantly change** over time (**2.8%** in 1993 and **4.0%** in 2011).

Percentage of High School Students Who Seriously Considered Attempting Suicide,* 2011

* During the 12 months before the survey.

Percentage of High School Students Who Attempted Suicide,* 2011

* One or more times during the 12 months before the survey.

Percentage of High School Students Whose Suicide Attempt Resulted in an Injury, Poisoning, or an Overdose That Had to Be Treated by a Doctor or Nurse,* 2011

* During the 12 months before the survey.

Prescription Drug Use

During the students life, the **number of times they used of Rx pain relievers/painkillers** (Vicodan, Percocet, OxyContin, Lortabs, Codeine) **without a doctors Rx:**

Possible Response	%
0 times	78.7
1 or 2 times	8.8
3 to 9 times	4.6
10 to 19 times	3.1
20 to 29 times	1.3
40 times or more	3.6
TOTAL	100.0

Prescription Drug Use

Type of Rx drug students have taken most often without a doctor's Rx:

Possible Response	%
I don't take Rx drugs	78.7
Narcotic pain relievers	11.6
Tranquilizers	1.5
Sleeping pills	1.4
Stimulants	1.9
Multiple at the same time	1.3
Not sure	3.5
TOTAL	100.0

Sexual Violence

Percentage of students who had ever been physically forced to have sexual intercourse when they did not want to **increased** from 8% in 2003 to 9% in 2011.

Percentage of High School Students Who Were Ever Physically Forced to Have Sexual Intercourse,* 2011

* When they did not want to.

YRBSS OHIO Information

2011 YRBS Summary Tables can be found on the ODH website

http://www.odh.ohio.gov/en/odhprograms/chs/s/ad_hlth/youthrsk/youthrsk1.aspx

YRBSS National Information

www.cdc.gov/yrbs

- Questionnaire and item rationale
- *Morbidity and Mortality Weekly Report* Surveillance Summaries
- Youth Online
- Data and codebooks for the national YRBS surveys
- Publications, journal articles, and fact sheets

Proposed new questions for 2013

- Texting while driving
- Sports related head injuries
- Return to play after sports related head injury

Conclusions

- Substantial percentages of youth are engaging in risky behaviors and contributing to causes of death
- Positives: declining unintentional injuries and suicide ideation
- Negatives: No change among violence, suicide attempts, and high prescription drug use
- Fluid system that can measure emerging issues

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

100. ASSESSMENT: Regular systematic collection, assembly, analysis, and dissemination of information on the health of the community.

101. There is a thorough description of the epidemiology of injury in the system jurisdiction using both population-based data and clinical databases.

Essential Service: Monitor Health

Indicator		Scoring
101.1 There is a thorough description of the epidemiology of injury mortality in the system jurisdiction using population-based data.	1	<p>1. There is no thorough description of the epidemiology of injury mortality in the system jurisdiction.</p> <p>2. Death certificate data have been used to describe the statewide incidence of trauma deaths aggregating all etiologies, but no E-code reporting is available.</p> <p>3. Death certificate data, by E-code, are reported on a statewide basis, but are not reported by sub-State jurisdiction.</p> <p>4. Death certificate data, by E-code, are reported on statewide and sub-State jurisdictions. These data are compared to national benchmarks, if available.</p> <p>5. Death certificate data, by E-code, are used as part of the overall assessment of trauma care in a State or sub-State, including statewide rural and urban preventable mortality studies.</p>

Essential Service: Monitor Health

Indicator		Scoring
101.2 There is a description of injuries within the trauma system jurisdiction including the distribution by geographic area, high-risk populations (pediatric, elder, distinct cultural/ethnic, rural, and others), incidence, prevalence, mechanism, manner, intent, mortality, contributing factors, determinants, morbidity, injury severity (including death), and patient distribution using any or all the following: vital statistics, emergency department (ED) data, EMS data, hospital discharge data, State police data (those from law enforcement agencies), medical examiner data, trauma registry, and other data sources. The description is updated at regular intervals. Note: Injury severity should be determined through the consistent and system-wide application of one of the existing injury scoring methods, for example, Injury Severity Score (ISS).	3	<p>1. There is no written description of injuries within the trauma system jurisdiction.</p> <p>2. One or more population-based data sources (e.g., vital statistics and medical examiner data) describe injury within the jurisdiction, but clinical data sources are not used.</p> <p>3. One or more population-based data sources and one or more clinical data sources are used to describe injury within the jurisdiction.</p> <p>4. Multiple population-based and clinical data sources are used to describe injury within the jurisdiction, and the description is systematically updated at regular intervals.</p> <p>5. Multiple population-based and clinical data sources (e.g., trauma registry, ED data, and others) are electronically linked and used to describe injury within the jurisdiction.</p>

Essential Service: Monitor Health

Indicator		Scoring
101.3 There is a comparison of injury mortality using local, regional, statewide, and national data.	1	<p>1. There is no written comparison of injury mortality using local, regional, statewide, and national data.</p> <p>2. There is a written descriptive comparison of at least the leading cause of injury death using local, regional, and statewide data.</p> <p>3. There is a written descriptive, graphic, and tabular comparison of the leading cause of injury death using local, regional, statewide, and national data.</p> <p>4. There is a written descriptive, graphic, and tabular comparison of the top three leading causes of injury death using local, regional, statewide, and national data.</p> <p>5. There is a written descriptive, graphic, and tabular comparison of the top ten</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

		leading causes of injury death using local, regional, statewide, and national data.
--	--	---

Essential Service: Monitor Health

Indicator		Scoring
101.4 Collaboration exists between EMS, public health officials, and trauma system leaders to complete injury risk assessments.	2	<p>1. No injury risk assessments are conducted.</p> <p>2. Trauma system leaders conduct injury risk assessments; however, there is no involvement of EMS or public health officials in those assessments.</p> <p>3. Public health officials, along with EMS and trauma system leaders, assist with the design of injury risk assessments.</p> <p>4. Public health officials, along with EMS and trauma system leaders, assist with the design and analysis of injury risk assessments.</p> <p>5. The public health epidemiologist, along with EMS and trauma system leaders, is involved in the development of injury reports. There is clear evidence of data sharing, data linkage, and well-defined reporting roles and responsibilities.</p>

Essential Service: Monitor Health

Indicator		Scoring
101.5 Integration of injury into other public health risk assessments that occurs at State, regional, and community levels, resulting in the integration into key reports and planning documents such as Healthy People 2010.	1	<p>1. No injury risk assessments are completed.</p> <p>2. Injury risk assessments are conducted in a segregated manner by the trauma program, separate from other public health risk assessments.</p> <p>3. Injury risk assessments are combined with other assessment data, after separate collection and analysis efforts.</p> <p>4. Injury risk assessments are conducted by public health officials as an integrated component with other health risk assessments.</p> <p>5. Injury risk assessments are conducted by public health officials as an integrated component with other health risk assessments. Comparisons and contrasts between injury death and disability rates are made, fully integrated, and published, along with other leading health risk indicators, for example, HIV/AIDS, cardiac, and cancer, in Health of the State and other formal public health documents.</p>

Essential Service: Diagnose and Investigate

Indicator		Scoring
101.6 The trauma system works with EMS and the public health system to complete a jurisdiction-wide study of the determinants of injury using existing data sources and public health tools.	1	<p>1. There is no jurisdiction-wide study of the determinants of injury.</p> <p>2. The trauma system, EMS, and public health officials (including EMS) use existing data sources such as the Behavioral Risk Factor Surveillance System (BRFSS) to describe determinants of injury among the general population.</p> <p>3. The trauma system, EMS, and public health officials (including EMS) use existing data sources such as the Youth Risk Behavior Survey (YRBS) to describe determinants of injury among high-risk subpopulations.</p> <p>4. Statewide data from all potential sources, for example, BRFSS, YRBS, Fatality Analysis Reporting System (FARS), vital records, and others, pertaining to the risk of injury are summarized, electronically linked, and analyzed to determine the potential target areas for injury prevention activities.</p> <p>5. A State injury prevention plan identifies injury prevention targets based, in part, on the determinants of injury and injury risk, and identifies strategies to document and demonstrate the cost-benefit of various behaviors.</p>

Essential Service: Diagnose and Investigate

Indicator		Scoring
101.7 The trauma system works with EMS and public health to identify special at-risk populations.		<p>1. There is no effort to describe risks to special at-risk populations such as age categories, cultural/ethnic populations, geographic variances, pediatrics, and high-risk co-morbidities, for example, substance abuse, or children with special</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

	2	<p>health care needs, or any combination of these.</p> <p>2. Risk assessments have been conducted for various age groupings, for example, adolescents and elder persons.</p> <p>3. In addition to risk assessments for age cohorts, cultural/ethnic variations have been analyzed.</p> <p>4. In addition to risk assessments for age and cultural/ethnic cohorts, geographic distribution of injury within the jurisdiction has been analyzed, for example, inner city versus suburban.</p> <p>5. There is strong evidence that multiple special at-risk populations have been identified during the assessment processes.</p>
--	---	---

Benchmark

102. There is an established trauma management information system (MIS) for ongoing injury surveillance and system performance assessment.

Essential Service: Monitor Health

Indicator	Scoring
102.1 There is an established injury surveillance process that can, in part, be used as an MIS performance measure.	<p>4</p> <p>1. There is no established system-wide injury surveillance process.</p> <p>2. There is a system-wide trauma registry, but not all hospitals in the service area contribute to the trauma management information system.</p> <p>3. There is a system-wide trauma registry with all hospitals in the service area contributing data.</p> <p>4. The system-wide trauma registry data are bolstered by one or more of the following databases: EMS data system, ED data system, or hospital discharge data.</p> <p>5. The statewide trauma registry, EMS data system, ED data system, hospital discharge data, rehabilitation, and burn data system are accessible, electronically linked, and have consistent data definitions and elements. The data are used for both injury surveillance and MIS performance measures.</p>

Essential Service: Monitor Health

Indicator	Scoring
102.2 Injury surveillance is coordinated with statewide and local community health surveillance.	<p>1</p> <p>1. Injury surveillance, as described in 102.1, does not occur within the system.</p> <p>2. Injury surveillance occurs in isolation from other health risk surveillance and is reported separately.</p> <p>3. Injury surveillance occurs in isolation but is combined and reported with other health risk surveillance processes.</p> <p>4. Injury surveillance occurs as part of broader health risk assessments.</p> <p>5. Processes of sharing and linkage of data exist between EMS systems, public health systems, and trauma systems, and the data are used to monitor, investigate, and diagnose community health risks.</p>

Essential Service: Monitor Health

Indicator	Scoring
<p>102.3 Trauma data are electronically linked from a variety of sources.</p> <p>Note: Deterministically means with such patient identifiers as name and date of birth. Probabilistically means computer software is used to match likely records through such less certain identifiers as date of incident, patient age, gender, and others.</p>	<p>2</p> <p>1. Trauma registry data exist but are not deterministically or probabilistically linked to other databases.</p> <p>2. Trauma registry data exist and can be deterministically linked through hand-sorting processes.</p> <p>3. Trauma registry data exist and can be deterministically linked through computer-matching processes.</p> <p>4. Trauma registry data exist and can be deterministically and probabilistically linked to at least one other injury database including: EMS data systems (i.e., patient care records, dispatch data, and others), ED data systems, hospital discharge data, and others.</p> <p>5. All data stakeholders (insurance carriers, FARS, and rehabilitation, in addition to typical trauma system resources) have been identified, data access</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

		agreements executed, hardware and software resources secured, and the "manpower" designated to deterministically and probabilistically link, analyze, and report a variety of data sources in a timely manner.
--	--	--

Essential Service: Monitor Health

Indicator		Scoring
102.4 There is a process to evaluate the quality, timeliness, completeness, and confidentiality of data.	1	<p>1. There is no process or written policy to evaluate the quality, timeliness, completeness, and confidentiality of the data collected in the system.</p> <p>2. There is a process of evaluation and written policy but no compliance with governance. Confidentiality of information is not ensured.</p> <p>3. The process of reviewing the quality, timeliness, completeness, and confidentiality of data is just beginning. There is some compliance with a draft written policy.</p> <p>4. There are draft written policies in place for evaluating the quality (including both reliability and validity), timeliness, and completeness of data and for ensuring confidentiality.</p> <p>5. There is a comprehensive written policy and demonstrated compliance concerning data management and governance including an evaluation of the quality, timeliness, and completeness of data, with confidential protection of records ensured while allowing appropriate access for research purposes.</p>

Essential Service: Monitor Health

Indicator		Scoring
102.5 There is an established method of collecting trauma financial data from all health care facilities and trauma agencies including patient charges as well as administrative and system costs.	2	<p>1. Financial data are not collected as part of the trauma system registry.</p> <p>2. Financial data are collected as part of the trauma system registry at individual facilities but are not reported to the lead trauma authority.</p> <p>3. Financial data are collected as part of the trauma system registry and are analyzed and reported by the lead trauma authority.</p> <p>4. Financial data from the trauma registry are linked with at least one other source of cost data such as hospital discharge data.</p> <p>5. Financial data are linked and analyzed from the trauma registry, insurers, emergency department, EMS, hospital discharge, and rehabilitation and are compared with general trauma system infrastructure costs to establish the general financial health of the system and its value to the community.</p>

Benchmark

103. A resource assessment for the trauma system has been completed and is regularly updated.

Essential Service: Monitor Health

Indicator		Scoring
103.1 The trauma system has completed a comprehensive system status inventory that identifies the availability and distribution of current capabilities and resources.	1	<p>1. There is no statewide resource assessment.</p> <p>2. A State resource assessment has been completed that documents the frequency and distribution of resources for at least two of the following categories: prehospital and hospital personnel, education programs, facilities, and prehospital equipment.</p> <p>3. A State resource assessment has been completed that documents the frequency and distribution of resources for more than two of the following categories: leadership, system development, legislation, finances, injury prevention, workforce resources, education, EMS, transport, communications, trauma care facilities, interfacility transfer, medical rehabilitation, information systems, medical oversight, system evaluation, performance improvement, and research.</p> <p>4. A trauma jurisdiction-specific resource assessment has been completed for at least half of the trauma jurisdictions.</p> <p>5. Trauma jurisdiction-specific resource assessments have been completed for the State, regional, and local areas and are updated at least biennially.</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

Essential Service: System Management		
Indicator		Scoring
103.2 The trauma system has completed a gap analysis based on the inventories of internal and external system status as well as system resource standards.	1	<p>1. There are no resource standards on which to base a gap analysis.</p> <p>2. The State trauma advisory committee has begun to develop statewide trauma system resource standards so that a gap analysis can be completed.</p> <p>3. State trauma system resource standards have been approved by the appropriate approving authority.</p> <p>4. A gap analysis of statewide trauma system resources has been completed for the entire State based on the system resource standards adopted.</p> <p>5. A gap analysis of statewide trauma system resources has been completed for the entire State and is updated at regular intervals based on the trauma resource standards in place.</p>

Essential Service: System Management		
Indicator		Scoring
103.3 There has been an initial assessment (and periodic reassessment) of overall system effectiveness.	1	<p>1. No preventable mortality assessment has been conducted on a system-wide basis.</p> <p>2. A system-wide preventable mortality study has been completed.</p> <p>3. A system-wide preventable mortality study that includes rates, frequencies, and types of inappropriate care rendered within the hospitals participating in the trauma system has been conducted.</p> <p>4. A system-wide preventable mortality study that includes rates, frequencies, and types of inappropriate care rendered in all phases of care within the trauma system, for example, prehospital, rehabilitation, and others, has been conducted.</p> <p>5. The system has completed preventable mortality studies that include the determination of rates of inappropriate care, as well as an examination of the number of severely injured (ISS > 15) patients arriving at the highest levels of available care within appropriate times. The assessment is repeated at regular intervals (could be an annual summary of deaths and complications).</p>

Essential Service: System Management		
Indicator		Scoring
103.4 The trauma system has undergone a jurisdiction-wide external independent analysis.	3	<p>1. No external examination of the trauma system or individual components has occurred.</p> <p>2. Individual trauma centers have undergone outside consultation and verification.</p> <p>3. In addition to trauma center verification, at least one other component of the system has been analyzed by external reviewers, for example, prehospital, rehabilitation, burns, and others.</p> <p>4. An outside group of trauma system "experts" has conducted a formal trauma system external assessment and has made specific recommendations to the system.</p> <p>5. Independent, external reassessment occurs regularly, at least every 5 years.</p>

Benchmark		
104. An assessment of the trauma system's emergency preparedness has been completed including coordination with the public health, EMS systems, and the emergency management agency.		
Essential Service: System Management		
Indicator		Scoring
104.1 There is a resource assessment of the trauma system's ability to expand its capacity to respond to mass casualty incidents (MCIs) in an all-hazards approach.		<p>1. There is no resource assessment of the trauma system's ability to expand its capacity to respond to mass casualty incidents for in an all-hazards approach.</p> <p>2. An assessment of the ability of some components of the trauma care system to respond to a mass casualty incident has been included in all-hazards planning.</p> <p>3. An assessment of the ability of all components of the trauma system to</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

	4	<p>respond to a mass casualty incident has been conducted on a jurisdiction-wide basis.</p> <p>4. A written inventory of system-wide MCI capacity has been completed and includes: medical reserve personnel, facility surge capacity, additional equipment resources and caches, communication interoperability, overall management structure such as NIMS (National Incident Management System), and SEMS (Standardized Emergency Management System).</p> <p>5. The written inventory of trauma system-wide MCI capacity has been shared with, and incorporated into, broader community-wide and statewide planning efforts for all-hazards responses.</p>
--	---	---

Essential Service: System Management

Indicator	Scoring
104.2 There has been a consultation by external experts to assist in identifying current status and needs of the trauma system to be able to respond to mass casualty incidents.	<p>3</p> <p>1. No external examination of the trauma system's performance or ability to respond within the all-hazards response system has occurred at the State, regional, or local level.</p> <p>2. Individual trauma centers have undergone outside consultation during tabletop and simulated incident drills.</p> <p>3. In addition to the involvement of at least some individual trauma centers, at least one other component of the trauma system has been analyzed by external reviewers, for example, prehospital, communications, information systems, and others.</p> <p>4. Preparations are under way for a formal system-wide review of the trauma system response to a mass casualty incident (to occur within the next 6 months).</p> <p>5. An outside group of all-hazards response "experts" has conducted a formal external assessment and has made specific recommendations to the system.</p>

Essential Service: System Management

Indicator	Scoring
104.3 The trauma system has completed a gap analysis based on the resource assessment for trauma emergency preparedness.	<p>1</p> <p>1. There are no resource standards on which to base a gap analysis.</p> <p>2. The statewide trauma advisory committee, in conjunction with appropriate incident management personnel, has begun to develop statewide MCI response resource standards.</p> <p>3. State resource standards for trauma system response during a mass casualty incident have been developed and approved.</p> <p>4. Some components (e.g., prehospital) of the trauma system, or facilities within it, have completed a gap analysis based on the adopted standards.</p> <p>5. A system-wide trauma system MCI resource gap analysis has been completed for the jurisdiction based on the system resource standards adopted.</p>

Benchmark

105. The system assesses and monitors its value to its constituents in terms of cost-benefit analysis and societal investment.

Essential Service: System Management

Indicator	Scoring
105.1 The benefits of the trauma system, in terms of years of productive life lost (YPLL), quality-adjusted life years (QALY), disability-adjusted life years (DALY), and so on, are described.	<p>1</p> <p>1. There are no cost data available to the system to compare to quality of life indicators.</p> <p>2. Trauma system costs are included in the trauma management information system that can serve as the basis for these calculations.</p> <p>3. Additional sources of data, in terms of other economic and quality of life measures, are available.</p> <p>4. Cost and quality of life measures can be analyzed and presented in descriptive and graphic form.</p> <p>5. A series of reports and fact sheets are available and regularly updated to descriptively and graphically illustrate costs and benefits of the trauma system as well as the cost and benefits of specific personal behaviors.</p>

Indicator		Scoring
105.7 An assessment of the needs of the general medical community, including physicians, nurses, prehospital care providers, and others, concerning trauma system information, has been conducted.	1	1. There is no routine or planned contact with the broad medical community. 2. Plans are in place to provide information to the broad medical community in response to a particular trauma system event or issue. 3. The broad medical community has been formally asked about what types of information would be helpful in reporting on trauma cases and issues. 4. Information resources for the general medical community have been developed, based on the stated needs of the general medical community; general medical community representatives are included in trauma system informational events. 5. In addition to routine contact, the broad medical community is involved in various oversight activities such as local, regional, and State trauma advisory councils.

200. POLICY DEVELOPMENT: Promoting the use of scientific knowledge in decision making that includes building constituencies; identifying needs and setting priorities; legislative authority and funding to develop plans and policies to address needs; and ensuring the public's health and safety.

Benchmark		
201. Comprehensive State statutory authority and administrative rules support trauma system leaders and maintain trauma system infrastructure, planning, oversight, and future development.		
Essential Service: Develop Policies		
Indicator		Scoring
201.1 The legislative authority (statute and regulations) plans, develops, implements, manages, and evaluates the trauma system and its component parts, including the identification of the lead agency and the designation of trauma facilities.	1	1. There is no specific legislative authority to plan, develop, implement, manage, and evaluate, or fund, the trauma system and its component parts. 2. There is legislative authority for establishing a trauma system, and specific timelines for adoption are being drafted and reviewed by trauma and injury constituencies. 3. The lead agency is identified in State statute and is required to plan and develop a statewide trauma system. 4. The lead agency is authorized to take actions to implement the trauma system and to report on the progress and effectiveness of system implementation. 5. The lead agency is required to plan, develop, implement, manage, monitor, and improve the trauma system while reporting regularly on the status of the trauma system within the State.
Essential Service: Develop Policies		
Indicator		Scoring

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

201.2 The legislative authority states that all the trauma system components, EMS, injury control, incident management, and planning documents, work together for the effective implementation of the trauma system (infrastructure is in place).	2	<p>1. There is no legislative authority or integrated management, and system participants do not routinely work together.</p> <p>2. There is no legislative authority; planning documents reflect a silo management structure in that participating agencies are not linked. For key issues, stakeholders sometimes come together to resolve problems.</p> <p>3. There is no legislative authority, but people are working together to improve system effectiveness and management within their individual jurisdictions.</p> <p>4. There is legislative authority, although it is not clearly evident that system components are integrated and working together.</p> <p>5. There is legislative authority; it clearly provides for the integration of trauma system components for an effective management and infrastructure to plan and implement the trauma system, as evidenced by agency involvement and interaction.</p>

Essential Service: Develop Policies

Indicator	Scoring
201.3 Administrative rules/regulations direct the development of operational policies and procedures at the State, regional, and local levels.	<p style="text-align: center;">1</p> <p>1. There is no legal authority to adopt administrative rules/ regulations regarding the development of a trauma system at the State, regional, or local level.</p> <p>2. There is legal authority, but there are no administrative rules/ regulations governing trauma system development, including components of the trauma system such as designation of trauma facilities, adoption of triage guidelines, integration of prehospital providers and rehabilitation centers, communication protocols, and integration with public health and all-hazards preparedness plans.</p> <p>3. There are draft State, regional, or local rules/regulations for the different components of trauma system development including integration with public health and all-hazards preparedness plans.</p> <p>4. There are existing statewide administrative rules/regulations for planning, developing, and implementing the trauma system and its components at the State, regional, and local levels.</p> <p>5. The lead agency regularly reviews, through established committees and stakeholders, the rules/regulations governing system performance, including policies and procedures for system operations at the State, regional, and local levels that include integration with public health and all-hazards preparedness plans.</p>

Essential Service: Develop Policies

Indicator	Scoring
201.4 The lead agency has adopted clearly defined trauma system standards (e.g., facility standards, triage and transfer guidelines, and data collection standards) and has sufficient legal authority to ensure and enforce compliance.	<p style="text-align: center;">1</p> <p>1. The lead agency does not have sufficient legal authority and has not adopted or defined trauma system performance and operating standards, nor is there sufficient legal authority to do so.</p> <p>2. Sufficient authority exists to define and adopt standards for trauma system performance and operations, but the lead agency has not yet completed this process.</p> <p>3. There is sufficient legal authority to adopt and implement operation and performance standards including enforcement. Draft process procedures have been developed.</p> <p>4. The authority exists to fully develop all operational guidelines and standards; the stakeholders are reviewing draft policies and procedures; and adoption by the lead agency, including implementation and enforcement, is pending.</p> <p>5. The authority exists; operational policies and procedures and trauma system performance standards are in place; and compliance is being actively monitored.</p>

Benchmark

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

202. Trauma system leaders (lead agency, trauma center personnel, and other stakeholders) use a process to establish, maintain, and constantly evaluate and improve a comprehensive trauma system in cooperation with medical, professional, governmental, and citizen organizations.

Essential Service: Mobilize Community Partnership

Indicator	Scoring
202.1 The lead agency demonstrates that it can bring organizations together to implement and maintain a comprehensive trauma system.	<p>2</p> <p>1. There is no evidence of partnerships, alliances, or organizations working together to implement and maintain a comprehensive trauma system.</p> <p>2. There have been limited attempts to organize groups, but to date no ongoing system committees meeting regularly to design or implement the trauma system.</p> <p>3. The lead agency has multiple committees meeting regularly to develop and implement a comprehensive trauma system plan.</p> <p>4. The lead agency demonstrates, through its various committees, an ability to bring together multidisciplinary groups interested in developing, implementing, and maintaining a comprehensive trauma system plan. Multiple stakeholders for various disciplines are routinely recruited to participate in system operational issues and refinement depending on expertise needed (e.g., data vs. public information and education).</p> <p>5. The lead agency has brought together multiple stakeholder groups to assist with, and make recommendations on, the development and implementation of the trauma system, preferably through a trauma-specific statewide multidisciplinary, multi-agency advisory committee.</p>

Essential Service: Mobilize Community Partnership

Indicator	Scoring
202.2 The lead agency has developed and implemented a trauma-specific statewide multidisciplinary, multi-agency advisory committee to provide overall guidance to trauma system planning and implementation strategies. The committee meets regularly and is instrumental in providing guidance to the lead agency.	<p>5</p> <p>1. There is no trauma-specific statewide multidisciplinary, multi-agency advisory committee providing guidance to the State lead agency in planning and developing a statewide trauma system.</p> <p>2. There is no trauma-specific statewide multidisciplinary, multi-agency advisory committee, and attempts to organize one have not been successful but are continuing.</p> <p>3. There is a trauma-specific statewide multidisciplinary, multi-agency advisory committee, but its meetings are infrequent and guidance is not always sought or available. Collaborative working arrangements have not been realized.</p> <p>4. There is a trauma-specific statewide multidisciplinary, multi-agency advisory committee. Committee members and stakeholders regularly attend meetings. Collaboration and consensus are beginning.</p> <p>5. There is a trauma-specific multidisciplinary, multi-agency advisory committee with well-defined goals and responsibilities. It meets regularly with the lead agency providing staff support. The committee routinely provides guidance and assistance to the lead agency on system issues. Multiple subcommittees meet as often as necessary to resolve specific system issues and to report back to the trauma-specific statewide multidisciplinary, multi-agency advisory committee. There is strong evidence of consensus building among system participants.</p>

Essential Service: Inform, Educate, Empower

Indicator	Scoring
202.3 A clearly defined and easily understood structure is in place for the trauma system decision-making process.	<p>1</p> <p>1. There is no defined decision-making process (written policy and procedure) regarding the trauma program within the trauma system lead agency or its committees.</p> <p>2. There is an unwritten decision-making process that stakeholders use when convenient, although not regularly or consistently.</p> <p>3. The decision-making process is articulated within the State Trauma System</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

		Plan, although it has not been fully implemented. Policies are not written. 4. The decision-making process is contained within the trauma system plan, and there are current policies and procedures in place to guide decision making. Use of the decision-making process is infrequent. 5. There is a clearly defined process for making decisions affecting the trauma program. The process is articulated in the trauma system plan and is further identified within system policies. Stakeholders know and understand the process and use it to resolve issues and to improve the program.
--	--	---

Essential Service: Inform, Educate, Empower

Indicator		Scoring
202.4 Trauma system leaders have adopted and use goals and time-specific, quantifiable, and measurable objectives for the trauma system.	1	<p>1. There are no goals or time-specific, quantifiable, and measurable objectives for the trauma system.</p> <p>2. Trauma system leaders have met to discuss time-specific, quantifiable goals.</p> <p>3. Trauma system leaders are beginning the process of identifying measurable program goals and outcome-based, time-specific, quantifiable, and measurable objectives.</p> <p>4. Trauma system leaders have adopted goals and time-specific, quantifiable, and measurable objectives that guide system performance.</p> <p>5. Trauma system leaders, in consultation with their trauma-specific statewide multidisciplinary, multi-agency advisory committee, have established measurable program goals and outcome-based, time-specific, quantifiable, and measurable objectives that guide system effectiveness and system performance.</p>

Benchmark

203. The State lead agency has a comprehensive written trauma system plan based on national guidelines. The plan integrates the trauma system with EMS, public health, emergency preparedness, and incident management. The written trauma system plan is developed in collaboration with community partners and stakeholders.

Essential Service: Inform, Educate, Empower

Indicator		Scoring
203.1 The lead agency, in concert with a trauma-specific multidisciplinary, multi-agency advisory committee, has adopted a trauma system plan.	2	<p>1. There is no trauma system plan, and one is not in progress.</p> <p>2. There is no trauma system plan, although some groups have begun meeting to discuss the development of a trauma system plan.</p> <p>3. A trauma system plan was developed and adopted by the lead agency. The plan, however, has not been endorsed by trauma stakeholders.</p> <p>4. A trauma system plan has been adopted, developed with multi-agency groups, and endorsed by those agencies.</p> <p>5. A comprehensive trauma system plan has been developed, adopted in conjunction with trauma stakeholders, and includes the integration of other systems (e.g., EMS, public health, and emergency preparedness).</p>

Essential Service: Inform, Educate, Empower

Indicator		Scoring
203.2 A trauma system plan exists and is based on analysis of the trauma demographics and resource assessments.	1	<p>1. There is no effort under way to develop a trauma system plan.</p> <p>2. The lead agency is developing a trauma system plan without reference to the trauma demographics and resource assessments and analyses.</p> <p>3. The lead agency is actively developing a trauma system plan based on trauma demographics and resource assessments and analyses.</p> <p>4. A trauma system plan has been developed identifying system priorities and timelines and integrating trauma demographics and resource assessments and analyses along with EMS, public health, and emergency preparedness plans.</p> <p>5. The trauma system plan is updated at least biennially based on changes in trauma demographics and resource assessments and analyses. It is reviewed for integration of other relevant plans such as EMS, emergency preparedness, and public health.</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

Essential Service: Inform, Educate, Empower		
Indicator		Scoring
203.3 There is within the trauma system plan congruence of the population demographics with system development and resource allocation priorities. Note: Needs of specific populations (e.g., pediatric, burn, and Native American) are integrated into the plan. Considerations should be given to age, population characteristics, and urban and rural environments	1	<p>1. There is no evidence that population demographics drive resource allocation or that this information is used to establish system priorities in developing or implementing the trauma system plan.</p> <p>2. Population demographics and system resources have been identified. It is not clear that this information is used for system allocation, priority setting, or system planning.</p> <p>3. There is evidence that planning processes take into consideration the needs of special populations and other cultural or geographic parameters.</p> <p>4. There is evidence within the trauma system plan that consideration of the needs of differing groups, cultural, geographic, and others, has been included. Specific application of information regarding the needs of special groups is occurring at the provider level.</p> <p>5. The plan addresses the needs of all residents and visitors including special population groups applicable to the geographic area.</p>
Essential Service: Inform, Educate, Empower		
Indicator		Scoring
203.4 The trauma system plan clearly describes the system design (including the components necessary to have an integrated and inclusive trauma system) and is used to guide system implementation and management. For example, the plan includes references to regulatory standards and documents, and includes methods of data collection and analysis.	1	<p>1. There is no trauma system plan.</p> <p>2. The trauma system plan does not address or incorporate the trauma system components (prehospital, communication, transportation, acute care, rehabilitation, and others), nor is it inclusive of all-hazards preparedness, EMS, or public health integration.</p> <p>3. The trauma system plan provides general information about all the components including all-hazards preparedness, EMS, and public health integration; however, it is difficult to determine who is responsible and accountable for system performance and implementation.</p> <p>4. The trauma system plan addresses every component of a well-organized and functioning trauma system including all-hazards preparedness and public health integration. Specific information on each component is provided, and trauma system design is inclusive of providing for specific goals and objectives for system performance.</p> <p>5. The trauma system plan is used to guide system implementation and management. Stakeholders and policy leaders are familiar with the plan and its components and use the plan to monitor system progress and to measure results.</p>
Essential Service: Inform, Educate, Empower		
Indicator		Scoring
203.5 A written injury prevention and control plan is developed and coordinated with other agencies and community health programs. The injury program is data driven, and targeted programs are developed based on high injury risk areas. Specific goals with measurable objectives are incorporated into the injury plan.	2	<p>1. There is no written plan for a coordinated injury prevention and control program.</p> <p>2. There are multiple injury prevention and control programs that may conflict with one another or with the goals of the trauma system, or both.</p> <p>3. There is a written plan for a coordinated injury prevention and control program that is linked to the trauma system plan and that has goals and time-specific, measurable objectives.</p> <p>4. The injury prevention and control plan is being implemented in accordance with established timelines.</p> <p>5. The injury prevention and control plan is being implemented in accordance with established timelines; data concerning the effectiveness of the plan are being collected and are used to validate, evaluate, and modify the plan.</p>
Essential Service: Mobilize Community Partnerships		

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

Indicator	Scoring
203.6 The trauma system plan has established clearly defined methods of integrating with emergency preparedness plans (all hazards).	<p>1</p> <p>1. There is no trauma system plan and no integration between trauma and emergency preparedness.</p> <p>2. There is an established trauma system plan; but it is silent on emergency integration, and no evidence is present to demonstrate integrated incident management and trauma systems.</p> <p>3. The trauma system plan addresses the interaction of the lead agency of the trauma system and emergency preparedness service system. Close coordination and clearly defined goals and objectives are in process.</p> <p>4. The trauma system plan addresses coordination between the lead agency of the trauma system and the lead agency for emergency preparedness. Plans are integrated, and working collaboration exists and is demonstrated. Routine working drills and training exercises are incorporated into operational plans.</p> <p>5. The trauma system plan addresses the lead agency coordination between EMS and emergency preparedness. Plans are well integrated, and routine simulated incident drills that are conducted use an all-hazards approach. Results from drills and live responses are used to further improve the plans and processes.</p>

Essential Service: Mobilize Community Partnerships

Indicator	Scoring
203.7 The trauma system plan has established clearly defined methods of integrating the trauma system plan with the EMS, emergency, and public health preparedness plans.	<p>1</p> <p>1. There is no mention of integration between the trauma system plan and the EMS, emergency, and public health preparedness plans.</p> <p>2. There is some cross-reference between plans, but defined methods of working collaboratively are not developed.</p> <p>3. The written plans are integrated and there are defined methods for working collaboratively; however, implementation or practice within the geographic area has not occurred.</p> <p>4. The trauma system plan has been integrated with other relevant plans. There is evidence of system integration activity.</p> <p>5. The trauma system planning and operations have been fully integrated with the EMS, emergency, and public health preparedness plans. Training and exercises are conducted regularly, and the integration of the system and its plans is evident.</p>

Benchmark

204. Sufficient resources, including those both financial and infrastructure related, support system planning, implementation, and maintenance.

Essential Service: Develop Policies

Indicator	Scoring
204.1 The trauma system plan clearly identifies the human resources and equipment necessary to develop, implement, and manage the trauma program, both clinically and administratively. (The trauma system plan integrates with the Assessment of Resources done previously.)	<p>1</p> <p>1. There is no method of assessing available resources or of identifying resource deficiencies in either the clinical or administrative areas of the trauma system.</p> <p>2. The trauma system plan addresses resource needs and identifies gaps in resources within the trauma system, but no mechanism for correcting resource deficiencies has been identified.</p> <p>3. Resource needs are identified, and a draft plan, inclusive of goals and timelines, has been prepared to address the resource needs. Plan has not been implemented.</p> <p>4. Resource needs are clearly identified, and action plans are being implemented to correct deficiencies in both clinical areas and admin support functions.</p> <p>5. A resource assessment survey has been completed and is incorporated into the trauma system plan. Goals and measurable objectives to reduce or eliminate resource deficiencies have been implemented. Evaluation of progress on meeting resource needs is evident, and when necessary, the plan has been adapted.</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

Essential Service: System Management		
Indicator		Scoring
204.2 Financial resources exist that support the planning, implementation, and ongoing management of the administrative and clinical care components of the trauma system.	1	<p>1. There is no funding to support the trauma system planning, implementation, or ongoing management and operations for either trauma system administration or trauma clinical care.</p> <p>2. Some funding for trauma care within the third-party reimbursement structure has been identified, but ongoing support for administration and clinical care outside the third-party reimbursement structure is not available.</p> <p>3. There is current funding for the development of the trauma system within the lead agency organization consistent with the trauma system plan, but costs to support clinical care support services have not been identified (transportation, communication, uncompensated care, standby fees, and others). No ongoing commitment of funding has been secured.</p> <p>4. There is funding available for both administrative and clinical components of the trauma system plan. A mechanism to assess needs among various providers has begun. Implementation costs and ongoing support costs of the lead agency have been addressed within the plan.</p> <p>5. A stable (consistent) source of reliable funding for the development, operations, and management of the trauma program (clinical care and lead agency administration) has been identified and is being used to support trauma planning, implementation, maintenance, and ongoing program enhancements.</p>

Essential Service: System Management		
Indicator		Scoring
204.3 Designated funding for trauma system infrastructure support (lead agency) is legislatively appropriated. Note: Although nomenclature concerning designated, appropriated, and general funds varies between jurisdictions, the intent of this indicator is to demonstrate long-term, stable funding for trauma system development, management, evaluation, and improvement.	4	<p>1. There is no designated funding to support the trauma system infrastructure.</p> <p>2. One-time funding has been designated for trauma system infrastructure support, and appropriations have been made to the lead agency budget.</p> <p>3. Limited funds for trauma system development have been identified, but the funds have not been appropriated for trauma system infrastructure support.</p> <p>4. Consistent, though limited, infrastructure funding has been designated and appropriated to the lead agency budget.</p> <p>5. The legislature has identified, designated, and appropriated sufficient infrastructure funding for the lead agency consistent with the trauma system plan and priorities for funding administration and operations.</p>

Essential Service: System Management		
Indicator		Scoring
204.4 Operational budgets (system administration and operations, facilities administration and operations, and EMS administration and operations) are aligned with the trauma system plan and priorities. Examples: Full-Time Equivalents (FTEs) per population to support the infrastructure; costs to improve the communication system.	1	<p>1. There are no operational budgets.</p> <p>2. There are limited operational budgets, not sufficient to cover related program costs for the lead agency, the EMS system, or the trauma center.</p> <p>3. There are operational budgets that may be sufficient to cover most program costs, but they are without regard to the trauma system plan or priorities.</p> <p>4. There are operational budgets that have some ties to the trauma system plan and that include consideration for the extraordinary costs to the trauma system (e.g., providers).</p> <p>5. An operational budget exists for each component in the plan and matches system needs and priorities with program and operational expenditures.</p>

Essential Service: Mobilize Community Partnerships		
Indicator		Scoring
204.5 The trauma system plan includes identification of additional resources (both manpower and equipment) necessary to	1	<p>1. The trauma system plan does not include the identification of additional resources necessary to respond to mass casualty incidents.</p> <p>2. The trauma system plan addresses mass casualty incidents but has not</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

respond to mass casualty incidents.		<p>identified additional resources.</p> <p>3. The trauma system plan identifies resources, but it is unclear how the needs are going to be met.</p> <p>4. The trauma system plan identifies both equipment and manpower resources available currently and additional resources needed; it also defines a process for securing and ensuring that equipment and human resources are available.</p> <p>5. There is a well-drafted and rehearsed trauma system plan, along with sufficient caches of equipment and backup personnel, that ensures the rapid deployment of additional resources during mass casualty incidents.</p>

Benchmark

205. Collected data are used to evaluate system performance and to develop public policy.

Essential Service: System Management

Indicator		Scoring
205.1 Collected data are used for strategic and budgetary planning.	3	<p>1. There is no central data repository that can be accessed for strategic or budgetary planning.</p> <p>2. There are varying databases that can be accessed but no single reporting structure to produce reports and to analyze findings.</p> <p>3. Data are collected and stored in a central repository; however, reports are not routinely generated that could be used for strategic or budgetary planning.</p> <p>4. There is a central warehouse for trauma and system financial data that are used for annual reporting of system performance.</p> <p>5. There is a central repository and data warehouse for all trauma system data. System participants including trauma centers and the lead agency can access the data. Regular (written, on-line, or electronic) reports are generated to identify financial information and budget utilization. Regular reports are used for strategic planning and performance efficiency.</p>

Essential Service: Develop Policies

Indicator		Scoring
<p>205.2 Collected data from a variety of sources are used to review the appropriateness of trauma system policies and procedures.</p> <p>Note: The format of the reports in this and other sections may be written, Web-based, or other electronic media.</p>	1	<p>1. There are no written, quantifiable trauma system performance standards or performance improvement mechanisms.</p> <p>2. There are draft written, quantifiable system performance standards or performance improvement mechanisms for each component of the trauma system.</p> <p>3. There are written, quantifiable system performance standards and performance improvement mechanisms that have been adopted by the lead agency in consultation with the trauma-specific statewide multidisciplinary, multi-agency advisory committee.</p> <p>4. Data from trauma, EMS, public safety, and other sources are routinely used by the lead agency to assess the extent of compliance of the trauma system with adopted standards.</p> <p>5. The lead agency, in cooperation with the trauma-specific statewide multidisciplinary, multi-agency advisory committee, uses compliance data from trauma, EMS, public safety, and other sources to improve system design changes or to make other system refinements. There is routine and consistent feedback to all system providers to ensure that data-identified deficiencies are corrected.</p>

Essential Service: System Management

Indicator		Scoring
205.3 The trauma management information system (MIS) is used to assess system performance, to measure system compliance with applicable standards, and to allocate trauma system resources to	2	<p>1. There is no trauma management information system.</p> <p>2. There is a limited trauma management information system consisting of a trauma patient registry, but no data extraction is used to identify resource needs, to establish performance standards, or to routinely assess and evaluate system effectiveness.</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

areas of need or to acquire new resources.		<p>3. There is a trauma management information system that routinely reports (written, on-line, or electronic) on system-wide management performance and compliance. Linkage between management reports, resource utilization, and performance measures has begun.</p> <p>4. Routine trauma MIS reports are issued at the State, regional, and local levels as well as at the provider level. Reports focus on management strengths, compliance with standards, and resource utilization. Trends are used to improve system efficiency and performance.</p> <p>5. Trauma MIS reports are used extensively to improve and report on system performance. The lead agency issues regular and routine reports to providers. Trauma leaders assess reports to determine system deficiencies and to allocate resources to areas of greatest need. System performance and standard compliance are assessed and reported.</p>

Essential Service: Inform, Educate, Empower

Indicator		Scoring
205.4 Injury prevention programs use trauma MIS data to develop intervention strategies.	2	<p>1. There is no evidence to suggest that trauma MIS data are used to determine injury prevention strategies.</p> <p>2. There is some evidence that trauma MIS data are available for injury prevention program strategies, but the use of these data is limited and sporadic.</p> <p>3. Trauma MIS reports are routinely provided to the injury prevention programs. The usefulness of the reports has not been measured, and injury prevention providers are just beginning to use trauma injury reports for program strategies and decision making.</p> <p>4. Trauma MIS reports on the status of injury, and injury mechanisms, are routinely available to injury prevention providers and are used routinely to realign injury programs to target the greatest need.</p> <p>5. A well-integrated trauma and injury reporting system exists. Evidence is available to demonstrate how system providers routinely use MIS data to identify program needs, to develop strategies on program priorities, and to set annual goals for injury prevention.</p>

Essential Service: Inform, Educate, Empower

Indicator		Scoring
205.5 Education for trauma system participants is developed based on a review and evaluation of trauma MIS data.	1	<p>1. There is no correlation between training programs for providers and the trauma management information system.</p> <p>2. There is limited use of trauma MIS reports to target educational opportunities.</p> <p>3. There is evidence that some providers are using trauma MIS reports to identify educational needs and to incorporate them into training programs.</p> <p>4. Many educational forums have been conducted based on an analysis of the performance data in the trauma management information system. Clear ties link education of providers with identified areas of need from trauma MIS reports.</p> <p>5. Routine analysis of trauma information and educational opportunities is being conducted. Integrated program objectives tying system performance and education are implemented and routinely evaluated. Regular updates to trauma information and education are available. Trauma MIS data are used to measure outcomes and effectiveness.</p>

Benchmark

206. Trauma system leaders, including a trauma-specific statewide multidisciplinary, multi-agency advisory committee, regularly review system performance reports.

Essential Service: Inform, Educate, Empower

Indicator		Scoring
206.1 Trauma data reports are generated		1. No trauma data reports are generated to evaluate and improve system

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

by the trauma system no less than once per year and are disseminated to trauma system leaders and stakeholders to evaluate and improve system performance effectiveness.	2	<p>performance effectiveness.</p> <p>2. Some general trauma system information is available for the stakeholders, but it is not consistent or regular.</p> <p>3. Trauma data reports are done on an annual basis, but are not used for decision making and evaluating system effectiveness.</p> <p>4. Routine reports are generated using trauma system data and other databases so that the system can be analyzed, standards evaluated, and performance measured.</p> <p>5. Regularly scheduled reports are generated from trauma system data and are used by the stakeholder groups to evaluate and improve system performance effectiveness.</p>
--	---	---

Essential Service: Inform, Educate, Empower

Indicator		Scoring
206.2 The trauma-specific statewide multidisciplinary, multi-agency advisory committee regularly reviews annotated trauma system data reports and system compliance information to monitor trauma system performance and to determine the need for system modifications.	3	<p>1. There is no trauma-specific statewide multidisciplinary, multi-agency advisory committee, and there are no regular reports of system performance.</p> <p>2. There is a trauma-specific statewide multidisciplinary, multi-agency advisory committee, but it does not routinely review trauma system data reports.</p> <p>3. The trauma-specific statewide multidisciplinary, multi-agency committee meets regularly and reviews process-type reports; no critical assessment of system performance has been completed.</p> <p>4. The trauma-specific statewide multidisciplinary, multi-agency advisory committee meets regularly and routinely assesses reports from trauma data to determine system compliance and operational issues needing attention.</p> <p>5. The trauma-specific statewide multidisciplinary, multi-agency advisory committee and related stakeholder groups meet regularly and review trauma data reports to assess system performance over time, looking for ways to improve system effectiveness and patient outcomes.</p>

Benchmark

207. The lead agency informs and educates State, regional, and local constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control.

Essential Service: Mobilize Community Partnerships

Indicator		Scoring
207.1 The lead agency ensures communications, collaboration, and cooperation between State, regional, and local systems.	2	<p>1. There is no evidence of active dialogue, either written or verbal, to suggest a strong working relationship between the trauma system lead agency and other governmental agencies (State, regional, or local).</p> <p>2. There is little evidence that the lead agency and other governmental agencies working to implement a trauma system actively engage in system planning and operational dialogue.</p> <p>3. The lead agency issues a quarterly update on trauma system activities. The update is largely one-way communication to other governmental agencies. Routine communication usually revolves around an event (reactionary); proactive, open communication is not the norm.</p> <p>4. The lead agency, through its multidisciplinary committee, engages in open, frequent communication with its constituencies. Newsletters, activity reports, and proactive planning are occurring through the lead agency. Communication and collaboration among governmental organizations is occurring, although they are largely event based.</p> <p>5. State, regional, and local systems engage in mutual and cooperative plan development and implementation. The lead agency seeks input and dialogue with a multitude of stakeholders. The communication is open, frequent, and proactive. Frequent dialogue occurs between the lead agency and local, regional, or State trauma system participants and leaders. There is evidence of mutual respect and sharing of information among the multidisciplinary groups.</p>

Indicator		Scoring
207.2 The trauma system leaders (lead agency, advisory committees, and others) informs and educates constituencies and policy makers through community development activities, targeted media messaging, and active collaborations aimed at injury prevention and trauma system development.	2	<p>1. No targeted messaging or media campaigns have begun to educate and inform community and State leaders or policy makers about either injury prevention needs or trauma system development activities.</p> <p>2. Limited interfaces with policy makers and the media, aimed at both injury prevention and trauma system development, have occurred. Community development activities have been limited to incident-specific response opportunities.</p> <p>3. Community activities have begun with the development of an injury prevention campaign, and there have been initial discussions with policy makers regarding trauma system development.</p> <p>4. Trauma system leaders are engaging policy makers in discussions about injury prevention and the trauma system. Media awareness and media messaging have been targeted at injury prevention activities with limited trauma system integration.</p> <p>5. A well-orchestrated and continuing trauma media campaign is under way. Key policy makers at the State, regional, and local levels are keenly aware of the benefits of a trauma system and of the importance of injury prevention programs.</p>

Essential Service: Mobilize Community Partnerships		
Indicator		Scoring
207.3 Trauma system leaders (lead agency; trauma-specific statewide multidisciplinary, multi-agency advisory committees; and others) mobilize community partners in identifying the injury problem throughout the State and in building coalitions of personnel to design systems that can reduce the burden of injury.	3	<p>1. No State lead agency exists to establish, maintain, or mobilize community partners in identifying the injury problem or in building community coalitions.</p> <p>2. A State lead agency to review and report on the injury problem statewide exists, but there is limited involvement with community coalitions or trauma system partners.</p> <p>3. A State lead agency for injury prevention has been established, and a statewide injury coalition has been meeting regularly and reporting on the status of injury in the State. Interface between the injury coalition and the trauma-specific statewide multidisciplinary, multi-agency advisory committee or trauma system leaders (government, acute care, or rehabilitation) has been limited.</p> <p>4. Trauma system leaders (lead agency; trauma-specific statewide multidisciplinary, multi-agency advisory committees; and others) for injury prevention have a proven track record for identifying the injury problem and for targeting messages and programs to reduce the impact of injury in the State. The injury prevention lead agency (if not the trauma system lead agency) interfaces with the trauma-specific statewide multidisciplinary, multi-agency advisory committee. Trauma system and injury prevention leaders have begun to identify strategies and are working collaboratively. Key policy makers are well informed about the burden of injury in the State.</p> <p>5. Trauma system and injury prevention leaders regularly inform and educate policy makers on trauma system development and injury prevention. Injury coalitions and trauma-specific statewide multidisciplinary, multi-agency advisory committees are integrated and work collaboratively to inform the community and to educate community leaders.</p>

Benchmark

208. The trauma, public health, and emergency preparedness systems are closely linked.

Essential Service: Mobilize Community Partnerships

Indicator	Scoring
208.1 The trauma system and the public health system have established linkages including programs with an emphasis on population-based public health surveillance, and evaluation, for acute and chronic traumatic injury and injury prevention.	<p>2</p> <p>1. There is no evidence that demonstrates program linkages, a working relationship, or the sharing of data between public health and the trauma system. Population-based public health surveillance, and evaluation, for acute or chronic traumatic injury and injury prevention has not been integrated with the trauma system.</p> <p>2. There is little population-based public health surveillance shared with the trauma system, and program linkages are rare. Routine public health status reports are available for review by the trauma system lead agency and constituents.</p> <p>3. The trauma system and the public health system have begun sharing public health surveillance data for acute and chronic traumatic injury. Program linkages are in the discussion stage.</p> <p>4. The trauma system has begun to link with the public health system, and the process of sharing public health surveillance data is evolving. Routine dialogue is occurring between programs.</p> <p>5. The trauma system and the public health system are integrated. Routine reporting, program participation, and system plans are fully vested. Operational integration is routine, and measurable progress can be demonstrated. (Demonstrated integration and linkage could include such activities as rapid response to and notification of incidents, integrated data systems, communication cross-operability, and regular epidemiology report generation.)</p>

Essential Service: Mobilize Community Partnerships

Indicator	Scoring
208.2 The incident management and trauma systems have formal established linkages for system integration and operational management.	<p>1</p> <p>1. There are no formal established linkages for system integration or operational management between the incident management and trauma systems.</p> <p>2. There are limited linkages or interfaces between the incident management and trauma systems specific to mass casualties.</p> <p>3. Plans are in place for both incident management and trauma system linkage. Integration is beginning, and cooperation within the multidisciplinary groups is occurring. Draft policies are being reviewed, and operational management strategies are being aligned.</p> <p>4. There is evidence of program linkages between the incident management and trauma systems. Operational management guidelines exist and are routinely evaluated and tested.</p> <p>5. Strong program linkages and interfaces are present. The incident management and trauma systems are well integrated, and operational procedures have been implemented, tested, and evaluated. System participants meet regularly and are familiar with the operational plans of both areas. Data from the trauma system and from the incident management system are shared.</p>

300. ASSURANCE: *Assurance to constituents that services necessary to achieve agreed-on goals are provided by encouraging actions of others (public or private), requiring action through regulation, or providing services directly.*

Benchmark

301. The trauma management information system (MIS) is used to facilitate ongoing assessment and assurance of system performance and outcomes and provides a basis for continuously improving the trauma system including a cost-benefit analysis.

Essential Service: Evaluation

Indicator	Scoring
301.1 The lead trauma authority ensures that each member hospital of the trauma system collects and uses patient data as well as provider data to assess system performance and to improve quality of care. Assessment data are routinely submitted to the lead trauma authority.	<p>3</p> <p>1. There is no system-wide management information data collection system that the trauma centers and other community hospitals regularly contribute to or use to evaluate the system.</p> <p>2. There is a trauma registry system in place in the trauma centers, but it is used by neither all facilities within the system nor the lead trauma authority to assess system performance.</p> <p>3. The trauma management information system contains information from all facilities within a geographic area.</p> <p>4. The trauma management information system is used by the trauma centers to assess provider and system performance issues.</p> <p>5. Hospital trauma registry data are routinely submitted to the lead trauma authority, are aggregated, and are used to evaluate overall system performance.</p>

Essential Service: Evaluation

Indicator Scoring	
301.2 Prehospital care providers collect patient care and administrative data for each episode of care and provide these data not only to the hospital, but have a mechanism to evaluate the data within their own agency including monitoring trends and identifying outliers.	<p>2</p> <p>1. There is no jurisdiction-wide prehospital data collection.</p> <p>2. Prehospital care providers have a patient care record for each episode of care, but it is not yet automated or integrated with the trauma management information system.</p> <p>3. The prehospital patient care record electronically captures patient care provided by field personnel and can be transferred or entered into the trauma registry system within individual trauma centers.</p> <p>4. The prehospital patient data system is integrated into the trauma management information system and is used by prehospital and hospital personnel to review and evaluate prehospital and system performance.</p> <p>5. Individual prehospital agency data are electronically submitted to the lead trauma authority, are aggregated with other prehospital agency data, and are used to evaluate overall trauma system performance.</p>

Essential Service: Evaluation

Indicator	Scoring
301.3 Trauma registry, emergency department (ED), prehospital, rehabilitation, and other databases are linked or combined to create a trauma system registry.	<p>3</p> <p>1. Some trauma registry and prehospital patient records are manually entered into a database when needed to answer system questions. There is no rehabilitation registry.</p> <p>2. There are databases for trauma, emergency departments, prehospital, and rehabilitation as well as statewide injury databases. None of the databases are routinely linked.</p> <p>3. There are electronic trauma registry and prehospital patient record databases. Both databases are linked, but the system does not use these data for routine review of system performance. Some rehabilitation data are collected separately from the trauma registry.</p> <p>4. There is an integrated management information system that includes, at a minimum, hospital and prehospital databases. The information is linked, and providers use the databases for system evaluation. Rehabilitation centers routinely provide electronic data to the trauma registry system.</p> <p>5. There is an integrated management information system that includes, at a minimum, trauma, ED, prehospital, 9-1-1 dispatch, and rehabilitation databases</p>

Essential Service: Evaluation

Indicator		Scoring
302.5 The retrospective medical oversight of the EMS system for trauma triage, communications, treatment, and transport is closely coordinated with the established performance improvement processes of the trauma system.	1	<p>1. There is no retrospective medical oversight procedure for trauma triage, communications, treatment, and transport.</p> <p>2. There is a retrospective medical oversight procedure for trauma triage, communications, treatment, and transport by both the trauma system and the EMS system, but the two processes are in conflict with each other or use different review criteria.</p> <p>3. There is a retrospective medical oversight procedure for trauma triage, communications, treatment, and transport by the performance improvement processes of the trauma system or by the EMS system; however, this procedure is not coordinated.</p> <p>4. By the performance improvement processes of the trauma system, there is retrospective medical oversight for trauma triage, communications, treatment, and transport that is coordinated with the EMS system retrospective medical direction, or by performance improvement processes of the EMS system that are coordinated by the trauma system.</p> <p>5. There is retrospective medical oversight of the trauma triage, communications, treatment, and transport that is coordinated with the EMS system retrospective medical direction. There is evidence this procedure is being regularly used to monitor system performance and to make system improvements.</p>

Essential Service: Link To Provide Care

Indicator		Scoring
302.6 There are mandatory system-wide prehospital triage criteria to ensure that trauma patients are transported to an appropriate facility based on their injuries. These triage criteria are regularly evaluated and updated to ensure acceptable and system-defined rates of sensitivity and specificity for appropriately identifying the major trauma patient.	3	<p>1. There are no mandatory universal triage criteria to ensure trauma patients are transported to the most appropriate hospital.</p> <p>2. There are differing triage criteria guidelines used by different providers.</p> <p>3. Appropriateness of triage criteria and subsequent transportation are not evaluated for sensitivity or specificity.</p> <p>3. Universal triage criteria are in the process of being linked to the management information system for future evaluation.</p> <p>4. The triage criteria are used by all prehospital providers. There is system-wide evaluation of the effectiveness of the triage tools in identifying trauma patients and in ensuring that they are transported to the appropriate facility.</p> <p>5. System participants routinely evaluate the triage criteria for effectiveness. There is linkage with the trauma system, and sensitivity and specificity (over- and under-triage rates) of the tools used are regularly reported through the trauma lead authority. Updates to the triage criteria are made as necessary to improve system performance.</p>

Essential Service: Link To Provide Care

Indicator		Scoring
302.7 There is a universal access number for citizens to access the EMS/trauma system, with dispatch of appropriate medical resources. There is a central communication system for the EMS/trauma system to ensure field-to--facility bidirectional communications, interfacility dialogue, and all-hazards response communications among all	1	<p>1. There is no universal access number (9-1-1) for easy citizen access to the EMS/trauma system and no coordinated communication system for triage, treatment, and transport of trauma patients for either single or multiple patient encounters.</p> <p>2. There is a universal access number (9-1-1) for quick citizen access to care. However, there is no coordinated communication system within a jurisdiction to allow for communications to occur among system participants either routinely or during all-hazards events.</p> <p>3. There are a universal access number (9-1-1) and a central communication</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

<p>system participants. Note: In some systems with limited resources, for example, rural, the available resources are, at least initially, the “appropriate resources.”</p>	<p>system for quick citizen access to care. A communication plan for the trauma system has been completed.</p> <p>4. The universal access number (9-1-1) and central communication system are integrated and communications regularly occur among dispatch, field providers, hospitals, and other system providers. The communication plan is implemented. Evaluation of the effectiveness of the communication system is done routinely, and corrective action is implemented as needed.</p> <p>5. A state-of-the-art electronic communication system is available within the jurisdiction. The trauma system communication plan is integrated with other system plans. The system is also available in all-hazards responses and can be used as a quick call system and as a paging network and is linked to public health and other nontraditional partners. Evaluation of the communication system interface with the trauma system occurs routinely.</p>

Essential Service: Link To Provide Care

Indicator	Scoring
<p>302.8 There are sufficient and well-coordinated transportation resources to ensure EMS providers arrive at the scene promptly and expeditiously transport the patient to the correct hospital by the correct transportation mode.</p>	<p>1</p> <p>1. There is no coordination of transportation resources within a jurisdiction. Multiple ambulances or aeromedical providers, or both, can all arrive on scene unannounced.</p> <p>2. There is a priority dispatch system in place that sends transportation resources to the scene.</p> <p>3. There is a priority dispatch system that ensures appropriate resources arrive on scene promptly and transport patients to the hospital. A plan for transporting trauma patients from the field to the hospital has been completed.</p> <p>4. There is a priority dispatch and transportation system that ensures appropriate system resources for prompt transport of trauma patients to trauma centers. A trauma transportation plan has been implemented. System issues are evaluated, and corrective plans are implemented as needed.</p> <p>5. The transportation system has a priority dispatch system; it regularly assesses its ability to get the right resources to the scene and to transport patients by using the correct mode of transportation. The transportation system is part of the overall EMS, trauma, and all-hazards response system.</p>

Essential Service: Link To Provide Care

Indicator	Scoring
<p>302.9 There is a procedure for communications among medical facilities when arranging for interfacility transfers including contingencies for radio or telephone system failure.</p>	<p>1. There are no specific communication plans or procedures to ensure communications among medical facilities when arranging for interfacility patient transfers.</p> <p>2. Interfacility communication procedures are generally included in the patient transfer protocols for each medical facility, but there is no system-wide procedure.</p> <p>3. There are uniform, system-wide procedures to facilitate communications among medical facilities when arranging for interfacility patient transfers, but there are no redundant procedures in the event of power or other communication system failures.</p> <p>2</p> <p>4. There are uniform, system-wide procedures for communications among facilities when arranging for interfacility patient transfers, and there are redundant procedures in the event of power or other communication system failures.</p> <p>5. There are uniform, system-wide procedures for communications among facilities when arranging for interfacility patient transfers. There are redundant procedures in the event of power or other communication system failures. The effectiveness of these procedures is regularly reviewed and changes made, if necessary, during the performance improvement process.</p>

Essential Service: Link To Provide Care

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

Indicator	Scoring
302.10 There are established procedures for EMS and trauma system communications in an all-hazards or major EMS incident that are effectively coordinated with the overall all-hazards response plan for the jurisdiction.	<p>1. There are no written procedures for EMS and trauma system communications in the event of an all-hazards incident.</p> <p>2. Local EMS systems have written procedures for EMS communications in the event of an all-hazards or major EMS incident. However, there is no coordination among the local jurisdictions.</p> <p>3. There are statewide or regional EMS communication procedures in the event of an all-hazards or major EMS incident. These plans do not involve other jurisdictions and are not coordinated with the overall all-hazards response plan and incident management system.</p> <p>2 4. There are statewide or regional EMS communication procedures in the event of an all-hazards or major EMS incident that are coordinated with other jurisdictions, with the overall all-hazards response plan, and with the incident management system.</p> <p>5. There are statewide or regional EMS communication procedures in the event of an all-hazards or major EMS incident that are coordinated with other jurisdictions, with the overall all-hazards response plan, and with the incident management system. There are one or more communication system redundancies. These procedures are regularly tested in simulated incident drills, and changes are made in the procedures, when necessary, based on the results of these drills.</p>

Benchmark

303. Acute care facilities are integrated into a resource-efficient, inclusive network that meets required standards and that provides optimal care for all injured patients.

Essential Service: Link To Provide Care

Indicator	Scoring
303.1 The trauma system plan has clearly defined the roles and responsibilities of all acute care facilities treating trauma and of facilities that provide care to specialty populations (e.g., burn, pediatric, spinal cord injury, and others).	<p>1. There is no trauma system plan that outlines roles and responsibilities of all acute care facilities treating trauma and of facilities that provide care to special populations.</p> <p>2. There is a trauma system plan, but it does not address the roles and responsibilities of licensed acute care and specialty care facilities.</p> <p>3. The trauma system plan addresses the roles and responsibilities of licensed acute care facilities or specialty care facilities, but not both.</p> <p>4. The trauma system plan addresses the roles and responsibilities of licensed acute care facilities and specialty care facilities.</p> <p>5. The trauma system plan clearly defines the roles and responsibilities of all acute care facilities treating trauma within the system jurisdiction. Specialty care services are addressed within the plan, and appropriate policies and procedures are implemented and tracked.</p>

Essential Service: Link To Provide Care

Indicator	Scoring
303.2 The trauma system lead agency should ensure that the number, levels, and distribution of trauma centers required to meet system demand are available.	<p>1. There is no trauma system plan to identify the number, levels, and distribution of trauma centers required to meet system demand.</p> <p>2. There is a trauma system plan, but it does not identify the number, levels, or distribution of trauma centers needed for the jurisdiction served.</p> <p>3. There is a trauma system plan that identifies the number, levels, and distribution of trauma centers needed for the jurisdiction. The plan, however, is not based on available data.</p> <p>4. There is a trauma system plan that identifies the number and levels of trauma centers needed based on actual available data. However, this plan is not used to make decisions about trauma facility designations.</p> <p>5. Essential Service: Evaluation

Indicator		Scoring
303.3 The trauma lead authority ensures that trauma facility patient outcomes and quality of care are monitored. Deficiencies are recognized and corrective action is implemented. Variations in standards of care are minimized, and improvements are made routinely.	5	<ol style="list-style-type: none"> 1. There is no requirement for trauma facilities to monitor patient outcomes and quality of care. 2. Designated trauma facilities are required to maintain a trauma registry including patient outcomes, but they are not required to regularly monitor these outcomes, or quality of care, and are required to report those findings to the lead trauma authority. 3. Designated trauma facilities are required to maintain a trauma registry and to use data from the registry in an ongoing performance improvement program to monitor and to improve the quality of care and patient outcomes. 4. Designated trauma facilities are required to maintain a trauma registry including patient outcomes, to use these data in an ongoing performance improvement program, to provide regular comparisons to local trauma system standards, and to report those findings to the lead trauma authority. 5. Designated trauma facilities are required to maintain a trauma registry including patient outcomes, to use these data in an ongoing performance improvement program. Deficiencies in meeting the local trauma system standards are recorded, and corrective action plans are instituted. Results of comparisons with State or national norms are regularly provided to the trauma agency, along with an explanation for significant variations from these norms, and a written plan to reduce these variations.

Essential Service: Link To Provide Care

Indicator		Scoring
303.4 When injured patients arrive at a medical facility that cannot provide the appropriate level of definitive care, there is an organized and regularly monitored system to ensure the patients are expeditiously transferred to the appropriate, system-defined trauma facility.	2	<ol style="list-style-type: none"> 1. There is no system to regularly review the conformity of interfacility transfers within the trauma system according to pre-established procedures. 2. There is a fragmented system, usually event based, to monitor the interfacility transfer of trauma patients. 3. The system for monitoring interfacility transfers is new, the procedures are in place, but training has yet to occur. 4. There is an organized system of monitoring interfacility transfers within the trauma system. 5. The monitoring of interfacility transfers of trauma patients has been integrated into the overall program of system performance improvement. As the system identifies issues for correction, a plan of action is implemented.

Essential Service: Link To Provide Care

Indicator		Scoring
303.5 The specific needs of unique populations, for example, English As a Second Language (EASL), socially disadvantaged, migrant/transient, remote, rural, and others, are accommodated within the existing trauma system.	2	<ol style="list-style-type: none"> 1. There has been no consideration of the specific needs of unique populations, for example, EASL in making an impact on the patient's access to care within the trauma system. 2. The lead agency and stakeholders are beginning to consider the specific needs of unique populations in implementing the trauma system. 3. The lead agency has, within the trauma system plan, identified the unique populations that may require special accommodations with the trauma system to effectively meet their needs. 4. The lead agency has, within the trauma system plan, accommodations for unique populations that allow them to effectively access trauma care. Monitoring processes are in development.

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

	5. The trauma system has accommodated the specific needs of unique populations by allowing them to effectively access trauma care. Routine monitoring, review, and reporting of these populations are incorporated into the evaluation of trauma system effectiveness.

Benchmark

304. The jurisdictional lead agency, in cooperation with other agencies and organizations, uses analytical tools to monitor the performance of population-based prevention and trauma care services.

Essential Service: Evaluation

Indicator	Scoring
304.1 The lead agency, along with partner organizations, prepares annual reports on the status of injury prevention and trauma care in State, regional, or local areas. Note: Annual reports may be distributed electronically rather than, or in addition to, printed copies.	1 1. No annual reports are available on the status of injury prevention or trauma care in State, regional, or local areas. 2. Annual reports are prepared but are not based on input from providers and other key stakeholders. 3. Annual reports are written by the lead agency with input from the trauma centers. 4. Annual reports are written by the lead agency in conjunction with the trauma centers and other stakeholders. Multiple sub-reports on the status of trauma care and injury prevention in State, regional, or local areas are distributed throughout the year. 5. There is an integrated annual reporting system that is electronically available to stakeholders. The lead agency, along with partner organizations, prepares and disseminates regular annual reports on the status of injury prevention and trauma care in State, regional, or local areas.

Essential Service: Evaluation

Indicator	Scoring
304.2 The trauma system MIS database is available for routine public health surveillance. There is concurrent access to the databases (emergency department, trauma, prehospital medical examiner, and public health epidemiology) for the purpose of routine surveillance and monitoring of health status that occurs regularly and is a shared responsibility. Note: All legal requirements for confidentiality and safeguarding of patient information must be met when sharing data between or among agencies.	2 1. There is no sharing of databases between emergency department, trauma, prehospital, medical examiner, or public health epidemiology. 2. The databases can be accessed by only the owner of the data, and sharing of information goes through a formal request process. 3. There is concurrent access to the databases (emergency department, trauma, prehospital medical examiner, and public health epidemiology) but no sharing of databases that would support public health surveillance. 4. The databases are shared among emergency department, trauma, prehospital, medical examiner, and public health epidemiology. Access issues have been resolved, and epidemiologic monitoring is beginning to routinely monitor the data for unusual events. 5. The databases of emergency departments, trauma, prehospital, medical examiner, and public health epidemiology are shared files. The epidemiology staff can review all the databases and registries for routine surveillance and unusual occurrences. Concurrent review by the respective groups is used to ensure the effectiveness of the injury prevention and trauma system.

Benchmark

305. The lead agency ensures that its trauma system plan is integrated with, and complementary to, the comprehensive mass casualty plan for both natural and man-made incidents, including an all-hazards approach to planning and operations.

Essential Service: Link To Provide Care

Indicator	Scoring
305.1 The EMS, the trauma system, and the all-hazards medical response system have operational trauma and all-hazards response plans and have established an ongoing cooperative working relationship to ensure trauma system readiness to all-	3 1. There is no system for integration between the EMS, the trauma system, and the all-hazards response system. 2. There have been some discussions between the EMS, the trauma system, and the all-hazards medical response system, but no formal plans have been developed. 3. Formal plans for the EMS, the trauma system, and the all-hazards medical

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

hazards events.	3	<p>response systems integration are in development and have started the approval process. Working relationships have formed and cooperation is evident.</p> <p>4. There are plans in place to ensure that the EMS, the trauma system, and the all-hazards medical response system are integrated and operational. All-hazards exercises and simulated incident drills have the cooperation and participation of the trauma system.</p> <p>5. The EMS, the trauma system, and all-hazards response plans are integrated and operational. Routine working relationships are present with cooperation and sharing of information to improve trauma system readiness for all-hazards responses.</p>
-----------------	---	--

Essential Service: Evaluation

Indicator	Scoring
305.2 All-hazards events routinely include situations involving natural (e.g., earthquake), unintentional (e.g., school bus crash), and intentional (e.g., terrorist explosion) trauma-producing events that test expanded response capabilities and surge capacity of the trauma systems.	<p>2</p> <p>1. All-hazards training is not a routine part of the trauma system.</p> <p>2. Training in response to all hazards is solely the responsibility of the EMS and of emergency management agencies. Trauma response has not been integrated into the system.</p> <p>3. All-hazards exercises are conducted routinely and include both trauma and EMS response capabilities.</p> <p>4. The trauma, EMS, and public health stakeholders have begun exercises in an all-hazards approach to mass casualty incidents.</p> <p>5. Exercises and training in all-hazards responses including testing of facility/clinic surge capacity are regularly conducted with trauma, EMS, and public health stakeholders. Debriefing sessions occur after each drill or event.</p>

Essential Service: Link To Provide Care

Indicator	Scoring
<p>305.3 The trauma system, through the lead agency, has access to additional equipment, materials, and personnel for large-scale traumatic events.</p> <p>Note: The lead agency will work with other appropriate national, State, regional, and local agencies to secure these additional resources.</p>	<p>2</p> <p>1. There is no surge capacity (prehospital, hospital, clinic, or coroner) built into the system for either smaller multi-patient events or mass casualty incidents.</p> <p>2. The trauma system has begun to identify additional equipment, materials, and personnel needed to respond to all-hazards events in light of new threats and emergencies.</p> <p>3. The lead agency, working with the trauma stakeholders, has in place additional equipment and materials for mass casualty incidents. A process to utilize additional personnel resources is in development. Testing of newly acquired equipment, material, and personnel resources has not yet been completed.</p> <p>4. The lead agency, in conjunction with the trauma stakeholders, has begun to test a method of deploying additional equipment, materials, and personnel during all-hazards events.</p> <p>5. The lead agency has acquired additional equipment and materials for both the prehospital and hospital response to all-hazards events. Deployment issues have been resolved. A mechanism to share personnel resources has been developed and tested in both the prehospital and hospital setting (e.g., mutual aid, precertification of practitioners, and rapid assignment of privileges). The system routinely tests its capabilities in this area.</p>

Benchmark

306. The lead agency ensures that the trauma system demonstrates prevention and medical outreach activities within its defined service area.

Essential Service: Link To Provide Care

Indicator	Scoring
306.1 The trauma system has developed mechanisms to engage the general medical	<p>1. There is no evidence that the trauma system reaches out to the general medical community at large to integrate it into trauma system improvements.</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

community and other system participants in their research findings and performance improvement efforts.	2	<p>2. There is some evidence of general medical community interface with the trauma centers, but it is sporadic and not well coordinated.</p> <p>3. The trauma system can demonstrate routine interface with the general medical community regarding trauma care updates and performance improvements.</p> <p>4. The trauma system has a formal mechanism to discuss trauma care, system improvements, and research results with the general medical community within its jurisdiction.</p> <p>5. There is strong evidence of active participation between the trauma system and the general medical community. Routine discussions are held; performance updates are shared; and research results are integrated within the medical care system.</p>
---	---	---

Essential Service: Link To Provide Care

Indicator		Scoring
306.2 The trauma system is active within its jurisdiction with the evaluation of community-based activities and injury prevention and response programs.	1	<p>1. There is no active participation by the trauma system in the evaluation of community-based activities and injury prevention and response programs.</p> <p>2. There is some activity by the trauma system in the evaluation of community-based activities and injury prevention and response programs.</p> <p>3. The trauma system evaluates community-based activities and injury prevention and response programs.</p> <p>4. The trauma system is an active participant in community activities and in injury prevention and response programs, including the evaluation of program effectiveness.</p> <p>5. The trauma system has integrated community-based activities and injury prevention and response programs with similar efforts within the community. Outreach efforts are well coordinated and duplication of effort is avoided. Ongoing evaluation is routine, and data are used to make program improvements.</p>

Essential Service: Evaluation

Indicator		Scoring
306.3 The effect or impact of outreach programs (both medical community training/support and prevention activities) is evaluated as part of a system performance improvement process. Note: "Evaluation" implies both informal evaluation processes and more structured research.	1	<p>1. There is no effort by the lead agency to review the efforts of the trauma centers in either medical community training/support or prevention activities.</p> <p>2. There is no routine evaluation of medical community training/support or prevention activities accruing within the jurisdiction.</p> <p>3. Trauma centers do internal monitoring and evaluations of their efforts in medical community training/support and prevention activities.</p> <p>4. The lead agency participates with trauma centers in evaluating their efforts in medical community training/support and prevention activities. The outreach programs are regularly assessed for effectiveness.</p> <p>5. The lead agency and trauma centers routinely use the data both to implement outreach programs and to communicate trauma system outcomes and performance to the medical community through its annual report. Evaluation processes are institutionalized and used to enhance future outreach programs.</p>

Benchmark

307. To maintain its State, regional, or local designation, each hospital will continually work to improve the trauma care as measured by patient outcomes.

Essential Service: Evaluation

Indicator		Scoring
307.1 The trauma system engages in regular evaluation of all licensed acute care facilities that provide trauma care to trauma patients and designated trauma hospitals. Such evaluation involves	1	<p>1. There is no ongoing mechanism for the trauma system to assess or evaluate the quality of trauma care delivered by all licensed acute care facilities that provide trauma care to trauma patients and designated trauma hospitals.</p> <p>2. There is a mechanism for the trauma system to evaluate trauma care services in designated trauma hospitals through internal performance improvement</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

independent external reviews.		processes. 3. There is a mechanism to evaluate trauma care services across the entire trauma care system through performance improvement processes. 4. Review of trauma care quality is both internal (through routine monitoring and evaluation) and external (through independent review during redesignation or reverification of trauma centers). 5. Quality of trauma care is ensured through both internal and external methods. Internal review is regular, and participation is routine for trauma stakeholders. External independent review teams provide further assurance of quality trauma care within all licensed acute care and trauma facilities treating trauma patients.

Essential Service: Evaluation

Indicator		Scoring
307.2 The trauma system implements and regularly reviews a standardized report on patient care outcomes as measured against national norms. Note: This process may include clinical and bench research.	1	1. There is no evidence that the trauma system engages in any review of patient care outcome data to evaluate its performance against national norms. 2. There is some standardized measurement of outcomes for trauma patients within the trauma system and applied to the trauma centers. 3. Through the lead agency, trauma centers use a national standardized measurement tool to assess the quality of trauma patient care outcomes and to regularly report trends in performance improvement committee reports. 4. The trauma system has established standardized measurements of trauma patient care outcomes based on national norms and routinely uses the report to highlight improvements in trauma patient care or to identify patient care issues needing remedial action. 5. The trauma system has completed an assessment of trauma care outcomes based on national norms and implements any corrective action noted. Routine measurements of quality are carried out, and regular reporting is accomplished with improvements instituted, trends reported, and highlights acknowledged as necessary.

Benchmark

308. The lead agency ensures that adequate rehabilitation facilities have been integrated into the trauma system and that these resources are made available to all populations requiring them.

Essential Service: Link To Provide Care

Indicator		Scoring
308.1 The lead agency has incorporated, within the trauma system plan and the trauma center standards, requirements for rehabilitation services including interfacility transfer of trauma patients to rehabilitation centers.	1	1. There are no written standards or plans for the integration of rehabilitation services with the trauma system or with trauma centers. 2. The trauma system plan has incorporated the use of rehabilitation services, but the use of those facilities for trauma patients has not been fully realized. 3. The trauma system plan has incorporated requirements for rehabilitation services. The trauma centers routinely use the rehabilitation expertise although written agreements do not exist. 4. The trauma system plan incorporates rehabilitation services throughout the continuum of care. Trauma centers have actively included rehabilitation services and their programs in trauma patient care plans. 5. There is evidence to show a well-integrated program of rehabilitation is available for all trauma patients. Rehabilitation programs are included in the trauma system plan, and the trauma centers work closely with rehabilitation centers and services to ensure quality outcomes for trauma patients.

Essential Service: Evaluation

Indicator		Scoring
308.2 Rehabilitation centers and out-patient rehabilitation services provide		1. There is no requirement for the rehabilitation centers or out-patient rehabilitation services to contribute data on trauma patient outcomes.

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

data on trauma patients to the central trauma system registry that include final disposition, functional outcome, and rehabilitation costs and also participate in performance improvement processes.	2	<p>2. Rehabilitation centers and out-patient rehabilitation services are integrated into the trauma plan, but there is no requirement for them to submit data on trauma patients to the central trauma system registry.</p> <p>3. Rehabilitation centers and out-patient rehabilitation services are integrated into the trauma plan, and rehabilitation care begins early in the patient's treatment plan within the acute care hospital. Data submission to the central trauma system registry is yet to be realized.</p> <p>4. Some trauma centers and rehabilitation facilities and out-patient rehabilitation services have close links, and integration of services is routine. Data sharing between individual trauma centers and rehabilitation centers and services is accomplished, and some integration with the central trauma system registry is ongoing. Rehabilitation personnel participate in trauma system performance improvement processes.</p> <p>5. The trauma plan integrates rehabilitation centers and out-patient rehabilitation services. Trauma centers integrate rehabilitation care early in the patient's treatment plan. Rehabilitation data, including final disposition, functional outcome, and rehabilitation costs, are collected. These data are routinely submitted to trauma centers and to the central trauma system registry for inclusion in system evaluation reports. Rehabilitation personnel are fully integrated into trauma system performance improvement processes.</p>
---	---	---

309. The financial aspects of the trauma systems are integrated into the overall performance improvement system to ensure ongoing "fine-tuning" and cost-effectiveness.

Essential Service: Evaluation

Indicator		Scoring
309.1 Cost data are collected and provided to the trauma system registry for each major component including prevention, prehospital, acute care, all-hazards response planning, and rehabilitation.	1	<p>1. No cost data are collected.</p> <p>2. Administrative and program cost data are collected and included in the annual trauma system report.</p> <p>3. In addition to administrative and program costs, clinical charges and costs are included in one or more major component areas and are provided to the trauma system registry for inclusion in the annual trauma system report.</p> <p>4. The costs associated with individual system components, for example, prehospital, can be determined and are provided to the trauma system registry for inclusion in the annual trauma system report.</p> <p>5. The cost of an aggregate system can be determined and is provided to the trauma system registry for inclusion in the annual trauma system report.</p>

Essential Service: Evaluation

Indicator		Scoring
309.2 Collection and reimbursement data are submitted by each agency or institution on at least an annual basis. Common definitions exist for collection and reimbursement data and are submitted by each agency.	1	<p>1. Collection and reimbursement data are not gathered, nor do common definitions exist.</p> <p>2. Common definitions exist, and collection and reimbursement data are available and reported to the lead agency for one or more clinical components.</p> <p>3. Common definitions exist. Collection and reimbursement data are available and reported to the lead agency for one or more clinical components, and are compared to cost data for those components.</p> <p>4. Common definitions exist. Collection and reimbursement data are available and reported to the lead agency for all clinical components, and are compared to cost data for those components.</p> <p>5. Common definitions exist. Collection and reimbursement data are available and reported to the lead agency for all clinical components, are compared to cost data for those components, and are reported in an aggregate form in the annual trauma system report.</p>

physicians may maintain trauma competence through continuing medical education programs after initial ATLS completion.		<p>4. Requirements for ATLS and other trauma training for physicians are provided by the trauma centers and the lead agency. Monitoring compliance with meeting the requirements is beginning.</p> <p>5. Regular ATLS, and other trauma training as identified through the performance improvement process, is completed in cooperation with the appropriate authorities (e.g., trauma center, lead agency, or licensing body) to ensure a collectively competent physician workforce in issues of trauma care.</p>
--	--	---

Essential Service: Ensure Competent Workforce

Indicator		Scoring
310.9 Conduct at least one multidisciplinary trauma conference annually that encourages system and team approaches to trauma care.	1	<p>1. There are no multidisciplinary trauma conferences conducted within geographic boundaries of the trauma system.</p> <p>2. There are sporadic multidisciplinary trauma conferences conducted.</p> <p>3. Multidisciplinary trauma conferences are conducted occasionally, and attendance by trauma practitioners is monitored and reviewed.</p> <p>4. Multidisciplinary trauma conferences are conducted at least annually.</p> <p>5. Multidisciplinary (EMS, physicians, nurses, physiatrists, policy makers, consumers, and others) trauma conferences are conducted regularly; new findings from quality assurance and performance improvement processes are shared; and the conferences are open to all practitioners within the system. Regular attendance is required.</p>

Essential Service: Ensure Competent Workforce

Indicator		Scoring
310.10 As new protocols and treatment approaches are instituted within the system, structured mechanisms are in place to inform all personnel in those changes in a timely manner.	1	<p>1. There is no structured mechanism to inform or educate personnel in new protocols or treatment approaches within the jurisdiction.</p> <p>2. A structured mechanism is in place to inform or educate personnel in new protocols or treatment approaches, but it has not been tried or tested.</p> <p>3. A structured mechanism is in place to inform personnel in new protocols or treatment approaches as changes in the system are identified.</p> <p>4. A structured mechanism is in place to educate personnel in new protocols and treatment approaches.</p> <p>5. A structured mechanism exists to educate personnel in new protocols and treatment approaches in a timely manner, and there is a method to monitor compliance with new procedures as they are instituted.</p>

Essential Service: Ensure Competent Workforce

Indicator		Scoring
<p>310.11 There are mechanisms within the system performance improvement processes to identify and correct systemic personnel deficiencies within the trauma system.</p> <p>Note: Systemic personnel deficiencies are those that cut across multiple agencies and institutions and impact the system as a whole. For example, if trauma triage protocols are not being adhered to by most prehospital providers from multiple agencies, then it is a systemic problem that could involve communication, training, medical direction, or performance improvement issues.</p>	1	<p>1. There is no mechanism to identify, through performance improvement processes, systemic personnel deficiencies within the trauma system.</p> <p>2. The trauma system has begun to identify systemic personnel deficiencies.</p> <p>3. The trauma system has a mechanism to identify systemic personnel deficiencies and is working on a process for corrective action.</p> <p>4. The trauma system has a mechanism to identify systemic personnel deficiencies and is instituting corrective actions across the system.</p> <p>5. Trauma stakeholders, including trauma centers and the lead agency, monitor and correct personnel deficiencies as identified through quality assurance and performance improvement processes. A method of corrective action has been instituted, and appropriate follow up is occurring. Monitoring of system deficiencies and corrective actions is ongoing.</p>

Essential Service: Ensure Competent Workforce

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM

Consensus Conference

Indicator	Scoring
310.12 There are mechanisms in place within agency and institutional performance improvement processes to identify and correct deficiencies in trauma care practice patterns of individual practitioners (e.g., EMTs, paramedics, nurses, physicians, and others) within the trauma system.	<p>1</p> <p>1. There is no mechanism in place to routinely assess the deficiencies in trauma care practice patterns of individual practitioners (e.g., EMTs, paramedics, nurses, physicians, and others) within the trauma system.</p> <p>2. The trauma system has begun a process to evaluate deficiencies in trauma care practice patterns of individual practitioners.</p> <p>3. A mechanism is in place to monitor and report on deficiencies in practice patterns of individual practitioners within the trauma system. The process is evolving as part of the quality assurance and performance improvement processes.</p> <p>4. There is a well-defined process to assess care provided by practitioners within the trauma system. The quality assurance and performance improvement processes identify deficiencies, and corrective action plans are instituted.</p> <p>5. Practice patterns of individual practitioners performing outside the standards of care are routinely assessed by the trauma centers and the local, regional, or State lead agency. Corrective actions (training, additional education, and disciplinary), as appropriate, are instituted, and trends are monitored and reported to the lead agency or other licensing agency.</p>

Essential Service: Ensure Competent Workforce

Indicator	Scoring
310.13 There is authority for a trauma medical director, and a clear job description, including requisite education, training, and certification, for this position. Note: The trauma medical director and the EMS system medical director may be the same person.	<p>1</p> <p>1. There is no requirement for a trauma medical director, and no job description has been developed.</p> <p>2. There is authority for a trauma medical director, but no job description has been developed.</p> <p>3. There is authority for a trauma medical director, and a job description is under development. Approval to hire is pending.</p> <p>4. There is authority for a trauma medical director. The plan to hire one has been developed along with a comprehensive job description, including requisite education, training, and certification.</p> <p>5. There is authority for a trauma medical director, and the job description, including requisite education, training, and certification, for the trauma medical director is clear. A physician appropriately credentialed has been hired, and the job classification is routinely assessed for appropriateness of the duties required.</p>

Benchmark

311. The lead agency acts to protect the public welfare by enforcing various laws, rules, and regulations as they pertain to the trauma system.

Essential Service: Enforce Laws

Indicator	Scoring
311.1 The lead agency works in conjunction with the prehospital regulatory agency to ensure that prehospital care is provided by licensed agencies that are in compliance with any rules, regulations, or protocols specific to prehospital trauma delivery (e.g., taking patients to the correct facility in accordance with pre-existing destination protocols). Note: In many cases, the lead agency and the prehospital regulatory agency are the same entity.	<p>1</p> <p>1. There is no evidence that the lead agency and the prehospital regulatory agency work together to ensure appropriate provider agency licensure and compliance.</p> <p>2. The lead agency refers complaints concerning issues of prehospital agency performance to the prehospital regulatory agency.</p> <p>3. The trauma system lead agency and the prehospital regulatory agency work together to resolve complaints involving prehospital agencies that relate to trauma system performance.</p> <p>4. The trauma system and the prehospital regulatory agency work together to monitor compliance of prehospital provider agencies with any rules, regulations, or protocols specific to prehospital trauma delivery.</p> <p>5. The prehospital regulatory agency, working cooperatively with the lead agency, is involved in ongoing trauma system performance improvement processes and prehospital compliance with any rules, regulations, or protocols specific to prehospital trauma delivery (e.g., taking patients to the correct facility in accordance with pre-existing destination protocols).</p>

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

Essential Service: Enforce Laws		
Indicator		Scoring
311.2 The lead agency refers issues of personnel noncompliance with trauma laws, rules, and regulations to appropriate boards or licensure authorities.	1	<p>1. Individual personnel performance is not monitored.</p> <p>2. Complaints about individual personnel noncompliance with trauma laws, rules, and regulations go directly to appropriate boards or licensure authorities.</p> <p>3. Trauma authority personnel collaborate actively with licensure authorities to resolve complaints involving individual personnel noncompliance with trauma laws, rules, and regulations.</p> <p>4. Individual personnel performance issues are addressed within trauma performance improvement processes unless they involve breaches of State or Federal statute.</p> <p>5. Appropriate boards or licensure authorities are involved in the system performance improvement processes addressing individual personnel performance issues.</p>
Essential Service: Enforce Laws		
Indicator		Scoring
311.3 The lead agency enforces laws, rules, and regulations concerning the verification of trauma centers, including the ability to de-designate trauma facilities for matters of noncompliance.	1	<p>1. The lead agency does not have the authority to de-designate trauma facilities for matters of noncompliance.</p> <p>2. The lead agency has the authority to de-designate trauma facilities for matters of noncompliance but does not monitor facility performance.</p> <p>3. The lead agency has the authority to de-designate trauma facilities for matters of noncompliance and monitors facility performance.</p> <p>4. The lead agency has the authority to de-designate trauma facilities for matters of noncompliance, monitors facility performance, and has taken one or more administrative actions to bring noncompliant facilities into compliance.</p> <p>5. Facilities are represented in the system performance improvement process and benchmark their performance against local and national standards. Issues of noncompliance are monitored and addressed as part of the performance improvement process. De-designation is reserved only as a final public health safeguard.</p>
Essential Service: Enforce Laws		
Indicator		Scoring
311.4 Laws, rules, and regulations are routinely reviewed and revised to continually strengthen and improve the trauma system.	4	<p>1. There is no process for examining laws, rules, or regulations. 2. Laws, rules, and regulations are reviewed and revised only in response to a "crisis" (e.g., malpractice insurance costs).</p> <p>3. Laws, rules, and regulations are reviewed and revised on a periodic schedule (e.g., every 5 years).</p> <p>4. Laws, rules, and regulations are reviewed by agency personnel on a continuous basis and are revised as needed.</p> <p>5. Laws, rules, and regulations are reviewed as part of the performance improvement process involving representatives of all system components and are revised as they negatively impact system performance.</p>
Essential Service: Enforce Laws		
Indicator		Scoring

HRSA MTPSE SCORE FOR THE STATE OF OHIO TRAUMA SYSTEM Consensus Conference

311.5 The lead agency routinely evaluates all system components to ensure compliance with various laws, rules, and regulations pertaining to their role and performance within the trauma system.	1	<p>1. The lead agency does not have the authority to evaluate all system components (e.g., prehospital).</p> <p>2. Complaints concerning individual component performance within the trauma system go directly to the licensure agency responsible for that component.</p> <p>3. Trauma agency personnel collaborate actively with licensure agencies to resolve complaints involving component performance within the trauma system.</p> <p>4. Deficiencies in individual system components are addressed as part of the trauma system performance improvement process.</p> <p>5. System components are equitably represented in the trauma system improvement process and work to improve individual component compliance and overall trauma system performance. De-designation, or revocation of licenses or certifications, is used only as a course of last resort to safeguard public health.</p>
Essential Service: Enforce Laws		
Indicator		Scoring
311.6 Incentives are provided to individual agencies and institutions to seek State or nationally recognized accreditation in areas that will contribute to overall improvement across the trauma system, for example, Commission on Accreditation of Ambulance Services (CAAS) for prehospital agencies, Council on Allied Health Education Accreditation (CAHEA) for training programs, and American College of Surgeons (ACS) verification for trauma facilities.	1	<p>1. There are no incentives for outside review and accreditation.</p> <p>2. Accreditation processes are generally encouraged but are not specifically acknowledged; for example, no special dispensation is offered to agencies or institutions completing such accreditation.</p> <p>3. Accreditation processes are strongly encouraged, and some incentives are provided, for example, extension of EMS agency review from 2 years to 3 years after CAAS accreditation.</p> <p>4. Incentives are provided to agencies that successfully complete outside accreditation processes, for example, acceptance of CAAS accreditation instead of local EMS agency review.</p> <p>5. As part of the system performance improvement process, the impact of outside review and accreditation on various agencies and institutions is monitored, and incentives are provided as appropriate.</p>

OHIO DEPARTMENT OF PUBLIC SAFETY
State Board of Emergency Medical Services

Ohio EMS 2015 Strategic Plan

Foreword

James E. Davis, Chairman, Ohio Emergency Medical Services Board

As chair of the State Board of Emergency Medical Services, I am proud to introduce our strategic plan for the advancement of the EMS system in the state of Ohio. This Ohio EMS 2015 document provides a platform to work from for the next four years. It is based off of the Japanese concepts of Hoshin Kanri - meaning direction, policy, and management. It is based on the principles of plan, do, check, and adjust, as well as Kaizen which translates to continuous improvement.

As we celebrate the ten year anniversary of a dedicated statewide trauma system in Ohio, the trauma committee working with community stakeholders completed a project to identify gaps that exist in trauma care. The National Highway Transportation Safety Administration (NHTSA), who oversees EMS at the federal level, also completed a statewide assessment of EMS in Ohio in February 2011. These two assessments allowed the EMS Board through specific committees to analyze the strengths, weaknesses, opportunities, and threats (SWOT) regarding EMS in Ohio.

The success of this implementation is only possible through the development of people. As legendary Ohio State football coach Woody Hayes stated, “You win with people”. Without the quality efforts and dedication of so many people this key directional document would have never become a reality. I want to thank the Department of Public Safety and Director Tom Charles for his support and encouragement. Appreciation also goes to the State EMS office, EMS Board, as well as to the many friends of EMS for their tireless pursuit of excellence.

The completion of this Ohio EMS 2015 document is where the work really begins. In the face of shrinking budgets and increased responsibilities, these goals will only be accomplished through creativity and open-mindedness. We must always challenge each other by asking the questions “why?”, “what-if?”, and “why can’t we?”. We must always appreciate that this is not a race but a journey. The end goal is to bring value added processes and policies to Ohio fire/EMS agencies and their EMS providers to benefit all of Ohio. Each objective in our plan will be assigned a group responsible for the task and metrics. A dashboard will be employed to gauge our collective progress. Policy decisions made by the staff and EMS Board will be guided by these benchmarks. While it is true that this strategic plan and its initiatives are EMS Board driven, it will take everyone with an interest in EMS in Ohio to make it a reality. I encourage you to get involved.

Yours in public safety,

James E. Davis – Chair

Ohio State Board of Emergency Medical Services

EMS in Ohio

An Overview of EMS in Ohio.

As the nation's seventh most populous state, Ohio has plenty of demand for emergency medical services. The State's 11.5 million people depend on their EMS system to respond promptly and effectively to time-critical diagnoses. This system has evolved over the past fifty or more years to include basic and advanced care available in all areas of the State.

Despite substantial progress, the job of building Ohio's EMS system remains far from completion. The State's lead agency does not have clear uniform regulatory authority over all forms of EMS agencies and vehicles. The increased use of safety belts and corresponding

State Board of EMS Mission

The State Board of EMS is dedicated to saving lives and minimizing disability to Ohio's citizens and visitors by developing and continually enhancing a statewide, comprehensive, systematic response to injury, illness and fire, primarily through education, training, certification and strategic planning.

decrease in revenues from fines are threatening the financial viability of the EMS system infrastructure. The State holds a rich repository of EMS and trauma care data that has not yet been fully transformed into useful information for guiding further policy development.

While there are notable gaps in the system, a great deal has been accomplished that has provided a foundation for future improvements. Partnerships exist between essential stakeholders at all levels. EMS education is well-established

and continues to support the growth of Paramedic availability statewide. Trauma triage criteria have been implemented statewide. Following the events of September 11, 2001, EMS has been integrated into a number of Ohio preparedness initiatives. Wireless 9-1-1 system access has almost been fully implemented statewide. There are a variety of public information and education initiatives aimed at preparing the public to prevent injuries and take action when an emergency confronts them. The needs of children are being considered as system decisions are being made.

The Ohio EMS 2015 strategic plan serves as the guidebook to meet our Mission, Vision and Values.

Vision

Ohio's EMS system will provide optimal pre-hospital care to its citizens and visitors. It will be nationally recognized for innovation, responsive leadership, and superior quality and service.

Mission

Provide a comprehensive emergency medical services (EMS) system to ensure that persons incurring medical and trauma emergencies receive prompt and appropriate emergency medical care from properly trained and certified personnel. The entire EMS system will be data-driven and medically directed with clearly defined, and publicly available, responsibilities, authorities, and accountabilities. The State EMS system will help assure consistent quality local emergency care as well as a regionalized, accountable emergency care system.

Values

Diversity: The EMS system will provide public service delivery and support professional recruitment and retention that encompasses every sector within our society.

Excellence: The EMS system will utilize continuous improvement and evaluation to achieve the highest level of performance.

Integrity: The EMS system will be based on individuals and agencies taking the appropriate actions in all aspects of their responsibilities to the citizens of Ohio.

Leadership: The EMS system will stand on a foundation of responsive leadership to achieve and maintain quality results, accountability, and outcomes; through guidance, direction, encouragement, and reinforcement.

Lifelong Learning: The EMS system will provide and nurture ongoing education and professional development that enhances the provision of pre-hospital care.

Partnership: The EMS system will be based on key stakeholders collaborating to solve problems, make decisions, and achieve the common goal of assuring the best EMS service for the State of Ohio.

Decision Priorities for State Board of EMS/ Division of EMS

1. **Patients** / Citizens
2. The EMS System
3. Partners / State of Ohio

Acknowledgements

This document and the strategies, vision, and direction it puts forth for the future of EMS in Ohio, would not have been possible without the cooperation of and input from our partner organizations. It is through the teamwork and partnership that is illustrated by the creation of this Strategic Plan, which will lead to an improved EMS System for 2015 and beyond. The Ohio Board of Emergency Medical Services and the Division of EMS acknowledges and thanks the following organizations for providing input and advice from their representatives to the EMS Strategic Planning Committee:

Ohio Association of Emergency Medical Services
Ohio Association of Professional Fire Fighters
Ohio Chapter of the American College of Emergency Physicians
Ohio Children's Hospital Association
Ohio Department of Health
Ohio Emergency Management Agency
Ohio Emergency Nurses Association
Ohio Fire Chief's Association
Ohio Hospital Association
Ohio Medical Transportation Board
Ohio Nurses Association
Ohio Society of Trauma Nurse Leaders
Ohio State Firefighters Association

Goal Areas and Strategies

1. REGULATION AND POLICY

Seek comprehensive enabling legislation, and develop operational regulations, policies and procedures to provide an effective state-wide system of emergency medical and trauma care.

1.1 LEADERSHIP/GOVERNANCE

- 1.1.1 Seek legislation to assure that the Division of EMS and State EMS Board have the necessary authority to enforce existing or future statutory and regulatory requirements for the provision of EMS and the development of a statewide EMS System.

1.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

- 1.2.1 Develop recommended models for legislature that can be used as a foundation to establish lead agency authority to improve the care of patients with trauma, stroke, STEMI and other time-critical conditions.
- 1.2.2 Structure State EMS Board committee structure to support the implementation of the EMS Strategic.

1.3 FUNDING/RESOURCES

- 1.3.1 Develop proposal for the legislature to identify a stable and ongoing source of funding to adequately support all of the functions assigned to the EMS Board and the Division of EMS.
- 1.3.2 Redefine the EMS grant program to appropriately prioritize funding that will support system-wide development activities and strategic plan initiatives at the state, regional, and local levels with priority given to rural and underdeveloped EMS and trauma system components.

2. RESOURCE MANAGEMENT

Develop a method to identify, categorize, and coordinate resources necessary for establishment and operation of regionalized, accountable EMS and trauma systems.

2.1 LEADERSHIP/GOVERNANCE

- 2.1.1 Develop regulations and policies to ensure equal access to basic emergency care statewide.

2.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

- 2.2.1 Re-evaluate the current map and functions of the Regional Physician Advisory Board (RPAB) regions in Ohio to determine if there can be improvements by redefining roles and aligning with the State's Homeland Security regions or other functional model.
- 2.2.2 Develop a mechanism to review, evaluate and report emerging issues, new techniques, equipment and applications for providers in the field.
- 2.2.3 Establish a program to improve pre-hospital pediatric equipment in the field.

2.3 FUNDING/RESOURCES

- 2.3.1 Seek legislation and authority to establish a shared purchasing program for EMS equipment and supplies.

3. HUMAN RESOURCES AND EDUCATION

Ensure the EMS system has essential trained and certified/licensed persons to perform required tasks. Provide a comprehensive statewide plan for assuring a stable EMS workforce including consistent EMS training and recruitment/retention programs with effective local, regional and state support.

3.1 LEADERSHIP/GOVERNANCE

- 3.1.1 Champion diversity and cultural competency by developing appropriate educational material for primary EMS training programs and develop enrollment measures for minorities.
- 3.1.2 Continue to implement the EMS Education Agenda for the Future including the National EMS Scope of Practice Model as a foundation for the Ohio authorized EMS scope of practice, National EMS Education Standards, and national EMS education program accreditation.
- 3.1.3 Determine minimum service expectations and requirements for all areas of Ohio.
- 3.1.4 Develop programs to ensure the health and safety of all EMS personnel.

3.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

- 3.2.1 Conduct a formal needs assessment of the numbers, levels, and placements of EMS personnel required for optimal system performance as part of the current focus on recruitment and retention.
- 3.2.2 Develop certification total number goals by level for EMS to meet regional and State of Ohio needs based on accepted provider to population ratios.
- 3.2.3 Expand and increase the use of resources that help training institutions deliver high-quality, relevant education programs for our certificate holders.

3.3 FUNDING/RESOURCES

- 3.3.1 Seek grant funding opportunities to support the development of programs to increase diversity through EMS training programs.

4. TRANSPORTATION

Provide for a safe, reliable, and coordinated EMS transportation system, which incorporates regionalized, accountable systems of emergency care and which provides for the systematic delivery of patients to the most appropriate specialty care facilities.

4.1 LEADERSHIP/GOVERNANCE

4.1.1 Develop a plan for legislative action combining the current functions, authorities and resources for licensing and regulation of all EMS patient transport resources in a single agency in Ohio.

4.1.2 Establish a statewide standardized air medical activation guideline.

4.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

4.2.1 Implement regulatory changes that will require that all EMS patient transport services and EMS patient transport resources, regardless of ownership or service provision model, to undergo inspection and licensure.

4.2.2 Establish statute that requires that all ambulance drivers must be trained in emergency vehicle operations.

4.3 FUNDING/RESOURCES

[No Strategies Established at this time.]

5. FACILITIES

Ensure the seriously injured (or ill) patient is delivered in a timely manner to the closest appropriate facility, through a statewide and medically accountable system, including protocols and medical direction.

5.1 LEADERSHIP/GOVERNANCE

5.1.1 Establish an emergency department categorization system for pediatrics.

5.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

5.2.1 Develop and maintain a comprehensive database of EMS and trauma system resources that provides an accurate accounting of personnel, equipment, and services throughout Ohio.

5.3 FUNDING/RESOURCES

5.3.1 Seek funding to support and expand the current EMS and trauma system.

6. COMMUNICATIONS

Develop an effective communications system for EMS operations and provide the means by which emergency resources can be accessed, mobilized, managed, and coordinated.

6.1 LEADERSHIP/GOVERNANCE

- 6.1.1 Develop a plan for legislative action that provides authority to develop dispatch center and emergency medical dispatcher certification standards.
- 6.1.2 Seek statute that creates a dispatch subcommittee under a single state authority to establish medical priority dispatching standards and emergency medical dispatcher certification standards via standardized EMD training for dispatchers.

6.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

- 6.2.1 Develop a statewide communications plan to provide for an interoperable system that enables communications from dispatch to EMS transport resource, EMS transport resource to EMS transport resource, EMS transport resource to hospital, hospital to hospital, and EMS transport resource to public safety communications.

6.3 FUNDING/RESOURCES

- 6.3.1 Seek support through wireless 9-1-1 funds to counties and/or the EMS grants program for standardized EMD training for dispatchers.
- 6.3.2 Seek funding to support statewide interoperable communications for EMS.

7. PUBLIC INFORMATION AND EDUCATION

Develop a public awareness and education program about the EMS system, that addresses the components and capabilities of an EMS system; the public's role in the system; the public's ability to access the system; what to do in an emergency (e.g., bystander care training); and prevention issues (e.g., alcohol or other drugs, occupant protection, speeding, motorcycle and bicycle safety).

7.1 LEADERSHIP/GOVERNANCE

- 7.1.1 Educate citizens on critical policy issues (e.g., quality and patient safety,) and the advocacy process so they can be effective advocates for the profession and our patients.
- 7.1.2 Promote the EMS profession to high school students and undergraduate students through training institutions.
- 7.1.3 Continue meaningful collaboration/partnership with other organizations on behalf of the EMS profession.
- 7.1.4 Require recipients of EMS grant funds to report on the effectiveness of their injury prevention programs.

7.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

- 7.2.1 Develop plan to utilize social networks like Twitter and Facebook, to educate the public and EMS service providers regarding preparedness, injury prevention, and other aspects of the EMS and trauma system.

7.3 FUNDING/RESOURCES

- 7.3.1 Seek funding from the Office of Traffic Safety, the Office of Rural Health or other source to support a train-the-trainer course for a bystander care program.

8. MEDICAL DIRECTION

Develop an EMS system in which physicians are involved in all aspects of patient care, through planning, protocols, quality improvement programs and licensing/discipline.

8.1 LEADERSHIP/GOVERNANCE

- 8.1.1 Partner with physicians in all aspects of our pre-hospital healthcare system including strategy, management, oversight and implementation.
- 8.1.2 Develop plan for Legislature to expand the role of RPAB from an advisory role to an authoritative role under direction of the EMS Board and the State Medical Director.
- 8.1.3 Support the Ohio Chapter of the American College of Physicians (ACEP) in updating and enhancing the Ohio EMS Medical Director course.
- 8.1.4 Expand the mission of RPABs to include all time-critical diagnoses and require the development of regional triage criteria for STEMI, stroke, post-cardiac arrest, and pediatrics.

8.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

- 8.2.1 Seek liability protection and civil immunity for the RPABs to enable the provision of regional medical direction.
- 8.2.2 Seek statutory authority to develop and require medical director certification for all agency medical directors
- 8.2.3 Develop a statewide database to ensure compliance with minimum standards and increase medical director communication and require verification of medical director registration for all EMS agencies.

8.3 FUNDING/RESOURCES

- 8.3.1 Seek funding to support RPABs.
- 8.3.2 Develop a financial resource needs plan for Board consideration.

9. TRAUMA SYSTEMS

Develop and maintain a fully functional trauma system to provide a high quality, effective patient care system.

By vote of the EMS Board at its August 17, 2011 meeting, the goals established in “A Framework for Improving Ohio’s Trauma System” (as approved by the EMS Board, October 20, 2010) are incorporated into this document as Appendix B.

9.1 LEADERSHIP/GOVERNANCE

9.1.1 Refer to Goal 1 within “A Framework for Improving Ohio’s Trauma System.”

9.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

9.2.1 Refer to Goal 1 through 10 within “A Framework for Improving Ohio’s Trauma System.”

9.3 FUNDING/RESOURCES

9.3.1 Refer to Goal 1 through 10 within “A Framework for Improving Ohio’s Trauma System.”

10. EVALUATION

Implement a comprehensive evaluation program to effectively assess and to improve a statewide EMS system.

10.1 LEADERSHIP/GOVERNANCE

10.1.1 Develop collaboration with the Ohio Department of Health on data linkages and injury prevention priorities.

10.1.2 Evaluate the statewide availability of EMS and trauma resources to ensure that these resources are adequately matched to the evolving needs of the EMS and trauma system.

10.1.3 Develop quarterly dashboard to measure success and produce annual reporting mechanism for stakeholders.

10.1.4 Define and improve quality outcomes to “Best in Nation” for pre-hospital care.

10.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

10.2.1 Deploy action plan to fully use the Ohio Trauma Registry and EMS Incident Reporting System data to support statewide and national quality assurance and prevention efforts and to support future trauma system maturation.

10.2.2 Utilize data to review, modify, and monitor state and regional use of Ohio trauma triage guidelines, including over-triage and under-triage rates and make improvement recommendations to provide for the specialized triage and emergency care needs of children and the elderly.

10.3 FUNDING/RESOURCES

- 10.3.1 Develop financial resource needs plan for Board consideration.

11. PREPAREDNESS

Building upon the day-to-day capabilities of the EMS system, ensure that EMS resources are effectively and appropriately dispatched and pre-hospital triage, treatment, transport, tracking of patients and documentation of care appropriate for the incident is provided, while maintaining the capabilities of the EMS system for continued operations.

11.1 LEADERSHIP/GOVERNANCE

- 11.1.1 Establish regulations that clearly define the role of the State Division of EMS in preparedness planning and disaster response.
- 11.1.2 Improve state disaster planning to address the needs of children.
- 11.1.3 Support the Ohio Department of Health in the continued development of hospital preparedness planning.

11.2 PATIENT CARE/SERVICE EXCELLENCE/SYSTEM DEVELOPMENT

- 11.2.1 Develop a comprehensive data base of EMS resources to be utilized during multiple casualty or mass casualty incident.
- 11.2.2 Create policies defining the role of emergency medical services in public health surveillance and response.
- 11.2.3 Identify strategies and develop programs to protect the EMS workforce and their families during a disaster.
- 11.2.4 Develop guidance for Crisis Standards of Care.

11.3 FUNDING/RESOURCES

- 11.3.1 Promote the effective use of Hospital Preparedness Program and other grant funds targeted to increase medical facility surge capabilities.

APPENDIX A

2012 EMS Board Committee Structure

EMS System Development

Chair: Dr. John Pakiela

Staff Liaison: Ellen Owens

Responsibilities: Strategic Plan / Dashboard; database oversight (Ohio Trauma Registry and EMS Incident Reporting System); Goals Area # 4 – Transportation; Goal Area # 6 – Communications; Goal Area # 10 – Evaluation and Goal Area # 11 – Preparedness.

Policy and Regulations

Chair: Jim Davis

Staff Liaison: Melissa Vermillion

Responsibilities: Goal Area # 1- Regulation and Policy; legislative initiatives for EMS system development (in conjunction with ODPS legislative personnel); administrative rules; position statements; and policy related issues.

Resource Management

Chair: Daryl McNutt

Staff Liaison: Alan Boster

Responsibilities: Goal Area # 2 – Resource Management; Goal Area # 7 – Public Information and Education; grants.

Human Resources and Education

Chair: Pam Bradshaw

Staff Liaison: Linda Mirarchi

Responsibilities: Goal Area # 3 – Human Resources and Education; recruitment and retention; certification; accreditation; and training related issues.

Medical Oversight

Chair: Dr. Brian Springer

Staff Liaison: Sue Morris

Responsibilities- Goal Area # 5 – Facilities; Goal Area # 8 - Medical Direction; Scope of Practice issues; research.

Trauma System

Chair: Dr. Jonathan Saxe (elected by committee as outlined in Revised Code)

Staff Liaison: Tim Erskine

Responsibilities: Goal Area # 9 – Trauma Systems (implementation of goals established in “A Framework for Improving Ohio’s Trauma System”).

EMS-Children

Chair: Dr. Wendy Pomerantz

Staff Liaison: Joseph Stack

Responsibilities: Implementation of performance measures as established by federal EMS-C and included in the EMS-C grant; and work with other committees on EMS-C related action items from the Strategic Plan.

Firefighter and Fire Safety Inspector Training

Chair: Jim Steele (elected by committee as outlined in Revised Code)

Staff Liaison: Doug Orahood

Responsibilities: Provide advice and counsel to the Executive Director on Firefighter and Fire Safety Inspector training and certification issues.

APPENDIX B

“A Framework for Improving Ohio’s Trauma System”

**OHIO STATE BOARD OF EMERGENCY MEDICAL SERVICES
TRAUMA COMMITTEE**

**A FRAMEWORK FOR IMPROVING
OHIO'S TRAUMA SYSTEM**

Final Version
Approved by Ohio State Board of EMS
October 20, 2010

Purpose of the Document

This document is intended to serve as a reference for planning in regards to Ohio's statewide trauma system. Public, governmental and healthcare stakeholders should view this document as a guideline to ameliorate gaps that exist in the current trauma system. The work described in this document is not an attempt to undo any of the trauma system components created by House Bill 138 (123rd General Assembly).

Acknowledgements

Acknowledgement and thanks are given to the countless individuals and organizations whose dedication and tireless efforts helped create Ohio's trauma system. It is through these efforts that a system of care for injured patients continues to evolve in Ohio.

Ohio Trauma Committee members are:

Nancie Bechtel, RN – Emergency Nurse
John Crow, MD – Pediatric Trauma Surgeon – Chair of the Ohio Trauma Committee
William Crum – Victim Advocate
David Degnan, EMT-P – EMS Provider
Mark Gebhart, MD – Emergency Medicine Physician
Todd Glass, MD – Pediatric Emergency Medicine Physician
Vickie Graymire, RN – Trauma Center Administrator
Kathy Haley, RN – Trauma Nurse – Vice Chair of the Ohio Trauma Committee
Brian Kuntz, RN, EMT-P – Representative of a Non-Trauma Center Hospital
Edward Michelson, MD – Non-Trauma Center Hospital Administrator
Sidney Miller, MD – Burn Surgeon
Debra Myers, RN – Trauma Registrar
Greg Nemunaitis, MD – Physical Medicine and Rehabilitation Physician
Jennifer Piccione, RN – Representative of a Non-Trauma Center Hospital
David Pohlman, EMT-P – Operator of an Ambulance Company
Kevin Pugh, MD – Orthopedic Surgeon
John Ross, EMT-P – Fire Chief
Jonathan Saxe, MD – Trauma Surgeon
Michael Shannon, MD – Neurosurgeon
Diane Simon, RN – Trauma Center Administrator
Howard Werman, MD – Chief Air Medical Officer
Richard Ziegler, DDS – Oral and Maxillofacial Surgeon

Liaisons to the Committee:

Forrest Smith, MD – Ohio Department of Health
Carol Jacobson, RN – Ohio Hospital Association
Amy Wermert, MPH – Ohio Injury Prevention Partnership

Committee members and trauma stakeholders involved in the subcommittee for trauma system planning include:

Nancie Bechtel, RN
David Degnan, EMT-P
Gary Englehart, FACHE
Todd Glass, MD
Vickie Graymire, RN – Co-chair
Kathy Haley, RN – Chair
Anne Moss, RN
Deb Myers, RN
Jonathan Saxe, MD
Lynn Haas, RN – Co-chair
Diane Simon, RN
Amy Wermert, MPH
Patty Wilczewski, RN

Committee members and others who assisted in the development of this document:

Nancie Bechtel, RN – Co-editor
Carla Coffey, RN
Gary Englehart, FACHE
Tim Erskine – Ohio Department of Public Safety, Division of EMS
Todd Glass, MD
Vickie Graymire, RN
Kathy Haley, RN – Editor
Sid Miller, MD
Anne Moss, RN
Deb Myers, RN
Jonathan Saxe, MD
Lynn Haas, RN – Co-editor
Diane Simon, RN
Amy Wermert, MPH
Patty Wilczewski, RN

A complete list of participants in the March 12, 2008 trauma system assessment can be found in Appendix A.

OHIO TRAUMA SYSTEM VISION AND VALUES

Vision

The vision for the Ohio trauma system is a statewide system of high quality, cost effective trauma care for all adult and pediatric residents and visitors in the state. The system targets the prevention of unnecessary death and disability and improves the delivery of medical services throughout the trauma care continuum. To assure this capability, an inclusive statewide network exists that encompasses prehospital agencies, state-designated trauma centers and acute care facilities. The system is formally organized, integrated, and includes the elements of a comprehensive system including injury prevention and control; public information and education; trauma data systems and research; prehospital services including patient care resources; hospital patient care resources including medical rehabilitation; and ongoing system evaluation and improvement processes. The system of care is statewide in design, and state- and regionally-implemented. The system is led and monitored by the Lead Trauma Agency (LTA) which collaborates with all appropriate stakeholders to accomplish the goals of the trauma system. The system's participants and the LTA are accountable to each other.

Values

Ongoing stakeholder involvement from across the health care continuum, the general public and regional trauma systems is paramount to the success of a comprehensive state trauma system.

Problem Statement

As of 2010, Ohio has components of an effective trauma system but lacks a comprehensive system plan that ensures optimal care for injured patients. The current state trauma system is deficient in key aspects consistent with effective public health models. These aspects include:

- Clear oversight
- Accountability among system participants
- Ongoing assessment of risk-factors and gaps
- Universal (statewide) and consistent provision of care/services to victims
- Evaluation & regulation of existing services
- Reassessment

Goal

The overall goal of the Ohio trauma system is to deliver high quality, cost-effective care to trauma patients. The state trauma system shall encompass state and regional coordination of a formal, organized and inclusive network of trauma care providers in order to:

- Provide leadership and direction for system development, ongoing evaluation, and improvement;
- Prevent unnecessary death and disability; improve and enhance the delivery of trauma services to residents and visitors in Ohio;
- Pursue funding mechanisms for trauma system implementation and maintenance;
- Pursue public awareness and prevention activities to decrease the incidence of injury;
- Develop consistent, relevant and accessible trauma education resources statewide;
- Design an integrated system of care from event recognition to full patient recovery, including medical rehabilitation;
- Improve and enhance the delivery of prehospital EMS and hospital trauma services to residents and visitors in Ohio;
- Establish standards for Ohio trauma system participation and mechanisms to ensure continuing compliance with system standards;
- Coordinate the trauma system with surrounding states;
- Assure accountability, objectivity, and relevance of the trauma system through integrated systems, data and quality management processes;
- Develop a system for trauma related evidence-based research;
- Ensure that special needs and high-risk populations are identified and their specific needs accommodated;
- Ensure integration of the trauma system plan with the state disaster plan;
- Assess educational needs of the constituents of the trauma system assuring there is a cohesive educational plan that addresses the needs of stakeholders, care providers and the public.

TRAUMA SYSTEM INTRODUCTION

What does a trauma system mean to the public?

For severely injured patients, the trauma system engages participants to get to the “right hospital, in the right manner, in the right amount of time.” These three factors optimize chances for trauma patient survival while minimizing chances for severe disabilities and death. Trauma is *the* leading cause of death for persons between the ages of 1 and 44 years of age and is a leading cause of death and disability among all age groups.

Multiple research studies and experience in other state trauma systems have demonstrated a person’s chances of dying or suffering a severe, lifelong disability are reduced if they are injured in a state with an organized trauma system.

History of trauma system development

The development of comprehensive emergency care systems for the ill and injured began in the United States over forty years ago. Ohio’s trauma system development has been ongoing for over three decades. An initial focus on the development of prehospital emergency service capacity has evolved to a view that encompasses comprehensive and integrated emergency medical services (EMS) and trauma systems. Key national and state development events include the following.

- In 1966, the National Academy of Science’s “White Paper” titled *Accidental Death and Disability: The Neglected Disease of Modern Society* identified the need for a system of trauma care including prehospital and hospital care.
- In 1973, the *National Emergency Medical Services Act* (PL 93-154) was enacted to stimulate the development of EMS systems. Fifteen system elements were identified as essential elements of an EMS system.
- The *National Trauma Care Systems Planning and Development Act* of 1990 (PL 101-590) encouraged state governments to develop, implement and improve trauma systems. States were charged with developing a trauma care plan delivered via a system approach. As of 2010, over 40 states have components of a statewide trauma system.
- Ohio’s EMS development can be traced to 1969 when the Heartmobile was pioneered. This vehicle was the first in the U.S. specifically designed as a mobile coronary care unit. The Heartmobile helped initiate the beginnings of advanced prehospital care across the nation.
- In the 1980’s, Ohio hospitals were included in a voluntary, loosely coordinated trauma system: larger urban hospitals self-identified themselves as regional trauma centers. There was no formal verification of trauma care among hospitals.
- In 1990, the National Highway Traffic Safety Administration (NHTSA) was invited to conduct a review of the Ohio EMS system and developed recommendations for future state system development that included trauma care.
- In 1992, the Division of Emergency Medical Services was established within the Ohio Department of Public Safety, and the State Board of Emergency Medical Services was

created by the passage of Senate Bill 98, to improve comprehensive development and implementation of prehospital systems of care.

- In 1999, the Ohio Trauma Registry was established within the Division of Emergency Medical Services. Hospitals caring for injured patients who meet defined inclusion criteria are required to submit data to the Ohio Trauma Registry.
- In July 2000, a bill introduced in the House of Representatives (HB 138, 123rd General Assembly) was signed into law by Governor Taft. This established a legally mandated statewide trauma system, created a statewide trauma committee called the Ohio Trauma Committee, defined “trauma victim,” and set official verification standards for trauma centers. The Ohio Trauma Committee was charged with assisting the State Board of Emergency Medical Services in developing rules and guidelines on a variety of trauma system elements including prehospital triage of victims to trauma centers; restrictions on admission of trauma patients by non-trauma centers’ physicians; and oversight of EMS quality of care and provider education.
- In addition to establishing the state trauma system, HB 138 created two commissions to study injury prevention and post-critical trauma care. It also mandated seven special studies to examine trauma care in the state as it existed at that time.
- From 2000-2002, the Ohio Trauma Committee developed recommendations for field triage to trauma centers and trauma registry risk adjustment. These recommendations were promulgated as rules in the Ohio Administrative Code by the State EMS Board.
- In 2002, the Director of the Department of Health directed a workgroup to focus on recommendations for the creation of a trauma center designating authority in Ohio. A provisional trauma center designation process was implemented.
- In 2005, a trauma rehabilitation registry was established with the Division of Emergency Medical Services as a module of the Ohio Trauma Registry. This registry was the first of its kind in the nation and was developed to track and understand longer-term outcomes of trauma victims.
- In 2007, the Ohio Department of Health convened the Ohio Injury Prevention Partnership (OIPP) with funding from the Centers for Disease Control and Prevention. The OIPP is a statewide group of professionals representing a broad range of agencies and organizations concerned with building Ohio’s capacity to address the prevention of injury.
- In 2008, the Ohio Trauma Committee conducted a wide-ranging assessment of the statewide trauma system in order to more effectively carry out its legislative mandate of advising and assisting the State Emergency Medical Services Board in matters related to trauma care. The Model Trauma System Planning and Evaluation document created by the federal government was used as the method for conducting this assessment.
- In 2009, a workgroup was formed by the Ohio Trauma Committee to develop a strategic plan for Ohio’s trauma system based on the results of the system assessment. The workgroup first met in February, 2009.
- In May 2009, a stakeholder meeting was held to evaluate the state trauma system and serve as the foundation for the remainder of this document. Details of the process are described in the subsequent section, *Ohio’s Trauma System Assessment*.

OHIO TRAUMA FACTS AND SYSTEM ACCOMPLISHMENT

(AS OF JULY 2010)

- Ohio has forty-three verified trauma centers as of July 2010. These include seventeen Level III trauma centers, twelve Level II trauma centers, and fourteen Level I centers. Six of the Level I and II trauma centers are pediatric-specific.
- The state has statewide trauma triage protocols that require EMS providers to transport severely injured patients directly to verified trauma centers. Certain conditions allow transports to non-trauma centers at the discretion of EMS providers. Variants to these trauma triage protocols have been created to adjust for regional differences.
- Acute care hospitals are required to have protocols that address the emergency care of trauma patients and their appropriate transfer to a trauma center. Trauma centers have transfer agreements with acute care facilities to ensure continuity of care and appropriate trauma patient transfers.
- Some EMS agencies have begun trauma performance improvement (PI) and peer review activities in order to continuously improve trauma care in the prehospital setting. There is no external oversight for EMS agencies' PI activities.
- Continuing education standards for EMS providers have been updated to place more emphasis on the educational needs for trauma care. With every certification renewal cycle, emergency medical technicians at the basic, intermediate and paramedic levels in the state are required to have eight hours of documented trauma education including the State of Ohio's trauma triage criteria.
- The seven special studies required by HB 138 are complete. These reports are available at <http://ems.ohio.gov>.
- The EMS and Trauma Grants program that had been funding EMS training and equipment since the early 1990's has expanded to include funding of trauma-related research in three areas: injury prevention, trauma rehabilitation, and trauma medical procedures. These research grants have resulted in numerous publications in peer-reviewed journals.
- Two temporary commissions set up by the Ohio Department of Health to study injury prevention and post-critical trauma care have since completed their reports. These two reports are available at <http://ems.ohio.gov> and are foundational documents for further improvements in the trauma system, specifically in areas of injury prevention and rehabilitation.
- In 2008, the Ohio Trauma Committee evaluated the special needs of the geriatric trauma patient and made recommendations to triage geriatric patients with specific indicators to trauma centers. These were incorporated in to O.A.C. 4765-14.

OHIO'S TRAUMA SYSTEM ASSESSMENT

Summary of Work

On March 12, 2008, the Ohio Trauma Committee convened to assess Ohio's statewide trauma system. A general assessment was conducted on the system's current strengths and weaknesses, as well as potential opportunities and threats to future development. The Committee reviewed the *Model Trauma Systems Planning and Evaluation* document (MTSPE) created by the Health Resources and Services Administration of the U.S. Department of Health and Human Services. The MTSPE contains 113 indicators by which a state trauma system may be evaluated. The MTSPE has been used by twenty-five other states and many regions within states to evaluate their trauma systems. It was adopted by the American College of Surgeons' Committee on Trauma (ACS-COT) as a tool for assessing trauma systems. (The ACS is the verifying body for Ohio's trauma centers.) The Ohio Trauma Committee made the decision to utilize the MTSPE to assess Ohio's trauma system. The eventual goal was to produce a comprehensive guidance document for further development of Ohio's trauma system in order to advance the care of trauma victims.

In November 2007, at the request of the Ohio Trauma Committee, the Ohio Society of Trauma Nurse Leaders (OSTNL) met to design an assessment process for Ohio utilizing the MTSPE. The OSTNL developed a template that evaluated Ohio's current trauma system against the MTSPE. This served as the foundation for a multi-stakeholder assessment using the MTSPE, which was conducted in a day-long retreat with the Ohio Trauma Committee and OSTNL. Other participating stakeholders included members from the Ohio COT, the Ohio Department of Health, the Ohio Emergency Management Agency, and the Ohio Hospital Association. Scoring on the MTSPE was accomplished by consensus of the stakeholders present at the retreat.

Over the next several months, the MTSPE assessment was a major agenda item for work at bimonthly meetings of the Ohio Trauma Committee. This work was completed by multiple stakeholders from a variety of agencies and involved a step-by-step process that provided the following:

- An evaluation of the implications of the scores for each section against the individual indicators of the MTSPE
- Categorization of each indicator by importance or priority
- Ranked relative ease of accomplishment
- Ranked anticipated cost

An additional outcome of this phase of the assessment was the recognition that a significant amount of dedicated work would be required to reach the project goal of producing a comprehensive guidance document that would drive specific aspects of improving the trauma system, both in the near-term and longer-term future. To address the amount of work required, the OSTNL took the lead on reviewing the assessment information and organized it according to MTSPE sections. This document was provided to the Ohio Trauma Committee as a recommended template for a future stakeholder meeting.

The next step for the Ohio Trauma Committee was the development of a dedicated steering subcommittee. The steering committee was comprised of volunteers from the Ohio Trauma Committee and included various professional backgrounds: physicians, nurses, hospital

executives, and others representing different constituencies of the Ohio Trauma Committee. This group, along with occasional invited guests, met on a bi-monthly basis, starting in January 2009. In addition, at several points, input was solicited for specific sections of the assessment and plan from other stakeholders within the state.

With the specific goal of this subcommittee being the development of a written Trauma System Plan for Ohio, an additional directive by the Ohio Trauma Committee was to review other states' trauma system plans known to be developmentally advanced relative to Ohio. This research was used to draft an outline of an Ohio Trauma System Plan by the subcommittee. The intent was to integrate the MTSPE indicators with functional components of a trauma system.

The result of this work is a document divided into eight major goals. Each goal lists the current and desired status of that goal's subject matter. Within the plan of action specific MTSPE indications are identified according to priority. Each indicator is associated with timeframes, leadership, partners, and funding to be determined by the work group during finalization. Each strategy has a measure of success to ensure appropriate outcomes are reached. The major goals are identified below.

- Goal 1: Leadership
- Goal 2: Injury Prevention
- Goal 3: Emergency/Disaster Preparedness Plan
- Goal 4: Prehospital Care
- Goal 5: Definitive Care – Acute Care Hospitals and Trauma Centers
- Goal 6: Definitive Care – Rehabilitation
- Goal 7: Evaluation, Quality Management & Performance Improvement
- Goal 8: Trauma System Registry Infrastructure
- Goal 9: Professional Education and Public Information
- Goal 10: People with Functional Needs

This Trauma System Plan for Ohio has been reviewed and approved by the membership of the Ohio Trauma Committee. The utility of this document is that it summarizes the information available from a wide range of topic experts across the State of Ohio. It explicitly defines overarching goals that have been identified nationally as key to the development of a robust and responsive trauma system. It incorporates a ranking system that allows the opportunity for leaders and policy makers to strategically plan for development and implementation of the various goals. Additionally, it is constructed to provide a resource to the experts and leadership in the various organizations and agencies across the state responsible for each goal area. It is intentionally non-prescriptive to avoid constraining innovation and development within current programs.

TRAUMA SYSTEM PLAN

Key components of an integrated state trauma system are described as the following goals.

Goal 1: Leadership – Have a viable, active state lead agency with authority, responsibility and resources to plan, implement and evaluate an inclusive trauma system for Ohio.

Goal 2: Injury Prevention – Have a state trauma system that is an active partner in a state-coordinated system for the reduction of injury-related morbidity and mortality.

Goal 3: Emergency/Disaster Preparedness – Have a trauma system prepared to respond to emergency and disaster situations in coordination with state disaster plans.

Goal 4: Prehospital Care – Evaluate and maintain guidelines specific to the transport of trauma patients that result in timely and safe delivery to trauma care.

Goal 5: Definitive Care – Acute Care Hospitals and Trauma Centers – Establish a statewide network of trauma centers that meets minimum state standards for operation and provision of quality trauma care in coordination with all other trauma system participants.

Goal 6: Definitive Care – Rehabilitation – Establish rehabilitation centers as active participants in Ohio's trauma system resulting in coordinated post-acute care for trauma victims.

Goal 7: Evaluation, Quality Management & Performance Improvement – Establish statewide and regional system evaluation, quality management, and performance improvement process.

Goal 8: Trauma System Registry Infrastructure – Evaluate and maintain an accurate and accessible injury data system, including a trauma registry, to support trauma system evaluation, performance improvement, public health planning, injury prevention, and outcomes research.

Goal 9: Professional Education and Public Information – Integrate trauma education and public information into all aspects of the trauma system.

Goal 10: People with Functional Needs – Ensure that special needs and high-risk populations are identified and their specific needs accommodated.

Goal 1: Leadership

Have a viable, active state lead agency with authority, responsibility, resources and funding to plan, implement and evaluate an inclusive trauma system for Ohio.

Current status: The Ohio Trauma Committee serves as an advisory committee to the EMS Board with legislative mandate limited to the establishment of triage guidelines. Trauma centers must be verified by the American College of Surgeons to function as a trauma center. The State has no enforcement authority. State designation support services are not comprehensive.

Desired status: Legislative authority (statute and regulations) exists to identify the Lead Trauma Agency (LTA) and its organizational structure. The LTA plans, develops, implements, manages, evaluates and administers the funding of the trauma system and its component parts. The LTA works through all appropriate stakeholders to accomplish the goals of the trauma system. The LTA informs and educates state, regional, county and local constituencies and policy makers to foster collaboration and cooperation for system enhancement and injury control.

Plan of action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
1.1: An external assessment is conducted on the state-wide trauma system. (MTSP indicator 103.4)	TBD	TBD	TBD	TBD	<ul style="list-style-type: none">● Written document with specific recommendations on system development.
1.2: A formal assessment of the needs of the various constituencies (i.e. media, public officials, general public, insurance providers, medical community) of the trauma system has been completed. (MTSP indicator 105.2 – 105.7)					<ul style="list-style-type: none">● Plans have been developed to meet these specific needs.● An effective communication plan for each constituent group is operationalized. (MTSP indicator 207.1, 207.2, 207.4)● Publish and distribute a Trauma Annual Report. (MTSP indicator 304.1)
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
<p>1.3: Legislative authority (statute and regulations) exists to identify the Lead Trauma Agency (LTA) and its organizational structure. The LTA plans, develops implements, manages, and evaluates the trauma system and its component parts. (MTSP indicator 201.1)</p>					<p>Legislative authority exists.</p> <ul style="list-style-type: none"> ● LTA is established with a defined organizational structure. (MTSP indicator 202.1, 202.3) ● There is a state-wide Trauma Medical Director with a written job description and whose specific legal authorities and responsibilities are formally granted by law or by administrative rule. (MTSP indicator 310.13) ● There is a state-wide EMS system medical director with a written job description and whose specific legal authorities and responsibilities are formally granted by law or by administrative rule. (MTSP indicator 302.3) ● Operational policies and procedures and trauma system performance standards are in place. (MTSP indicator 201.3, 201.4) <p>Compliance is actively monitored.</p>
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
<p>1.4: Based on needs assessment, a trauma system plan has been adopted:</p> <p>1.4.1: Match resource allocation to need. (MTSP indicator 303.2, 303.5)</p> <p>1.4.2: Integrate various state and regional components of the trauma system (i.e. EMS, trauma centers, hospitals, emergency preparedness, rehabilitation) into regional trauma systems that have formal relationships. (MTSP indicator 303.2)</p> <p>1.4.3: Identify and manage personnel and equipment</p> <p>1.4.5: Identify and manage financial resources and operational budgets to support and coordinate state and regional plans.</p> <p>1.4.6: Develop an enhanced state-wide 9-1-1 system. (MTSP indicators 203.1 – 203.4; 203.7; 204.1-204.2; 204.4-204.5, 302.7)</p>					<ul style="list-style-type: none"> ● A trauma system plan has been adopted and developed with multi-agency groups and endorsed by those agencies that address our strategies.
<p>1.5: LTA, in cooperation with various licensing and certifying boards / agencies, conducts regular operational assessment of all components of the trauma system to ensure compliance with laws, rules and regulation, clinical care protocols and other responsibilities as identified in the trauma plan. (MTSP indicators 310.5, 310.5, 310.8, 311.1 – 311.3, 311.5, 311.6)</p>					<ul style="list-style-type: none"> ● A mechanism exists to evaluate individual and institutional trauma care services across the entire trauma care system through performance improvement. ● All individuals and institutions receive a report regarding status / compliance (some of these functions may be completed by relevant licensing agencies). ● A mechanism is in place for LTA to facilitate resolution of non-compliance /complaints in collaboration with appropriate agencies.
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
1.6: The LTA will analyze the trauma system function across all provider organizations in order to develop a geographically rational system of regional responsibility to facilitate communication, administration, coordination and improvement of care. (MTSP indicators 103.1, 105.2-105.7, 207.1)					<ul style="list-style-type: none"> • All counties are included in a well organized regional trauma system by a timeframe determined by the LTA.
1.7: The LTA administers the funds necessary to operate the state trauma system					<ul style="list-style-type: none"> • LTA resources match system needs • System resources match population needs • Hospital resources meet patient needs

Goal 2: Injury Prevention

Active partnership between the state trauma and injury prevention systems focusing on the reduction of injury morbidity and mortality.

Current Status: Injury prevention programs exist at the state, regional, county, and local levels, as well as at all trauma centers. These programs have a forum to meet through the Ohio Injury Prevention Partnership (OIPP). Voluntary, state-level injury prevention and control plans focused on high priority injuries are being developed. Monitoring of program outcomes and injury prevention effectiveness occurs only sporadically by local injury prevention programs. Local programs are not guided by a strategic state plan. Coordination of injury prevention programs with the state trauma system is limited.

Desired Status: The written injury prevention and control plan is fully developed and coordinated with interested agencies and community health programs. State, regional, county and local level injury plans are data driven with a focus on high priority injuries. Specific goals with measurable objectives are incorporated into the injury plan. Trauma system and injury prevention leaders regularly inform and educate policy makers on trauma system development and injury prevention. Injury coalitions and trauma-specific statewide multidisciplinary, multi-agency advisory committees are integrated and work collaboratively to inform the community and to educate community leaders. The trauma system participants have been trained in the use of effective injury prevention strategies and analytical tools. These tools are used routinely to monitor and report on the outcome of implemented strategies and on the effectiveness of injury prevention and control programs within the trauma system. A process is in place to facilitate access to data for evaluation and research.

Plan of Action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
2.1: The development of statewide injury prevention plans on high priority injuries. (MTSP Indicators 101.6 & 203.5) (OIPP Infrastructure Goal #2)	TBD	TBD	TBD	TBD	● Injury plans are data driven with a focus on evidence-based programs. Specific goals with measurable objectives constitute the plans. Stakeholders will participate in the implementation and evaluation of the plan.
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
2.2: The trauma system and public health system have established linkages with an emphasis on population-based public health programs, surveillance and evaluation of acute and chronic traumatic injury and primary and secondary injury prevention programs. (MTSP Indicators 101.4 & 101.6, 208.1) (OIPP Infrastructure Goal #5)					<ul style="list-style-type: none"> ● Sharing of data between systems exists at regularly scheduled intervals as deemed appropriate by participating groups. (MTSP Indicator 208.1)
2.3: Evidence-based injury prevention strategies are utilized at the state, regional, county and local trauma system levels. (MTSP Indicator 306.2) (OIPP Infrastructure Goal #4)					<ul style="list-style-type: none"> ● The trauma system is an active participant in community activities, evidence-based injury prevention and control programs and the evaluation of program effectiveness. ● Evidence-based injury prevention resources are distributed.
2.4: Increase the knowledge and skills (capacity) of injury prevention personnel. (OIPP Infrastructure Goal #4)					<ul style="list-style-type: none"> ● Injury prevention training is developed with incorporation throughout the state.
2.5: Support public health policies designed to advance injury and violence prevention in Ohio. (OIPP Infrastructure Goal #2)					<ul style="list-style-type: none"> ● Position statements developed for injury prevention policies are available and utilized.
2.6: Injury prevention programs use trauma data to develop intervention strategies. (MTSP Indicator 205.4) (OIPP Infrastructure Goal #1)					<ul style="list-style-type: none"> ● Trauma reports on the status of injury and injury mechanisms are easily accessible and routinely available to injury prevention personnel. Trauma data is routinely used to align injury prevention programs to target the greatest need. ● Existing databases (death, risk factor, fatality review, hospital, EMS, trauma, child maltreatment, crime, traffic crash, poison control, brain injury, etc) are compiled, assessed for quality and linked (208.1).

Goal 3: Emergency/Disaster Preparedness

The trauma system is well-integrated into state, regional county and local disaster plans. The trauma system is prepared to respond to emergency and disaster situations in coordination with state, regional, county and local disaster plans.

Current Status: The Ohio Emergency Management Agency (EMA), all county EMAs, local EMAs, and many facilities have plans and procedures in place for all-hazards incidents. These plans are not integrated with the state trauma system and do not address the roles and responsibilities of trauma centers in a disaster situation. Current drills and exercises do not test the trauma system.

Desired Status: . The emergency management and trauma systems are well-integrated, and operational procedures have been implemented, tested, and evaluated for disaster operations. System participants meet regularly and are familiar with the operational plans of both areas, and data from the trauma system and from the emergency management system are shared. Roles and resources of trauma centers and acute care hospitals during disaster events are well-defined and incorporated into state, regional, county and local plans.

Plan of Action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
3.1: Create plans to ensure the EMS, trauma and the all-hazards medical response systems are integrated and operational within existing individual, county, regional and statewide disaster plans. (MTSP indicator 305.1)	TBD	TBD	TBD	TBD	<ul style="list-style-type: none">• All-hazards exercises and simulated incident drills have the cooperation and participation of the trauma system or trauma centers at the local, regional and state levels.• Interactions of the lead trauma agency and emergency management agencies are addressed. Close coordination with clearly defined roles, goals and objectives are included in plans. (MTSPE Indicator 203.6)• The trauma system is actively involved in the support of ESF-8
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
3.2: All-hazards exercises routinely include trauma-producing events (natural, unintentional and intentional) that test the capabilities of the trauma system. (MTSP Indicator 305.2, 208.2)					Exercises and training in all-hazards responses which test and evaluate trauma center, acute care hospital, and trauma system surge capacity are conducted regularly. <ul style="list-style-type: none"> • Roles of trauma centers and non-centers during a disaster events are well defined and incorporated into the regional/local plan.
3.3: The lead trauma agency has access to additional materiel and personnel for large-scale traumatic events. (MTSPE indicator 305.3)					<ul style="list-style-type: none"> • The lead trauma agency has worked with national, state, regional, county and local agencies to create caches of equipment and materials for use in prehospital and hospital care in large-scale traumatic events. Plans for utilizing additional personnel in these events are also in place. • Caches of supplies, equipment and pharmaceuticals are available to trauma centers and acute care hospitals when needed.

Goal 4: Prehospital Care

Evaluate and maintain guidelines specific to the transport of trauma patients that result in timely and safe delivery to trauma care.

Current status: The emergency medical system exists within the state of Ohio with regional variability. A well-established EMS Board exists with authority over licensure for emergency medical services and fire personnel, protocol development, prehospital triage criteria, and other priorities. There is an identified State EMS Medical Director, Regional Physician Advisory Boards, and trauma-specific triage and transport guidelines. There is trauma-specific prehospital education. There are highly variable regional linkages between EMS and trauma systems. There is no state trauma system medical director actively involved with the development, implementation, and evaluation of protocols. There is no organized trauma EMS performance improvement process at the state level.

Desired status: The trauma system is supported by the EMS system that includes communication, medical oversight, prehospital triage and transportation. The trauma system, EMS system and public health agencies are well integrated with a sophisticated trauma / EMS performance improvement system. There is a designated state trauma medical director.

Plan of action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
4.1: There is a well-defined trauma system with medical oversight integrating the specialty needs of the trauma system with the medical oversight for the overall EMS system. (MTSP indicator 302.1)	TBD	TBD	TBD	TBD	<ul style="list-style-type: none">● Formal, written procedure exists delineating the responsibilities and relationship of the state trauma medical director and the state EMS medical director.● In cooperation with the prehospital certification and licensure authority, guidelines exist for prehospital personnel for initial and ongoing trauma education and training; including trauma-specific courses and those courses that are readily available throughout the State. (MTSP indicator 310.1)
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
<p>4.2: The trauma system medical director is actively involved with the development, implementation, and ongoing evaluation of EMS system protocols to ensure they are congruent with the trauma system design. (MTSP indicator 302.4)</p>					<ul style="list-style-type: none"> ● Development of EMS / Trauma system protocols, with clear collaboration between the trauma system medical director and the state EMS medical director, with protocols congruent with the trauma system plan. ● Local, regional and state medical oversight exists. Effective performance improvement process of the EMS system for trauma triage, communications, treatment, and transport is in place. (MTSP indicator 302.5) ● Sufficient and well-coordinated transportation resources exist to ensure EMS providers arrive at the scene promptly and expeditiously transport the patient to the correct hospital by the correct transportation mode. (MTSP indicator 302.8)
<p>4.3: There is clearly defined, cooperative, and ongoing relationship between the hospital trauma medical directors and local / regional EMS directors (MTSP indicator 302.2).</p>					<ul style="list-style-type: none"> ● A formal organizational structure exists at the local and regional level, supporting the collaboration and medical oversight of trauma triage, education, communication, treatment and transport.

Goal 5: Definitive Care – Acute Care

Establish a statewide and regional network of trauma care to include trauma centers and acute care facilities. These would meet minimum state standards for operation and provision of quality trauma care in coordination with all other trauma system participants.

Current Status: There are a large number of trauma centers, verified by the ACS or operating under provisional designation, in the state. Trauma center status is voluntary and no authority exists to control the placement of trauma centers. Coordination among trauma centers and between trauma centers and non-trauma centers is not standardized and non-systematized. Physicians at non-trauma center hospitals are prohibited from admitting trauma victims as defined by the Ohio Revised Code. Secondary triage of trauma victims is facility determined and there is no mandatory review of the criteria. There is no regulatory oversight of trauma care in trauma centers or in non-trauma centers and performance improvement is not mandated. Some voluntary, cooperative regionalization of care occurs in the state.

Desired Status: Acute care facilities, regardless of trauma designation, are integrated into a resource-efficient, inclusive network that meets required standards and provides optimal care for all injured patients. There are clearly defined roles and responsibilities of all acute care facilities treating trauma and facilities that provide care to specialty care populations. A network of comprehensive regional trauma systems exists.

Plan of Action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
5.1: Assure an inclusive trauma network which recognizes the contribution of all acute care hospitals in the treatment of the trauma victim. 5.2: Trauma center development is encouraged and enabled in resource poor regions.	TBD	TBD	TBD	TBD	<ul style="list-style-type: none">• Continued verification of Ohio trauma centers.• Written and approved process exists for non-trauma center designation.
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
5.4: There is a procedure for communications among medical facilities when arranging for interfacility transfers including contingencies for radio or telephone system failure. (MTSPE Indicator 302.9)					<ul style="list-style-type: none"> • All hospitals, trauma centers and acute care hospitals provide standardized care in the first 30 minutes after patient arrival. • Development of a standardized reporting form with regional reporting and monitoring. • Regional performance improvement process exists that involves all hospitals within a regional system. • Bi-directional, closed loop communication exists regarding follow up to transferring facilities in regards to patient care and outcome.
5.5: When injured patients arrive at a medical facility that cannot provide the appropriate level of definitive care, there is an organized and regularly monitored system to ensure the patients are expeditiously transferred to the appropriate, system-defined trauma facility.					<ul style="list-style-type: none"> • An organized system of monitoring inter-facility transfers exists within the trauma system (MTSPE Indicator 303.4).
5.6: Assess and ensure that injury trauma and severity are matched to resources available for timeliness and quality of care.					<ul style="list-style-type: none"> • Over- and under-triage reaches acceptable levels in standardized statewide methodology across the state. • Statewide feedback mechanism for correction of over- and under-triage is established and functional. (MTSPE Indicator 303.1)
5.7: Set appropriate education standards for physicians and nurses who routinely participate in trauma care.					<ul style="list-style-type: none"> • Baseline standards of education for nurses and physicians exist across the state. • A statewide performance improvement process to monitor the achievement of the education standards exists. (MTSPE Indicator 310.3 through 310.7)

Goal 6: Definitive Care – Rehabilitation

Establish rehabilitation centers as active participants in Ohio's trauma system resulting in coordinated post-acute care for trauma victims.

Current status: Rehabilitation is available to most trauma patients. Trauma centers work with rehabilitation programs on an individual, non-standardized basis without a systematized approach. Some in-patient rehabilitation data is submitted to the Ohio Trauma Registry, but outpatient data is not. The data has not been validated, nor is it routinely used in system evaluation reports.

Desired status: A well-integrated program of rehabilitation is available for all trauma patients. Rehabilitation programs are included in the trauma system plan, and trauma centers work closely with rehabilitation centers and services to ensure quality outcomes for trauma patients. The trauma plan integrates rehabilitation centers and outpatient rehabilitation services. Trauma centers integrate rehabilitation care early in the patient's treatment plan. Rehabilitation data, including final disposition, functional outcome, and rehabilitation costs, are collected. These data are routinely submitted to trauma centers and to the Ohio Trauma Registry for inclusion in system evaluation reports. Rehabilitation personnel are fully integrated into trauma system performance improvement processes.

Plan of Action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
6.1: Establish leadership for rehabilitation services within the inclusive trauma system. (MTSP Indicator 308.1) 6.2: Review, revise, and implement the recommendations of the 2003 Post Critical Trauma Commission Report. 6.3: Maintain standard of care and ensure continual improvement of rehabilitation services.	TBD	TBD	TBD	TBD	<ul style="list-style-type: none"> ● A rehabilitation oversight body is present, meeting at least twice a year, by end of year 2. ● Rehabilitation services in the state are congruent with the needs of the trauma victims. Specific measurements to be defined. ● OTR-Rehabilitation data is used to evaluate post-traumatic rehabilitation care and patient outcomes. ● Formal written transfer agreement between all trauma centers and inpatient rehabilitation facilities.
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
<p>6.4: Rehabilitation centers and outpatient rehabilitation services provide quality data on trauma patients (MTSP Indicator 308.2).</p> <p>6.5: Rehabilitation oversight body to define and oversee the rehabilitation database.</p> <p>6.6: Development of a comprehensive rehabilitation database that is integrated within the Ohio Trauma System Registry.</p>					<ul style="list-style-type: none"> ● Oversight body defines the staging of facilities that care for a post-injury rehabilitation patient who will be reporting data. ● Ohio trauma rehabilitation data is used to evaluate post-traumatic rehabilitation care and patient outcomes with an annual report submitted to the LTA.

Goal 7: Evaluation, Quality Management & Performance Improvement

Establish statewide and regional system evaluation, quality management, and performance improvement process throughout the continuum of care.

Current status: Reports on varying aspects of injury prevention and clinical care are created in isolation at state, regional and local levels. These are not integrated at any level. Analysis is fragmented, uncoordinated and largely unshared with other stakeholders.

Desired status: Processes exist to evaluate the performance of all aspects of the trauma system. These include analysis of the outcomes of population-based injury prevention services; access to and availability of services, with emphasis on special populations; quality of services across the full spectrum of trauma care providers; and outcomes of care. Evidence-based performance improvement indicators exist and performance goals have been set. Detailed feedback on quality and performance is provided to pertinent stakeholders, including the LTA. Overall assessments of the trauma system are provided to the public and the media.

Plan of action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
7.1: Establish a performance improvement body which is multidisciplinary in nature and oversees all aspects of the trauma system's quality and performance.	TBD	TBD	TBD	TBD	<ul style="list-style-type: none"> • Regular meetings, analysis of data and reports are created providing feedback to all trauma system components. • System performance outcome goals have been created based on the baseline analyses which are time-specific, quantifiable and measurable. (MTSPE Indicators 202.4, 306.1, 306.3, 307.2, 309.4, 310.11, 310.12) • Inventory and a gap analysis are completed and reported to stakeholders and the public (MTSPE Indicators 103.2). • Trauma data reports are generated and are disseminated to system leaders and stakeholders to evaluate and improve system performance effectiveness. (MTSPE Indicator 105.1) • Develop process of integrating outcome of trauma-related research into clinical care and trauma system refinement improvement.

Goal 8: Trauma System Registry Infrastructure

Evaluate and maintain an accurate and accessible trauma registry to support trauma system evaluation, performance improvement, public health planning, injury prevention, and outcomes research.

Current Status: Injury data is collected from EMS, acute care hospitals, and inpatient rehabilitation facilities. Data from hospitals and rehabilitation facilities is limited to serious injuries (i.e. hospitalization greater than 48 hours). Currently, financial and death certificate/coroner's data are not collected. There is limited data regarding emergency department and hospital discharge. Data has been linked probabilistically but relevant data (i.e., Social Security number, patient name) to make deterministic linkage is not collected. At the system level, collected data is available to support trauma system evaluation, performance improvement, public health planning, injury prevention, and outcomes research; however, the frequency of these data analyses is low. A comprehensive injury surveillance system does not exist.

Desired Status: There is a comprehensive and standardized trauma management information system. The trauma system registry will include all aspects of care: prehospital, acute care, rehabilitation, coroner, financial. All data systems are deterministically and probabilistically linked. There is a process in place to evaluate and ensure the quality, timeliness, completeness, and confidentiality of the data. The trauma system registry will be made widely available for research, injury surveillance and system performance assessment. Data is provided to outside sources in an aggregate and de-identified format and is consistent with confidentiality requirements.

Plan of action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
8.1: Develop a comprehensive, standardized trauma system registry.	TBD	TBD	TBD	TBD	<ul style="list-style-type: none">● System has the ability to compare injury mortality. (MTSPE Indicator 101.3)● System has the ability to describe the epidemiology of injury. (MTSPE Indicator 101.1)● All databases are probabilistically and deterministically linked. (MTSPE Indicator 102.3)
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
8.2: Develop standardized, dynamic reporting tools to allow individuals to access specific views and information.					<ul style="list-style-type: none"> ● Existence of a web-based reporting system allows monitoring of injury data by the full scope of injury stakeholders. (MTSPE Indicator 102.2, 301.4, 304.2)
8.3: Develop rules and regulations that ensure quality, timeliness, completeness and confidentiality of data.					<ul style="list-style-type: none"> ● Policies and procedures exist that ensure quality trauma data is readily available. (MTSPE Indicator 102.4)
8.4: Establish a method of collecting trauma financial data from a variety of sources.					<ul style="list-style-type: none"> ● Financial data is used for annual strategic and budgetary planning. (MTSPE Indicator 102.5, 205.1) ● Definitions for financial trauma data are a component of the data dictionary and are reported to the trauma system registry. (MTSPE Indicator 309.1, 309.2, 309.3)

Goal 9: Professional Education and Public Information

Integrate trauma education and public information into all aspects of the trauma system.

Current Status: Trauma education requirements are not well-defined. There is no trauma educational plan for the state. Sporadic educational requirements exist. The Division of EMS mandates education to all certified prehospital personnel. There are no specific nursing and physician trauma education requirements. General public trauma information, including information generated for the stakeholders and constituents, is scattered and diffuse.

Desired Status: Professional trauma education plan exists for all care providers. There is a public information plan related to trauma. Both plans are well-defined, monitored, evaluated and revised as needed.

Plan of Action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
9.1: Establish a public information plan.	TBD	TBD	TBD	TBD	<ul style="list-style-type: none">• Public officials and the general public are included and involved in trauma information directives.• An assessment of public officials, general public, and medical community on their level of understanding regarding trauma system has been conducted• Information resources for dissemination to the general public and public officials have been developed. (MTSP indicator 105.4, 105.5)
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
<p>9.2: Establish a professional trauma education plan.</p>					<ul style="list-style-type: none"> • An educational needs assessment of the medical community (including pre-hospital, nursing, physicians and allied health) regarding trauma patient care has been conducted. (MTSP Indicator 105.6, 105.7) • Trauma care providers will be knowledgeable on trauma care and the trauma system function. • Information resources for dissemination to the broad medical community have been developed. (MTSPE indicator 205.5) • Guidelines exist for prehospital, nursing, physician and allied health personnel for initial and ongoing trauma training. (MTSPE indicator 310.1, 310.2, 310.3, 310.10)

Goal 10: People with Functional Needs

Ensure that individuals with functional needs achieve the same benefits from the trauma system as the general population.

Current Status: Pediatrics and geriatrics are the only special populations which are identified in law or rule; their own triage criteria are integrated into the state's triage rules. There are pediatric trauma centers in the largest metropolitan areas with effective catchment areas covering the entire state, but the roles and responsibilities of other acute care facilities are not formalized. Beyond triage, the needs of the geriatric population have not been addressed at the system level. No assessments have been done to identify and determine the needs of other special populations, including physical and mental disability, limited English proficiency, cultural/ethnic or rural/remote location. The Joint Commission, the accrediting body for hospitals in Ohio, mandates that hospitals have processes to address gaps in hospital care for persons with functional needs.

Desired Status: The trauma system plan addresses the needs of persons with functional needs including but not limited to those with the following circumstances:

- **Dependency status** (i.e. children of all ages and those adults with significant behavioral, cognitive and/or physical disabilities);
- **Communication barriers** to seeing, hearing and/or understanding the spoken or written word (i.e. people with illiteracy, non-English-speaking, and/or those lacking the ability to see, hear or speak);
- **Access to care barriers** (i.e. those who do not have access to public or private transportation and/or who live so remotely that they do not have access to medical care and/or injury prevention programming); and
- **Acute, chronic and/or co-morbid medical conditions** including obesity that may complicate trauma medical care.

Plan of Action:

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
10.1: Establish strategies in all previous goal categories that acknowledge the needs of persons with dependency status, communication barriers, access to care barriers, and/or acute, chronic, and co-morbid medical conditions.	TBD	TBD	TBD	TBD	<ul style="list-style-type: none">• The Trauma System Plan addresses people's functional needs along the trauma care continuum.
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
10.1: <u>LEADERSHIP</u>: Include a representative from the Governor's Council on People with Disabilities (or equitable organization) on the governance board of the Lead Trauma Agency.					<ul style="list-style-type: none"> ● Functional needs are discussed on an ongoing basis and are integrated in to future-developed aspects of the State Trauma Plan.
10.2: <u>INJURY PREVENTION PROGRAMS</u>: Establish injury prevention programs targeted to persons with functional needs. The injury prevention programming should be based on trended state injury data.					<ul style="list-style-type: none"> ● State trauma data will demonstrate a decrease in injury rates (trended) among persons with functional needs after injury prevention programming is implemented.
10.3: <u>EMERGENCY / DISASTER PREPAREDNESS PLANNING</u>: Establish plans that mitigate access-to-care barriers and promote communications for persons with functional needs in disasters.					<ul style="list-style-type: none"> ● Procedures to address system gaps during disasters for persons with functional needs are integrated into local, regional and state plans.
10.4: <u>PREHOSPITAL CARE</u>: Establish evidence-based prehospital trauma triage protocols for persons with functional needs whose condition(s) makes field assessment by EMS more difficult. 10.4.1: Establish statewide prehospital protocols for equipment and transport that promote the safe care of pediatric and bariatric patients, as well as the EMS providers caring for them.					<ul style="list-style-type: none"> ● Under-triage rates of trauma patients with functional needs are comparable via state data to patients without functional needs. ● Properly-sized equipment and safe transport processes expedite the timely transfer of pediatric and bariatric trauma patients to trauma centers. These safe and timely methods also help to reduce injuries and maximize out-of-service times for EMS providers.
Continued...					

STRATEGY	TIMEFRAME	LEADERSHIP	PARTNER(S)	FUNDING	MEASURES OF SUCCESS
10.5: <u>DEFINITIVE CARE/ACUTE CARE</u>: Establish processes in which hospitals' best practices related to caring for patients with functional needs are shared across the state.					<ul style="list-style-type: none"> ● All hospitals have access to processes that will improve care to patients with functional needs.
10.6: <u>DEFINITIVE CARE/REHABILITATION</u>: Include recommendations specific to persons with functional needs in the updated 2003 Post-Critical Trauma Commission Report.					<ul style="list-style-type: none"> ● Rehabilitation services for trauma patients with functional needs are comparable via state data to patients without functional needs.
10.7: <u>EVALUATION, QUALITY MANAGEMENT & PERFORMANCE IMPROVEMENT</u>: Include significant information on persons with functional needs in state trauma data reports. 10.7.1: Develop programs to address gaps in care for persons with functional needs.					<ul style="list-style-type: none"> ● Gaps in care for persons with functional needs are highlighted in state trauma reports. ● Trauma patients with functional needs receive care equitable to that received by patients without functional needs.
10.8: <u>TRAUMA SYSTEM REGISTRY INFRASTRUCTURE</u>: Establish data elements in state trauma-related databases that identify persons with functional needs so that aggregate data can be trended to demonstrate achievement of care and system gaps for improvement.					<ul style="list-style-type: none"> ● Data elements in the Ohio Trauma Registry (OTR), the EMS Incident Reporting System (EMSIRS), and the Trauma Rehab Registry identify persons with functional needs who are trauma victims in Ohio. This data drives evaluation, quality management and performance improvement in the care of trauma patients in the state.

GLOSSARY

Accountability – Obligation of an individual or organization to account for its activities, accept responsibility for them, and to disclose the results in a transparent manner.

Acute Care Facility – In the context of this document, a hospital that is not a trauma center.

Adult Trauma Victim – A trauma victim between the ages of 16 and 69 years. (See also geriatric trauma victim, pediatric trauma victim)

Agency – A division of government with a specific function offering a particular kind of assistance.

All-Hazards Care – A standardized, integrated, coordinated and trained response for the provision of care during all types of incidents.

American College of Surgeons (Committee on Trauma) – A scientific and educational association of surgeons; the entity which sets the standards for and conducts the trauma center verification program.

Assessment – The regular systematic collection, assembly, analysis, and dissemination of information on the health of the community. These data, from a variety of sources, will assist in determining the status and cause of a problem and will identify potential opportunities for interventions.

Compliance – The process of performing acts according to what is expected or required. In the context of trauma systems, doing those things as required by the State to achieve trauma center status.

Comprehensive Trauma System – A coordinated inclusive system of care for the injured that encompasses all phases of care, from the prehospital setting to rehabilitation services and follow-up care. Such systems include data systems for injury surveillance and prevention as well as for performance measurement and improvement.

Continuum of Care – The concept of care including intentional and unintentional injury prevention, emergency medical services (EMS) 9-1-1/dispatch and medically supervised trauma care intervention, ground and air transportation, emergency department (ED) trauma care, trauma center-organized teams, surgical intervention, intensive and general in-hospital care, rehabilitative services, and mental health and social services.

Cost – The expenses and revenues incurred during the planning, implementation, and evaluation of the trauma system.

Data Systems – A collection of information from which one may make conclusions or inferences. In the context of trauma systems, data sources aid in describing the epidemiology of injury, care and outcome data, as well as cost of system and care, and provide a tool for quality

measurement in the system jurisdiction using population-based data, clinical databases, and accounting data. Such sources may include vital statistics and these types of data: EMS, ED, trauma center and hospital discharge, State police, medical examiner, trauma registry, rehabilitation facilities, and mental health and social services.

Definitive Care – Actions taken or implemented to ensure the needs of the patient are met.

Designation (facility) – The identification of capabilities or status based upon predetermined criteria. In the context of trauma systems, the identification of trauma centers based upon the meeting of specific predetermined criteria.

Deterministic Data Linkage – Data that are linked with direct patient identifiers such as name, Social Security number or medical record number.

Disaster – An unexpected natural or man-made catastrophe of substantial extent causing significant physical damage or destruction, loss of life or sometimes permanent change to the natural environment.

Emergency – In the context of trauma systems, the occurrence of critical or life-threatening injury requiring triage and transportation to resuscitation resources found in trauma centers and acute care hospitals.

Emergency Medical Services – A branch of emergency services which provides prehospital medical care and/or transport of patients with illnesses or injuries to definitive care.

Enabling Legislation – Legislation that provides appropriate officials the authority to implement or enforce the law.

Epidemiology – The study of causes, distribution and control of disease in a population.

ESF (Emergency Support Function) – Used by State Emergency Management Agency as the primary mechanism to organize and provide assistance to local jurisdictions. ESFs align categories of resources and provide strategic objectives for their use. ESF-8 supports public health and medical services.

Evidence-based – Characterized by methods of diagnosis and treatment that are based on demonstrable evidence, that is, their effectiveness has been demonstrated by well-designed, peer-reviewed studies.

Functional Outcome – The use of valid and reliable measurement tools, that is, Functional Inventory Measurement (FIM) and Wee-FIM, functional inventory measurement for pediatric patients, to assess the impact of disease and medical treatment on the lives of affected individuals. Domains assessed include mobility, activities of daily living, and cognitive capabilities.

Gap Analysis – The difference between trauma system standards and the compliance of the trauma system with those standards that result in the identification of system needs.

Geriatric Trauma Victim – Trauma victims age 70 years or older.

High-Risk Populations – Groups of people with unique anatomic and physiologic differences which predispose them to certain types of injuries and may also require a specialized approach to trauma care.

Incidence – The degree or range of occurrence or effect.

Incident – An event that requires an emergency response to protect life or property. Incidents may include major disasters, emergencies, terrorist attacks, wild land and urban fires, floods, hazardous material spills, nuclear accidents, aircraft accidents, earthquakes, hurricanes, tornadoes, tropical storms, war-related disasters, public health and medical emergencies, and other occurrences requiring an emergency response.

Inclusive Trauma System – A system that includes all health care facilities to the extent that their resources and capabilities allow and where the patient's needs are matched to hospital resources and capabilities. An inclusive trauma system encompasses all injuries: minor, moderate, and major. Patients with relatively minor injury need not go to a Level 1 or 2 trauma center, and access to a facility equipped to provide optimal care for injury is available and organized. If the facility is not prepared to provide care needed, there is a well orchestrated plan for expeditious patient transfer to a level of care commensurate with injury

Indicator – A measurable variable or characteristic that can be used to determine the degree of adherence to a standard or the level of quality achieved.

Infrastructure – Basic physical and organization structures needed for the operation of an entity or enterprise. In the context of trauma systems, the identified lead agency within the State; State trauma manager; trauma advisory committee; and supporting legislative language, that is, rules/regulations; trauma data system; identified resource care facilities (e.g., levels of trauma centers and burn centers); workforce; and other essential components to facilitate the implementation, monitoring, and performance improvement of care provided to severely injured people.

Injury – Physical harm or damage to the body resulting from the transfer of or exposure to mechanical, thermal, electrical, or chemical energy or from the absence of such essentials as heat or oxygen.

Interfacility Transfer – Movement of a patient from one care facility to another. In the context of trauma systems, interfacility transfer usually occurs in an effort to move an injured patient to a higher level of care where necessary resources optimize recovery.

Lead Agency / Lead Trauma Agency – A rule-making regulatory body whose membership is analogous to the EMS Board’s Trauma Committee with authority, responsibility and resources to lead development, operations and evaluation of the state trauma system.

Legislative Authority – Statute and regulations. A statutory provision establishing and continuing a government agency, activity, or program.

Level I Trauma Center – Level I trauma center is the highest level of trauma center and a regional resource center. It has a full range of surgical and medical specialists with resources available 24 hours a day and is required to admit a minimum required annual volume of severely injured patients. Additionally, a Level I center has a program of research and is a leader in trauma education and injury prevention.

Level II Trauma Center – Level II trauma center has a full range of surgical and medical specialists with resources available 24 hours a day. It provides comprehensive trauma care, regardless of severity of the injury. A Level II does not have volume requirements or the research obligation; however, it provides trauma education, outreach and injury prevention.

Level III Trauma Center –A Level III trauma center does not have the full availability of surgical and medical specialists, but does have resources for emergency resuscitation, surgery, and intensive care of most trauma patients. A Level III center has transfer agreements with Level I or Level II trauma centers that provide back-up resources for the care of exceptionally severe injuries. Example: Rural or community hospitals

Management Information System (MIS) – This comprehensive system is the collection of data from different sources to enable the review of the entire trauma system. It includes trauma registry, EMS, incident after-action reports, death certificates, crash reports, and cost information. The purpose of the system is to identify and evaluate system best practices, identify and evaluate gaps, review the utilization of trauma resources, track patient outcomes, develop performance standards, and measure system performance against similar systems (benchmarking).

Medical Oversight – The responsibility of supervising actions related to, involving, or used in medicine or treatment.

Morbidity – The relative incidence of disease, the condition of being diseased and the ratio of sick to well persons in a community.

Mortality – The relative incidence of death in a population.

Multidisciplinary – Composed of or combining several fields of expertise.

Ohio Administrative Code – Written statements of law adopted by an administrative agency pursuant to authority granted by the General Assembly to carry out the policies and intent of a statute enacted by the General Assembly. Also known as “Administrative Rules” or simply “Rules”. (See also Ohio Revised Code)

Ohio Revised Code – The laws of the State of Ohio.

Ohio Trauma Registry – Ohio’s trauma system registry. See Trauma System Registry.

Patients with Special Needs / Special Populations – Those individuals who have or are at risk for chronic physical, developmental, behavioral, or emotional conditions and who also require health and related services of a type or amount beyond that required generally.

Pediatric Trauma Victim – A trauma victim under the age of 16.

Performance Improvement (PI) – Methodology for evaluating and improving processes that employs a multidisciplinary approach and that focuses on data, benchmarks, and components of the system being evaluated.

Policy Makers – A person or organization with power to influence or determine laws, rules, policies and practices.

Population-Based – Interventions that are targeted toward populations to promote the overall health status of the community by preventing disease, injury, disability, and premature death.

Prehospital Care – Treatment provided to the trauma victim by emergency medical services before reaching the hospital.

Preparedness – The state of being prepared for specific or unpredictable events or situations.

Primary Injury Prevention – Activities implemented to completely avoid the occurrence of an injury or injury-producing event. Actions taken in anticipation of potential injury events that eliminate or reduce the risk for injury.

Probabilistic Data Linkage – A method of linking data between two or more sources using a computerized judgment process where specific data fields are statistically analyzed in order to conclude that the two records belongs to the same individual. Besides merging databases, this process can also be utilized to remove duplicate records from one database.

Protocol – Standard procedure for the triage, transport, resuscitation, and eventual definitive care of the injured patient.

Public Health (Model) – The science of health promotion and disease / injury prevention with emphasis on population level interventions rather than at the individual level.

Public Health Model – A proven, systematic method for identifying and solving problems. Improvements in the public health system, in partnership with the health care system, can be accomplished through informed, strategic, and deliberate efforts to positively affect health.

Regional / Regional Trauma System – A regional trauma system exists when these neighboring stakeholders formally organize into a structured entity for trauma system development specific to their area. These regions may overlap with other regional systems that exist for other purposes.

Rehabilitation – Services that seek to return an injured individual to the fullest physical, psychological, social, vocational, and cognitive levels of functioning of which he or she is capable, consistent with physiological or anatomical impairments and environmental limitations.

Resources – Somebody or something that assists with trauma development. Examples include but are not limited to the following: personnel, equipment, data, information, facilities.

Regulation – A rule or an order having force of law issued by the executive authority of the government. The term “regulation” is often used interchangeably with “rule.”

Risk Assessment – Information or report that evaluates and summarizes an organization’s vulnerabilities with comparison against benchmarks or regional, state or national standards.

Rule – A statement issued by an authoritative body of what to do in a specific situation. It clarifies or interprets a law. The term “rule” is often used interchangeably with “regulation.”

Secondary Injury Prevention – Initiative used to minimize the severity of an injury at the time of occurrence, such as through the use of safety devices.

Standards – Rules established as a basis of comparison for measuring or judging capacity, quantity, content, extent, value, and quality of services provided. In the context of trauma systems, rules defining resource availability determining trauma and burn care capabilities of hospitals.

Specialty Care Facility – An acute care facility that provides specialized services and specially trained personnel to care for a specific portion of the injured population, such as pediatric, burn injury, or spinal cord injury patients.

Special Populations – Groups of people with unique differences, which include but are not limited to age, physical and mental disability, limited English proficiency, cultural/ethnic or rural/remote location, that create a need for an atypical approach to trauma care.

Stakeholder – A person or group of individuals with a direct interest, involvement, or investment in a matter. In the context of trauma, an individual with interest in trauma care or trauma system development. (e.g., trauma surgeon, trauma program manager, epidemiologist, EMS, ED director, or hospital administrator).

Surge Capacity – A health care system’s ability to rapidly expand beyond normal services to meet the increased demand for qualified personnel, medical care, and public health in the event of bioterrorism or other large-scale public health emergencies or disasters.

Injury Surveillance System – The ongoing and systematic collection, collation, analysis, and interpretation, of information to understand the context in which specific injuries occur. A comprehensive injury surveillance system can be used not only to define and prioritize injury problems but also to support policy and intervention efforts.

Trauma (traumatic injury) – Tissue or organ injury, or both, sustained by the transfer of environmental energy. When a person is “hurt” vs. “sick”.

Trauma Center – A specialized hospital with the immediate availability of specially trained health care personnel who provide emergency care on a 24/7 basis for the severely injured. These specially trained personnel are immediately available to treat patients with ready operating rooms, special equipment, and necessary supplies. They are also committed to continuous quality improvement, education, injury prevention, and research. These hospitals have been verified by the American College of Surgeons by meeting established criteria for either adult or pediatric trauma care. A hospital may function as a Level I, II or III, depending on the depth of resources available.

Trauma System Registry – A collection of data on patients who receive hospital care for certain types of injuries. Such data are primarily designed to ensure quality trauma care and outcomes in individual institutions and trauma systems, but have the secondary purpose of providing useful data for the surveillance of injury morbidity and mortality.

Trauma System Plan – A document which serves as a blueprint for the design, implementation, and ongoing development of a trauma system tailored to meet the unique needs of an individual state. The plan identifies the essential components of its jurisdiction and is designed to meet the needs of all injured persons. All levels of providers will be incorporated into the plan. The plan will provide direction and function as a communication tool so that all components within the system are functioning as a unit. It outlines the organizational structures, system components, basis for system standards, specific objectives of the system, and a means of evaluating and improving system performance, while developing a vision of trauma care for the future.

Trauma System – An organized, inclusive approach to facilitating and coordinating a multidisciplinary system response to preventing injuries and providing care to the injured. A trauma system encompasses a continuum of care delivery and is inclusive of injury prevention and control, public health, EMS field intervention, ED care, surgical interventions, intensive and general surgical in-hospital care, and rehabilitative services, along with the social services and the support groups that assist the injured and their significant others with their return to society at the most productive level possible.

Trauma System Manager – The entity who is responsible for the management, coordination, facilitation, and evaluation of the trauma system. This position may be filled by an individual, a person under the auspices of a larger organization or agency, or a board of trauma experts and professionals.

Trauma Victim – A person who has suffered injuries caused by an external force that pose a threat to life or limb, or that may cause permanent, significant disability or disfigurement.

Triage – The sorting and determining priority on the basis of need or likely benefit. In the context of trauma systems, a process for sorting patients by types and severity of injury to determine transport to facilities where appropriate resources will exist to ensure optimal outcome.

Triage Protocols – Established, written plans for sorting and setting priorities. In the context of this document, protocols are written plans, often backed by rules/regulations that use severity of injury and hemodynamic stability as a criterion for the determination of patient prioritizing and transfer to appropriate facilities.

Verification – An objective process by which trauma care capability and performance of an institution is evaluated by experienced on-site reviewers.

APPENDIX A

List of participants in the March 12, 2008 Trauma System Assessment (an 8-hour facilitated meeting)

Trauma Committee

Nancie Bechtel, RN
John Crow, MD – Chair
Gary Englehart, FACHE
Mark Gebhart, MD
Todd Glass, MD
Vickie Graymire, RN
Kathy Haley, RN – Vice Chair
Jason Kinley, EMT-P
Brian Kuntz, RN, EMT-P
Edward Michelson, MD
Sidney Miller, MD
Greg Nemunaitis, MD
Jennifer Piccione, RN
Kevin Pugh, MD
Jane Riebe
Jonathan Saxe, MD
Michael Shannon, MD
Diane Simon, RN
Richard Ziegler, MD

Trauma Committee Liaisons

Carol Cunningham, MD – State Medical Director, Ohio Department of Public Safety, Division of Emergency Medical Services
Jonathan Groner, MD – State Board of EMS
Virginia Haller, MD – Ohio Department of Health
F. Barry Knotts, MD – Chair, Trauma Registry Advisory Subcommittee

Ohio Department of Public Safety Staff

China Dodley – Public Information Officer
Tim Erskine – Chief, Trauma Systems and Research
Heather Frient – Legal Counsel
Sue Morris – Data Analyst

Participating Guests

Christy Beeghly – Ohio Department of Health, Injury Prevention Program
Jim Dwertman – Ohio Emergency Management Agency
David Evans – Miami Valley Hospital
Scott Highly – Ohio Fire Chiefs Association
Carol Jacobson – Ohio Hospital Association
Herb de la Porte – Ohio Ambulance and Medical Transportation Association

Facilitators – Ohio Society of Trauma Nurse Leaders

Lynn Haas, RN
Patty Wilczewski, RN

INTRODUCTION

The Emergency Medical Services Board (EMS Board), which is within the Division of Emergency Medical Services in the Department of Public Safety, has a variety of duties under the Ohio Revised Code. Am. Sub. House Bill 138 of the 123rd General Assembly requires Legislative Service Commission staff, subject to the Commission's approval, to evaluate the effectiveness of the Board and its staff in fulfilling the Board's duties and to prepare two reports. This, the first of the two, is a preliminary report that describes the Board's duties as specified in the Revised Code and the actions the Board is taking to fulfill those duties.

Although H.B. 138 makes reference to LSC staff findings and recommendations, this report is more limited. As explained at the Commission's meeting on October 10, 2001, making recommendations would place the staff in the role of policymaker with regard to the delivery of emergency medical services in Ohio. The Commission is considering appointing a joint legislative committee to consider the Board's activities and make recommendations. Those recommendations will be included in the second report.

This report starts with a brief history of the licensing of emergency medical services performed in Ohio. It then considers the duties of the EMS Board, including licensing procedures, oversight of quality of services, statewide planning, administration of grant programs, information gathering, government and public liaison activities, and trauma system duties. The report concludes with a description of issues addressed by the Board as identified in Board meeting minutes. There is also an appendix containing information pertaining to the Board's duties and activities and a glossary of terms used in the report.

EMS Board membership

The Board is composed of 20 members, 19 of whom are appointed by the Governor. The other member is a Department of Public Safety staff person appointed by the Director of Public Safety.¹ The Board members appointed by the Governor must include:

(1) One physician certified by the American Board of Emergency Medicine or the American Osteopathic Board of Emergency Medicine who is active in the practice of emergency medicine and is actively involved with an emergency medical association;

(2) One physician certified by the American Board of Surgery or the American Osteopathic Board of Surgery who is active in the practice of trauma surgery and is actively involved with emergency medical services;

¹ Revised Code section 4765.02.

(3) One physician certified by the American Academy of Pediatrics or American Osteopathic Board of Pediatrics who is active in the practice of pediatric emergency medicine and actively involved with an EMS organization;

(4) One administrator of an adult or pediatric trauma center;

(5) One administrator of a hospital that is not a trauma center;

(6) One registered nurse who is in the active practice of emergency nursing;

(7) One chief of a fire department that is also an EMS organization in which more than 50% of the persons who provide emergency medical services are full-time paid employees;

(8) One chief of a fire department that is also an EMS organization in which more than 50% of the persons who provide emergency medical services are volunteers;

(9) One person who is certified by the Board to teach an EMS training program or an EMS continuing education program;

(10) One person who is an emergency medical technician-basic (EMT-basic) nominated by the Ohio Association of Professional Fire Fighters or the Northern Ohio Fire Fighters;

(11) One person who is an EMT-Intermediate (EMT-I) nominated by the Ohio Association of Professional Fire Fighters or the Northern Ohio Fire Fighters;

(12) One person who is an EMT-Paramedic (paramedic) nominated by the Ohio Association of Professional Fire Fighters or the Northern Ohio Fire Fighters;

(13) One person who is an EMT-basic nominated by the Ohio State Firefighter's Association;

(14) One person who is an EMT-I nominated by the Ohio State Firefighter's Association;

(15) One person who is a paramedic nominated by the Ohio State Firefighter's Association;

(16) One person who is an EMT-basic, EMT-I, or paramedic nominated by the Ohio Association of Emergency Medical Services;

(17) One person who is an EMT-basic, EMT-I, or paramedic affiliated with an EMS organization;

(18) One person who is a member of the Ohio Ambulance Association;

(19) One physician certified by the American Board of Surgery, American Board of Osteopathic Surgery, American Osteopathic Board of Emergency Medicine, or American Board of Emergency Medicine who is the chief medical officer of an air medical agency and is currently active in providing emergency medical services.

Each Board member serves a term of three years. Board members serve without compensation but are reimbursed for expenses incurred in fulfilling their duties as Board members. The chair and vice-chair of the Board are selected annually from among its members. The Board meets at least four times annually and at the call of the chair. The following is the roster of current Board members and the organization or occupation each member represents.

EMS Board Membership 2001	
James Augustine, M.D. American College of Emergency Physicians, Ohio Chapter Dayton, OH	Amy Lynn Northern Ohio Fire Fighter's Association Mentor, OH

The Director of Public Safety is required to appoint a full-time executive director for the Board who is knowledgeable in emergency medical services and trauma care. The executive director serves as the chief executive officer of the Board and as the executive director of the Division of Emergency Medical Services. Laura L. Tiberi is the executive director.

The Board is required to appoint a medical director who is a physician certified by the American Board of Emergency Medicine or the American Osteopathic Board of Emergency Medicine who is active in the practice of emergency medicine and has been actively involved with an EMS organization for at least five years prior to being appointed. The medical director is required to direct the executive director and advise the Board with regard to adult and pediatric trauma and EMS issues. Dr. John Drstvensek is the Board's medical director.

A BRIEF HISTORY OF EMERGENCY MEDICAL SERVICES LAW IN OHIO

The General Assembly has enacted much legislation in the last quarter century regulating the provision of emergency medical services. In general, entities providing training in emergency medical services and individuals providing those services have been required to obtain certificates. The entity or entities responsible for regulating the training and services has changed over the years as have the duties regulated and the titles of the service providers.

Am. Sub. H.B. 832 of the 111th General Assembly

(Effective 08-31-76)

H.B. 832 authorized the Board of Regents to issue certificates of accreditation to training programs for emergency medical technicians-paramedic (paramedics). The State Board of Education was authorized to issue a certificate of accreditation to training programs for emergency medical technicians-ambulance (EMT-As). The act required the Board of Regents to adopt rules for administration of the accreditation process for paramedic training programs and the State Board of Education to adopt rules for administration of the accreditation process for EMT-A training programs.²

Accredited EMT-A training programs were authorized to issue certificates of competency to EMT-As, and the State Board of Education was given the duty of renewing the certificates. Accredited paramedic training programs were authorized to issue certificates of competency to paramedics, and the Board of Regents authorized to renew the certificates.³

H.B. 832 created the Emergency Medical Services Advisory Council. The council consisted of two public members and seven members representing the following: (1) physicians, (2) hospital associations, (3) volunteer fire and ambulance emergency medical services, (4) volunteer rescue emergency medical services not operated in conjunction with a volunteer fire service, (5) public professional emergency medical services, (6) private emergency medical services, and (7) funeral businesses or associations engaged in ambulance services. The council was required to prepare a plan for the statewide regulation of emergency medical services during periods of disaster and prepare and recommend standards for the operation of ambulance and emergency medical services.⁴

² R.C. 4731.83.

³ R.C. 4731.86.

⁴ R.C. 4731.93.

Am. Sub. H.B. 1092 of the 112th General Assembly

(Effective 07-21-78)

Under H.B. 1092, the Board of Regents was authorized to issue certificates of accreditation to training programs for advanced emergency medical technicians-ambulance (ADV EMT-As).⁵ Accredited ADV EMT-A training programs were authorized to issue certificates of competency to ADV EMT-As, and the Board of Regents was authorized to renew the certificates.⁶

Am. Sub. H.B. 222 of the 116th General Assembly

(Relevant provisions effective 05-15-86)

H.B. 222 was the first major revision of the law regulating emergency medical services. The act created the Ohio Emergency Medical Services Agency in the Department of Education.⁷ The authority of the State Board of Education and the Board of Regents to issue certificates of accreditation to EMT-A, ADV EMT-A, and paramedic training programs was transferred to the agency. The Board of Regents' rule-making authority regarding administration of the accreditation process for ADV EMT-A and paramedic training programs was transferred to the State Board of Education.⁸

The act transferred the authority of accredited training programs' to issue EMT-A, ADV EMT-A, and paramedic certificates to the Ohio Emergency Medical Services Agency, but the agency was required to issue a certificate on recommendation of an accredited training program. The authority of the State Board of Education and Board of Regents to renew EMT-A, ADV EMT-A, and paramedic certificates was also transferred to the agency. The State Board of Education was required, however, to adopt rules establishing requirements for renewal of the certificates and permitted to adopt rules establishing grounds for revocation of the certificates and for other disciplinary actions against EMT-As, ADV EMT-As, and paramedics.⁹

The Ohio Emergency Medical Services Board was created, consisting of 26 voting members and 11 nonvoting members. The voting members were the Director of Health, Chairperson of the Emergency Medical Services Advisory Council, Chancellor of the

⁷ R.C. 3303.09.

⁸ R.C. 3303.11.

⁹ R.C. 3303.15 and 3303.201.

Board of Regents, five physicians, two hospital administrators, a nurse, three fire chiefs, a physician advisor to a fire department's emergency medical system, three volunteer firefighters, three paid firefighters, a private provider of emergency medical services, a public provider of emergency medical services, a representative of the Ohio Funeral Directors Association, an instructor in a vocational school instruction program for EMT-As, and an instructor in a post-secondary or hospital training program for ADV EMT-As or paramedics. The nonvoting members were the Director of Highway Safety, President of the State Board of Pharmacy, Adjutant General, a representative of the Ohio Nurses Association, a representative of the public, three representatives of the interests of health care consumers, a fire department EMS training officer, a private EMS training officer, and a training officer of a public EMS agency. The Board was required to: (1) approve or disapprove a proposed statewide EMS plan, and any revisions to the plan, prepared by the Ohio Emergency Medical Services Agency, (2) advise applicants for state or federal EMS funds and review and comment on applications for those funds, (3) serve as a statewide clearinghouse for discussion, inquiry, and complaints concerning emergency medical services, (4) advise and make recommendations to the Ohio Emergency Medical Services Agency on all aspects of its responsibilities, (5) advise and make recommendations to the State Board of Education on rules and standards for emergency medical services, and (6) make recommendations to the General Assembly on legislation to improve the delivery of emergency medical services.¹⁰

H.B. 222 required the State Board of Education to submit its proposed rules regarding emergency medical services to the Ohio Emergency Medical Services Board and authorized that board to disapprove the rules by a two-thirds vote.¹¹

Am. Sub. S.B. 98 of the 119th General Assembly

(Effective 11-12-92)

S.B. 98 was the next major revision of the law governing emergency medical services. The act created the major features of the currently existing law.

The Ohio Emergency Medical Services Board was replaced with the State Board of Emergency Medical Services (EMS Board), which exists today. The EMS Board was created in the Division of Emergency Medical Services of the Department of Public Safety. It originally consisted of the following 18 members: (1) three physicians, (2) a hospital administrator, (3) a registered nurse, (4) two chiefs of fire departments that were also EMS organizations, (5) a person certified to teach emergency medical services, (6) two EMT-As, (7) two ADV EMT-As, (8) two paramedics, (9) two individuals who

¹⁰ R.C. 33093.10.

¹¹ R.C. 3309.101.

are an EMT-A, ADV EMT-A, or paramedic, (10) a member of the Ohio Ambulance Association, and (11) an employee of the Department of Public Safety.¹²

The EMS Board was required to perform, in a modified manner, the Ohio Emergency Medical Services Board's duties to: (1) advise applicants for state or federal EMS funds and review and comment on applications for those funds, (2) serve as a statewide clearinghouse for discussion, inquiry, and complaints concerning emergency medical services, and (3) make recommendations to the General Assembly on legislation to improve the delivery of emergency medical services.¹³

S.B. 98 abolished the Ohio Emergency Medical Services Agency and required the EMS Board to perform, in a modified manner, the agency's duties to: (1) issue certificates of accreditation to EMS training programs, (2) issue EMT-A, ADV EMT-A, and paramedic certificates, and (3) prepare a statewide EMS plan.¹⁴

The EMS Board was authorized to issue: (1) certificates of approval to EMS continuing education programs and (2) certificates to teach in an EMS training program or an EMS continuing education program.¹⁵

The State Board of Education's EMS rule-making responsibilities were terminated. The EMS Board was required to adopt rules, subject to the Director of Public Safety's approval, regulating emergency medical services.¹⁶

S.B. 98 also abolished the Emergency Medical Services Advisory Council and provided for the EMS Board to perform, in a modified manner, the council's duties of preparing a plan for the regulation of emergency medical services during periods of disaster and recommendations for the operation of ambulance and EMS organizations.¹⁷ The EMS Board was required to establish: (1) a curriculum and textbook advisory group,

¹² R.C. 4765.02.

¹³ R.C. 4765.10.

¹⁴ R.C. 4765.03, 4765.08, and 4765.15. Unlike the Ohio Emergency Medical Services Agency, the EMS Board was not required to issue an EMT-A, ADV EMT-A, or paramedic certificate on the recommendation of an accredited EMS training program. However, S.B. 98 provided for accredited training programs and approved continuing education programs to issue certificates of completion. The EMS Board was required to provide for the examination of applicants for EMT-A, ADV EMT-A, and paramedic certificates. (R.C. 4765.24 and 4765.29.)

¹⁵ R.C. 4765.17 and 4765.23.

¹⁶ R.C. 4765.11, 4765.15, and 4765.24.

¹⁷ R.C. 4765.08 and 4765.09.

(2) a continuing education advisory group, (3) a trauma care advisory group, and (4) an access, delivery, and quality care advisory group.¹⁸ The act created the Subcommittee of the EMS Board for Firefighter and Fire Safety Inspector Training to provide the EMS Board's executive director advice and counsel regarding the regulation of fire service training programs established by the state or a local government for firefighters and fire safety inspectors.¹⁹

The act gave the EMS Board the following additional duties: (1) divide the state into pre-hospital EMS regions and appoint either a physician to serve as the regional director or a physician advisory board to serve as the regional advisory board, (2) establish an EMS incidence reporting system and a trauma system registry, (3) establish a grant program, (4) maintain a toll-free long distance telephone number for responding to questions about emergency medical services, (5) work with the State Fire Marshal in coordinating the training of firefighters and EMS personnel when possible, (6) provide a liaison to the State Emergency Operation Center during Governor-declared disasters, and (7) make a semiannual report on its activities to the Joint Legislative Committee on Emergency Medical Services Oversight.²⁰

Am. Sub. S.B. 150 of 121st General Assembly

(Effective 11-24-95)

S.B. 150, which mainly concerned the certificate of need program, retitled EMT-As as emergency medical technicians-basic (EMTs-Basic) and ADV EMT-As as emergency medical technicians-intermediate (EMTs-I).²¹

Sub. H.B. 405 of the 121st General Assembly

(Effective 10-01-96)

Under H.B. 405, the EMS Board was authorized to issue certificates to practice to first responders.²²

¹⁸ R.C. 4765.04.

¹⁹ R.C. 4765.55.

²⁰ R.C. 4765.05, 4765.06, and 4765.10. The semiannual report requirement was eliminated by Sub. H.B. 670 of the 121st General Assembly, which abolished the oversight committee.

²¹ R.C. 4765.01.

²² R.C. 4765.30.

Am. Sub. H.B. 138 of the 123rd General Assembly

(Effective 11-03-00)

H.B. 138 made a number of changes to the EMS law. It increased the membership of the EMS Board by adding an adult or pediatric trauma center administrator and another physician.²³ The EMS Board was required to establish a state trauma registry rather than a trauma system registry.²⁴

In addition to renaming the EMS Board's subcommittee concerning firefighter and fire safety inspector training,²⁵ the act created a trauma committee within the Board to advise and assist the Board in matters related to adult and pediatric trauma care and the establishment and operation of the state trauma registry. The EMS Board was authorized to appoint other committees and subcommittees as it considered necessary.²⁶

The act also changed or established a number of EMS Board duties. The act requires the Board to work with appropriate state offices, rather than the State Fire Marshal, in coordinating the training of firefighters and EMS personnel.²⁷ It is to consult with regional directors and regional physician advisory boards when developing and administering rules regulating emergency medical services.²⁸ The Board is required to develop and distribute guidelines for the care of trauma victims by EMS personnel and for the conduct of peer review and quality assurance programs by EMS organizations.²⁹ It is to establish written protocols for the triage of adult and pediatric trauma victims and is authorized to approve regional protocols for the triage of adult and pediatric trauma victims submitted by regional physician advisory boards or regional directors.³⁰

²³ R.C. 4765.02.

²⁴ R.C. 4765.06.

²⁵ The subcommittee was renamed the Firefighter and Fire Safety Inspector Training Committee.

²⁶ R.C. 4765.04 and 4765.55.

²⁷ R.C. 4765.10.

²⁸ R.C. 4765.11.

²⁹ R.C. 4765.12.

³⁰ R.C. 4765.40.

DUTIES OF THE BOARD: TRAINING AND ISSUANCE OF CERTIFICATES

The EMS Board is required to establish standards for training of EMS personnel and qualifications of instructors, accreditation of training programs, and the conduct of examinations. The Board has adopted rules regarding all these matters.

Accreditation of training programs

The EMS Board is required to administer the accreditation and approval processes for Ohio's EMS training programs.³¹ The Board has adopted by rule criteria that each training program (including fire services training programs) must meet to receive accreditation.³² Each program must, for example, employ a program coordinator and a medical program coordinator, and select an advisory committee to oversee the program.³³

To operate as an EMS training program a program must be approved and receive a certificate from the EMS Board. The Board does not charge applicants a fee for the application process or for the accreditation certificate. An applicant must submit information about the proposed program, such as the program's location and intended instructors, to the Board by completing a series of application forms. The Board may also, in the process of approving an application for accreditation, conduct inspections of sites to be utilized by an applicant's training program. A certificate of accreditation is valid for three years. In 2000, there were 122 Board-accredited EMS and firefighter schools in Ohio.³⁴

The Board may provisionally certify a training program that does not meet all the requirements. A provisional accreditation certificate is good for one year and may not be renewed. If, within a year, the applicant can demonstrate the program's compliance with the requirements, the Board will issue the program a regular certificate, good for three years.

A program may not change the content of the curriculum or the number of hours included in the curriculum without first providing notice of the proposed changes to, and receiving written approval from, the Board. If, at any time, the program's physical

³¹ R.C. 4765.17.

³² R.C. 4765.15, 4765.16.

³³ Ohio Administrative Code Chapter 4765-8.

³⁴ Laura Tiberi, EMS Board Executive Director, July 2001 (See **APPENDIX D**).

facilities, faculty, or affiliation agreements change unexpectedly, the program must inform the Board of the changes within ten days of the change.³⁵

The EMS Board also oversees the renewal process for training program accreditation certificates. By no later than 90 days prior to a certificate's expiration date, the EMS Board must mail a renewal application to each training program that holds a certificate.

EMS personnel certificates

An applicant for a certificate to practice emergency medical services who has completed approved training must register for and pass a written and practical examination.³⁶ Examination registration forms may be obtained from EMS instructors and program coordinators or from a training facility. The Board recently expanded its web site to include online examination, registration, and testing schedules. Out-of-state applicants may also register by phone.³⁷

The National Registry of EMTs grades the EMT-Basic examinations, which takes from four to five weeks. Test grades take approximately 30 days to process. Once test scores are entered into the EMS Board's examination database, certificates to practice are issued for candidates who have passed.³⁸

An applicant unable to pass the written examination in three attempts must wait a time specified by the Board before attempting the examination again. The Board may require the applicant to complete additional training before retaking the examination.³⁹

Certificate to teach

The Board administers the application and certification process for EMS instructors, specifying by rule the education requirements.⁴⁰ The Board may waive the requirements for a certificate to teach for a physician who serves as an active medical director of an EMS organization or who is recommended by the regional physician advisory board. The Board may also accept training completed in another state or

³⁵ O.A.C. 4765-7-06.

³⁹ R.C. 4765.29(B).

⁴⁰ R.C. 4765.22.

another field of study on verification that the training was substantially similar to the Ohio curriculum. All other requirements to teach must be met, including passing a written certification examination approved by the Board.⁴¹

Continuing education requirements

The Board requires certificate holders to complete continuing education requirements. It has established the requirements by rule.⁴² Continuing education credit may be offered and earned through classroom instruction, individual study, skills practicum, or other format approved by the Board. The Board also accepts as valid continuing education courses approved by any of the following: an EMS licensing agency in another state, the National Registry of Emergency Medical Technicians, the United States military, a medical or nursing licensing board of this or another state, or a course related to EMS operations or patient care offered through a journal or publication of a state or national medical, nursing, or EMS organization.⁴³

Certificate holders do not necessarily have to take a course to fulfill continuing education requirements. Instead, they may elect to re-take their certification examination.⁴⁴ The Board does not assess an examination fee for individuals who elect to take the test.

The Board may exempt an applicant for renewal of a certificate from all or part of the continuing education requirements due to active military service, unusual circumstances or special hardship, emergency, or any other cause the Board considers reasonable. The procedures are established by rule.⁴⁵

Bridge courses

In 1992, legislation was passed that altered the scope of practice for EMT-Intermediates.⁴⁶ Training in manual defibrillation and the administration of epinephrine by subcutaneous injection, which had previously been optional components of the EMT-I program, became mandatory. In 1996, the EMS Board adopted new rules

⁴¹ O.A.C. 4765-8-12(A)(4).

⁴² R.C. 4765.16; O.A.C. Chapter 4765-8.

⁴³ O.A.C. 4765-8-05.

⁴⁵ R.C. 4765.31; O.A.C. 4765-8-11.

⁴⁶ Sub. S.B. 98, effective 11-12-92.

that incorporated the new skills into the curriculum. Any EMT-I not certified for the additional training must complete a bridge course prior to January 1, 2002.

In 1995, Ohio also adopted new curriculum that expanded the scope of practice for EMT-Basics. By January 1, 2002, any EMT-Basic not trained in the new procedures must complete a 26 hour bridge course.

The Board requires that following successful completion of the bridge coursework, including written and practical examinations, the training program present each EMT provider with a certificate of completion stating that the EMT has successfully completed the bridge course and notify the appropriate EMS division.⁴⁷

Disciplinary actions

Standards and ethics related to emergency medical services, as well as the procedures for handling complaints and disciplinary actions, are established by rule of the EMS Board.⁴⁸ Each EMS organization must have an internal procedure in place to handle complaints relating to the provision of services by the organization, its employees, and other persons affiliated with the organization.⁴⁹ If the Emergency Medical Services Division administrator, on reviewing a complaint, decides that further investigation is needed, the Division must record and assign a number or similar identifier to the complaint. The investigation must be conducted in such a manner as to protect patient confidentiality. The Division may also notify the person who is the subject of the complaint, the director or medical director of any EMS organization by which the subject of the complaint is employed or with which the subject is affiliated, and the appropriate regional medical director or regional physician advisory board. The Division must then review all complaints received against the individual implicated by the complaint and examine any evidence that appears to show that the individual violated any provisions of the statutes and rules governing the provision of emergency medical services. Based on the findings of an investigation, the Board may initiate disciplinary proceedings.⁵⁰

With a vote of at least ten members, the Board may revoke, refuse to grant, or refuse to renew a certificate to practice emergency medical services. The Board may also issue a written reprimand, or may impose a fine not to exceed \$1,000 if it determines that the person committed fraud in passing the certification examination; committed fraud, misrepresentation, or deception in applying for or securing a certificate from the Board;

⁴⁷ http://www.state.oh.us/odps/division/ems/ems_local/Bridge/letter.pdf.

⁴⁹ O.A.C. 4765-10-01.

⁵⁰ R.C. Chapter 119; O.A.C. 4765-10-02.

or violated any provision of the statutes and administrative rules governing the provision of emergency medical services.⁵¹

A certificate to practice that has been suspended, limited, or revoked may be reinstated by the vote of at least ten members of the Board. In voting to reinstate a certificate, the Board may impose any limitation or conditions on the reinstatement that it deems necessary or appropriate.⁵²

Certification of firefighters and fire safety inspectors

The EMS Board is required to oversee the training and issuance of certificates to firefighters and fire safety instructors.⁵³ The process for issuing certificates is established by rule.⁵⁴ No person may provide firefighter or fire safety inspector services without possessing a certificate issued by the EMS Board. Those engaged in fire service who do not directly participate in fire fighting activities, such as dispatchers, alarm operators, and emergency medical technicians, are not required to obtain a firefighter certificate.⁵⁵ Applicants for a certificate to practice as a firefighter or fire safety inspector must present documented proof of completion of a Board-approved training course. There is no examination.⁵⁶

If the Board determines that an applicant submitted misleading, false, or fraudulent information in applying for a certificate, it may revoke the applicant's firefighter or fire safety inspector certificate. In the event that a certificate is revoked, the notice of the revocation must be published in *Siren*, the firefighters' newsletter published by the Division of Emergency Medical Services.⁵⁷

⁵³ R.C. 4765.55.

⁵⁴ O.A.C. 4765-11.

⁵⁵ O.A.C. 4765-11-09(E).

⁵⁶ A certificate in lieu of completion of a chartered training program may be issued to an applicant who submits evidence of service as a firefighter in the state of Ohio as (1) a volunteer firefighter with a fire department of any township, fire district, city, or village prior to July 2, 1979, or (2) a permanent full-time paid firefighter with a fire department of any city or village prior to July 2, 1970.

⁵⁷ O.A.C. 4765-11-09.

DUTIES OF THE BOARD: OVERSEEING QUALITY OF SERVICE

The EMS Board has a number of statutory duties related to overseeing the quality of service provided by those licensed by the Board. This section describes the Board's duties concerning standards of performance for EMTs and instructors and for ambulance staffing.

The Board is statutorily required to adopt rules addressing the performance of all levels of EMTs.⁵⁸ The Board is also responsible for developing detailed triage protocols,⁵⁹ making recommendations concerning the staffing of ambulances,⁶⁰ and initiating action against EMTs who practice beyond their scope of practice.

The Board has not adopted rules regarding EMT performance. According to EMS Board Executive Director Laura Tiberi, this is because the scope of practice and EMT performance standards are specified in statute.⁶¹

The Board is required to adopt rules establishing standards for the minimum qualifications, peer review, and quality improvement requirements for persons who provide medical direction to EMTs.⁶² Although the Board has not yet adopted these rules, according to Ms. Tiberi, the Board has reviewed a proposal from the Board's medical director and the regional physician advisory boards regarding the requirements for persons who provide the medical direction. Ms. Tiberi stated that the Board approved a proposal at its September meeting and anticipates that the rules process will proceed accordingly.

The Board is required to adopt rules establishing qualifications for a certificate to teach and has adopted several rules specifying the requirements for a certificate to practice as an EMS or first-responder instructor.⁶³ As required by statute, the rules designate the different levels of instructor training required to instruct each level of EMS

⁵⁸ R.C. 4765.11. There are four levels of EMTs: first responders, emergency medical technicians-basic, emergency medical technicians-intermediate, and emergency medical technicians-paramedic. R.C. 4765.11(A)(2), 4765.35-4765.39.

⁵⁹ R.C. 4765.40.

⁶⁰ R.C. 4765.09.

⁶² R.C. 4765.11.

⁶³ O.A.C. 4765-8-12, 4765-8-14, 4765-12-09.

personnel. An additional certificate is provided for in rule for instruction in special topics of emergency medicine.

The Board has a statutory duty to adopt rules "establishing written protocols for the triage of adult and pediatric trauma victims."⁶⁴ The Board was given two years from the effective date of H.B. 138 of the 123rd General Assembly to develop these rules. Since H.B. 138 became effective on November 3, 2000, the rules are to be adopted by November 3, 2002. The Board has begun to develop the rules. The Trauma Committee established to work on the drafting process has draft documents of the trauma protocols on the Internet and is currently engaged in further drafting and obtaining public comment through trauma town meetings.⁶⁵

Another of the Board's duties concerns ambulance staffing. The Revised Code specifies the training each person in an ambulance is to have. It also specifies the minimum level of training each person on an ambulance must have during an emergency run. This standard is different when the ambulance is staffed by volunteers.⁶⁶ These statutes are not further addressed in Board rules.

The Board has authority regarding emergency medical technicians who have entered the emergency department of a hospital. In a hospital emergency department or while moving a patient between the emergency department and another part of the hospital, all levels of emergency medical technicians may perform emergency medical services, but only pursuant to the direction and supervision of a physician or registered nurse.⁶⁷ The Board has authority to pursue disciplinary action against an emergency medical technician who exceeds the scope of practice within a hospital. According to Ms. Tiberi, however, it is not the Board's practice to monitor the activities of emergency medical technicians within a hospital. The Board does not have the authority to monitor or discipline a physician or nurse who delegates tasks to an emergency medical technician that are outside of the emergency medical technician's scope of practice.

The Board uses its authority to investigate complaints from the public as a means of monitoring the quality of emergency medical services.⁶⁸ Ms. Tiberi explained that the Board concerns itself with the quality of emergency medical services by maintaining curricula, standards of accreditation, and continuing education. The complaint and

⁶⁴ R.C. 4765.40.

⁶⁵ http://www.state.oh.us/odps/division/ems/ems_local/trauma/DraftDoc.htm. (See **APPENDIX E.**)

⁶⁶ R.C. 4765.43.

⁶⁷ R.C. 4765.36.

⁶⁸ R.C. 4765.10(B)(1).

investigation processes serve as additional means of monitoring the quality of performance. It is the Board's policy to investigate every complaint by conducting "[f]air, impartial and consistent investigations of all complaints, problem applications or alleged rule violations brought to the attention of the Division of Emergency Medical Services, [build] public confidence and [promote] high professional standards for all associated emergency medical service organizations."⁶⁹ The public can make complaints to the Board by accessing its web site or using a toll-free telephone number. The Board publishes an explanation of its investigation process and a copy of its complaint form on its web site for public access.

If its investigation determines legal action is warranted, the Board may file a complaint with the Attorney General or a prosecuting attorney or city director of law. On receiving the complaint, the official must prosecute or seek an injunction against any person violating the law governing EMS personnel.⁷⁰

⁶⁹ Emergency Medical Services Investigation Policy. Available at http://www.state.oh.us/odps/division/ems/ems_local/Enforcement/Policy.pdf.

⁷⁰ R.C. 4765.48.

DUTIES OF THE BOARD: STATEWIDE PLANNING

Under Ohio law, the EMS Board has duties regarding statewide EMS planning. The Board must provide day-to-day planning and also planning for disaster situations.

Day-to-day EMS planning

Prehospital emergency medical services

For purposes of overseeing the delivery of adult and pediatric prehospital emergency medical services, the EMS Board is required to establish prehospital EMS regions. The term "prehospital emergency medical services" is defined in law as "an emergency medical services system that provides medical services to patients who require immediate assistance, because of illness or injury, prior to their arrival at an emergency medical facility."⁷¹ According to Ms. Tiberi, these services are emergency medical services.

For each prehospital EMS region, the EMS Board is required to appoint either a physician to serve as the regional director or a physician advisory board to serve as the regional advisory board. The Board must specify the duties of each regional director and regional advisory board. The Board has established ten regions that cover the entire state.⁷² A regional physician advisory board has been established for each region, so no regional directors have been appointed. Advisory board members serve without compensation, but must be reimbursed for actual and necessary expenses incurred in

⁷¹ R.C. 4765.05.

⁷² The regions and their constituent counties are as follows: **Region 1** (Adams, Brown, Butler, Clermont, Clinton, Hamilton, Highland, and Warren); **Region 2** (Champaign, Clark, Darke, Greene, Miami, Montgomery, Preble, and Shelby); **Region 3** (Allen, Auglaize, Hancock, Hardin, Mercer, Paulding, Putnam, and VanWert); **Region 4** (Defiance, Erie, Fulton, Henry, Huron, Lucas, Ottawa, Sandusky, Seneca, Williams, and Wood); **Region 5** (Delaware, Fairfield, Fayette, Franklin, Knox, Licking, Madison, Marion, Morrow, Pickaway, Pike, Ross, Scioto, Union, and Wyandot); **Region 6** (Athens, Belmont, Coshocton, Gallia, Guernsey, Harrison, Hocking, Jackson, Jefferson, Lawrence, Meigs, Monroe, Morgan, Muskingum, Noble, Vinton, and Washington); **Region 7** (Ashland, Carroll, Crawford, Holmes, Richland, Stark, Tuscarawas, and Wayne); **Region 8** (Portage and Summit); **Region 9** (Cuyahoga, Lake, Lorain, Geauga, and Medina); and **Region 10** (Ashtabula, Columbiana, Mahoning, and Trumbull).

Because Regions 5 and 6 are so big, the EMS Board has proposed that they be split to create an 11th region that would consist of Athens, Gallia, Hocking, Jackson, Lawrence, Meigs, Pike, Scioto, and Vinton counties. This proposal has not yet been adopted.

carrying out their duties as members. The EMS Board has adopted several administrative rules governing the organization, operations, and responsibilities of the advisory boards.

With respect to operations, the rules require each advisory board to do the following: (1) annually appoint a chairman and vice chairman from among its members and notify the EMS Board's medical director no later than February 15, (2) meet as often as needed to carry out its duties, but at least four times annually, (3) meet at least four times annually with the medical director and advise the medical director of all advisory board meetings, (4) hold at least two public forums annually on the subject of delivery of prehospital emergency medical care in the region, and (5) submit to the medical director and all EMS organizations in its region, prior to the last day of February each year, a report that documents activities, improvements, accomplishments, and problem areas in the previous calendar year.⁷³ According to Carol MacDowell, the EMS Board's Advisory Board Coordinator, the advisory boards are generally meeting the operations requirements. She acknowledges, however, that the advisory boards have not been complying with the public forum requirement. She said that the problem is being remedied. The EMS Board is requiring each advisory board to have held at least one public forum by the end of 2001 and to meet the minimum two forum requirement starting in 2002.

With respect to responsibilities, the rules require each advisory board to (1) develop and recommend written medical protocols for EMS providers, organizations, and personnel operating in the region, (2) provide services to assist in developing and maintaining appropriate emergency medical services in its region, and (3) assist all EMS organizations in its region in procuring the services of a medical director or physician advisory board (as required by law) and serve as the physician advisory board for the EMS organization until a medical director or physician advisory board can be obtained.⁷⁴

The services each advisory board is required to provide to assist in developing and maintaining appropriate emergency medical services are to (1) assist in developing EMS continuing education programs within its region, (2) assist in the organization, evaluation, and procurement of equipment for EMS organizations in its region, (3) maintain information regarding all EMS providers and organizations in the region including the name of the medical director or physician advisory board members for each, (4) maintain a listing of all EMS equipment owned by or available to each EMS provider in the region, (5) maintain a listing of all EMS training and continuing education programs in the region, (6) identify problems with the provision of emergency medical services in the region and develop strategies to address the problems, (7) facilitate agreements for

⁷³ O.A.C. 4765-3-03.

⁷⁴ O.A.C. 4765-3-04.

mutual aid and assistance between EMS organizations in the region, and (8) review any experimental procedures proposed to be included in EMS protocols within its region.⁷⁵

Ms. MacDowell said that the advisory boards are complying, or in the process of coming into compliance, with the requirements concerning their duties. However, she indicated that she is not sure what the advisory boards are doing regarding the organization, evaluation, and procurement of equipment for EMS organizations in their regions and the maintenance of listings of all EMS equipment owned by or available to each EMS provider in the regions. She also indicated that she is not aware of many reviews being conducted by advisory boards of experimental procedures proposed to be included in EMS protocols. She said the issue "doesn't come up."

Statewide planning

The EMS Board is required to prepare a statewide EMS plan and to revise it as necessary.⁷⁶ But, according to Ms. Tiberi, a plan has not yet been prepared. The reason she gave for the plan not yet being prepared is that the Board has not determined all the necessary components for such a plan. Ms. Tiberi attributes this to lack of experience and understanding engendered by the Board's relatively recent creation.⁷⁷

Ms. Tiberi explained that the first eight years of the EMS Board's existence have been focused primarily on rulemaking in order for the Board to operate as required by state law. However, Ms. Tiberi stated that the Board has recently undertaken a commitment to strategic planning by reviewing an EMS assessment that was completed in 1991 and inviting EMS professionals from around the country to conduct a reassessment of Ohio's emergency medical services under a grant from the National Highway Traffic Safety Administration. Scheduled for November 2001, this reassessment will be used to craft a five-year strategic plan at the Board's annual planning retreat in January 2002.

Recommendations for air medical, ambulance, and EMS organizations

Ohio law requires the EMS Board to prepare recommendations for the operation of air medical, ambulance, and EMS organizations. The recommendations must include (1) the definition and classification of ambulances and medical aircraft, (2) the design, equipment, and supplies for ambulances and medical aircraft (including special equipment, supplies, training, and staffing required to assist pediatric and geriatric

⁷⁵ O.A.C. 4765-3-04(B).

⁷⁶ R.C. 4765.08.

⁷⁷ The initial appointments to the EMS Board were to be made within 90 days of November 12, 1992. S.B. 98, effective on that date, established the Board.

emergency victims), (3) the minimum number and type of personnel for the operation of ambulances and medical aircraft, (4) the communication systems necessary for the operation of ambulances and medical aircraft, and (5) reports to be made to ascertain compliance with the Revised Code chapter governing emergency medical services and rules and recommendations adopted thereunder and to ascertain the quantity and quality of air medical, ambulance, and EMS organizations in the state.⁷⁸

The EMS Board has yet to adopt any recommendations, but has proposed recommendations for the operation of air medical organizations.⁷⁹ With respect to ambulance and EMS organizations, the EMS Board has not acted. According to Ms. Tiberi, the Board does not plan to act in those two areas because Board members feel that the Board does not have adequate legislative authority to regulate the organizations. Regarding ambulance service organizations specifically, Ms. Tiberi said that the EMS Board defers to the licensing requirements for those organizations that have been adopted by the Ohio Ambulance Licensing Board.

Disaster situations

"Disaster" is defined in Ohio law as "any imminent threat or actual occurrence of widespread or severe damage to or loss of property, personal hardship or injury, or loss of life that results from any natural phenomenon or act of a human."⁸⁰ To deal with disasters, the EMS Board must provide a state EMS disaster plan and work closely with the Ohio Emergency Management Agency (OEMA).

State plan for disasters

Under Ohio law, the EMS Board must prepare a plan for the statewide regulation of emergency medical services during periods of disaster. This emergency operations plan must be consistent with the statewide EMS plan and with the statewide emergency operations plan adopted by OEMA. The EMS Board must submit the plan to OEMA.⁸¹

The EMS Board has adopted a state plan for emergency medical services during periods of disaster and has submitted it to OEMA. The plan has been incorporated into

⁷⁸ R.C. 4765.09.

⁷⁹ Draft Guidelines for the Operation of Air Medical Services, June 13, 2001. See http://www.state.oh.us/odps/division/ems/ems_local/trauma/DraftDoc.htm. (See **APPENDIX G.**)

⁸⁰ R.C. 5502.21(E).

⁸¹ R.C. 4765.08. The current emergency operations plan was adopted March 20, 2001. According to Candice Sherry of OEMA, the emergency operations plan is completely revised every four years, with 25% being revised annually.

the emergency operations plan. According to Candice Sherry of OEMA, the emergency operations plan is adequate to meet disaster situations.

Relationship with OEMA

The EMS Board is required by statute and administrative rules to do the following: (1) cooperate with OEMA in any manner it considers necessary to develop and implement the emergency operations plan,⁸² (2) participate on the incident command system steering committee,⁸³ and (3) provide a liaison to the state emergency operation center during those periods when a disaster has occurred in Ohio and the Governor has declared an emergency.⁸⁴ Ms. Tiberi said that the EMS Board is meeting all of these requirements.

⁸² *Id.*

⁸³ O.A.C. 4501:3-2-05. The deputy director of OEMA is authorized to adopt an incident command system and establish a steering committee. The duties of the committee are to (1) coordinate implementation of an incident command among state agencies, (2) develop and approve training for state emergency response officials and personnel on an incident command system, (3) monitor and evaluate implementation and use of an incident command system and training by state agencies, (4) recommend local implementation of an incident command system and assist local emergency response officials and personnel in development, training, and evaluation of the incident command system, on request of local officials, and (5) develop and make available an all-risk overhead management team.

⁸⁴ R.C. 4765.10(A)(8). "Emergency" means any period during which the Congress of the United States or chief executive has declared or proclaimed that an emergency exists. R.C. 5502.21(F).

DUTIES OF THE BOARD: EMERGENCY MEDICAL SERVICES FUNDING

EMS Grants

The EMS Board has distributed funding to assist organizations in providing training, equipment, and improving availability, accessibility, and quality of their programs through a grant program that has been in place since 1995. The grants are provided from a portion of seat belt fine revenues. Previously, 50% of seat belt fine revenue was distributed to the appropriation in line item 765-637 EMS Grants. Effective November 1, 2001, however, 54% of fines are to be distributed to this fund.

There are approximately 1,500 EMS providers and agencies eligible to apply for grants in Ohio. Am. Sub. H.B. 138 of the 123rd General Assembly has expanded the pool of eligible applicants to include those who focus on research and injury prevention, especially in the area of trauma. Until the revised program required by H.B. 138 is implemented, however, eligible applicants include only:

(1) EMS organizations established or operated by a township, village, city, or county within Ohio;

(2) Non-profit EMS organizations having principal responsibility for emergency medical response within a political subdivision that provide emergency medical services under contract with that political subdivision;

(3) Private, for-profit ambulance services, or divisions of those services, that provide emergency medical services under contract with a political subdivision;

(4) EMS organizations that are established by a joint fire district, joint ambulance district, or joint township fire district.⁸⁵

Of the eligible applicants, the following table illustrates the number of applications received versus the number of applications approved by the Board. The approval rate ranges from 93% to 99% for applications received. EMS Board staff reported that the Board's intent and action has been to award every eligible applicant agency some amount of the funding requested. For example, if the total amount of funding requested is \$10 million but the actual appropriation is only \$5 million, the Board may choose to award each approved applicant 50% of the requested amount rather than deny an applicant any funds.

⁸⁵ O.A.C. 4765-5-02.

Selection criteria currently used in the grant application process includes determining whether the requested item: (1) is necessary for emergency medical care; (2) will improve patient care or the ability of the EMS organization to provide care; (3) is logical in light of current or future funding needs; (4) will improve the overall EMS system in the affected area; and (5) is a reasonable solution or approach to a problem or situation. In addition, financial hardship to the EMS organization is considered.

Comparison of Applications Received vs. Applications Approved			
Year	Applications Received	Applications Approved	Percent Approved
1995	345	321	93%
1996	650	600	92%
1997	575	543	94%
1998	526	493	94%
1999	623	512	98%
2000	600	592	99%
2001	608	603	99%
2002	813	785	97%

Additional information was provided by the EMS Board staff related to total dollars requested versus total reimbursements requested by those awarded grants. Although over 90% of eligible applicants have been awarded some level of funding, it appears that grantees have only sought reimbursement for 65% or less of the awarded funds since the grant program was created.

Grants Requested versus Grants Requested for Reimbursement (in millions of dollars)					
Year	Appropriated Dollars* for Line Item 765-637	Total Grant Dollars Requested by Applicants	Total EMS Grant Awards	Total Reimbursements Requested by Grantees	Percent Requested for Reimbursement by Grantees
1995	\$1.8	Unknown	Unknown	\$1.0	Unknown
1996	\$2.5	Unknown	Unknown	\$.22	Unknown
1997	\$3.5	\$7.0	\$3.3	\$2.2	65%
1998	\$3.0	\$6.2	\$3.0	\$1.7	56%
1999	\$3.0	\$7.4	\$3.0	\$1.3	42%
2000	\$5.0	\$8.0	\$4.8	\$1.5	31%
2001	\$5.0	\$9.4	\$4.9	\$.50	9%**
2002	\$5.7	\$28.3	\$5.6	Unknown	Unknown

* Including Controlling Board Transfers

** Note: Grantees have requested an extension and have until 12/30/01 to seek reimbursement.

EMS Board staff suggested possible reasons for the low reimbursement request rate might include the following:

(1) Cash flow issues: Because the grants require grantees to first spend the money, and then be reimbursed, many departments may not have the initial funding available for the originally intended purchase. It was noted that some equipment can cost as much as \$25,000.

(2) Training: An initial grant request may assume a certain number of staff will attend training. When grants are actually awarded, however, the number of staff who remain interested in the training may have been reduced.

(3) Staffing levels: Grant requests may include an assumption that an increase in staff may occur when, by the time the grant moneys are available, the increase has not occurred.

(4) Volunteer organizations: Paperwork may be misplaced or overlooked.

Assistance to funding applicants

The EMS Board is required to assist applicants for state or federal EMS funds. The Board must review and comment on applications for these funds and approve the use of all state and federal funds designated solely for EMS programs unless federal law requires another state agency to approve the use of all such federal funds.⁸⁶

According to Ms. Tiberi, an EMS agency seeking state funds receives assistance with the grant application if necessary. The Board maintains a toll free telephone line that may be used by local EMS agencies to receive assistance with the applications. Questions are often received about applications for funds for purchasing new equipment. The Board also monitors federal and state grants as they become available and notifies the local agencies of other sources of funding.

⁸⁶ R.C. 4765.10(A)(3).

DUTIES OF THE BOARD: INFORMATION GATHERING SYSTEMS

The EMS Board oversees and maintains two systems of data collection on the delivery of emergency medical services in Ohio: the EMS Incident Reporting System and the Trauma System Registry. Through the Incident Reporting System, the EMS Board collects data on all EMS runs in the state, both trauma and medical, with a primary focus on pre-hospital treatment of patients. The Ohio Trauma Registry (OTR) collects data from trauma cases only. While eventually the Board plans to collect more expansive information on each trauma case, currently, the Registry collects only in-patient hospital data. In the future, the EMS Board plans to link the information in the OTR and EMS Incident reporting systems to allow for a broader examination into emergency medical services in Ohio.⁸⁷

EMS Incident Reporting System

The Revised Code requires the EMS Board to establish and maintain an EMS Incident Reporting System for the collection of information regarding the delivery of emergency trauma and medical services and the frequency at which the services are provided.⁸⁸ Rules establishing the system were promulgated on June 29, 2001.⁸⁹ The information collected by the Incident Reporting System will be distributed in aggregate form by region and county levels, and will include an annual report on each.

A nine-member Incidence Run committee, appointed by the EMS Board, oversees and advises the Board on matters concerning the Incident Reporting System. Membership of the committee must represent professionals who interact with the EMS system frequently and is to include firefighters, physicians, nurses, and EMS professionals.⁹⁰

Ohio EMS organizations must report all incidents. "Incident" is defined as "any ground or air response to a call for emergency medical services by a public or private emergency medical services organization."⁹¹ Each EMS organization must submit, at a minimum, the following information on each incident:

⁸⁷ *The Register*, newsletter of The Ohio Trauma Registry, Issue 3, June 2001.

⁸⁸ R.C. 4765.06(A).

⁸⁹ http://www.state.oh.us/odps/division/ems/ems_local/rules/New/menu.html.

⁹⁰ O.A.C. 4765-13-09.

⁹¹ O.A.C. 4765-13-01.

- (1) Name and address of the EMS organization;
- (2) Time and date of the incident;
- (3) Location of the incident;
- (4) EMS personnel involved;
- (5) Patient identification (name, date of birth, etc.);
- (6) Information regarding provider assessment;
- (7) Description of the treatment provided to the patient;
- (8) Transport information.⁹²

In the event of a natural disaster or other situation resulting in mass casualties, the Board can grant exemptions from reporting the incidents.

EMS organizations that respond to less than 10,000 incidents annually must submit quarterly reports to the Board. Those that respond to more than 10,000 incidents annually must submit data to the Board in monthly reports. Reports may be filed in written form, or in an electronic submission via the EMS Board's web site.⁹³

All EMS organizations must submit any additional information the Board considers necessary for maintaining the reporting system. EMS organizations that fail to submit an incident report in a timely manner will first be notified in writing, advising the organization of the requirements and consequences of failing to report. The Board will also send a copy of the notification letter to the chief executive officer of the political subdivision or private organization and to the chairperson of the appropriate regional physician advisory board. Continued failure of the EMS organization to report to the Board can result in the organization's ineligibility for the EMS Grants Program.⁹⁴

Ohio Trauma System Registry

The Revised Code requires the EMS Board to establish the Trauma Registry Committee to oversee and maintain a state trauma system registry to collect information regarding the care of adult and pediatric trauma victims.⁹⁵ Procedures for the registry's

⁹² O.A.C. 4765-13-03.

⁹³ O.A.C. 4765-13-05.

⁹⁴ O.A.C. 4765-13-06, -07, -08.

⁹⁵ R.C. 4765.06(B).

operation have been established by rule.⁹⁶ The Committee must annually appoint a chairperson from among its members and, if necessary, may establish subcommittees to aid in certain endeavors.⁹⁷

Who must report to the registry

The registry began collecting data in 1999.⁹⁸ All health care facilities, including hospitals, nursing facilities, county homes, county nursing homes, inpatient rehabilitation facilities, and ambulatory surgical facilities must submit the required information regarding trauma patients to the registry. The Board must take into consideration the financial and other burdens the registry's requirements impose on the affected health care providers and health care facilities. In addition, at the Board's request, any person or state agency possessing information regarding adult or pediatric trauma care must also provide the required information to the Board.

All trauma-related deaths must be reported to the registry by the coroner of the county in which the death occurs within 180 days after occurrence. The coroner must include in the report copies of the investigative summary, autopsy report, if applicable, and death certificate.⁹⁹

Information collected by the registry

A trauma injury is defined in statute as "any tissue damage that creates a significant risk for loss of life or limb, or significant permanent disfigurement or disability; is caused by blunt or penetrating mechanisms; is caused by exposure to electromagnetic, chemical or radioactive energy; or is caused by drowning, suffocation, strangulation, or a deficit or excess of heat."¹⁰⁰

Not all injuries are entered into the Trauma Registry. For an injury to be entered, the patient must be admitted or observed in the hospital for at least 48 hours or transfer into or out of the hospital. The patient must have at least one serious injury, such as burns, hypothermia, smoke inhalation, or the effects of hanging or drowning. Some

⁹⁹ O.A.C. 4765-4-03.

¹⁰⁰ R.C. 4765.01.

injuries are not to be included in the Registry, including contusions, abrasions, insect bites, foreign bodies, and isolated hip fractures.¹⁰¹

The Trauma Committee has developed a format for reports to the registry. The information to be provided includes the name of the treating hospital, identification of the patient, the date of treatment, and how the patient incurred the injury.¹⁰² Aggregate reports of each facility's trauma incidents must be made on a quarterly basis. The reports must be provided and maintained in a way that protects the individual identity of the patient. Specific physicians and health care facilities must be identified by a code or similar designation rather than by name.¹⁰³

The Board uses the information compiled in the registry to analyze and evaluate the delivery of trauma care within the state. The Board considers the geographic patterns of trauma incidence around the state, the types and severity of the trauma injuries incurred, and the criteria for, and appropriateness of, the triage decisions made in treating the reported trauma injuries. The Board must also determine what areas of the state need improvements to the system of trauma care delivery and public education in trauma prevention. Furthermore, the Board must be able to assess, through the registry, a patient's access to trauma care, the availability and responsiveness of the prehospital emergency care system, and the cost of each patient's trauma care.¹⁰⁴

Confidentiality

H.B. 138 requires that by November 3, 2002, the Board adopt and implement rules that provide written standards and procedures for risk adjustment of information received by the Board. The rules must be developed in consultation with appropriate medical, hospital, and EMS organizations and may provide for risk adjustment by a contractor of the Board. Before these risk adjustment standards and procedures are implemented, no member of the Board and no employee or contractor of the Board or Department of Public Safety may make public any information received by the Board under the EMS law that identifies or tends to identify any specific provider of emergency medical services or adult or pediatric trauma care. After the standards and procedures are implemented, the Board may make public such information only on a risk-adjusted basis.

¹⁰¹ *The Register*, newsletter of the Ohio Trauma Registry, Issue 3, June 2001.

¹⁰² http://www.state.oh.us/odps/division/ems/ems_local/trauma/Green_book%20DRAFT%20REV%20September%2027%202001.pdf.

¹⁰⁴ O.A.C. 4765-5-01; *The Register*, newsletter of The Ohio Trauma Registry, Issue 2, March 2001.

H.B. 138 also requires the Board to adopt rules that specify procedures for ensuring the confidentiality of information that is not to be made public and the circumstances in which deliberations of the persons performing risk adjustment functions are not open to the public and records of those deliberations are maintained in confidence. These rules have not yet been adopted, however a draft version of the rules is available on the Board's web site.¹⁰⁵

¹⁰⁵ http://www.state.oh.us/odps/division/ems/ems_local/trauma/DraftDoc.htm. (See **APPENDIX F.**)

DUTIES OF THE BOARD: GOVERNMENT AND PUBLIC LIAISON ACTIVITIES

Several of its statutory duties cause the EMS Board to act as a liaison between the EMS community and both state government and the public.¹⁰⁶ The Board is required by statute to work with other state agencies in coordinating training of firefighters and EMS personnel and to make recommendations to the General Assembly on legislation to improve the delivery of emergency medical services. The Board is also required to serve as a statewide clearinghouse for discussion, inquiry, and complaints concerning emergency medical services and is permitted to establish a statewide public information system.

Liaison with state government

To fulfill its duty to work with appropriate state offices in coordinating the training of firefighters and EMS personnel, the Board establishes the curriculum for all initial and mandatory training of EMS personnel and firefighters. The Board has adopted rules establishing uniform minimum standards for the training, classification, and certification of firefighters and fire safety instructors.¹⁰⁷ To receive a charter as a fire service training program, a program must meet or exceed requirements established in the rules.

Regarding its duty to make recommendations concerning EMS legislation, Ms. Tiberi explained that the Board acts through the Department of Public Safety, rather than independently. The Board's recommendations are made to the legal council and legislative liaison of the Division of Emergency Medical Services. Ms. Tiberi said that the Board monitors relevant legislation throughout its progress in the General Assembly.

Liaison with the public

The Board acts as a liaison with the public through its toll-free telephone line, web site, and public information programs.¹⁰⁸ The web site includes a detailed list of e-mail and phone contacts.¹⁰⁹ Both the phone line and the web site can be accessed by the public and EMS workers and organizations to contact the Board with questions, comments, and complaints.

¹⁰⁶ R.C. 4765.10. Information for this section of the report was obtained from Laura Tiberi and the EMS web site.

¹⁰⁷ O.A.C. Chapter 4765-11.

¹⁰⁸ The toll free telephone number is 1-800-233-0785.

¹⁰⁹ The web site address is http://www.state.oh.us/odps/division/ems/ems_local.default.

The Board provides free safety information and conducts public outreach and education programs. According to Ms. Tiberi and information on the EMS web site, these programs include radio and television public service announcements and participation in National EMS Week each May and in the EMS Data Collection Project. Programs for children include school visits, conducting coloring contests for children and publishing a calendar for the contest winners' designs, and maintaining the EMS for Children and Ohio Safe Kids programs. An Ohio Department of Public Safety (ODPS) press release reported that "in 2000, more than 3.1 million pieces of safety literature were sent to almost 7,000 organizations, including 1,787 schools."¹¹⁰ ODPS Director, Lieutenant Governor Maureen O'Connor, has stated that "providing free safety materials is one way we're fulfilling our mission to provide education, service, and protection to residents of Ohio."¹¹¹

The Board publishes two newsletters, "The Register" and "The Siren," to provide current information on emergency medical services to local agencies.

¹¹⁰ Press release, July 11, 2001. Available on ODPS web site.

¹¹¹ *Ibid.*

DUTIES OF THE BOARD: TRAUMA DUTIES UNDER AM. SUB. HOUSE BILL 138

Appointment of a trauma committee

The trauma committee within the EMS Board was created by H.B. 138 to advise and assist the Board in developing the state trauma registry and rules and protocols to match severely injured adults and children with the hospitals best equipped to provide the specialized medical care that critical trauma victims require.¹¹² Lt. Governor O'Connor appointed the Committee's twenty-two members on November 3, 2000.¹¹³

The Board may also appoint other committees and subcommittees as it considers necessary.

Guidelines for the triage of trauma patients

H.B. 138 also requires that by November 3, 2002, the Board adopt rules establishing written protocols for the triage of adult and pediatric trauma victims that minimize overtriage and undertriage, and emphasize the special needs of pediatric and geriatric trauma patients. The Board has published a draft version of these new rules on its web site.¹¹⁴

Once the rules are approved, the Board must review them at least every three years to determine whether they are causing overtriage or undertriage, and modify them as necessary. In addition, the Board must adopt rules that provide for enforcement of the state and regional triage protocols and for education regarding those protocols for EMS organizations and personnel, regional directors and regional physician advisory boards, EMS instructors, and persons who regularly provide medical direction to EMS personnel in Ohio.¹¹⁵

Guidelines for the care of trauma victims

H.B. 138 requires the Board to develop and distribute guidelines for the care of trauma victims by EMS personnel and for the conduct of peer review and quality

¹¹² R.C. 4765.04; Laura Tiberi, EMS Executive Director, July 2001.

¹¹³ Laura Tiberi, EMS Executive Director, July 2001.

¹¹⁵ R.C. 4765.40.

assurance programs by EMS organizations.¹¹⁶ The guidelines must be consistent with the state trauma triage protocols and place emphasis on the special needs of pediatric and geriatric trauma victims. In developing the guidelines, the Board may consult with entities interested in trauma and emergency medical services and consider any relevant guidelines adopted by national organizations, including those adopted by the American College of Surgeons, American College of Emergency Physicians, and the American Academy of Pediatrics.

The Board must distribute the guidelines by November 3, 2002, to each EMS organization, regional director, regional physician advisory board, certified EMS instructor, and person who regularly provides medical direction to EMS personnel in Ohio.

Report on study of trauma care

Section 3 of H.B. 138 requires the EMS Board and its trauma committee to study and evaluate the following matters:

- (1) The status and needs of emergency medical services and adult and pediatric trauma care provided between Ohio and other jurisdictions;
- (2) Methods to improve specialized care provided by EMS organizations to pediatric and geriatric trauma victims;
- (3) The feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study is to include an analysis of the cost of acquiring, maintaining, and using these devices, potential sources of funding, and training required to ensure effective use of the devices;
- (4) Methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner;
- (5) Methods to increase advanced trauma life support, basic trauma life support, and prehospital trauma life support training among appropriate health care providers, particularly in rural areas of the state;
- (6) The roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in Ohio, and methods to enhance those roles;
- (7) The causes and impact of trauma on minority populations in Ohio and methods to improve emergency medical services and trauma care for those populations.

¹¹⁶ R.C. 4765.12.

The Board must conduct this aspect of the study in cooperation with the Commission on Minority Health.

The Board must, in conducting its study and developing its recommendations, consult as needed the appropriate committees and subcommittees of the Board; regional directors; regional physician advisory boards; organizations that represent physicians, nurses, and hospitals that care for emergency and trauma patients; EMS organizations; government entities; and the Ohio State Coroners' Association, as needed.

By no later than November 3, 2003, the Board must submit a report of its findings and recommendations to the Governor, the General Assembly, and other appropriate authorities and organizations.

EMS BOARD MEETINGS

The EMS Board meets every two months. Some issues of concern to the Board are discussed in the following excerpts from Board meeting minutes:

- November 2000: A Board member expressed concern over the disparity that continues in grants honored and funds actually expended. Specifically, he wanted the Board to discuss avenues for a better expenditure record and to continue investigating the need and use of grant funds. Another Board member added that there is a need to follow up with agencies that do not spend the awarded funds and examine the true need for these funds as a function for bettering pre-hospital care. Director Tiberi stated that the grant application allows flexibility for needed items and that the typical pattern for awardees is to wait until the end of the fiscal year to file for reimbursement.
- November 2000: A Board member reported that \$500,000 was available in left over money carried over from fiscal year 1998. Grant applicants will receive a letter stating that the money must be used towards purchasing a computer and once the state has implemented the data collection system in Ohio they will have to comply and submit their data in a timely fashion. There are 533 applications, and each applicant will receive approximately \$938.08 per computer.
- January 2001: Director Tiberi reported that the Governor's Management Improvement Commission (MIC) 2000 had released its report to the Governor in November 2000. One of the recommendations included in the report was to "merge all EMS and firefighter training in a single agency of Emergency Services within an existing cabinet agency. There was insufficient time to reach a conclusion as to which cabinet agency should house this function. A small team of subject matter experts and customers of these services should work out the details of where the merged function is to be housed." Director Tiberi reported that the Department of Public Safety has responded with a plan, as requested, suggesting how this challenge might be addressed. She said that the Ohio Department of Public Safety [ODPS] emphatically supports the executive director of the board as a lead person to any small group that is put together.

Director Tiberi concluded that:

[ODPS] has also supported that representatives, customers, and consumers of services of different agencies, organizations, and professional associations that are represented on the EMS

Board be represented if such a group is developed. Certainly, if consolidation continues to be considered in any significant way, we feel very strongly along with the Fire Alliance that the logical place would be [ODPS]. The focus would be on saving lives and preserving safety in the state of Ohio. With the passage of the Trauma Bill [H.B. 138 of the 123rd General Assembly], which adds the new medical focus to the Division of EMS and EMS Board, it seems clear that [ODPS] is the mission-centered choice. With the budget on the legislative plate, no quick follow up is foreseen at this time on this section of the MIC 2000 report.

The Board unanimously approved a motion authorizing Director Tiberi to support the Board's regulatory authority and the Board's official position in opposition to moving the EMS Division to any other state agency if further discussions on the MIC 2000 report take place, since the Board feels that a mission and customer focused consolidation, if it would occur, should be at ODPS, maintaining the designated EMS fund and the Board's rule-making authority.

- January 2001: Director Tiberi stated that:

The Board is charged by law with making a State Disaster Plan, but on the other hand we have no accompanying authority or ability to truly submit an active response plan. The EMA is responsible and has authority for the State Disaster Plan and management. My concerns are the accountability to the Emergency Management Agency's current document, which says we will do certain things that we technically have no ability to do. We can assist; we can aide; we can call on other agencies; we can give a list of agencies; we can work with the Ohio Fire Chief's Association which has a fine disaster response plan; there are many things that we can do. Ohio is quite unique in the fact that we have oversight over the certificate holders, but there is no oversight over the agency, except for the private ambulance companies that have standards for private licensing.

Director Tiberi's comments were meant to alert the Board to the need to consider this issue as an active topic for 2001.

- January 2001: The Board provided the following directions to the Trauma Committee concerning actions relative to H.B. 138:

(1) The establishment of minimum qualifications and peer review and quality improvement requirements for persons who provide medical direction to EMS personnel was delegated to the regional physicians advisory board level;

(2) The establishment of the curriculum, number of hours of instruction and training and instructional materials to be used for pediatric EMS training and continuing education programs was delegated to the Education Committee;

(3) The grant program rules that create additional priorities for funding to include injury prevention, rehabilitation, retraining, and reemployment, and medical procedures related to trauma care was delegated to the Grant Committee;

(4) The development and distribution of guidelines for the care of trauma victims by EMS personnel was delegated to the Trauma Committee;

(5) The conduct of peer review and quality assurance programs by EMS organizations was referred to the Systems Management Committee.

- March 2001: A Board member initiated a discussion of the continuing education rule violations that were on the increase. He stated that:

In the past couple of months we have discovered at least two departments where there is a continuing education problem. The instructor was not operating under the direction of any approved school which then invalidates all the continuing education for those EMTs. We have also found out through the audit process (10% of all renewals annually) that there are EMTs without appropriate continuing education to be currently certified.... The case review team has discussed this at length. Our research included other boards in state government and how they deal with continuing education.... From the investigative standpoint, it was asked that the Board give some direction on this matter. These [cases] can be processed through the [Ohio Revised Code Chapter] 119 process or through consent agreements for first offenders.

A draft consent agreement policy was presented to the EMS Board to review (see **APPENDIX A**) and voted on at the May 2001 EMS Board meeting. (On May 16, 2001, the Board approved the draft consent agreement policy.)

- March 2001: Mike Glenn, Trauma Coordinator, reported that, in addition to the Trauma Registry Advisory Committee, the Pre-hospital, Hospital, and Air Medical Subcommittees have been developed and are meeting to work on specific aspects of [implementing] H.B. 138. Mr. Glenn stated that since the "Committee and the subcommittee members are aware that the Joint Commission on Agency Rule Review (JCARR) process is lengthy and will require them to have final documents ready for JCARR **no later** than January 31, 2002, this requires that all final drafts be ready for EMS Board review by mid fall and ready for final public hearing later fall/early winter."
- March 2001: A Board member reported that the EMS For Children (EMS-C) Committee's *Emergency Guidelines for Schools* have been revised and are in the process of being reprinted. They will be distributed on request to schools, EMS agencies, and other groups caring for children.¹¹⁷
- May 16, 2001: The following is from a Continuing Education Audit Report presented to the Board:

Overall Statistics [as of May 16, 2001]

Total Number Audited (since 12/00)	217
Total Number Approved (as of 05/16/01)	141
Total Number Waiting on Additional Documentation	70
Total Number Referred to the Investigative Division (Non-compliance/No response)	6

Breakout

Total EMT-Basic Audits	118
Total EMT-Intermediate Audits	23
Total EMT-Paramedic Audits	76

- ? May 16, 2001: Mike Glenn, Trauma Coordinator, reported that the Trauma Committee meets monthly. A series of trauma town meetings will be held in eight locations around Ohio to introduce the first draft of the destination protocol and transfer agreement template. The Board also approved a motion for the Trauma Committee to continue discussion with the Ohio Ambulance Licensing Board for the purpose of allowing air medical transport services to be licensed by that body. Director Tiberi stated that H.B. 138 requires that the

¹¹⁷ The *Guidelines* are also available on the EMS Board's web site at the following Internet address: http://www.state.oh.us/odps/division/ems/ems_local/emsc/EMSCGuide.pdf.

Board adopt standards for [air medical transportation] organizations even though the Board does not have the authority to certify them.

- July 2001: Director Tiberi reported that there was approximately \$1.5 million in funds that were unspent in the last fiscal years. She had been asked to approach the Controlling Board with a request to allow those funds to be utilized by the EMS Division to do a special additional grant opportunity for computers for the EMS Incidence Reporting System and perhaps look at offering Incidence Reporting cost offset. The Board approved this request to go to the Controlling Board.
- July 2001: Mike Glenn, Trauma Coordinator, reported that 359 people have participated in seven out of the eight trauma town meetings. [The numbers from the eighth meeting were unavailable.] Of these, 246 participants were from hospitals and 113 from EMS/fire agencies. Health care professionals from 58 counties have participated, and at least one Trauma Committee member has been present at all seven meetings.
- July 2001: It was reported that the Ohio EMS-C program has been selected to participate in a pediatric assessment project funded by the National EMS-C program. The project is modeled after the National Highway Traffic Safety Administration's Technical Assessment Team process for emergency medical services. The process offers states an approach to assessing their EMS system as it relates to children and adolescents. The process will provide a comprehensive assessment to help Ohio continue to improve emergency medical service for children and provide information to the Federal EMS-C program documenting strengths and weaknesses of its program. The review team will be in Columbus for the three-day assessment on December 4, 2001. The team will hear presentations and conduct interviews on Ohio's EMS-C activities.

GLOSSARY

Emergency Medical Services Incidence Reporting System - A system established by the State Board of Emergency Medical Services for the collection of information regarding the delivery of emergency medical services in Ohio and the frequency at which services are provided. (R.C. 4765.06.)

Emergency Medical Services Personnel - First Responders, EMT-basic, EMT-intermediate, EMT-paramedic, and persons who provide medical direction to such persons. (R.C. 4765.01(L).)

Emergency Medical Technician-Basic (EMT-Basic) - A person who holds a valid certificate to practice as an EMT-Basic. An EMT-basic may operate an ambulance and give emergency medical services to patients. Services may include determining the nature and extent of illnesses or injuries and establishing priority for required emergency services, opening and maintaining an airway, chest compressions, controlling hemorrhages, stabilizing fractures, assisting in childbirth, cardiac resuscitation, and any other services approved by adoption of a rule by the State Board of Emergency Medical Services. (R.C. 4765.01 and 4765.37.)

Emergency Medical Technician-Intermediate (EMT-I) - A person who holds a valid certificate to practice as an EMT-I. An EMT-I may perform the emergency services including the following: cardiac monitoring, electrical interventions to support or correct cardiac function, administering epinephrine, determining triage, and any other service approved by rule of the State Board of Emergency Medical Services. (R.C. 4765.01 and 4765.38.)

Emergency Medical Technician-Paramedic (Paramedic) - A person who holds a current certificate to practice as an EMT-Paramedic. Paramedics may perform emergency medical services including cardiac monitoring, electrical interventions to support or correct cardiac function, airway procedures, relief of pneumothorax, administering appropriate drugs and intravenous fluids, triage of trauma victims, and any other services, including life support or intensive care techniques, approved by rule of the State Board of Emergency Medical Services. (R.C. 4765.01 and 4765.39.)

First Responder - A volunteer for a non-profit emergency medical services organization or a non-profit fire department who holds a certificate to practice as a first responder. A first responder may provide limited emergency services until an EMT arrives on the scene of the emergency. Limited emergency services include opening and maintaining an airway, giving mouth to barrier ventilation, chest compressions, electrical interventions with automated defibrillators, assisting in childbirth, and triage of trauma victims. (R.C. 4765.30 and 4765.35.)

Life Support Care (life support) - Care provided to patients requiring extraordinary therapeutic measures to sustain and prolong life. (Online Medical Dictionary, (December 1998) <www.graylab.ac.uk/omd/index.html>.)

State Trauma Registry - A register containing information on adult and pediatric trauma-related deaths, the identification of trauma patients, the monitoring of trauma patient care data, amounts of uncompensated adult and pediatric trauma care provided annually by each

facility, and any other information specified by the State Board of Emergency Medical Services. (R.C. 4765.06.)

Trauma (or traumatic injury) - Severe damage to or destruction of tissue that creates a significant risk of loss of life; loss of limb; significant, permanent disfigurement; or significant, permanent disability and is caused by one of the following: blunt or penetrating injury; exposure to electromagnetic, chemical, or radioactive energy; drowning; suffocation; strangulation; or a deficit or excess of heat. (R.C. 4765.01(N).)

Triage - The sorting out and classification of patients or casualties to determine priority of need and proper place of treatment. (Online Medical Dictionary, (December 1998) <www.graylab.ac.uk/omd/index.html>.)

process and how the testing has impacted the state of Ohio. There are ten other states doing the 99 Intermediate Curriculum and the committee would like to receive input from them to see how it is affecting the work they're doing.

INVESTIGATIVE TEAM REPORT - Richard Rucker & Melissa Vermillion

The investigative team passed out a "Summary of Past Adjudication Orders to Date of the State Board of EMS."

DRAFT CONSENT AGREEMENT POLICY

Draft Consent Agreement Policy was provided March 21, 2001 to Board for review. The policy was brought before the Board today for approval.

- CONSENT AGREEMENTS

I. POLICY

The State Board of Emergency Medical Services through the Division of Emergency Medical Services will consider entering into consent agreements for rule violations under ORC/OAC 4765. with certificate holders and accredited schools when deemed appropriate. *Consent agreements* provide the State EMS Board and the certificate holders or accredited institutions an alternate method in lieu of the Chapter 119 process to comply with established rules, and where appropriate, be administered discipline as the circumstances warrant.

Consent agreements will be presented to the State EMS Board for consideration after the following conditions are satisfied:

1. The Office of Investigative Services has completed a thorough investigation.
2. The Assistant Attorney General representing the State EMS Board believes a consent agreement is appropriate for the particular circumstances.
3. The EMS Executive Director approves the consent agreement.
4. The certificate holder or accredited institution agrees to the conditions set forth in the consent agreement.

When applicable, the Case Review Team as outlined in the Investigative Process Policy may be convened by the Executive Director to provide input into consent agreement consideration.

II. SPECIAL PROVISIONS

The Assistant Attorney General representing the State EMS Board shall prepare and present consent agreements to the State EMS Board for consideration after review by the Executive Director and Office of Investigative Services. A

majority vote by State EMS Board Members is necessary to approve a consent agreement.

Eligibility for certificate holders and accredited institutions to participate in consent agreements should fall within the following guidelines:

1. First offenders.
2. The rule violation can be readily remedied through a consent agreement.
3. High probability that the certificate holder or accredited institution will fulfill the conditions of the consent agreement.

Consent agreements approved by the State EMS Board in previous cases have included but not limited to criminal convictions, scope of practice and patient care issues. These consent agreements when applicable, contained provisions requiring the certificate holders to complete education or training to reinforce appropriate emergency medical technicians behavior. Ethics courses, anger management and critical decision making are primary examples. When educational or training courses are part of a consent agreement; the following conditions shall be satisfied to successfully meet the terms of the agreement.

1. The certificate holder shall submit the proposed relevant education or training course for approval to the Division of Emergency Medical Services prior to attending the course.

- a. Universities, colleges, and educational institutions are appropriate sources for obtaining such education or training.
- b. Consideration will be given to local education or training by the department's medical director, department's training officer or other
- c. instructional source approved by the Division of Emergency Medical Services.

1. The education or training with rare exceptions should be multiple sessions.
2. The length and hours of education or training will be approved (disapproved) on a case by case basis. The prime consideration is reinforcing appropriate emergency medical technician behavior.
3. The certificate holder attending the education or training must demonstrate attendance and satisfactory completion of the course within the agreed upon time frame. Submissions of grade transcripts, certificates of completion or signed letterheads by the program director are examples of documents giving evidence of attendance and satisfactory completion.

When all conditions of the consent agreement have been completed, then the case shall be presented to the State EMS Board for consideration of closure.

Certificate Holders who fail to complete the conditions outlined in the consent

agreement shall be processed in accordance with all applicable provisions of Ohio Revised Code Chapters 4675, 119 and terms listed in the agreement.

ACTION: Motion to approve Draft Consent Agreement policy. Burgess first. Fratianne second. None opposed. Motion approved.

Mr. Resanovich stated he felt as being part of the case review team this is a way to do business for these offenses and do business quickly.

Mr. Mace asked on several different occasions we have dealt with patient care standards and entered into consent agreements. He didn't see the medical director being consulted on these matters. Would that be a part of the investigative process?

Ms. Vermillion answered the medical director on most cases have been consulted. The medical directors are implementing remedial training.

Ms. Petrella stated actually that is part of the investigation.

ACTION: Motion to go into Executive Session at 12:55 p.m. to deliberate on report and recommendations of case #OOI-10 (Rumbaugh) and several consent agreements. Burgess first. Close second. None opposed. Motion approved.

APPENDIX B

Ohio Task Force on Fire and Emergency Response Training Summary Report and Recommendations December 15, 1999

I. Executive Summary

Under the authority of Governor Bob Taft, Lt. Governor Maureen O'Connor and Commerce Director Gary Suhadolnik convened the Ohio Task Force on Fire and Emergency Response Training on September 15, 1999.

The purpose of the Ohio Task Force on Fire and Emergency Response Training was to accomplish the following:

- 1) To survey and compile information on all of the fire and emergency response programs provided by or coordinated through state government, including a list of all training programs, the oversight agency (agencies) and sources of funding. 2) To make formal, written recommendations to the Directors of the Departments of Commerce and Public Safety regarding the following: a) How can the state coordinate fire and emergency services training so as to increase efficiencies, lower overall costs and provide customers simpler points of contact for arranging training opportunities. b) How can the state agencies which provide fire and emergency services training better coordinate their offerings with those provided by or coordinated through local government and/or by the federal government. c) What additional training opportunities should the state offer and which agency should provide the training? d) How can test scheduling and registration be improved to provide for the prompt test registration needs of the fire and EMS services. e) Which agency or agencies should administer each type of training offered?

Using historical, evaluative, and action research methodology, the Task Force held public hearings throughout the state, surveyed similar agencies throughout the United States, and reviewed models for the efficient delivery of fire and emergency medical training and certification for the State of Ohio. Public hearings, research and interaction by the Task Force members revealed the following problems:

- Frustration with the service delivered by the Division of Emergency Medical Services and the Office of the State Fire Marshal.
- Dissatisfaction with the Division of EMS regarding telephone and information systems, and the certification and testing process.

- Poor communications between state agencies and local governments, local training institutions, local fire and EMS service providers, and instructors.
- The need to coordinate services through consolidation.
- The length of time it takes for BCI to conduct background and fingerprint checks of fire and EMS candidates.
- Live fire training centers not readily available.
- Concern with the usefulness of the National Registry as the testing source for EMTs.
- Perceived inequities in the fire and EMS funding mechanisms.

Using the Quality Service through Partnership problem solving processes and quality improvement techniques, the Task Force developed both immediate and long-term recommendations for improvements.

The immediate goals include:

- Re-establishing regional training coordinators.
- Establishing, publicizing and utilizing a Communications Plan.
- Utilizing technology, especially the Internet, to design an information clearinghouse.
 - Developing an interactive inquiry system for information regarding status of certification, test, or renewal.
 - Establishing an automated telephone system for response to Frequently Asked Questions.
 - Coordinating and updating all curricula, materials, and corresponding tests.
 - Establishing and monitoring a clearinghouse for grants.
 - Increasing communications to and solidifying the relationship with schools and instructors.
 - Working with training delivery partners, such as local training institutions, to decentralize the testing and grading process for fire and EMS certification tests and to review alternative testing mechanisms for fire and EMS.
 - Evaluating the disparities between re-certification of EMTs and no renewal requirements for Firefighters and seeking the necessary legislative changes to make for a more equivalent system of requirements.
 - Implementing a more prompt and efficient certification and card issuance process, such as using the state's deputy registrar locations to issue certification identification cards with proof of requirements met.

The Task Force believes that many of these goals can be accomplished with in-house operational changes and administrative direction. Possible long-term solutions may require budgetary, legislative or administrative rules changes in order to occur.

Long-term goals include the following recommendations:

- A single agency approach to fire and EMS training and certification.

- Additional funding for current training and grants, as well as the construction of regional live fire training facilities.
- Efficient use of the Internet and technology to bring effective training into the individual fire stations and chartered agencies, and for more efficient testing and certification.

The Task Force also requests that the Management Improvement Commission, scheduled to meet early next year, review these findings and determine how the State of Ohio can otherwise improve the quality delivery of fire and EMS training to all emergency responders.

Respectfully submitted this 15th day of December, 1999

II. Ohio Task Force on Fire and Emergency Response Training

On July 27, 1999, by written notice, Ohio's Governor Bob Taft appointed thirteen individuals to work with Director Gary Suhadolnik (Department of Commerce) and Lt. Governor/ Director Maureen O'Connor (Department of Public Safety) as members of Ohio's Task Force on Fire and Emergency Response Training. On September 15, 1999, Directors Suhadolnik and O'Connor convened the first meeting of the task force to review the purpose and goals and establish timelines for the task force. State Fire Marshal Robert Rielage and Public Safety Assistant Director Gary Joseph were appointed as co-chairpersons of the task force and charged with coordinating future meetings and activity.

Task Force members appointed by the Governor represent the fire and emergency medical services professional community including fire chiefs, training institutions, practitioners, state agencies, and local government. They are: Jim Beckner, Rural Fire Council; Charles Geloff, Miami Valley CTC and Joint Vocational Schools; Ed Humphrey, Ohio Township Association; Gary Joseph, Department of Public Safety; Mike Kelly, Ohio Municipal League; Daniel Leffler, Northern Ohio Firefighters; Laura Ludwig, Department of Public Safety and EMS Board; Cheryl Lyman, Department of Commerce; John Preuer, Ohio Fire Chief's Association; David Price, Fire Chief and County Emergency Management; Robert Rielage, State Fire Marshal; Rodger Sansom, Ohio State Firefighters' Association; Kevin Watts, Ohio Association of Professional Firefighters. (Appendix A)

The written recommendations of the Task Force were to be shared with the Directors of Commerce and Public Safety no later than 90 days after the first meeting, or by December 15, 1999. The Directors of Commerce and Public Safety will review the recommendations and forward the report, with their comments, to the Governor no later than thirty days after the receipt of the recommendations. Unless otherwise directed by the Governor, the Task Force on Fire and Emergency Response Training has completed its charge and ceases to exist with the issuance of these recommendations.

III. Task Force Mission and Purpose

The purpose of the Ohio Task Force on Fire and Emergency Response Training was to accomplish the following:

- 3) To survey and compile information on all of the fire and emergency response programs provided by or coordinated through state government, including a list of all training programs, the oversight agency (agencies) and sources of funding.
- 4) To make formal, written recommendations to the Directors of the Departments of Commerce and Public Safety regarding the following:
- f) How can the state coordinate fire and emergency services training so as to increase efficiencies, lower overall costs and provide customers simpler points of

- contact for arranging training opportunities.
- g) How can the state agencies which provide fire and emergency services training better coordinate their offerings with those provided by or coordinated through local government and/or by the federal government.
- h) What additional training opportunities should the state offer and which agency should provide the training?
- i) How can test scheduling and registration be improved to provide for the prompt test registration needs of the fire and EMS services.
- j) Which agency or agencies should administer each type of training offered?

IV. Step One: **Information Collected on Current Fire and EMS Training Programs in State Government**

The first meeting of the Task Force focused on surveying and compiling information about fire and EMS training offered through state agencies. Staff of the Office of the State Fire Marshal and Public Safety's Division of EMS made presentations to explain the role they play and the training offered. Information gathered from multiple sources was shared with all task force members.

A. Current Training and Certification Training required for certification as an Ohio Firefighter or EMT is essentially administered by one state agency, the Department of Public Safety, through the Division of Emergency Medical Services. Service and training delivery involves multiple agencies and organizations including the State Fire Academy, Joint Vocational Schools, Fire Departments, Hospitals and other charters and accredited agencies.

The Division of Emergency Medical Services (ODPS), along with the State Board of Emergency Medical Services, regulates EMS Training and Certification for the state of Ohio. (Appendix B) The State Board of EMS has the authority to make rules regarding Emergency Medical Services. EMS training includes the initial training for certification levels of First Responder, Basic and Intermediate EMT, and EMT-Paramedic and all continuing education training. The Division, with the approval of the Board, also accredits the training institutions which are permitted to conduct certified training programs and continuing education courses for EMT training at all levels. There are currently 90 such accredited training institutions and 280 sites with certificates of approval to teach continuing education. (Appendix C) The Division and the Board also approve EMS Instructor qualifications, training and recertification.

The Division of EMS, with the advice of a Firefighter and Fire Safety Instructor Training Sub-Committee of nine (9) members selected by the Fire Service Members of the EMS Board, also oversees the requirements for firefighter training, instructor qualification, firefighter certification requirements and chartering fire training institutions. (Appendix D) A Fire Chartered Agency is permitted to conduct certified firefighter training programs, including Firefighter I A, 1B, 1 C, Firefighter 1 and 2, Fire Safety Inspector and

Fire Instructor. There are currently 64 such chartered agencies which are approved to conduct firefighter training. (Appendix C)

All of the Division of EMS rules regarding mandatory certification training for EMS and Fire and accredited institutions are governed by rule as published in the Ohio Administrative Code. (Appendix E) There are about 1260 fire departments in Ohio, approximately 45,000 firefighters, 1600 EMS services, and 35,000 EMTs of all levels. EMTs must recertify every three years. 70-75% of Ohio's firefighters are volunteer or part-time and about 70% of EMS response is provided by fire departments. The Division of EMS certification standards are based upon nationally recognized standards for Firefighters and Emergency Medical Services professionals. Finally, while EMS renewals require meeting continuing education requirements, no additional training is required by the state for Fire personnel.

The Office of the State Fire Marshal, (SFM) a division of the Department of Commerce (DOC) sets the certification standards for Underground Storage Tank Inspectors (UST), a mandatory training program. The SFM, through the Ohio Fire Academy, offers optional advanced and specialized classes in such areas as fire service supervision and management, fire safety education, fire investigation and fire inspection. While none of these are requirements for state certification as a firefighter, the wide variety of programs offered through the Fire Academy resident program and the Outreach program offer advanced learning opportunities for fire personnel. The Fire Academy conducts 150 resident programs annually at the Academy facility in Reynoldsburg for 3,000 participants and an estimated 800 Outreach programs statewide for 13,000 participants. The SFM also operates a Film Library and Resource Center to support local training efforts. The Ohio Fire Academy is not chartered or accredited institution for mandatory fire and EMS certification training, but does hold a charter to teach the courses required to obtain certification as a Certified Fire Safety Inspector and Instructor. Additionally, the Academy does offer certification levels of training in its course catalog by virtue of a contract with another chartered and accredited training institution, a local joint vocational/adult education institution. The Fire Academy has also recently been approved to offer continuing education for EMS. (Appendix F)

In fact, the vast majority of certification level training for Fire and EMS is conducted at local Joint Vocational Schools (JVS) and community and technical colleges. Other training delivery institutions include hospitals, county and regional Fire/EMS programs, private entities, and fire departments. Fire departments may apply for and qualify as a chartered or accredited institution to conduct fire and/or EMS training and/or to provide continuing education training programs.

B. Current Funding Sources

The cost of and funding for training is diverse. Individuals, the employer or sponsoring agency, government stipends, or grants may cover the cost of training. Mandatory

training required for certification as an EMT or Firefighter appears to be most often paid for by the individual or the sponsoring agency. The Division of EMS, entirely supported by Ohio's safety belt fines, uses 50% of the safety belt fine fund for grants to local EMS providers. The percentage is designated by statute. Approximately \$3.5 million a year in this grant fund supports EMS initial training, continuing education, training equipment and patient care equipment to eligible local EMS agencies.

The Office of the State Fire Marshal offers some grants for fire equipment and training, mostly to smaller fire departments. An estimated \$750,000 is available in equipment grants to small, rural departments. There is an additional modest set-aside for equipment for departments in forest fire districts. Finally, there is an estimated \$1 million for reimbursement for basic training for firefighters from areas with less than 25,000 population.

The cost of the training itself also varies. For specialized firefighter training beyond the certification requirements, the Fire Academy, on-premise and through statewide outreach, charges a fee for courses offered. The fee generally covers the cost of the instructor and class materials. Technical schools and JVS's, offering the mandated state training for certification as a firefighter or an EMT, depend on course fees, local support (such as administrative budget and local levies) and a modest reimbursement through the State Department of Education per hour taught (\$440,262 total statewide in FY 1999). Because schools are a competitive business and do not have equal resources, the class costs do remain the prerogative of the school. Several JVS's report a deficit in the area of Public Safety training, yet continue to offer what is considered this vital service and attempt to offset the costs through other program areas or through dedicated local support, such as through a hospital. Fire departments that hold a charter to teach firefighter training or EMS do not receive the Department of Education reimbursement. These class expenses are entirely absorbed by the local department, the individual student, or may be offset by EMS grants available through the Division of EMS.

The most visible funding-mechanisms are the state budget and the dedicated funding sources that support the operations of the Office of the State Fire Marshal, including the Fire Academy, and the Division of Emergency Medical Services.

The Fire Marshal's Office and Fire Academy's operating budget's primary source (64%) of funding is taxes levied in the amount of .75% of gross fire insurance premium receipts collected by insurance companies operating in Ohio. This fund, Fund 546 (O.R.C. 3737.7) also earns interest. The current FY 2000 budget, accounting for revenues from all sources, for the State Fire Marshal's Office is slightly over \$13 million. An historical comparison is available in Appendix G. Included also is a chart reflecting FY 1999 expenditures which illustrates in summary fashion where the funding goes: 13% to Capital improvement; 13% to BUSTR; 11 % Fire Academy; 6% Fire prevention; 3% Forensic Lab; 14% Code Enforcement; 11 % Fire Investigations; 1 % Firefighters Dependents Fund; 12% Grants to Fire Departments; 16% Administration Costs. The figures also reflect that the Office of the State Fire Marshal has statutory responsibilities

beyond the training issues this task force has researched.

The safety belt fines collected in the state of Ohio provide the dedicated funding source for the operations of the Division of Emergency Medical Services and the expenses incurred with the support of the State EMS Board. By statute (O.R.C. 4513.263), the safety belt fines are distributed as follows:

- 10% School age safety belt program
- 10% Statewide safety belt public information and education
- 28% EMS Administration (Division and Board)
 - 50% EMS Grants to local agencies
 - 2% Ambulance Licensing Board

The current fiscal year budgets \$1.5 million for the EMS Administration and \$4.8 for EMS grants. Comparison and historical figures can be found in Appendix G.

Finally, the broad scope of emergency response training includes a host of other specialized training programs offered by/through the Ohio Emergency Management Agency (OEMA), a division of the Department of Public Safety, and the Ohio Department of Natural Resources (ODNR). The ODNR provides specialized training through the Division of Forestry on Wildfire Behavior, limited to their designated fire protection areas. The Division of Forestry is the State's liaison with the U.S. Forest Service and supports the training and equipping of national fire crews. The OEMA provides specialized training in Emergency Planning and Exercise, Emergency Management, Radiological Incidents, terrorism and CAMEO (Computer Aided Management of Emergency Operations). All of the special offerings are federally funded through sources such as the Federal Emergency Management Agency (FEMA) and the Environmental Protection Agency. The OEMA is the State's liaison with the Federal Emergency Management Agency's Emergency Management Institute. (Appendix H)

V. Regional Meetings

The collection of information about all the training opportunities for fire and EMS personnel, and the accompanying concerns, issues and complaints about training and testing procedures led the Task Force early on to establish a priority stage in their work; the need to gain input from boundaries beyond Columbus, Ohio. The Task Force considered necessary the involvement and contributions from the fire and EMS service customers statewide. Inviting user groups into regional forums illustrated quite clearly the significance of this effort and the importance of customer input. Task Force members shared the responsibility for hosting five regional meetings on October 6, 1999 in Columbus, Findlay, Akron, Nelsonville, and Middletown. (Appendix I)

An estimated 225 representatives from local governments, EMS services, fire

departments, Joint Vocational Schools, and other interested parties attended the five regional information gathering sessions. Each regional forum was equally well attended, and the participants who gave of their own time to attend were well prepared, thoughtful, and earnest in their remarks. The comments heard by the task force members were mirrored across the state. Most of these "customers" of Ohio's Fire and EMS training and certification delivery system expressed frustration with the service delivered by the Division of EMS and, to some extent, some concerns with the Office of the State Fire Marshal. The comments overwhelmingly, however, signaled dissatisfaction with the Division of EMS in relation to telephone and information systems, the certification and testing process, and confusion surrounding educational requirements, in general. Suggestions were made to add continuing education requirements for firefighters and to equalize or standardize somewhat the fire and EMS certification and education requirements. Poor communications between state agencies and local governments, local training institutions, local fire and EMS service providers and instructors also surfaced as a concern. Funding issues for vocational schools, the dedicated budgets, the distribution of EMS grants and the desire for additional fielding and grants for local fire departments were also a significant topic. Finally, a substantial number of attendees at the regional meetings noted the difficulty of working between two state agencies and expressed a wish for consolidated services from the state level. All of the testimony heard at the regional forums was recorded on videotape for accuracy of reporting and for the archive.

The Task Force members reported back to the third meeting of the full membership all details of comments and concerns from the field; messages consistent from all areas of the state and all representative customer organizations. Joined with similar concerns that Task Force members themselves had taken the opportunity to express, a substantial list of issues was compiled. The Task Force then divided the list into three primary categories: Training; Testing and Certification; and Service Delivery. Subcommittees were established to review, summarize and prioritize the issues in each of these areas and did so with a narrative and summary chart report. Full subcommittee reports are included in Appendix J.

VI. Survey From Other States

Because the input of Ohio's Fire and EMS community was valuable in crafting the recommendations of the Task Force, the members also decided to look beyond Ohio's borders. How did other states administer emergency training? How did other states pay for public safety services? With the goal of benchmarking in mind, and seeking best practices, the task force queried other states through the State Training Director's, the State Fire Marshal's Association, and the Association of State EMS Director's. (Survey -Appendix K)

The one lesson clearly learned was the diversity in organization and funding of public safety services across the nation. The 37 surveys returned are rich in information with

little consistency among the states and the agencies responding. The Task Force agreed that while it was of benefit to have made the collection effort, the information assembled was difficult to make use of at this time. The members concurred that the collected information would be saved as a source of data for both the Office of the State Fire Marshal and the Division of EMS to continue to review for best practice concepts.

VII. Recommendations of the Ohio Task Force on Fire and EMS Training

Information collected, digested, and discussed at length, the task force turned to the responsibility of the assigned report and recommendations. These recommendations follow the format as set by the formal charge to the Task Force. Most of the issues and suggestions as reported by the Subcommittees on Training, Testing and Certification, and Service Delivery will have a logical position in these overall recommendations. The Task Force requests that the subcommittee issues which perhaps stretched beyond the bounds of the charge of the task force, yet are identified concerns, be addressed by the departments and divisions/offices involved.

A) How can the state coordinate fire and emergency services training so as to increase efficiencies, lower overall costs and provide customers simpler point of contact for **arranging training opportunities?**

Based upon comments from the field and the Task Force membership, most feel that significant consideration should be given to consolidation of fire and EMS training, certification and service delivery in one agency. Members of the state's fire services organizations seem particularly adamant about the need to coordinate services by consolidation, and, in fact, presented a model for consideration. (Appendix L) The customer base feels that a single agency point of contact would be simpler, more efficient, and more cost effective. A "one-stop-shop" approach consolidating the rules and regulations, testing, training and certification, resource and information delivery, and funding and grants clearly has merit. To accomplish this would require no less than the Governor's support and legislative and statutory changes regarding placement of offices in state agencies and funding mechanisms, as well as a substantive redirection of the involved agencies' budgets.

- The Task Force recommends that the issue of single agency consolidation of fire and EMS training and services be given serious consideration by the Directors of Commerce and Public Safety and the Governor's Management Improvement Commission.

In the meantime, as noted in the subcommittee reports, a great deal can be accomplished by focusing on administrative and operational changes which will improve training

delivery. It is recommended that the state coordinate training and delivery by:

- Re-establishing regional training coordinators. (EMS) Establishing, publicizing
- and utilizing a Communications Plan. (EMS and SFM)

- Utilizing technology, especially the Internet, in addition to current forms of communication, to design an information clearinghouse. Developing an interactive inquiry system for information regarding status of certification, test, or renewal. (EMS and SFM)
- Establishing an automated telephone system for response to Frequently Asked Questions. (EMS)
- Updating and keeping communication current regarding all curricula, materials, and corresponding tests. (EMS)
- Establishing and monitoring a clearinghouse of grants for local agencies. (EMS)
- Increasing communications to and solidifying the relationship with schools and instructors.(EMS)
- Working with training delivery partners, such as local training institutions, to decentralize the testing and grading process for fire and EMS certification tests and to review alternative testing mechanisms for fire and EMS. (EMS)
- Evaluating the disparities between recertification of EMTs and no renewal requirements for Firefighters and seeking the necessary legislative changes to make for a more equitable system of requirements. (EMS and SFM)
- Implementing a more prompt and efficient certification and card issuance process, such as using the state's deputy registrar locations to issue certification identification cards with proof of requirements met.(EMS)

B) How can the state agencies which provide fire and emergency services training better coordinate their offerings with those provided by or coordinated through local and/or federal government?

The Task Force believes a single agency system would provide more coordinated training, certification and testing, rules and information delivery. A single agency training model was prepared as an example by Fire Academy staff of the Office of the State Fire Marshal. (Appendix M)

In the short-term, the Division of EMS and the Office of the State Fire Marshal should make an Internet and print version clearinghouse of information regarding training, certification and testing readily available, as noted above. A concentrated effort to create and continue this information base as a shared responsibility of the two primary agencies, the State Fire Marshal and the Division of EMS, would go a long way to improving communications statewide.

Another coordination issue of concern is the length of time it takes for BCI to conduct a background and fingerprint check of Fire and EMT candidates for the local employers, Fire Departments and EMS services. The Task Force requests that BCI be made aware of the Task Force concerns and asked to expedite the process and the turn around time for Firefighter and EMS personnel. In fact, the Task Force believes that EMTs and Firefighters should qualify as public safety candidates, much like law enforcement, and be granted prompt processing.

C) What additional training opportunities should the state offer and which agency should provide the training?

The significant issue here was the ability to equalize training opportunities statewide. For example, the Task Force recommends that funds be sought and obtained for regional live fire facilities throughout the state, perhaps under the supervision of the recommended regional coordinators. These facilities should be located regionally so that there is a training facility within an hour's drive of every fire department in the state. Under the current required training standards, and the hours set by law, many beginning volunteer firefighters do not participate in a live fire as a training exercise, but experience their first live fire in a real emergency scenario. Live fire training centers are not readily available. In fact, 80 of Ohio's 88 counties do not have such a training facility. Large paid-professional fire services may operate a training facility, but the vast majority of Ohio's firefighters outside these services have less opportunity in the way of live fire training, a significant safety concern, as well as a training issue. Live fire training facilities are the physical setting necessary for achieving additional training recommendations as listed below which place an emphasis on firefighter safety through required live fire training. The Task Force recommends that these training centers and training recommendations be adopted within two years time.

Other additional training recommendations include:

- Better vigilance at maintaining a standard fire curriculum and testing system.(EMS)
- Develop and seek approval for a continuing education program for firefighters.(EMS and SFM)
- Waive the teaching methodology requirement for instructor certification candidates with a teaching degree or demonstrated ability, and require continuing education for instructor certificate renewal. Revise the 36-hour Basic Firefighter course with supplemental modules for specialty training such as wildland, interior structural firefighting, and hazardous materials awareness.(EMS)
- Revisions to the volunteer and part-time firefighter training requirements:

Volunteer Firefighter

-

1 St year

Complete 36-hour Basic training course with a focus on orientation, firefighter safety, and basic skills. Satisfactory completion of a haz mat awareness and operations

program. Prior to engaging in interior structural firefighting, satisfactory completion of alive fire training module. By End of 3rd year Satisfactory completion of a 74 hour (1-B) training program and

	meet NFPA Firefighter I standards.	–
	Part-Time Firefighter	
1 St year	Meet all requirements above, including the 1-B program, and the NFPA Firefighter I standards.	
	Career Firefighter	
1 st year	Complete the 240 hour fire recruit training course, and meet NFPA Firefighter II standards.	

D) How can test scheduling and registration be improved to provide for the prompt test registration needs of the fire and EMS services?

The Task Force recommends no less than an entire overhaul of the testing process conducted by the Division of EMS. No program gathered as much criticism and concern from all customers as the current testing registration and grading process. Lost registrations, inefficient service, testing locations, lag time between test and grade, incapability in accessing information and actual employment concerns because of inability to be promptly tested and certified all surfaced as viable concerns. An additional consideration was the usefulness of the National Registry as the testing source and mechanism for EMTs. Timeliness, pertinence to practical training, pass rates, and simply the fact that the Registry does not represent an Ohio test, all numbered as Task Force discussion points. With this significant concern, the Task Force felt that the recommendations must include a strong endorsement to evaluate testing methods, timeliness and alternatives to the National Registry.

The fire service representatives of the Task Force remain adamant about testing on demand. Funding, time demands, staff levels and a comparison with a multitude of other professional examinations for certification or licensure suggest that this is not a viable option. However a great deal can be done to improve this process in service and efficiency.

- Establish "permanent" testing sites statewide with established and published hours of operation so that tests may be given at any time to individual applicants during hours of operation. Such sites might include deputy registrar/driver exam stations, vocational schools, colleges or universities. The final approved listing will be based on geographic representation, customer demand and reasonable cost.
- Offer the option for application for a specific test date request at the class location with a proctor for large class groups.
- Establish decentralized prompt grading so that with proper paperwork, upon

successful passage of the appropriate test, an individual can report to a designated site and be issued a certification card.

- The certification card would be an identification card, such as a driver's license, with the appropriate Fire and EMT endorsement, renewable at recertification time, as designated by rule or code. A small appropriate cost for issuing the certification card would be considered based on reasonable costs and funding availability.
- Utilizing such technology would allow for the compilation of a database of certified firefighters, instructors, inspectors and EMTs at all levels which could form the basis of an interactive inquiry system for status of an individual's certification.

E) Which agency or agencies should administer each type of training offered?

The Task Force feels a service improvement could be gained by moving towards a single agency system for training. With the addition of regional training coordinators, improved training, outreach, and communications would be more easily achieved. However, given the legislative and budgetary modifications this would entail, this project needs substantive review and planning and ultimately, approval.

In the meantime, achievements in service delivery, through recommendations noted throughout this report, will go a long way to bettering the administration of training. Currently, the Division of EMS, with the approval of the EMS Board, administers all EMS training. The Division also administers fire training. While the basic administration of training is in one agency, the service delivery is more fragmented. In fact, while the Fire Academy is renowned for fire service training, the Academy itself is not a chartered training institution for fire or EMS certification training. While the EMS Board represents the fire and EMS community, by statute, there is no designated representation from the SFM or the Fire Academy. At a minimum, staff level coordination and participation should broaden to include EMS and SFM staff at EMS Board meetings and Firefighter Training Sub-Committee meetings and Public Safety EMS staff at Fire Commission meetings so that a more thorough and connected approach in planning, information exchange and training can be achieved.

In addition, basic service delivery, or customer service, improvements need to be made by the administering agency, the Division of EMS, as noted throughout this report.

F) Funding

Although not one of the original questions to be addressed, the issue of funding crosses all boundaries in the points reviewed. The Task Force felt that a specific, separate, and priority recommendation regarding funding be indicated.

- The Task Force strongly encourages that policy and budget decisions made regarding the dedicated funding sources that exist for the Office of the State Fire Marshal and the Division of EMS utilize and account for all of the dedicated funds, and that these funds go entirely to the benefit of the service as designated by law.

There are also perceived inequities in the fire and EMS funding mechanisms. EMS services currently have \$3.5-4 million in grants available to them in a state fiscal year to be used for initial training or continuing education, training equipment and patient care equipment. The Fire Marshal's budget includes \$1.5 million for firefighter grants in specific categories. With 70-75% of Ohio's firefighters in the volunteer or part-time category, and nearly 70% of EMS provided by Ohio's fire departments, volunteer and paid, the fire services hope that impetus can be given to seeking more training and equipment assistance funding for fire service needs.

The survey conducted of other state's fire and EMS training and budgets revealed multiple funding mechanisms across the nation for public safety services, including some states that support local public safety services training entirely from state budgets. The Task Force advocates continued review of funding sources to better support Ohio's not-for-profit fire and emergency medical services. At a minimum, it is hoped that alternative and additional sources for training and equipment grants for fire services can be identified. Mindful of the concern mandates pose for state and local governments, yet recognizing that public safety services represent a partnership between state and local governments and a valuable and necessary service for the protection of all of Ohio's citizens, consideration should be given to state funding to offset the costs of mandatory training for EMS and fire personnel.

The Task Force also wishes to call special attention to the following funding concerns:

- Joint Vocational Schools rely heavily on the minimum reimbursement received per hours taught in public safety services, yet this funding is entirely reliant upon the Ohio Department of Education Budget. With no dedicated source, the funding levels are not assured.
- The Task Force is concerned with the flat level of income directed to the Office of the State Fire Marshal over the years as generated by the .75% of gross fire insurance premium receipts. While there has been a 27% increase in the gross state product, the insurance premium receipts show no increase that could be attributed to economic growth over time. Instead, the fund has remained static. The Task Force questions whether the total amount is being collected, if some adjustment factor occurs, or if there is some other rationale for this fund not

reflecting economic growth patterns. In fact, the question is whether the funding amount available is consistent with the intent of the original legislation.

VIII. Conclusions

The members of Ohio's Task Force on Fire and Emergency Response Training thank Governor Taft, Lt. Governor O'Connor and Director Suhadolnik for their leadership and interest in Ohio's firefighters and emergency medical services personnel, partners in the protection of and service to Ohio's citizens. The ninety -day deadline was a challenge to meet. Members of the Task Force engaged in a candid and forthright exchange of information over the three-month period.

With an earnest dedication from all members, and the dialogue and synergy that evolved, the Task Force is confident that this report summarizes the issues and challenges that face Ohio's public safety services in the matter of training, testing and certification, and service delivery. The Task Force also deems these recommendations and solutions achievable. Many of the solutions proposed should entail no more than sound administrative changes and good management.

On behalf of the broad representation of Ohio's fire and emergency services community that the Task Force represents, we respectfully recommend these changes for better assistance to emergency services in Ohio and protection for Ohio's citizens.

Division of Emergency Medical Services

Staff and Committee reports to the State EMS Board for 2000

Presented to the Board at the January 17, 2001 Board Meeting

Mission of the Division of EMS: To save lives and minimize disability to Ohio's citizens and visitors by developing and continually enhancing a statewide, comprehensive, systematic response to injury, illness and fire, primarily through education and training, certification, and strategic planning.

The EMS Division of the Ohio Department of Public Safety serves as the administrative arm of Ohio's State EMS Board, a regulatory board. This statutorily created Board includes representatives from Ohio's medical community, EMT organizations and practitioners, and representatives from Ohio's fire services.

Mark Marchetta	Akron	November 12, 2003	17.
Richard Fratianne	Cleveland	November 12, 2003	2.
Andrew Hawk	Dayton	November 12, 2003	18.
Larry Willard	Logan	November 12, 2003	19.
Sgt. Gary Lewis	Columbus	Appointed by the Director of Public Safety	

Membership

20 members, 19 appointed by the Governor; 1 ODPS staff person appointed by the Director of Public Safety

Term

Three years

Qualifications

Members must have a background or experience in emergency medical services or trauma care. The Governor makes the appointments based on recommendations submitted by the following groups, each of which submits three names to the Governor.

1. American College of Emergency Physicians, Ohio Chapter / EMS Certified Physician
2. American College of Surgeons, Ohio Chapter / EMS Certified Surgeon
3. American Academy of Pediatricians, Ohio Chapter / EMS Certified Pediatrician
4. OHA; Osteopathic Association; Children's Hospitals Association; Health Forum / Administrator of a Hospital with adult or pediatric trauma center
5. Ohio State Council of Emergency Nurses and Ohio Nurses Association / RN
6. Ohio Fire Chiefs Association / Fire Chief with primarily full-time EMS squad
7. Ohio Fire Chiefs Association / Fire Chief with primarily volunteer EMS squad
8. Ohio Emergency Medical technicians Instructors Association/ EMT Instructor
9. Ohio Association of Professional Firefighters and Northern Ohio Firefighters/ EMT-Basic
10. Ohio Association of Professional Firefighters and Northern Ohio Firefighters / EMT-I
11. Ohio Association of Professional Firefighters and Northern Ohio Firefighters / EMT-Paramedic
12. Ohio State Firefighters Association / EMT-Basic
13. Ohio State Firefighters Association / EMT-I
14. Ohio State Firefighters Association / EMT-Paramedic
15. Ohio Association of Emergency Medical Services / EMT-Basic, Intermediate OR Paramedic
16. Ohio Ambulance Association / Member
17. EMT-Basic, EMT-Intermediate or EMT-Paramedic / at-large member affiliated with an EMS Organization
18. Ohio Association of Air Medical Services (Ohio Assoc of Critical Care Transport) / Chief Medical Officer
19. OHA; Osteopathic Association; Children's Hospitals Association; and Health Forum / Administrator of Hospital Not a Trauma Center

Compensation

Expenses only.

EMS Board and Division Responsibilities include:

- Certification of Emergency Medical Technicians at the First Responder, Basic, Intermediate and Paramedic levels
- Accreditation and approval of EMS training sites for initial certification and continuing education programs
- Certification of approved state EMS instructors
- Curriculum design and oversight for EMS
- Administration of a multi-million dollar grants program; in 2000, \$4.9 million was awarded to EMS agencies for training, training equipment, and patient care equipment
- Creation and implementation of a statewide trauma registry
- Implementation of H.B. 138, the "Trauma Bill," with the assistance of a Trauma Committee appointed by the Director
- Coordination of statewide regional physicians advisory boards which oversee EMS systems at the regional level and provide input and guidance into statewide protocols
- Coordination of the federally funded initiative designed to improve emergency care for children, EMS-C and the statewide leadership for Ohio's SafeKids
- Creation and maintenance of statewide EMS incidence reporting and data collection

505-Non Paymnt/Child Support	1
Total	52
Notices of Opportunity Approved by Board	23
Chapter 119 Hearings Conducted	8
Number of Completed Cases	9
Cases Open/Active	43

Investigative Services on behalf of the State Board made significant strides in efficiency and effectiveness. A lead investigator, an additional compliance officer, and a secretary were added to Division staff. Improvements and Achievements include:

- Presentation to and adoption by EMS Board of a formal investigative policy to promote uniformity in the conduct of investigations and to ensure investigations are Fair, Impartial and Reasonable.
- Persons party to an investigation are fully informed at the outset of the investigation
- Standardized complaint forms and policy initiated; available for download on web-site
- Case investigation classification and tracking system fully implemented to promote management of the system from initial complaint to final adjudication and comprehensive monthly statistical reports to Executive Director and Board
- EMS case tracking identifies common areas of investigation and discipline which will lead to the categorizing of trends and training needs
- The EMS certification database reflects internally pending cases or disciplinary actions

Regional Physicians Advisory Boards

A coordinator was hired in 2000 to recreate the Board's and Divisions efforts in the area of coordination of the RPAB's. In Ohio's ten (10) regions, most have 7-9 members. An Annual RPAB meeting was conducted in November to kick-off the new organizational details, encourage participation, and highlight information needed by the physicians who assist in medical direction for Ohio's EMS services. The newly rejuvenated RPABs will provide a strategic resource for the success of the statewide trauma system. All regions have resumed regular meetings. A quarterly Chair's meeting calendar has been established. And a protocol advisory group is currently forming to assist in the development and evaluation of state minimum guidelines. State EMS Medical Director, Dr. Drstvensek, and the RPAB Coordinator continue to work closely on these medical issues.

Legislative Activity

The year 2000's legislative highlight was the passage of HB 138, the Trauma Bill, signed by the Governor in a ceremony at Children's Hospital in July and effective November 3, 2000.

The new trauma bill establishes a statewide trauma system. Over the next two years, rules and protocols will be developed to match severely injured adults and children with the hospitals best equipped to provide the specialized medical care that critical trauma victims require.

The bill, sponsored by Rep. William Schuck (R-Columbus), provides for the establishment of a state wide trauma system, linking EMS, hospitals, and trauma centers. The EMS Board's Trauma Committee and the Regional Physician Advisory Boards will play a significant role in helping the EMS Board develop these protocols. The Ohio Department of Public Safety's EMS Division and State EMS Board will oversee the development of a state protocol for the triage of severely injured adult and pediatric trauma victims.

Hospitals caring for severely injured patients will be required to meet national standards for trauma centers set by the American College of Surgeons. All hospitals in Ohio will be required to have trauma care protocols and transfer agreements with trauma centers. The goal is to provide the most seriously injured with the best care possible.

The EMS Board's Trauma Committee is comprised of 24 healthcare and EMS experts from across the state. Appointed by the Director of the Ohio Department of Public Safety, Lt. Governor Maureen O'Connor were the following:

- | | |
|---------------------------|--|
| 1. Jay A. Johannigman, MD | General Trauma Surgery/Cincinnati |
| 2. Martin A. Torch, MD | Orthopedic Surgery/ Columbus |
| 3. Michael B. Shannon, MD | Neurosurgery/Zanesville |
| 4. Sidney F. Miller, MD | Surgery with Burn Victim Specialty/ Dayton |
| 5. Mark L. Billy, DDS | Oral and Maxillofacial Surgery/ Austintown |

- | | |
|---------------------------|--|
| 6. Greg Nemunaitis, MD | Physical Medicine and Rehabilitation / Toledo |
| 7. Victor Garcia, MD | Pediatric Surgery / Cincinnati |
| 8. Michael D. Mackan, MD | Emergency Medicine Physician / Akron |
| 9. Joseph W. Luria, MD | Pediatric Emergency Medicine / Cincinnati |
| 10. Howard Werman, MD | Air Medical Physician / Columbus |
| 11. William Emery, MD | Coroner / Ashland County |
| 12. Kathryn Jo Haley, RN | Registered Nursing-Trauma Center / Columbus |
| 13. Nancie M. Bechtel, RN | Emergency Nursing / Columbus |
| 14. Timothy Erskine | Trauma Registrar / Cincinnati |
| 15. Jean Kirchner | Trauma Center Administration / Toledo |
| 16. Lynn V. Horner | Hospital Administration / Orrville |
| 17. Michael H. Perkins | Ambulance Company Operations / West Lafayette |
| 18. Kenneth A. Rybka | Fire Chief / Bedford |
| 19. Jason Kinley | Firefighter and EMT-P / Xenia |
| 20. Enrique Grisoni, MD | Physician with Trauma Administrative
Responsibility / Cleveland |
| 21. Sue Fickle, RN | Hospital Representative / Lima |
| 22. Karen Weaver | Hospital Representative / Defiance |
| 23. Patrick Dunster, MD | Hospital Representative / Millersburg |

One additional appointment, a trauma victim advocate, remains to be named.

The Trauma Committee, working closely with the Regional Physician Advisory Boards, will assist the EMS Board over the next two years in developing the rules and protocols necessary to ensure that the most seriously injured trauma victims in Ohio are matched with an appropriate level of medical care.

The **Board's Legislative Committee** also prepared a Board approved legislative agenda which was presented to Lt. Governor Maureen O'Connor, Director of Public Safety, for endorsement. The following legislative goals have been recognized by ODPS and will be carried by the department's legislative liaison into the legislative process in 2001 with the 124th General Assembly. The items to be pursued in this legislative package include:

- A realignment/redrawing of the prehospital emergency medical services regions as currently outlined under O.R.C. 3702.58 to allow for the defining of these districts by the Division of EMS authorized under O.R.C. 4765.
- The establishment of subpoena power for the Board as an investigating agency.
- Authority to issue summary suspension of a certificate to practice for individuals where overwhelming evidence shows a violation of the O.R.C./O.A.C. that is serious in nature and may effect the safety or well-being of the public.

OHIO EMSC – 2000

As a section of the Division, Ohio's EMS-C coordinators have combined EMS leadership in Injury Prevention, state leadership for Ohio's SafeKids, and the

federally-funded EMS-C effort into a comprehensive injury prevention program focusing on children. Utilizing the strength of Board members in pediatric medicine, the result is an EMS Board committee for EMS-C which provides oversight and direction to these projects.

EMS and Injury Prevention: Advocates for Children

The primary goal of our new EMSC Partnership Grant is to increase the involvement of EMS providers in community-based injury prevention initiatives. This goal will be accomplished by 1) offering regional injury prevention training to EMS providers; 2) offering funding to EMS agencies through sub-contracts; and 3) creating an injury prevention resource manual for EMS. Following is a summary of progress for each of these objectives:

1. Contracted with an injury prevention specialist to facilitate 10 regional training sessions. The injury prevention training sessions have been successful, with over 150 participants in attendance.
1. Injury prevention subcontract proposal forms have been developed based on models provided by the Delaware, Virginia and New Mexico EMSC programs. Thirty-two applications were received this year. Eighteen subcontracts were awarded in November for an approximate total of \$89,000.
1. Adapted the New Mexico EMSC Program's *EMTs and Injury Prevention: Advocates for Children* for use in Ohio. Three hundred training manuals have been printed for use in 10 regional trainings.

Child Day Care Project

The Ohio EMSC program has updated and revised Ohio's approved first-aid curriculum for child day care personnel in an effort to standardize training and establish a statewide network of trainers. In 2000, twelve train-the-trainer sessions were completed, resulting in the training of over 300 eligible instructors. Those who have completed the training have been added to regional referral lists to be accessed by day care providers. Training manuals are currently available to anyone eligible to teach the curriculum. To date, we have distributed 525 of the revised first aid curricula to eligible instructors in Ohio.

Ohio has also collaborated with the State of Oklahoma to put our curriculum on a CD ROM with their current day care project. They are currently available through the EMSC Resource Center.

Guidelines Evaluation

Ohio EMSC has recently completed an evaluation of our *Emergency Guidelines for Schools* which were created under a previous enhancement grant. Over 20,000 copies of the guidelines have been distributed throughout the state and thousands more nationwide. The guidelines are in the process of being revised and reprinted.

PEPP Training

The Ohio EMSC program has sponsored training for six individuals to become PEPP course coordinators. These coordinators will train EMS personnel throughout the state and establish a network of PEPP trained instructors. Our goal is to sponsor train-the-trainer PEPP meetings in Ohio specifically in areas where there are no pediatric hospitals or trauma centers. We are sponsoring a PEPP train-the-trainer course in Southeast Ohio in March, 2001. The Ohio EMS Board has approved the PEPP course for continuing education in Ohio and has approved grant funds to be utilized for PEPP training.

Ohio SAFEKIDS

The Ohio EMSC Program has responsibility for lead agency activities for the Ohio SAFE KIDS Coalition. The Coalition serves seventeen local coalitions. The Ohio program has recently secured state grant funding for Ohio SAFE KIDS activities and workshops.

Coalition Children's Safety Calendar

We are coordinating our annual EMS Children's Safety Poster Contest. An awards ceremony took place in October to award prizes and honor the winners of this annual EMS event. Fourteen winners were selected from over 4,000 entries. The winners received a bicycle with a helmet. Over 220 helmets were given as honorable mention prizes. The calendars are being distributed throughout Ohio to all EMS agencies, schools, child care centers, health departments, pediatricians, SAFE KIDS Coalitions and others upon request.

EMSC Staff

Ohio has two full-time EMSC coordinator positions funded by state funds. Alan Boster, and Christy Beeghly, MPH, EMT-B, EMSC Coordinators

EMSC Website

The Ohio EMSC website was expanded and enhanced during 2000. All current Ohio EMSC products and resources are available on the website. It also contains descriptions of current projects and links to other related sites.

TRAUMA COMMITTEE

Trauma Report to EMS Board **Activities for 2000** **Reporting in January 2001**

Trauma Committee

1. The trauma committee has met 3 times, and has scheduled monthly meetings through the end of 2001.
2. Elected a chair (Dr. Luria) and vice chair (Dr. Johanningman)
3. Adopted a basic set of committee standard operating procedures.
4. Two standing and one AdHoc committee have been created to address details of certain assigned activities
5. Requests that the EMS allow the Trauma Registry Advisory Committee to report to the Board through the Trauma Committee, thus eliminating the need to have a second data committee under the trauma committee.
6. The position of victim advocate is being pursued, the two nominating organizations have been contacted, expect nominations list from the Governors Council on People with Disabilities soon, awaiting the Ohio Brain Injury

Mission Statement

"to save lives, reduce injuries and economic loss, to administer Ohio's motor vehicle laws and to preserve the safety and well being of all citizens with the most cost-effective and service-oriented methods available."

- Association's list. The OBIA Ex. Dir. attended the December meeting as a guest
7. Triage protocols are a priority activity

Trauma Registry Advisory Committee

1. Held six meetings between April and October 2000. Meetings in November and December were not held in deference to the Trauma Committees activities.
2. The TRAC meet several times between May 1999 and October 1999, without ever achieving a quorum. Thus, a chair as required was never elected, nor any official business conducted. The committee did review several reports, looking at the baseline validity of the data collected to date.
3. The database of hospital registry contacts has been updated and a scheduled contact information data maintenance is in place.
4. The first issue of a regular newsletter, *The Register*, was published on June 1
5. Regular monthly meetings are scheduled for 2001.
6. The nominating organizations for seats on the TRAC have been contacted with a renewed request to nominate if the seat is empty, re-consider their nominee if they have not attended, or confirm that their existing member is interested in continuing.
7. The TRAC is planning to publish an annual report of 1999 trauma registry data, early in 2001.
8. The Register will be published on regular basis (4 issues/2001, 6 issues/2001)
9. The state data set will be evaluated and possible deletions/additions/changes to data points will be recommended
10. The framework for collecting data from the County Coroners and Rehabilitation facilities will be developed. The goal is to begin collection of data 1/1/02. Beta testing of data downloads as early as the 3rd quarter 2001 (electronic data transfer from the death certificate database at the DOH)
11. Develop a web based data system, for Rehab facilities to report through.

Trauma Coordinator Activity

- Several speaking engagements were undertaken addressing the trauma legislation, especially on trauma registry issues, pertinent to regional organizations in Lima, Dayton, Cleveland, and Toledo.
- Established contacts with state trauma coordinators and/or state EMS offices

- and Health Departments which have jurisdiction over their trauma systems in
- Texas, Washington, New York, Oregon, California
 - Created a power point presentation for use by EMS office in speaking to public and professional organizations about the trauma legislation.
 - Have met with several Ohio state organizations to create a liaison/contact with them for enhanced communication (College of Surgeons, Trauma Coordinators, Trauma registrars, Ambulance Association). During early 2001 plan to meet with College of Emergency Physicians, Hospital Association, Coroners Association, Air Medical Association and Emergency Nurses)
 - Attended the Annual Regional physicians advisory board meeting and spoke on the status of the trauma legislation activity
 - Created an extensive mail and e-mail database of trauma committee members, trauma committee nominees, interested individuals, EMS Board members and nominating organizations to facilitate communications.
 - Developed a base of information to be used for trauma legislation and registry information on the EMS website.

GRANTS COMMITTEE

The Division of EMS Grants Coordinator provided staff assistance to the Grants Committee in 2000. The safety belt funded state EMS Grants Fund provided for 603 grants to state EMS agencies in FY2000 for a total of \$4,922,091 in reimbursement grants awarded. These grants, per statute and rules developed by the EMS Board, are dedicated to training, training equipment, patient care equipment and research regarding the quality and accessibility of care. Money's above the projected \$3,000,000 available were added to the FY 2000 grant base by gaining Controlling Board approval for a carryover of unspent grant funds from previous years.

In a separate grant award, a joint venture of the Board's Grants and Systems Management Committee, a portion of unspent grant funds from previous years was carried forward for a special computer assistance grant. This special offering provides funds for eligible EMS agencies, to purchase the hardware necessary for compliance with Ohio's upcoming EMS data collection effort. 538 agencies applied for and received computer grants totaling \$505,585.

The grants process was also administratively streamlined to allow for local determination and justification of training and equipment needed, rather than intensive selection by the committee at the state level. The grants committee continues to seek appropriate methods and rules changes to allow for even more efficiency and maximum use of the available grant funds.

See grants insert for funds history

EDUCATION

In 2000, the Education Committee finalized the rules language for the paramedic curriculum which were subsequently approved by the Board; assisted the Board with an animated Public Hearing; and followed through with the final filing of the rules January 2, 2001. (effective date March 1, 2001) The committee led the roll-out sessions for paramedic training institutions relative to the new paramedic curriculum, the USDOT curriculum adopted by the Board in 2000. Thirty-eight of the forty-one paramedic programs were represented at the roll-outs.

The Committee also maintained a subcommittee to review the new USDOT Intermediate curriculum and recommendations. By motion of the committee, the EMS Board approved adoption of the national Intermediate curriculum in Ohio. The committee remains charged with a recommendation of hours. The national recommendation is 600 hours; the committee reported to the Board that they were evaluating a range of hours probably between 230-400 and asked for Board members final comments by August 16, 2000. However, the final report to the Board on recommendations has not been issued.

In additional activities in 2000, the Education Committee:

- Recommended with successful Board adoption a 12 hour strategy for an equivalent cardiac class as an option to the ACLS
- Evaluated available testing options and the National Registry and, while timeliness remains an issue, the time factor can be adequately addressed with administrative actions. Developing, maintaining, validating, and administering a separate test/ test service would be cost prohibitive to the Division/Board.

Systems Management

The systems management committee continues to provide leadership to the daunting task of finalizing Ohio's statutorily required EMS data collection effort. The committee presented this year to the EMS Board for approval the draft final rules, a complete draft procedure manual, and the data elements for collection based on the National model data set. Rules language is pending final legal office review and should be filed with a rules change package in February. - The committee also worked with the grants committee to set the parameters of the special computer assistance grant, establish the system requirements of the computers, and worked operationally with staff from the ODPS Technology Section to craft a final plan for software and file transfer development. A powerpoint presentation of the data collection effort is posted on the EMS web-site for use as a self study to the elements of this project and will also be used in 5 regional information sessions in 2001.

Firefighter and FSI Training Subcommittee

Additional Accomplishments/Highlights of 2000

- Executive Director served as member of the MIC 2000 addressing issues relative to possible consolidations of fire and EMS training. The final report (November 2000) leaves this question for the departments and customers to determine.
- Successful Controlling Board requests added a rollover of unspent grant funds to the FY 2000 base grants for a total of nearly \$5 million directly benefiting EMS agencies in Ohio. Another successful request carried over operational funds from a previous year to begin office improvements and automation as driven largely by the ***Report and Recommendations of the Governor's Task Force on Fire and Emergency Response Training*** in December 1999.
- AG's office issued a Draft Opinion on EMS run reports and the confidentiality issue
- The Division participated in a successful State Fire School in May 2000
- Executive Director keynote at May 2000 Star of Life Awards, sponsored by partner ACEP
- Celebration of National EMS Week including Board photo, presentation of EMS-C

t-shirt with Ohio's Meredith Murphy (student calendar contest) at Parma Christian Academy

- EMS-C program won the innovation and Product Development Award for an Outstanding Publication, the Emergency Guidelines for Schools
- EMS Staff and Board members worked the display at the Ohio State Fair in August
- EMS Board approved the expansion of scope of practice for EMT-B's to allow for the administration of aspirin under local medical control and direction
- The Trauma Committee transition required per HB 138 coordinated by former Chair James Augustine, with transition materials and the work of the prehospital subcommittee forming the basis of the new committee start-up
- Approved the PEPP course as eligible for Ohio's reimbursement grant program and with EMS-C sponsored initial EMS-C trainings in Ohio
- New Board appointments nominated and made in timely fashion for continued work of Board in November 2000
- Adopted the USDOT curriculum for Paramedics and Intermediates.
- Fire Prevention Week celebrated with Firefighter Subcommittee in an event handing out smoke detectors to area residents and Hilltop employees
- ***The Siren***, the newsletter of the EMS Board, established a regular publication date and is available on the website. Publication set for the 30th of every Board meeting month.
- Executive Director attended "Feel the Heat," a day-long training in firefighting for public safety officials
- EMS staff spoke and organized display at quarterly and annual conferences of the Ohio Association of EMS
- Conducted 16 instructor orientation sessions for new EMS and Fire instructors
- Executive Director attended "boot camp" for new State EMS Directors coordinated by the National Association of State EMS Directors (NASEMSD); also attended the NASEMSD Annual Conference and Meeting
- Division web page expanded for better ease of use and more information available to customers
- Teleconference held with all exam proctors
- Executive Director participated in several television and radio interviews on special topics such as National EMS Week, National Fire Prevention Week, Toy Safety issues during the holidays, and multiple other injury-prevention topics
- Executive Director attending regular meetings of Ohio's Regulatory Boards, a joint information and educational group
- Contractual agreements developed to update all accredited and chartered training institutions
- Database for all training programs established to improve communications with and monitoring of all programs

GOALS 2000

At the January 2000 meeting, the State EMS Board set a number of Goals for the Year 2000

Goal	Status
The Board should become more Public Focused/Friendly ongoing	Achieved and
Update the Newsletter and Web page ongoing	Achieved and
Improve Telephone System/Service	Achieved
Implement the Trauma Registry	Achieved and ongoing
Trauma Committee develop data oversight group or procedure	In process
Continue EMS-C program/grants	Achieved
Prepare Board Notebooks/copies of rules	Achieved
Examine Task Force Recommendations	Achieved and ongoing
Establish committee membership/Orientation for Chairs	Achieved
Review Office Operations to Improve delivery of Service	Achieved
Make an Office Automation Plan	Achieved
Implement new Paramedic and Intermediate Curricula	In process/Planned
Continue Regional Conferences for Information Sharing	did not do in 2000 However information sharing did occur in many other ways
Seek RPAB Legislative Change	In process
Meet with Border States to discuss EMS issues	Not done
Update the State Disaster Plan	In process w/EMA

Mission Statement

"to save lives, reduce injuries and economic loss, to administer Ohio's motor vehicle laws and to preserve the safety and well being of all citizens with the most cost-effective and service-oriented methods available."

Firefighter 1A	1960
Firefighter 1B	551
Firefighter 1C	350
Firefighter Level 1	119
Firefighter Level 2	1060
Fire Safety Inspector	579

Office Operations:

The telephone auto-attendant system was put into place in April 2000. Up to that point, there was no mechanism for calculating telephone calls.

April through December 2000

44,497 telephone calls received and answered on the office main line only
Only 961 received the greeting that says "due to heavy volume we are not able to take your call at this time. Please call back later."
23 callers were not able to get through at all because all phone ques were full

July 2001

Rollled out the results of a one year project to redesign the EMS database for efficiency and web-based capabilities. Customers can register on-line for a test, search for a school, and verify their certification and expiration dates. Planned for the next phase of technology enhancements are grant applications on-line

Investigative Services on behalf of the State Board made significant strides in efficiency and effectiveness. A lead investigator, an additional compliance officer, and a secretary were added to Division staff. Improvements and Achievements include:

- Presentation to and adoption by EMS Board of a formal investigative policy to promote uniformity in the conduct of investigations and to ensure investigations are Fair, Impartial and Reasonable.
- Persons party to an investigation are fully informed at the outset of the investigation
- Standardized complaint forms and policy initiated; available for download on web-site
- Case investigation classification and tracking system fully implemented to promote management of the system from initial complaint to final adjudication and comprehensive monthly statistical reports to Executive Director and Board
- EMS case tracking identifies common areas of investigation and discipline which will lead to the categorizing of trends and training needs

Legislation

The year 2000's legislative highlight was the passage of HB 138, the Trauma Bill, signed by the Governor in a ceremony at Children's Hospital in July and effective November 3, 2000.

The new trauma bill establishes a statewide trauma system. Over the next two years, rules and protocols will be developed to match severely injured adults and children with the hospitals best equipped to provide the specialized medical care that critical trauma victims require.

The bill, sponsored by Rep. William Schuck (R-Columbus), provides for the establishment of a state wide trauma system, linking EMS, hospitals, and trauma centers. The EMS Board's Trauma Committee and the Regional Physician Advisory Boards will play a significant role in helping the EMS Board develop these protocols. The Ohio Department of Public Safety's EMS Division and State EMS Board will oversee the development of a state protocol for the triage of severely injured adult and pediatric trauma victims.

Trauma

- Trauma committee appointed by Lt. Governor O'Connor November 3, 2000
- Trauma Committee presents 8 regional trauma town meetings June-July 2001
- Trauma Registry Committee redesigns registry and publishes the *Register* to highlight Ohio's trauma data and knowledge

OHIO Emergency Medical Services for Children

- EMS has combined EMS leadership in Injury Prevention, state leadership for Ohio's SafeKids, and the federally-funded EMS-C effort into a comprehensive injury prevention program focusing on children. Utilizing the strength of Board members in pediatric medicine, the result is an EMS Board committee for EMS-C which provides oversight and direction to these projects.

- **Child Day Care Project**

The Ohio EMSC program has updated and revised Ohio's approved first-aid curriculum for child day care personnel in an effort to standardize training and establish a statewide network of trainers. In 2000, twelve train-the-trainer sessions were completed, resulting in the training of over 300 eligible instructors. Those who have completed the training have been added to regional referral lists to be accessed by day care providers. Training manuals are currently available to anyone eligible to teach the curriculum. To date, we have distributed 525 of the revised first aid curricula to eligible instructors in Ohio.

- **Guidelines Evaluation**

Ohio EMSC has recently completed an evaluation of our *Emergency Guidelines for Schools* which were created under a previous enhancement grant. Over 20,000 copies of the guidelines have been distributed throughout the state and thousands more nationwide. The guidelines are in the process of being revised and reprinted.

- **PEPP Training (Pediatric Education for Prehospital Professionals)**

The Ohio EMSC program has sponsored training for six individuals to become PEPP course coordinators. These coordinators will train EMS personnel throughout the state and establish a network of PEPP trained instructors. Our goal is to sponsor train-the-trainer PEPP meetings in Ohio specifically in areas where there are no pediatric hospitals or trauma centers. We are sponsoring a PEPP train-the-trainer course in Southeast Ohio in March, 2001. The Ohio EMS Board has approved the PEPP course for continuing education in Ohio and has approved grant funds to be utilized for PEPP training.

- **Ohio SAFEKIDS**

The Ohio EMSC Program has responsibility for lead agency activities for the Ohio SAFE KIDS Coalition. The Coalition serves seventeen local coalitions. The Ohio program has recently secured state grant funding for Ohio SAFE KIDS activities and workshops.

- **Children's Safety Calendar**

We are coordinating our annual EMS Children's Safety Poster Contest. An awards ceremony took place in October to award prizes and honor the winners of this annual EMS event. Fourteen winners were selected from over 4,000 entries. The winners received a bicycle with a helmet. Over 220 helmets were given as honorable mention prizes. The calendars are being distributed throughout Ohio to all EMS agencies, schools, child care centers, health departments, pediatricians, SAFE KIDS Coalitions and others upon request.

EMS Grants Program

The safety belt funded state EMS Grants Fund provided for 603 grants to state EMS agencies in FY2000 for a total of \$4,922,091 in reimbursement grants awarded. These grants, per statute and rules developed by the EMS Board, are dedicated to training, training equipment, patient care equipment and research regarding the quality and accessibility of care. Money's above the projected \$3,000,000 available were added to the FY 2000 grant base by gaining Controlling Board approval for a carryover of unspent grant funds from previous years. For FY 2001, the Board has just awarded \$5.5 million to nearly 800 local provider agencies.

In a separate grant award, a joint venture of the Board's Grants and Systems Management Committee, a portion of unspent grant funds from previous years was carried forward for a special computer assistance grant. This special offering provides funds for eligible EMS agencies, to purchase the hardware necessary for compliance with Ohio's upcoming EMS data collection effort. 538 agencies applied for and received computer grants totaling \$505,585.

EDUCATION

In 2000, the Education Committee finalized the rules language for the paramedic curriculum which were subsequently approved by the Board; assisted the Board with an animated Public Hearing; and followed through with the final filing of the rules January 2, 2001. (effective date March 1, 2001) The committee led the roll-out sessions for paramedic training institutions relative to the new paramedic curriculum, the USDOT curriculum adopted by the Board in 2000. Thirty-eight of the forty-one paramedic programs were represented at the roll-outs.

ADDITIONAL ACCOMPLISHMENTS

- Executive Director served as member of the MIC 2000 addressing issues relative to possible consolidations of fire and EMS training. The final report (November 2000) leaves this question for the departments and customers to determine.

- Successful Controlling Board requests added a rollover of unspent grant funds to the FY 2000 base grants for a total of nearly \$5 million directly benefiting EMS agencies in Ohio. Another successful request carried over operational funds from a previous year to begin office improvements and automation as driven largely by the ***Report and Recommendations of the Governor's Task Force on Fire and Emergency Response Training*** in December 1999.
- AG's office issued a Draft Opinion on EMS run reports and the confidentiality issue
- The Division participated in a successful State Fire School in May 2000
- Executive Director keynote at May 2000 AND May 2001 Star of Life Awards, sponsored by partner ACEP
- EMS-C program won the innovation and Product Development Award for an Outstanding Publication, the Emergency Guidelines for Schools
- New Board appointments nominated and made in timely fashion for continued work of Board in November 2000
- Adopted the USDOT curriculum for Paramedics and Intermediates.
- ***The Siren***, the newsletter of the EMS Board, established a regular publication date and is available on the website. Publication set for the 30th of every Board meeting.
- Division web page expanded for better ease of use and more information available to customers

APPENDIX E: Draft Trauma Triage Protocol

DRAFT – June 13, 2001

Persons 16 Years of Age and Older

These criteria are used to define the Adult trauma patient and include, but are not limited to the following:

Physiologic Criteria

1. GCS <12, Loss of consciousness greater than 5 minutes, alteration in level of consciousness with evidence of head injury at time of exam or thereafter, or fails to localize pain.
2. Respirations less than 10 or greater than 29 or intubation or relief of a tension pneumothorax.
3. Pulse greater than 120 in combination with any other physiologic criteria.
4. Systolic blood pressure less than 90 or absent radial pulse with carotid pulse present.

Anatomy of Injury

1. Penetrating trauma to head, neck, torso, or extremities proximal to knee or elbow.
2. Abdominal injury with tenderness, distention, or seatbelt sign
3. Flail chest and/or tension pneumothorax.
4. Two or more proximal long bone fractures.
5. Evidence of pelvic fracture (exception: isolated hip fracture).
6. Signs or symptoms of a spinal cord injury.
7. Amputation proximal to wrist and/or ankle.
8. Crush injury to head, neck, torso, or extremities proximal to knee or elbow.
9. Burns greater than 10% Total BSA or other significant burns involving the face, feet, hands, genitalia, or airway.

Patients with any of the mechanisms of injury and/or special considerations that appear in standardized pre-hospital trauma education curriculum, or who in the judgment of the on-scene EMS provider, may be considered trauma patients for the purpose of this document.

Persons Under 16 Years of Age

These criteria are used to define the Pediatric trauma patient and include, but are not limited to the following:

Physiologic Criteria

1. GCS <12, Loss of consciousness greater than 5 minutes, alteration in level of consciousness with evidence of head injury at time of exam or thereafter, or fails to localize pain.
2. Evidence of poor perfusion (i.e.; weak distal pulse, pallor, cyanosis, delayed capillary refill, or tachycardia)
3. Evidence of respiratory distress or failure (i.e.; stridor, grunting, retractions, cyanosis, nasal flaring, hoarseness or difficulty speaking)

Anatomy of Injury

1. Penetrating trauma to head, neck, torso, or extremities proximal to knee or elbow.
2. Abdominal injury with tenderness, distention, or seatbelt sign
3. Flail chest and/or tension pneumothorax
4. Two or more proximal long bone fractures.
5. Evidence of pelvic fracture including hip
6. Signs or symptoms of a spinal cord injury.
7. Amputation proximal to wrist and/or ankle.
8. Crush injury to head, neck, torso, or extremities proximal to knee or elbow.
9. Burns greater than 5% Total BSA or other significant burns involving the face, feet, hands, genitalia, or airway.

Patients with any of the mechanisms of injury and/or special considerations that appear in standardized pre-hospital trauma education curriculum, or who in the judgment of the on-scene EMS provider, may be considered trauma patients for the purpose of this document.

DRAFT – June 13, 2001

Destination Guidelines Pre-hospital Sub-Committee

EMS personnel should limit on scene time to **Ten Minutes** or less after the trauma patients extrication except in extenuating circumstances. The receiving facility should be notified prior to arrival

Trauma patients as defined in this document and as required by law should be transported to the nearest appropriate Trauma Center.

The state triage protocols are to require that a trauma victim be transported directly to a trauma center that is qualified to provide appropriate adult or pediatric trauma care, unless any of the following exceptions applies:

- (1) It is medically necessary to transport the victim directly to another hospital for initial assessment and stabilization before transfer to an appropriate trauma center:

Including but not limited to:

- a.) Blunt Cardiac Arrest
- b.) Unstable Airway not controlled by conventional means
- c.) Uncontrolled hemorrhage

- (2) It is unsafe or medically inappropriate to transport the victim directly to an appropriate trauma center due to adverse weather or ground conditions or excessive transport time:

For purposes of defining excessive consider 15-30 minutes

- (3) Transporting the victim to an appropriate trauma center would cause a shortage of local emergency medical service resources:
- (4) No appropriate trauma center is able to receive and provide trauma care to the victim without undue delay:
- (5) Before transportation of a patient begins the patient requests to be taken to a particular hospital that is not a trauma center or, if the patient is less than 18 years of age or is not able to communicate, such a request is made by an adult member of the patient's family or a legal representative of the patient.

DRAFT – May 21, 2001

Note: This page was NOT reviewed/revised at the June 13th pre-hospital sub-committee meeting

Air Medical Document

Air Medical Transportation

1. General principles
 - a. Prolonged delays at the scene waiting for air medical transport should be avoided. If air medical transportation is unavailable (e.g., weather conditions), patient should be transported by ground guidelines as listed above.
 - b. Air transport, if dispatched to the scene, should be diverted to the hospital if the patient appeared appropriate for air transport but the decision was made to transport to the nearest facility (non-trauma center) in the interim.
 - c. Air Medical Programs share the responsibility to educate EMS units and facilities on appropriate triage. They should also institute an active utilization and quality review program that provides feedback to EMS units.
 - d. Patients with uncontrolled ABC's should be taken to the closest appropriate facility (24-hour emergency department) if that can be achieved prior to the arrival of air medical transport.
 - e. Traumatic cardiac arrest due to blunt trauma is not appropriate for air transport.
2. Reasons to Consider a Call for Air Transport:
 - a. Prolonged extrication
 - b. Multiple victims/trauma patients
 - c. Time/distance factors:

If the transportation time to a trauma center by ground is greater than 30 minutes AND the transport time by ground to the nearest trauma center is greater than the total transport time* to a trauma center by helicopter. ***Total transport time includes any time at scene waiting for helicopter and transport time to trauma center.**
 - d. In the rural environment, immediate transfer with severely traumatized patients by air medical transport may be appropriate and should be encouraged if it does not significantly delay intervention for immediate life-threatening injuries.

APPENDIX F: Draft Registry Risk Adjustment & Confidentiality

DRAFT

General Principals being considered by the Trauma Registry Advisory Committee discusses rules language for the registry mandates in HB 138

This information is posted for comments and feedback from parties interested in the Ohio State Trauma Registry. Recently enacted legislation requires the EMS Board to adopt rules that address risk-adjustment and confidentiality of registry data. This process is being discussed by the members of the Trauma Registry Advisory Committee. Comments, and questions can be directed to Mike Glenn, RN, Trauma Coordinator at (614) 728-6853 or mglenn@dps.state.oh.us

This is a draft only and not necessarily the exact language that would be submitted for rules.

Risk Adjustment of Trauma Registry Data

1. Mortality should be the outcome that is risk adjusted.
2. TRISS should be the primary methodology used to risk adjust trauma registry data.
3. Major Trauma Outcome Study (MTOS) equations and co-efficient should be used
TRISS allows for risk adjustment of mortality utilizing the following factors;
 Physiologic (systolic BP, respiratory rate, Glasgow Coma Scale score)
 Anatomic (Injury Severity Score)
 Age (older or younger than 55)
 Trauma Type (blunt or penetrating injury)
4. Other risk adjustment methodologies should be evaluated by the Trauma Registry Advisory Committee (TRAC) and recommendations made to the Trauma Committee and EMS Board on their potential use. (i.e. NISS, ASCOT, ICISS)
5. The TRAC will evaluate the possibilities of creating Ohio specific co-efficients, based upon the Ohio data set, to utilize with the TRISS methodology, and when appropriate these equations should be utilized. Additionally, other appropriate state databases should be evaluated for use in developing specific co-efficients.
6. The TRAC should utilize a variety of acceptable techniques for providing statistical analysis of risk-adjusted data (examples: Z-scores, M statistics and W statistics)
7. In addition to TRISS, mortality should be risk adjusted by sex and age providing specific attention to age groupings that appropriately identify pediatric patients. (TRISS only discriminates between groups older and younger than 55 year old).
8. The TRAC will evaluate and report to the Trauma Committee and EMS Board on the feasibility of adjusting mortality on other risk factors, (Ethnicity, presence of co-morbid conditions, geographic regions, etc.)
9. The TRAC will evaluate and report to the Trauma Committee and EMS Board on the feasibility of risk adjusting other outcomes (i.e. complications, functional outcomes, length of stay, cost, etc)

DRAFT

General Principals being considered by the Trauma Registry Advisory Committee discusses rules language for the registry mandates in HB 138

10. ODPS may contract with individuals and or organizations with specific expertise in risk-adjustment and statistical analysis of medical data.

Confidentiality of Deliberations of Employees/Contractors performing Risk-Adjustment

1. All employees and contractors performing risk-adjustment on Ohio trauma registry data should be required to sign and adhere to statements of confidentiality and conflicts of interest.
2. The EMS Board, with the advise of the Trauma Committee and TRAC shall approve individuals who will have access to data, or involvement with the process of data review, regarding trauma data risk adjustment. These individuals may include Trauma Registry Advisory Committee members, Trauma committee members or EMS Board members.
3. All TRAC meetings containing discussions involving non-risk adjusted outcome data from individual hospital or groups of hospitals, shall be considered confidential and not subject to Ohio's open meetings act.
4. All minutes, recordings, and documents, electronic and paper, that contain non-risk adjusted outcome data from individual hospitals or groups of hospitals shall be considered confidential and not subject to Ohio's public records act.
5. Any meeting at which the discussion, review or display of outcome data for the purpose of risk adjustment will be utilized shall be a meeting closed to the public.
6. Executive sessions may/may not (*this still needs legal interpretation*) be used to discuss risk adjustment and/or review data in which individual providers are identifiable, at meetings that would otherwise be open meetings.

Confidentiality of data that is not to be made public

1. All reports that contain non-risk-adjusted outcomes must be presented in an aggregate form to a degree that individual hospitals and individual patients are not identified.
2. Individual Hospitals may request data reports on their own hospitals data, and these reports shall remain confidential, for the exclusive use of the hospital only for support of its trauma quality assurance program as required by ORC 3727.09 B (4).
3. The TRAC and hospitals will work out a process for the formatting, structure and frequency of confidential trauma QA reports.
4. All entities submitting data to the state trauma registry must do so in accordance with policies and procedures adopted by the TRAC and approved by the Board.

DRAFT

General Principals being considered by the Trauma Registry Advisory Committee discusses rules language for the registry mandates in HB 138

5. The TRAC should develop policies and procedures that specifically address how requests for data from the state trauma registry are handled and the creation of reports with TRAC review prior to release.
6. The following data fields, individually would identify an individual recipient of trauma care, and thus are considered not public data.
 - SS#
 - Medical Record Number
7. The following data fields, collectively, may identify an individual recipient of trauma care, and thus must be strictly reviewed by the TRAC prior to publication as public data.

Patients date of birth	Gender
Race/ethnicity	Zip code of residence
Date injury occurred	County in which injury occurred
ICD-9-CM Diagnosis codes	E-Code description of injury
Time of arrival at ED	Others? _____
8. The following data fields, individually would, identify an individual provider of trauma care, and thus are considered not public data.
 - Hospital code
9. The following data fields, collectively, may identify an individual provider of trauma care, and thus must be strictly reviewed by the TRAC prior to publication as public data.

Date injury occurred	Site at which injury occurred
County in which injury occurred	E-code description of injury
ICD-9-CM Diagnosis codes	
Others? _____	
10. The following data points are outcome oriented and must be reported in aggregate format unless risk-adjusted.

Total days in ICU	Ventilator support days
Complications	FIM scores upon discharge
Discharge status	Billed hospital charges
Length of stay in hospital	Others? _____

DRAFT

General Principals being considered by the Trauma Registry Advisory Committee discusses rules language for the registry mandates in HB 138

Informational Review of Risk Adjustment

The trauma registry was created by ORC 4765.06 (B) specifically to “provide for the reporting of adult and pediatric trauma-related deaths, identification of adult and pediatric trauma patients, monitoring of adult and pediatric trauma patient care data, determination of the total amount of uncompensated adult and pediatric trauma care provided annually by each facility that provides care to trauma victims, and collection of any other information specified by the board”

Meaningful comparisons of patients’ outcomes, across the state, require adjustment for patient risks. Risk-adjustment “levels the playing field” by accounting for factors that the patient brings to a healthcare encounter that could affect their outcome. Risk adjustment facilitates “apples to apples” comparisons, sorting patients by similar characteristics so that like is compared to like. Risk adjustment is a way to remove or reduce the effects of confounding factors in the study of a group of patients

Additional considerations in risk-adjustment (these may not necessarily need to be written in rule.

Selection bias – the patient groups reported on must be reviewed in great detail to control for selection bias (ex. Inclusion or exclusion of dead on arrival patients, patients transferred from another facility vs. directly from the scene, etc.)

Coding differences – manual AIS coding variances between trauma centers, manual coding vs. software generated coding. Coding done with and without autopsy data.

Missing data - TRISS analysis requires certain minimum data, large numbers of records with missing data can skew reporting.

Confounding factors – co-morbidities, prolonged or inconsistent pre-hospital care are significant factors that are difficult to control

Steps in Risk Adjustment

The first step in risk adjustment is to decide which outcome you are evaluating. The Trauma Registry database has several potential outcomes that could be evaluated using risk adjusted methodologies. Mortality is the most common outcome that is risk adjusted. Through consensus of the TRAC members present and the expertise of the non-voting members, it was agreed that initially, mortality should be the outcome measure subjected to risk adjusted reporting.

DRAFT

General Principals being considered by the Trauma Registry Advisory Committee discusses rules language for the registry mandates in HB 138

The next step in the risk adjustment process is to determine which risk factors need to be adjusted for. A wide variety of factors could be considered such as age, sex, race, ethnicity, acute clinical stability, extent and severity of co-morbidities, physical functional

status, etc. To a great degree, risk adjustment on data in the trauma registry will be limited by the information available in the data set itself. By electing to use the TRISS methodology, the following factors of risk will be adjusted for: physiologic stability on arrival to the ED, severity of anatomic injury, age and injury type blunt or penetrating.

The third step is to define the methodology that will be applied to the variables in order to produce risk adjusted data. The TRISS methodology is used most consistently in published trauma literature and effectively serves as the gold standard against which other trauma mortality risk adjustment methodologies are compared. Its limitations are well documented and although not a perfect tool, it should serve adequately to begin evaluating trauma mortality in Ohio.

TRISS utilizes information from the Revised Trauma Score (RTS), the Injury Severity Score (ISS), patient age and injury type. TRISS provides a revised probability of survival given the factors used to create the TRISS score (physiologic instability as measured by the RTS, the first set of vital signs in the emergency department, anatomic injuries, as coded on patient discharge using the Abbreviated Injury Score (AIS) which is used to calculate the Injury Severity Score). The physiologic components of the RTS, systolic blood pressure, respiratory rate and coded values from the glasgow coma scale are all currently collected as part of the trauma registry. The patient's age and injury type (blunt or penetrating) are also collected routinely.

The anatomic injury information that is used must be supplied in the format of an injury severity score (ISS). The ISS ranges from 1-75 and is calculated using the Abbreviated Injury Scale (AIS). AIS scores are assigned for each anatomic injury, and range from 1-6. Injury Severity Scores are calculated by identifying the three highest AIS scores from six different body regions. These three AIS scores are squared and summed, giving you an ISS. The current trauma registry does not collect AIS scores on individual injuries, although we do collect ICD-9-CM diagnosis codes. Software exists which will "map" AIS codes to the existing ICD-9 codes in the trauma database. It is current practice at all ACS verified trauma centers in Ohio to code patient injuries using AIS. Due to the specific nature of AIS coding for trauma center use and the training required to use this process, AIS coding will not become standard practice at non-trauma center hospitals. Thus, ICD-9 mapping is the only currently viable alternate to AIS coding of large ICD-9 data sets. The limitations of ICD-9 mapping are well established and can be controlled for when reviewing data. Future revisions of the Trauma Registry data set should include collection of trauma center AIS coding.

DRAFT

General Principals being considered by the Trauma Registry Advisory Committee discusses rules language for the registry mandates in HB 138

TRISS produces a probability of survival using the following formula

$$Ps = 1/(1+e^{-b}) \text{ where } b = b_0 + b_1 (\text{RTS}) + b_2 (\text{ISS}) + b_3 (\text{A})$$

(A) is the symbol for the patients age. If the age is 54 years or less, A is equal to 0, If the patient is 55 years old or more, A is equal to 1

$b_{0...3}$ are coefficients derived from regression analysis applied to the Major Trauma Outcome Study. The constant e is equal to 2.718282

Coefficients for Revised Trauma Score blunt and penetrating injury types

	b_0 (constant)	b_1 (RTS)	b_2 (ISS)	b_3 (age)
Blunt	-1.2470	0.9544	-0.0768	-1.9052
Penetrating	-0.6029	1.1430	-0.1516	-2.6676

GCS	Systolic BP	Respiratory Rate	Coded Value
13-15	>89	10-29	4
9-12	76-89	>29	3
6-8	50-75	6-9	2
4-5	1-49	1-5	1
3	0	0	0

Weights

GCS	0.9368
Systolic BP	0.7326
Respiratory Rate	0.2908

APPENDIX G

DRAFT GUIDELINES FOR THE OPERATION OF AIR MEDICAL SERVICES: June 13, 2001

AIR AMBULANCES

Definitions

The Following definitions apply throughout this article:

- 1) "Air Medical Program" means to furnish, operate, conduct, maintain, advertise, promote, or otherwise engage in providing emergency medical services, as a rotorcraft or fixed-wing ambulance service provider as part of a regular course of doing business.
 - 2) "Air medical personnel" means a person who is licensed and/or certified by the State of Ohio as a paramedic, a registered nurse, or physician with an unlimited license to practice medicine.
 - 3) "Medical director of an air medical program" means a licensed physician within an air ambulance service who is ultimately responsible for patient care during each transport. The Medical Director shall have an active role in the delivery of emergency care and has knowledge of air medical transport and flight physiology. The medical director is responsible for directly overseeing and assuring that appropriate air-medical personnel, and equipment are provided for each patient transported by the air medical program within the air-medical services as well as the clinical performance of air medical personnel.
 - 4) "Rotorcraft ambulance" means a helicopter or other aircraft capable of vertical take offs and landings with the capability of hovering.
 - 5) "A rotorcraft ambulance service provider" means a service provider, based in the State of Ohio or providing transport services within the State of Ohio, that utilizes rotorcraft aircraft to respond directly to the scene of a medical emergency and are utilized to air lift critically ill or injured patients directly to or between definitive care facilities or to a point of transfer with another more appropriate form of transportation and has a minimum staff of at least one RN and a second licensed and /or certified medical crew member which may be physician, nurse, paramedic, or respiratory therapist.
 - 6) "Fixed-wing ambulance" means a propeller driven or jet airplane with appropriately licensed and or certified medical personnel as determined by the medical director.
 - 7) "Fixed-wing ambulance service provider" means a service provider, based in the State of Ohio or providing transport services within the State of Ohio, that utilizes fixed-wing aircraft to provide airport to airport transports where the patient(s) involved requires a stretcher or cot and are being transported to or from a definitive care medical setting.
 - 8) "Licensed" or "licensure" means authorization in written form issued by the State of Ohio to an air medical program.
 - 9) "CAMTS" means the Commission on Accreditation of Medical Transport Systems.
 - 10) "14 CFR, Part 135 & 119" means air carriers with reference to Federal Aviation Regulations, Part 135 & 119, and holding a current FAA Air Carrier certificate, with approved "Air Ambulance Operations-Helicopter," or "Air Ambulance Operations-Airplane" operations specifications.
 - 11) "F.A.A." means the Federal Aviation Administration.
 - 12) "F.A.R." means the Federal Aviation Regulations including but not limited to Title 14 CFR.
 - 13) "Base of operation" means a location at which an aircraft and crew are stationed to respond to transport requests.
 - 14) "Mutual aid" means an agreement between two or more air medical programs to respond to the scene of an emergency or interfacility transport when the original service requested is unable to respond.
 - 15) "Flight Physiology" means the physiological stress of flight encountered during air medical operations to include, but not be limited to, the Boyle's, Charles', Dalton's, Henry's, and Universal Gas Laws, and stressors of barometric pressure changes, hypoxia, thermal and humidity changes, gravitational forces, noise, vibration, and fatigue.
-

Rotorcraft Ambulance Service Provider

Sec. 1.

- 1) Who needs to be licensed as a rotorwing provider?**
 - a) Base of operations in Ohio, or
 - b) Program providing, or seeking to provide rotorcraft ambulance services within the State of Ohio, or
 - c) Responding directly to the scene of a medical emergency in the State of Ohio,
- 2) Licensure not needed for the following:**
 - a) Assisting in a major catastrophe, disaster, when existing emergency medical services are insufficient are unable to cope with the situation.
 - b) An air medical program responding in a mutual aid capacity
 - c) An agency or instrumentality of the United States.
- 3) Other aviation requirements:**
 - a) Meet all applicable parts of F.A.A regulation, and shall
 - b) Hold a valid 14 CFR , Part 135 Air Carrier certificate, or shall have a contract with the holder of a 14 CFR Part 135 Air Carrier certificate to provide aviation services under their certificate.
 - c) Either must also have current FAA approved Air Ambulance Operations-Helicopter specifications.
- 4) Rotorcraft ambulance service provider organizations will have:**
 - a) Continuing education
 - b) Audit and review
 - c) Scene response utilization consistent with the American College of Surgeons as defined in Resources for Optimal Care of the Injured Patient.
 - d) Performance Improvement
 - e) Qualified Medical control and direction
 - f) Safety and survival programs and education.
- 5) Medical Director requirments:**
 - a) Ohio licensed medical director with a current unlimited Ohio License.
 - b) The duties and responsibilities of the medical director include, but are not limited to:
 - (i) Assuming medical authority over any and all patients treated and transported by the rotorcraft ambulance service.
 - (ii) Providing liaison with physicians.
 - (iii) Assuring that the drugs, medications, supplies, and equipment are appropriate
 - (iv) Monitoring and evaluating overall clinical operations.
 - (v) Assisting in the coordination and provision of clinical continuing education.
 - (vi) Participating in a quarterly audit and review of cases treated by air medical personnel.
 - (vii) Attesting to the competency of air medical personnel affiliated with the rotorcraft ambulance service provider organization.
- 6) Responsibility for in-service training** – program will designate one (1) person licensed and/or certified as a paramedic, a registered nurse, or a licensed physician, and have appropriate knowledge of patient care during air ambulance transport.
- 7) Public Safety** - service will not engage in conduct or practices detrimental to the health and safety of emergency patients or to members of the general public while in the course of business or service as a rotorcraft ambulance service provider.
- 8) Coordination with EMS and Law enforcement** - will have area wide plan to provide safety education and coordinate rotorcraft ambulance service with emergency medical services rescue, law enforcement, and mutual aid back-up systems
- 9) Required personnel resources** - adequate number of trained personnel and aircraft to routinely provide continuous twenty-four (24) hour services.
- 10) Safety committee to include:**
 - a) Pilot(s)
 - b) Air-medical personnel
 - c) Aircraft maintenance technician(s)
 - d) Communications personnel.
 - e) The safety committee shall meet at least quarterly and may be concurrent and in conjunction with the audit/review committee.
- 11) Who can request rotorcraft?**
 - a) hospitals and health care facilities,
 - b) emergency medical services organizations,
 - c) fire departments and
 - d) law enforcement agencies
 - e) industrial safety departments.

12) Destinations

- a) Appropriate medical facility in accordance with protocols approved by the Air Medical Program Medical Director.
- b) Trauma patients meeting triage criteria will be transported to an appropriate Level I or II Trauma Center.

Sec. 2.

1) Application requirements:

- a) Aircraft types and identification numbers.
- b) A listing of all personnel, and their qualifications by category, who will regularly serve as pilots, and air medical personnel.
- c) A copy of the patient care transport record to be utilized on each transport.
- d) Documentation of medical education as approved by the Medical Director
- e) A listing of all on-board life support and medical communications equipment available, including a list of drugs and medications to be carried on each aircraft.
- f) A copy of all treatment protocols and standing orders (if applicable) under which all non-physician personnel operate.
- g) Documentation of appropriate aircraft liability coverage in accordance with State guidelines.
- h) Insurance coverage for each and every aircraft owned and/or operated
- i) valid for a period of two (2) years

Sec. 3.

1) Rotorcraft ambulance characteristics:

- a) equipment and operations
 - i) performance inherent in the type of aircraft selected by the rotorcraft ambulance service provider
 - ii) aircraft and its equipment and operations shall be in compliance with prevailing F.A.R for the type of aircraft in question and flying conditions under which the aircraft will be operated as specified in the 14 CFR, Part 135 air carrier certificate of the air ambulance service provider.
- b) Capable of carrying a minimum of one (1) patient on a litter in a horizontal position located so as not to obstruct the pilot's vision or interfere with the performance of any member of the flight crew or required air medical personnel.
- c) Means of securing each litter and attached patient securely to either the floor (deck), walls (bulkhead), seats, or specific litter rack or any combination thereof which will comply with an acceptable method using either approved data from the aircraft manufacturer or data approved by the F.A.A. If data approved by the F.A.A. is required, a field approval or, supplemental type certificate (STC) shall be obtained.
- d) Demonstrable unobstructed vertical space at the head and thorax areas of the upper surface of a litter(s) to allow for performance of advanced life support cardiac care.
- e) Both the head and thorax of a secured patient shall be accessible by a minimum of two (2) air-medical personnel at one (1) time.
- f) Lighting available for patient observation (a minimum of forty (40) foot-candles at the level of the patient is recommended). Lighting shall be such as to not interfere with the pilots vision and will be focused, shielded, diffused, or colored illumination.
- g) Temperature regulation to assure the comfort of all persons on board.
- h) Door access demonstrably large enough for ease of patient litter loading and unloading in the supine position.
- i) Electrical system of the aircraft capable of supporting all of the ancillary equipment without the threat of overload or systems failure.
- j) Other specialized equipment may be required to conduct certain operations. The installation of this equipment shall comply with an acceptable method using either approved data from the aircraft manufacturer or data approved by the F.A.A. If data approved by the F.A.A. is required, a field approval or, supplemental type certificate (STC) shall be obtained.
- k) Searchlight rated as a minimum of four hundred thousand (400,000) candlepower or greater, manipulated by the pilot with a minimum movement of ninety (90) degrees vertical and one hundred eighty (180) degrees horizontal with the capability of illuminating the proposed landing site.
- l) air to ground communication capability to allow the pilot to communicate with all of the following ground personnel:
 - i) Law enforcement,
 - ii) Fire/rescue,
 - iii) Ambulances,
 - iv) Hospital(s).
- m) Adequate patient restraint(s) to preclude interference with the crew or aircraft flight controls.
- n) Intercommunications system.

Sec. 4.

1) Documentation:

- a) Maintain accurate records concerning the emergency care provided to each patient within the state.
- b) Participate in Ohio EMS Run reporting and the Ohio Trauma Registry as required.
- c) Premises maintained, suitable to the conduct of a rotorcraft ambulance service, with provision for adequate storage, and/or maintenance of rotorcraft ambulances and the on-board equipment.
- d) Have a periodic maintenance program as outlined for each specific aircraft in compliance with F.A.A. guidelines and manufacturer's service recommendations (MSR) as a minimum to assure that each rotorcraft ambulance, including equipment, is maintained in good, safe working condition and that rigid sanitation conditions and procedures are in effect at all times.
- e) Premises, records, hangars, padding, and tie-down facilities, and rotorcraft ambulances will be made available for inspection
- f) A determination of non-compliance with F.A.R. may result in immediate suspension of licensure as a rotorcraft ambulance service provider.
- g) Each rotorcraft ambulance service provider shall make available for inspection at place of operation during regular business hours any manual of operations required under F.A.R.
- h) Licensure as a rotorcraft ambulance service provider may be terminated upon the date specified in the notice.
- i) establish equipment checklist procedures to insure the following:
- j) Electronic and mechanical equipment are in proper operating condition.
- k) Rotorcraft ambulances shall be maintained in safe operating conditions at all times.
- l) Emergency patient care equipment maintained in minimum quantities either directly on board the rotorcraft ambulance or available at the time of patient transport.
- m) Insure that rigid sanitation conditions and procedures are in effect at all times.
- n) The interior and the equipment within the aircraft are clean and maintained in good working order at all times.
- o) Freshly laundered linens are used on all litters, and pillows and linen shall be changed after each patient is transported.
- p) When the aircraft has been utilized to transport a patient known to have a communicable disease, the aircraft must be cleansed and all contact surfaces be disinfected.
- q) Provider may operate, for a period not to exceed one hundred eighty (180) consecutive days, a temporary replacement rotorcraft ambulance if the temporary replacement rotorcraft ambulance is used to replace a certified rotorcraft ambulance that has been temporarily taken out of service for repair or maintenance, providing the following:
- r) The replacement rotorcraft ambulance must meet all certification requirements of this article.

Sec. 5.

1) Staffing

- a) will be staffed by no less than three (3) people and include the following requirements:
- b) The first person must be a properly certified pilot who shall complete an orientation program covering flight, and air medical operations as prescribed by the holder of the 14 CFR Part 135 Air Carrier certificate under which the Air Medical Program operates.
- c) The second person shall be an Ohio-licensed registered nurse with air-medical oriented training as prescribed by the program medical director
- d) The third person shall be any appropriate, licensed or certified medical personnel required to properly care for the medical needs of the patient at the discretion of the program medical director.
- e) The air medical personnel on board the aircraft must be trained in air transport issues and flight physiology.
- f) notify in writing within thirty (30) days of any change in the services provided.

Sec. 6.

1) Equipment

- a) Portable suction with appropriate catheters and tips capable of a minimum of three hundred
- b) (300) mm mercury.
- c) Oropharyngeal airways (adult, child, and infant sizes)
- d) Nasopharyngeal airways (small, 20-24 french; medium, 26-30 french; large, 30 french or greater)
- e) greater)
- f) 1 adult, & 1 child/infant bag, with adult, child, infant, and neonate masks.
- g) Portable oxygen w/appropriate cannulas, or mask, etc.
- h) Blood pressure cuffs (adult, child, and infant sizes)
- i) Stethoscope (carried in the aircraft or by air medical personnel)
- j) Bandages and dressings to include, but not limited to the following:
- k) Sterile gauze pads (4x4).

DRAFT GUIDELINES FOR THE OPERATION OF AIR MEDICAL SERVICES: June 13, 2001

- l) Airtight dressings.
 - m) Tape/bandage shears (shears may be carried in aircraft or by air-medical personnel).
 - n) Rigid extrication collars in pediatric, small, medium, and large (or adjustable to fit the sizes indicated) for each patient transported.
 - o) Portable defibrillator with self-contained cardiac monitor and E.C.G. strip writer with adult and pediatric paddles, or hands-free adapter which will not interfere with the aircraft's electrical and radio system
 - p) Endotracheal intubation equipment to include laryngoscopes with spare batteries and bulbs, with laryngoscope blades, and endotracheal tubes in adult, child, and infant sizes.
 - q) Medications, intravenous fluids, administration sets, syringes, and needles will be specified by the air-medical director identifying types and quantities
- 2) Controlled drugs shall not be left on unattended aircraft unless adequate security precautions have been taken.

Sec. 7.

1) Communications – rotorcraft provider will have maintain the following:

- a) communications equipment required under 14 CFR Part 135 for the type of aircraft and service provided
- b) radio communications equipment that allows it to communicate directly with Ohio hospitals and EMS.
- c) Transmitters are to operate with an output power not to exceed ten (10) watts as applicable to F.C.C. rules and regulations.
- d) A dispatch and tactical communications system with the capability to provide a coordinated voice communications linkage within the flying area of the rotorcraft ambulance service provider.

Rotorcraft Ambulance Service Provider Licensure Application with Accreditation by CAMTS (Commission for Accreditation of Medical Transport Systems).

Sec. 1.

1) Deemed status - CAMTS Accredited programs

- a) Required info:
 - i) Base of operations and a level of care to be provided.
 - ii) A description and general location of each aircraft to be used as an air ambulance, including the make, model, year of manufacture, insignia, name or monogram, or other distinguishing characteristics.
 - iii) Documentation of appropriate aircraft liability coverage in accordance with State guidelines.
 - iv) The insurance coverage specified shall be for each and every aircraft owned and/or operated by or for the fixed wing ambulance service provider.
 - v) Proof of current critical care transport accreditation by the Commission for Accreditation of Medical Transport Systems (CAMTS), including the date of accreditation expiration.
 - vi) Other information as requested .
 - b) will be licensed by the commission for a period of up to three (3) years, or the expiration date of the CAMTS accreditation (whichever occurs first), and a certificate will be issued.
 - c) must comply with all applicable F.A.A regulation(s), and
 - d) hold a valid 14 CFR Part 135 Air Carrier certificate, or
 - e) have a contract with the holder of a 14 CFR Part 135 Air Carrier certificate, to provide aviation services under their certificate.
 - f) hold a current FAA approved EMS Operations Specifications certificate.
-

Fixed Wing Ambulance Service Provider

Sec. 1.

- 1) **Who needs to be licensed as a Fixed Wing Provider?**
 - a) base of operations in Ohio, or a program
 - b) providing, or seeking to provide fixed wing ambulance services within the State of Ohio,
- 2) **Licensure not required for the following:**
 - a) assisting in a major catastrophe, disaster, when existing emergency medical services are insufficient or are unable to cope with the situation.
 - b) an air medical program responding in a mutual aid capacity
 - c) an agency or instrumentality of the United States.
- 3) **Other Aviation Requirements:**
 - a) meet all applicable parts of F.A.A regulation, and
 - b) hold a valid 14 CFR , Part 135 Air Carrier certificate, or
 - c) have a contract with the holder of a 14 CFR Part 135 Air Carrier certificate to provide aviation services under their certificate.
 - d) Either must also have current FAA approved Air Ambulance Operations-Helicopter specifications.
- 4) **Fixed wing ambulance service provider organizations will have:**
 - a) Continuing education
 - b) Audit and review
 - c) Performance Improvement
 - d) Qualified Medical control and direction
 - e) Safety and survival programs and education.
- 5) **Medical Director requirements:**
 - a) Ohio licensed medical director with a current unlimited Ohio License.
 - b) The duties and responsibilities of the medical director include, but are not limited to:
 - c) Assuming medical authority over any and all patients treated and transported by the fixed wing ambulance service.
 - d) Providing liaison with physicians.
 - e) Assuring that the drugs, medications, supplies, and equipment are appropriate
 - f) Monitoring and evaluating overall clinical operations.
 - g) Assisting in the coordination and provision of clinical continuing education.
 - h) Participating in a quarterly audit and review of cases treated by air medical personnel.
 - i) Attesting to the competency of air medical personnel affiliated with the fixed wing ambulance service provider organization.
- 6) **Responsibility for in-service training** - will designate one (1) person licensed and/or certified as a paramedic, a registered nurse, or a licensed physician, and have appropriate knowledge of patient care during air ambulance transport.
- 7) **Public safety**
 - a) service provider will not engage in conduct or practices detrimental to the health and safety of emergency patients or to members of the general public while in the course of business or service as a fixed wing ambulance service provider.
- 8) **Safety committee to include:**
 - a) Pilot(s)
 - b) Air-medical personnel
 - c) Aircraft maintenance technician(s)
 - d) Will meet at least quarterly and may be concurrent and in conjunction with the audit/review committee.
- 9) **Patient Destination:**
 - a) Transport to an appropriate medical facility in accordance with protocols approved by the Air Medical Program Medical Director.

Sec. 2.

- 1) **Application Requirements:**
 - 2) Aircraft types and identification numbers.
 - 3) A listing of all personnel, and their qualifications by category, who will regularly serve as pilots, and air medical personnel.
 - 4) A copy of the patient care transport record to be utilized on each transport.
 - 5) Documentation of medical education as approved by the Medical Director
 - 6) A listing of all on-board life support and medical communications equipment available, including a list of drugs and medications to be carried on each aircraft.
 - 7) A copy of all treatment protocols and standing orders (if applicable) under which all non-physician personnel operate.
 - 8) Documentation of appropriate aircraft liability coverage in accordance with State guidelines.

DRAFT GUIDELINES FOR THE OPERATION OF AIR MEDICAL SERVICES: June 13, 2001

- 9) Insurance coverage specified shall be for each and every aircraft owned and/or operated by or for the fixed wing ambulance service provider.
- 10) valid for a period of two (2) years from the date of issue

Sec. 3.

Fixed Wing ambulance characteristics:

1) Equipment and operations

- a) Performance characteristics inherent in the type of aircraft selected by the fixed wing ambulance service provider.
- b) Equipment and operations shall be in compliance with prevailing F.A.R for the type of aircraft in question and flying conditions under which the aircraft will be operated as specified in the 14 CFR, Part 135 air carrier certificate of the air ambulance service provider.
- c) Capable of carrying a minimum of one (1) patient on a litter in a horizontal position located so as not to obstruct the pilot's vision or interfere with the performance of any member of the flight crew or required air medical personnel.
- d) Means of securing each litter and attached patient securely with an acceptable method using either approved data from the aircraft manufacturer or data approved by the F.A.A. If data approved by the F.A.A. is required, a field approval or, supplemental type certificate (STC) shall be obtained and kept on file.
- e) Demonstrable unobstructed vertical space at the head and thorax areas of the upper surface of a litter(s) to allow for performance of advanced life support cardiac care.
- f) Both the head and thorax of a secured patient shall be accessible by a minimum of two (2) air-medical personnel at one (1) time.
- g) lighting available for patient observation (a minimum of forty (40) foot-candles at the level of the patient is recommended). Lighting shall be such as to not interfere with the pilots vision and will be focused, shielded, diffused, or colored illumination.
- h) Temperature regulation to assure the comfort of all persons on board.
- i) door access demonstrably large enough for ease of patient litter loading and unloading in the supine position.
- j) The electrical system of the aircraft capable of supporting all of the ancillary equipment without the threat of overload or systems failure.
- k) Other specialized equipment may be required to conduct certain operations.
- l) The installation of this equipment shall comply with an acceptable method using either approved data from the aircraft manufacturer or data approved by the F.A.A. If data approved by the F.A.A. is required, a field approval or, supplemental type certificate (STC) shall be obtained.
- m) Equipped with adequate patient restraint(s) to preclude interference with the crew or aircraft flight controls.
- n) The aircraft must have air to ground communications capabilities to allow medical personnel to communicate with medical control.

Sec. 4.

- 1) Maintain accurate records concerning the medical care provided to each patient within the state.
- 2) Premises will be maintained, suitable to the conduct of a fixed wing ambulance service, with provision for adequate storage, and/or maintenance of fixed wing ambulances and the on-board equipment.
- 3) Have a periodic maintenance program as outlined for each specific aircraft in compliance with F.A.A. guidelines and manufacturer's service recommendations (MSR) as a minimum to assure that each fixed wing ambulance, including equipment, is maintained in good, safe working condition and that rigid sanitation conditions and procedures are in effect at all times.
- 4) Premises, records, hangars, padding, and tie-down facilities, and fixed wing ambulances will be made available for inspection by the director or the director's authorized representative at any time during regularly scheduled business hours.
- 5) A determination of non-compliance with F.A.R. may result in immediate suspension of licensure as a fixed wing ambulance service provider.
- 6) Each fixed wing ambulance service provider will make available for inspection at place of operation during regular business hours any manual of operations required under F.A.R.
- 7) Licensure as a fixed wing ambulance service provider may be terminated upon the date specified in the notice.
- 8) establish equipment checklist procedures to insure the following:
- 9) Electronic and mechanical equipment are in proper operating condition.
- 10) Fixed wing ambulances shall be maintained in safe operating conditions at all times.
- 11) Emergency patient care equipment required for fixed wing ambulance certification is maintained in minimum quantities either directly on board the fixed wing ambulance or available at the time of patient transport.
- 12) insure that rigid sanitation conditions and procedures are in effect at all times. The following sanitation standards apply to all fixed wing ambulances:
- 13) The interior and the equipment within the aircraft are clean and maintained in good working order at all times.
- 14) Freshly laundered linens are used on all litters, and pillows and linen shall be changed after each patient is transported.

DRAFT GUIDELINES FOR THE OPERATION OF AIR MEDICAL SERVICES: June 13, 2001

- 15) When the aircraft has been utilized to transport a patient known to have a communicable disease, the aircraft must be cleansed and all contact surfaces be disinfected.

Sec. 5.

Fixed Wing Staffing

- 1) Staffed by no less than three (3) people and include the following requirements:
- 2) The first person must be a properly certified pilot who shall complete an orientation program covering flight, and air medical operations as prescribed by the holder of the 14 CFR Part 135 Air Carrier certificate under which the Air Medical Program operates.
- 3) Minimum of 2 appropriate, licensed or certified medical personnel required to properly care for the medical needs of the patient at the discretion of the program medical director.
- 4) The air medical personnel on board the aircraft must be trained in air transport issues and flight physiology.

Sec. 6.

Equipment

- 1) **Required on all flights:**
 - a) Portable suction with appropriate catheters and tips capable of a minimum of three hundred
 - b) (300) mm mercury.
 - c) Oropharyngeal airways (adult, child, and infant sizes)
 - d) Nasopharyngeal airways (small, 20-24 french; medium, 26-30 french; large, 30 french or greater)
 - e) 1 adult, & 1 child/infant bag, with adult, child, infant, and neonate masks as appropriate for the flight.
 - f) Portable oxygen w/appropriate cannulas, or mask, etc.
 - g) Blood pressure cuffs (adult, child, and infant sizes)
 - h) Stethoscope (carried in the aircraft or by air medical personnel)
 - i) Bandages and dressings to include, but not limited to the following:
 - j) Sterile dressings
 - k) Airtight dressings.
 - l) Tape/bandage shears (shears may be carried in aircraft or by air-medical personnel).
 - m) Rigid extrication collars in pediatric, small, medium, and large (or adjustable to fit the sizes indicated) for each patient transported.
 - n) Minimum of AED must be carried on transports.
- 2) **Equipment based on mission/patient condition**
 - a) alternative to the AED is Portable defibrillator which may be used by appropriately trained medical personnel as specified by the medical director. Monitor should include self-contained cardiac monitor and E.C.G. strip writer with adult and pediatric paddles, or hands-free adapter which will not interfere with the aircraft's electrical and radio system
 - b) (12) Endotracheal intubation equipment to include laryngoscopes with spare batteries and bulbs, with laryngoscope blades, and endotracheal tubes in adult, child, and infant sizes.
 - c) (13) Medications, intravenous fluids, administration sets, syringes, and needles will be specified by the air-medical director identifying types and quantities
- 3) Controlled drugs shall not be left on unattended aircraft unless adequate security precautions have been taken.
- 4) Additional equipment/supplies as specified by the medical director based on crew medical training and patient need.
- 5) Medical equipment will not interfere with aircraft electrical and radios system.

Sec. 7.

1) Communications:

- a) all communications equipment required under 14 CFR Part 135 for the type of aircraft and service provided
- b) radio communications equipment that allows it to communicate directly with medical control.
- c) Transmitters are to operate with an output power in accordance with applicable F.C.C. rules and regulations.

Fixed wing Ambulance Service Provider Licensure Application with Accreditation by CAMTS (Commission for Accreditation of Medical Transport Systems).

Sec. 1.

Deemed status - CAMTS Accredited programs

1) Required info:

- a) Base of operations and a level of care to be provided.
 - b) A description and general location of each aircraft to be used as an air ambulance, including the make, model, year of manufacture, insignia, name or monogram, or other distinguishing characteristics.
 - c) Documentation of appropriate aircraft liability coverage in accordance with State guidelines.
 - d) The insurance coverage specified shall be for each and every aircraft owned and/or operated by or for the fixed wing ambulance service provider.
 - e) Proof of current critical care transport accreditation by the Commission for Accreditation of Medical Transport Systems (CAMTS), including the date of accreditation expiration.
 - f) Other information as requested .
- 2) will be licensed by the commission for a period of up to three (3) years, or the expiration date of the CAMTS accreditation (whichever occurs first), and a certificate will be issued.
 - 3) must comply with all applicable F.A.A regulation(s), and
 - 4) hold a valid 14 CFR Part 135 Air Carrier certificate, or
 - 5) have a contract with the holder of a 14 CFR Part 135 Air Carrier certificate, to provide aviation services under their certificate.
 - 6) hold a current FAA approved EMS Operations Specifications certificate.

It's About Safety

THE SIREN

*A Newsletter of the Division of Emergency Medical Services
and the State Emergency Medical Services Board
1970 W. Broad Street • Columbus, Ohio 43223
1-(800)-233-0785*

September/October 2001

Laura Tiberi, Executive Director

We have implemented several new online services on our Web site. It is hoped that the Emergency Medical Services (EMS) Web site and the new online features will serve as an alternative mode of communication for visitors and a one-stop center for current EMS related information. I hope everyone will take the opportunity and familiarize themselves with the new online system. It will provide a more value-added Web site for the EMS and fire community.

New online services that were recently implemented include:

- 1) **Training Facility Look-up-** Viewers can look up either accredited training facilities or approved continuing education sites by county, school name, city or ZIP code;
- 2) **Exam calendar-** Offers a listing of all scheduled exam dates through the end of the year. The benefit of this online system is that all exam dates that are entered in the database automatically appear, eliminating the need to frequently update printed exam calendars;
- 3) **Certification Verification-** Certifications can be verified by entering either a social security number or certification number; and
- 4) **New and Improved Online Test Registration-** This version will require those registering for tests to update their personal information that is fed directly into EMS database records. This will assist the Division in keeping accurate records. Try out the new online services by visiting the Division of EMS Web site at: <http://www.state.oh.us/odps> Click on Emergency Medical Services.

Ohio Task Force One Aids New York After Terrorist Attacks

Within hours of the September terrorist attack on the World Trade Center in New York on September 11th, 72 members of Ohio's Urban Search and Rescue Task Force One were on their way to assist in the recovery effort coordinated by our Emergency Management Agency (EMA) division.

Commanded by Michael Muhl, the Ohio Task Force is one of 27 such units in the United States and was one of nine dispatched to New York and Washington, D.C. following the terrorist attacks. The Ohio Task Force carried with it four trained canines along with a large array of specialty equipment, including sensitive listening devices, miniature TV cameras connected with fiber optics for insertion into tiny spaces, heavy lift and extraction equipment and its own medical support. All the equipment is worth about \$1.2 million.

It was the second deployment of the Task Force, which is comprised of highly trained and equipped volunteers from across the state. The Task Force, based at Wright-Patterson Air Force Base near Dayton, became operational in April 2000 and first was deployed as part of the recovery effort in Xenia following a tornado a year ago.

Many Ohio fire departments kept a volunteer list following the terrorist attacks in case more were needed to go search the rubble. But federal officials said their need was not immediate.

The training and support finances for the Task Force come from state and federal funds.

Many organizations distributed red, white and blue ribbons to people in exchange for donations to the relief efforts.

DISCIPLINARY & ADMINISTRATIVE ACTION

September 19, 2001

Scott Whitcomb, EMT Applicant
Violation: Felony conviction for Corruption of a Minor
Sanction: Denial of EMT-Basic certificate to practice

Anthony Allegrini, EMT Cert #18537
Violations: Committed fraud, misrepresentation, or deception in applying for or securing any certificate - Not satisfying the requirements for certification to practice for the level sought in a renewal application - Not completing the continuing education requirements to renew as a paramedic

Sanction: \$500 fine, EMT certificate to practice suspended for six months, must complete the continuing education requirements within this six month period. If not in compliance at the completion of the six month suspension, then will result in the revocation of EMT-Paramedic certificate to practice

Stacey McGuire, EMT Cert #88116
Violation: Practicing beyond the scope of an EMT-Paramedic
Sanction: Written reprimand and two year probation

Edison Cook, Jr., EMT Cert #7909
Violation: Conviction for misdemeanor involving moral turpitude to wit domestic violence
Sanction: Written reprimand, three year probation, and successful completion of anger management course within nine months

Chris LaDue, EMT Cert #95798
Violation: Conviction for misdemeanor involving moral turpitude to wit domestic violence
Sanction: Written reprimand, three year probation, and successful completion of anger management course within nine months

Kenneth Allison, EMT Cert #95680
Violation: Conviction for misdemeanor involving moral turpitude to wit domestic violence
Sanction: Written reprimand, three year probation, and successful completion of anger management course within nine months

Annette McKissic, EMT Applicant
Violation: Felony convictions for Theft and Food Stamp Trafficking
Sanction: Issue EMT-Basic Certificate, 3 year probation and within six months must supply the Division of EMS with a complete criminal history check

A Note from Doctor D.

State Medical Director Dr. John Drstvensek

C. Q. I.

In manufacturing plants, service industries and medical centers, organizations around the world are using continuous quality improvement (CQI) as their strategy to bring about dramatic changes in their operations.

Today, organizations need to meet or exceed customer expectations while maintaining a cost competitive position. CQI is a systematic, organization wide approach for improving all processes that deliver quality products and services and is the strategy to meet today's challenges and to prepare for the future.

In pursuing CQI, the organization will use four principles:

1. Develop a strong customer focus
2. Continually improve all processes
3. Involve employees
4. Mobilize data and team knowledge to improve decision-making

The Regional Physician Advisory Boards (RPAB) are preparing a sample CQI packet to share with the EMS providers and EMS medical directors in an effort to help all areas of this diverse state meet the needs of the patients in their communities.

CQI courses are available around the state and country. Talk to your EMS medical director about using this important tool to improve the health care in your area.

Ohio Families to Receive 25,000 Free Booster Seats

Boost America! a \$30 million child passenger safety program that gives one million booster seats to low-income families nationwide, gave its 250,000th free booster seat to an Ohio family on August 24, 2001, at the St. Stephens Community Center in Columbus. In all, 25,000 booster seats will be given to Ohio families. United Way and the Ohio Department of Public Safety are handling the distribution of the seats.

A new survey indicates 84 percent of Ohio children ages four through eight run an increased risk of injury or death in car crashes because they are not in booster seats.

A booster seat raises a small child higher in a car, allowing a safety belt to properly cross at the shoulder and at the waist, as recommended by safety belt and auto manufacturers. If improperly restrained, during a crash, a child is more likely to suffer critical or even fatal injuries.

Lt. Governor Maureen O'Connor helped craft HB 334 with Representative Kevin DeWine to require children under 80 pounds and under 8-years-old be properly restrained in life-saving booster seats. HB 334 is currently in committee.

Boost
America!
Raising kids with safety in mind

FIRST THERE FIRST CARE

Bystander Involvement Encouraged

The Ohio Department of Public Safety Emergency Medical Services Division (EMS) encourages educated bystander involvement to help prevent motor vehicle fatalities. According to the National Highway Traffic Safety Administration (NHTSA), every American will be in or witness a motor vehicle crash every ten years.

The campaign, "First There, First Care" includes these five actions for bystander care:

• Stop to help • Call for help • Assess the victim • Start the breathing • Stop the bleeding

The chances of being in a life-threatening crash are greatest in rural areas, which is partially attributed to the significant time delay from when a crash occurs to when it is first reported to Emergency Medical Services (EMS). It also takes longer for EMS to respond in rural areas, due to the distances they must travel to reach injured crash victims.

Many highway fatalities result from blood loss and airway obstruction. Both are treatable conditions if care is given soon after the injuries occur. Thus, many rural highway fatalities may be attributed to the lack of early intervention.

We know that every second counts in an emergency. Therefore, individuals trained to perform bystander care at a roadway emergency can make the difference between life and death—but only if they get involved and take action!

To receive more information on the "First there, First Care" bystander care for the injured campaign, visit www.nhtsa.dot.gov/people/injury/ems. Also, to become more involved, contact your local emergency medical service.

IT'S EMS BIKE PATROL

In Toledo, the Whitehouse fire department has been using bikes to help save lives. They have a converted police mountain bike and nine bicycles to assist. The new Emergency Medical Services (EMS) bike carries more than \$3,000 worth of equipment, which includes an oxygen tank, portable heart defibrillator, IV set up and a first-aid kit.

Paramedics with the city of Toledo's fire and rescue division began riding bikes in 1999. The bikes are equipped with 30 pounds of gear. The obvious difference is that they can't transport people to hospitals. The bikes are only used at special events such as parades, firework shows, running races and festivals so they can respond to people and problems in congested areas.

The bike unit has taken an additional 32 hours of training to cover such topics as bike maintenance, how to maneuver through crowds and how to go up and down stairs on a bike that is carrying an oxygen tank and other heavy equipment. The paramedics also promote bike safety.

Several other EMS providers in Ohio also offer bike service for festivals and other events.

Carol MacDowell

E-mail: clmacdowell@dps.state.oh.us

- ★ Responsible for coordinating and assisting with the activities of the 10 regional physician advisory boards
- ★ Provides a vital link between the regional physician advisory boards, the state trauma committee, EMS board, and state medical director
- ★ Attends regional physician advisory board meetings
- ★ Member of the Business Advisory Committee of Goodwill Rehabilitation
- ★ Graduated from Columbus State Community College in 1998 with a degree in Health Information Management
- ★ Is certified as a Registered Health Information Technician
- ★ Worked as a manager in the Health Information Management Department at Columbus Children's Hospital, 1998
- ★ Served as Trauma Registrar at Mt. Carmel Health System, 1998-2000
- ★ Is an adjunct faculty member at Columbus State Community College, where she currently teaches Advanced Medical Terminology

Michaele Von Ville-Feuillerat

E-mail: mvonville-feuillerat@dps.state.oh.us

- ★ Attended The Ohio State University and graduated with a Bachelor of Science in Physical Education K-12 in August of 1989
- ★ Accepted to the Columbus Division of Fire Training Academy and graduated in December of 1989 with a 240 hour Firefighter and EMT-Basic certification
- ★ Gained Paramedic status in 1996 and became an EMS Instructor
- ★ Obtained a Masters of Science in Human Services Management from Franklin University
- ★ Also trained as a Heavy Rescue Technician
- ★ Began career with the Ohio Division of EMS in February 2001
- ★ Is the EMS Education Coordinator, responsible for the accreditation of all training programs in the state, handles the initial certification of all instructors and serves as staff liaison to the Education Committee of the EMS Board
- ★ Interests are in family, profession, horseback riding and soccer

Focus on EMS Board Members...

In this issue, we will continue to introduce you to Ohio EMS Board members. More profiles will be included in the next issue of the Siren.

Ohio EMS Board Member—Martin Mace

E-mail: mmace@apk.net

Position on EMS Board: Full-time paramedic nominated by Northern Ohio Firefighters

Brief biography

- * Full-time paid Paramedic in state of Ohio for 25 years
- * 13 years with Lakewood EMS, a hospital based third municipal service
- * 12 years with City of Bay Village Fire Dept. as Firefighter/Paramedic
- * -Currently involved in the Dive Rescue Team for the Fire Department
- * Personal interest in law that led to Paralegal training

Interest/involvement and/or association with EMS:

- * Chairman of Legislative Committee
- * Co-Chair of Education Committee
- * Have worked in Private and Public sector including teaching throughout career
- * Served as representative of the EMS Board on the Rules Committee at Board of Health for the 1999 DNR Legislation

Ohio EMS Board Member—Mark Mankin

E-mail: MM5241@aol.com

Position on EMS Board: Firefighter, EMT instructor nominated by Ohio State Firefighters Association

Brief biography

- * Capt./EMS Coordinator City of Worthington Division of Fire
- * EMS, EMT-P for 17 years
- * Started as a volunteer FF/EMT 1980
- * Became full-time EMT-P instructor in 1983

Interest/involvement and/or association with EMS:

- * Serves on EMS Systems Management Committee

Final Analysis
Legislative Service Commission

Am. Sub. H.B. 138
123rd General Assembly
(As Passed by the General Assembly)

Reps. Schuck, Barrett, Bender, Evans, Ford, Metelsky, D. Miller, Sullivan, Sykes, Pringle, Van Vyven, Verich, Winkler, Young, Bateman, Haines, Olman, DePiero, Barnes, Williams, Willamowski, Terwilleger, Vesper, Brading, Ogg, Roberts, Tiberi, Schuler, Perry, Goodman, Jones, Corbin, Callender, Calvert, Mottley, Austria, O'Brien, Thomas, Ferderber, Cates, Flannery, Patton, Clancy, Damschroder, Sutton, Jerse, Salerno, Opfer, Myers

Sens. Drake, Hagan, Kearns, Armbruster, Spada, Johnson, Brady, Watts, Wachtmann, Prentiss, Latell, Gardner

Effective date: November 3, 2000

ACT SUMMARY

- Prohibits, beginning November 3, 2002, a hospital or physician from admitting or transferring a trauma patient to a hospital that is not an appropriate trauma center or failing to transfer a trauma patient to an appropriate trauma center.
- Requires the State Board of Emergency Medical Services to develop state triage protocols for the treatment of trauma victims.
- Provides for the establishment of regional triage protocols.
- Requires emergency medical service organizations to develop written protocols for the treatment of trauma victims.
- Imposes additional costs for failure to use an occupant restraining device and for reinstating a driver's license suspended for OMVI and reallocates the use of the funds with respect to programs involving safety education and emergency medical services.
- Directs a portion of the fines collected from state highway patrol tickets and arrests to a program under which grants are made for uses related to trauma and emergency medical services.

- Alters the composition and operation of the State Board of Emergency Medical Services.
- Establishes a trauma committee in the State Board of Emergency Medical Services.
- Requires the State Board of Emergency Medical Services, Department of Health, and Legislative Service Commission to study and report on trauma care emergency medical services in Ohio.
- Permits emergency medical service organizations to contract to provide services in other jurisdictions.
- Allows private fire companies and emergency medical service organizations to participate in Department of Administrative Services purchasing and salvage programs.
- Establishes a sales tax exemption for the purchase of emergency medical equipment and supplies for trauma care and emergency medical services.

CONTENT AND OPERATION

TRAUMA CARE

Overview

The act provides that an adult or pediatric trauma center must be verified by the American College of Surgeons as a condition of representing itself to the public as a trauma center. For a limited period, the act provides that a pediatric trauma center that is not verified by the American College of Surgeons may operate under a designation issued by the Director of Health. The act prohibits a physician from admitting a trauma patient to a hospital that is not a trauma center and prohibits both physicians and hospitals from making inappropriate transfers of trauma patients. Hospitals are required to adopt protocols for providing trauma care and to enter into agreements with trauma centers governing the transfer of trauma patients from hospitals to appropriate trauma centers. The State Board of Emergency Medical Services is required to develop triage protocols for the treatment of trauma victims. Comparable regional triage protocols may be developed, however, that take precedence over the state triage protocols. The Board must develop guidelines for the care of trauma victims provided by emergency medical service personnel.

Types of trauma care and injuries

(sec. 4765.01(N) and (M))

"Trauma" (or "traumatic injury") is defined by the act as "severe damage to or destruction of tissue" that satisfies both of the following conditions:

(1) It creates a significant risk of loss of life; loss of a limb; significant, permanent disfigurement; or significant, permanent disability.

(2) It is caused by blunt or penetrating injury; exposure to electromagnetic, chemical, or radioactive energy; drowning, suffocation, or strangulation; or a deficit or excess of heat.

"Trauma care" is defined as "the assessment, diagnosis, transportation, treatment, or rehabilitation of a trauma victim by emergency medical service personnel or by a physician, nurse, physician assistant, respiratory therapist, physical therapist, chiropractor, occupational therapist, speech-language pathologist, audiologist, or psychologist licensed to practice in Ohio or another jurisdiction.

Authorized trauma centers

(sec. 4765.01)

"Trauma center" is defined by the act as "any hospital that is verified by the American College of Surgeons as an adult or pediatric trauma center, any hospital in Ohio that is designated by the Director of Health as a pediatric trauma center, and any hospital that is licensed or designated under the laws of another state as capable of providing specialized trauma care appropriate to the medical needs of the trauma patient."

State designation of pediatric trauma centers

(sec. 3727.081)

If a hospital has been denied verification as a pediatric trauma center by the American College of Surgeons solely because the hospital does not meet that organization's anesthesia and surgical staffing standards, the act permits the hospital to submit an application to the Director of Health to receive the Director's designation as a Level II pediatric trauma center. The act requires the Director to cease reviewing applications December 31, 2003, and provides that all applications pending on that date are void. The act provides that the Director's designation of a hospital as a pediatric trauma center expires December 31, 2004, unless earlier suspended or revoked by the Director or surrendered by the hospital.

Not later than November 3, 2002, the Director must adopt rules that establish standards and procedures for designating hospitals as Level II pediatric trauma centers. The rules must include standards to be followed by a hospital operating under the Director's designation and procedures for the Director's enforcement of those standards. The rules must be adopted in accordance with the Administrative Procedure Act (R.C. Chapter 119.). Any action taken to suspend or revoke a hospital's designation must be taken in accordance with the Administrative Procedure Act.

The act permits the Director to conduct an inspection before designating a hospital as a pediatric trauma center. The inspection may be conducted by using a contractor of the Department of Health with appropriate competence and independence.

The Director is required to review in a timely manner all applications received. A hospital must be designated as a Level II pediatric trauma center if the hospital submits a complete application and the Director finds all of the following:

(1) The hospital has established trauma care protocols that ensure a surgeon and anesthesiologist are available from outside the hospital in a timely manner and on short notice;

(2) The hospital's protocols ensure that the surgeon will participate in the early care of a trauma patient;

(3) The hospital has adhered to its protocols and the hospital's performance has met the expected outcomes, as evidenced by data obtained from a review of at least two years of the hospital's trauma activities;

(4) The care of patients will not be compromised by issuing the designation.

The act prohibits the Director and any employee or contractor of the Department from making public any information reported to or collected by the Department under the designation program. The prohibition applies to information that identifies or would tend to identify a specific patient.

Prohibitions regarding transfer and treatment

Hospitals

(sec. 3727.10)

Beginning November 3, 2002, the act prohibits a hospital in Ohio from knowingly doing any of the following:

(1) Representing that it is able to provide trauma care to a severely injured patient that is inconsistent with its level of categorization as a trauma center, provided that a hospital that operates an emergency facility may represent that it provides emergency care;

(2) Providing trauma care to a severely injured patient that is inconsistent with applicable federal laws, state laws, and trauma care protocols and patient transfer agreements adopted by the hospital under the act;

(3) Transferring a severely injured trauma patient to a hospital that is not a trauma center with an appropriate level of categorization or otherwise transferring a severely injured trauma patient in a manner inconsistent with any applicable trauma patient transfer agreements adopted by the hospital.

Physicians

(sec. 4765.50)

Beginning November 3, 2002, the act prohibits a physician from purposefully doing any of the following:

- (1) Admitting an adult trauma patient to a hospital that is not an adult trauma center for the purpose of providing adult trauma care;
- (2) Admitting a pediatric trauma patient to a hospital that is not a pediatric trauma center for the purpose of providing pediatric trauma care;
- (3) Failing to transfer a trauma patient to an adult or pediatric trauma center in accordance with applicable federal law, state law, and adult and pediatric trauma protocols and patient transfer agreements adopted by a hospital under the act.

Hospital trauma care protocols

(sec. 3729.09(A))

Not later than November 3, 2002, the act requires each hospital that is not a trauma center to adopt protocols for the trauma care provided in or by that hospital. Each hospital that is an adult trauma center and not a Level I or Level II pediatric trauma center must adopt protocols for pediatric trauma care provided in or by that hospital. Each hospital that is a pediatric trauma center and not a Level I or Level II adult trauma center must adopt protocols for adult trauma care provided in or by that hospital.

In developing its trauma care protocols, each hospital must consider the guidelines for trauma care established by the American College of Surgeons, the American College of Emergency Physicians, and the American Academy of Pediatrics. Trauma care protocols must be written, comply with applicable federal and state laws, and include policies and procedures with respect to all of the following:

- (1) Evaluation of trauma patients, including criteria for prompt identification of trauma patients who require a level of trauma care that exceeds the hospital's capabilities;
- (2) Emergency treatment and stabilization of trauma patients prior to transfer to an appropriate trauma center;

(3) Timely transfer of trauma patients to appropriate trauma centers based on the patient's medical needs;

(4) Peer review and quality assurance procedures for adult and pediatric trauma care provided in or by the hospital.

Transfer protocols

A hospital's policies and procedures for timely transfer are referred to in the act as "trauma patient transfer protocols." Under the act, a hospital's trauma patient transfer protocols must specify all of the following:

(1) Confirmation of the ability of the receiving trauma center to provide prompt trauma care appropriate to the patient's medical needs;

(2) Procedures for selecting an appropriate alternative trauma center to receive a patient when it is not feasible or safe to transport the patient to a particular trauma center;

(3) Advance notification and appropriate medical consultation with the trauma center to which a trauma patient is being, or will be, transferred;

(4) Procedures for selecting an appropriate method of transportation and the hospital responsible for arranging or providing the transportation;

(5) Confirmation of the ability of the persons and vehicle that will transport a trauma patient to provide appropriate trauma care;

(6) Assured communication with, and appropriate medical direction of, the persons transporting a trauma patient to a trauma center;

(7) Identification and timely transfer of appropriate medical records of the trauma patient being transferred;

(8) The hospital responsible for care of a patient in transit;

(9) The responsibilities of the physician attending a patient and, if different, the physician who authorizes a transfer of the patient;

(10) Procedures for determining, in consultation with an appropriate trauma center and the persons who will transport a trauma patient, when transportation of the patient to a trauma center may be delayed for either of the following reasons: (a) immediate transfer of the patient is unsafe due to adverse weather or ground conditions or (b) no trauma center is able to provide appropriate trauma care to the patient without undue delay.

Hospital trauma patient transfer agreements

(sec. 3727.09(B))

Not later than November 3, 2002, the act requires each hospital to enter into the following written agreements:

(1) An agreement with one or more adult trauma centers in each level of trauma center categorization higher than that of the hospital that governs transfer of adult trauma patients from the hospital to those trauma centers;

(2) An agreement with one or more pediatric trauma centers in each level of trauma center categorization higher than that of the hospital that governs the transfer of pediatric trauma patients from the hospital to those trauma centers.

The act provides that a hospital's trauma patient transfer agreement must comply with applicable federal and state laws and contain provisions conforming to the act's requirements for trauma care protocols.

Exceptions

The act establishes exceptions to the requirement that a hospital enter into patient transfer agreements. Under these exceptions, all of the following apply:

(1) A Level I or Level II adult trauma center is not required to enter into an adult trauma patient transfer agreement with another hospital.

(2) A Level I or Level II pediatric trauma center is not required to enter into a pediatric trauma patient transfer agreement with another hospital.

(3) A hospital is not required to enter into an adult trauma patient transfer agreement with a Level III or Level IV adult trauma center, or enter into a pediatric trauma patient transfer agreement with a Level III or Level IV pediatric trauma center, if no trauma center of that type is reasonably available to receive trauma patients from the hospital.

Public inspection of protocols and agreements

(sec. 3727.09(C))

A hospital is required by the act to make its trauma care protocols and patient transfer agreements available for public inspection during normal working hours. A hospital must furnish a copy of those documents on request and may charge a reasonable and necessary fee for doing so. However, the hospital must furnish copies of the documents to the Director of Health free of charge.

State triage protocols

(sec. 4765.40(A))

Not later than November 3, 2002, the act requires the State Board of Emergency Medical Services to adopt rules establishing written protocols for the triage of trauma victims. The rules must define adult and pediatric trauma in a manner that is consistent with the act's definitions, minimizes overtriage and undertriage, and emphasizes the special needs of pediatric and geriatric trauma patients. The act provides that a pediatric patient is one who is less than age 16; otherwise the patient is an adult patient. A geriatric patient is described as one who is at least 70 years old or exhibits significant anatomical or physiological characteristics associated with advanced aging.

The state triage protocols are to require that a trauma victim be transported directly to a trauma center that is qualified to provide appropriate adult or pediatric trauma care, unless any of the following exceptions applies:

- (1) It is medically necessary to transport the victim to another hospital for initial assessment and stabilization before transfer to an appropriate trauma center;
- (2) It is unsafe or medically inappropriate to transport the victim directly to an appropriate trauma center due to adverse weather or ground conditions or excessive transport time;
- (3) Transporting the victim to an appropriate trauma center would cause a shortage of local emergency medical service resources;
- (4) No appropriate trauma center is able to receive and provide trauma care to the victim without undue delay;
- (5) Before transport of a patient begins, the patient requests to be taken to a particular hospital that is not a trauma center or, if the patient is less than 18 years of age or is not able to communicate, such a request is made by an adult member of the patient's family or a legal representative of the patient.

The state triage protocols must require trauma patients to be transported to a trauma center that is able to provide appropriate adult or pediatric trauma care, but the protocols must not require a trauma patient to be transported to a particular trauma center. The protocols are to establish one or more procedures for evaluating whether an injury victim requires or would benefit from trauma care. These procedures are to be applied by emergency medical service personnel based on the patient's medical needs.

In developing the state triage protocols, the Board must consider relevant model triage rules. The Board also must consult with the Commission on Minority Health, the regional directors and physician advisory boards appointed under continuing law for each of the state's prehospital emergency medical services regions, and appropriate medical, hospital, and emergency medical service organizations.

Before the Joint Committee on Agency Rule Review considers the Board's proposed state triage protocols, or any amendments to them, the act requires the Board to send a copy of the proposal to the Ohio chapters of the American College of Emergency Physicians, American College of Surgeons, and American Academy of Pediatrics; OHA: the Association for Hospitals and Health Systems; the Ohio Osteopathic Association; and the Association of Ohio Children's Hospitals. The act requires the Board to hold a public hearing at which it considers the appropriateness of the protocols to minimize overtriage and undertriage of trauma victims.

The act requires the Board to provide copies of the adopted state triage protocols, and amendments to the protocols, to each emergency medical service organization, regional director and regional physician advisory board, certified emergency medical service instructor, and person who regularly provides medical direction to emergency medical service personnel in Ohio. The act also requires that copies be provided to each medical service organization in other jurisdictions that regularly provides emergency medical services in Ohio. Others must be given copies on request.

Regional triage protocols

(sec. 4765.40(B))

The State Board of Emergency Medical Services is required by the act to approve regional protocols for the triage of trauma victims and any amendments to them. The act requires that the regional protocols provide a level of trauma care comparable to the state triage protocols. The act specifies that the Board may not otherwise approve regional protocols. The Board may not approve regional triage protocols for regions that overlap and must resolve any such disputes by apportioning the overlapping territory among appropriate regions in a manner that best serves the medical needs of the residents of that territory. The Board's Trauma Committee is to have reasonable opportunity to review and comment on regional triage protocols and amendments to the protocols before the Board approves or disapproves them.

Regional triage protocols and amendments to them must be submitted in writing to the Board by the regional directors or physician advisory boards

appointed under continuing law for each of the state's prehospital emergency medical services regions. The act specifies that the director of the board responsible for submitting the application is the director or board that serves a majority of the population in the region in which the protocols apply.

Before submitting regional protocols or amendments to the Board, a regional director or physician advisory board must consult with each of the following that regularly serves the region in which the protocols apply:

- (1) Other regional directors and physician advisory boards;
- (2) Hospitals that operate an emergency facility;
- (3) Adult and pediatric trauma centers;
- (4) Professional societies of physicians who specialize in emergency medicine or trauma surgery;
- (5) Professional societies of nurses who specialize in emergency nursing or trauma surgery;
- (6) Professional associations of labor organizations of emergency medical service personnel;
- (7) Emergency medical service organizations and medical directors of such organizations;
- (8) Certified emergency medical service instructors.

The act provides that regional triage protocols must require patients to be transported to a trauma center that is able to provide an appropriate level of trauma care. The regional triage protocols may include any of the exceptions to the transfer requirement that the act includes with respect to the state triage protocols. The act prohibits the regional protocols from discriminating among trauma centers for reasons not related to a patient's medical needs. The act provides that regional protocols must seek to minimize undertriage and overtriage. The act specifies that the regional protocols supersede the state triage protocols in the region where the regional protocols apply.

On the approval of regional triage protocols or an amendment to them, the act requires the State Board of Emergency Services to provide written notice of the approval and a copy of the protocols or amendment to each entity in the region to which the Board is required to send a copy of the state triage protocols.

Review of triage protocols

(sec. 4765.40(C))

The act requires the State Board of Emergency Medical Services to review the state triage protocols at least every three years to determine if they are causing overtriage or undertriage of trauma patients. The Board must modify the protocols as necessary to minimize overtriage and undertriage. Each regional director or physician advisory board that has regional triage protocols must review the protocols at least every three years to determine if they are causing overtriage or undertriage and must submit an appropriate amendment to the State Board as necessary to minimize overtriage and undertriage. The Board must approve the amendment if it will reduce overtriage or undertriage. Otherwise, the Board is prohibited from approving the amendment.

Enforcement of triage protocols

(sec. 4765.40(D) and (E))

The act prohibits a provider of emergency medical services or a person who provides medical direction to emergency medical service personnel in Ohio from failing to comply with the state triage protocols or applicable regional triage protocols. The act requires the Board to adopt rules that provide for the enforcement of the state and regional triage protocols and for education regarding those protocols.

Protocols for emergency medical service personnel

(sec. 4765.41)

Continuing law requires the medical director or cooperating physician advisory board of each emergency medical service organization to establish written protocols to be followed by emergency medical service personnel in performing services when communications have failed or the required response time prevents communication and the life of the patient is in immediate danger. The act requires the organization's protocols to be consistent with the applicable state or regional protocols for the triage of trauma victims, but provides that the organization's protocols may direct to a trauma center an emergency victim who is not required under the state or regional protocols to be transported to a trauma center.

Guidelines for care by emergency personnel

(sec. 4765.12(A))

Not later than November 3, 2002, the act requires the State Board of Emergency Medical Services to develop and distribute guidelines for the care of trauma victims by emergency medical service personnel and for the conduct of peer review and quality assurance programs by emergency medical service organizations. The guidelines must be consistent with the state triage protocols adopted by the Board and must place emphasis on the special needs of pediatric and geriatric trauma victims. In developing the guidelines, the Board must consult with the entities with interests in trauma and emergency medical services and must consider any relevant guidelines adopted by national organizations, including the American College of Surgeons, American College of Emergency Physicians, and American Academy of Pediatrics. The act requires the Board to distribute the guidelines and amendments to them.

Peer review and quality assurance programs

(sec. 4765.12(B))

Not later than November 3, 2003, the act requires each emergency medical service organization to implement ongoing peer review and quality assurance programs designed to improve the availability and quality of the emergency medical services it provides. The form and content of the programs are to be determined by each emergency medical service organization. In implementing the programs, each organization must consider how to improve its ability to provide effective trauma care, particularly for pediatric and geriatric trauma victims, and must take into account the Board's trauma care guidelines.

The act provides that information generated solely for use in a peer review or quality assurance program is not a public record. The information, and any discussion conducted in the course of the program, is not subject to discovery in a civil action and is not to be introduced into evidence in a civil action against the emergency medical service organization on whose behalf the information was generated or the discussion occurred. The act provides that in the absence of willful or wanton misconduct, an emergency medical organization on whose behalf a peer review or quality assurance program is conducted and the person who conducts the program is not liable in a civil action for betrayal of professional confidence or otherwise.

Trauma registry

(secs. 3729.17, 4765.06, 4765.10, and 4765.11)

Continuing law requires the State Board of Emergency Medical Services to establish a registry to be used for the collection of information regarding the care of trauma victims in Ohio. The registry must provide for the reporting of trauma-related deaths, identification of trauma patients, monitoring of trauma patient care data, determination of the total amount of uncompensated trauma care provided annually by each facility, and collection of other information specified by the Board. The Board must maintain the registry in accordance with rules it has adopted.

The act specifies that the Board's pre-existing registry is a "state" trauma registry. The act provides that rules relating to the registry may not prohibit the operation of other trauma registries. It specifies that the rules may provide for the reporting of information to the state trauma registry by or through other trauma registries in a manner consistent with information otherwise reported to the state trauma registry. The act allows other trauma registries to report aggregate information to the state trauma registry, provided that the information can be matched to the person who reported it. The act states that "[i]nformation maintained by another trauma registry and reported to the state trauma registry in lieu of being reported directly to the state trauma registry is a public record and shall be maintained, made available to the public, held in confidence, risk adjusted, and not subject to discovery or introduction into evidence in a civil action as provided in [the laws regarding public records]." The act specifies that any person who provides, maintains, or risk adjusts such information must comply with all applicable laws and has the same immunities as a person who performs the same function for the state trauma registry.

The act eliminates a provision of law that required health care providers to make reports on trauma care to the Ohio Health Care Data Center, which is operated by the Department of Health.

Confidentiality of information received by the Board

(secs. 4765.06(B), (C), and (E), 4765.10(C), and 4765.11(A)(20))

Under prior law, the State Board of Emergency Medical Services was required to adopt rules establishing standards for protecting the confidentiality of all information it collects or receives that would identify a specific patient or recipient of emergency medical services or trauma care, unless the laws regarding public records provided otherwise. Prior law expressly required the Board to

follow its rules for maintaining the confidentiality of information it received, including information reported to the trauma registry.

In lieu of the confidentiality provisions of prior law, the act expressly prohibits the Board and any employee or contractor of the Board or the Department of Public Safety from making public any information the Board receives that identifies or would tend to identify a specific recipient of emergency medical services or trauma care. The act requires the Board to adopt rules that specify procedures for ensuring the confidentiality of information that is not to be made public. The act specifies that it does not prohibit the Board from making public any statistical information that does not identify or tend to identify a specific recipient or provider of emergency medical services or trauma care.

Professional confidences

(sec. 4765.06(F))

Under prior law, a provider was not subject to civil liability for betrayal of a professional confidence when the provider furnished information to the State Board of Emergency Medical Services. A provider who made a report could not be held to answer for betrayal of a professional confidence under the laws that permit the State Medical Board to take disciplinary actions against a physician.

The act continues the provisions of prior law that established civil immunity for providers that make reports to the Board, but limits the immunity to cases in which there is an absence of willful or wanton misconduct. The act eliminates the prior law reference to discipline by the State Medical Board, an action that appears to have the effect of including additional types of providers under the pre-existing protection from being held to answer for betrayal of a professional confidence when a report is made to the Board.

Risk adjustment of information

(sec. 4765.06(D))

Not later than November 3, 2002, the act requires the Board to adopt and implement rules that provide written standards and procedures for risk adjustment of information received by the Board. The act does not describe the process of "risk adjustment," but it appears to refer to the act of examining outcome measurements by taking into account variations that may be the result of individual, group, or community differences. For example, risk adjustment may

involve an examination of data according to age, race or ethnicity, sex, or diagnosis or treatment level.¹

The act requires the Board to develop the risk adjustment rules in consultation with appropriate medical, hospital, and emergency medical service organizations. The rules may provide for risk adjustment by a contractor of the Board.

Before risk adjustment standards and procedures are implemented, neither the Board nor any employee or contractor of the Board or the Department of Public Safety may make public any information that identifies or would tend to identify a specific provider of emergency medical services or trauma care. After risk adjustment standards and procedures are implemented, the Board may make public such information only on a risk adjusted basis. The Board's rules for ensuring the confidentiality of information must specify the circumstances in which deliberations of the persons performing risk adjustment functions are not open to the public and records of those deliberations are maintained in confidence.

Funding

(secs. 4511.191, 4511.81, 4511.99, 4513.263, 4513.99, and 5503.04)

Under continuing law, the fines for failure to use seat belts or other occupant restraining devices are deposited in five funds established in the state treasury for separate purposes, all of which are related to safety education and emergency medical services. The act changes the percentages of the amounts distributed to some of the funds, increases the fine for failing to use seat belts and other occupant restraining devices, and directs a percentage of the fines collected by the State Highway Patrol to programs related to emergency medical services.

With respect to the fines collected for failure to use seat belts or other occupant restraining devices, the act provides for the funds to be distributed as follows:

(1) 8% (reduced from 10%) for establishment of a seat belt education program;

(2) 8% (reduced from 10%) for establishment of elementary school programs that encourage seat belt use;

¹ *Ohio Department of Mental Health, Risk Adjustment in Mental Health*, <http://www.mh.state.oh.us/offices/oper/feature3.html>, last visited 1/23/01.

(3) 54% (increased from 50%) for making grants to emergency medical service organizations;

(4) 28% (no change) for operating the State Board of Emergency Medical Services;

(5) 2% (no change) for operating the Ohio Ambulance Licensing Board.

The act renames two pre-existing state treasury funds that deal with emergency medical services by including a reference to trauma care. Under the act, these funds are called the Trauma and Emergency Medical Services Fund and the Trauma and Emergency Medical Services Grants Fund.

Under prior law, the fine for operating an automobile without a seat belt or other occupant restraining device was \$25 and the fine for riding as a passenger in an automobile without wearing a seat belt or occupant restraining device was \$15. The act increases both fines by \$5.

Under continuing law, the Department of Health administers a child highway safety program with money received from fines paid by motor vehicle operators who do not properly use child restraint systems. Prior law directed 65% of the fines to the Child Highway Safety Fund for the Department's use in administering the program. The act directs 100% of these fines to the Child Highway Safety Fund and allows the Department to use the funds to defray the cost of "verifying" pediatric trauma centers.²

Under continuing law, the fines from State Highway Patrol tickets and arrests are divided between the state and the county or municipality where a case is prosecuted. Prior law directed 45% to the General Revenue Fund and 55% to the county or municipality. The act increases the state share to 50%, directs the additional 5% to the Trauma and Emergency Medical Services Grants Fund, and reduces the local share accordingly.

Continuing law imposes a fee for having a driver's license reinstated after it has been suspended for operating a vehicle while under the influence of drugs or alcohol or similar violations. The act increases the fee by \$20 (to \$425) and directs the added amount to the Trauma and Emergency Medical Services Grants Fund.

² *The Revised Code section referenced in this provision of the act does not provide for "verification" of trauma centers by the Department of Health. "Designation" of Level II pediatric trauma centers occurs under the act pursuant to R.C. 3727.081.*

Emergency medical services grants

(sec. 4765.07)

Continuing law requires the State Board of Emergency Medical Services to administer a program under which grants are distributed to emergency medical service organizations. Prior law specified that the grants were to be used for personnel training, purchasing equipment, and generally improving emergency medical services. Grants were to be distributed equitably with priority given to grants used for training personnel.

The act establishes priorities for distribution of grants as follows:

(1) First priority, which is essentially a continuation of the pre-existing priority, must be given to emergency medical service organizations for the training of personnel, for the purchase of equipment and vehicles, and to improve the availability, accessibility, and quality of emergency medical services in Ohio. In this category, the act requires the Board to give priority to grants that fund training and equipping of personnel.

(2) Second priority must be given to entities that research the causes, nature, and effects of traumatic injuries, educate the public about injury prevention, and implement, test, and evaluate injury prevention strategies.

(3) Third priority must be given to entities that research, test, and evaluate procedures that promote the rehabilitation, retraining, and reemployment of trauma victims and social service support mechanisms for trauma victims and their families.

(4) Fourth priority must be given to entities that research, test, and evaluate medical procedures related to trauma care.

Medical direction of emergency personnel

(sec. 4765.11(A)(22))

The act requires the Board to adopt rules establishing minimum qualifications and peer review and quality improvement requirements for persons who provide medical direction to emergency medical service personnel.

Regional consultation when adopting rules

(secs. 4765.05 and 4765.11(C))

Continuing law requires the State Board of Emergency Medical Services to divide the state into "prehospital emergency medical services regions." For each region, the Board must appoint a physician to serve as the regional director or a physician advisory board to serve as the regional advisory board. The act requires the Board, in developing and administering all of its rules, to consult with regional directors and regional advisory boards and to emphasize the special needs of pediatric and geriatric patients.

Board composition

(sec. 4765.02)

The act makes the following changes related to the membership of the State Board of Emergency Medical Services:

(1) In addition to the continuing law requirement for the Governor to attempt to appoint members who represent Ohio's urban and rural areas and various geographic areas, the act requires the Governor to attempt to appoint members who represent various schools of training.

(2) With respect to the continuing member who is a surgeon, the act specifies that the member must be active in the practice of trauma surgery. The act includes the Ohio Osteopathic Association among the groups permitted to make nominations for the position.

(3) With respect to the continuing member who is a physician certified in emergency medicine, the act includes the Ohio Osteopathic Association among the groups permitted to make nominations for the position.

(4) The position to be filled by an administrator of a hospital with an active emergency room is replaced by a position to be filled by the administrator of an adult or pediatric trauma center. Each of the following is permitted to make three nominations: (a) OHA: the Association for Hospitals and Health Systems, (b) the Ohio Osteopathic Association, (c) the Association of Ohio Children's Hospitals, and (d) the Health Forum of Ohio.

(5) The act adds a position to be filled by an administrator of a hospital that is not a trauma center. Three nominations for the position may be made by each of the following: (a) OHA: the Association for Hospitals and Health Systems, (b) the Ohio Osteopathic Association, (c) the Association of Ohio Children's Hospitals, and (d) the Health Forum of Ohio.

(6) The act adds a position to be filled by a physician certified by the American Board of Surgery, American Board of Osteopathic Surgery, American Osteopathic Board of Emergency Medicine, or American Board of Emergency Medicine, who is the chief medical officer of an air medical agency and is currently active in providing emergency medical services. The Governor is to appoint this member from among three persons nominated by the Ohio Association of Air Medical Services.

Board operations

(sec. 4765.02)

With respect to the Board's operation, the act does the following:

(1) Requires the Board to select a vice-chair in addition to the pre-existing requirement to select a chair;

(2) Requires the Board to maintain written or electronic records of its meetings;

(3) Permits the Board to adopt bylaws to regulate its affairs;

(4) Replaces the numerical voting requirements specified in prior law with a requirement;

(5) Reduces to five (from ten) the number of members who must submit a written request in order for the chair to be required to call a meeting;

(6) Requires the employer of a Board member, upon 24 hours' notice from the member, to release the member from the member's employment duties to attend a meeting of the full Board. The act provides that it does not require the employer to compensate the member for the time the member is released from employment duties, but any civil immunity, workers' compensation, disability, or similar coverage that applies to the member continues while the member is released from employment.

Executive director and medical director

(sec. 4765.03)

Continuing law requires the Director of Public Safety to appoint a full-time executive director for the State Board of Emergency Services. In addition to the continuing requirement that the executive director be knowledgeable in emergency medical services, the act requires that the director be knowledgeable in trauma care.

Continuing law requires the Board to appoint a medical director who is responsible for directing the executive director and advising the Board with regard to emergency medical services. The act specifies that the medical director's duties include providing direction and advice on trauma care.

Under continuing law, recommendations for the appointment of the medical director may be made by the Ohio Chapter of the American College of Emergency Physicians, the Ohio Osteopathic Association, and the Ohio State Medical Association. Rather than permitting the consideration of recommendations, the act requires the Board to consider the recommendations. The act expands the list of organizations permitted to make recommendations by including the Ohio chapters of the American College of Surgeons and American Academy of Pediatrics.

Continuing law requires the executive director and medical director to attend each meeting of the Board. Under prior law, the attendance requirement did not apply when a meeting concerned the appointment of an executive director or medical director. Under the act, the attendance requirement does not apply if the Board elects to exclude the person from a meeting. The Board's authority to exclude either the executive or medical director extends to meetings that concern a person's performance, as well as meetings that concern the appointment or performance of the person in the opposing position.

Trauma Committee

(sec. 4765.04(B))

The act creates the Trauma Committee of the State Board of Emergency Medical Services. The Committee is to consist of the following members appointed by the Director of Public Safety:

(1) A physician who is certified by the American Board of Surgery or American Osteopathic Board of Surgery and actively practices general trauma surgery, appointed from among three persons nominated by the Ohio Chapter of the American College of Surgeons, three persons nominated by the Ohio State Medical Association, and three persons nominated by the Ohio Osteopathic Association;

(2) A physician who is certified by the American Board of Surgery or American Osteopathic Board of Surgery and actively practices orthopedic trauma surgery, appointed from among three persons nominated by the Ohio Orthopedic Society and three persons nominated by the Ohio Osteopathic Association;

(3) A physician who is certified by the American Board of Neurological Surgeons or the American Osteopathic Board of Surgery and actively practices

neurosurgery on trauma victims, appointed from among three persons nominated by the Ohio State Neurological Society and three persons nominated by the Ohio Osteopathic Association;

(4) A physician who is certified by the American Board of Surgeons or American Osteopathic Board of Surgeons and actively specializes in treating burn victims, appointed from among three persons nominated by the Ohio Chapter of the American College of Surgeons and three persons nominated by the Ohio Osteopathic Association;

(5) A dentist who is certified by the American Board of Oral and Maxillofacial Surgery and actively practices oral and maxillofacial surgery, appointed from among three persons nominated by the Ohio Dental Association;

(6) A physician who is certified by the American Board of Physical Medicine and Rehabilitation or American Osteopathic Board of Rehabilitation Medicine and actively provides rehabilitative care to trauma victims, appointed from among three persons nominated by the Ohio Society of Physical Medicine and Rehabilitation and three persons nominated by the Ohio Osteopathic Association;

(7) A physician who is certified by the American Board of Surgery or American Osteopathic Board of Surgery with special qualifications in pediatric surgery and actively practices pediatric trauma surgery, appointed from among three persons nominated by the Ohio Chapter of the American Academy of Pediatrics and three persons nominated by the Ohio Osteopathic Association;

(8) A physician who is certified by the American Board of Emergency Medicine or American Osteopathic Board of Emergency Medicine, actively practices emergency medicine, and is actively involved in emergency medical services, appointed from among three persons nominated by the Ohio Chapter of the American College of Emergency Physicians and three persons nominated by the Ohio Osteopathic Association;

(9) A physician who is certified by the American Board of Pediatrics, American Osteopathic Board of Pediatrics, or American Board of Emergency Medicine, is sub-boarded in pediatric emergency medicine, actively practices pediatric emergency medicine, and is actively involved in emergency medical services, appointed from among three persons nominated by the Ohio Chapter of the American Academy of Pediatrics, three persons nominated by the Ohio chapter of the American College of Emergency Physicians, and three persons nominated by the Ohio Osteopathic Association;

(10) A physician who is certified by the American Board of Surgery, American Osteopathic Board of Surgery, or American Board of Emergency Medicine and is the chief medical officer of an air medical organization, appointed from among three persons nominated by the Ohio Association of Air Medical Services;

(11) A coroner or medical examiner appointed from among three people nominated by the Ohio State Coroners' Association;

(12) A registered nurse who actively practices trauma nursing at an adult or pediatric trauma center, appointed from among three persons nominated by the Ohio Association of Trauma Nurse Coordinators;

(13) A registered nurse who actively practices emergency nursing and is actively involved in emergency medical services, appointed from among three persons nominated by the Ohio Chapter of the Emergency Nurses' Association;

(14) The chief trauma registrar of a trauma center, appointed from among three persons nominated by the Alliance of Ohio Trauma Registrars;

(15) The administrator of a trauma center, appointed from among three persons nominated by OHA: the Association for Hospitals and Health Systems, three persons nominated by the Ohio Osteopathic Association, three persons nominated by the Association of Ohio Children's Hospitals, and three persons nominated by the Health Forum of Ohio;

(16) The administrator of a hospital that is not a trauma center and actively provides emergency care to trauma patients, appointed from among three persons nominated by OHA: the Association for Hospitals and Health Systems, three persons nominated by the Ohio Osteopathic Association, three persons nominated by the Association of Ohio Children's Hospitals, and three persons nominated by the Health Forum of Ohio;

(17) The operator of an ambulance company that actively provides trauma care to emergency patients, appointed from among three persons nominated by the Ohio Ambulance Association;

(18) The chief of a fire department that actively provides trauma care to emergency patients, appointed from among three persons nominated by the Ohio Fire Chiefs' Association;

(19) An emergency medical technician who actively provides trauma care to emergency patients, appointed from among three persons nominated by the Ohio Association of Professional Firefighters, three persons nominated by the Northern Ohio Fire Fighters, three persons nominated by the Ohio State

Firefighters' Association, and three persons nominated by the Ohio Association of Emergency Medical Services;

(20) A person who actively advocates for trauma victims, appointed from three persons nominated by the Ohio Brain Injury Association and three persons nominated by the Governor's Council on People with Disabilities;

(21) A physician or nurse who has substantial administrative responsibility for trauma care provided in or by a trauma center, appointed from among three persons nominated by OHA: the Association for Hospitals and Health Systems, three persons nominated by the Ohio Osteopathic Association, three persons nominated by the Association of Ohio Children's Hospitals, and three persons nominated by the Health Forum of Ohio;

(22) Three representatives of hospitals that are not trauma centers and actively provide emergency care to trauma patients, appointed from among three persons nominated by OHA: the Association for Hospitals and Health Systems, three persons nominated by the Ohio Osteopathic Association, three persons nominated by the Association of Ohio Children's Hospitals, and three persons nominated by the Health Forum of Ohio. The representatives may be hospital administrators, physicians, nurses, or other clinical professionals.

Qualifications and appointment of members

The act requires the members of the Trauma Committee to have substantial experience in their fields of practice and be residents of Ohio. It provides that they may be members of the State Board of Emergency Medical Services. In appointing members, the Director of Public Safety must attempt to include persons who represent urban and rural areas, various geographical areas of Ohio, and various schools of training. The Director may not appoint more than one member who is employed by or practices at the same hospital, health system, or emergency medical service organization.

The act allows the Director to refuse to appoint any of the persons nominated. In that event, the nominating organization or organizations will continue to nominate the required number of persons until the Director makes the appointment.

Initial appointments must be made not later than 90 days after the act's effective date. Members serve at the pleasure of the Director, except that a member who ceases to be qualified for the position must cease being a member. Vacancies are to be filled in the same manner as original appointments.

Members serve without compensation. They are, however, reimbursed for actual and necessary expenses incurred in carrying out official duties.

Operation

The act requires the Trauma Committee to select a chairperson from among its members. A majority of all members constitute a quorum. No action is to be taken without the concurrence of a majority of all members. The committee is to meet at the call of the chair, on written request of five members, and at the direction of the State Board of Emergency Medical Services. The committee must not meet at times or locations that conflict with meetings of the Board. The executive director and medical director of the Board are authorized to participate in any meeting of the committee and must participate at the committee's request.

Duties and powers

The act requires the Trauma Committee to advise and assist the State Board of Emergency Medical Services in matters related to trauma care and the establishment and operation of the state trauma registry. In matters relating to the registry, the Board and committee must consult with trauma registrars from trauma centers in Ohio. The committee may appoint a subcommittee to advise and assist with the registry. The subcommittee may include persons with expertise relevant to the registry who are not members of the Board or committee.

Firefighter and fire safety inspector training committee

(secs. 4765.04(A) and 4765.55(D))

Prior law created the Firefighter and Fire Safety Inspector Training Subcommittee of the State Board of Emergency Medical Services. The act redesignates the subcommittee as a full committee. The committee continues to consist of the Board members who are chiefs of fire departments, and the Board members who are emergency medical technicians appointed from among persons nominated by the Ohio Association of Professional Fire Fighters or the Northern Ohio Fire Fighters and from among persons nominated by the Ohio State Firefighter's Association. The act eliminates the member who was appointed by the Director of Public Safety. Since this member was the designated chairperson, the act requires the committee members or their designees to select a chairperson.

Committee appointments and expiration

(sec. 4765.04(C) and (E))

In addition to the Board's Trauma Committee and Firefighter and Fire Safety Inspector Committee, the act permits the Board to appoint other committees

and subcommittees as it considers necessary. The act specifies that the Trauma Committee and Firefighter and Fire Safety Inspector Committee are not subject to the continuing law that requires a committee created in statute to have a specific expiration date.

Assistance to the Board and its committees

(sec. 4765.04(D))

The Board, and any of its committees or subcommittees, are authorized by the act to request assistance from any state agency. The Board and its committees and subcommittees may permit persons who are not members of those bodies to participate in their deliberations, but no person who is not a member of the Board may vote on the Board and no person who is not a member of a committee may vote on that committee.

Air medical organizations and ambulance service organizations

(secs. 4765.01 and 4765.09)

Continuing law requires the State Board of Emergency Medical Services to prepare recommendations for the operation of ambulance service organizations and emergency medical service organizations. The act expands the requirement by including air medical organizations. "Air medical organization" is defined by the act as an organization that provides emergency medical services, or transports emergency victims, by means of fixed or rotary wing aircraft.

Under the act, the Board's recommendations regarding air medical organizations must include the following:

- (1) The definition and classification of medical aircraft.
- (2) The design, equipment, and supplies for medical aircraft, including special equipment, supplies, training, and staffing required to assist pediatric and geriatric emergency victims.
- (3) The minimum number and type of personnel for the operation of medical aircraft.
- (4) The communications systems necessary for the operation of medical aircraft.
- (5) Reports to be made by persons holding certificates as emergency medical service providers to ascertain the quantity and quality of air medical organizations throughout Ohio.

With respect to the Board's continuing duty to make recommendations for use of ambulances, the act specifies that the Board must consider the special equipment, supplies, training, and staffing required to assist pediatric and geriatric emergency victims.

Training of firefighters and emergency medical service personnel

(sec. 4765.10)

Prior law expressly required the State Board of Emergency Medical Services to work with the State Fire Marshal's Office in coordinating the training of firefighters and emergency medical service personnel when possible. In turn, the Fire Marshal's Office was required to cooperate with the Board. The act expands the cooperation requirement by requiring the Board to work at all times with "appropriate state offices" and requiring the other state offices to cooperate with the Board and its committees and subcommittees.

Training of emergency medical service personnel

(secs. 4765.16, 4765.35, 4765.37, 4765. 38, and 4765.39)

Continuing law provides that all courses offered through an emergency medical services training program or continuing education program, other than ambulance driving, must be developed under the direction of a physician who specializes in emergency medicine. The act specifies that each course dealing with trauma care must be developed in consultation with a physician who specializes in trauma surgery. The act requires all levels of emergency medical personnel to be trained in triage protocols for trauma victims. In the statutes specifying the services that emergency medical personnel are authorized to perform, the act includes determining triage of trauma victims.

Certification renewal notice

(secs. 4765.11(A)(5) and 4765.30)

The act requires the State Board of Emergency Medical Services to provide notice of the scheduled expiration of an individual's certificate to practice as a first responder or emergency medical technician-basic, emergency medical technician-intermediate, or paramedic. The Board must notify the individual and furnish a renewal application not later than 60 days before the expiration date. The act specifies that the Board's rules on renewal must include any procedures necessary to ensure that adequate notice is provided.

Out-of-state EMS personnel

(sec. 4765.50)

Continuing law exempts from Ohio's certification requirements for emergency medical service personnel a person who performs the same functions under the authority of the laws of a state that borders Ohio. The act extends this exemption to emergency medical service personnel acting under the laws of any other jurisdiction.

Reports and studies

(Sections 3, 5, 6, 7, and 8)

The act requires the State Board of Emergency Medical Services, with the assistance of its Trauma Committee, to study and evaluate the following:

(1) The status and needs of emergency medical services and trauma care provided between Ohio and other jurisdictions.

(2) Methods to improve specialized care provided by emergency medical service organizations to pediatric and geriatric trauma victims.

(3) The feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study must include an analysis of the cost of acquiring, maintaining, and using such devices, potential sources of funding, and training required to ensure effective use of the devices.

(4) Methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner.

(5) Methods to increase advanced trauma life support, basic trauma life support, and prehospital trauma life support training among appropriate health care providers, particularly in Ohio's rural areas.

(6) The roles that hospitals that are not trauma centers play in the state and regional trauma systems and methods to enhance those roles.

(7) The causes and impact of trauma on minority populations in Ohio and methods to improve emergency medical services and trauma care for those populations. This study must be conducted in cooperation with the Commission on Minority Health.

Not later than November 3, 2003, the Board must report its findings and recommendations to the Governor, General Assembly, and other appropriate authorities and organizations. The act requires that the Board conduct its study and develop its findings and recommendations in consultation with the following organizations, as appropriate: appropriate committees and subcommittees of the Board; regional directors and regional physician advisory boards; organizations that represent physicians, nurses, and hospitals that care for emergency and trauma patients; emergency medical service organizations; appropriate governmental entities; and the Ohio State Coroners' Association.

Department of Health: injury prevention

The act requires the Director of Health to organize and coordinate a temporary commission to determine how to better prevent traumatic injuries in Ohio. The commission's study is to include consideration of how to improve public safety education and how to prevent pediatric and geriatric injuries. The Departments of Public Safety, Natural Resources, Agriculture, and Education, Commission on Minority Health, and Bureau of Workers' Compensation are to participate in and assist with the study.

Within 120 days after the act's effective date, the Director of Health must appoint to the commission appropriate public health authorities, entities that conduct safety research and education, and advocates for injured persons. Commission members must have expertise in injury prevention, broadly represent relevant disciplines, and represent all regions of Ohio. Within the same timeframe, the Speaker of the House of Representatives must appoint to the commission one member of the majority party and one member of the minority party in the House of Representatives and the President of the Senate must appoint to the commission one member of the majority party and one member of the minority party in the Senate.

In conducting its study and developing its recommendations, the commission must consult with and cooperate with the Trauma Committee of the State Board of Emergency Medical Services. The commission must conclude its study and disband by November 3, 2003, whereupon the Director must transmit the commission's findings to the Governor, General Assembly, chief executive of each state agency that is involved in the study, and other appropriate persons.

Department of Health: improving trauma care

The act requires the Director of Health to organize and coordinate a temporary commission to determine how to improve the accessibility, affordability, quality, and cost-effectiveness of post-critical trauma care. The commission's study is to include consideration of appropriate transfer of trauma

victims from regional trauma centers to other health care facilities; physical, psychological, and vocational rehabilitation of trauma victims; re-employment of trauma victims; social support mechanisms for families of trauma victims; and mitigation of the effects of pediatric and geriatric trauma. The Rehabilitation Services Commission, Department of Aging, Bureau of Workers' Compensation, and Bureau of Employment Services are to participate in and assist with the commission's study.

Within 120 days after the act's effective date, the Director of Health must appoint to the commission appropriate public health authorities; entities that represent injury victims; certified safety professionals; employers; employment training and placement services; agricultural organizations; highway safety and motorists' organizations; health insurers; providers of social services to injury victims; nursing and rehabilitation institutions; victims of violent crime; hospitals; and professionals active in physical, psychological, and vocational therapy. Commission members must have expertise in rehabilitation and retraining of injury victims, broadly represent relevant disciplines, and represent all regions of Ohio. Within the same timeframe, the Speaker of the House of Representatives must appoint to the commission one member of the majority party and one member of the minority party in the House of Representatives and the President of the Senate must appoint to the commission one member of the majority party and one member of the minority party in the Senate.

In conducting its study and developing its recommendations, the commission must consult with and cooperate with the Trauma Committee of the State Board of Emergency Medical Services. The commission must conclude its study and disband by November 3, 2003, whereupon the Director must transmit the commission's findings to the Governor, General Assembly, chief executive of each state agency that is involved in the study, and other appropriate persons.

Legislative Service Commission: trauma report and Board evaluation

The act requires LSC staff, subject to the Legislative Service Commission's approval, to prepare a report on the trauma care system in Ohio. The report must include an analysis of the act's effects pertaining to the delivery of trauma care and the verification of hospitals as trauma centers. The report must be submitted to the Commission by November 3, 2004.

The act requires LSC staff, subject to the Commission's approval, to evaluate the effectiveness of the State Board of Emergency Medical Services and its staff in fulfilling the Board's duties. A preliminary report of the LSC staff's findings and recommendations must be prepared by November 3, 2001. Not later than one year after the preliminary report is submitted, the LSC staff must prepare

a final report, including an analysis of the Board's success in implementing the recommendations made in the preliminary report.

Legislative intent

(Section 4)

According to the act, the General Assembly finds that pediatric and geriatric trauma patients have special medical needs that require particular emphasis to improve outcomes for these patients. The act specifies that it is the intent of the General Assembly to provide for these special needs in a state trauma system and trauma triage protocols approved by the State Board of Emergency Medical Services.

According to the act, the General Assembly recognizes that hospitals that operate emergency facilities, but are not trauma centers, play an important role in the prompt and appropriate diagnosis, stabilization, and treatment of adult and pediatric trauma patients. The act specifies that it is the intent of the General Assembly to enhance the quality of emergency care such hospitals provide to trauma patients and to integrate such hospitals into the state and regional trauma systems provided for by the act. The act specifies that it is also the intent of the General Assembly that community-based emergency medical and trauma services be preserved and that nothing in the act be construed as encouraging the overtriage of patients or the unnecessary transfer of patients.

Technical changes

(secs. 4765.15, 4765.32, 4765.55, 4767.08, and 5502.01)

The act amends several sections of the Revised Code solely to reflect name changes and to make other technical changes.

**FIREFIGHTING AND EMERGENCY MEDICAL
SERVICE ORGANIZATIONS**

Agreements for fire protection or emergency medical services

(sec. 9.60)

Continuing law permits a firefighting agency or private fire company to contract with a governmental entity to provide fire protection, including ambulance and emergency medical services.³ Fire protection services can also be

³ A firefighting agency is a municipal corporation, township, township fire district, joint ambulance district, joint emergency medical services district, or joint fire district.

provided without a contract if all parties agree. Under prior law, the arrangements had to be made with a government agency in Ohio or an adjoining state. The act permits the arrangements to be made with government entities in other jurisdictions. The act extends the authority to enter into arrangements with government agencies to any public or private emergency medical service organization.

Continuing law provides that firefighting agencies and fire department members are immune from civil liability when they render service outside the boundaries of the firefighting agency. The act specifies that the civil immunity provisions in current law for fire departments and emergency medical service organizations apply to a political subdivision that is operating a fire department or emergency medical service organization when the members are rendering service outside the boundaries of the political subdivision.

The act provides that a private fire company or private, nonprofit emergency medical service organization providing service to a governmental entity in Ohio or another jurisdiction has the same immunities and defenses in a civil action that a political subdivision has under continuing law. Similarly, the act provides that the employees of a private fire company or private, nonprofit emergency medical service organization have the same immunities and defenses in a civil action that employees of a political subdivision have under continuing law.

Participation in state purchasing and salvage programs

(secs. 9.60, 125.04, 125.13, and 3737.66)

Continuing law allows the Department of Administrative Services to permit a political subdivision to participate in contracts into which the Department has entered for the purchase of supplies and services. Continuing law also authorizes the Director of Administrative Services to dispose of declared surplus or excess supplies the Department of Administrative Services has received from state agencies by sale, lease, or transfer.

The act allows private fire companies and private nonprofit emergency medical service organizations to participate in the cooperative purchasing programs operated by the Department of Administrative Services under the same conditions that govern public agencies' participation. Under these conditions, a private fire company or private nonprofit emergency medical service organization is required to file with the Department a written request for inclusion in the program signed by the chief officer of the company or organization. The request must include an agreement to be bound by the terms and conditions the Department prescribes and to make direct payments to the vendor under each purchase contract. The act also allows private fire companies and emergency

medical service organizations to obtain surplus or excess supplies according to the same order of priority that applies to municipal corporations and other political subdivisions. The act permits the Department to charge a reasonable fee to cover the administrative costs it incurs as a result of an entity participating in a purchase contract.

Sales tax exemption

(sec. 5739.02(B)(20))

Continuing law provides a sales tax exemption for the sale of emergency and fire protection vehicles and equipment to nonprofit organizations for use in providing fire protection and emergency services. The act specifies that the exemption applies to vehicles and equipment used in providing trauma care and emergency medical services.

This publication is a report by the State Board of Emergency Medical Services prepared by the staff of the Division of Emergency Medical Services, from research and information supplied by a number of organizations contracted with by the Division, and with assistance from members of the state Trauma Committee. This publication contains the recommendations of the State Board of Emergency Medical Services and summaries of the studies and research conducted on behalf of the Board and the Division.

The State Board of Emergency Medical Services authorized the state Trauma Committee and the Division of EMS staff to prepare this report pursuant to the mandate of Am. Sub. H.B. 138 of the 123rd General Assembly.

Executive Summary

The 123rd General Assembly, with the passage of Am. Sub. H. B. 138, tasked the State Board of Emergency Medical Services with producing seven reports on a variety of topics related to EMS and Trauma. The Division of EMS, serving as the administrative arm of the State EMS Board, contracted with seven groups to produce studies and /or research that would assist the EMS Board in responding to this mandate. The scope of the topics that the EMS Board was required to report on is very broad. In many instances the studies and research generated additional questions that need to be addressed. The EMS Board understands that, nationally, there continues to be a lack of quality research data in the published literature, upon which EMS practice can be improved. This situation is slowly improving, but remains a serious obstacle to EMS and Trauma System development. Secondly the EMS Board has discovered that in Ohio there appears to be a general lack of interest or ability on the part of EMS agencies, trauma centers and hospitals, and professional societies of healthcare providers to engage in large scale, meaningful EMS and trauma system research. This is a multifactorial problem, which is beyond the scope of this report to detail. The low level of interest in performing EMS specific research related to the reports required by the General Assembly was a considerable concern and this resulted in an important lack of data upon which to make recommendations.

The EMS Board believes that all seven of these EMS/Trauma system reports would be better served with additional, more focused research and study. Adequate funding for research of this nature and scope is essential. The Board further feels that a comprehensive EMS and Trauma research agenda will be of immense value. A comprehensive research agenda, that supports the national EMS research agenda, will permit appropriate state level facilitation of high quality research that can be used to support and improve EMS system development. It will allow for focusing of Ohio's limited EMS and Trauma research funding on priority research that is scientifically sound and builds upon the current body of knowledge in EMS. It will limit duplication of efforts and smaller scale research that could be more effectively coordinated as part of larger scientific efforts or clinical trials. It will permit Ohio to seek or participate in larger federal EMS and Trauma care grant opportunities, thus further expanding the research skills and experience within EMS in Ohio.

Among the significant findings of these reports, the EMS Board has found that there are ongoing needs in the areas of education, training and equipment for care of specialty populations that include but may not be limited to, pediatric and geriatric patients. Continual adaptation of advancing technology in data collection and reporting should be encouraged and supported. Improved communication between trauma surgeons and county coroners may lead to better utilization of autopsy data. There are ongoing needs for trauma specific continuing education for EMS providers and consideration should be given to expanding the type, nature and availability of that continuing education. Full development of a state wide EMS and Trauma system has been successfully undertaken in a number of states. Evaluation of the effects of these efforts on all participants, from first responders to rehabilitation providers, as well as continual evaluation of Ohio's system development, is crucial.

Authority/Mandate

Am. Sub. H.B. 138 Section 3.

The State Board of Emergency Medical Services, with the advice and assistance of its trauma committee, shall study and evaluate the following matters

- (A) The status and needs of emergency medical services and adult and pediatric trauma care provided between this state and other jurisdictions.
- (B) Methods to improve specialized care provided by emergency medical services organizations to pediatric and geriatric trauma victims.
- (C) The feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study shall include an analysis of the cost of acquiring, maintaining, and using such devices, potential sources of funding, and training required to ensure effective use of the devices.
- (D) Methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner;
- (E) Methods to increase advanced trauma life support, basic trauma life support, and prehospital trauma life support training among appropriate health care providers, particularly in rural areas of the state.
- (F) The roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in this state, and methods to enhance those roles.
- (G) The causes and impact of trauma on minority populations in this state and methods to improve emergency medical services and trauma care for those populations. This study shall be conducted in cooperation with the Commission on Minority Health;

In conducting its studies and developing its findings and recommendations, the Board shall consult the appropriate committees and subcommittees of the Board; regional directors; regional physician advisory boards; organizations that represent physicians, nurses, and hospitals that care for emergency and trauma patients; emergency medical services organizations; appropriate governmental entities; and the Ohio State Coroner's Association, as appropriate.

Not later than three years after the effective date of this act, the Board shall report its findings and recommendations to the Governor, the General Assembly, and other appropriate authorities and organizations.

Introduction

Passage of Am. Sub. H.B. 138 by the 123rd General Assembly required the State Board of Emergency Medical Services to create reports on seven EMS/Trauma topics. Shortly after the appointment of the Trauma Committee in November of 2000, the determination was made that the Division of EMS and the State Board of EMS did not have the internal resources or expertise to conduct the required studies. The Division of EMS and the State Board of EMS agreed that under the direction of the Trauma Committee, individuals and or organizations with the appropriate expertise and resources would be contracted with to conduct the studies in preparation for the Board to submit a report to the Governor and General Assembly in November 2003. Initially the state supported university medical schools and their associated research departments were contacted and asked to submit quotes for performing one or more of the studies required by the legislation. After several months it was apparent that there was not sufficient interest from the medical schools. Only one organization was under contract with ODPS by the fall of 2001 for completion of one study looking at the role of non trauma center hospitals.

The studies required by the legislation were very broad and the amount of funding available to fund all seven studies was viewed to be minimal or inadequate by many of the potential researchers. A decision was made within the Division of EMS to invite a larger pool of organizations and/or individuals to participate by offering a grant for completion of supportive research projects or reports on topics related to the required reports. In most cases, researchers were asked to narrow the focus of their research or report. This was done to ensure that all of the required topics would be addressed and extrapolation of a more narrow report to a larger population or issue would be done when statistically appropriate and relevant. A call for proposals was made in January/February 2002. Proposals were received in March and six grants were awarded for completion of reports on six of the seven required topics, with one report being performed under a contract from the original request for quote process.

Based upon feedback from the organizations interested in assisting the Board complete these reports, reports on topics A and B were combined so that all pediatric issues were in one report, and all adult/geriatric issues were in another. The State Board of Emergency Medical Services, through the Division of EMS, awarded six grants and one contract, totaling \$563,044 to the following organizations to conduct research and/or develop the reports required for the Board.

- **Columbus Children’s Hospital (\$185,371)**
Report A, the status and needs of emergency medical services and pediatric trauma care provided between this state and other jurisdictions and methods to improve specialized care to pediatric trauma victims.

- **Riverside Methodist Hospital, Senior Health Services (\$65,366)**
Report B, the status and needs of emergency medical services and adult trauma care provided between this state and other jurisdictions; and methods to improve care to geriatric trauma victims.
- **St. Vincent Mercy Medical Center (\$61,442)**
Report C, the feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study shall include an analysis of the cost of acquiring, maintaining, and using such devices, potential sources of funding, and training required to ensure effective use of the devices.
- **Central Ohio Trauma System & Ohio State Coroner's Association (\$87,500)**
Report D, methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner.
- **Ohio Chapter, American College of Surgeons & Ohio Society of Trauma Nurse Coordinators (\$49,320)**
Report E, methods to increase advanced trauma life support, basic trauma life support, and prehospital trauma life support training among appropriate health care providers, particularly in rural areas of the state.
- **Hospital Council of Northwest Ohio (\$64,500)**
Report F, the roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in this state, and methods to enhance those roles.
- **Columbus Children's Hospital (\$49,545)**
Report G, the causes and impact of trauma on minority populations in this state and methods to improve emergency medical services and trauma care for those populations. This study shall be conducted in cooperation with the Commission on Minority Health.

Four of the seven organizations completed their projects under budget by a total of \$61,759.02. The total cost of grants and contracts to complete these studies was \$501,284.98. This does not include ODPS, Division of EMS staff time.

Six of the seven organizations completed their work on or before June 30, 2003. The seventh, Ohio Health, Senior Health Services, expects to have data collection completed and a report submitted by December 2003)

Given the very broad scope of these reports required by the legislation, the relatively short time frame for completion and minimal funding, it should be understood that these reports cannot be considered exhaustive, or comprehensive in nature. What is clear from the data in these studies is that additional research and study is required in all seven of these areas. The focus of future studies should be narrowed to address very specific issues, some of which can be extrapolated from data in these reports. A comprehensive and inclusive approach to evaluating and studying the EMS and Trauma system in Ohio is needed. An Ohio EMS and Trauma research agenda, supporting the national research agenda, is needed to ensure that the funding available in Ohio for EMS and Trauma research is utilized with maximum effectiveness to improve clinical care, support educational and injury prevention activities and support the needs for system development.

Recommendations

- A. The status and needs of emergency medical services and pediatric trauma care provided between this state and other jurisdictions and methods to improve specialized care provided by emergency medical services organizations to pediatric trauma victims.**
1. Additional, focused studies on pediatric trauma care needs in our state EMS and Trauma System are needed.
 2. Mutual aid is not a concern; appropriate support between EMS provider agencies exists.
 3. EMS agencies require additional preparation (education, equipment, protocols/procedures) for children with special needs.
 4. The majority of EMS providers need more pediatric education, specifically in assessment, airway management and trauma management.
 5. There is a significant deficit of pediatric education and equipment, efforts to provide additional education and equipment need to be made.
 6. Medical Directors need to be more involved in EMS agencies requests for funding from the EMS/Trauma Grant program.
- B. The status and needs of emergency medical services and adult trauma care provided between this state and other jurisdictions and methods to improve specialized care provided by emergency medical services organizations to geriatric trauma victims.**
1. Additional, focused studies on adult trauma care needs in our state EMS and Trauma System are needed.
 2. Efforts should be made to support geriatric trauma research in areas of prehospital triage parameters and resuscitation.
- C. The feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study shall include an analysis of the cost of acquiring, maintaining, and using such devices, potential sources of funding, and training required to ensure effective use of the devices.**
1. Additional, focused studies on electronic reporting of data to the state EMS and Trauma Registries are needed.
 2. Personal handheld devices, specifically the Palm Pilots tested, proved to be unfeasible for the collection of trauma registry data.
 3. Collection of registry data as directly as possible from the patient and family with concurrent entry into electronic format will have significant benefits both in cost savings and accuracy.
 4. Additional research into the use of wireless technology should be supported.

D. Methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner.

1. Additional, focused studies on the role of the county Coroner and data from autopsy reports to the state EMS and Trauma registries are needed.
2. The greatest barriers to performing autopsies on trauma victims are cost, family opposition, and lack of county coroner office staff.
3. Consensus needs to be developed between Ohio coroners and trauma medical directors on mechanism(s) of injury that require an autopsy.
4. Trauma medical directors do utilize the results of autopsies on trauma victims. Mechanisms to ensure that this data is accessible need to be in place.
5. No mandate to perform autopsies on trauma victims should be made without also providing for adequate financial and human resources for the county coroners, medical examiners or agencies/organizations performing the autopsies.
6. A single form (i.e. the death certificate) should be used statewide to report all required information as opposed to the creation of a special form just for injury reporting.
7. Autopsy reports should utilize a standardized format.
8. Efforts to promote complete documentation on the death certificate should be made.
9. The death certificate should include a field(s) to record the E codes (External Cause of Injury Code).
10. Resources need to be provided to county coroners to enable them to complete reports with tools that are designed to disseminate the information in an efficient and complete manner.

E. Methods to increase advanced trauma life support, basic trauma life support, and prehospital trauma life support training among appropriate health care providers, particularly in rural areas of the state.

1. Additional, focused studies on trauma education in Ohio are needed.
2. Exploring new options in education using existing technologies could improve accessibility and variety of courses, as well as resolve location issues.
3. On-line training, interactive educational software, and long distance education are options that should be evaluated for enhancement in learning opportunities.
4. Expanding trauma education programs beyond the basic level would be helpful in expanding continuing education options.

5. Statewide guidelines or standards for trauma education could also help identify the amount of trauma education needed.
6. Better communication about existing courses is needed to partially address issues with accessing courses.
7. Further study in the cost of education and investigating options for funding of trauma education is needed.

F. The roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in this state, and methods to enhance those roles.

1. Additional, focused studies on roles that all health care facilities play in the state EMS and Trauma System is needed.
2. The majority of hospitals, both trauma centers and non trauma centers, reported that they saw positive impacts, or reported no negative impacts, as a result of trauma system implementation. This should be monitored as the system matures.
3. Given that House Bill 138 has only been in operation since November of 2002, it was not possible to collect statistical data from the hospitals to determine what effects the trauma system changes have had on the non-trauma hospitals. A full year of data will be required to conduct the post-test and compare with the pre-test data collected during this project. Thus, a post-test should be conducted with Ohio hospitals in 2004 or 2005 to allow for at least a year's worth of experiences under the new trauma system guidelines. These data should be compared to the data collected through this project to determine the actual effect of House Bill 138 on the non-trauma centers.
4. For additional insight into the effects of House Bill 138, the State Trauma Committee believes the collection of objective data versus perception data would be more meaningful toward trauma system development.

G. The causes and impact of trauma on minority populations in this state and methods to improve emergency medical services and trauma care for those populations. This study shall be conducted in cooperation with the Commission on Minority Health.

1. Additional, focused studies on the impact of trauma on minority and specialty populations in Ohio are needed.
2. Information regarding race and ethnicity should be collected in such a manner as to be consistent and comparable between data sets such as the U.S. Census, the Ohio Bureau of Vital Statistics Death Certificate, the Ohio Trauma Registry and the EMS Incident Reporting System.
3. There are significant injury patterns, and causes specific to children in

minority populations. Additional research and increased efforts in injury prevention programming are needed.

4. Access to EMS by minority populations does not appear to be a problem, however additional research of this may be needed to assure that minority populations have ready access EMS in all areas of Ohio.

Trauma Committee Review of the Studies and Research

Trauma Committee Review of Special Study for Report A: “Identification of Issues Related to the Care and Management of Pediatric Trauma Patients Located Along the Border of Ohio”

General Description/Stated Goals:

This study focuses on the identification of issues related to the care and management of pediatric trauma patients located within 20 miles of the Ohio-West Virginia border within HSA regions 5 & 6. EMS Medical Directors, air medical physicians, EMS coordinators, and EMS providers were surveyed with regard to mutual aid concerns, transport of pediatric patients across state borders, availability of pediatric education and equipment, as well as availability of pediatric resources such as pediatric policies, protocols, and medications. Pediatric run reports from the study area were also reviewed.

Key findings:

1. Thirty two percent of EMS providers had taken a pediatric specific training course.
2. Only twelve and one half percent of agencies have all of the state recommended BLS equipment.
3. Eleven percent of the agencies surveyed are missing appropriate pediatric sized bag-valve-masks.
4. Seventy five percent of ALS units have transport monitors and even less had pediatric electrodes and defibrillator capability.
5. Fifty three percent of EMS agencies had pediatric length/weight dose charts and only seventy-six percent had resuscitation drugs and IV fluids.
6. Forty one percent of EMS coordinators indicated the need for pediatric specific equipment.
7. Ninety six percent of EMS coordinators indicated the need for more pediatric training but find cost and travel prohibitive.

8. Ninety two percent of EMS coordinators would be interested in applying for grant funding to obtain pediatric equipment and training.
9. Eighty percent of the EMS coordinators did not have protocols for children with special needs.
10. The average transport time to the closest hospital was 25.4 minutes, however run report review identified average accumulated time for a pediatric transport was 58.7 minutes.
11. All of the physician responders identified pediatric education as critical. Money and distance were listed as barriers.
12. EMS medical directors responded that they wanted assistance with review of pediatric run reports and were unaware of pediatric resources currently available to their agencies.
13. Based on run report review, the use of mutual aid does not appear to be an issue for the study region.
14. In general, there were limited issues regarding the interstate transport of pediatric trauma patients. Ranked by frequency, EMS providers listed (1) no issues, (2) longer transport times, (3) concerns over medical/legal issues, (4) service area left uncovered, (5) discrepancies in standards of care between states, and (6) discrepancies in the qualifications of the responders between states.

Strengths:

1. There is an adequate literature review to ground the study.
2. The investigators contacted a large group of rural providers. They received very good response rates for the air medical directors, EMS medical directors and EMS coordinators. The EMS providers responded to a mailed survey at a rate to be expected using this method.
3. The study resulted in the clear identification of needs for the EMS system in southeast Ohio:
 - a. EMS training in pediatrics that is locally provided and inexpensive.
 - b. Pediatric equipment by the majority of BLS and ALS units.
 - c. Training and protocol development for children with special healthcare needs.
4. Usable data was obtained using a methodology that is easily replicable.

Weaknesses:

1. Readers must be careful not to generalize the study results to other border areas of Ohio.
2. The authors state that there are no published studies regarding transport of patients across state lines or on mutual aid agreements. They do comment that some of the transport times seem excessive. Benchmark data or guidelines should be provided for comparison to justify such observations.
3. There is no information indicating the EMS agencies surveyed have attempted to obtain funding for equipment or training from available grant programs.
4. The bar graphs used to illustrate the data in Section 8 are confusing. The authors should either re-design the graphs or provide directions as to how to read the graph.

Comment:

This is a nicely designed and reported study regarding the adequacy of resources to respond to pediatric emergencies along the southeast Ohio border. The authors identify several major areas of concern related to training, equipment, protocol development and case review. The study should be replicated in other regions to gain a more complete picture of pediatric trauma care within Ohio. At a minimum, the authors indicate a need to facilitate resources for this area of the state. In a big picture sense, this report indicates a strong need for data driven trauma program improvement throughout the state.

Trauma Committee Review of Special Study for Report B: “Stand Up For Senior Independence Research-Preliminary Data”

General Description/Stated Goals:

This purpose of this study is to evaluate a program for decreasing falls in individuals over the age of sixty years. Study subjects are approached for enrollment if they experienced two falls in their home during a 30 day period. Local EMS providers, independent living housing workers, and health care providers identify potential study participants. Once enrolled, subjects are screened for risk factors linked with frailty and falling. Specific interventions were provided as necessary. The primary outcome was the number of falls post-intervention.

Key findings:

1. Issues related to the home environment, dementia, and nutrition were identified in study subjects.
2. Sixty-five percent of the patients enrolled experienced no falls 3 months after their intervention.

Strengths:

1. Reducing falls in older adults is a good goal.

Weaknesses:

1. Special Study # 3 is supposed to address the status and needs of emergency medical services and adult trauma care between this state and other jurisdictions, and methods to improve care to geriatric trauma victims. The study does not address this topic.

2. There is no needs assessment data to support the research.
3. There is a low enrollment rate for study subjects (40%).
4. There is a high drop-out rate for study subjects (30%).
5. There is no control group. How do the authors know that other forces did not account for the results they measured?
6. There is no consideration for other factors that may result in falls. This would include medications, neuromuscular dysfunction, vision impairment, mental retardation, etc.
7. There is conflicting data in the study. The authors state that “100% of the research subjects decreased their number of falls post intervention.” In one of the tables, however, 11% of the research subjects experienced three falls three months post-intervention.

***Trauma Committee Review of Special Study for Report C:
“Ohio Department of Public Safety HB 138 Special Project #6 Final Report”***

General Description/Stated Goals:

The purpose of this project was to study the feasibility of recording and reporting information to the Ohio Trauma Registry with portable electronic devices. The authors installed and tested a single software application and began testing it in January 2003. This report summarizes their experience.

Key findings:

Numerous problems were encountered. Most of the difficulties were related to the limited data capacity of the device tested. After four months, the authors concluded that portable handheld devices were not appropriate for this purpose and that laptops afforded the best approach for collecting data in a cost efficient and accurate manner. Implementation and testing of a wireless laptop computer system for recording trauma registry information is ongoing.

Strengths:

1. There is an adequate literature review to support the study.
2. The study identifies important limitations to the product and software studied.

Weaknesses:

1. This study does not meaningfully address the intent of the trauma legislation:
 - a. There was no listing/review of what products were available from alternative vendors.

- b. The authors tested only one system prior to abandoning hand held technology. There is no mention of why this was done.
2. The conclusions are limited by the technology and software used. There should have been some consideration for other handheld systems.
3. The study did not address potential sources of funding or training requirements for such a system.
4. The financial report on page 9 is unclear. How do the bold-faced values on the first line (untitled) related to the “Total” line?
5. On page 15, a reference to “typographical errors” is made. The reviewers believe the authors are referring to transcription errors. Typographical errors can be made whether writing down the information or entering it into an electronic database.

Comment on Study Recommendations:

The authors state that additional research into the use of wireless laptop computers should be supported. The information in the report does not support the notion that handheld technology should be abandoned for the purpose of reporting to the Ohio Trauma Registry. The State Trauma Committee believes that research into the use of all wireless technology, including handheld units, should be supported.

***Trauma Committee Review of Special Study for Report D:
“The Nature of Injury Related Autopsies in Ohio”***

General Description/Stated Goals:

The objectives of this study include:

1. Determine which injury types are appropriate for autopsy:
 - a. Determine rate of autopsy for these injury types.
 - b. Determine barriers to autopsy performance for these injury types.
2. To identify which stakeholders utilize autopsy data and for what purpose.
3. To survey the state county coroners, medical examiner, and a sampling of trauma medical directors for suggestions on how data might be submitted to the Ohio Trauma Registry.

These objectives were addressed through a review of death certificates from 1996-2001 and surveys sent to all Ohio coroners/medical examiner, coroners from neighboring states, and Ohio medical directors.

Key findings:

1. Sixty percent of unintentional injury deaths have an autopsy.
2. Sixty percent of intentional self-injury deaths have an autopsy.
3. Ninety-eight percent of homicides have an autopsy.
4. Ohio coroners indicated that among patients deemed appropriate for autopsy, only two percent did not receive an autopsy because of a barrier:
 - a. Barriers included cost, family opposition, and personnel.
5. Ohio and non-Ohio coroners consider trauma medical directors and EMS professionals infrequent users of autopsy data.
6. Trauma medical directors consider themselves and EMS professionals frequent users of autopsy data.
7. Trauma medical directors believed an autopsy after a motor vehicle crash was substantially more important when compared to Ohio coroners.
8. Much of the injury data included in the death certificate is missing (e.g. 59% of ICD9-10 data).
9. Over the five year study period, 2,936 injury deaths were not reviewed by a coroner, according to Ohio Vital Statistics. The consensus of the Ohio State Coroner's Association is that coroners are currently not being notified in these cases.
10. Ohio coroners expressed non-support for the creation of a new form and process to report autopsy injury data to the Ohio Trauma Registry.
11. Forty percent of coroners usually or always prepare their reports on manual typewriters.
12. While the majority of Ohio coroners are not in favor of a standardized reporting format, the non-Ohio coroners and Ohio trauma medical directors find this a reasonable request.

Strengths/Comment:

This is an extremely well done study that sends a simple message. There is a communication gap between coroners and trauma medical directors regarding the collection of autopsy data and how it is/should be utilized. Trauma medical directors want more autopsy information. Ohio coroners believe the information will serve no purpose and tax an already overburdened system. The solution is for the trauma care providers and coroners to outline a specific plan for the use of autopsy data. This would include when an autopsy is performed, what data is necessary to obtain and report, and how the data will be used to improve trauma care in the state. There should be a performance improvement process to insure appropriate deaths are being reported to the coroners and that appropriate information from autopsies is being reported. Another necessary step is to provide adequate funding and resources for obtaining autopsy information. Electronic reporting of autopsy information should be explored.

Weaknesses:

1. There is no data that indicates how Ohio compares to other states with regard to autopsy reporting.
2. The study indicates that there is a place on the death certificate to indicate if a case was reviewed by a coroner. This is incorrect. The death certificate has a place to indicate if the case was reported to the coroner.

Trauma Committee Review of Special Study for Report E: “HB 138 Special Projects #7: Evaluating Trauma Education”

General Description/Stated Goals:

The objectives of this study included:

1. Identify which trauma education courses are currently offered throughout Ohio.
2. To ascertain the number and size of the different trauma education courses offered in Ohio.
3. To determine what courses are most utilized by trauma care professionals.
4. To evaluate the barriers to offering trauma educational courses.

Surveys regarding accessibility, availability, barriers, and perceptions of trauma education in Ohio were developed and distributed to EMS providers, nurses, and physicians who care for trauma patients. Information regarding course offerings and other types of trauma education were collected from training centers and course coordinators. Perceptions regarding barriers to attending trauma education courses were also solicited at a state stakeholders meeting (EMS Board/Trauma Committee retreat). The data were categorized by population density, regions, and other factors.

Key findings:

1. Seventy eight percent of surveyed EMS providers indicated attendance of least one trauma course. BTLIS was the most common course (73%)
2. Sixty three percent of EMS providers indicated certification in at least one trauma course.
3. Forty two percent of EMS providers believe they are receiving the necessary education to provide quality trauma care.
4. Lack of financial support, frequency of courses, and having to take courses while off –duty were the most common barriers to trauma education (Urban EMS providers were more likely to attend a trauma course during normal working hours).

5. Sixty-seven percent of surveyed nurses indicated attendance of at least one trauma course. Sixty percent hold a course certification. The most common course attended was TNCC followed by BTLS.
6. Nurses cite time off work, lack of financial support as the major barriers to attending trauma courses.
7. Seventy-five percent of physicians indicated completion of a trauma course. ATLS was the most common course attended. Time off work and frequency of courses were cited as the major barriers.
8. Perceptions regarding course availability did not seem to differ with regard to population density.

Strengths:

1. This was a large and difficult undertaking. The surveys addressed the objectives.
2. The literature review demonstrates that trauma education results in improved knowledge and skill level. There is also literature available which supports the need for continuing trauma education. A 1990 study showed that BTLS skills deteriorate after approximately 18 months of initial training. (Prehospital and Disaster Medicine 5:137-144.)
3. There was an excellent distribution of EMS responses with regard to geography.
4. The recommendations could serve as a basis for more objective studies related to trauma education.

Weaknesses:

1. The results may be biased due to the low return rate (10%-25%) of surveys from EMS providers, nurses and physicians.
2. The survey format was necessary given the nature of the study. The value of this report is the issues it identifies. These issues will require more objective study (which the authors clearly point out). It must still be stated that the document is mostly comprised of perceptual data. Therefore the recommendations for increasing access to education are not evidence based.
3. There were no questions related to whether EMS agencies took advantage of existing programs for funding trauma education (i.e. the EMS Grants Program).
4. The document states that the ACSCOT developed the BTLS course. BTLS was developed by an independent group of EMS physicians under the guidance of John Campbell, MD.
5. The tables should have been better labeled.

***Trauma Committee Review of Special Study for Report F:
“The Roles of Hospitals That Are Not Trauma Centers In The State Of Ohio’s
Trauma System”***

General Description/Stated Goals:

The goals of this project included:

1. Profiling existing Ohio non-trauma center resources in terms of emergency care, laboratory, blood bank, in-patient care, diagnostic capabilities, surgical intensive care, and rehabilitation.
2. Profiling existing geographical relationships between non-trauma centers and trauma centers.
3. Measuring the impact of state trauma triage protocols on non-trauma hospitals.
4. Determining the level of collaboration between current non-trauma hospitals and trauma center hospitals on issues regarding patient care and follow-up.

To accomplish these goals, statistical information from hospitals was collected. Fact sheets identifying the number of trauma centers, projected number of trauma centers, number of staffed beds, number of ED injury visits, number of OR cases, and number of trauma center transfers within individual regions and throughout the state were developed. Additionally, subjective observations regarding the effect of the trauma legislation were compiled.

Key findings:

1. Ninety-six percent of all hospitals consider themselves to be very or somewhat familiar with Ohio’s trauma system.
2. Ninety percent of all hospitals thought trauma related communications were timely, useful, and understandable.
3. Over two-thirds of the respondents said they need more information about the trauma system. At least forty percent of all hospitals wanted more information about trauma performance improvement, peer review, and hospital trauma protocols.
4. Forty-three percent of hospitals had problems implementing required trauma system elements.
5. Twelve percent of hospitals believe trauma system implementation had a negative effect on their community.
6. Non-trauma centers were more likely to report a negative impact of the trauma legislation when compared to trauma centers.

Strengths:

1. The response rate to the survey was excellent (100%).

2. The regional and state data sheets provide good baseline data with regard to number of trauma centers as well as emergency department, ICU, acute care and pediatric beds, and emergency department visits for injuries.
3. The authors correctly identify that performing the study 6 months after trauma system implementation is too short of a time span.
4. The report identifies areas for state educational initiatives regarding the state trauma system.
5. It may be useful to compare the perceptions identified in the study to more objective measures of the effect of the trauma legislation.

Weaknesses:

1. The study title misrepresents the content. There is no discussion of the “role” of acute care hospitals in the trauma system.
2. Most of the report contains opinions which are not supported by fact. For instance, opinions regarding the effect of the trauma legislation on quality of trauma care were presented without any supporting data for these opinions. This is true for both the positive and negative effects stated in the study.
3. The study included only hospitals. EMS organizations, public officials, and local citizens could have provided helpful perceptions regarding the role of the non-trauma hospital.
4. Data for number of operative cases, and number of acute care hospital patients transferred to a trauma center are not trauma specific.
5. The study would have better served trauma system development if it had asked the hospitals what indicators should be measured to evaluate the trauma system so that baseline data could be collected.
6. The authors recommend the study be repeated one year after trauma system implementation. The effects of the trauma system would be better measured by waiting at least two years after implementation.

Comment on Study Recommendations:

The authors recommend one-on-one interviews with a random selection of non-trauma hospital CEO's and Emergency Supervisors to further gauge the effect of the trauma legislation. The State Trauma Committee believes the collection of objective data would be more meaningful toward trauma system development.

Trauma Committee Review of Special Study for Report G: “The Impact of Trauma on Minority Children”

General Description/Stated Goals:

The objectives of this study included:

1. Identify causes and outcomes of injuries among Ohio’s pediatric minority populations.
2. Identify rate of injury with regard to cause and outcome by location for each minority group.
3. Compare the rates of missing data across minority groups and location.
4. Compare the rates of patients discharged to rehabilitation facilities with an Injury Severity Score of > 16 across minority groups.
5. Compare the time from 911 call logged to arrival in the emergency department across minority groups. The times for Caucasian patients were used to determine if there were differences across racial groups.

These objectives were met by reviewing the records of children listed in the trauma registries of the regional pediatric trauma centers in Ohio. Patients were included in the final study group if they were less than 16 years of age, transported directly from the scene, and admitted to the hospital for the treatment of an injury (or died in the emergency department). Data from the US Census (2000) and Ohio Vital Statistics were also used in this evaluation.

Key findings:

1. Year 2000 census data indicates that minorities accounted for sixteen percent of Ohioans less than 16 years of age. (African Americans-12.3%, Native Americans-0.1%, Asians, 0.3%, Hispanic-1.1%, and Other-2.2%)
2. There were 1900 injury deaths in children from 1996-2001. Twenty-seven percent were of them were among minority children.
3. Of the 6084 direct from the scene admissions to regional pediatric trauma centers from 1998-2001, thirty-four percent (2060) were among minorities. African Americans accounted for twenty-eight percent of the total admissions.
4. African Americans have the highest rate of death and injury per 100,000 children. The relative risk of African Americans to injury death and trauma admissions is two to three times as great as the Caucasian population. Hispanics are at equal risk when compared to whites. Native Americans are at a little less risk and Asians are at substantially less risk when compared to Caucasians.

5. Hospital length of stay for minorities was the same as for Caucasians.
6. Risk of injury admission relative to the white population was led by burns (6.6 times as likely as Caucasians), followed by pedestrian injuries, gunshot wounds, assaults, drowning, and crush injuries.
7. The pattern of suicide injuries suggests prevention interventions should begin around age 10.
8. There was no relationship between distance to an EMS agency and the proportion of minorities within a given census block. In urban areas most residents are within three miles of an EMS agency regardless of minority status.

Strengths/Comment:

1. The study should provide valuable information for directing targeted injury prevention initiatives across the state.
2. The study maximized the use of data available in Ohio. There was good explanation of the data including strengths and limitations.
3. The study presents a clear data-based observation of how injuries among minority children compare to those in the Caucasian population.

Weaknesses:

1. While not practical, the study would have potentially been strengthened if all injured children would have been included. (That is, not only admissions directly from the scene to a trauma center.) The result is an underreporting of minority groups who may live in more rural areas of the state.
2. The study report could be strengthened by a literature review of how injury rates and deaths have historically compared between different races/ethnicities.
3. The authors should have included recommendations for addressing the differences observed.

Organizations

The following agencies and organizations were invited to review a preliminary copy of the studies and research conducted for this report and to provide feedback and comments to the Division of EMS for inclusion in the final publication of this report. Seven of these organizations requested copies of one or more of the research studies, however, none provided feedback or comments for inclusion in the final publication of this report.

Alliance of Ohio Trauma Registrars
Association of Ohio Children's Hospitals*
Association of Ohio Health Commissioners
Governors Council on People with Disabilities
Health Forum of Ohio*

Injury is the leading cause of death and disability for Ohioans ages 1 through 34 and the 6th leading cause of death for all age groups.

More than 5,000 Ohioans are killed each year from injury-related causes.

Motor vehicles and firearms are the leading causes of injury death overall.

EXECUTIVE SUMMARY

The Ohio Commission on the Prevention of Injury

Ohio's 123rd General Assembly passed House Bill 138 authorizing a statewide trauma system in November 2000. Section Five of this comprehensive legislation required the Ohio Department of Health to form a commission on the prevention of injury, with particular emphasis on the pediatric and geriatric populations in Ohio. The result of the commission's work is this comprehensive report examining the current status of injuries in Ohio with recommendations for future action. The report includes information on unintentional injuries, such as motor vehicle traffic crashes, falls, and drowning, and intentional injuries, including suicide, homicide and family violence. It is intended to guide subsequent statewide activities, including adoption of a state strategic plan for injury prevention, to make Ohio a safer and healthier place to live, work and play.

The Injury Problem

The consequences of injury can be far-reaching and severe. Injuries are the leading cause of death and disability for Ohioans ages 1 through 34 and the sixth leading cause of death for all age groups. More than 5,000 Ohioans are killed each year from injury-related causes. Motor vehicles and firearms are the two leading causes of injury death overall. Of the millions of Ohioans who survive injuries, many suffer long-term consequences such as permanent disability, time lost from work and family, costly medical expenses and pain and suffering. Injury leads to huge societal costs as well, amounting to billions of dollars annually in health care expenses, lost productivity, rehabilitation and criminal justice system expenses among others. The good news is that injuries largely follow predictable patterns and are therefore, preventable.

Common Themes

The consensus-based process used to develop this report led to the identification of the following overarching themes. These themes provide the foundation for core recommendations in this report. Risk factors and prevention strategies for unintentional and intentional injuries often differ, however there are factors common to both. Further examination of these common factors or intersection points will facilitate consolidating prevention efforts, and potentially reducing program-related costs. Decision makers and advocates addressing both should decide where consolidation efforts make sense.

- **Injuries are costly. Injury prevention saves lives and money.**
Injuries are associated with long-term disability, requiring in-depth and long-term health care services, reducing the participating workforce and consuming already scarce public resources. Investment in prevention programs prevents the much higher costs of dealing with injury consequences.
- **Improved injury surveillance efforts and program evaluation are needed.**
Monitoring changes in injury frequency and patterns is necessary for planning and evaluation. Deaths caused by injuries are captured statewide, however, deaths only represent the tip of the iceberg of the injury problem. Injury data in Ohio are incomplete and inadequate for nearly all injury categories.
- **Improved statewide coordination of programs is needed.**
Many statewide and local prevention efforts are underway, each targeting the injury problem from a unique perspective. Improved statewide coordination of injury prevention efforts would benefit all involved.
- **Injuries disproportionately affect those living in poverty, and the young and the old.**
Special programs targeted at these populations are important.
- **Alcohol use is an important risk factor for injury.**
Alcohol and other drug abuse is a far more complicated issue than can be addressed comprehensively in this report. There is a clear association between alcohol use and increased risk for injury.
- **Legislation can be an effective strategy for preventing injuries.**
Where appropriate, state and local legislation and policies that lead to the prevention of injuries should be enacted or strengthened, and their effects should be evaluated.

Conclusions

This report serves as a starting point. The most challenging work lies ahead in addressing the recommendations resulting from the commission's work. A coordinated statewide effort is needed to more effectively target limited resources and share information among those working to prevent injuries in Ohio. The identification of high-risk groups for injury prevention efforts is critical because resources are scarce. Improved statewide data are clearly needed to identify patterns of injury and associated risk factors. Injury prevention efforts are cost-effective and can save state dollars in health care expenses, worker compensation claims, law enforcement and criminal justice-related costs, rehabilitation expenses and lost productivity.

Common Themes and Core Recommendations to Prevent Injury in Ohio

Theme: *Injuries are costly. Injury prevention saves lives and money.*

A. Seek creative and collaborative solutions to funding.

1. Enhance communication and collaboration among key stakeholders.
2. Encourage insurance companies, employers and others to cover injury prevention programs and services to reduce health-care costs.

B. Provide state funding that adequately addresses injury - a leading cause of morbidity and mortality in Ohio.

Theme: *Improved injury surveillance efforts and program evaluation are needed.*

C. Improve injury surveillance efforts.

1. Develop and maintain injury data infrastructures as discussed below. Collect cost and payer information when possible to allow cost/benefit analyses of injury prevention interventions.
2. Form an ongoing, interagency workgroup to review and make recommendations regarding data needs and opportunities. The workgroup should consider coordination, linking and quality improvement of data-collection efforts. It should include representatives familiar with the relevant databases. This group should explore:
 - Funding opportunities to support data linkage.
 - Mechanisms to improve quality and access to data.
3. Continue to provide support for the:
 - Development and maintenance of the Ohio Emergency Medical Services Incident Reporting System (EMSIRS) and the Ohio Trauma Registry through the Ohio Department of Public Safety.
 - Implementation of the Ohio Youth Risk Behavior Survey (YRBS) and the Ohio Behavioral Risk Factor Surveillance Survey (BRFSS).
 - Collection of licensed child care center serious injury data through the Ohio Department of Job and Family Services.

4. Support new uses of injury data through:
 - The development of a Crash Outcomes Data Evaluation System (CODES) in Ohio. CODES links traffic crash reports, Emergency Medical Services Incident Reporting System (EMSIRS) data and hospital discharge data. Funding is available from the National Highway Traffic Safety Administration.
 - Ohio's participation in the Centers for Disease Control and Prevention's (CDC's) National Violent Death Reporting System (NVDRS).
 - External cause of injury coding (e-coding) of and increased access to the full set of Ohio hospital discharge data.
5. Create a permanent and stable funding mechanism for the development of:
 - A statewide emergency department surveillance system that uses the CDC's *Data Elements for Emergency Department Systems*. (www.cdc.gov/ncipc/pub-res/deedspage.htm)
 - A statewide coroners' database.
 - A statewide school injury surveillance system.
 - An occupational injury surveillance system based on the U.S. Bureau of Labor Statistics injury data collection system.
 - A statewide toxic exposure data collection system.
 - Incentives (e.g., related grant funding, etc.) to improve records completion for all statewide injury databases.

D. Promote the use of injury prevention guidelines and evaluation measures that are based upon current evidence-based research and literature.

As part of the statewide coalition (described below), create a committee with responsibility for ongoing review of the effectiveness of prevention programs.

Common Themes and Core Recommendations to Prevent Injury in Ohio

Theme: Improved statewide coordination of programs is needed.

E. Coordinate the development of leadership and infrastructure to identify, promote and respond to injury prevention needs at the state and local level.

1. Implement recommendations from the State and Territorial Injury Prevention Directors' Association's (STIPDA) report, *An Assessment of the Ohio Injury Program, March 19-22, 2001*.
2. Strengthen the structure and funding of the Ohio Department of Health's Injury Prevention Section to provide technical assistance, training and coordination of activities, and support to state and local injury prevention efforts.
3. Create a statewide, interdisciplinary injury prevention coalition and provide a permanent funding mechanism to hire a full-time coordinator.

F. Coordinate EMS, trauma care and public health agencies with other injury prevention programs at the national, state and local levels to increase collaboration.

1. Increase interagency collaboration and coordination between state agencies and organizations concerned with the prevention of injury, in particular the Ohio departments of Health and Public Safety, including the EMS Board and Trauma Committee, the Bureau of Workers' Compensation, Ohio departments of Education, Mental Health, Aging, Transportation, Natural Resources and other relevant agencies.

G. Promote the use of coordinated, community prevention programs - that are multifaceted, evidence-based, and use effective evaluation by public health agencies, trauma centers, emergency medical services and other programs.

1. As part of the statewide coalition, create a committee with responsibility for injury prevention education.

2. Increase awareness, through statewide public education programs, that injury is a preventable public health problem and promote strategies for prevention through collaborative community programs.
 - Create an injury prevention Web site, listserve and toll-free referral number.
 - Promote materials to health care, government, and other groups working with at-risk populations.
3. Provide relevant training on injury surveillance and prevention strategies for professionals including: policy makers, law enforcement, nurses, physicians, EMS, teachers, child care professionals, extended care facility and senior care workers, employers, public health professionals and others.
4. Incorporate age-appropriate education on injury prevention, life skills, conflict resolution, parenting skills, bullying and other related issues into school curricula. Provide and promote standardized training materials for classroom use by teachers and other school professionals.

Theme: Injuries disproportionately affect those living in poverty, and the young and the old.

H. Promote injury prevention programs that focus on populations most at risk based on injury surveillance. Children and older adults living in poverty should be high priority.

Theme: Alcohol use is an important risk factor for injury.

- I. Fund and support initiatives that address prevention of alcohol and other drug-related injuries. These initiatives should include education, legislation, coalition building, and screening and intervention by health care professionals.

Common Themes and Core Recommendations to Prevent Injury in Ohio

Theme: Legislation can be an effective strategy for preventing injuries.

J. Enact or strengthen state and local legislation and policies which lead to the prevention of injuries.

1. The statewide coalition should monitor and advocate for policies and legislation which enhance the safety of Ohioans.
2. Provide information and resources to relevant agencies to support injury prevention legislation.
3. Enact legislation and policy to prevent injuries. Refer to pages 31-32 for specific policy and legislative recommendations.

OTHER ACKNOWLEDGMENTS

Special thanks go to the following individuals for their work in supporting the commission:

Virginia Haller, MD, Ohio Department of Health, for her devoted support of and invaluable insights into the commission's work and report preparation.

Pamela Leimbach, administrative assistant, Ohio Department of Health, Bureau for Children with Medical Handicaps for her administrative support in scheduling and coordinating meetings, and in recording, preparing and distributing commission meeting minutes in an always reliable and timely manner.

Mike Glenn, RN, State Trauma Coordinator, Ohio Department of Public Safety for his support throughout the process.

Christy Beeghly, MPH, Center for Injury Research and Policy, Columbus Children's Hospital, for her knowledge and input regarding injury prevention and her outstanding contributions to the preparation of the commission's report.

We would like to acknowledge the following organizations for their contributions:

The Ohio State Medical Association for providing refreshments and excellent accommodations for the Commission's meetings.

The National SAFE KIDS Coalition, the USDA Natural Resources Conservation Service and the AAA Foundation for Traffic Safety for permission to use their photographs throughout the report chapters.

Printing of this report was made possible through the support of the Ohio Department of Health, with partial support from the Ohio Department of Public Safety.

This report is dedicated to the memory of Rich Van Horn, Ohio Department of Natural Resources.

Message from the Commission Chair

November, 2003

Dear Colleagues,

Injury is the great modern plague, and Ohio's challenge is clear. We must apply to injury the same public health approaches that have been successful in combating many other diseases and public health problems. Prevention of injury is within our grasp.

The magnitude of the injury problem in Ohio is staggering. Injury claims the lives of more than 5,000 Ohioans each year and is the leading cause of death and disability among Ohio citizens from age one through 34 years. The costs and long-term consequences of injury on the healthcare system, the workplace, and among survivors and their families are enormous. By any measure, injury is the most significant public health problem facing our state's population.

The Ohio Commission on the Prevention of Injury, whose creation was authorized by House Bill 138 in the year 2000, brought together experts in multiple disciplines from across the state. This report is the product of two years of work by commission members. It is a consensus document that incorporates the best information available on existing and potential injury prevention programs in Ohio. Though there are many existing activities to prevent injuries in our state, there are also critical gaps in our efforts to address the problem. There is a lack of injury surveillance systems that would provide the information needed to focus our limited resources more effectively. Ongoing prevention efforts too often lack coordination among state and local agencies and groups in the private sector. Indeed, many other states lead Ohio in efforts to prevent injury among their citizens. While acknowledging the successes of ongoing programs, this report makes recommendations for improvement of existing programs and implementation of new injury prevention efforts.

I wish to thank the members of the commission for their hard work and dedication. I am impressed by the collective knowledge, commitment and compassion that this group has demonstrated during the development of this report. I wish to thank Director Nick Baird, MD and Dr. Virginia Haller and other members of the Ohio Department of Health for their support of the Commission's work. I also wish to recognize and thank the representatives of other Ohio governmental agencies, the state legislature, and other professional and advocacy groups from around the state for their invaluable contributions to the commission's report. Special thanks goes to Ms. Pamela Leimbach for her administrative assistance, and to Ms. Christy Beeghly for her outstanding contributions to the final report.

It is my hope, and that of the entire commission, that this report will serve as a guide for new statewide efforts to combat the leading public health problem of injury. This report provides a blueprint for a state strategic plan for the prevention of injury. Through increased collaboration of state government, professional and advocacy organizations, and the private sector, and with increased commitment of resources that are commensurate with the magnitude of this public health problem, the high financial costs of injury will be reduced, and Ohioans will enjoy safer and healthier lives.

Gary A. Smith, MD, DrPH
Director, Center for Injury Research and Policy
Columbus Children's Research Institute, Children's Hospital

The Ohio Commission on the Prevention of Injury

The Commission's Work

Ohio's 123rd General Assembly passed House Bill 138, authorizing a statewide trauma system in November 2000. Section Five of this legislation required the Ohio Department of Health to form a multi-disciplinary commission on the prevention of injury, with particular emphasis on the pediatric and geriatric populations in Ohio (*Appendix D contains the full text of Section Five of H.B. 138*).

In October 2001, commission members from across the state first gathered to discuss the current status of injuries and prevention efforts in Ohio. They developed a strategy and over the next two years, regularly convened to produce a consensus-based report.

Committees were formed to examine existing injury policies, programs and data sources, and document needs. Commission members identified chapter topics, drafted and carefully reviewed chapters, and achieved consensus in issuing recommendations. Common themes and needs emerged after assessing individual injury areas. The process resulted in core recommendations for improving injury prevention efforts in Ohio. The result of the commission's work is this comprehensive report examining the current status of injuries in Ohio with recommendations for future action. Reports for individual injury areas (e.g. fire/burn, motor vehicle-related injury, etc.) are available electronically at www.state.oh.us/odps/division/ems/ems_local/trauma/trauma_commissions.htm

Goals

The long-term goal of the Ohio Commission on the Prevention of Injury is to reduce injury and injury-related death to Ohioans. Implementation of the commission's report recommendations will facilitate achievement of this goal.

The commission largely used Healthy People 2010 (HP 2010) as a guideline for setting goals for Ohio. HP 2010 is a statement of national health objectives designed to identify the most significant preventable threats to health and to establish national goals to reduce these threats. The objectives are built on scientific knowledge and are designed to measure progress over time. Thirty-nine HP 2010 objectives relate to unintentional and intentional injury. HP 2010 objectives related to injury are defined throughout this report for most of the injury topics and, where available, Ohio injury rates are compared to those of the country as a whole. Additional information about HP 2010 and the methods used to set national goals can be found at www.healthypeople.gov/default.htm.

INJURY IN OHIO

Defining the Problem

Injury can be defined as physical damage caused by a transfer of energy to tissues of the body. This energy can come in various forms, kinetic/mechanical, thermal, chemical or electric. Injury also can be caused by a lack of needed elements such as heat or oxygen. Injury can result from unintentional (accidental) or intentional acts.

Injuries are largely classified by the:

- Events and activities that preceded them (e.g. motor vehicle-related, occupational-related).
- Outcome or result of the transfer of energy (e.g. traumatic brain injury, burns).
- Intention of the acts causing the injury (e.g. abuse, suicide, homicide).

This report will group injuries into these categories to organize a discussion of the topics. Overlap among these categories exist, for example, motor-vehicle crashes can cause traumatic brain injuries and burns can be used as a form of abuse. The report's chapters reflect this overlap as appropriate.

Throughout this report, "unintentional injuries" will be used to describe those injuries resulting from accidents. The word "accident" suggests something unpredictable, random and therefore not preventable. Most injuries are predictable and preventable. Using the word "accident" hides this fact.

Given the perspective that injuries are predictable and preventable, action can be taken to intervene. Epidemiologic studies and surveillance systems provide information to identify how, when and where injuries typically occur. We can identify who may be at the highest risk for injuries. We can also target interventions to prevent specific types of injuries.

Photo courtesy of the National SAFE KIDS Campaign

Individual Injury Area Reports

The common themes and core recommendations found in this report are based on the findings of individual injury area reports (e.g. fire/burn, motor vehicle-related injury, etc.) that are available electronically at: www.state.oh.us/odps/division/ems/ems_local/trauma/trauma_commissions.htm

CDC State of Ohio Injury Profile

The Centers for Disease Control and Prevention has created injury profiles for each state to document the injury problem and compare states against a national profile. Ohio's profile can be found at: www.cdc.gov/ncipc/StateProfiles/sip_oh.pdf

Overall Goals

Reduce injury deaths of all causes and intents.

Goal	37.0 deaths per 100,000 (better than the best state)
OH 1998	43.7
US 1998	54.4

Data Source: NCHS Vital Statistics System for numbers of deaths. Bureau of Census for population estimates.

Reduce deaths caused by unintentional injuries.

HP 2010 Goal	17.5 deaths per 100,000
OH 1998	29.5
US 1998	35.0

Data source: National Vital Statistics System (NVSS), CDC, NCHS.

Reduce deaths caused by violence.

Goal	10.0 deaths per 100,000 (better than the best state)
OH 1988	13.8
US 1998	18.0

Data Source: NCHS Vital Statistics System for numbers of deaths. Bureau of Census for population estimates.

Reduce hospital emergency department visits caused by injuries.

HP 2010 Goal	126 hospital emergency department visits per 1,000.
OH	Identify baseline
US 1997	131

Data source: National Hospital Ambulatory Medical Care Survey (NHAMCS), CDC, NCHS.

Increase the number of states and the District of Columbia with statewide emergency department surveillance systems that collect data on external causes of injury.

HP 2010	All states and the District of Columbia.
OH	No system in place
US 1998	12 States

Data source: External Cause of Injury Survey, American Public Health Association (APHA).

Increase the number of states and the District of Columbia that collect data on external causes of injury through hospital discharge data systems.

HP 2010	All states and the District of Columbia.
OH	System exists but data is not easily accessed
US 1998	23 States

Data source: External Cause of Injury Survey, American Public Health Association (APHA).

DATA

Injury is one of the great modern plagues. When ranked among other public health problems, injury is arguably the leading threat to the health and well being of the general population in the United States. In 2000, intentional and unintentional injuries caused more than 148,000 deaths, 1.4 million hospitalizations and 29.5 million emergency department (ED) visits in the United States.

Injury is the leading cause of death and disability for Ohioans ages 1 to 34 and the sixth leading cause of death for all age groups. Thousands of Ohioans are killed each year from injury-related causes. More than 5,100 Ohioans died from injuries in 2000. Motor vehicle traffic, firearms, poisoning, falls, suffocation, fire/burn and drowning are the leading causes of injury death per 100,000 Ohioans (*Figure 1*). During 1999-2000, Ohio's injury death rate was 45.8 deaths per 100,000, which was less than the national rate of 54.0 but still higher than the HP 2010 target of 37.0 deaths per 100,000.

Injury death rates have remained relatively constant in the United States during the 20th century. In contrast, disease rates have declined (*Figure 2*). By 1980, death rates from tuberculosis and gastrointestinal disorders had declined by 99 percent compared to the turn of the century. Death rates from influenza and pneumonia declined by 85 percent. The decreased rates were a result of a focused energy and application of scientific principles to disease control. Infectious disease rates have decreased due to a better understanding of disease etiology, improved treatment and sanitary conditions, and targeted prevention

Figure 1.

Leading Causes of Injury Death per 100,000 Ohioans, 1999-2000

efforts. In contrast to disease, during this century, injury death rates have declined by only 30 percent. Injury is at present responsible for three times as many deaths as are influenza and pneumonia.

Unintentional causes lead to the greatest proportion of injuries and injury-related death. During one year in Ohio, unintentional injury fatalities exceed that of 12 jet crashes, each causing 260 casualties. Imagine one large jet crash every month in Ohio. This is the equivalent in fatalities to those that resulted from the 2001 terrorist attack on the World Trade Center. For the entire United States, annual injury fatalities equal more than 360 jumbo jet crashes with no survivors. That is nearly one jet crash **each day**. Such catastrophic events would merit immediate public action and attention. However, because injury deaths occur in isolation or in small clusters, they often go unnoticed except by those directly affected by the loss.

Figure 2.

Death Rates from Injuries and Other Causes, United States, 1910 - 2000

* Ischemic Heart Disease

During one year in Ohio, the number of deaths caused by unintentional injuries exceeds that of one large jet crash per month, each causing 260 casualties.

Many perceive these deaths to be accidents, unforeseen tragedies happening by chance. They are not.

The leading causes of unintentional injury death in Ohio are motor vehicle traffic, falls, poisonings, suffocations, fire/burns and drowning. Motor vehicle traffic accounted for 40 percent of unintentional injury deaths in 1999-2000.

When measured in Years of Potential Life Lost (YPLL), injuries account for almost one-third of all premature death (YPLL before age 65) in

the United States. They account for more YPLL than heart disease, cancer and stroke combined, which are the next leading causes of YPLL in the United States. Injury accounts for so many YPLL because it is the leading cause of death from ages 1 - 34 years.

In Ohio during 1999-2000, injuries accounted for the most YPLL before age 65 (*Figure 3*) and unintentional injuries alone accounted for the second most YPLL, after cancer (malignant neoplasms).

Figure 3.

Figure 4.

Source: National Center for Health Statistics (1999)

Although fatalities are the most severe and final consequence of injuries, they represent only the tip of the iceberg when examining the burden of injury. The injury pyramid (*Figure 4*) depicts that for each injury death in the United States, there are approximately 18 hospitalizations and 233 emergency department visits. At this time, we do not have corresponding Ohio data for non-fatal injuries, however, estimates can be made based on the injury pyramid. Given that approximately 5,000 Ohioans die from injuries each year, the Ohio injury pyramid is presented below (*Figure 5*).

Of the millions of Ohioans who survive injuries, many suffer long-term consequences such as permanent disability, time lost from work and family, costly medical expenses and pain and suffering.

During 2000 in the United States, unintentional falls were the leading cause of non-fatal injury for all ages, followed by unintentional struck by/against and unintentional motor vehicle occupant as the second and third causes, respectively (*Figure 6*). Corresponding Ohio-specific data is not available for non-fatal injuries.

Figure 5.

Figure 6.

**Leading Causes of Non-fatal Injury in the U.S.
per 1,000, 2000**

INTENTIONAL Vs. UNINTENTIONAL

This report discusses injuries resulting from both intentional and unintentional acts. There are clearly fundamental differences in the underlying causes of intentional and unintentional injuries. Efforts to prevent intentional injuries often involve more complex issues including mental health, family and group dynamics.

Approximately two-thirds of injuries are unintentional and one-third are intentional (*Figure 7*). During 1999–2000 in Ohio, the violence-related injury death rate was 13.8 per 100,000 compared to the U.S. rate of 16.9 per 100,000. These figures include suicides, homicides and legal intervention. Homicide alone was within the top eight leading causes of death in Ohio during 1999–2000 for all age groups from 1 to 44 years. The violence-related injury death rate in Ohio varies by age group and race (*Figure 8*). Black individuals in age groups from 15 to 39 years suffer the highest intentional injury death rates.

Figure 7.

Ohio and U.S. Injury Death Rates, 1998

Nationally, nonfatal violence-related injury rates increase up to age 24 and then decrease with age. During 2000, injury rates ranged from 217.5 per 100,000 ages 0-4, to a high of 1,828.6 per 100,000 ages 20-24, to a low of 50.3 per 100,000 ages 85 and older. The leading cause of violence-related nonfatal injury for all age groups is struck by/against assault followed by self-harm poisoning, however, the leading causes vary considerably among age groups.

Although there are fundamental differences in addressing intentional and unintentional injuries, factors common to both exist. Examining these common factors or intersection points will facilitate consolidating prevention efforts, and possibly reducing program-related costs. It is critical that planners and decision makers from concern with either type of intent sit at the table and decide where consolidation makes sense. Specific examples of such approaches are outlined in the intentional injury chapters that can be found online at www.state.oh.us/odps/division/ems/ems_local/trauma/trauma_commissions.htm.

Figure 8.

Ohio Intentional Injury Death Rates per 100,000 by Age & Race, 1996-1998

COSTS & CONSEQUENCES

The greatest cost of injury is measured in human suffering and loss. At the same time, the financial repercussions are staggering. In the United States, more than \$224 billion is spent annually on medical care, rehabilitation and lost income and productivity resulting from injury. The federal government pays about \$12.6 billion each year in injury-related medical costs and about \$18.4 billion in death and disability benefits. Insurance companies and other private sources pay approximately \$161 billion (*CDC Injury Fact Book 2001-2002*). Injury-related deaths and disabilities have a profound negative effect on the productivity of the U.S. workforce.

The total monetary cost of fatal injury incidences in Ohio from 1993 to 1997 for persons aged 24 years and younger was more than \$1 billion (*Table 1*). This total includes medical, legal, administrative costs and estimated lifetime productivity loss. Motor vehicle-related deaths account for 53 percent and firearm-related deaths account for 28 percent of the costs.

In State fiscal year (SFY) 2002, Ohio Medicaid provided health care services associated with an *inpatient diagnosis* of trauma for 11,616 people. Ohio Medicaid spent more than \$201 million in state and federal funds in SFY 2002 for services directly related to their trauma. This figure

understates total trauma spending because it does *not* include prescription drug or skilled nursing facility costs for services related to their trauma, and it does not include anyone with an outpatient diagnosis of trauma.

A recent assessment of injury-related Ohio Medicaid spending over a four-year period reveals the following. In SFY 1999, 9,096 Ohio Medicaid consumers used health care services due to a trauma incident occurring during SFY 1999. These consumers spent approximately \$235 million in total health care expenditures during the first year after the injury. One-third, or at least \$78 million, of these health care expenditures was directly related to the injury. Over the four-year period following the trauma incident, Ohio Medicaid spent \$566 million in total health care expenditures for this group, of which \$92.8 million was directly tied to the trauma.

Those connected with the victim also experience the consequences of the injury. A non-injured spouse may need to provide full-time care to a disabled spouse, resulting in loss of work productivity and possibly lost income for two individuals. Children are profoundly affected when parents are injured and can no longer care for them. These significant costs are more difficult to calculate.

Table 1.

Ohio Fatal Injury Incidences, Estimated Costs for Ages 0-24, 1993-97				
Cause of Death (All Intents)	Total Monetary Cost of Injuries	Total Years Potential Life Lost	Mean Annual Frequencies	Average Rate/100,000
MV Traffic	\$545,152,173.00	27,948	456.6	11.6
Firearm	\$298,899,271.00	16,753	279.6	7.1
Fire/Burn	\$48,015,535.00	3,599	51.8	1.3
Drowning/Submersion	\$47,796,514.00	3,219	48.8	1.2
Suffocation	\$47,382,041.00	3,223	48.6	1.2
Poisoning	\$20,877,871.00	1,152	19.4	0.5
Falls	\$11,856,837.00	732	11.6	0.3
Other Transport	\$10,343,542.00	596	9.8	0.3
Non MV Pedestrian	\$9,218,230.00	593	9.2	0.2
Cut/Pierce	\$5,139,705.00	287	4.8	0.1
Machinery	\$4,409,630.00	257	4.2	0.1
Struck by/Against	\$3,451,992.00	243	3.6	0.1
Non MV Pedal Cyclist	\$1,207,458.00	77	1.2	0
Natural/Environmental	\$818,553.00	50	0.8	0
Total	\$1,054,569,352.00	58,729	1042.8	26.6

RISK FACTORS

Factors that place a certain group of individuals at a higher risk for injury must be identified to effectively target prevention efforts. Risk factors vary according to the type of injury, however, there are some risk factors that are common to nearly every injury category.

LOW INCOME

Poverty is a risk factor for injury. Children from low income families are twice as likely to die in a motor vehicle crash, four times more likely to drown and five times more likely to die in a fire (*NSKC, Children at Risk Fact Sheet. Washington, DC, 2003*).

Approximately one out of 10 Ohioans were defined as having poverty status in 1999. Fourteen percent of children younger than 18 years and 8 percent of elders older than 64 years were living in poverty.

For these individuals, housing may be substandard and more hazardous. They may be living in neighborhoods with busy streets and without safe recreation spaces for children. In addition, increased exposure to physical hazards and lack of access to health care are contributing factors affecting the occurrence and severity of injury. Individuals living in poverty may not have access to prevention education or the resources to obtain safety devices such as child safety seats, bicycle helmets and smoke alarms. Other factors related to low income that may increase one's risk for injury include single-parent households, lack of education and young maternal age.

Violence and poverty have been positively correlated. Stress and frustration may lead to a higher likelihood of abuse and participation in violence-related activities.

Children from low-income families are twice as likely to die in a motor vehicle crash, four times more likely to drown and five times more likely to die in a fire.

AGE

As recognized by the legislators who drafted House Bill 138, age is a significant factor affecting the occurrence and severity of injury. Children and older adults are disproportionately affected by injuries. As a result, the commission was given a specific mandate to emphasize the injury prevention needs of these groups. Where relevant, the authors of the report's chapters have brought attention to these issues.

Young Ohioans

Children are not small adults. They are developmentally, anatomically and physiologically different than adults. These differences place them at greater risk for injury and affect the severity of the injury. In addition, the developmental and cognitive abilities of children play a significant role in their vulnerability to injury. Appendix A contains tables listing some of the physical differences and describing the injury risks to children by age group.

Injuries take a significant toll on the young. Former Surgeon General C. Everett Koop said on the subject of childhood injury, "If some infectious disease came along that affected one out of every four children in the United States, there would be a huge public outcry and we would be told to spare no expense to find the cure – and to be quick about it."

- During the preschool, elementary and middle school years, injury accounts for approximately as many deaths as all other causes combined.
- Every day in the United States, more than 28,000 youth ages 19 years and younger are injured seriously enough to require medical treatment in an emergency department, totaling more than 10 million annually.
- Each year in the United States, more than 17,000 youth ages 19 years and younger will die as a result of injury (22.5 per 100,000). More than 630 will die in Ohio (20.0 per 100,000).
- Injuries have been the leading cause of death in children for nearly 40 years.
- One in four children will suffer an injury during the next year that will require medical attention.
- It is estimated that as many as 90 percent of unintentional injuries can be prevented.

Regardless of how the injury problem is measured, injury rises to the top of the list of public health threats to children.

**"If some infectious disease came along that affected one out of every four children in the United States, there would be a huge public outcry and we would be told to spare no expense to find the cure – and to be quick about it."
Former Surgeon General
C. Everett Koop**

Infants and Young Children

During the first year of life, risk of death due to injury is very high. In absolute numbers, more children die due to injury during this year than during any single one-year period during the preschool and early school years.

During 1999-2000 in Ohio, the unintentional injury death rate for infants younger than 1 year of age was 33 per 100,000. This is the highest age-specific unintentional injury death rate until age 17. The leading causes of unintentional injury death for infants are suffocation, fire/burn, motor vehicle traffic and drowning. Suffocation accounted for 72 percent of the deaths in 1999-2000.

For young children aged 1 to 4 years, fire/burn, motor vehicle traffic crashes and drowning accounted for 72 percent of unintentional injury deaths in Ohio during 1999-2000. Homicide was the second leading cause of death for this age group.

Children

For children aged 5 to 14 years, motor vehicle crashes, drowning and fire/burns accounted for more than 72 percent of the unintentional injury deaths in Ohio during 1999-2000. For children ages 5 to 9 years, homicide was the fourth-leading cause of death. For children ages 10 to 14 years, suicide was the third-leading cause and homicide was the fifth-leading cause of death. Firearms are the cause of death in nearly half of the homicides for ages 5-14.

For children ages 1 to 14, the leading cause of non-fatal intentional injury is struck by/against assault, followed by sexual assault.

Teens and Young Adults

During the teenage and young adult developmental period, risk-taking behavior, use of alcohol/other drugs and peer pressure contribute to a high risk for unintentional and intentional injury.

During 1999-2000 in Ohio, unintentional injuries, suicides and homicides were the three leading causes of death, respectively for youth ages 15 to 19. Firearms were the cause of death in 67 percent of homicides and 46 percent of suicides. Suffocation was the cause of death in 40 percent of suicides in this age group.

The Ohio Youth Risk Behavior Survey (YRBS) is a biennial survey conducted among 2,000 randomly sampled Ohio high school students to assess health-related risk factors. Summary findings related to unintentional and intentional injury from the 1999 YRBS are described below.

From 1993 to 1999, fewer teens reported carrying a weapon such as a gun, knife or club both on and off school property. Fewer students were involved in physical fights. Although Ohio's teenagers are less violent than in past years, there is still room for improvement. Fourteen percent of female students have been forced to have sexual intercourse when they did not want to. One out of 10 students were hit, slapped or physically hurt by their boyfriend or girlfriend in the last 12 months. Eight percent of Ohio high school students actually attempted suicide in 1999.

More Ohio teens are buckling up. Sixteen percent of teens reported that they never or rarely wore a seatbelt when riding in a car in 1999, a 33 percent decrease over the 24 percent in 1997 but still too high. Very few teens are wearing a helmet while riding a bicycle (92 percent rarely or never wear one). Helmet use while riding a motorcycle is more frequent, with 39 percent rarely or never wearing a helmet. Unfortunately, there has been a 41 percent increase in the percentage of teens who drive a vehicle after drinking alcohol (12 percent in 1993 to 17 percent in 1999). Trend data from 1993 through 1999 indicate a steady increase in males, females, white and African-American students driving a car or other vehicle after drinking alcohol.

Nationwide, unintentional struck by/against was the leading causes of non-fatal injury followed by motor vehicle traffic as the second-leading cause for ages 15-19.

Older Ohioans

At the other end of the age continuum, elders have an elevated risk for injury (*Figures 9 & 10*). As with children, anatomical, physiological and cognitive changes help to explain the heightened risk. Sight, balance and coordination may wane which may lead to a fall. Elders may be socially isolated and dependent leading to a higher risk for abuse or suicide. Reaction times may increase leading to risk for motor vehicle crashes. Poor sight or decreased mental capacity may lead to unintentional medication overdoses or poisonings. In addition, physical changes may lead to greater severity of injuries and less resiliency. Appendix A contains tables listing some of the physical and cognitive changes that cause greater injury risk for elders.

Ohio's population 60 years and older comprises more than 15 percent of the state's total and the percentage who are 85 years and older is rising steadily. If ignored, the injury problem to elders will grow as more Ohioans age into the risk category.

In Ohio during 1999-2000, motor vehicle traffic was the leading cause of unintentional injury death, followed by falls and suffocation for ages 65 to 74. For those over the age of 75 years, falls account for the most unintentional injury deaths, followed by motor vehicle traffic and suffocation. Nationwide, unintentional falls are the leading cause of nonfatal injuries in this age group also.

Figure 9.

Figure 10.

GENDER

At most ages and for most causes of injury, males are at higher risk than females. Males are at higher risk than females for motor vehicle crashes, falls, drowning, homicide and suicide completion.

Although in general males are at an increased risk for injury, females are at an increased risk for specific injuries. These include hip fractures from fall-related injuries, intimate partner violence and sexual assault. Females are at much higher risk for fatal and nonfatal injury from intimate partner violence. In a national survey, one out of four women reported being raped or physically assaulted by an intimate partner at some time in their lives; only 8 percent of men reported such as experience. Women are more likely to attempt suicide than men.

Photo courtesy of the National SAFE KIDS Campaign

RACE AND ETHNICITY

Racial disparities in injury rates have been noted. African Americans have the highest overall injury rate of nearly all other racial and ethnic groups. However, many of these differences disappear when socioeconomic status is controlled. Racial disparities appear to relate more to living in impoverished neighborhoods as discussed above, than with race or ethnicity.

African Americans in Ohio are disproportionately more likely to be living in poverty, and thus are at an increased risk for injury. More than 25 percent of African Americans in Ohio are living in poverty, compared to 8 percent of whites.

For Ohio African Americans aged 15-24 and 25-34 years, homicide exceeded unintentional injuries as the leading cause of death in 1999-2000. Homicide was the fourth- and fifth- leading cause of death respectively, for whites in these age groups.

GEOGRAPHY

Individuals living in rural areas are at greater risk from unintentional injury-related death than those living in urban areas. Rural areas are less likely to have organized systems of trauma care, resulting in prolonged response and transport times. Nearly one-fourth of Ohio's population lives in rural areas as defined by the U.S. Census Bureau.

In contrast, living in an inner city places one at greater risk for nonfatal injuries than those living in rural and suburban areas. Proximity to quality medical care may affect injury survival rates in urban areas.

<http://photogallery.nrcs.usda.gov>*

COMMON THEMES

The consensus-based process used by the commission members to develop this report led to the identification of common, overarching themes. These themes provided the foundation for core recommendations in this report. A brief discussion of the manner in which these recurring themes affect injury will be discussed.

THE COST BENEFIT OF PREVENTION

Injuries are extremely costly to individuals and society. The good news is that prevention efforts confer benefits outweighing the costs.

If bicycle helmets, working smoke alarms and child vehicle restraints were considered as important for health as immunizations and other preventive medications (e.g. blood pressure medication), millions of dollars would be saved. A paradigm shift is indicated that views safety interventions as a part of routine health and wellness – a “vaccine” against injury. Those entities benefiting from the prevention of injuries include insurance companies, health care facilities, employers and government.

Following are a few examples of the cost benefit of preventing injuries:

- For every dollar spent on a bicycle helmet, \$30 is saved in direct medical care costs and other costs to society.
- For every dollar spent on a child safety seats, \$32 is saved in direct medical costs and other costs to society.
- For every dollar spent on a smoke alarm, \$69 can be saved in fire-related costs.
- For every dollar spent on poison control centers, \$7 is saved in medical costs.

If bicycle helmets, working smoke alarms and child vehicle restraints were considered as important for health as immunizations and other preventive medications (e.g. blood pressure medication), millions of dollars would be saved.

THE NEED FOR IMPROVED INJURY SURVEILLANCE

Strategies to prevent and reduce injury take a population-based approach similar to other public health strategies to prevent and control disease. Comprehensive, population-level injury data, which is lacking in Ohio, is important for a number of reasons. Decision makers and program administrators use injury data to assess needs and identify funding priorities. Program planners and coordinators use data for quality improvement and program evaluation. Health care institutions use data for quality improvement purposes. Data linkages provide a view of the entire spectrum of injury from risk factors to costs, outcomes and long-term impact on society.

The lack of statewide injury surveillance impedes our ability to adequately describe the injury problem in Ohio. Several injury databases recommended by the Centers for Disease Control and Prevention and the State and Territorial Injury Prevention Directors Association are either in their infancy stages of development, being contemplated or have not been explored in Ohio. Existing Ohio injury databases include death records, EMS incident reporting, a statewide trauma registry, child abuse/neglect reports, adult protective services, traffic crash reports, crime statistics, fire incident reporting, occupational-related injuries, child fatality review, hospital discharge and farm-related injuries. A table further describing the data available from each of these sources, restrictions to access the data and the years for which data are available, can be found in the Appendix.

Most of these databases exist in isolation at this time. They are housed and controlled by separate agencies and are not linked to other sources of data. Analysis and reporting of the data occurs often within this context and

Photo courtesy of the National SAFE KIDS Campaign

without a broader perspective of the data's use to other groups. These databases will be most useful if continuing discussions guide analysis of the data. A workgroup should be formed including representatives familiar with those databases. This group can identify opportunities for linkage and sharing of data as well as broader reporting and uses of the data

to improve administrative decision-making abilities. They can also make recommendations for the development of new surveillance systems.

A statewide injury surveillance system that tracks all injuries is a most pressing need. This system should include injuries treated at urgent care centers, emergency

departments and hospitals, and it should have the capability to link injury records from events preceding the injury to long-term outcomes. Injury data from schools, child care centers and long-term care facilities are useful sources that should be considered.

Ohio will have the opportunity to focus injury prevention activities on the needs of high risk populations in this state as data collection grows and data analysis matures. This is preferred to implementing programs based on the assumption that the Ohio population mirrors that of the nation.

A statewide injury surveillance system that tracks all injuries is a most pressing need. This system should include injuries treated at urgent care centers, emergency departments and hospitals, and it should have the capability to link injury records from events preceding the injury to long-term outcomes.

THE NEED FOR INCREASED STATEWIDE COORDINATION OF EFFORTS

Many statewide and local prevention efforts are underway, each targeting the injury problem from a unique perspective. Participation on the commission provided members with the opportunity to view injuries from a broader perspective than that of their parent organizations. For example, those regularly addressing intentional injuries to children learned about the problem of injuries occurring in the workplace. Those focusing on pediatric injury prevention had the opportunity to learn how elders are disproportionately affected by injury as well. Members learned about new resources and sources of data available to them. Due to the important knowledge and resources shared by commission members, it is apparent that improved statewide coordination of injury prevention efforts would benefit all involved.

Interagency collaboration and coordination between state agencies and organizations concerned with the prevention of injury should be enhanced. Key organizations include the Ohio departments of Health and Public Safety, including the EMS Board and Trauma Committee, the Bureau of Workers' Compensation, Ohio departments of Education, Mental Health, Aging, Job and Family Services, Transportation, and Natural Resources. In addition, representatives from other stakeholder organizations should be invited to collaborate at the state level. These groups include the Ohio Hospital Association, the Ohio Children's Hospital Association, elder advocacy groups, Commission on Minority Health, Ohio PTA Association, Ohio Public Health Association, Association of Ohio Health Commissioners, MADD, regional trauma groups, law enforcement organizations, etc.

State-level infrastructure and leadership requires continuing support to increase coordination of efforts. This support will enable the provision of technical assistance, training, and coordination to state and local injury prevention efforts.

One strategy to increase coordination involves the creation of a statewide, interdisciplinary injury prevention coalition. The coalition would increase sharing of resources and data, and eliminate duplication of efforts. Funding for a full-time coordinator should be provided. Key responsibilities of this position should include the following:

- Facilitate the translation of report recommendations into action.
- Seek ways to improve communication, such as through the creation of a state injury prevention Web site, listserve and newsletter.
- Reduce duplication of prevention efforts, such as through the creation of a single point of contact toll-free referral number.
- Improve access to injury data.
- Seek additional funding for statewide coalition efforts.
- Improve the dissemination of well-evaluated and evidence-based prevention strategies.
- Facilitate the coordination of new committees/work groups developed as a result of the report recommendations.
- Serve as a state-level advocate for injury prevention, particularly focusing on the needs of the young and the old, the impoverished and other high-risk groups.
- Cultivate and coordinate expertise in various risk areas, such as through the development of a speaker's bureau and media contact list.

THE ROLE OF ALCOHOL

Alcohol is a risk or contributing factor in almost every category of injury, both intentional and unintentional. One of the most dramatic examples is the effect that alcohol has had on motor vehicle crashes. In 2002, alcohol was a factor in 40 percent of the motor vehicle injury-related deaths in Ohio. Alcohol use has also been linked to a substantial number of the injuries and deaths resulting from falls, fires and drownings. It also contributes to the incidence of physical fighting, homicide, suicide, family violence and sexual assault. Alcohol has been found to play a role in more than half of homicides and sexual assaults, more than half of burns, almost half of hypothermia and frost bite cases, and 40 percent of falls.

There are multiple ways in which alcohol and other drug use increases the risk for injury.

Intoxication:

- Decreases the level of alertness.
- Impairs motor function, diminishing coordination and balance, and increasing reaction time.
- Impairs judgment and results in poor decision making.
- Diminishes perception and cognitive abilities.
- Increases risk taking behavior and feelings of invulnerability (especially among adolescents and young adults).
- Reduces inhibitions and intensifies feelings of anger and depression.
- Is associated with increased violent behavior.

Additionally, chronic use may render a person more medically fragile, resulting in more severe injuries and less resiliency.

Although alcohol and other drug treatment approaches are somewhat beyond the scope of this report, the commission advocates for continued support of successful initiatives that address prevention of alcohol and other drug-related injuries. For example, programs that limit youth access to alcohol, provide treatment for those who abuse alcohol and other drugs, counsel high-risk groups about the role of alcohol in injury and enforce relevant laws are likely to have a measurable effect on injury rates.

PREVENTION CONCEPTS & STRATEGIES

A science of injury prevention has emerged through the work of pioneers, such as William Haddon and Susan Baker, who have shown that injuries, like diseases, have predictable epidemiologic patterns and are largely preventable. Injury research and prevention efforts have gained the attention of the U.S. Congress, especially following the publication of *Injury in America: A Continuing Public Health Problem* by the National Research Council and the Institute of Medicine in 1985. In June 1992, a National Center for Injury Prevention was created at the Centers for Disease Control and Prevention (CDC) in Atlanta.

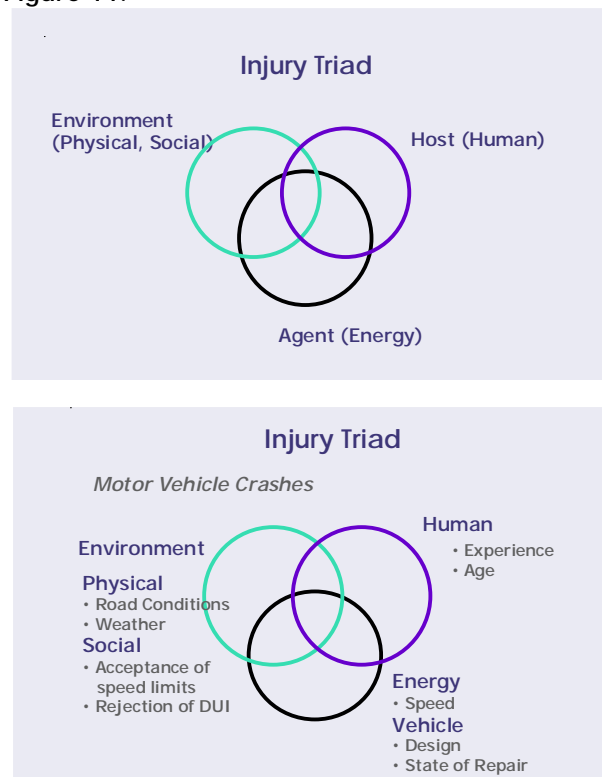

The Injury Triad

Contributing factors to injury are generally divided into three groups: host, environment (often subdivided into sociocultural and physical) and agent factors, frequently called the epidemiologic triad. The agent in the case of injury is the energy that is transferred or the cause of energy (e.g. fire/heat, car, gunshot, fall). The injury triad (Figure 11) presents examples of these factors for the case of motor vehicle crashes. Using prevention strategies that attack the injury triad from all directions will have the greatest likelihood of success. Therefore, a combination of strategies that address all of the factors, including host, environment and agent factors, should be used. Strategies should be prioritized based on the availability of resources and the highest probability of success.

The Injury Can be Prevented without Preventing the Event

A key concept in injury-prevention science is preventing the injury without preventing the event. For example, a child can be in a car crash but be protected by a properly fitting restraint system. The amount of energy transferred to the body does not exceed tissue tolerances and no injury occurs. However, given a similar crash where a child is improperly secured and is ejected from the vehicle, a serious injury is almost certain to occur due to the large amount of energy transfer. Injury-causing agents will be difficult to eliminate but we can modify many host and environment factors to mitigate energy transfer and reduce the risk of serious injury.

Figure 11.

Use Passive Strategies When Possible

The epidemiologic triad (host, agent, environment factors) has been used to understand medical illnesses for more than a century. Regarding medical illnesses, we know that vaccines (passive strategy) are more effective public health tools than attempting to change behavior in high-risk groups (active strategy). This concept can also be applied to the science of injury control. When educational or other active strategies are used, they should be coupled with passive strategies when possible. These strategies do not require action by an individual for protection to occur. Using playground injuries as an example, an individual does not need to know that the playground equipment was designed to prevent entrapment. Passive protective strategies are very much like vaccines. The protection is automatically present, and the protective strategy will go into action when needed. "Technological vaccines" such as energy-absorbing playground surfacing, stationary activity centers (as opposed to wheeled baby walkers), flame-retardant sleepwear, roll-over protective structures on tractors, child-resistant medication packaging and

the motor vehicle airbag have been successfully employed to prevent a variety of types of injury. In addition, other passive strategies such as sidewalks, window guards and pool fences are used to separate individuals from potential hazards.

Unitary Rubberized Playground Surfacing: A "technological vaccine" against playground injuries.

parents that they should use child restraints is simply not enough.

Enactment and enforcement of laws and policies also are recommended strategies for preventing injuries. For example, employers can develop workplace policies that protect employees from harm. State government can enact legislation requiring the use of bicycle helmets.

Supervision Alone Fails to Prevent Injury

Injury prevention theory dictates that strategies requiring frequent action or vigilance on the part of an individual are least likely to succeed. Adult supervision is the most common active strategy recommended to prevent injury to children. Although supervision is clearly desirable, when used alone it frequently fails to prevent injury. Many consumer product-related injuries to children occur with an adult immediately present at the moment of injury. Because injuries take only a moment to occur, and characteristically occur unexpectedly, and because even the best parent in the world cannot watch their child 100 percent of the time, supervision alone cannot be relied on to effectively prevent injury.

As discussed above in regard to the epidemiologic triad, multifaceted prevention programs that combine strategies are most likely to be effective. For example, a successful program to increase booster seat use among young children could involve the following strategies.

- Spreading awareness of the importance of booster seat use through a public awareness campaign in partnership with local media.
- Offering booster seat educational courses to parents of young children.
- Providing booster seat distribution programs in low-income, high-risk communities.
- Enacting legislation requiring children to be restrained in an appropriate restraint until the adult seat belt fits them properly.
- Working with law enforcement to raise awareness of new laws and available resources.
- Designing motor vehicles with built-in child restraint systems.

Effective Active Strategies

There are, however, injury-prevention strategies that inevitably rely on behavior change. Engineers can design a better bicycle helmet, but it will prevent head injury only if it is used consistently and properly. Therefore, active strategies need to be developed and evaluated to determine the most effective methods for changing behavior and therefore, reducing the risk of injury. We know from health education and behavior theories and the experiences of other public health issues that knowledge alone does not change behavior. Most people know that cigarette smoking is hazardous to one's health. This fact does not prevent millions of people from using tobacco products daily. Educational strategies must reduce real and perceived barriers to positive behavior change. In the case of child restraints, barriers to use may be inability to read installation instructions or not being able to afford the restraint. Although an important first step, informing

Injury Prevention Occurs in the Community

Unlike some diseases that can be effectively prevented without leaving the clinician's office, injury cannot be effectively fought without attacking it where it occurs in the community. Instead of providing vaccination against infectious diseases in the office or clinic, injury prevention programs use "technological vaccines" in the home and community (such as energy-absorbing surfaces under playground equipment or airbags in motor vehicles) to passively "immunize" against injury. Injury prevention strategies involving collaboration and community involvement are more likely to be successful. Coalition development is a strategy that has been effectively used to mobilize communities to address the injury problems that most affect them.

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

In addition to common themes and core recommendations, this section outlines injury-specific recommendations developed through consensus. Supporting information for injury-specific recommendations can be found in individual reports on the subjects. These documents are available electronically at www.state.oh.us/odps/division/ems/ems_local/trauma/trauma_commissions.htm.

Theme: Injuries are costly. Injury prevention saves lives and money.

A. Seek creative and collaborative solutions to funding.

1. Enhance communication and collaboration among key stakeholders.
2. Encourage insurance companies, employers and others to cover injury prevention programs and services to reduce healthcare costs.

B. Provide state funding that adequately addresses injury - a leading cause of morbidity and mortality in Ohio.

Theme: Improved injury surveillance efforts and program evaluation are needed.

C. Improve injury surveillance efforts.

1. Develop and maintain injury data infrastructures as discussed below. Collect cost and payer information when possible to allow cost/benefit analyses of injury prevention interventions.
2. Form an ongoing, interagency workgroup to review and make recommendations regarding data needs and opportunities. The workgroup should consider coordination, linking and quality improvement of data collection efforts. It should include representatives familiar with the relevant databases. This group should explore:
 - Funding opportunities to support data linkage.
 - Mechanisms to improve quality and access to data.
3. Continue to provide support for the:
 - Development and maintenance of the Ohio Emergency Medical Services Incident Reporting System (EMSIRS) and the Ohio Trauma Registry through the Ohio Department of Public Safety.
 - Implementation of the Ohio Youth Risk Behavior Survey (YRBS) and the Ohio Behavioral Risk Factor Surveillance Survey (BRFSS).
 - Collection of licensed child care center serious injury data through the Ohio Department of Job and Family Services.
4. Support new uses for injury data through:
 - The development of a Crash Outcomes Data Evaluation System (CODES) in Ohio. CODES links traffic crash reports, Emergency Medical Services Incident Reporting System (EMSIRS) data and hospital discharge data. Funding is available from the National Highway Traffic Safety Administration.
 - Ohio's participation in the Centers for Disease Control and Prevention's (CDC's) National Violent Death Reporting System (NVDRS).
 - External cause of injury coding (e-coding) of and increased access to the full set of Ohio hospital discharge data.
5. Create a permanent and stable funding mechanism for the development of:
 - A statewide emergency department surveillance system that uses the CDC's *Data Elements for Emergency Department Systems*. (www.cdc.gov/ncipc/pub-res/deedspage.htm)
 - A statewide coroners' database.
 - A statewide school injury surveillance system.
 - An occupational injury surveillance system based on the U.S. Bureau of Labor Statistics' system.
 - A statewide toxic exposure data collection system.
 - Incentives (e.g., related grant funding, etc.) to improve records completion for all statewide injury databases.

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

Injury-specific Data Surveillance Recommendations:

6. Create a standardized list of data elements or report form for child maltreatment reporting in health care facilities. Create a database to track maltreatment-related injuries.
7. Encourage the development and use of standardized elder abuse assessment tools, record keeping and referral tracking systems in health care facilities. Create a database to track injuries resulting from elder abuse.
8. Encourage the development and use of standardized intimate partner violence assessment tools, record keeping and referral tracking systems in health care facilities. Create a database to track injuries resulting from intimate partner violence.
9. Encourage the development of Domestic Violence Fatality Review in all 88 counties based on existing county programs and the Ohio Child Fatality Review Program.
10. Classify burn and fire injuries of greater than 5 percent body surface area as a reportable disease and develop a surveillance database.
11. Develop a poison exposure surveillance system to include deaths, hospitalizations, emergency department visits and all exposure incidents reported to Ohio poison control centers.
12. Create a statewide surveillance system to track suicide attempts and completions.
13. Create a statewide surveillance system to track firearm-related injuries.
14. Require law enforcement traffic crash reports to collect information on potential distractions.

D. Promote the use of injury prevention guidelines and evaluation measures that are based upon current evidence-based research and literature.

As part of the statewide coalition (described below), create a committee with responsibility for ongoing review of the effectiveness of prevention programs.

Theme: Improved statewide coordination of programs is needed.

E. Continue to develop leadership and infrastructure to identify, promote, and respond to injury prevention needs at the state and local level.

1. Implement recommendations from the State and Territorial Injury Prevention Directors' Association's (STIPDA) report, *An Assessment of the Ohio Injury Program, March 19-22, 2001*.
2. Strengthen the structure and funding of the Ohio Department of Health's Injury Prevention Section to provide technical assistance, training and coordination of activities, and support to state and local injury prevention efforts.
3. Create a statewide, interdisciplinary injury prevention coalition and provide a permanent funding mechanism to hire a full-time coordinator.

Injury-specific Recommendations

4. Create a permanent and stable funding mechanism for voluntary home visit programs of two years or greater duration per client in an effort to prevent child maltreatment. Target high-risk groups such as low-income families, families having children with disabilities and single parents without support.
5. Create a permanent and stable funding mechanism to maintain statewide suicide prevention and response initiatives.
6. Provide incentives for local government to construct "safe" communities for cyclists and pedestrians.
7. Create a permanent and stable funding mechanism to sustain the operation of the three existing regional poison control centers in Ohio.
8. Provide funding for a coordinated, annual, statewide smoke alarm awareness day to offer inspections, battery replacements and new installations as needed to low income families, families with young children and older adults.

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

9. Provide funding for a multifaceted statewide campaign to increase helmet use among bicycle and other non-powered vehicle users. The campaign should include education, helmet subsidies or giveaways, and legislation.
10. Provide funding for a statewide education and awareness program to prevent unintentional poisoning by elders and children younger than 5 years, and evaluate its effectiveness.
11. Implement a statewide outreach and education program to raise awareness among potential employers of the policies and regulations in existence to protect youthful workers from injury.
12. Implement a statewide awareness and education program targeting parents about firearm-related injuries.
13. Provide increased support of child restraint distribution, installation and education programs.
14. Establish and support driving alternatives to serve older drivers with a diminished ability to drive

F. Coordinate and link EMS, trauma care and public health agencies with other injury prevention programs at the national, state and local levels to increase collaboration.

1. Increase interagency collaboration and coordination between state agencies and organizations concerned with the prevention of injury, in particular the Ohio departments of Health and Public Safety, including the EMS Board and Trauma Committee, Bureau of Workers' Compensation, Ohio departments of Education, Mental Health, Aging, Transportation, Natural Resources and other relevant agencies.

Injury-specific Recommendations:

2. Encourage a collaborative response to intimate partner violence and child maltreatment in all counties.
3. Encourage a collaborative response to elder abuse in all counties.

G. Promote the use of community prevention programs - that are multifaceted, evidence-based and use effective evaluation by public health agencies, trauma centers, emergency medical services and other programs.

1. As part of the statewide coalition, create a committee with responsibility for injury prevention education.
2. Increase awareness through statewide public education programs that injury is a preventable public health problem and promote strategies for prevention through collaborative community programs.
 - Create an injury prevention Web site, listserve and toll free referral number.
 - Promote materials to health care, government and other groups working with at-risk populations.
3. Provide relevant training on injury surveillance and prevention strategies for professionals including: policy makers, law enforcement, nurses, physicians, EMS, teachers, child care professionals, extended care facility and senior care workers, employers, public health professionals and others.
4. Incorporate age-appropriate education on injury prevention, life skills, conflict resolution, parenting skills, bullying and other related issues into school curricula. Provide and promote standardized training materials for classroom use by teachers and other school professionals.

Injury-specific Recommendations:

5. Provide funding for and require the development of a standardized six-hour child maltreatment training curriculum for licensed child care centers. This responsibility should be given to the Ohio Department of Job and Family Services, Child Care Licensing Section. The training is currently required in the Ohio Administrative Code.
6. Support evidence-based programs for youth that provide instruction in life skills and anger management to encourage positive solutions and nonviolent responses to conflicts and problems.

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

Theme: *Injuries disproportionately affect those living in poverty and the young and the old.*

H. Promote injury prevention programs that focus on populations most at risk based on injury surveillance. Children and older adults living in poverty should be high priority.

Theme: *Alcohol use is an important risk factor for injury.*

I. Fund and support initiatives that address prevention of alcohol- and other drug-related injuries. These initiatives should include education, legislation, coalition building, and screening and intervention by health care professionals.

Theme: *Legislation can be an effective strategy for preventing injuries.*

J. Enact or strengthen state and local legislation and policies which lead to the prevention of injuries.

1. The statewide coalition should monitor and advocate for policies and legislation which enhance the safety of Ohioans.
2. Provide information and resources to relevant agencies to support injury prevention legislation.
3. Enact legislation and policies to prevent injuries.

Injury-specific Recommendations:

4. Enact state legislation based on the American Academy of Pediatrics' Residential Swimming Pool Safety Act:
 - Require four-sided fencing on all new residential swimming pool construction.
 - Require four sided fencing be added to all existing residential swimming pools at the time of sale of the house.
 - Provide a one-time tax credit of \$100 to add four-sided fencing to any existing residential swimming pool.

5. Expand existing state legislation to require that all persons riding in a boat shorter than 18 feet in length, regardless of age, wear a personal flotation device.
6. Mandate the installation of protective window guards on windows not designated as emergency exits in multiple-residence dwellings where young children may live.
7. Enact legislation requiring new public and school playgrounds to be constructed according to the U.S. Consumer Product Safety Commission's (CPSC) guidelines for playground surfacing and equipment. Encourage communities to renovate existing playgrounds accordingly.
