8. Support federal legislation to reinstate flammability standards for children's sleepwear, particularly for children ages 0-7 years. Enact similar state legislation.
9. Support national standards mandating "fire-safe" cigarettes.
10. Enact legislation requiring helmet use by bicycle and other non-powered vehicle riders when riding on public roads.
11. Support legislation requiring energy-absorbing handlebars and other safety design improvements on new bicycles.
12. Enact a stronger motorcycle helmet law that applies to riders of all ages. (Current law applies only to riders younger than age 18.)
13. Support increased enforcement of Ohio's recently enacted .08 percent blood alcohol concentration (BAC) law for motor vehicle operators.
14. Increase penalties for driving under the influence of alcohol and other drugs.
15. Increase penalties for underage alcohol drinkers, their parents and those who provide alcohol to underage drinkers.
16. Enact legislation requiring children's products sold in Ohio to conform to the safety standards of the Consumer Product Safety Commission. Prohibit the sale of recalled products. (See Children's Product Safety Act at www.kidsindanger.org for model legislation).

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

17. Create a task force to review child maltreatment laws and recommend improvements. This group should consider:
 - Requiring standard terminology and objectivity in defining abuse.
 - Developing an objective, medical definition of abuse for health care professionals. The American Academy of Pediatrics has a definition of physical abuse.
 - Banning the use of corporal punishment in schools and other institutions where children receive care.
18. Create a task force to review other state laws and issue recommendations for improving Ohio's domestic violence law. This group should consider the following:
 - Include dating partners, male and female, who have never married or cohabited in Ohio domestic violence law.
 - Increase penalties for a violation of sections A and B of ORC 2919.25.
 - Require training of health care professionals as outlined in ORC 4723.25; ORC 4731.282; ORC 4732.141 to be mandatory.
19. Create a task force to review elder abuse laws and recommend improvements. This group should consider:
 - Requiring standard terminology and objectivity in defining elder abuse.
 - Developing an objective, medical definition of abuse for health care professionals.
20. Enact state legislation addressing the following firearm-related issues: Juvenile Possession Law, Child Access Prevention Law, and 'Safe Gun' standards.
21. Enact statewide primary restraint legislation for all motor vehicle occupants and support enforcement.
22. Improve the child restraint law to include:
 - Required booster seat use for children in the 4 to 8-year-old range.
 - Restriction of children 11 years of age and younger from being front seat passengers, unless there is no alternative seating.
23. Enact ATV (all-terrain vehicle) safety legislation to include the following:
 - Required helmet use for operators and riders.
 - Restricted sale to and use of ATVs by children aged 15 years and younger.
 - Required safety training and state certification for operators.

Appendix

ANATOMIC AND PHYSIOLOGIC FEATURES THAT INCREASE THE OCCURRENCE AND/OR SEVERITY OF INJURY IN CHILDREN

<u>General</u>	The surface-to-volume ratio of children is high. Dehydration can easily occur from overheating or sunburn. Also, rapid growth rates mean children's coordination and motor skills may be poorly developed in relation to their physical size.
<u>Airway</u>	Airway is smaller and more flexible. Airway is easier to obstruct with both food and nonfood objects. Tongue is larger.
<u>Breathing</u>	Normal ventilation requires minimal work. Respiratory rate decreases with age and varies with excitement, fear, anger, fever or pain. Stress may double respiratory rate. Most infants less than 6 months do not breathe through their mouth; they are nose breathers. Higher respiratory rates mean increased exposure to airborne toxins, for example smoke from house fires.
<u>Head</u>	Head is large relative to the child's body. The child's higher center of gravity makes falls more likely. Strangulation can occur in crib or high chair. Head is likely to impact in falls and car crashes.
<u>Neck</u>	Infant's short neck makes it difficult to palpate a carotid pulse and to intubate. Discrete movement of the infant's neck can block the airway. Fulcrum of neck movement is higher than in adult.
<u>Chest and Lungs</u>	Pediatric bony cage is less rigid, more compressible than the adult. Children have a decreased risk of rib fractures but an increased risk of pulmonary contusion.
<u>Abdomen And Pelvis</u>	Abdominal wall poorly developed. Abdominal organs less protected by rib cage organs are large in relation to the abdominal cavity.
<u>G.I.</u>	Increased intestinal absorption increases likelihood of poisoning from nitrates, lead, or medications.
<u>Mouth</u>	Chewing mechanism not fully developed. Risk of choking and aspiration from foods, for example popcorn, nuts or chips.
<u>Back, Spine And Bones</u>	Children grow at rapid rate; coordination not consistent with growth. Bones are porous, flexible and can splinter and bend with stress causing spiral fractures and splintering.
<u>Skin</u>	Skin is thin relative to adults. Full thickness burns occur at lower temperatures.

ANATOMIC AND PHYSIOLOGIC FEATURES THAT INCREASE THE OCCURRENCE AND/OR SEVERITY OF INJURY IN OLDER PERSONS

<u>General</u>	Decrease in physiologic reserves, slowing of central nervous system response, drug metabolism changes, decreases in body mass, muscular atrophy and high frequency of pre-existing medical conditions.
<u>Airway</u>	Loss of protective reflexes in swallowing increases likelihood of choking on food.
<u>Breathing</u>	Decreased protective mucous and deconditioning (lack of fitness) opens the lungs to toxic exposure.
<u>Head</u>	Changes in cognitive ability, concentration and memory can mask symptoms of traumatic brain injury.
<u>Neck</u>	Thinning of intervertebral discs and shortening of vertebral bodies increase the difficulty of intubation.
<u>Back, Spine and Bones</u>	Osteoporosis increases risk of fractures.
<u>Skin</u>	Loss of subcutaneous tissue and thinning skin increase likelihood of injury after a bump and chances of thermal burns.
<u>Mouth</u>	Poor dentition and false teeth may increase risk of choking.
<u>Visual and Auditory Acuity</u>	Loss of vision and hearing increase risk of motor vehicle crashes and falls.
<u>Balance, Strength, Coordination</u>	Decreases in balance strength and coordination increase risk of falling and damage from a fall.

BEHAVIORAL AND DEVELOPMENTAL FEATURES THAT INCREASE THE OCCURRENCE OF INJURY

Infants

- Completely dependent on care giver
- Require constant supervision
- Unable to verbally communicate and report events
- Explores by mouthing objects; spends a lot of time sucking
- Rapid changes in motor abilities and mobility
- Begins to turn over and grasp objects

Resulting injury risks:

- Falls when left unattended or from infant walkers
- Suffocation and aspiration of small items
- Child maltreatment
- Electrical cord mouth burns
- Burn deaths in house fires

Toddlers or Preschoolers

- Curious, exploratory and impulsive
- Requires constant supervision
- Imitative of adult behavior with lack of awareness regarding potential danger
- Increased motor abilities
- Higher center of gravity
- Oral exploration puts objects in mouth

Resulting injury risks:

- Falls from stairs and windows
- Scald burns
- Drowning
- Child maltreatment
- Poisonings

Elementary School Age

- More mature motor skills
- May recognize dangerous situations but lack experience or judgment to make appropriate and safe decisions
- Increased mobility
- Increased independence
- Unable to assess speed and time of oncoming traffic

Resulting injury risks:

- Pedestrian injuries
- Bicycle, skateboard, scooters, in-line roller blading injuries
- Playground injuries

Young Adolescent

- Dynamic period of change and transition
- Need for peer approval and influenced by peer pressure
- Curious, experimental, risk-taking behavior and feelings of immortality
- More agile, increased strength and abilities, however may lack experience in appropriate decision-making skills
- Increased involvement in sports and recreational activities
- Increased independence
- Imitate behavior of older adolescents and adults
- Increased incidence of depression, experimentation with drug/alcohol use
- Impulsive

Resulting injury risks:

- Car occupant and motorcycle injuries
- Sports injuries
- Bicycle, skateboard, scooters, in-line roller blading injuries
- Drug and alcohol abuse
- Violence related injuries
- Sexual assault and dating violence
- Suicide and suicide gestures

Older persons

- Social isolation
- Depression
- Cognitive impairment (memory/judgement)
- Increased leisure time
- Prescription drug effects/interactions
- Lack of public transportation

Resulting injury risks

- Slips, trips and falls
- Motor vehicle crashes
- Poisonings
- Elder abuse
- Suicide

Appendix D

Section 5 of Amended Substitute House Bill 138 as enacted by the 123rd General Assembly, November 2000

The Director of Health shall organize and coordinate a temporary commission to determine how to better prevent traumatic injuries in this state. The commission's study shall include, without limitation, consideration of how to improve public safety education and how to prevent pediatric and geriatric injuries.

The Department of Public Safety, Department of Natural Resources, Department of Agriculture, Department of Education, Commission on Minority Health and Bureau of Workers' Compensation shall participate in and assist with the commission's study.

Within 120 days after the effective date of this act, the director shall appoint to the commission appropriate public health authorities, entities that conduct safety research and education, and advocates for injured persons. Commission members shall have expertise in injury prevention, broadly represent relevant disciplines, and represent all regions of the state.

Within 120 days after the effective date of this act, the Speaker of the House of Representatives shall appoint to the commission one member of the majority party and one member of the minority party in the House of Representatives and the President of the Senate shall appoint to the commission one member of the majority party and one member of the minority party in the Senate.

In conducting its study and developing its recommendations, the commission shall consult and cooperate with the Trauma Committee of the State Board of Emergency Medical Services. The commission shall conclude its study and disband not later than three years after the effective date of this section, whereupon the director shall transmit the commission's findings and recommendations to the Governor, General Assembly, chief executive of each state agency specified in this section, and other appropriate persons.

EXECUTIVE SUMMARY

The Centers for Disease Control and Prevention (CDC) reported that, in 1999, 150,000 Americans died from injuries, and one in 10 survived an injury serious enough to require at least an emergency room visit (CDC Injury Research Agenda, 2002). Injuries are the leading cause of death for people ages 1 to 44. Of all hospital stays, 8 percent are due to injuries. Traumatic brain injury, spinal cord injury and burns tend to result in more serious and long-term consequences. It is estimated 5.3 million Americans have long-term disabilities from traumatic brain injury, with 80,000 new cases added each year. Another 200,000 Americans have disabilities due to traumatic spinal cord injury, with 11,000 new cases annually. Beyond limitations on movement and thinking, persons who survive traumatic injuries often experience post-traumatic stress disorder, depression, substance abuse, and problems at school, work or family.

According to data reported to the Ohio Trauma Registry, in the four-year period between Jan. 1, 1999, and Dec. 31, 2002, 78,200 Ohio citizens survived traumatic injuries severe enough to require at least two days of hospitalization or transfer to a trauma center. Falls and motor vehicle crashes accounted for two-thirds of these injuries. Traumatic brain injury and spinal cord injury resulted in the most severe injuries. Of these two types of injuries, 78 percent were due to falls and vehicular crashes.

Legislative authority and commission membership

Recognizing the importance of addressing this public health concern for the well-being of Ohio citizens, the Ohio General Assembly enacted House Bill (H.B.) 138 November 2000, creating the Post-critical Trauma Care Commission. H.B. 138 required the director of health organize and coordinate a temporary commission “to determine how to improve the accessibility, affordability, quality, and cost effectiveness of post-critical adult and pediatric trauma care.” The commission was required to complete its work by Nov. 3, 2003.

H.B. 138 also delineated a variety of participants for the commission and required the director of health appoint representation from those organizations and entities identified in the legislation. The enabling legislation established that “[C]ommission members shall have expertise in rehabilitation and retraining of injury victims, broadly represent relevant disciplines, and represent all regions of the state.” H.B. 138 required mandatory members, including representatives from the majority and minority parties of both houses of the Ohio General Assembly and certain specified state agencies as follows:

Ohio Bureau of Workers’ Compensation

Ohio Department of Aging

Ohio Department of Health

Ohio Department of Job and Family Services

Ohio Rehabilitation Services Commission

All five of these agencies have indicated their support for this final report. In fulfilling the charge for broad representation among many potential stakeholders, 28 organizations and associations were invited to nominate a primary and alternate representative to the commission. Agencies and organizations subsequently represented and supporting this report were:

Ohio Association of Health Plans	Ohio Farm Bureau Federation
Ohio Business Coalition on Health	Ohio Public Health Association
Ohio Department of Public Safety	Ohio Rehabilitation Association
Ohio Department of Alcohol and Drug Addiction Services	The Salvation Army
Ohio Department of Education	Ohio Legal Rights Service
Ohio Fire Chiefs’ Association	American Physical Therapy Association
Ohio Hospital Association	Association of Ohio Philanthropic Homes, Housing and Services for the Aging
Ohio Nurses Association	Ohio State Chiropractic Association
Ohio Psychological Association	Ohio Association of Professional Fire Fighters
Ohio State Medical Association	Ohio Society of Trauma Nurse Coordinators
Brain Injury Association of Ohio	Ohio Osteopathic Association
Ohio Association of Rehabilitation Facilities	State Trauma Committee
Ohio Children’s Hospitals Association	Central Ohio Trauma System

Findings

The state’s system of delivering trauma services, and its enabling legislation, adequately address first response, transport to a trauma center, and reporting to the Ohio Trauma Registry. The system does not address post-critical trauma care adequately, with little or no attention given to reverse transport, follow-up services, and the roles of non-trauma center hospitals and other post-acute care providers in an overall state system of trauma services. The lack of systematic resources for persons with traumatic injuries increases the occurrence of unmet needs resulting in additional medical complications, loss of productivity, recurring injury, and reduced life satisfaction.

Post-critical trauma care of individuals coping with the consequences of an injury for which they have no preparation presents its own unique and complex set of challenges to patients, caregivers, health-care professionals, educators, and society at large. While the aftermath of a traumatic injury is challenging for many reasons, difficulties this patient population has accessing appropriate services via the existing health and human service systems are paramount.

Transitioning from the hospital or other acute-care setting into work, home, school, and community should be as seamless as possible to meet adequately the individual needs of persons requiring post-critical trauma care. Patient, family and provider access to up-to-date and comprehensive information concerning the array of resources that may be available in a community is key to successful community reintegration. However, in the end, the foundation for successful reintegration of the post-critical trauma care patient consists of access to services of the patient’s choice, mutual respect for the strengths that patients and professionals bring to the reintegration process, early and ongoing consumer and family involvement, and promotion of self-direction and decision making.

Through deliberation, a series of recommendations evolved intended to address selected aspects of identified shortcomings in the current service delivery systems. The following recommendations are detailed in subsequent chapters of this report. Crucial to identifying topics and developing recommendation was the overarching goal of improving the accessibility, affordability, quality, and cost effectiveness of post-critical trauma care.

Recommendation 1: Providers and health-care facilities delivering post-critical care to trauma patients should adopt and comply with a patient bill of rights and responsibilities that recognizes the unique needs of those undergoing rehabilitation and recovery, and contributes to an effective and responsive patient-care program.

Recommendation 2: A rehabilitation service locator should be created and maintained to allow patients, their families, and acute-care providers to identify sources of needed follow-up rehabilitation services and compare salient characteristics of available providers.

Recommendation 3: To address the lifetime needs of Ohio citizens with disability due to injury, a system of resource facilitation should be established that provides access to information and services, increases the capacity for community support, and, as needed, coordinates services for individuals and their families.

Recommendation 4: To ensure the most appropriate educational experience for children who have had traumatic injuries, hospital and school personnel need additional training on issues for educational re-entry; classroom teachers need access to resources about reintegrating these students; and mechanisms are needed to ensure providers, internal and external to the school system, take a coordinated approach. More research is needed on educating students who have incurred traumatic injuries.

Recommendation 5: Organizations and agencies with an interest in minimizing the effects of substance use disorders on injury outcomes should be convened to identify opportunities for improving secondary substance abuse prevention and treatment for persons during and following trauma care.

Recommendation 6: A follow-up registry should be established to provide information about the long-term complications and outcomes for trauma-care patients. Data collection methodology should be an extension of the existing Ohio Trauma Registry and should provide information for local, regional and statewide prevention programming and health-care service planning.

Recommendation 7: Within the broader framework of responsibility for injury and trauma, leadership concerning longer-term issues and needs following traumatic injury should have a single, identifiable, and permanent location within Ohio’s state government.

“The findings and recommendations presented in the Commission’s comprehensive and thoroughly researched report are sobering, yet hopeful.”

Tom Hayes
Director,
Ohio Department of Job
& Family Services

INTRODUCTION AND BACKGROUND

The Centers for Disease Control and Prevention (CDC) reported that, in 1999, 150,000 Americans died from injuries, and one in 10 survived an injury serious enough to require at least an emergency room visit (CDC Injury Research Agenda, 2002. See Injury Fact Sheet in appendix A). Injuries are the leading cause of death from in people ages 1 to 44. Of all hospital stays, 8 percent are due to injuries. It is estimated that 5.3 million Americans have long-term disabilities from traumatic brain injury, with 80,000 new cases added each year. Another 200,000 Americans have disabilities due to traumatic spinal cord injury, with 11,000 new cases annually. Injuries to limbs, the back, and eyes, as well as burn injuries, also are causes of disability. Beyond limitations on movement and thinking, persons who survive traumatic injuries often experience post-traumatic stress disorder, depression, substance abuse, and problems in school, work or family.

Trauma or traumatic injury means severe damage to or destruction of tissue that creates a significant risk of loss of life; loss of a limb; significant, permanent disfigurement; significant, permanent disability; and is caused by blunt or penetrating injury; exposure to electromagnetic, chemical, or radioactive energy; drowning, suffocation, or strangulation; a deficit or excess of heat. (O.R.C. 4765.01(N))

Trauma care means the assessment, diagnosis, transportation, treatment, or rehabilitation of a trauma patient by emergency medical personnel or by appropriately credentialed health-care professionals within the prescribed scope of practice.

Trauma center is any hospital verified by the American College of Surgeons.

Pediatric patient is a patient younger than 16 years of age.

Adult or geriatric patient is a patient who is not a pediatric patient.

Post-critical trauma care refers to recognizing the needs of trauma patients requiring or undergoing rehabilitation and recovery care or services following release or transfer from a trauma center.

Over the past four years Ohio hospitals participating in the Ohio Trauma Registry reported that 78,205 patients survived traumatic injuries and were discharged from the hospital (see Figure 1). One in five patients had traumatic brain injury, spinal cord injury, or burns as their primary injury.

Injury patterns

N=78,205 (survivors)
January 1999 – December 2002

Injury Patterns based upon ICD-9-CM Diagnosis Code groups utilized in the Barell Matrix. Inj Prev 2002;8:91-6

This graph depicts trauma patients whose length of stay in the intensive care unit was three or more days. Although there are many factors that affect a patient’s length of stay in the intensive care unit, a higher severity of injury is one main reason. Thirty percent of these patients suffered traumatic brain injury, spinal cord injury or burns.

Commission authority

Recognizing the importance of addressing this public health concern for the well-being of Ohio citizens, in November 2000 the Ohio General Assembly enacted H.B. 138, creating the Post-critical Trauma Care Commission. (The full text of section 6 of Amended Substitute H.B. 138 as enacted by the 123rd General Assembly is included in appendix B.) H.B. 138 required the director of health organize and coordinate a temporary commission “to determine how to improve the accessibility, affordability, quality, and cost effectiveness of post-critical adult and pediatric trauma care.” The commission was required to complete its work by Nov. 3, 2003.

Appointments to the commission began March 2001, and the inaugural meeting was held July 2001, at the Ohio Department of Health. John D. Corrigan, Ph.D., from the department of physical medicine and rehabilitation at The Ohio State University, was appointed as commission chair and Cynthia Iske, M.S. O.T.R./L., from Children’s Hospital of Columbus was appointed as commission vice chair.

Guiding principles

Although in some contexts, post-critical trauma care is considered one component of the broader concept of trauma care, this report distinguishes it as a discipline with standards of care, treatment, and follow-up tailored to specific medical, social, psychological, and educational needs resulting from a traumatic incident that occurs post-injury and has potential lifetime consequences.

Post-critical trauma care of individuals coping with the aftermath of an injury for which they have no preparation presents its own unique and complex set of challenges to patients, caregivers, health-care professionals, educators, and society at large.

Post-critical trauma care is challenging for many reasons, chief among them is that it is often difficult for this patient population with diverse needs to fit easily into existing service systems.

The foundation for successful reintegration of the post-critical trauma-care patient into the home and community consists of access to services of the patient’s choice, mutual respect for the strengths patients and professionals bring to the reintegration process, early and ongoing consumer and family involvement, and promotion of self-direction and decision making.

Patient and provider access to up-to-date and comprehensive information concerning the broad array of post-critical trauma care resources available in a community is key to successful rehabilitation.

Transitioning from the hospital or other acute care setting into work, home, school, and community living should be as seamless as possible to meet adequately the specialized needs of the post-critical trauma-care individual.

Commission recommendations

The state’s system of delivering trauma services, and its enabling legislation, adequately addresses traumatic injury from first response, transport to a trauma center, and reporting to the Ohio Trauma Registry. The system does not address post-critical trauma care adequately, with little or no attention given to reverse transport, follow-up services, and the roles of non-trauma center hospitals and other post-acute care providers in an overall state system of trauma services. The lack of systematic resources for persons with traumatic injuries increases the occurrence of unmet needs. This results in additional medical complications, loss of productivity, recurring injuries, and reduced life satisfaction. Addressing these recognized shortfalls guided the commission in its work.

Through deliberation, a series of recommendations evolved intended to address identified shortcomings. These recommendations are detailed in subsequent chapters of this report. Crucial to identifying topics and developing recommendations was the overarching goal of improving the accessibility, affordability, quality, and cost-effectiveness of post-critical trauma care. Chapters in this report describe the following recommendations:

Patient bill of rights and responsibilities

Providers and health-care facilities delivering post-critical care to trauma patients should adopt and comply with a Patient Bill of Rights and Responsibilities that recognizes the unique needs of those undergoing rehabilitation and recovery, and contributes to an effective and responsive patient care program.

Rehabilitation service locator

A rehabilitation service locator should be created and maintained to allow patients, their families, and acute care providers to identify sources of needed follow-up rehabilitation services and compare salient characteristics of available providers.

Statewide system of resource facilitation

To address the lifetime needs of Ohio citizens with disability due to injury, a system of resource facilitation should be established that provides access to information and services, increases the capacity for community support, and, as needed, coordinates services for individuals and their families.

Meeting educational needs of children who have had traumatic injuries

To ensure the most appropriate educational experience for children who have had traumatic injuries, hospital and school personnel need additional training on issues for educational re-entry; classroom teachers need access to resources about reintegrating these students; and mechanisms are needed to ensure all providers, internal and external to the school system, take a coordinated approach. More research is needed on educating students who have incurred traumatic injuries.

Substance use and traumatic injury

Organizations and agencies with an interest in minimizing the effects of substance use disorders on injury outcomes should be convened to identify opportunities for improving secondary prevention of substance abuse and treatment for persons during and following trauma care.

Ohio trauma follow-up registry

A follow-up registry should be established to provide information about the long-term complications and outcomes for trauma care patients. Data collection methodology should be an extension of the existing Ohio Trauma Registry and should provide information for local, regional and statewide prevention programming and health-care service planning.

On-going responsibility for post-critical trauma care issues

The commission made a final recommendation pertaining to the continued attention that will be required to pursue these recommendations. While many agencies and organizations should be involved in implementation of the above recommendations, there is a need for a single focus of oversight and leadership related to the issues the commission raised, as well as other challenges affecting individuals after their initial care. Specifically, the commission recommends that, in the process of identifying the locus of leadership and responsibilities in Ohio government for issues of injury and trauma, leadership for concerns about the needs and services following critical care should have a single, identifiable location within the resulting structure.

Commission process

Recommendations toward improvement of post-critical trauma care would have to first determine where post-critical care begins. It would require identification of appropriate stakeholders, the needs of the patient and the systems of care, as well as the processes by which accessibility, affordability, cost-effectiveness and quality of care and services can be ensured.

Five areas of study or concentration were set forth for the commission in the legislation:

- Transfer of trauma patients from regional trauma centers to other facilities;
- Physical, psychological, and vocational rehabilitation of trauma patients;
- Reemployment of trauma patients;
- Social support mechanisms for families of trauma patients;
- Mitigation of the effects of pediatric and geriatric trauma.

In its inaugural meeting, the commission determined that, before a comprehensive work plan could be developed, certain questions would need to be addressed and answered to the extent possible. These were initially identified as:

- Determining what quantitative data was available and accessible to the commission;
- Assessing where the current system in Ohio is in the delivery of post-critical trauma care;
- Identifying where the needs for improvement exist;
- Identifying where the current system is succeeding and in turn failing;
- Determining to the extent possible what direction the trauma system needs to take in the future to ensure improvement in the accessibility, affordability, cost-effectiveness, and quality of post-critical trauma care.

Data needs initially identified to address these questions included:

- The number of patients entering rehabilitation and other post-acute care as a result of traumatic injury. The existing state trauma registry was suggested as a source for some of this data;
- Review models from other states that have undertaken to quantify post-critical trauma care needs;
- Accounting of rehabilitation and post-acute care options currently available statewide;
- Data on traumatic injury recovery, rehabilitation, and costs to Medicaid and workers’ compensation.

While considerable effort was made to identify sources of this information, one of the commision’s first conclusions was objective data about the eventual consequences of trauma were not available in Ohio or nationally.

In January 2002, it was decided the most advantageous use of the level of expertise and experience on the commission, plus the means to ensure concentrated efforts would be to divide the commission into three committees:

- Medical rehabilitation – Priorities categorized into four basic issues: geographic availability; insurance and coverage; service matching; and patient tracking. By looking at these issues, this committee hoped to be able to recommend a methodology wherein referring hospitals and other initial treating facilities had a better means of matching patient acuity and service needs with service provision.
- Disability – Directed attention to the issues of re-entry into the workforce or education system; examined resources for social support; and inquiry into the impact of age and family on long-term rehabilitation.

- Data and follow-up registry – Provided objective information on which to base public and private policy decisions about post-critical trauma care. The committee recommended a system that allows research on the nature and scope of consequences of trauma, and provides an informed basis for meeting the needs of those injured.

After meeting in committees for 15 months, the commission systematically reviewed, evaluated and revised specific recommendations brought forth by the three committees. Five areas of recommendations emerged, and in the course of deliberations two additional focus areas were identified: substance abuse and on-going responsibility for post-critical trauma care issues. Committees and the commission as a whole engaged in monthly, iterative discussions of the recommendations, their rationale, and suggestions for implementation. This work concluded at the end of June 2003, when the commission reached consensus on the content of its final report.

From July 2003, through the conclusion of the commission’s work, efforts focused on disseminating the report and recommendations. Special emphasis was given to gaining support for the final report from sponsoring agencies and organizations, as well as the means by which the commission’s findings would be shared with the Governor and the Ohio General Assembly.

Benchmarks

November 2000	Substitute H.B. 138 effective date.
February 2001	Ohio Department of Health (ODH) staff directed to organize and provide administrative support to the Post-critical Trauma Care Commission.
March 2001	State agencies, organizations, and professional associations invited to nominate representatives to the commission.
April 2001	Letters of appointment sent to selected representatives.
July 2001	Ohio Commission on Dispute Resolution and Conflict Management Inaugural meeting held at ODH.
August 2001, to May 2002	Monthly commission meetings.
May 2002	Committees’ preliminary recommendations presented to full commission.
January 2003	First draft of final report presented to full commission.
February to June 2003	Bi-monthly commission meetings to review, evaluate and revise committee recommendations, rationale and suggestions for implementation.
June 2003	Commission approved revised final report for distribution to sponsoring organization and agencies.
September 2003	Letters supporting the final report were received from numerous agencies and organizations.
November 2003	Final report was presented to the Governor and the Ohio General Assembly.

Membership and collaboration

H.B. 138 delineated a variety of participants for the commission and required the director of health appoint representation from organizations and entities identified in the legislation. H.B. 138 established that “[C]ommission members shall have expertise in rehabilitation and retraining of injury victims, broadly represent relevant disciplines, and represent all regions of the state.” Throughout its deliberations and study, the commission relied on the expertise, experience, and affiliations of its membership not only for first-hand contributions to the process, but to provide external contributory sources as well. Therefore, the commission’s final work product, which follows in subsequent parts of this report, reflects a compilation of data and information from multiple sources provided through the good offices of commission representatives and their supporting organizations.

Mandatory members required by the legislation included representatives from the majority and minority parties of both houses of the General Assembly and certain specified state agencies as follows:

- Ohio Bureau of Workers’ Compensation
- Ohio Department of Aging
- Ohio Department of Health
- Ohio Department of Job & Family Services
- Ohio Rehabilitation Services Commission

In fulfilling the charge for non-state agency representation, department of health staff developed a listing of 54 possible sources for commission membership. From this original listing, 28 organizations and associations were invited to nominate a primary and alternate representative to the commission. Agencies and organizations represented by members and endorsing this report are:

- | | |
|--|---|
| Brain Injury Association of Ohio | Ohio Farm Bureau Federation |
| Ohio Association of Health Plans | Ohio Public Health Association |
| Ohio Business Coalition on Health | Ohio Rehabilitation Association |
| Ohio Children’s Hospitals Association | The Salvation Army |
| Ohio Department of Public Safety | Ohio Legal Rights Service |
| Ohio Department of Alcohol and Drug Addiction Services | American Physical Therapy Association |
| Ohio Department of Education | Association of Ohio Philanthropic Homes, Housing and Services for the Aging |
| Ohio Fire Chiefs Association | Ohio State Chiropractic Association |
| Ohio Hospital Association | Ohio Association of Professional Fire Fighters |
| Ohio Nurses Association | Ohio Society of Trauma Nurse Coordinators |
| Ohio Psychological Association | Ohio Osteopathic Association |
| Ohio State Medical Association | State Trauma Committee |
| Ohio Association of Rehabilitation Facilities | Central Ohio Trauma System |

Over the course of the commission’s work the original membership altered somewhat due to personal and agency/organizational commitments. The final membership roster by name is included in appendix C of this report.

Acknowledgements

The chair, vice chair and members of the Post-critical Trauma Care Commission wish to also acknowledge the support received from the following sources over the course of its deliberations:

- Roy Croy, Ohio Department of Health, Bureau of Community Health Care Facilities and Services for his steady hand and sage advice.
- Linda Vojtush, executive secretary, Ohio Department of Health, Bureau of Community Health Care Facilities and Services for her tireless administrative support in scheduling and setting up meetings, and in recording, preparing, and distributing commission meeting minutes in an always reliable and timely manner.
- Virginia Haller, M.D., Ohio Department of Health, for her keen interest in the commission’s work and valuable insights into injury prevention and Ohio’s activities in that field.
- Margaret Lewis, Fred Bartenstein, and Ed Krauss of the Ohio Commission on Dispute Resolution and Conflict Management for their facilitation in the early stages of commission meetings. The advice, assistance, and expertise provided by these professional facilitators contributed immeasurably to start up, organization, and work planning for the commission’s later endeavors.
- Judy Roush, commission member and her parent organization, the Ohio Farm Bureau, for providing excellent accommodations for the commission’s meetings.
- The Ohio Bureau of Workers’ Compensation for their invaluable assistance in preparing this final report.

"Many of the issues of the Commission studied are relevant to workplace traumas and the injured worker population served by the Ohio Bureau of Workers' Compensation."

Administrator/CEO,
Ohio Bureau of
Workers' Compensation

A MODEL PATIENT BILL OF RIGHTS AND RESPONSIBILITIES FOR TRAUMA PATIENTS RECEIVING POST-CRITICAL TRAUMA CARE IN OHIO

Recommendation: Providers and health-care facilities delivering post-critical care to trauma patients should adopt and comply with a patient bill of rights and responsibilities that recognizes the unique needs of those undergoing rehabilitation and recovery, and contributes to an effective and responsive patient care program.

Vision

Philosophies and guiding principles for treating trauma patients, and the treatments themselves, should reflect not only medically and technologically advanced practices, but also will reflect the highest regard for the uniqueness of the patient, the sanctity of the caregiver-patient relationship, and an awareness that the likelihood of successful rehabilitation increases when patients, families, and caregivers demonstrate respect, cooperation, dignity, and responsibility.

Description of the problem

Richard J. Mullins wrote in an article published in 1999, "Many authors have identified the publication of *Accidental Death and Disability: The Neglected Disease of Modern Society* in 1966...as the inaugural event in what was to become a sustained effort sponsored by government to control 'accidental injury' as a health problem...In this publication, strong government leadership was proposed as essential in the effort to solve the 'neglected epidemic' of death and disability from injury. The authors detailed the problem's enormous magnitude: the tragedy of early death among the young, the burden of disability, and costs of billions of dollars. The authors emphasized that the scope of the problem was all the more alarming when contrasted with the public's apathetic attitude toward trauma care." (1)

Recognizing the still significant relevance of that milestone white paper, as well as the evolution of medicine and public health in this arena, this chapter puts forth recommendations meant to inform public policy and public awareness, and most importantly, empower trauma patients as they move through the process of healing and regaining their independence.

The continuum of care required by trauma patients is a broad spectrum that will, in most cases, expose these individuals to medical care and social support systems that are, to varying degrees, coordinated, provided by qualified health professionals, and responsive to each patient's specialized needs. Across this continuum of care, from triage to rehabilitation, trauma patients encounter a host of often challenging and stressful experiences, as well as the need to make decisions for which they usually have no preparation or prior experience. As a result, the importance of the caregiver-patient relationship becomes a touchstone for trauma patients' successful rehabilitation.

In his article, “Gift From Within,” Frank M. Ochberg, M.D., refers to a principle of individuality that states, “Every individual has a unique pathway to recovery after traumatic stress.” (2) Although Dr. Ochberg refers to the emotional impact of traumatic stress (emotional disorder vs. physical injury) resulting from events such as violence, abuse, crime, or other environmental stress, his principle translates in its entirety to individuals coping with the aftermath of traumatic injury. While it is difficult to experience medical diagnosis and treatment in the acute care setting, the needs of trauma patients become even more unique as they attempt to rehabilitate and integrate themselves back into a society more equipped and comfortable in accommodating its most healthy and productive members. Learning to drive, coping with disfigurement, re-entering the work force, dealing with depression, and a host of other challenges that face the trauma patient require special attention and a commitment on the part of professionals and support persons to recognize that

their patient, family member, or friend has unique needs, personal preferences, and a pathway to recovery not exactly like any other. It is within this context that concern for patients’ rights needs to be considered and that caregivers assume responsibility for informing and explaining these rights to patients and their families.

In *American Independence and the Right to Emergency Care*, Robert Baker, Ph.D., observes that, “Asserting a right is a powerful statement in the American political rhetoric. In this country, medicine has recognized patients’ rights for over 150 years. As early as 1886 there was a proposal to ‘draw up...a Bill of Rights which shall secure patients from any injustice from the votaries of science.’” (3)

The American Hospital Association (AHA) first adopted a patient bill of rights in 1973. Subsequently, on Oct. 21, 1992, the AHA Board of Trustees approved a revised version of its original bill of rights. The AHA developed these rights with the expectations that hospitals and health-care institutions would support these rights in the interest of delivering effective patient care. A random review across an array of health-care providers and advocacy organizations reveals many such institutions and providers have developed patient bills of rights that incorporate the principles reflected in the AHA model, which is a practice the AHA promotes and supports. In its introduction, the AHA Patient’s Bill of Rights states that, “The American Hospital Association encourages health care institutions to tailor this bill of rights to their patient community by translating and/or simplifying the language of this bill of rights as may be necessary to ensure that patients and their families understand their rights and responsibilities.” (4)

Proposed strategies

Goal

Caregivers and the facilities within which they treat and minister to trauma patients undergoing rehabilitation and recovery will adopt, formally through written and visible public displays, as well as informally, through their personal norms and approaches to care, a code of rights and responsibilities that contributes to and creates a nurturing, respectful, and outcome-based environment.

Principles

- The Model Patient Bill of Rights and Responsibilities will augment, and not supplant, existing and similar bills of rights already in use in facilities that provide post-critical trauma care;
- The Model Patient Bill of Rights and Responsibilities incorporates rights and responsibilities specific to patients who are experiencing challenges unique to post-critical trauma care and are undergoing rehabilitation and recovery related to their trauma;
- The Model Patient Bill of Rights and Responsibilities recognizes that adults and children have unique sets of challenges and may require standards of care, treatments, and follow-up tailored not only to their specific medical and trauma-related circumstances, but also to their unique age and stage-of-life-based needs;
- The Model Patient Bill of Rights and Responsibilities is only one of many tools contributing to the creation and maintenance of a culture that reflects an ingrained and inherent respect for the uniqueness of the individual and an environment where caregivers and families feel safe interacting collegially to enhance the physical, emotional, and spiritual healing of the trauma patient.

Keeping in mind Dr. Ochberg’s “unique pathway to recovery,” the Post-critical Trauma Care Commission’s Medical Rehabilitation Committee reviewed a number of existing patient bills of rights used by a variety of health-care institutions and facilities. The committee particularly searched for patient bills of rights drafted for post-acute patients with complex and varied needs and more specifically, for those addressing post-critical trauma patient needs. Although the review did not employ formal research methodologies, it did reveal that the use of general patient bills of rights is widespread in the health-care profession, particularly in hospitals. Patient bills of rights specific to the needs of trauma patients were not found readily.

The commission decided developing a Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio would be a valuable contribution to ensuring this vulnerable population receives the highest quality care in settings that respect the rights and roles of patients, families, and caregivers. To that end, the commission recommends that the Model Bill of Rights and Responsibilities contained herein be adopted as a model for use by institutions and facilities that provide post acute and/or rehabilitative treatment or care, as well as those that provide social services that support such care, to trauma patients in Ohio.

The following is the *Post-critical Trauma Care Commission’s Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio*. The end of the chapter includes a list of patient bills of rights that were reviewed as part of the research and drafting process.

Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio

The Post-critical Trauma Care Commission, as authorized by H. B. 138 of the 123rd General Assembly, recommends providers and health-care facilities administering post-critical care to trauma patients in Ohio adopt and comply with a patient bill of rights and responsibilities that recognizes the unique needs of individuals undergoing rehabilitation and recovery, and contributes to an effective and responsive patient-care program. Further, the commission recommends facilities adopt the following model patient bill of rights and responsibilities or one that reflects its precepts and principles.

Patient rights

This facility's post-critical trauma care patients, including adults, children, and parents or guardians of children who are patients, have the following rights:

1. Patients have the right to receive appropriate, individualized care and treatment, and to:

- Up-to-date, comprehensive information about their condition, including appropriate care and treatment options, and to have that information explained in terms they are able to understand;
- Participate as an equal partner of the health team in all decisions concerning their care, including the right to accept, refuse, modify, or discontinue treatment;
- Be advised of the risks of any treatment, procedure, or therapy and the right to be informed of the possible medical consequences of accepting or refusing a course of action;
- Be informed of clinical trials, experimental treatments, or unproven research protocols that may be available for their treatment or rehabilitation, as well as the right to accept or refuse participation in such research;
- Expect the best possible care, including specialty care, from providers trained, credentialed, and experienced in managing their condition. Should a facility or provider not be able to provide appropriate care at any time during the course of treatment, patients have the right to expect timely referrals to providers able to provide such care;
- Receive appropriate care free from unlawful discrimination of any type.

Pediatric patients have the right to:

- Be treated in American College of Surgeons (ACS)-verified pediatric trauma centers. Adult centers that have not undertaken a pediatric review process parallel to the adult verification process are not interchangeable with pediatric trauma centers;
- Be treated in pediatric rehabilitation centers that focus on school re-entry, family-centered care, and community reintegration. Adult rehabilitation facilities with pediatric resources are not interchangeable with Commission for Accreditation of Rehabilitation Facilities (CARF)-accredited pediatric rehabilitation facilities.

2. Patients have the right to receive care that is coordinated and ongoing, as needed, across a broad spectrum of settings, including home, hospital, nursing home, school, workplace, therapeutic, and rehabilitative care settings. These include the right to:

- Expect continuity of care, as well as appropriate follow-up care, that focuses on helping them achieve the highest possible degree of functionality, greater independence, and a rapid return to productivity;
- Expect prompt and effective communication among the health-care professionals attending to their treatment, recovery, and rehabilitative needs, including timely sharing of information related to medical history, individualized plans of care, prognosis, treatment, and follow-up regimens when multidisciplinary provider teams are involved;
- Seek multiple opinions from professionals on their care team in any setting, or from sources of their own choosing, without fear of experiencing negative consequences as the result of seeking additional or alternate information;
- Know the names, credentials, experience, and professional status of their caregivers, as well as which caregiver has primary responsibility for coordinating and managing their care;
- Expect their family members are encouraged to participate as members of the care team so they can provide care continuity as the patient navigates the health-care system.

3. Patients have the right to be treated at all times with respect, dignity, and consideration and to expect health-care professionals to place high priority on safeguarding their privacy. These include the right to:

- Participate in decisions concerning their health care based on their religious beliefs, spiritual values, or cultural identity;
- Expect consideration of their personal privacy and comfort during physical examinations, therapeutic interventions, or rehabilitative interventions;
- Access their medical records and to expect that no other persons, other than those involved with their care or allowed by law, have access to their records without the patient's written permission;
- Expect confidentiality in communications with their caregivers and to have their health-care providers maintain their records and communications maintained confidentially, unless patients waive their confidentiality rights;
- Prepare advance directives to express end-of-life preferences.

4. Patients have the right to receive assistance and support to maintain, and whenever possible, enhance, the quality of their lives. These include the right to:

- Be informed of available resources throughout the course of their treatment (and especially as part of the discharge process), including appropriate support groups; pastoral/spiritual care; psychological counseling; employment counseling; local community social services; national referral sources, including associations and organizations; government sources for information and assistance; protective or advocacy services; translator services; patient education programs; and other services as appropriate and available;
- Expect that their health-care professionals will take the necessary measures to ensure that patients will, to the extent possible, be relieved of pain throughout the course of their treatment and as part of long-term follow-up;
- Be approached and treated at all times as a "whole" person and to expect that all aspects of treatment, follow-up, and support reflect their emotional, physical, spiritual, and psychological needs. Families of pediatric patients have the right to be viewed as extensions of the patient and provided with information and services that enable them to create an environment in which the pediatric patient can thrive.

5. Patients have the right to understand the policies and procedures of a facility or provider, including those concerning patient conduct, payment and billing, and complaint and appeal processes. These include the right to:

- Be advised of and understand any policies or rules that apply to their conduct in their role as a patient, including expectations regarding compliance with instructions from their health-care team, provision of accurate personal medical information to caregivers, notification of appointment cancellations, and other patient responsibilities, as specified by the provider;
- Obtain complete and detailed information concerning the costs of their care. Patients have the right to itemized listings, as well as total charges, for the services they have received. Patients have the right to an explanation of the charges for any and all items they do not understand;
- Understand what, if any, third-party payors have responsibility for any portion of their bills, as well as any co-payments, deductibles, or non-covered services for which the patient may be responsible;
- Obtain information on how to receive assistance in paying their bills, including referrals to programs for which the patient may be eligible;
- Be advised of any complaint, grievance, or appeal processes available to them related to their care or payment for services.

Patient responsibilities

Post-critical trauma care patients of this facility, including adults, children, and the parents or guardians of children who are patients, have the following responsibilities:

1. Patients have the responsibility to provide, to the best of their ability, full and complete information concerning matters related to their health, including the responsibility to:
- Inform providers and/or caregivers of their past medical history, current diagnoses and/or symptoms, treatment plans developed by other providers, current and past medications, past hospitalizations, and other information related to their care and treatment;

• Tell their providers of any changes to their medical condition, adverse reactions to treatment or medications, and changes to contact information, including phone numbers and addresses.
2. Patients have the responsibility to follow through with agreed upon plans of treatment, including scheduled appointments and self-care, including the responsibility to:
- Follow the instructions and read or have read and explained to them educational materials, special instructions, or self-care plans provided by the health-care team to ensure the best possible treatment outcomes;

• Inform their providers, and ask questions if they are uncertain or not clear, regarding any aspect of their health care, including planned treatment and/or follow-up regimens, medication dosages and schedules, or instructions from physicians, nurses, or other caregivers;

• Attend follow-up medical appointments, inform provider offices in a timely manner if there is a need to cancel an appointment, and reschedule appointments promptly;

• Understand that, if they refuse treatment or do not follow the agreed upon treatment plan, they assume responsibility for outcomes resulting from their choices;

• Inform their caregivers or health-care team of non-medical concerns related to their diagnosis and treatment, including those of an emotional, psychological, spiritual, or family-related nature, so appropriate referrals can be made to address concerns promptly.
3. Patients have the responsibility to meet the financial obligations of their health-care treatment, including the responsibility to:
- Understand and/or ask questions concerning the costs of their care and to ask specific and detailed questions regarding their provider bills and any third party coverage;

• Pay their providers promptly and to provide information to the provider or insurer/third party as required or requested to facilitate coordination and payment of benefits;

• Advise providers and insurers/third parties of changes to employment, addresses, phone numbers, and other information used to identify or contact patients.
4. Patients have the responsibility to demonstrate respect and dignity to other patients and health-care staff in the environment where care is provided, including the responsibility to:
- Be considerate of others in the health-care setting, including being polite and respectful, ensuring appropriate behavior by their guests, assisting to control unnecessary noise, distractions, and prohibited activities, such as smoking, and honoring the rights of others in the health care setting;

• Be respectful of the facility's property and the property of other patients.
5. Patients have the responsibility to follow the rules, regulations, and policies of their health-care setting, as well as for knowing their rights in the setting, including the responsibility to:
- Follow facility rules concerning patient conduct and to ask questions regarding policies that they do not understand. Additionally, patients have the responsibility to limit the number of their visitors, per the facility's policy, and, to the best of their ability, ensure their visitors adhere to facility rules and regulations;

• Know and understand their rights concerning care and conduct in the facility and to follow the facility's administrative process for addressing concerns about their rights.

Implementation

Implementation of a strategy to adopt, endorse, and promote a Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio should take the following steps:

1. The Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio should be endorsed and promoted through legislative action (e.g., joint House and Senate resolution).
2. The Ohio Association of Rehabilitation Facilities (OARF), the Ohio Hospital Association, the Ohio Department of Health, the Ohio Department of Public Safety, Emergency Medical Services, the Ohio Department of Job & Family Services, the Ohio Department of Aging, the Ohio Bureau of Workers' Compensation, the Ohio Chapter Committee on Trauma of the American College of Surgeons, and others as appropriate, should collaborate to promote and implement the following initiatives:
- Encourage facilities that provide post-critical trauma care to review their existing patient bills of rights with an eye toward including rights that specifically reflect trauma care principles as expressed in the commission's report. The commission recommends its bill of rights be promoted as a model rather than a mandate, with a preference that existing structures be used to ensure patient-focused environments that foster quality outcomes. Further, the commission recommends the stakeholders identified above communicate to regulatory bodies, such as the Commission for Accreditation of Rehabilitation Facilities (CARF), that inclusion of trauma-related rights in a facility's patient bill of rights become part of the accreditation review process.

• Develop and lead an awareness campaign that publicizes and promotes the Model Patient Bill of Rights and Responsibilities to educate facilities and their caregivers on the expectations, standards, and benefits associated with establishing an environment that encourages openness, teamwork, and mutual respect.

• Develop and implement a best practices program to publicly recognize and reward facilities and caregivers who demonstrate exemplary effort in providing post-critical trauma care to trauma patients in Ohio, with particular emphasis on innovative initiatives that reflect productive and successful caregiver-family partnerships.

Legislative support

Representatives of the Post-critical Trauma Care Commission, including the chief executives of the state agencies named in H.B. 138, will impress upon the Ohio General Assembly members the importance of formalizing a Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio. The commission will stress its proposed model be promoted and supported through a joint resolution of the House and Senate or some other legislative vehicle that underscores the importance of the principles contained within the model. Should the leadership of the General Assembly be so inclined, they may also sponsor legislation that would require any facility providing care specific to this population include as part of their operating procedures the proposed model bill of rights and responsibilities or a similar credo that incorporates the same principles. Although the commission does not at this time recommend this specific model be mandated for use by facilities, an eventual developmental step may be introducing legislation that would require facilities providing care to this population to

adopt and incorporate into their operating procedures and existing bills of rights language that clearly delineates and specifically protects the rights of post-critical trauma care patients. The commission does not anticipate that this would require a significant amount of funding. However, establishing a specific source of funds for this purpose in the Ohio Department of Health would elevate its profile and signal to the public and their elected representatives the importance attached to it.

Accrediting body support

The commission recommends discussions ensue with representatives of the major accrediting bodies for facilities that serve trauma patients receiving post-critical trauma care regarding patient rights-related accreditation requirements. Information sharing with CARF, the Ohio chapter of the American College of Surgeons, the Ohio Hospital Association, the Ohio Health Care Association, and others as appropriate, could focus on incorporating these principles in the oversight and accrediting activities and standards maintained and enforced by these organizations. Additionally, specific strategies for regular review and feedback for facility practices related to patient and family involvement could be an ongoing topic of discussion. The commission believes open and visible discussion of these issues, as well as their elevation to a place of importance at least equal to those of a clinical or operational nature, would contribute to the potential for improved patient outcomes, as well as an enhanced quality of life for patients and providers.

Awareness campaign

Patients receive post-critical trauma care in a variety of settings throughout Ohio. Once a patient has received initial treatment at a designated trauma center, there are numerous options for the next phases of care. Patients may receive acute rehabilitation services through an inpatient facility (hospital, nursing or long-term care facility, stand-alone rehabilitation facility, etc.) or may be referred to an outpatient rehabilitation setting (vocational rehabilitation, sports medicine, etc.). It is the commission’s contention the concepts and principles of the Model Patient Bill of Rights and Responsibilities are equally applicable to any facility that provides care for this vulnerable population. Therefore, the commission recommends the previously identified stakeholders collaborate to undertake a public awareness campaign targeted toward the promotion of the model bill of rights and best practices related to the demonstration of patient and family-centered principles. Promotional activities could include direct mailings to providers that would include the commission’s vision and goals, as well as a copy of the model bill of rights; references to established Web sites, including the resource locator, the long-term care consumer guide, and others; and examples of best practices of facilities in Ohio that emphasize collaborative, team-oriented, and respectful treatment of individuals coping with the ongoing challenges of trauma rehabilitation.

Best practices

The commission recommends the previously identified stakeholders, in collaboration with interested organizations, agencies, and individuals, establish a formal mechanism to recognize and publicize best practices demonstrated by post-critical trauma care providers throughout Ohio. Incentives and possibilities for reward are as broad as the imagination. Public acknowledgment and praise for creative use of the model bill of rights, for example, is just one jumping-off point for a variety of strategies and initiatives that could be advertised and promoted throughout the industry and to the public. The commission believes bringing to the forefront of the public agenda positive and ongoing attention concerning challenges and opportunities facing trauma patients will contribute to meaningful forces of change and empowerment.

Director, Ohio Department of Aging

REHABILITATION SERVICE LOCATOR

Recommendation: A rehabilitation service locator should be created and maintained to allow patients, their families, and acute-care providers to identify sources of needed follow-up rehabilitation services and compare salient characteristics of available providers.

Vision

The intent of the locator service is to assist trauma patients and their families to identify and select prescribed discharge services that meet their needs.

Description of the problem

Trauma patients, family members, and health-care professionals lack comprehensive information about health-care services (medical and therapeutic) available in Ohio to treat trauma patients after discharge from the critical/acute care hospital setting. Trauma patients' medical and therapy needs post discharge can be varied and complex depending on the severity of the injury. Often hospital discharge planning falls short of appropriately matching the trauma patient's needs with the most appropriate and best quality health-care provider. Health-care services frequently change, which poses a challenge to health-care professionals to know all the service options available (based on quality and location). There is no comprehensive listing of resources for professionals or consumers regarding service availability. A rehabilitation service locator provides a comprehensive service listing. The locator allows the user to conduct a self-directed search of the most appropriate service based on their post-acute needs. Services identified in the locator are intended to assist patients throughout the continuum from pediatrics through adulthood to geriatrics.

The service locator concept was developed to address the Post-critical Trauma Care Commission's mission. The service locator will help families and professionals identify services in a specific geographic location and match this to their service needs. Each facility listed in the service locator will identify the funding they accept. There is also the possibility to link to sites/contacts similar to MedAssist Inc., which is a free service for patients to qualify for various funding sources. Companies such as this will assist patients in obtaining Medicaid, Bureau of Children with Medical Handicaps (BCMH), charitable services or other types of services. They have a mission to assist uninsured patients through the often difficult and confusing process of applying for public assistance to satisfy their obligation to the medical provider. The locator database will gather various data points that address quality, such as accreditation, outcomes, and patient satisfaction. If each patient is matched appropriately with the right facility, we would anticipate the cost effectiveness and quality aspects of the mission are met.

The overriding principle of the service locator is to provide information regarding quality health-care service availability and enhancing consumer choice. The service locator will enhance and, in some cases, facilitate the transfer decision-making process from acute care to the next appropriate level of care. The locator can be Web-based and have a user-friendly look-up function or search capability. The user could input specific information about the patient together with the patient's needs and, through the

search function, could find compatible service providers that meet the patient’s specifications. Although the specific services categories maintained on the locator may change as the system matures, it is recommended the following services be included initially: location, demographics, years of operation, types of services offered, types of professionals available, funding accepted, patient characteristics, accreditations, admission/discharge criteria, outcomes, linkages to consumer guides (e.g., a guide to finding the right rehabilitation facility).

The purpose of the rehabilitation service locator is to provide a comprehensive tool of service availability. To bridge the gap between the trauma patient, family and caregivers with health-care professionals it is proposed that a Web-based rehabilitation service locator be created. Trauma patients and their families, as well as health-care providers, can use this locator service (e.g., discharge planners, social workers, physicians, case managers and insurers). Similar in principle to the Ohio Long-Term Care Consumer Guide at www.ltcoho.org, which assists consumers and professionals in identifying long-term nursing services, the rehabilitation service locator would be designed to meet the trauma patient’s specific needs.

Benefits of the rehabilitation service locator are:

- Trauma patients and their families will be able to access up-to-date information regarding the availability of post-acute health-care services that might otherwise be unknown;
- Health-care providers (discharge planners, social workers, physicians, case managers and insurers) will be able to access up-to-date information regarding the availability of post-critical/acute health-care services that might otherwise be unknown;
- The Web-based locator can be populated and updated easily as facility information changes.
- The Web-based locator can be accessed easily from the home or office;
- Standardization of facility services and detail will provide comparison opportunity;
- Trauma patients will be more likely to receive quality post-critical/acute services in their communities;
- Smaller facilities will be able to market their services appropriately to a larger audience;
- Funding for development and maintenance will be absorbed by contributing facilities;
- Facilities will be more likely to update their individual information;
- The opportunity for consumer and insurer funding comparisons will be improved.

Proposed strategies

Goal

The goal of the Rehabilitation Service Locator is to promote patient and caregiver choice for post-acute discharge services.

Principles

1. The Rehabilitation Service Locator Web site should be developed to house comprehensive information about Ohio’s inpatient and outpatient rehabilitation services.
2. The Rehabilitation Service Locator Web site should be designed to provide users with information regarding facilities and the services they offer (e.g., location, demographics, services offered, professionals available, funding accepted, patient characteristics, accreditation, admission criteria and outcomes).

3. The locator’s target population should be Ohio trauma patients and their families; however it should be available for use by other consumers and health-care professionals in their search for inpatient and outpatient rehabilitation services.
4. Locator information should be updated routinely to maintain its accuracy, and links should be provided to related Web sites (e.g., the Brain Injury Association of Ohio).

Implementation

1. Create Rehabilitation Service Locator Web site: It would be ideal to piggyback with the long-term care Web site locator; however, may need to consider the trauma system’s Web site location, if the cost of conformity to the existing long-term care locator is too significant.
 - a. Develop specific data points for the service locator.
 - b. Develop plan for submission: The locator information is supplied by facilities and providers voluntarily, using standardized definitions and data formats, and funded by a nominal fee paid by submitting facilities.
 - c. Initial mailing of a letter introducing the service locator to various inpatient and outpatient rehabilitation providers in Ohio. Enclosed will be the data collection form with the needed information.
 - d. Developing the plan for ongoing maintenance — possibly through annual subscription fees paid by health-care providers to be listed on the Web site.
 - e. Once created, a major initiative will involve marketing the locator to the potential users. A full-scale awareness campaign will be needed to reach health-care providers, agencies that serve this population, the trauma patients and their families.
2. Create a satisfaction measure: A final step of implementation is to create a measure of the locator’s effectiveness that can be used to justify its existence and secure ongoing funding but mostly to tweak its functionality for the user. A defined set of criteria should be developed that includes utilization (e.g., number of hits) and user satisfaction. Contract with an outside service/company to evaluate customer satisfaction results uniformly. The goal is to display results that can be compared evenly across facilities, similar to the insurance companies and LTC Web site.
3. Create a multidisciplinary group: Although the Rehabilitation Service Locator recommendations list a multitude of service types for inclusion on the locator, it is felt that a multidisciplinary group is needed to further analyze and develop standard definitions for service types using published national references (e.g., the *Brain Injury Association of America Provider Directory*). It will be important that facilities included in the locator abide by the standard definitions when describing their services so the user can make valid comparisons and decisions.

"The report does offer a sound roadmap for Ohio to follow as it constructs a comprehensive system of post-critical care for Ohioans who suffered traumatic injuries."

John M. Connelly
Executive director, State of Ohio
Rehabilitation Services Commission

A STATEWIDE SYSTEM OF RESOURCE FACILITATION

Recommendation: To address the lifetime needs of Ohio citizens with disability due to injury, a resource facilitation system should be established to provide access to information and services, increase the capacity for community support and, as needed, coordinate services for individuals and their families. The resource facilitation system should model the one the Brain Injury Association of Ohio is developing, but be expanded to include all causes of disability due to injury and extended to all regions of the state.

Vision

Ohio citizens with long-term needs due to traumatic injury, as well as professionals who work with them, should have easy access to the best available knowledge and resources about injury and its effects. A statewide system of resource facilitation (1) should be in place to provide a comprehensive yet economic approach to promoting informed choices. Knowledge of the resource facilitation system and its use should be widespread, allowing timely use of its services.

Description of the problem

Children and adults with long-term needs due to trauma require assistance from knowledgeable and trained individuals to help them identify, obtain and maintain the services and supports they require to maximize recovery and reintegration into home and community life. Assistance is particularly critical for those individuals who do not fit within eligibility criteria established for the major human service agencies. In fact, most of the state agencies that comprise today's human service system were established before large numbers of individuals began surviving significant and debilitating traumatic injuries.

Though the make-up of the disability population has changed over the last quarter of a century — with the proportion of individuals with long-term needs due to trauma on the rise — the service system has not responded to these population shifts. A conclusion from the 1995 report by the National Conference of State Legislators titled, What Legislators Need to Know About Traumatic Brain Injury, (2) applies to others with long-term needs due to traumatic injury:

These people have diverse needs that make it difficult for them to fit easily into existing service systems. State delivery systems tend to be based on diagnosis (developmental disabilities, mental illness, special health-care needs) or on financial need, such as Medicaid. These services are not always available or appropriate for people with brain injuries. Federal funding streams have shaped state services, making it difficult to restructure or expand existing services . . ." (2)

Unquestionably the fragmented, bureaucratic nature of the current human service system presents a significant obstacle to accessing needed assistance and supports for individuals with long-term needs due to trauma. For those with cognitive deficits following trauma, the very nature of their disability

compounds their difficulty in working through the bureaucratic maze to acquire assistance that may be available to them. Additionally, their need for information, resource coordination and problem-solving assistance may persist for years following their injury. For example, of those using the Brain Injury Association of Ohio's Helpline and Community Support Network programs during 2002, 16 percent were three months or less post injury, 20 percent were between four and 12 months post injury, 21 percent were between 13 and 36 months post injury, 27 percent were between 37 months and 10 years post injury and 16 percent were more than 11 years post injury. (6)

Without assistance, individuals with long-term needs associated with trauma experience significant barriers and delays in finding and accessing services available to them through the current service system. Failure to obtain needed services and supports in a timely and coordinated fashion, in turn, puts them at greater risks for common secondary complications, such as depression, substance abuse, and long-term unemployment, as well as other negative outcomes.

In the 1989 Interagency Head Injury Task Force Report (3) issued by the U.S. Department of Health and Human Services, "Encouraging the use of 'care manager' systems that operate throughout all stages of care, from acute care through community reentry" was listed as an implementation strategy to achieve a national agenda with six key recommendations. In 1990, Ohio enacted legislation (Amended Substitute H.B. 594) (4) to create the Head Injury Program and its Advisory Council in the Ohio Department of Health. (The program has since been transferred to the Ohio Rehabilitation Services Commission and is known as the Brain Injury Program and Advisory Committee.) Three of the program's eight legislated purposes pertain to facilitating access to information and services:

- Identify existing services in this state to assist survivors of head injury and their families;
- Promote service coordination for survivors of head injury and their families;
- Explore options for delivering case management services to residents of this state who are survivors of head injury.

The on-going need for assistance accessing resources was validated through the National Institutes of Health's Rehabilitation of Persons with Traumatic Brain Injury Consensus Statement (5) synthesized from testimony provided at an Oct. 26 through 28, 1998, Consensus Development Conference. It states, "Community-based, non-medical services should be components of the extended care and rehabilitation available to persons with traumatic brain injury. These include but are not necessarily limited to "...case manager programs to support practical life skill redevelopment and to help navigate through the public assistance and medical-rehabilitative care systems..." (5)

The need to assist individuals with spinal cord injuries is also apparent from statements and recommendations stemming from several meetings sponsored by the Centers for Disease Control and Prevention. The first, convened in November 1999, was titled, "Future Directions for Community-Based Spinal Cord Injury Program Research and Development." Held in Atlanta, approximately 20 spinal cord injury researchers and public health officials reviewed community-based methods for preventing secondary conditions of spinal cord injury. At a March 2001 follow-up meeting to further develop the national research agenda, interagency representatives *"discussed the progression of health needs following spinal cord injury and identified gaps in current service delivery for persons with spinal cord injury, developed an inventory of activities being conducted across federal agencies and explored a coordinated response to better serve this population."* (6) (Italics added.)

A system of resource facilitation

A resource facilitation system should be a comprehensive, coordinated program with three basic functions: 1) provide timely and up-to-date information to individuals, families, providers, and the public; 2) assist individuals who have been injured in obtaining available services and supports to maximize their health, independence, and integration into family, work, and community; and 3) build the local community's capacity to address their needs. Three program components offer graduated levels of assistance matching the degree of help required at a given point in time:

- A toll-free, statewide information and resource (I&R) telephone service;
- Regional offices addressing local needs and resources in all 88 Ohio counties;
- Individual service coordination, as needed, for more complex needs.

The I&R telephone service is designed to be the primary point of entry into the system, and represents the least intensive level of assistance in the program continuum. Those with greater resource facilitation needs are linked to regional offices, or if their needs are intensive and on-going, to programs offering the assistance of individualized service coordination. As the intensity of individuals' needs for resource facilitation services increase or decrease, they move up or down the program continuum to obtain the appropriate level of assistance. Individuals may drop out of the system entirely if their resource facilitation needs are met, and on-going assistance is no longer required, with the assurance they can return for help at a later time, should it become necessary. Core administrative, information management and communication services underpin these three programmatic components, promoting the development of an integrated, efficient and effective system.

The Brain Injury Association of Ohio (BIA-Ohio) has developed and operates two of the three program components of a resource facilitation system. BIA-Ohio operates the toll-free Helpline, and six of 15 proposed Community Support Network offices. BIA-Ohio also provides Infrastructure Support Functions. (See the schematic at the end of this chapter).

BIA-Ohio’s system has been developed incrementally over a period of almost 15 years as advocates have been able to acquire funding. Financial support has come primarily from grants awarded by the Brain Injury Advisory Committee at the Ohio Rehabilitation Services Commission, drawing upon state appropriations and federal match through the U.S. departments of Education, and Health and Human Services. BIA-Ohio has acquired supplemental support to help sustain and/or further develop the system through private foundation awards, as well as contributions from individuals and corporations. Donated office space and miscellaneous support services offered by the agencies that house the Community Support Network programs also contribute to their sustainability and promote cross-agency communication and collaboration. However, funding fluctuations associated with time-limited grant awards have made further development and stabilization of the system difficult.

The third programmatic component of resource facilitation — individual resource coordination — offers the most intensive assistance, but is also the least developed in Ohio. Only a few programs provide specialized individual service coordination for persons with brain injury. Though there is a demand for this type of specialized assistance, funding to sustain programs is lacking and, where it can be cobbled together, is unstable for any significant duration. Compounding the problem is the fact that, though some individuals with long-term needs due to trauma are eligible for case-management services provided through other systems, the personnel within those systems typically are unprepared to recognize or cope with their special needs. While training and certain accommodations could remedy this situation, no systematic approach has been developed to do so.

Proposed strategy

Goal

Extend the resource facilitation system developed for individuals with brain injury so information, services and supports are available to all Ohio citizens who experience disability as a result of traumatic injury.

Principles

The envisioned resource facilitation system should:

- Be integrated and comprehensive, not duplicative;
- Respect individual choice and promote self-direction;
- Encourage consumer and family involvement;
- Value home and community-based supports so individuals may take their places in the most integrated settings;
- Promote inclusiveness and cultural sensitivity in terms of outreach, program design and implementation.

Implementation

This proposal for development of a resource facilitation system for persons with a traumatic injury responds to the director of health’s charge and the Post-critical Trauma Care Commission’s purposes as identified in H.B. 138 by:

- Promoting accessibility to existing services and supports related to individuals’ physical, psychological, vocational rehabilitation, re-employment and social support needs;
- Capitalizing on an established, well-developed and nationally recognized conceptual framework for the system’s design and quality assurance mechanisms;
- Saving costs by building on a partially developed system that has been phased in over a 15-year period;
- Promoting efficiency and program cohesiveness through cross-system communication, collaboration and training;
- Encouraging self-direction and cost-efficiency through a three-tiered system that promotes choice and matches individuals’ level of need to the appropriate level of assistance.

The following steps are suggested for implementation of a resource facilitation system for Ohio citizens who incurred traumatic injury.

- 1) Convene a stakeholder’s workgroup to expand the BIA-Ohio system’s design to accommodate the needs of all populations with long-term needs due to injury, and to promote cross-agency buy-in and consumer involvement.
- 2) Draw on expertise and leadership from the Ohio departments of Health, Aging, Jobs and Family Services, and Public Safety, along with the Centers for Disease Control and Prevention, the Health Resources and Services Administration, and The Ohio State University’s Traumatic Brain Injury Model System, (7) to guide the workgroup’s efforts and synchronize them with national trends and initiatives.
- 3) Establish incremental achievement benchmarks, along with corresponding outcome, quality assurance measures, and reporting protocols, to ensure forward progression leading to the system’s full implementation.
- 4) Develop memorandums of agreement outlining state-agency roles and actions to contribute to the system’s efficiency and effectiveness. Issues addressed in the memorandums may include, but not necessarily be limited to, activating the current system to better serve individuals with long-term needs due to trauma through personnel training, program modifications, outreach, joint initiatives, and resource identification and development.
- 5) Build on and fortify those components and infrastructure of the proposed resource facilitation system thus far developed, so they may serve as a starting point for the system’s full implementation.

- 6) Monitor and take necessary action to integrate the long-term needs of individuals with disability due to trauma into contemporaneous system change initiatives. Such opportunities may include: the New Freedom Initiative/Ohio Access and related systems change grants, Ticket to Work and Work Incentives Improvement Act of 1999, and Ohio’s newly adopted rules for implementation of Individuals with Disabilities Education Act.
- 7) Develop awareness campaigns, targeting the general public and personnel within service providing agencies to promote knowledge and use of the resource facilitation system. Campaigns should address the growing number of individuals who experience disability due to traumatic injury and provide contact information to access the resource facilitation system.
- 8) Ensure individuals who staff Ohio’s resource facilitation system are knowledgeable about challenges associated with disabilities due to trauma and assistance offered through the complex service delivery system.
- 9) Adhere to values promoting development of a culturally sensitive resource facilitation system that is holistic, person and family centered, and encourages choice, self direction, and availability of community-based supports.

Toll-free Statewide Helpline

Operated by BIAOH

Two
↓

Community Support Networks

Operated by BIAOH; dotted areas on map show the 6 CSN locations currently funded

Three
↓

Individual Service Coordination

Only a few programs exist in Ohio offering Individual Resource Facilitation Services (case management); access to programs serving other disability populations is limited due to eligibility criteria that often excludes people w/BI.

Infrastructure Support Functions (ISF)

Administrative: Administrative support for the system’s first two program components (Helpline and Community Support Networks), provided by the Brain Injury Association of Ohio, includes financial and personnel management, and maintenance of the Information Management System.

Information Management System: At the system’s center are relational databases maintained on a server and accessible to Helpline and Community Support Network staff via the Internet. Information stored in the databases includes a statewide inventory of 72 types of programs and services, locations and meeting times for support groups around the state, contact information for distributing educational materials and event notices, and records on individuals seeking assistance through the program – the nature of their needs, how they learned about the service, how helpful they found it to be, etc. The IMS supports management, evaluation, reporting and development aspects of the program.

Communication & Outreach: The system’s primary “point of entry” is through the toll-free Helpline. Its number is included in various resource directories, and is publicized through public service announcements, at trainings and events and through literature distribution.

Education & Training: Is required for: 1) resource facilitation personnel at each of the system’s three levels; 2) professionals and service providers within established systems; and 3) individuals with long-term needs due to trauma, their families and advocates. Content should include: causes, consequences of injuries due to trauma, risks and prevention strategies for secondary complications, person-centered planning, understanding the current service system and how to navigate it, natural supports, basic advocacy skills, and assistance available through the Resource Facilitation System.

Interagency Collaboration: The system relies heavily on cross-system, interdisciplinary collaboration in its design, development and maintenance. Informal networking as well as formalized agreements to collaborate in areas of training, planning, problem solving, resource sharing and development and coordination of services at an individual level are essential to the System’s success.

Development: Identification and acquisition of federal, state and local (formula and fee-for-service) funding, supplemented with private sector support from diverse sources **Resource.**

Report of the Post-critical Trauma Care Commission

39

"...Ohio must exercise leadership in addressing over time the continuing challenges facing post-critical trauma care patients. This is especially true for children, since they face obstacles in achieving educational success and in recovering from devastating injuries so early in life."

Andrew Carter
President,
Ohio Children's Hospitals Association

MEETING THE EDUCATIONAL NEEDS OF CHILDREN WHO HAVE HAD TRAUMATIC INJURIES

Recommendation: To ensure the most appropriate educational experience for children who have had traumatic injuries, hospital and school personnel need additional training on issues for educational re-entry. Classroom teachers need access to resources about reintegrating these students; and mechanisms are needed to ensure providers, internal and external to the school system, take a coordinated approach in providing care. More research is needed on educating students who have incurred traumatic injuries.

Vision

Educational services should be affordable and accessible, and should ensure high educational expectations and achievement for children, including those who have experienced traumatic injuries.

Description of the problem

Educating children with traumatic injury can be a complex task for the educational system when the child is discharged from the hospital or rehabilitation setting. The child brings a medical label of traumatic injury with them to the school system, and the local educational agency (LEA) is responsible for providing appropriate reentry and educational services for the child.

At this point, confusion and/or frustration may occur for the patient, the family, and the educational agency on how to provide appropriate educational services since post-critical trauma or traumatic injury is not a disability category listed under the *Individuals with Disabilities Education Act* (IDEA). Traumatic injury, as defined by H.B. 138, can include such injuries as nerve or spinal cord injury, burns, vascular injury, limb amputation, internal organ injury, bone fractures, or brain injury.

Ensuring a seamless system for children with traumatic injury transitioning from the hospital to home, school, work, and community living is one area of concern. Transition and educational intervention requires a multidimensional approach and the use of a variety of strategies and resource materials. Although educators are providing services to meet the needs of children with traumatic injury, programs have not been developed adequately to meet the educational needs of these children. The solution is to provide training and support for teachers, therapists, and staff in the schools.

Another area of concern is the lack of knowledge and understanding of what is available in the LEAs under IDEA to meet the needs of the child with traumatic injury. IDEA provides the avenue for the educational agencies to evaluate the children to determine the educational and related service needs. In addition, IDEA requires documentation of services to meet the child's needs with a free appropriate public

education (FAPE) in the least restrictive environment (LRE). Under IDEA, there is not a disability category of traumatic injury. However, LEAs can provide services to children with traumatic injury(ies) identified as:

- Other health impaired;
- Orthopedically impaired;
- Multiple disabled;
- Traumatic brain injury;
- Emotional disturbance;
- Cognitive disabled.

The solution for this concern is not only training but ensuring a variety of methods for disseminating information pertaining to FAPE.

Another area of concern is the lack of controlled empirical studies regarding educational reintegration. There are discrepancies between hospital numbers of children treated with post-critical trauma and the lower incidence and prevalence of children receiving FAPE, as identified under IDEA in the educational system.

In addition, few empirical studies have been conducted to validate specific special education intervention to ensure children with traumatic injury are successful in school. The solution would be to conduct the research with controlled studies over a period of time.

The fourth area of concern is to ensure children with traumatic injury who are receiving services from a number of different agencies (i.e., medical, educational, mental health, mental retardation, drug, alcohol, and social) do not slip through the cracks of the system. Many times, it is not clear who will accept management responsibility for the child. The solution will require a system change on the part of a variety of agencies.

Definition of terms

Cognitive disability (mental retardation) - [3301-51-01(F)(3)(b)] Means significantly subaverage general intellectual functioning, existing concurrently with deficits in adaptive behavior and manifested during the developmental period, which adversely affects a child’s educational performance. (i) Significantly subaverage general intellectual functioning refers to an intelligence quotient of 70 or below as determined through a measure of cognitive functioning administered by a school psychologist or a qualified psychologist using a test designed for individual administration. Based on a standard error of measurement and clinical judgment, a child may be determined to have significant subaverage general intellectual functioning with an intelligence quotient not to exceed 75. (ii) Deficits in adaptive behavior means deficits in two or more applicable skill areas occurring within the context of the child’s environments

and typical of the child’s chronological age peers. (iii) A child who was identified by an Ohio school district as having a developmental handicap as of the effective date of this rule shall be considered a child with a disability if the child continues to meet the definition for developmental handicap set forth under *Rules for the Education of Handicapped Children*, effective 1982, and shall be eligible to receive special education and related services in accordance with *Operating Standards for Ohio’s Schools Serving Children with Disabilities*, effective July 1, 2002.

Emotional disturbance - [3301-51-03(F)(3)(e)] Means a condition exhibiting one or more of the following characteristics over a long period of time and to a marked degree that adversely affects a child’s educational performance: (i) An inability to learn that cannot be explained by intellectual, sensory, or health factors; (ii) An inability to build or maintain satisfactory interpersonal relationships with peers and teachers; (iii) Inappropriate types of behavior or feelings under normal circumstances; (iv) A general pervasive mood of unhappiness or depression; (v) A tendency to develop physical symptoms or fears associated with personal or school problems. The term includes schizophrenia. The term does not apply to children who are socially maladjusted, unless it is determined they have an emotional disturbance.

Individuals with Disabilities Education Act (IDEA) - This is the federal law that supports special education and related service programming for children and youth with disabilities. Formerly know as the Education for the Handicapped Act (EHA), IDEA has its roots in Public Law 94-142 (the Education of All Handicapped Children Act), which originally was enacted in 1975 to establish grants to states for educating children with disabilities.

Amendments structure IDEA into four parts: part A addresses general provisions; part B covers the Assistance for Education of All Children with Disabilities; part C covers Infants and Toddlers with Disabilities; and part D addresses National Activities to Improve the Education of Children with Disabilities.

IDEA requires FAPE, which includes special education and related services, be available to children and youth with disabilities in mandated age ranges.

Orthopedic impairment - [3301-51-01(f)(3)(h)] Means a severe orthopedic impairment that adversely affects a child’s educational performance. The term includes impairments caused by congenital anomaly (e.g., clubfoot, absence of some member, etc.), impairments caused by disease (e.g., poliomyelitis, bone tuberculosis, etc.), and impairments from other causes (e.g., cerebral palsy, amputations, and fractures or burns that cause contractures).

Other health impairment - [3301-51-01(F)(3)(i)] Means having limited strength, vitality or alertness, including a heightened alertness to environmental stimuli, that results in limited alertness to the educational environment. This condition is due to chronic or acute health problems, such as asthma, attention deficit disorder or attention deficit hyperactivity disorder, diabetes, epilepsy, a heart condition, hemophilia, lead poisoning, leukemia, nephritis, rheumatic fever, and sickle cell anemia, and adversely affects a child’s educational performance.

Paraprofessional services - [3301-51-01(CC)] According to *Operating Standards for Ohio's Schools Serving Children with Disabilities*, paraprofessional services include services provided by school, county board of mental retardation and developmental disabilities, and other educational agency employees who are trained adequately to assist in the provision of special education and related services to children with disabilities. Paraprofessionals work under the supervision of teachers, intervention specialists, and/or related service providers. Other titles used to identify these service providers include teacher assistants, educational aides, and job coaches.

Traumatic brain injury - [3301-51-01(F)(3)(I)] According to *Operating Standards for Ohio's Schools Serving Children with Disabilities*, traumatic brain injury means an acquired injury to the brain caused by an external physical force or by other medical conditions, including but not limited to stroke, anoxia, infectious disease, aneurysm, brain tumors and neurological insults resulting from medical or surgical treatments. The injury results in total or partial functional disability or psychosocial impairment or both, which adversely affects a child's educational performance. The term applies to open or closed head injuries, as well as to other medical conditions that result in acquired brain injuries. Injuries result in impairments in one or more areas such as cognition, language, memory, attention, reasoning, abstract thinking, judgment, problem-solving, sensory, perceptual and motor abilities, psychosocial behavior, physical functions, information process and speech. The term does not apply to brain injuries that are congenital or degenerative, or to brain injuries induced by birth trauma.

Proposed strategies and implementation

Strategy 1: Training and support is needed for teachers, therapists, and staff in the LEAs

Hospital and school personnel should receive training to plan for school reintegration and transitions. Presently, there are not enough personnel who have an understanding of the unique behaviors and educational challenges of these children or who know what teaching strategies can be applied to assist learning.

Implementation:

- Mandate professional development
 - Pre-service: When working with universities, include information about post-critical trauma education (special education and regular education) courses and in allied health careers.
 - In-service: Require educational agency staff to receive quality training in the special needs of this population.
- Provide technical assistance programs for ongoing instructional assistance.
- Develop teacher-based competencies at the national and state levels.
- Ensure teachers have access to personnel with a specialization in post-critical trauma; investigate through cost-benefit analysis the potential benefit of such teacher support.
- Investigate the effectiveness of having trained teams available to consult in a particular area versus traditional teacher trainings.
- Ensure paraprofessionals are included in school-based training. Investigate the effectiveness of para-educator training on child outcomes.

- Parents should be informed of present and future consequences for learning and life-long living of such an injury.
- If a medical-care facility is involved, a correct diagnosis of a post-critical trauma must be noted. This information should be provided to educational agencies prior to discharging the child. One suggestion would be for hospitals to note this diagnosis in their discharge instructions.
- Agencies providing services must have a coordinated professional development effort.

Strategy 2: An organized and easily accessible system of disseminating information must be developed.

A variety of books, manuals, educational brochures, and magazine and journal articles contain information about reintegrating children with post-critical trauma into the community or students with post-critical trauma into schools, and what teaching strategies work. While these materials exist, they do not seem to be in the hands of educators who can best use them.

Implementation:

- Web sites that will assist individuals in accessing a variety of information and materials must be organized.
- Place credit-bearing courses from universities on the Internet for a broader access to training and information.
- Contact existing sources for materials/resources before placing additional research or development funds into creating training materials that presently exist and can be adapted.

Strategy 3: Conduct scientifically based research

While there are many anecdotal and well-devised application articles regarding educating this population, there are very few well-controlled empirical studies over time.

Implementation:

There are many areas of pediatric research that are pressing equally for funding. Regarding educational reintegration, two areas were determined to be critical for research:

- Incidence and prevalence: Discrepancies between hospital numbers of youth treated with post-critical trauma and special education numbers need to be clarified. Recommendations include:
 - Fund a comprehensive longitudinal study in which children with all degrees of traumatic injury are followed for many years using valid formal and informal assessment procedures to determine progress for educational need and qualitative methods to document post-injury educational experiences and quality of life.
 - Identify early predictors of long-term educational need through studies of outcome, especially in the case of children with mild to moderate injuries.
 - Include a question about head injuries and brain diseases in special education and kindergarten screenings with positive responses triggering attention to issues common in this population. In addition, follow-up research on how early identification impacts the students educational success.
- Teacher techniques: While a number of recommendations exist for strategies employed to educate children with post-critical trauma, few empirical investigations have been undertaken to validate specific special educational interventions or management practices. Research recommendations include:
 - Investigate effectiveness of educational interventions that draw from the existing body of relevant educational research.
 - Emphasize in teacher trainings and educational materials development the existing research-based teaching methodologies while highlighting the flexibility and experimental orientation often required when applying existing strategies to meet these children’s needs.
 - Educational research must meet the scientific research requirements of the no child left behind philosophy.

Strategy 4: To effectively meet the needs of children with traumatic injury, a systems change in health-care facilities and educational agencies need to occur

Transitions for children or students may require a number of agencies’ involvement (medical, educational, mental health, mental retardation, drug, alcohol, and social). Many slip through the cracks of these systems, and often it is not clear who will accept management responsibility for the case.

Implementation:

- Fund projects that will reward collaborative efforts for children or students with post-critical trauma or traumatic injury.
- Convene task force meetings of individuals who represent agencies who can make a change in policy and procedures.
- Educate policy makers about the special needs of this population and encourage them to require collaboration in agencies when providing funding for ongoing operation and special projects.

SUBSTANCE ABUSE AND TRAUMATIC INJURY

Recommendation: Organizations and agencies with an interest in minimizing the effects of substance use disorders on injury outcomes should convene to identify opportunities for improving secondary prevention of substance abuse and treatment for persons during and following trauma care.

Vision

Ohioans who have substance use disorders and incur a traumatic injury should be provided with accurate and timely information about how to reduce their dependence on alcohol and other drugs . Information on ways that have been proven effective for both reducing substance use and the risk of subsequent injury should be provided. For patients requiring formal substance abuse treatment to accomplish these ends, there should be ready access to service providers who are able to work with people with disability due to injury.

Description of the problem

Alcohol use frequently is a factor in all types of injury. Substance use has long been recognized as a major, independent risk factor in unintentional injuries, as well as intentional injuries such as assaults, homicides, and suicides. In 40 percent to 50 percent of fatal motor vehicle crashes and 25 percent to 35 percent of non-fatal crashes, at least one participant is legally intoxicated. Alcohol has been found to play a role in more than half of homicides, more than half of burns, almost half of hypothermia and frost bite cases, and 40 percent of falls. Intoxication is present in between one-quarter and one-third of individuals incurring traumatic brain or spinal cord injuries. Although the role of drugs other than alcohol in traumatic injuries has not been investigated as thoroughly, studies have shown cocaine, amphetamines, and marijuana, especially in combination with alcohol, play a significant role in traumatic injuries of all kinds.

Whether or not an individual is intoxicated at the time of injury, a significant proportion of individuals who incur injuries have histories of chronic substance use disorders. Waller (1988) conservatively estimated 20 percent to 25 percent of all patients hospitalized for injury are alcoholics or have a drinking problem. Studies of patients receiving rehabilitation for either traumatic spinal cord or brain injury have found more than half of adolescents and adults have diagnosable histories of substance use disorders (Heinemann, et al, 1988; Corrigan, 1995). Rivera, et al (1993a) found evidence of chronic alcoholism in up to three-fourths of adult trauma patients.

There are multiple ways in which alcohol and other drug use increases the risk for injury. Intoxication:

- Decreases the level of alertness;
- Impairs motor function, diminishing coordination and balance, and increasing reaction time;
- Impairs judgment, resulting in poor decision making;
- Diminishes perception and cognitive abilities;

- Increases risk taking behavior and especially including feelings of invulnerability (especially among adolescents and young adults);
- Reduces inhibitions and intensifies feelings of anger and depression;
- Is associated with increased violent behavior;

Additionally, chronic use may render a person more medically fragile, resulting in more severe injuries. Obtaining illicit drugs may place an individual in an unsafe environment. Beyond substance use being a risk factor for injury, injury is a risk factor for substance abuse. Contributing factors include:

- Self-medication for pain;
- Seeking relief of frustration resulting from changes in lifestyle due to disability;
- Feelings of entitlement due to lost abilities;
- Filling time to reduce boredom resulting from changed social roles and reduced daily structure;
- Seeking relief from loneliness or isolation frequently caused by disability.

Persons who experience one traumatic injury are at greatly increased risk for re-injury. For example, after one traumatic brain injury, a person is three times more likely to have a subsequent injury than someone in the general population. After a second injury, the relative risk for a third increases to eight times the norm (Annegers et al, 1980). Untreated alcohol and other drug use disorders play a significant role in re-injury. Rivera and colleagues (1993b) found the re-admission rate for more than 2,500 adult patients treated at a level I trauma center was 2.5 times more likely for patients who were intoxicated at their initial admission. Patients who showed physiological signs of chronic alcohol abuse were 3.5 times more likely to be re-admitted.

While alcohol and other drug use are associated highly with injury, it also has been found that an injury may provide an opportunity for intervention to change contributing behaviors. There is extensive evidence that traumatic injury creates a teachable moment that is a unique opportunity in the course of the addiction process (Gentilello et al, 1988; Reyna et al, 1985; Soderstrom and Cowley, 1987). When a patient makes a connection that the injury is a direct result of alcohol and other drug use, they become more open to accepting education or treatment, which can in turn reduce the alcohol or other drug consumption and improve the course of subsequent recovery. The impact of even brief interventions that take advantage of this opportunity can be quite dramatic (Gentilello et al, 1999). Thus, systematic screening and education have been recommended for acute treatment settings working with injured patients (Hungerford and Pollock, 2002).

Despite the potential benefits of screening and education, these activities are not carried out routinely in trauma centers. Limited resources during hospitalization, the singular focus on treating the immediate injury, and the perceived futility of making referrals for follow-up treatment all provided barriers to addressing substance abuse routinely. While there may be a greater opportunity during the course of rehabilitation to identify histories of substance use disorders, dramatically shorter lengths of stay and greater medical acuity of rehabilitation patients has reduced the attention given to issues viewed as psychosocial in nature.

Proposed strategies

Goal

Develop a structure in which the multiple agencies and organizations that serve persons with substance use disorders and traumatic injuries can meet, educate each other, identify specific opportunities and barriers, and develop a plan to address systematically the needs of this population. Given the scope of the problem, as well as the multiple issues and stakeholders involved, the structure developed should have sufficient resources to sustain a longer-term, systematic effort.

Principles

While there are many potential approaches to bringing together the stakeholders needed to achieve this goal, the chosen method should incorporate the following:

- Provide an opportunity for all involved to benefit from existing information about the scope of the problem of injury and substance use disorders, evidence-based methods for acute intervention, and the special needs and problems of accessing treatment for persons with disabilities arising from injury;
- Take advantage of the unique expertise and resources in each of the service-delivery systems working with these individuals;
- Find solutions that promote collaboration among stakeholders, including formal agreements for communication, consultation, and cooperative ventures;
- Allow adequate time and resources for evaluating impact and planning subsequent iterations to benefit from successes and failures.

Implementation

The Post-critical Care Trauma Commission believes the effects of alcohol and other drug use on injury outcomes, both human and economic, have been underestimated greatly. Substance abuse — current, previous, or resultant — complicates and often confounds trauma care and rehabilitation. Yet, it is equally evident to the commission that adequately addressing substance abuse will require an infusion of knowledge and funding resources not currently within the grasp of trauma care programs, rehabilitation providers, or the publicly funded substance abuse treatment system.

Therefore, the commission recommends further study of the barriers and opportunities for developing resources to address the following questions:

- **What is required to allow screening and intervention in acute medical settings to be implemented routinely?** Emergency departments, trauma programs, and rehabilitation units should be assisted in their capability for taking advantage of the “teachable moment” that can occur as the result of an injury.
- **What resources need to be made available to substance abuse treatment providers to improve the availability of services for individuals who have incurred disability as a result of injury?** The existing substance abuse treatment system should become an accessible and effective source of treatment for persons with disability due to injury.
- **How can projects be supported to identify and promote effective methods of integrated treatment for injured individuals who have co-occurring substance use disorders?** There appear to be significant gains, both human and economic, that could be achieved with greater attention to clinical programs to serve this population.

The commission also recommends consideration of potential stakeholders include, at a minimum, the following agencies and organizations: the state departments of Alcohol and Drug Addiction Services, Health, Public Safety; the Ohio Bureau of Workers’ Compensation; the Ohio Rehabilitation Services Commission; the American College of Surgeons Trauma Committee – Ohio Chapter; the Ohio Society of Trauma Nurse Coordinators; the Ohio Hospital Association; the Ohio Association of Emergency Medical Physicians; the Ohio Association of Rehabilitation Facilities; the Association of Ohio Childrens Hospitals; the Ohio Public Health Association; the Brain Injury Association of Ohio; the Ohio Association of County Behavioral Healthcare Authorities; and the Ohio Council of Behavioral Healthcare Providers.

THE OHIO TRAUMA FOLLOW-UP REGISTRY

Recommendation: A follow-up registry should be established to provide information about the long-term complications and outcomes for trauma-care patients. Data collection methodology should be an extension of the existing Ohio Trauma Registry and should provide information for local, regional and statewide prevention programming and health-care service planning.

Vision

Future examinations of issues and problems following critical trauma care should have the benefit of valid and reliable data from Ohio.

Description of the problem

In H.B. 138, the General Assembly created the Post-critical Trauma Care Commission and charged it “...to determine how to improve the accessibility, affordability, quality, and cost-effectiveness of post-critical adult and pediatric trauma care.” While there is considerable clinical experience and personal testimony to indicate needs persist and more systematic services are necessary, the commission determined there is little or no objective data to address questions such as:

- How many injury survivors experience long-term limitations in their day-to-day functioning?
- What kinds of injuries are more likely to result in long-term consequences?
- Do children have unique consequences of traumatic injuries? Do older adults?
- Are there services available to assist these individuals, and are they using them?
- How much do services cost, and are they effective?

Emergency medical services legislation enacted in 1992 established the authority for the Ohio Department of Public Safety to create the Ohio Trauma Registry. The registry, which became operational in 1999, is a database that contains information about all persons who have suffered an injury and are admitted to a hospital for at least 48 hours. The trauma registry provides information about the number of people in Ohio requiring trauma services, the cause and treatment of their injuries, and status at time of leaving the hospital. However, the registry does not provide information about longer-term consequences of injuries. Medical complications that persist after going home, problems that develop after hospital discharge, effects on independence in one’s home or community, difficulties in educational or vocational roles, or the impact on the individual’s family, all may be significant consequences of injury. These effects of trauma may also carry significant human and economic costs that should be considered when prioritizing prevention activities and planning service delivery systems.

BWC’s analysis of injuries that occurred in 1996 and resulted in workers’ compensation claims is included in Appendix D. The analysis allowed description of the types of services and costs, over the subsequent six years. Most remarkable was that 14 percents of the costs, and 21 percent of the services billed occurred after one year following the injury. These data support the presumption that important health-care issues occur over an extended period following injury.

Policy makers, service providers and the general public want reliable and valid data on which to base decisions regarding the effects of medical conditions, clinical interventions, and funding priorities. Lack of data about post-hospital consequences of traumatic injuries creates a significant gap in Ohio’s ability to address this major public health problem.

The target population of the proposed Ohio Trauma Follow-up Registry is defined in O.R.C. 4765 for trauma systems. The operational definition would parallel that used for the Ohio Trauma Registry. Patients in the trauma registry would be surveyed by phone at six-months post-injury, with further follow-ups at one and five years on sub-groups who have greater risk for disability. Survey respondents would be asked for information on persistent medical problems, health-care utilization since discharge, changes

in living situation, independence in daily activities, ability to engage in work or school, impact of injury on social and financial supports, and psychological functioning. Sampling would be constructed to allow conclusions about the state population and would include sufficient numbers of persons to allow detection of unique issues faced by any age group, gender, socioeconomic strata, type of insurance program, rural or urban community, and type of injury.

Data collection for the follow-up registry also should be an extension of the existing trauma registry. However, it is recommended respondent surveys be centralized and conducted under the auspices of the Trauma Committee convened by the Ohio Department of Public Safety to promote economies of scale and effectiveness of data collection methods. Legislative authority needed to establish and fund the registry should be congruent with Health Insurance Portability and Accountability Act (HIPAA) regulations, thus allowing Ohio trauma centers to provide contact information without patient consent. Beyond this contact information and data currently provided to the trauma registry, no other information or involvement would be required from participating hospitals.

The follow-up registry also would provide an opportunity to give additional information on resources for trauma patients who experience persistent problems due to their injury. All persons for whom contact information is available could be mailed informational brochures that would include statewide information and resource access points. Mailings could also be used to inform individuals about the follow-up registry and its purpose.

While the current Ohio Trauma Registry provides important information about the incidence of traumatic injuries, well-designed and selective follow-up of trauma patients will provide a complete picture of the impact of injury in Ohio. The Post-critical Trauma Care Commission is recommending creating the Ohio Trauma Follow-up Registry to provide much needed information on the consequences of traumatic injuries.

Proposed strategies

Goal

A trauma follow-up registry will provide objective information on which to base public and private policy decisions about the post-critical care and persistent needs of persons at risk of losing life or limb, or experiencing permanent disability or disfigurement. It will identify the nature and scope of the consequences of trauma, inform public policy that addresses the needs of persons who experience these injuries, provide information about access to services and supports, and guide clinical care research. The follow-up registry will allow reliable estimates of the human and economic costs of injuries — vital pieces of information for assessing the scope of this public health problem.

Principles

- The registry should serve all age, gender and socioeconomic groups, geographic regions, and types of injury.
- A public health model should be used to design and implement the registry.
- There should be public access to the data, while protecting the confidentiality of patient information.
- The registry should be flexible enough to adapt to changing needs while remaining consistent enough to be informative about low incidence conditions and outcomes.

Implementation

The Ohio Trauma Follow-up Registry is intended to provide reliable and valid information about the persistent needs of trauma patients. Prior to seeking on-going legislative support and authority for a comprehensive, statewide registry, a time-limited pilot of the methodology for data collection, database management and data analysis is considered essential to develop viable budget projections. Prior to conducting the pilot, support for pre-pilot research should be sought from the state EMS boards’ EMS/trauma grant program. The pilot phase will require new resources to allow for implementing and testing the recommended methodology. Costs for ongoing operation cannot be determined without piloting, and will require new resources as well.

There are three steps to implementing the Ohio Trauma Follow-up Registry:

- Conduct pre-pilot research projects;
- Gain legislative authority and funding to conduct a pilot project;
- Gain legislative authority and support for ongoing implementation.

Pre-pilot research

Specific research projects should be conducted to identify the best approaches to sampling, data collection, and providing linkage information. The existing mechanism for the state EMS boards’ EMS/trauma grant program should be sought for these projects. Projects addressing the following issues should be prioritized:

- Test methods of exchanging data with trauma centers, and using the information to contact patients;
- Test effectiveness of providing information and resource linkage to a toll-free telephone number and/or Web site;

- Analyze the trauma database to determine the sampling procedures for the levels of stratification proposed;
- Determine what issues should be addressed in the survey and the items that should be used.

The commission hopes grants addressing these issues can be funded beginning with the 2003 grant cycle. It may also be useful to allow submission of field-initiated ideas related to the conduct of a follow-up registry.

Pilot project

A large scale, pilot project is needed to determine the resources required for ongoing implementation of the follow-up registry. Based on the pre-pilot research results, a prospectus is recommended for describing the proposed methods and procedures of the follow-up registry, as well as products required to initiate a pilot. Funding will be needed from federal, state, and/or private resources for what will be a multi-year, but time-limited, project. The result of the pilot should be a thorough evaluation of the registry’s effectiveness and projection of costs for its ongoing implementation. Legislative authority as described in No. 4 and No. 8 below will be required to conduct the pilot.

The following conclusions, reached by the Post-critical Trauma Care Commission, should guide the pilot phase:

1. The Ohio Trauma Follow-up Registry should be designed and conducted to provide reliable and valid information about the consequences of traumatic injury, the needs of persons who experience these injuries, and the effective use of clinical-care resources.
2. The registry also should provide information to individuals and their families about services and supports available to assist them.
3. Target population for the registry should be defined in O.R.C. 4765 for trauma systems. The operational definition should parallel that used for the Ohio Trauma Registry.
4. Legislative authority should parallel the trauma registry, with oversight by the Trauma Registry Advisory Subcommittee. A subcommittee structure may be required for start-up or ongoing review. The current structure allows public members to participate, which allows inclusion of representatives of constituencies not currently involved in the Trauma Registry Advisory Subcommittee. An administrative structure parallel to the trauma registry should be authorized, giving implementation responsibility to the Ohio Department of Public Safety.
5. Data collection should be centralized and responsibility given to the Department of Public Safety. While responsibility will be co-located with that for the trauma registry, data collection and data-base management could be conducted directly or via contract.
6. Sampling of respondents for the follow-up registry should be constructed to allow generalization to the entire Ohio population and should include sufficient numbers of persons to allow detection of unique issues faced by any age group, gender, socioeconomic strata, type of insurance program, rural or urban community, and type of injury.

7. Telephone surveys should be conducted six months after the date of injury, with further follow-ups one and five years post-injury on trauma patients with greater risk for medical complications and disability.
8. Legislative authority should state the public health purpose of the registry so as to facilitate its congruence with the Health Insurance Portability and Accountability Act. Because patient contact information will need to be collected from trauma services, comprehensiveness will be enhanced greatly if hospitals are allowed to release personal identifying information without consent. Ascent for participation would be attained at the time of follow-up contact. Legislation should explicitly protect the confidentiality of Social Security Numbers, if it is decided that this information is required.

Legislative authority for ongoing operation

Eventual implementation of the actual operative registry will require statutory changes to the Ohio Revised Code. The following issues may need to be addressed:

- Purpose for collecting the data;
- Governance structure and its powers;
- Rulemaking authority;
- Authority to specify the data elements to be collected by rule;
- Confidentiality of data;
- Authority to collect Social Security Numbers;
- Funding;
- Authority to contract for the performance of functions and hire outside consultants;
- Mandate to ensure compliance and cooperation from hospitals or other organizations;
- Realistic time frame to have the pilot project and the registry in place and operating;
- Requirements for reporting to the General Assembly, EMS Board, or other entities;
- Immunity from liability for any potentially high-risk uses of the data (e.g., risk adjusting or outcome comparisons).

To promote using the data resulting from the follow-up registry, funds should be available for research projects on an ongoing basis. Expanding existing trauma commission research funds should be considered for this purpose.

Acute Care, Disability, and Rehabilitation

Public Health Issue

- Each year, Americans make between 30 and 40 million emergency department visits for injuries. While the majority of injured patients are treated and released, many are admitted to inpatient trauma units and later receive rehabilitative services.
- Trauma systems deliver coordinated care, from acute care through rehabilitation, but they are not fully operational or do not exist in many parts of the nation. Where trauma systems are lacking, as many as 30% to 40% of deaths among trauma patients are due to preventable problems in clinical care, including missed diagnoses and treatment delays. After trauma systems are introduced, follow-up studies have shown as much as a 50% reduction in preventable trauma deaths.
- Each year, an estimated 80,000 Americans sustain a traumatic brain injury (TBI) that results in long-term disability. An estimated 5.3 million Americans live with TBI-related disabilities, including cognitive problems that affect their ability to perform daily activities.
- Nearly 200,000 people in the United States are living with a disability related to a spinal cord injury (SCI). Every year, another 11,000 are hospitalized for SCI.

CDC’s Role and Expertise

- CDC is the only organization in the federal government responsible for addressing all phases of injury research — from defining the problem to testing the effectiveness and public acceptance of an intervention — for the major causes of injury among all age groups. Funding state and local injury programs allows CDC to rapidly share findings from research with groups that can put the information to immediate use.
- CDC’s multidisciplinary research fosters innovative approaches to clinical preventive services. For example, recognizing that alcohol is often a factor in injury, CDC convened federal agencies and experts in alcohol research, emergency medicine, and trauma care to set a research agenda to improve such services as screening for alcohol problems in emergency departments.
- CDC research and programs frequently become the underpinning for reducing the impact of traumatic brain and spinal cord injuries, or for preventing the development of secondary conditions and other adverse outcomes. CDC findings provide crucial information to help communities prevent these kinds of injuries and disabilities.

The Future of Injury Research — What’s Next?

With extensive input from its academic research centers, national nonprofit organizations, and other federal agencies with a stake in injury prevention, CDC identified the top research priorities for acute care, disability, and rehabilitation — those research issues that CDC must address to fulfill its public health responsibilities. These priorities, published in the *CDC Injury Research Agenda*, will receive CDC’s greatest attention and resources.

Public Health Threat	Injury Center’s Research Priority
<i>Injury prevention services for at-risk patients treated in emergency departments and trauma centers are lacking.</i>	Develop and evaluate protocols that provide interventions for at-risk patients in acute care settings. Study ways to implement multiple services simultaneously.
<i>Despite evidence that trauma care systems save lives, many Americans are not served by a trauma system.</i>	Measure the benefits and costs of trauma care. Assess outcomes such as medical complications, functional status, and quality of life.
<i>People with traumatic brain or spinal cord injury face a range of secondary conditions, from medical conditions such as pressure ulcers, to behavioral changes such as depression and substance abuse.</i>	Increase understanding of risk factors for secondary conditions, especially among persons without access to state-of-the-art information and care. Develop more effective methods to treat and manage these conditions.
<i>Many people with injury-related disabilities do not get the services they need.</i>	Identify methods and strategies to link people with traumatic brain or spinal cord injury with needed services.
<i>Data from electronic, point-of-care clinical information systems are not routinely used for injury surveillance.</i>	Develop and evaluate data standards and methods of linking disparate systems to capture and report data about injuries and other acute health problems.
<i>A limited understanding of the costs and consequences of disabling injuries hinders resource allocation and policy decisions.</i>	Develop and apply methods to calculate population-based estimates of the incidence, costs, and long-term consequences of spinal cord injury and nonhospitalized, “mild” traumatic brain injury.
<i>Many populations affected by traumatic brain injury have not been well studied to date.</i>	Conduct TBI research among children, youth, working adults, institutionalized individuals, victims of intimate partner violence, and people within school systems and the criminal and justice systems.
<i>Studies to date suggest that limb injuries result in substantial disability and affect the ability to return to work.</i>	Conduct population-based studies to accurately describe the public health burden of limb injuries and suggest appropriate interventions to prevent these injuries and resulting disabilities.

Injuries are the leading cause of death for Americans under 45 and the leading cause of potential life lost before age 65. In 1999, nearly 150,000 Americans died from injuries, and one in ten was injured badly enough to seek treatment in an emergency department. The CDC Injury Research Agenda, developed by CDC’s Injury Center and its many partners, will help drive the national initiative to lower the rate of both unintentional and violence-related injuries, which will result in reduced human suffering and loss of life.

Section 6 of amended substitute H.B. 138 as enacted by the 123rd general assembly

The Director of Health shall organize and coordinate a temporary commission to determine how to improve the accessibility, affordability, quality, and cost-effectiveness of post-critical adult and pediatric trauma care. The commission’s study shall include, without limitation, consideration of appropriate transfer of adult and pediatric trauma victims from regional trauma centers to other health care facilities; physical, psychological, and vocational rehabilitation of adult and pediatric trauma victims; re-employment of trauma victims; social support mechanisms for families of adult and pediatric trauma victims; and mitigation of the effects of pediatric and geriatric trauma.

The Rehabilitation Services Commission, Department of Aging, Bureau of Workers’ Compensation, and Bureau of Employment Services shall participate in and assist with the commission’s study.

Within 120 days after the effective date of this act, the director shall appoint to the commission appropriate public health authorities; entities that represent injury victims; certified safety professionals; employers; employment training and placement services; agricultural organizations; highway safety and motorists’ organizations; health insurers; providers of social services to injury victims; nursing and rehabilitation institutions; victims of violent crime; hospitals; and professionals active in physical, psychological, and vocational therapy. Commission members shall have expertise in rehabilitation and retraining of injury victims, broadly represent relevant disciplines, and represent all regions of the state.

Within 120 days after the effective date of this act, the Speaker of the House of Representatives shall appoint to the commission one member of the majority party and one member of the minority party in the House of Representatives and the President of the Senate shall appoint to the commission one member of the majority party and one member of the minority party in the Senate.

In conducting its study and developing its recommendations, the commission can consult with and cooperate with the Trauma Committee of the State Board of Emergency Medical Services. The commission shall conclude its study and disband not later than three years after the effective date of this section, whereupon the director shall transmit the commission’s findings and recommendations to the Governor, General Assembly, chief executive of each state agency specified in this section, and other appropriate persons.

MEMBERSHIP OF THE POST-CRITICAL TRAUMA CARE COMMISSION

Member Name	Represented Agency/Organization
Sen. Steve Austria	Ohio Senate, Republican Caucus
Robert Bates	Ohio State Fire Chiefs Association
Sally Betz	Ohio Nurses Association
Jerrold Blackmore	Association of Ohio Philanthropic Homes, Housing & Services for the Aging
John Corrigan, Ph.D. (Chair)	Ohio Psychological Association
John Edwards	Ohio Bureau of Workers’ Compensation
Peter Feldkamp, D.C.	Ohio State Chiropractic Association
Mike Glenn	Ohio Department of Public Safety
Christopher Goff	Ohio Business Coalition on Health
June K. Gutterman, Ed.D.	Ohio Rehabilitation Services Commission
Sen. Robert Hagan	Ohio Senate, Democratic Caucus
Jill Huntley	Ohio Department of Job & Family Services
Cindy Iske (Co-chair)	Ohio Hospital Association
Tina Kiehmeyer	Ohio Bureau of Workers’ Compensation
Beverley Laubert	Ohio Department of Aging
Michael Link	Ohio Department of Alcohol & Drug Addiction Services

A longitudinal investigation of medical cost and treatment volume for traumatic injuries: 1996-2002

Ohio Bureau of Workers’ Compensation (BWC) research projects unit for the Ohio Post-critical Trauma Care Commission

Summary

This investigation of the long-term needs of people who suffer traumatic injuries demonstrates the medical needs of these individuals persist long after the acute phase of their treatment ends. Thirty-six percent of the medical payments and 45 percent of the services for traumatic injuries occurred from two months to five years following the injury. In the first month following a traumatic injury, most of the necessary services are provided by physicians and hospitals. As time passes, services are more often provided by non-physician professionals and are likely to involve rehabilitation activities. The proposed Ohio Trauma Follow-up Registry would enable Ohio’s health-care providers to plan for the long-term needs of these individuals and provide the necessary services at the appropriate time.

Introduction

H.B. 138, enacted by the 123rd Ohio General Assembly created the Post-critical Trauma Care Commission. The commission was established to “...determine how to improve the accessibility, affordability, quality, and cost-effectiveness of post-critical adult and pediatric care.” The commission has been meeting since July 2001 to draft recommendations for the Governor, General Assembly and the sponsoring state agencies.

One proposed recommendation is that “a follow-up registry be established to provide data on the longer-term outcomes for trauma-care patients.” A follow-up registry would provide “objective information on which to base public and private policy decisions about the post-critical care and persistent needs of persons at risk of losing life or limb, or experiencing permanent disability or disfigurement. It would (a) identify the nature and scope of the consequences of trauma, (b) inform public policy addressing the needs of persons who experience these injuries, (c) provide information about access to services and supports, and (d) allow clinical research.”

The proposed follow-up registry is viewed as an extension of the Ohio Trauma Registry. The Ohio Department of Public Safety administers the Ohio Trauma Registry , which became operational in 1999, with oversight by the Trauma Registry Advisory Committee. It is a database of information on all people who suffer an injury and are admitted to a hospital for at least 48 hours. The database includes information about the number of people who require trauma services, the cause of the injuries, the treatment provided and the status at discharge from the hospital. One limitation of the Ohio Trauma Registry is that it does not provide information on the long-term consequences of injuries.

The claim records of the BWC provide a unique opportunity to conduct longitudinal investigations of injuries prior to establishing a follow-up registry. BWC claims data include injuries sustained by the worker, the type and timing of the treatment provided, and the treatment cost. By statute, the injured worker is eligible to receive medical treatment for consequences of an industrial injury for as long as necessary, allowing study of the injuries and their long-term effects.

The Ohio Trauma Registry collects information on injuries coded according to the International Classification of Diseases Revision 9 (ICD-9). The code groups are displayed in table 1.

Table 1. ICD-9 code groups included in the Ohio Trauma Registry.

Code group	Group description
800-805	Skull fracture
802-803	Facial fracture
805-807	Spinal fracture
807-808	Chest fracture (rib or sternum)
808-809	Pelvis fracture
810-812	Shoulder girdle fracture
812-820	Upper extremity fracture
820-830	Lower extremity fracture
830-840	Dislocation (includes jaw)
850-851	Concussion
851-852	Brain contusion
852-855	Intracranial hemorrhage
860-861	Hemo/pneumothorax
861.2-861.3	Lung injury
863-864	Gastrointestinal hollow organ injury
864-865	Liver injury
865-866	Spleen injury
870-874	Scalp or facial laceration
875-880	Torso laceration
880-887	Upper extremity laceration or minor amputation
887-888	Upper extremity amputation
890-896	Lower extremity laceration or minor amputation
900-905	Vascular injury
941-949	Burns
950-958	Nerve or spinal cord injury

It should be noted that BWC’s claims data differ from the Ohio Trauma Registry data in two important ways. First, BWC records include only persons who are injured in the course of their employment. Thus, the claims records don’t include data on pediatric or childhood injuries, very little data on teenagers and no data on injuries that befall persons who are not working or are retired. Second, the available records do not permit identification of injuries that require a 48-hour stay in a hospital, one of the Ohio Trauma Registry’s criteria. In light of these differences, BWC data can be expected to include a narrower demographic range of injured persons and a broader range of severity, i.e., from relatively minor to quite significant injuries within each code group. It is assumed that if it were possible to exclude the injuries that do not require admission to a hospital for at least 48 hours, the findings of this study would be amplified.

Methodology

All claims involving the 25 ICD-9 code groups listed above with dates of injury between Jan. 1, 1996, and Dec. 31, 1996, were retrieved from the BWC Data Warehouse. Treatment types and costs were identified by retrieving the first service date and the ICD-9 code for which the provider submitted the bill, bill category (hospital, non-physician, nursing service, other, physician, rehabilitation, vendor, and drug), line item units of service (UOS) provided, reimbursed amount (the amount paid to the provider). The first service date was used to create five treatment intervals that correspond to the anticipated follow-up intervals:

- Interval 1 included treatments provided within 30 days of the date of injury;
- Interval 2 included treatments provided two to six months following the date of injury;

- Interval 3 included treatments provided from six months to one year following the date of injury;
 - Interval 4 included treatments provided from one to five years following the date of injury;
 - Interval 5 included treatments provided more than five years following the date of injury.
- The reimbursed amount and units of service were summed for each ICD-9 group, each bill category and each treatment interval.

Results

The 25 ICD-9 groups included 106,590 claims. However, since any one injured worker might suffer injuries in more than one ICD-9 grouping, an additional analysis was performed to identify unique individuals. The study sample included 91,738 injured workers. Seventy-five percent were male and 25 percent were female. The mean age of the sample was 41 years and, mean age at injury was 35 years.

The totals and percentages of payments and units of service and percentages for each bill category are displayed in table 2. The table shows that \$74,275,624.38 was paid for medical services from the date of injury to 2002. Forty-five percent of these expenses were for physician services and 43 percent for hospital services. The total units of service for the same period was 2,546,672, with 31 percent (784,352) provided by physicians and 44 percent (1,116,526) in hospitals. The percentage of total medical payments for each bill category is shown in chart 1.

Table 2. Amount paid and units of service billed by bill category.				
Bill category	Amount paid	Amount paid %	Units of service billed	Units of service billed %
Grand total	\$ 74,275,624.38		2,546,672	
Physician	\$ 33,098,017.46	45%	784,352	31%
Hospital	\$ 31,906,549.08	43%	1,116,526	44%
Non-physician	\$ 4,938,977.03	7%	219,892	9%
Nursing service	\$ 1,668,703.53	2%	42,236	2%
Rehabilitation	\$ 1,349,017.97	2%	197,087	8%
Vendor	\$ 1,128,407.72	2%	111,042	4%
Drug	\$ 184,821.59	0%	59,274	2%
Other	\$ 1,130.00	0%	16,263	1%

Medical Payments for Traumatic Injuries
by Bill Category: 1996-2002

The proportions of medical payments during each treatment interval are displayed in chart 2. Sixty-four percent of the payments, totaling \$47,802,315.65, were for treatment services provided during the month following the date of injury. Fifty-five percent of the units of service, totaling 1,411,935, were provided during the same period. Fifteen percent of the payments (\$11,289,466.33) and 17 percent of the units of service (437,215) were provided from one to six months following the injury. From six months to one year following the date of injury, 6 percent of payments (\$4,769,215.50) and 7 percent of units of service (\$168,573) were provided. The first year following the date of injury accounted for 85 percent of the total medical costs and for 79 percent of the units of service provided to injured workers. Table 3 presents the distribution of medical costs and units of service for each treatment interval.

Table 3. Amount paid and units of service billed by treatment interval.				
Treatment Interval	Amount paid	Amount paid %	Units of service billed	Units of service billed %
Grand total	\$ 74,275,624.38		2,546,672	
1 (DOI + 30 days)	\$ 47,802,315.65	64%	1,411,935	55%
2 (DOI + 1-6 months)	\$ 11,289,466.33	15%	437,215	17%
3 (DOI + 6 months-1 year)	\$ 4,769,215.50	6%	168,573	7%
4 (DOI + 1-5 years)	\$ 9,401,275.57	13%	465,135	18%
5 (DOI + 5 years or more)	\$ 1,013,351.33	1%	63,814	3%

Tables 4 and 5 show the percentages of payments and units of service by bill category and treatment interval. It is not surprising the hospital service volume and payments to hospitals decrease over time following the injury. Physician payments and service volume also decrease over time, but at a lesser rate. Payments in the non-physician category (e.g., physical, occupational and other therapists) increase one to six months following the date of injury and continue for the duration of the period studied. It is also evident that services in the rehabilitation category become much more important later in the history of the injury. Payments in this category constitute only 2 percent of total payments and 8 percent of total units of service, but the volume of services is highest in the one to five years and five years or more treatment intervals.

Table 4. Percentage amount paid by bill category and treatment interval.						
Bill category	1 (DOI + 1 month)	2 (DOI + 1-6 months)	3 (DOI + 6 months to 1 year)	4 (DOI + 1-5 years)	5 (DOI + 5 years or more)	totals
All categories	64%	15%	6%	13%	1%	100%

Discussion

This brief investigation of the long-term needs of persons who suffer traumatic injuries demonstrates the medical needs of these individuals persist long after the acute phase of their treatment ends. Claims records of injured workers, retrieved from BWC’s Data Warehouse, show that 64 percent of payments and 55 percent of units of service provided for traumatic injuries occur in the first month following an injury. The months that follow, up to five years after the injury, account for 36 percent of the payments and 45 percent of the services provided to these individuals. Clearly, individuals who suffer traumatic injuries may continue to require treatment for up to five years following the injury.

The investigation also demonstrates how these needs change over time. It is hardly surprising that, in the first month following a traumatic injury, physicians and hospitals provide most of the necessary services. Physicians continue to provide a significant proportion of services for the duration of the study period. However, as time passes, services are more often provided by non-physician professionals and are likely to involve rehabilitation activities.

While the population served by BWC does not precisely correspond to the population the Ohio Trauma Registry monitors, this study suggests individuals who sustain an injury involving “risk of losing life or limb, or experiencing permanent disability or disfigurement” have continuing needs for treatment and care long after acute treatment ends. At the present time, the State of Ohio has no means of systematically identifying and responding to these needs. The proposed Ohio Trauma Follow-up Registry would provide timely and statistically sound data on the needs of trauma patients at several points in the recovery process. It would enable Ohio’s health-care providers to plan for these individuals’ long-term needs and provide the necessary services at the appropriate time.

Appendix E

Letters of support for the Post-critical Trauma Care Commission’s recommendations

The following organizations presented letters of support for the research and recommendations provided by the Post-critical Trauma Care Commission. Members of the commission wish to acknowledge and thank these organizations for their support.

- American Physical Therapy Association, Ohio Component, Jonathan Cooperman, P.T., J.D., M.S., president
- Association of Ohio Philanthropic Homes, Housing and Services for the Aging, John Alfano, president/CEO
- Brain Injury Association of Ohio, Philip E. Cole, president
- Central Ohio Trauma System, Jonathan I. Groner, M.D., F.A.C.S., president
- Ohio Association of Professional Fire Fighters, Kevin Watts, president
- Ohio Association of Rehabilitation Facilities, Julie A. Keil, M.P.A., executive director
- Ohio Bureau of Workers’ Compensation, James Conrad, administrator/CEO
- Ohio Children’s Hospital Association, Andrew Carter, president
- Ohio Department of Aging, Joan W. Lawrence, director
- Ohio Department of Alcohol and Drug Addiction Services, Gary Q. Tester, director
- Ohio Department of Education, Susan Tave Zelman, superintendent of public instruction
- Ohio Department of Public Safety, Gary F. Joseph, interim director
- Ohio Farm Bureau, John C. Fisher, executive vice president
- Ohio Fire Chiefs’ Association Inc., Chief Stan Crosley, president
- Ohio Hospital Association, Bridget Gargan, vice president, State Policy & Advocacy
- Ohio Job & Family Services, Tom Hayes, director
- Ohio Legal Rights Service, Carolyn S. Knight, executive director
- Ohio Nurses Association, Gingy Harshey-Mead, M.S.N., R.N., C.N.A.A., chief executive officer
- Ohio Osteopathic Association, Paul A. Martin, D.O., president
- Ohio Psychological Association, Michael O. Ranney, M.P.A., executive director
- Ohio Public Health Association Inc., Ruth Shrock, president
- Ohio Rehabilitation Association, Robin Markey, president
- Ohio Rehabilitation Services Commission, John M. Connelly, executive director
- Ohio Society of Trauma Nurse Coordinators, Vickie Graymire, R.N., M.S., C.E.N., president
- Ohio State Medical Association, William C. Sternfeld, M.D., president
- Ohio State Chiropractic Association, Peter D. Feldkamp, D.C., president
- The Salvation Army, Major Paul Cain, area coordinator
- State of Ohio Rehabilitation Services Commission, John M. Connelly, executive director

Effective date: *

ACT SUMMARY

- Requires the imposition of one or more sanctions, including civil penalties, for operating one of the following health care facilities without a license: ambulatory surgical facility, freestanding dialysis center, freestanding inpatient rehabilitation facility, freestanding birthing center, freestanding radiation therapy center, or freestanding or mobile diagnostic imaging center.
- Authorizes the Director to impose one or more sanctions against a licensed health care facility for failure to comply with statutory requirements or administrative rules establishing quality standards.
- Requires an ambulatory surgical facility to require each physician who practices at the facility to comply with all statutes related to obtaining informed consent from a patient.

** The Legislative Service Commission had not received formal notification of the effective date at the time this analysis was prepared. Additionally, the analysis may not reflect action taken by the Governor.*

- Creates an immunity for ambulatory surgical facilities from liability for a physician's failure to obtain informed consent from a patient unless the physician is an employee of the ambulatory surgical facility.
- Specifies procedures that a hospital must follow in applying to the American College of Surgeons for verification or reverification as a trauma center.
- Provides that a hospital may operate as a trauma center under provisional status in the following circumstances: (1) after it properly applies for verification or reverification, (2) until the final results of its reverification are received, if its application was submitted within one year before the verification ceased, and (3) if the process of applying for verification or reverification was initiated on or before May 20, 2002.
- Specifies the period of time during which a trauma center may operate under provisional status.
- Requires a hospital to provide prompt written notice of its status as a trauma center or provisional trauma center to the Director of Health, Emergency Medical Services Division of the Department of Public Safety, and the physicians and physician advisory boards serving the emergency medical services region.

CONTENT AND OPERATION

HEALTH CARE FACILITIES

Sanctions for operating a health care facility without a license

(secs. 3702.30 and 3702.32)

Ohio law prohibits the following health care facilities from operating without a license issued by the Director of Health: ambulatory surgical facilities, freestanding dialysis centers, freestanding inpatient rehabilitation facilities, freestanding birthing centers, freestanding radiation therapy centers, and freestanding or mobile diagnostic imaging centers. Prior law, however, did not specify penalties for violating the prohibition.

Under the act, if the Director determines that one of these health care facilities is operating without a license, the Director is required to do one or more of the following:

(1) Provide an opportunity for the health care facility to apply for a license within a specified time, not exceeding 30 days after the health care facility receives the order;

(2) Issue an order requiring that the facility cease its operations;

(3) Issue an order prohibiting the facility from performing certain types of services;

(4) Impose a civil penalty of not less than \$1,000 and not more than \$250,000;

(5) Impose an additional civil penalty of not less than \$1,000 and not more than \$10,000 for each day the facility operates without a license.

The act requires the Director to adopt rules governing the issuance of orders and the imposition of civil penalties, including a scale for determining the amount of the penalties.

Sanctions for violations by a licensed health care facility

(sec. 3702.32)

The act authorizes the Director to impose sanctions against a health care facility for violations other than operating without a license. The sanctions may be imposed for violating any provision of the quality standards established in rules adopted by the Director and for violating any of the statutes under which the facility is licensed. If the Director determines that a violation has occurred, the Director may do any or all of the following:

(1) Provide an opportunity for the health care facility to correct the violation within a specified period of time;

(2) Revoke, suspend, or refuse to renew the facility's license;

(3) Prior to or during the pendency of an administrative hearing, issue an order that prohibits the facility from performing certain types of services;

(4) Provide an opportunity for the facility to correct the violation;

(5) Impose a civil penalty of not less than \$1,000 and not more than \$250,000;

(6) Impose an additional civil penalty of not less than \$500 and not more than \$10,000 for each day the facility fails to correct the violation.

Informed consent requirements

(secs. 2317.54, 3702.30(C) and (D), and 3702.32(C))

Ambulatory surgical facilities

Under the act, every ambulatory surgical facility must require each physician who practices at the facility to comply with all relevant provisions in the Revised Code that relate to the obtaining of informed consent from a patient. While the Revised Code does not contain a general provision requiring informed consent for all types of medical procedures, there are provisions that apply to specific procedures. For example, criminal penalties can be imposed against a person who performs or induces an abortion without the patient's informed consent.

As a condition of receiving a license to operate an ambulatory surgical facility, the act requires the facility to demonstrate to the Director that it satisfies the act's informed consent compliance requirements.

All health care facilities

If the Department of Health finds that a physician employed in an health care facility is not complying with any informed consent compliance requirement, the act requires the Department to report its findings to the State Medical Board, the physician, and the facility.¹ The act specifies that this requirement does not create a new cause of action or substantive legal right against a health care facility and in favor of a patient who allegedly sustains harm as a result of the failure of the patient's physician to obtain the patient's informed consent before performing a procedure on or otherwise caring for the patient in the facility.

Under the act, if, after making its report, the Department finds that the physician has persisted in the reported violation at the same health care facility and the facility has not taken reasonable steps to correct the physician's violation, the Department may, after providing the facility an opportunity for a hearing pursuant to the Administrative Procedure Act (R.C. Chapter 119.), impose a civil penalty of not less than \$1,000 and not more than \$50,000 on the facility.

¹ *Even though it requires only ambulatory surgical facilities to require physicians to comply with informed consent requirements in the Revised Code, the act requires the Department of Health to report violations of such requirements that occur in any of the health care facilities subject to the act.*

Use of funds from civil penalties

(sec. 3702.31)

Moneys collected from imposition of civil penalties under the act are to be deposited into the Quality Monitoring and Inspection Fund and used to administer and enforce the Department of Health's health care facility licensing program. The money may also be used in administering and enforcing provisions of continuing law that require health care providers of certain specialized services to meet safety and quality-of-care standards established in rules adopted by the Director.²

Injunctions

(sec. 3702.32(B) and (D))

If a health care facility does not comply with an order issued by the Director requiring the facility to cease its operations or prohibiting the facility from performing certain types of services, the Director is authorized by the act to seek an injunction enjoining the facility from not complying with the order.³ The petition for the injunction must be filed in the court of common pleas of the county in which the health care facility is located. The act requires the court to grant an injunction on a showing that the facility is operating without a license or is providing the types of services prohibited by the Director's order.

Immunity

(sec. 2317.54)

Under continuing law, a hospital, home health agency, or provider of a hospice care program is immune from liability for a physician's failure to obtain informed consent from a patient before performing a procedure on or otherwise caring for the patient, unless the physician is an employee of the hospital, home health agency, or provider. The act extends this immunity to ambulatory surgical facilities.

² *The health care services that must meet safety and quality-of-care standards are solid organ and bone marrow transplantation, stem cell harvesting and reinfusion, cardiac catheterization, open-heart surgery, obstetric and newborn care, pediatric intensive care, operation of linear accelerators, operation of cobalt radiation therapy units, and operation of gamma knives.*

³ *This provision of the act has incorrect division cross references.*

References to original rules

(sec. 3702.30)

The act eliminates provisions that referred to the deadlines that applied to the original adoption of rules establishing quality standards for health care facilities.

HOSPITAL TRAUMA CENTERS

Trauma centers

(secs. 3727.09, 3727.10, and 4765.50)

Beginning November 3, 2002, continuing law prohibits a hospital from knowingly representing that it is able to provide adult or pediatric trauma care that is inconsistent with its level of categorization as a trauma center or making an inappropriate transfer of a trauma patient. At the same time, continuing law prohibits a physician from purposefully admitting a trauma patient to a hospital that is not a trauma center or failing to transfer trauma patients to a trauma center in accordance with the law or protocol and transfer agreements.

The act clarifies the effective date of these provisions by specifying that the provisions apply on and after November 3, 2002.

Verification of trauma centers

(secs. 3727.101 and 4765.01)

To be a trauma center, an Ohio hospital must be verified as an adult or pediatric trauma center by the American College of Surgeons.⁴ The act establishes the following requirements pertaining to a hospital's application for verification or reverification:

(1) If a hospital is seeking initial verification as an adult or pediatric trauma center, verification at a different level, or reverification after having ceased to be verified for one year or longer, the hospital must submit an application to the American College of Surgeons for a consultation visit.

(2) If a hospital is seeking reverification after having ceased to be verified for less than one year, the hospital must submit an application for either a consultation visit or a reverification visit.

⁴ *Until December 31, 2004, certain pediatric trauma centers may operate under a designation issued by the Director of Health (sec. 3727.081, not in the act).*

(3) The hospital must undergo the visit and obtain a written report of the results of the visit. If the report is not obtained on or before one year after the application for the visit is submitted, the hospital must submit a new application.

(4) Not later than one year after obtaining a report of the results of the visit, a hospital is permitted to apply to the American College of Surgeons for verification or reverification as an adult or pediatric trauma center if certain conditions are met. First, the hospital's chief medical officer and chief executive officer must certify in writing to the hospital's governing board that the hospital is committed and able to provide adult or pediatric trauma care consistent with the level of verification or reverification being sought. Second, the hospital's governing board must adopt a resolution stating that the hospital is committed and able to provide adult or pediatric trauma care consistent with the level of verification or reverification being sought. Third, the hospital's governing board must approve a written plan and timetable for obtaining the level of verification or reverification being sought, including provisions for correcting at the earliest practicable date any deficiencies identified in the report obtained from the visit.

Provisional status trauma centers

(secs. 3727.101 and 4765.01)

The act recognizes as trauma centers certain hospitals that are not verified by the American College of Surgeons. Under the act, a hospital is permitted to operate as a trauma center "under provisional status," as follows:

(1) On submission of an application for verification or reverification from the American College of Surgeons, in accordance with the act's provisions regarding applications.

(2) Until it receives the final results of its reverification, if the application was submitted within one year before it ceased to be verified.

Under the act, a trauma center operating under provisional status must limit its provisional status activities to those activities authorized by the level of verification or reverification being sought. The trauma center must also make a reasonable, good faith effort to comply with all requirements established by the American College of Surgeons that must be met for the level of verification or reverification being sought.

Ceasing operation under provisional status

The act requires a hospital to cease operating as a trauma center under provisional status if any of the following applies:

(1) The application for verification or reverification is denied, suspended, terminated, or withdrawn.

(2) In the case of a hospital seeking initial verification, verification at a different level, or reverification after having ceased to be verified for one year or longer, the hospital has not obtained verification or reverification by the date that occurs 18 months after commencing to operate under provisional status.

(3) In the case of a hospital seeking reverification after having ceased to be verified for less than one year, the hospital has not obtained reverification by the date that occurs one year after commencing to operate under provisional status.

Under the act, a hospital that is required to cease to operate as an adult or pediatric trauma center under provisional status must do all of the following:

(1) Except as otherwise provided by federal law, at the earliest practicable date transfer to one or more appropriate trauma centers all trauma patients in the hospital to whom the hospital is not permitted to provide trauma care.

(2) Promptly comply with the laws that prohibit a hospital from misrepresenting its trauma center status and from improperly admitting trauma patients.

(3) Not later than 180 days after ceasing to operate under provisional status, comply with the trauma care laws according to its current status by adopting appropriate trauma care protocols and entering into appropriate patient transfer agreements. The act specifies that a hospital is not in violation of the trauma care laws during the time it develops different trauma care protocols and enters into different patient transfer agreements.

A hospital that ceases to operate as an adult or pediatric trauma center under provisional status may not operate as an adult or pediatric trauma center under provisional status until two years have elapsed since it ceased to operate under that status.

Availability of records

The act provides that a trauma center operating under provisional status must make available for public inspection during normal working hours a copy of its declarations to being committed and able to provide trauma care and a copy of its application for verification or reverification. On request, the trauma center must provide a copy of the documents. The trauma center is permitted to charge a reasonable fee to cover the necessary expenses incurred in furnishing the copies, except that no fee can be charged if the copies are being furnished to the Director of Health.

On request, the trauma center must furnish to the Director a copy of the report of the consultative or reverification visit obtained from the American College of Surgeons and a copy of the plan and timetable for obtaining verification. The act specifies the following:

- (1) Patient-identifying information can be omitted.
- (2) Submission of the documents does not waive any privilege or right of confidentiality that otherwise applies to the documents and the information in them.
- (3) The documents and the information in them are not public records and cannot be disclosed to any person except employees of the Department of Health who are expressly authorized by the Director to examine the copies and information in them.
- (4) The documents and information in them are not subject to discovery or introduction into evidence in a civil action, except an action brought by the Director against the trauma center or a person that authorized, approved, or created the original documents and the information in them.

Pending applications for verification

Irrespective of its provisions regarding the receipt of a report of the results of a consultation visit or reverification visit from the American College of Surgeons, the act provides that a hospital may operate under provisional status if it submitted an application for a consultation visit or reverification visit on or before May 20, 2002. The act requires the hospital to do all of the following:

- (1) Comply substantively with the act's requirements to attest to the hospital's commitment and ability to provide trauma care;
- (2) Approve through its governing board a written plan and timetable for obtaining the level of verification or reverification being sought, including provisions for correcting at the earliest practicable date any deficiencies identified in the exit interview and any subsequent report received;
- (3) Comply with all other provisions of the act applicable to the operation of trauma centers under provisional status, including the act's provisions expressing when a hospital must cease operating under provisional status.

Trauma center notices to state and local entities

(sec. 3727.102)

The act requires a hospital to provide prompt written notice of its trauma center status to the Director of Health, the Emergency Medical Services Division of the Department of Public Safety, and the physicians and physician advisory boards serving as regional directors and regional advisory boards for the applicable emergency medical service region. Specifically, a notice must be provided when any of the following occurs:

(1) The hospital ceases to be an adult or pediatric trauma center verified by the American College of Surgeons.

(2) The hospital changes its level of verification as an adult or pediatric trauma center verified by the American College of Surgeons.

(3) The hospital commences to operate as an adult or pediatric trauma center under provisional status.

(4) The hospital changes the level of verification or reverification it is seeking under its provisional status.

(5) The hospital ceases to operate under its provisional status.

(6) The hospital receives verification or reverification in place of its provisional status.

BACKGROUND

Injury is the leading cause of death for persons in the age group one through 44 as well as the most common cause of hospitalizations for persons under the age of 40. The financial costs of injuries are staggering: injuries cost billions of dollars in health care and social support resources. In 1995, for example, the lifetime costs of all injuries were estimated at \$260 billion annually. These estimates do not include the emotional burden resulting from the loss of a child or loved one, or the toll of severe disability on the injured person and his or her family. Each year over 37,000 people lose their lives on our nation's roads, and approximately 70 percent of those fatalities occur on rural highways. The National Highway Traffic Safety Administration (NHTSA) is charged with reducing death and injury on the nation's highways. NHTSA has determined it can best use its limited EMS resources if its efforts are focused on assisting States with the development of integrated emergency medical services (EMS) programs which include comprehensive systems of trauma care.

To accomplish this goal, in 1988 NHTSA developed a Technical Assistance Team (TAT) approach which permitted states to utilize highway safety funds to support the technical evaluation of existing and proposed emergency medical services programs. Following the implementation of the Assessment Program, NHTSA developed a Reassessment Program to assist those states in measuring their progress since the original assessment. The Program remains a tool for States to use in evaluating their statewide EMS programs. The Reassessment Program follows the same logistical process, and now uses the same ten component areas plus the area of preparedness with updated standards. The standards now reflect current EMS philosophy and allow for the evolution into a comprehensive and integrated health management system, with regional accountable systems of care, as identified in the 2006 IOM Report on the Future of Emergency Care. NHTSA serves as a facilitator by assembling a team of technical experts who demonstrate expertise in emergency medical services development and implementation. These experts demonstrate leadership and expertise through involvement in national organizations committed to the improvement of emergency medical services throughout the country. Selection of the Technical Assistance Team is also based on experience in special areas identified by the requesting State. Examples of specialized expertise include experience in the development of legislative proposals, data gathering systems, and trauma systems. Experience in similar geographic and demographic situations, such as rural areas, coupled with knowledge in providing emergency medical services in urban populations is essential.

The Ohio Department of Public Safety, Division of Emergency Medical Services (DEMS) requested the assistance of NHTSA. NHTSA agreed to utilize its technical assistance program to provide a technical reassessment of the Ohio Statewide EMS program. NHTSA developed a format whereby the DEMS staff coordinated comprehensive briefings on the EMS system.

The TAT assembled in Mt. Sterling, Ohio on February 15-17, 2011. For the first day and a half, over 20 presenters from the State of Ohio, provided in-depth briefings on EMS and trauma care, and reviewed the progress since the 2001 Reassessment. Topics for review and discussion included the following:

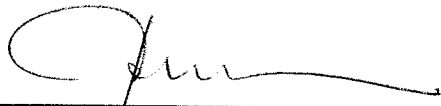

General Emergency Medical Services Overview of System Components

- Regulation and Policy
- Resource Management
- Human Resources and Education
- Transportation
- Facilities
- Communications
- Trauma Systems
- Public Information and Education
- Medical Direction
- Evaluation
- Preparedness

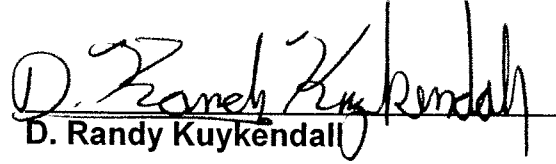

The forum of presentation and discussion allowed the TAT the opportunity to ask questions regarding the status of the EMS system, clarify any issues identified in the briefing materials provided earlier, measure progress, identify barriers to change, and develop a clear understanding of how emergency medical services function throughout Ohio. The team spent considerable time with each presenter so they could review the status for each topic.

Following the briefings by presenters from the DEMS, public and private sector providers, and members of the medical community, the TAT sequestered to evaluate the current EMS system as presented and to develop a set of recommendations for system improvements. When reviewing this report, please note the TAT focused on major areas for system improvement.

The statements made in this report are based on the input received. Pre-established standards and the combined experience of the team members were applied to the information gathered. All team members agree with the recommendations as presented.

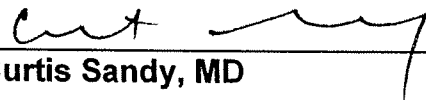

Christoph Kaufmann, MD, MPH

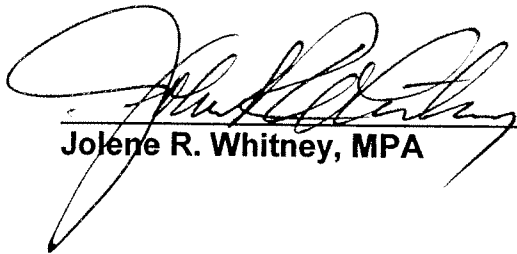

D. Randy Kuykendall

W. Dan Manz

Curtis Sandy, MD

ACKNOWLEDGMENTS

The Technical Assistance Team (TAT) would like to acknowledge the Ohio Department of Public Safety, Division of Emergency Medical Services (DEMS) for their support in conducting this assessment and the Ohio Traffic Safety Office for supporting the assessment process.

The TAT would like to thank all of the presenters for being candid and open regarding the status of EMS in Ohio. Each presenter was responsive to the questions posed by the TAT which aided the reviewers in their evaluation. Many of these individuals traveled considerable distance to participate.

Special recognition and thanks go to Dr. Carol Cunningham, State EMS Medical Director and Richard Rucker, Executive Director, DEMS and his staff and all the briefing participants for their extraordinary efforts and well-prepared presentations.

INTRODUCTION

As the State song suggests, “Beautiful Ohio” is a state with much to admire. Ohio is the crossroads of America. It is the home of nationally recognized institutions of higher education and healthcare. Ohio teams frequently dominate in many sports. The economy is founded on a diverse mix of agriculture, manufacturing and service industries. Ohioans reside in a blend of communities ranging from livable mid-size cities to beautiful rural countryside.

As the nation’s seventh most populous state, Ohio has plenty of demand for emergency medical services. The State’s 11.5 million people depend on their EMS system to respond promptly and effectively to time critical diagnoses. That system has evolved over the past forty or more years to include basic and advanced care available in all areas of the State.

Despite substantial progress, the job of building Ohio’s EMS system remains far from done. The State’s lead agency does not have clear uniform regulatory authority over all forms of EMS agencies and vehicles. The increased use of safety belts and corresponding decrease in revenues from fines are threatening the financial viability of the EMS system infrastructure. The State holds a rich repository of EMS and trauma care data that has not yet been fully transformed into useful information for guiding further policy development.

While there are notable gaps in the system, a great deal has been accomplished that has provided a foundation for future improvements. Partnerships exist between essential stakeholders at all levels. EMS education is well established and supporting the growth of Paramedic availability statewide. Trauma triage criteria have been implemented statewide. Post 9/11, EMS has been integrated into a number of Ohio preparedness initiatives. Wireless 9-1-1 system access has been almost fully implemented statewide. There are a variety of public information and education initiatives aimed at preparing the public to prevent injuries and take action when an emergency confronts them. The needs of children are being considered as system decisions are being made.

The next steps in Ohio’s EMS system development include a focus on the fundamentals. Authorities at state, regional and local levels must be clarified. A reliable level and source of funding needs to be secured. Structural differences between the regulation of varying forms of EMS agencies must be eliminated. Priorities need to be established for verifiable trauma care.

Ohio’s EMS system meets key elements of each NHTSA standard. With some careful planning, cooperation, and commitment, there is good reason to believe the State can make substantial progress towards becoming a national example of excellence. The Buckeyes deserve nothing less.

OHIO DIVISION OF EMERGENCY MEDICAL SERVICES (DEMS)

The TAT revisited the ten essential components of an optimal EMS system that were used in the Ohio: *An Assessment of Emergency Medical Services*, in 2001. These components provided an evaluation or quality assurance report based on ten standards. While examining each component, the TAT identified key EMS issues, reviewed the State's progress since the original report, assessed its status, and used the eleven 2009 Reassessment Standards as the basis for recommendations for Ohio EMS system improvement.

A. REGULATION AND POLICY

Standard

Each State should embody comprehensive enabling legislation, regulations, and operational policies and procedures to provide an effective state-wide system of emergency medical and trauma care and should:

- Establish the EMS program and designate a lead agency;
- Outline the lead agency's basic responsibilities and authorities including licensure and certification including the designation of emergency medical services regions;
- Require comprehensive EMS system planning;
- Establish a sustainable source of funding for the EMS and trauma system;
- Require prehospital data collection which is compatible with local, State and national efforts such as the National EMS Information System (NEMSIS) and evaluation;
- Provide authority to establish minimum standards related to system elements such as personnel, services, specialty care facilities and regional systems and identify penalties for noncompliance;
- Provide for an injury/trauma prevention and public education program; and
- Integrate the special needs of children and other special populations throughout the EMS system;
- Integrate pediatric EMS needs into State statutes, rules and regulations.

All of these components, which are discussed in different sections of this guideline, are critical to the effectiveness of legislation, regulations or policies/procedures which are the legal foundation for a statewide EMS system.

Status

In 1992, responsibility for Emergency Medical Services (EMS) was moved from the Department of Education to the Department of Public Safety, creating the Division of Emergency Medical Services (DEMS). A new State Board of Emergency Medical Services (hereinafter "the EMS Board") was established to oversee emergency medical services and the certification and the training of EMS and fire service personnel in Ohio. The DEMS, in conjunction with the EMS Board, has statutory authority for the following:

- Establishing training and certification standards for fire and emergency medical services personnel;
- Fire and EMS instructor training and certification standards;
- Accreditation of EMS programs of instruction and approval of EMS continuing education programs / Chartering of firefighter and fire safety inspector programs of instruction;
- Oversight of Ohio's trauma system;
- Distribution of grants for emergency medical services organizations;
- Emergency Medical Services for Children (EMSC);
- Regional Physician Advisory Boards;
- Investigations to insure compliance with Chapter 4765 of the Ohio Revised and Administrative Codes;
- Collection and analysis of data submitted to the EMS Incident Reporting System and the Ohio Trauma Registry; and
- Preparation of a statewide emergency medical services plan and a plan for the statewide regulation of emergency medical services during periods of disaster.

The EMS Board is responsible for the promulgation of rules and regulations pertaining to EMS in Ohio. The DEMS staff serves as the administrative arm of the EMS Board. The Executive Director of the DEMS serves as the Chief Executive Officer of the EMS Board. This position reports to both the Board Chair and the Director of Public Safety. That reporting structure is not optimal in that there could be differences in policy direction between the EMS Board and the Department. Serving two masters in this way is not an ideal supervisory structure.

The EMS Board consists of 20 members mostly appointed by the Governor with Senate concurrence. These members are appointed from nominations submitted by EMS stakeholder groups and must have background or experience in emergency medical services or trauma care. EMS Board members include emergency and pediatric physicians, a trauma surgeon, nurses, educators, hospital administrators, fire chiefs and emergency medical technicians. A final member of the EMS Board is designated by the Director of the Ohio Department of Public Safety. EMS Board members serve for a three year term without compensation, but are reimbursed for their expenses. The EMS Board currently meets every other month to carry out its duties and appoints committees and subcommittees as necessary.

The primary funding source for the DEMS and the EMS Board is safety belt violation fines. Due to increase in safety belt use rates (a good thing) this revenue source is decreasing (a bad thing). An increase in fees to obtain driving abstracts was recently added to legislation. Sixty cents of each fee has been designated for the EMS and Trauma fund. The money generated through this fee has been sufficient to maintain operations however a recent challenge has been made to the collection of the fee which is concerning as it could result in a loss of the funds in the future. The net result is that the Division and the EMS Board are under resourced to fulfill their legislatively assigned

functions. The strategy Ohio has used for its funding sources makes good sense but has created instability in support due to a declining base of fines collected.

Each year the DEMS offers grant funding to eligible EMS agencies in Ohio. Since its inception, the grant program has awarded funding for training, training equipment, and patient care equipment. Over 700 EMS agencies benefit annually from Ohio EMS grant support. The Ohio Revised Code defines the priority distribution of available funds for Ohio's EMS and trauma system grant program.

First priority is given to EMS organizations for training, purchase of equipment and vehicles, and to improve the availability, accessibility, and quality of EMS in Ohio. In this category, the Board gives priority to grants for training and equipping of EMS personnel. This is commonly called the EMS Training and Equipment Grant.

Second priority is given to entities that research the causes, nature, and effect of traumatic injuries, educate the public about injury prevention, and implement, test, and evaluate injury prevention strategies. This is commonly called the Trauma System Injury Prevention Grant.

Third priority is given to entities that research, test, and evaluate procedures that promote the rehabilitation, retraining, and re-employment of adult or pediatric trauma victims and social service support mechanisms for adult or pediatric trauma victims and their families. This is commonly called the Trauma Rehabilitation Grant.

Fourth priority is given to entities that research, test, and evaluate medical procedures related to adult and pediatric trauma victims and their families. This is commonly called the Trauma Procedures Grant.

The EMS Board is seeking a change to the above designations to allow for a one-time allotment of funds to assist educational institutions in obtaining national accreditation.

Institutions wishing to offer training for initial First Responder or EMT certification must be accredited (approved) by the EMS Board. Programs offering continuing education must be similarly approved. In keeping with the national *EMS Education Agenda for the Future*, the Board recently voted to require Ohio's paramedic institutions to obtain national accreditation through the Committee on the Accreditation of Allied Health Education Programs, (CAAHEP) by January 1, 2018.

In the State of Ohio, there are more than 42,000 certified EMS personnel. The Division certifies these persons based upon the successful completion of an approved course of education and successful completion of National Registry of EMTs certification. The levels of certification recognized in Ohio include First Responder, EMT-Basic, EMT-Intermediate and EMT-Paramedic. Approximately 4,000 initial certifications and 10,000

certification renewals are processed annually. Certificate holders must meet continuing education requirements and renew their certification every three years.

The EMS Board and the Executive Director are statutorily required to investigate all complaints or allegations of violations involving emergency medical technicians, fire fighters, instructors, and EMS or fire training institutions. The DEMS conducts all investigations, to include, but not limited to, interviewing witnesses and subjects of investigations, collecting and interpreting data and evidence, preparing case summaries, case notes, and cases for presentation to the EMS Board and the DEMS Executive Director for conclusive findings. Additionally, the staff prepares affidavits and exhibits for hearings, drafts the subsequent adjudication orders and record of proceedings for appeals and monitors compliance with all imposed disciplinary sanctions. Over the last two years, the office has conducted over 1600 investigations. All disciplinary actions taken by the EMS Board are posted on the DEMS web site and included in the Division's newsletter.

The State of Ohio has a legislated trauma system with the purpose of ensuring that seriously injured people get to the right hospital in the right amount of time. The EMS Board, with advice from its Trauma Committee, and working through the DEMS is tasked with monitoring, coordination and facilitating the trauma system. It is not clear that the authority in statute and resources available are achieving this charge. Guidelines for the care of trauma victims and their transport to trauma facilities by EMS personnel, consistent with state trauma triage protocols adopted by the EMS Board, have been developed and distributed. The Trauma Committee is established in law and consists of 24 members which may be too large to be practical.

The EMS Board has two statewide databases, created in legislation, that provide it with information to guide decision making. The EMS Incident Reporting System (EMSIRS) collects data on all emergency runs made by EMS units in Ohio. The Ohio Trauma Registry (OTR) is a database of clinical information from all Ohio hospitals on all seriously injured people they admit. These databases are maintained and operated by the DEMS, and are used by the EMS Board to make data-based decisions. They are also used by medical researchers studying EMS and trauma care.

EMSC is a federally funded initiative designed to improve emergency care for children and ensure that the children of Ohio receive the very best emergency care the EMS system can provide. The EMS Board includes a designated position for a pediatric physician and the EMSC committee of the EMS Board serves as the advocate for pediatric issues.

The State of Ohio is divided into ten pre-hospital emergency medical services regions for the purpose of overseeing the delivery of pre-hospital emergency medical services. For each region, the EMS Board may appoint up to nine members to a Regional Physician Advisory Board (RPAB). Care is taken to ensure broad representation of the counties in the region. The RPAB may provide assistance to regional EMS

organizations in such areas as continuing education programs, equipment procurement, establishing mutual aid agreements, development of written medical protocols and in obtaining a medical director. The regions as currently configured may not be ideal. Beyond their assigned role in medical direction, it is not clear that the regions are fulfilling other functions often performed by similar organizations.

The EMS Board is charged with the preparation of a statewide emergency medical services plan and a plan for the statewide regulation of emergency medical services during periods of disaster. The DEMS maintains an active role in homeland security and disaster preparedness, representing the interests of EMS and fire personnel through participation on various committees, including the Homeland Security Advisory Council. The Division facilitates the exchange of critical information through participation in the Strategic Analysis and Information Center. The DEMS is an integral part of the state's planning and response to disasters through work with various preparedness committees and initiatives and staffing of the state EOC during times of disaster.

The EMS Board has established a Strategic Planning Committee to develop a 5-year plan for the advancement of Ohio's EMS system. All current committees of the Board have completed a S.W.O.T. analysis and submitted goals. The recommendations of this Technical Assistance Team (TAT) report will also be reviewed with the Strategic Planning Committee and incorporated into the plan.

In addition to its responsibilities for EMS, the DEMS is also the lead agency for the training and certification of fire service personnel in Ohio. There are over 42,000 firefighters certified by the state of Ohio and 10,000 certified fire safety inspectors. Until recently, fire certificates were issued without an expiration date. At the request of fire service partners, legislation was passed requiring the renewal of fire certificates. Certificate holders must now meet continuing education requirements and renew their certification every three years. Approximately 5,000 new certificates are issued annually, and over 13,000 renewals are completed each year.

Institutions wishing to offer training for initial Firefighter or Fire Safety Inspector certification must be approved by the Executive Director with the advice and counsel of the Firefighter and Fire Safety Inspector Training Committee of the EMS Board. There are currently 70 institutions approved to offer fire training and over 4000 firefighter and fire safety inspector instructors certified through the DEMS.

The Firefighter and Fire Safety Inspector Training Committee of the EMS Board is one of two committees established in law. The Executive Director of the DEMS, with the advice and counsel of the committee, is responsible for adopting standards to regulate firefighter and fire safety inspector training and the chartering of training programs. The DEMS charts institutions interested in offering fire service training programs. The DEMS is accredited by the National Board of Fire Service Professional Qualifications (Pro Board).

While the Division and the Board have significant responsibilities and appear to be doing excellent work in many areas of EMS and trauma care, they are lacking some of the fundamental capabilities that would enable them to meet the NHTSA standard. Having a separate Medical Transportation Board that regulates predominately private-for-profit EMS agencies is an anomaly. The lack of authority to submit Ohio's substantial pre-hospital database into the National EMS Information System (NEMSIS) represents a missed opportunity for both Ohio and the nation. A very limited ability to enforce requirements such as the reporting of agency medical directors is concerning in that it hampers a fundamental understanding of who is doing what within the EMS system. Similar "home rule" excuses pervaded many presentations to the TAT when there appeared to be a common understanding about why DEMS is unable to enforce requirements that are clearly the right thing for EMS patients.

Recommendations

- The DEMS and the EMS Board should complete their strategic planning process with the inclusion of recommendations from this report.
- The EMS Board should in its strategic planning process re-evaluate the current map and functions of EMS regions in Ohio to determine if there can be improvements by updating roles and aligning with the State's Homeland Security regions or other functional model.
- **The legislature should reassign the current functions, authorities and resources of the Ohio Medical Transportation Board to the DEMS as a step towards achieving a single lead EMS agency in Ohio.**
- **The EMS Board should work cooperatively with the Legislature to identify a stable and ongoing source of funding to adequately support all of the functions assigned to the EMS Board and the DEMS.**
- The Director of Public Safety and the EMS Board should clarify the supervisory hierarchy of the EMS Executive Director to establish a single point of oversight.
- The EMS Board should provide the Legislature with models that can be used as a foundation to establish comprehensive lead agency authority to improve the care of patients with trauma, stroke, STEMI and other time critical emergency conditions.
- The Division and the EMS Board should take steps as the opportunity presents in policy, legislation, regulation and other venues to move towards the use of current nomenclature for "licensure" of EMS personnel, "accreditation" in reference to national educational program accreditation rather than State program approval, titles for levels of EMS personnel levels, etc.

- **The EMS Board and the Legislature should assure that DEMS has the necessary authority to enforce existing or future statutory and rule requirements for the provision of EMS.**

B. RESOURCE MANAGEMENT

Standard

Each State EMS lead agency should identify, categorize, and coordinate resources necessary for establishment and operation of regionalized, accountable EMS and trauma systems. The lead agency should:

- Maintain a coordinated response to day-to-day emergencies as well as mass casualty incidents or disasters and ensure that resources are used appropriately throughout the State;
- Have policies and regulations in place to assure equal access to basic emergency care for all victims of medical or traumatic emergencies;
- Provide adequate triage, including trauma field triage, and transport of all patients by appropriately certified personnel (at a minimum, trained to the emergency medical technician [EMT] level) in properly licensed, equipped, and maintained ambulances;
- Provide transport to a facility that is appropriately equipped, staffed and ready to administer to the needs of the patient including specialty care hospitals (section 4: Transportation);
- Appoint an advisory council, including pediatric EMS representation, to provide broad-based input and guidance to the state EMS system and to provide a forum for cooperative action and for assuring maximum use of resources; and
- Coordinate with State Highway Safety Agency and other State Agencies in the development of the Strategic Highway Safety Plan to ensure that EMS system information is used to evaluate highway safety problems and to improve post-crash care and survivability.

Status

The EMS Board continues to be responsible for the promulgation of rules and regulations pertaining to Ohio EMS and the development of the EMS system. The Board is statutorily created and is authorized to promulgate rules, make disciplinary decisions and, in conjunction with the Department of Public Safety, supervise the activities of the Executive Director of the DEMS. Although this board clearly fulfills the responsibilities of an advisory committee to state government on matters of EMS and trauma, it also holds significant regulatory, enforcement and oversight authority with regard to the DEMS and system stakeholders. Since the Board is codified not only as

an advisory council, but an official body of state government, it is positioned in a pivotal leadership role to drive the development of policies and resources necessary to ensure the continued success of trauma and EMS throughout the state of Ohio.

Ohio's forty-five verified trauma centers are evidence of hospital commitment to ensuring quality care for trauma patients. Statewide trauma triage protocols with regional modifications are in place and require EMS providers to transport severely injured patients directly to verified trauma centers. The trauma registry system provides data to the DEMS and through the existence of several regional trauma registry data collection points; data are available in those areas for regionalized quality improvement efforts as well.

Ambulance staffing requirements have recently changed in Ohio and seem to be controversial in terms of ensuring timely responses to emergency calls. Due to the existing bifurcated system of ambulance service regulation, the DEMS is unable to determine the numbers and locations of ambulance service assets across the state.

The Ohio Fire Chiefs' Association's Ohio Fire Service Emergency Response System (ERS) provides local fire chiefs with easy access to large quantities of fire service resources that may be needed to respond to a major fire or natural or man-made disaster. This system provides for rapid activation and response of fire service resources in quantities beyond the means of a single fire department and local mutual aid.

The DEMS continues to work closely with Ohio's Strategic Transportation Safety Plan (STSP). Although EMS clinical data has not been used in this effort, data are available and should be considered in the continued development of the STSP.

Recommendations

- **The EMS Board and the DEMS should work cooperatively with the Legislature to identify a stable and ongoing source of funding to adequately support all of the functions assigned to the Board and the DEMS.**
- The EMS Board should redefine the EMS grants program to appropriately prioritize funding that will support system-wide development activities at the state, regional and local level with priority given to rural and underdeveloped EMS and trauma system components.
- **The EMS Board should develop and present a proposal to the Legislature to consolidate the responsibilities of the Ohio Medical Transportation Board within the DEMS.**

- The EMS Board should implement regulatory changes that will require that all ambulance services and ambulance vehicles, regardless of ownership or service provision model, are inspected and licensed by the DEMS.
- **The DEMS should develop and maintain a comprehensive database of EMS and trauma system resources that provides an accurate accounting of personnel, equipment and services throughout Ohio.**
- The DEMS should continue to support the collection, evaluation and dissemination of system resource information to local, regional, statewide and national stakeholders by improving the effectiveness of existing data collection systems.
- The EMS Board and the DEMS should evaluate the statewide availability of EMS and trauma resources to ensure that these resources are adequately matched to the evolving needs of the EMS and trauma system.

C. HUMAN RESOURCES AND EDUCATION

Standard

Each State should ensure that its EMS system has essential trained and certified/licensed persons to perform required tasks. These personnel include: first responders (e.g., police and fire), prehospital providers (e.g., emergency medical technicians and paramedics), communications specialists, physicians, nurses, hospital administrators, and planners. Each State should provide a comprehensive statewide plan for assuring a stable EMS workforce including consistent EMS training and recruitment/retention programs with effective local and regional support. The State agency should:

- Ensure sufficient availability of adequately trained and appropriately licensed EMS personnel to support the EMS system configuration;
- Assure an ongoing state EMS personnel needs assessment that identifies areas of personnel shortage, tracks statewide trends in personnel utilization and which establishes, in coordination with local agencies, a recruiting and retention plan/program;
- Establish EMT as the state minimum level of licensure for all transporting EMS personnel;
- Routinely monitor training programs to ensure uniformity, quality control and medical direction;
- Use standardized education standards throughout the State that are consistent with the National EMS Education Standards;
- Ensure availability of continuing education programs, including requirements for pediatric emergency education;
- Require instructors to meet State requirements;
- Assure statutory authority, rules and regulations to support a system of EMS personnel licensure that meets or exceeds the national EMS Scope of Practice Model, new National EMS Education Standards, as they are available, and other aspects of the EMS Education Agenda for the Future; and
- Monitor and ensure the health and safety of all EMS personnel.

Status

Training and certification has long been an area in which Ohio has had strong capabilities. Both DEMS staff and educational program presenters shared a common perspective and commitment to doing the right things for candidates. The obvious respect and support between DEMS staff and education program managers was refreshing to see and no doubt works to the ultimate best interest of EMS patients.

In the summer of 1986, legislation moved the authority for training of advanced EMTs and Paramedics out of the Board of Regents and into the Ohio Department of Education. The Office of Public Safety was established within the Vocational Education section of the Department of Education with authority to establish minimum training and certification standards for EMTs, EMS instructors and the accreditation of educational institutions.

Controversy over the use of the National Registry of EMTs (NREMT) testing as the Ohio certification examination led to the establishment of the Division of EMS within the Department of Public Safety (previously Department of Highway Safety). A new twenty member board was established with authority to create the rules and regulations for the development of EMS. Fines associated with the violation of safety belt usage laws have provided the funding for the EMS Board and DEMS as well as establishing a grant fund.

Ohio currently certifies four levels of EMS providers: First Responder, EMT-Basic, EMT-Intermediate and EMT-Paramedic. In general, Ohio has shown a steady increase in the number of certifications issued. In 1992, there were approximately 34,000 certified EMTs at all levels in Ohio. Today, there are over 42,000 EMTs. A small amount of this increase (approximately 2100) can be attributed to the addition of First Responder as a certification level beginning in late 2000. The most noticeable change has occurred at the Paramedic level jumping from approximately 6,000 certified in 1992 to over 16,000 today. The majority of personnel are still certified at the EMT-Basic level which has remained a fairly constant number over the past twenty years (approximately 24,000 in 1992 and approximately 21,500 today). The NREMT examination is used for certification at all four levels.

Although a needs assessment has not been completed, Ohio has served as a training ground for many other states. As an example, Tennessee reported approximately 75% of the 150 new paramedics hired at a department that went from volunteer to paid status came from Ohio. The EMS agencies who lost personnel, in most cases easily found others to take their place. Rural areas with volunteers were reported to be having more trouble recruiting and retaining personnel. Some volunteer agencies report using their grant money to pay for personnel to complete additional training only to have those personnel move to the urban and metropolitan areas in search of jobs once their training is complete. To assist the rural volunteer agencies, a Recruitment and Retention Committee was established and a section of the DEMS web site has been

established to provide resources and information to those needing assistance. Data about the adequacy of EMS staffing across Ohio is not consistently evaluated to assure that community needs are being met.

Institutions wishing to offer training for initial First Responder or EMT certification must be State accredited by the EMS Board. The term “accreditation” in Ohio refers to the State’s approval process for educational programs and is not consistent with the national terminology for non-governmental, independent, national accreditation by CAAHEP. In keeping with the national *EMS Education Agenda for the Future*, the Board recently voted to require Ohio’s paramedic institutions to obtain national accreditation through CAAHEP by January 1, 2018. The cost of obtaining national accreditation has been cited as a barrier.

There are currently 93 institutions approved to offer EMS training, which include colleges and universities, vocational schools, hospitals, EMS organizations and fire departments. Only five of the 51 institutions approved for Paramedic training currently hold CAAHEP accreditation. Ohio’s state “accreditation” approval process for all levels closely mirrors the national accreditation standards. The DEMS is currently in the process of developing an on-line application process for initial and renewal program approvals that will include annual reporting. On-site reviews and audits will continue to be completed as in the past, but the on-line reporting will make it easier to monitor programs between reviews.

Recent changes in Ohio law permits the DEMS to issue program approvals for a period of up to five years, but most are issued for three. Provisional State accreditation may also be issued to programs that fail to meet the standards established by the Board. Rules are in place to permit the provision of didactic portions of the initial certification courses through distance learning. Although not yet being utilized by most programs, this is intended to provide an opportunity for those candidates with limited access to training or those facing scheduling problems to have more access to quality education.

The Ohio curriculum at each level is currently under review to bring it in line with the National EMS Educational Standards as a minimum. Ohio’s scope of practice will remain at or above the *National EMS Scope of Practice Model*, including the use of supraglottic airways by EMT-Basics in the pulseless and apneic patient and endotracheal intubation of apneic patients at the EMT-Intermediate level.

There are over 500 institutions which have been awarded a Certificate of Approval by the EMS Board to offer continuing education to currently certified EMS personnel. Certificates of Approval may be issued for up to five years but are generally renewed every three years. The renewal process includes an on-site review of facilities, equipment and records along with interviews of key program personnel. An on-line application process is being developed for the continuing education sites as well.

All instructors for initial and continuing education must hold a certificate to teach issued

by the EMS Board. There are currently over 3600 EMS, Assistant EMS and Continuing Education instructors certified through the DEMS. To become an EMS instructor, an individual must have at least five years experience, pass a knowledge exam and skills exam at their level of certification and complete a seventy-hour course of instruction, including supervised teaching. Renewal requirements include instructional continuing education and active teaching.

A physician serving as a medical director of an EMS agency may apply to become an EMS instructor. Requirements for training and testing are waived for these individuals. This was done to encourage physician involvement in the educational processes.

To qualify for Ohio EMS certification, EMS personnel are required to successfully complete an approved course of instruction and pass the state-specified NREMT examinations. Ohio's curricula meet, and in some cases exceed, the National Education Standards.

Recommendations

The DEMS and the EMS Board should:

- Conduct a formal needs assessment of the numbers, levels, and placements of EMS personnel required for optimal system performance as part of the current focus on recruitment and retention.
- **Reform the current Ohio “accreditation” process into a State approval process that works in conjunction with the nationally recognized EMS education program accreditation to assure Ohio students continue to get the best possible educational preparation.**
- **Assure that after January 1, 2013, graduates of non-CAAHEP accredited paramedic education programs understand their eligibility for Ohio certification but not national certification through the NREMT.**
- Continue to implement the *EMS Education Agenda for the Future* including the *National EMS Scope of Practice Model* as a foundation for the Ohio authorized EMS scope of practice, National EMS Education Standards, national certification and national EMS education program accreditation.
- Assess and report the outcome evaluations of all levels of EMS education programs.
- Support the initial cost of paramedic program accreditation with EMS grant funds.

D. TRANSPORTATION

Standard

Each State should require safe, reliable EMS transportation. States should:

- Develop statewide EMS transportation plans, including the identification of specific EMS service areas and integration with regionalized, accountable systems of emergency care;
- Implement regulations that establish regionalized, accountable systems of emergency care and which provide for the systematic delivery of patients to the most appropriate specialty care facilities, including use of the most recent Trauma Field Triage Criteria of the American College of Surgeons/Committee on Trauma;
- Develop routine, standardized methods for inspection and licensing of all emergency medical transport services and vehicles, including assuring essential pediatric equipment and supplies;
- Establish a minimum number of personnel at the desired level of licensure on each response and delineate other system configuration requirements if appropriate;
- Assure coordination all emergency transports within the EMS system, including public, private, or specialty (air and ground) transport and including center(s) for regional or statewide EMS transportation coordination and medical direction if appropriate; and
- Develop regulations to ensure ambulance drivers are properly trained and licensed.

Status

The DEMS, as the state lead agency, does not license or inspect all EMS organizations operating ambulances within the state. Only private-for-profit EMS organizations are required to be licensed. Licensing for these organizations is accomplished by the Ohio Medical Transportation Board, which operates independently from the DEMS and EMS Board. However, the DEMS also has authority to “prepare for the operations of EMS” which may include determining equipment and supplies, minimum ambulance staffing and needed communications. There appears to be some confusion and duplication of

effort by having two boards regulate the provision of emergency medical services within Ohio.

Annually, the OMTB licenses 443 EMS organizations, 133 MICU's and conducts inspections on 3200 vehicles. Seventy percent of the ambulance services in Ohio are fire based and are not state regulated. There are 15 licensed air ambulance services, with 57 helicopters located throughout the state. There is no certificate of need for establishing the necessity for an air ambulance or the vehicle locations. It was reported that there is no central dispatch for air ambulance, no standardized activation guidelines and no other accreditation required (such as CAAMTS).

To this day, the DEMS does not have the ability to monitor and assess the number of EMS organizations and vehicles, or the level of care provided by every EMS organization in the state. This greatly impacts their ability to assess the number of resources, utilization, and appropriate use of resources for routine patient care, let alone the needs of a region in the event of a disaster.

With regard to ambulance staffing, a 2008 legislative amendment brought about a modification to the minimum staffing requirements. The minimal level of staffing is now one First Responder and one EMT. Historically, the minimum level of staffing has been two EMTs. The statutory change now requires both personnel to respond in the ambulance when dispatched. This change created a burden for rural providers who would previously ensure minimum staffing of two EMT's, with one EMT arriving at the scene.

The DEMS has no regulations for ambulance drivers. However, the Transportation Board requires the non-EMT drivers to be EVOC trained. Emergency vehicle operations courses are provided within the state.

Recommendations

- The Legislature should merge the functions of the OMTB within the DEMS to create efficiencies, reduce duplication and confusion to the public and EMS providers.
- **The Legislature should establish authority for DEMS to require all EMS agencies operating ambulances within Ohio to be licensed and inspected regularly.**
- **The Legislature should authorize DEMS to establish regulations for all ground and air ambulances operating within the state to ensure standardization of equipment, staffing and communications statewide.**
- With stakeholder input, the Board of EMS and Department of Public Safety should establish a graduated fee schedule for EMS organization licensure and ambulance permits.

- The Legislature should restore the minimum staffing requirement for ambulances to be two EMT's.
- The EMS Board should establish rules that require all ambulance drivers to be trained in emergency vehicle operations.
- **The EMS Board should utilize the Air Ambulance Committee and the RPABs to establish a statewide standardized air medical activation guideline.**

E. FACILITIES

Standard

It is imperative that the seriously injured (or ill) patient be delivered in a timely manner to the closest appropriate facility. Each State should ensure that:

- Both stabilization and definitive care needs of the patient are considered;
- There is a statewide and medically accountable regional system, including protocols and medical direction, for the transport of patients to state-designated specialty care centers;
- There is state designation of specialty medical facilities (e.g. trauma, burns, pediatric, cardiac) and that the designation is free of non-medical considerations and the designations of the facilities are clearly understood by medical direction and prehospital personnel;
- Hospital resource capabilities (facility designation), including ability to stabilize and manage pediatric emergencies, are known in advance, so that appropriate primary and secondary transport decisions can be made by the EMS providers and medical direction;
- Agreements are made between facilities to ensure that patients, including pediatric patients, receive treatment at the closest, most appropriate facility, including facilities in other states or counties;
- Hospital diversion policies are developed and utilized to match system resources with patient needs – standards are clearly identified for placing a facility on bypass or diverting an ambulance to appropriate facilities.

Status

There are 181 hospitals in the state of Ohio with 33,860 beds. Only 45 of these are verified trauma centers at any level. These include fourteen Level I trauma centers, thirteen Level II trauma centers, and eighteen Level III trauma centers. Included in these numbers are three Level I and three Level II pediatric-specific trauma centers. Additionally, there are nine burn centers in Ohio including the nationally recognized Shriners' Hospitals for Children in Cincinnati.

As Ohio currently uses the American College of Surgeons (ACS) verification process

exclusively and the ACS only verifies Levels I through III, the State of Ohio has neither criteria for nor verification of Level IV or V trauma centers. However, it should be noted that the verification of trauma centers within the state is entirely voluntary. It is quite impressive that 45 hospitals have elected to undergo the ACS verification process (every three years) and participate in the state trauma system without financial incentives.

Many states have developed statewide funds for uncompensated trauma care that serve, in part, to offset the expense incurred with maintaining an adequate and available hospital staff to respond to the myriad needs of injured patients in a timely fashion. Such a fund may also serve to facilitate completion of an inclusive trauma system in Ohio, with all hospitals participating in the system at a level commensurate with their abilities. Other states have used a variety of sources for these funds, including: vehicle licensing, seatbelt fines, moving violation/DUI fines, tobacco taxes, etc. Some of these statewide trauma center funds are established in a manner that qualifies the state for federal Medicaid matching funds.

Statewide trauma triage protocols, which are routinely modified as needed, require EMS providers to transport severely injured patients directly to verified trauma centers. Five circumstances are outlined in law that permits transport to non-trauma centers. Acute care hospitals are required to have protocols that address the emergency care of trauma patients and their appropriate transfer to a trauma center. Trauma centers are required to have transfer agreements with acute care facilities to ensure continuity of care and the appropriate transfer of trauma patients.

Although there has been no statewide survey of hospital capabilities, this has been accomplished at the local level in many areas of the state. The Region I RPAB (SW Ohio) has completed surveys of the hospitals in the region for the past two years. The reported capabilities are provided to local medical directors and EMS agencies to assist in transport decision-making. The Central Ohio Trauma System (COTS) also maintains Franklin County and Central Ohio Hospital Resource Guides for EMS providers.

While currently not as mature as the trauma system, systems of care for other time critical diagnoses are being developed in Ohio. Individual hospitals have begun the effort to improve care of patients with stroke and STEMI through voluntary accreditation as stroke or cardiac centers. Successful implementation of these systems of care will require additional support not only from local EMS agencies, but also from the DEMS. The number of these efforts can be expected to rapidly increase as the State works to provide timely care and for all citizens for all time critical diagnoses.

Ohio EMSC, housed within the DEMS at the Ohio Department of Public Safety, was created to incorporate children's issues into all aspects of the EMS system. Ohio has received funding consistently since 1987 for the EMSC Program. Although the early EMSC Program focused on injury prevention activities, the release of EMSC Performance Measures by the Health Resources and Services Administration in 2005

changed the focus to pediatric emergency care. These measures include inter-facility transfer guidelines and agreements.

Recommendations

The Legislature should:

- Create a trauma fund to partially compensate all verified trauma centers for unreimbursed care provided to trauma patients.
- **Pass legislation that includes criteria for verification of Level IV, and possibly Level V trauma centers in order to support completion of an inclusive trauma system for the citizens of Ohio.**
 - **This legislation should also include provisions for designation and de-designation of trauma centers.**
 - **This legislation should also mandate reporting of all trauma-specific data to the Ohio State Trauma Acute Care Registry or link trauma data reporting to receiving uncompensated care financial offsets.**

The DEMS should:

- Utilize data to review, modify, and monitor state and regional use of Ohio trauma triage guidelines, including over triage and under triage rates.
- Enhance current efforts to provide for the specialized triage and emergency care needs of children and the elderly.
- **Continue to systematize the care of patients with stroke, STEMI and other time critical diagnoses.**

F. COMMUNICATIONS

Standard

An effective communications system is essential to EMS operations and provides the means by which emergency resources can be accessed, mobilized, managed, and coordinated. Each State should assure a comprehensive communication system to:

- Begin with the universal system access number 911;
- Strive for quick implementation of both wire line and wireless enhanced 911 services which make possible, among other features, the automatic identification of the caller's number and physical location;
- Strive to auto-populate prehospital patient care report (NEMSIS compliant) with all relevant times from the public safety answering point (PSAP);
- Provide for emergency medical dispatch training and certification for all 911 call takers and EMS dispatcher.
- Provide for priority medical dispatch;
- Provide for an interoperable system that enables communications from dispatch to ambulance, ambulance to ambulance, ambulance to hospital, hospital to hospital and ambulance to public safety communications.
- Provide for prioritized dispatch of EMS and other public safety resources.
- Ensure that the receiving facility is ready and able to accept the patient; and
- Provide for dispatcher training and certification standards.
- The statewide communications plan includes effective, reliable interoperable communications systems among EMS, 911, emergency management, public safety, public health and health care agencies.
- Each State should develop a statewide communications plan that defines State government roles in EMS system communications.

Status

The Governor established a task force that oversees the State Interoperability Executive Committee (SIEC). The Public Safety Director links the task force with the SIEC which provides guidance and strategic direction to the emergency responders for reliable wireless communications interoperability.

A county-by-county communications capability assessment was completed in 2005. This created a database of equipment and frequencies for each county and support agency. It also established multi-disciplinary capabilities for an interoperable communications system.

The Ohio Office of Information Technology implemented the Multi-Agency Radio Communications Systems (MARCS), an 800 MHz radio system that provides effective communications throughout Ohio. The system is used by all state agencies, sheriff dispatch centers, county emergency management, many EMS providers, hospitals and health departments. The Ohio Emergency Management Agency has a remote deployable site called a Transportable Communications System (TCS) which can be used to patch UHF, VHF and redundancy for the 800 MHz system.

Currently, enhanced wireline 9-1-1 service is provided statewide (88 counties) and enhanced wireless 9-1-1 service is provided in 84 counties. As of December 2010, Phase I automatic number identification has been implemented in four counties. Phase II which includes automatic number and location identification has been implemented in 78 counties. Legislation supporting funding for further development of the 9-1-1 system is due to sunset by December 31, 2012. This is an area of concern as these funds could be utilized by counties to support emergency medical dispatch (EMD) training for centers with wireless 9-1-1.

There appears to be no clear authority for emergency medical dispatch training or requirements. However, the State Board of Education has an emergency service telecommunicator training program which is offered at vocational centers throughout the state. The 40 hour course is offered 8 times a year and the tuition covered for employees of emergency medical service providers from a fund created by law. However, very little funding has actually been realized.

Dispatch centers in Ohio vary from sophisticated to minimally staffed in rural areas. There are neither Emergency Medical Dispatch Center standards nor standards for personnel who routinely dispatch emergency medical services.

Recommendations

- **The EMS Board should seek authority to develop dispatch center and emergency medical dispatcher certification standards.**
- The EMS Board should create a dispatch subcommittee to establish medical priority dispatching standards and emergency medical dispatcher certification standards.
- **The DEMS should encourage standardized EMD training for dispatchers supported by wireless 9-1-1 funds to counties and/or the EMS grants program.**
- The Ohio Emergency Management Agency with the Department of Public Safety should conduct regular assessments for ambulances, hospitals and dispatch centers within the emergency healthcare system to ensure routine and redundant communications systems are sufficient and interoperable.
- The EMS Board and stakeholders should create a central dispatch center for air medical services with flight-following and the ability to track resources and availability of aircraft.

G. PUBLIC INFORMATION AND EDUCATION

Standard

Public awareness and education about the EMS system are essential to a high quality system. Each State should implement a public information and education (PI&E) plan to address:

- The components and capabilities of an EMS system;
- The public's role in the system;
- The public's ability to access the system;
- What to do in an emergency (e.g., bystander care training);
- Education on prevention issues (e.g., alcohol or other drugs, occupant protection, speeding, motorcycle and bicycle safety);
- The EMS providers' role in injury prevention and control; and
- The need for dedicated staff and resources for PI&E.

Status

The Ohio Injury Prevention Partnership (OIPP) is the CDC's Injury Community Planning Group (ICPG) for Ohio. The OIPP is a statewide group of professionals representing a broad range of agencies, organizations and disciplines concerned with building Ohio's capacity to address the prevention of injury. There is a very close relationship between OIPP and the DEMS. They have been a participating member of the OIPP since its inception in 2009 and currently serve in a leadership position.

The President of OIPP serves as the injury prevention liaison to the EMS Board's Trauma Committee. Because of its wide array of available expertise, OIPP was selected as the primary author of the injury prevention section of *A Framework for Improving Ohio's Trauma System*. The first plan of action identified in the injury prevention section of the document is to develop a statewide injury prevention plan on high priority injuries. They also identified a strategy within the plan to support public health policies designed to advance injury and violence prevention.

Annually, the DEMS offers grant funding to eligible EMS agencies statewide. These grants are categorized into four priorities. The second priority is commonly called the "Trauma System Injury Prevention Grant" and is awarded to entities that research the cause, nature, and effect of traumatic injuries, educate the public about injury prevention, or implement, test, and evaluate injury prevention strategies. Since 2003-2004, the DEMS has awarded over \$2.2 million in this category.

The EMS for Children's program resides within the DEMS. The coordinator has been active with injury prevention programs though recent efforts have been focused on meeting national performance measures associated with the grant funding. The Safe Kids Ohio is currently located in the DEMS and is managed by the EMSC coordinator. Ohio provides administrative assistance and fiscal oversight for the 15 coalitions and 6 local chapters, and coordinates their monthly phone meetings. The EMSC coordinator also serves on the OIPP and plans to become more involved with the organization.

The DEMS has a designated liaison from the Department of Public Safety Public Information Office. The liaison handles all media inquiries and information releases pertaining to EMS initiatives and also assists the DEMS with postings to its web site and publication of a newsletter – *The Siren*. The PIO is very active in marketing campaigns and collaborates with the State Office of Traffic Safety (SOTS) on many initiatives. The SOTS was instrumental in providing funds to support this NHTSA assessment.

The Department of Public Safety provides numerous printed safety materials and safety videos to the public, free of charge. This includes information related to such topics as bicycle safety, pedestrian safety, teen drinking and driving, and vehicle occupant safety. Several PSA campaigns have been provided to the public with a focus on CPR training, toy safety and child passenger safety.

Every year, the DEMS supports activities associated with EMS week and provides recognition to outstanding EMS personnel. The materials developed for EMS week have been recognized by the ACEP at the national level. They also conduct activities related to other national recognition programs like Trauma month.

Most P.I. & E. activities are conducted at the local level. The DEMS has had limited involvement in educating the public in regards to accessing EMS or in the provision of bystander care.

Recommendations

- The DEMS should seek funding from the Office of Traffic Safety or the Office of Rural Health to support a train-the-trainer course for a bystander care program;
- **The DEMS should seek opportunities to collaborate with the Ohio Department of Health on data linkages and injury prevention priorities;**
- The DEMS should require recipients of EMS grant funds to submit information regarding the effectiveness of their injury prevention programs;
- The DEMS should utilize existing databases to assess injury prevention needs and to focus educational efforts to the public and EMS providers;
- The DEMS should utilize social networks like Twitter and Facebook, to educate the public regarding preparedness, injury prevention and other aspects of the EMS and trauma system.

H. MEDICAL DIRECTION

Standard

Physician involvement in all aspects of the patient care system is critical for effective EMS operations. EMS is a medical care system in which physicians oversee non-physician providers who manage patient care outside the traditional confines of the office or hospital. States should require physicians to be involved in all aspects of the patient care system, including:

- A state EMS Medical Director who is involved with statewide EMS planning, overseeing the development and modification of prehospital treatment protocols, statewide EMS quality improvement programs, scope of practice and medical aspects of EMS provider licensing/disciplinary actions;
- On-line and off-line medical direction for the provision of all emergency care including pediatric medical direction, when needed and the authority to prevent and EMS provider from functioning based on patient care considerations; and
- Audit and evaluation of patient care as it relates to patient outcome, appropriateness of training programs and quality improvement.

Status

The State EMS Medical Director is a contract position designated in Ohio law and must be a board-certified emergency medicine physician in active practice and actively involved in EMS for at least 5 years. The Medical Director directs the Executive Director of the Division of EMS and advises the EMS Board with regard to trauma and EMS issues. The State EMS Medical Director however, has limited authority in regards to agency medical directors and has limited involvement with air medical transport within the state.

The State EMS Medical Director for the past several years provides many hours of service beyond what her contract provides and is recognized at a national level for her contributions.

Each EMS region has appointed a Regional Physician Advisory Board (RPAB) that serves in an advisory capacity to the EMS agencies in their region. Each physician on the RPAB serves a 3 year term and is selected to ensure geographic representation within the region. The RPABs meet 4 times a year.

The RPAB advisory role includes the development and recommendation of patient treatment protocols including approving state trauma triage rules, assisting in

developing EMS continuing education programs, assisting in the organization, evaluation, and procurement of equipment for EMS organizations, and facilitating agreements for mutual aid and assistance between EMS organizations in the region. The RPAB also serves as a resource to maintain agency medical director contacts as well as help identify issues and solutions that affect the provision of medical care to patients. The RPAB cannot however serve as a “regional medical direction” board because of liability concerns. The RPAB’s mission is mostly trauma focused.

Region 6 has not had an active RPAB in several years. This seems to be due to its rural nature, the large size of the region and the lack of a true regional referral center within the region. A new chairman has recently been appointed and attempts to revitalize the RPAB are underway.

The Chairs of the RPABs meet quarterly with the State Medical Director and contribute to the development of the State of Ohio EMS Guidelines and Procedures Manual.

The Medical Oversight Committee of the EMS Board is composed of physicians and providers and recommends scope of practice changes based upon evidence-based best practices when available.

Each EMS agency is required to have a medical director and notify the DEMS regarding the name of that individual. The medical director must be board-certified or board-eligible in emergency medicine, be actively involved in emergency care of patients, and actively participate in quality improvement activities, education and protocol development and updates. For agencies without a board-certified or board-eligible emergency medicine physician, the medical director must meet all other requirements as well as complete a medical director education course as approved by the state. This includes the NAEMSP Medical Director Course or the Ohio ACEP course which is available on-line. However, there is no mechanism in place to track completion of these courses unless a physician submits a request for CME.

Currently, the DEMS does not have an accurate database of medical directors as there is no mechanism to enforce the agency notification requirement. While physicians must register as a medical director with the Board of Pharmacy, there is no such registration requirement for the DEMS.

The agency medical director is required to establish patient treatment protocols and can use the state guidelines as a resource. The medical director can restrict a provider’s scope of practice but cannot expand beyond the state adopted scope of practice for each licensure level.

Medical directors have a level of protection from civil liability related to acts and omissions except in cases of willful and wanton misconduct. There is no administrative liability protection in statute however.

Recommendations

- **The DEMS and Legislature should expand the role of RPAB from an advisory role to an authoritative role under direction of the EMS Board and the State Medical Director.**
- **The Legislature should extend the existing medical director liability protection to the RPABs to enable the provision of regional medical direction.**
- The DEMS should redefine EMS regions to better align regions with Homeland Security Planning Regions and reduce geographic size to increase RPAB activities.
- **The DEMS should expand RPABs' mission from that of trauma to all time-critical diagnoses and require development of regional triage criteria for STEMI, stroke, post-cardiac arrest, and pediatrics.**
- The Legislature should provide limited immunity for administrative liability of medical directors.
- The EMS Board and the DEMS should develop and require medical director certification for all agency medical directors and develop a statewide database to ensure compliance with minimum standards and increase medical director communication.
- The DEMS should require verification of medical director registration for all EMS agencies.

I. TRAUMA SYSTEMS

Standard

Each State should maintain a fully functional trauma system to provide a high quality, effective patient care system. States should implement legislation requiring the development of a trauma system, including:

- Trauma center designation, using American College of Surgeons Committee on Trauma guidelines as a minimum;
- Trauma field triage and transfer standards for trauma patients;
- Data collection and trauma registry definitions for quality assurance, using American College of Surgeons Committee on Trauma National Trauma Data Standards, as soon as practicable;
- Systems management and quality assurance; and
- Statewide Trauma System Plan, consistent with the Health Resources and Services Administration Model Trauma System Planning & Evaluation Document.

Status

Ohio, the seventh most populous state, faces most of the trauma system development challenges represented by all states; there exist challenges of population density disparity, funding, geography, “home rule” politics, lack of a state trauma plan, cross-border issues, EMS and air medical inconsistency across the state. Trauma system development has been ongoing in Ohio for over three decades. An initial focus on the development of prehospital emergency medical service capacity has evolved to a view that encompasses a desire to achieve comprehensive and integrated EMS and trauma systems. Despite the appropriate breadth of this view and many successes, there remain many opportunities for improvement

In the 1980's, Ohio hospitals were included in a voluntary, loosely coordinated trauma system: larger urban hospitals self-identified as regional trauma centers. There was no formal verification of trauma care among hospitals. In July 2000, legislation was passed that established a mandated statewide trauma system, created a statewide trauma committee (the Ohio Trauma Committee), defined “trauma victim”, and set official verification standards for trauma centers. One of the recognized shortcomings of the current Ohio trauma system is that it is “exclusive”; it focuses exclusively on the severely injured patient rather than all injured patients and is centered exclusively on

hospitals verified by the ACS as trauma centers rather than all hospitals who may receive injured patients. The state trauma registry only collects data on those trauma patients admitted to a hospital for at least 48 hours, are transferred, or who die. A true inclusive trauma system would concern itself with all injured patients seeking hospital care within the state.

It is not known whether the non-participating hospitals (non trauma centers) do submit all required data to the Ohio Trauma Acute Care Registry. These facilities are to report trauma patient data, as do the verified trauma centers. The difficulty is that these facilities are also expected to transfer all trauma patients at risk of complication or death. This is a “Catch 22” in which small hospitals are expected to submit reports voluntarily that may bring their care into question at the State level. For this reason and many others, it will be beneficial to the victims of injury in Ohio to add Level IV trauma centers and perhaps Level V trauma centers also. Periodic visits by the State would be expected to improve trauma care simply through the hospital site visit process.

A trauma rehabilitation registry, the first of its kind in the nation, was established as a module of the Ohio Trauma Registry in 2005. This registry was developed to track and understand longer-term outcomes of trauma victims. To date, the data captured in this registry have not been linked to acute care data in such a way that meaningful analyses have been forthcoming. Statewide trauma triage protocols have been developed that require EMS providers to transport severely injured patients directly to verified trauma centers with a few exceptions. Acute care hospitals are required to have protocols that address the emergency care of trauma patients and their appropriate transfer to a trauma center. Trauma centers are to have transfer agreements with acute care facilities to ensure continuity of care and the appropriate transfer of trauma patients. The presence and consistency of these various protocols and agreements across the many hospitals in Ohio is not tracked. Verifying that these protocols and agreements exist and are appropriately written is an important body of work yet to be accomplished.

Despite its limitations (functioning as an advisory group) the Ohio Trauma Committee has had numerous successes. The Trauma Committee is charged with assisting the State Board of EMS in the development of a variety of trauma system elements including prehospital triage of patients to trauma centers, restrictions on admission of trauma patients by non-trauma centers; and oversight of EMS quality of care and provider education. The advisory nature and large size of the 22-member (plus three liaison members) Ohio Trauma Committee limits its potential.

Only a lead agency that monitors patient care and transfer, has designation and de-designation authority over trauma centers, and has approval authority for triage protocols can be expected to successfully implement a comprehensive and integrated inclusive trauma system. Similarly, the trauma lead agency needs to be properly positioned and structured within the DEMS in order to be successful and achieve its potential. The work of the trauma office is large and requires adequate FTE resources. This work includes (but is not limited to): Level IV (and Level V) trauma center

verification, designation and de-designation of trauma centers, ensuring data collection from all trauma centers throughout the state, managing the Ohio Trauma Acute Care Registry, updating and approving regional trauma triage guidelines, ensuring seamless transfer of trauma patients through the trauma system (including special populations such as pediatric, elderly, and burns), ensuring adequate and appropriate use of rehabilitation resources, and developing agreements for trauma patient repatriation to neighboring states.

The forty-five verified trauma centers in Ohio are self-selected and undergo voluntary verification by the American College of Surgeons. There was no state needs assessment to determine the optimal level, number, and location of trauma centers; neither is there a state designation process. As such, the Level I and II trauma centers are in population centers, while the Level III trauma centers are more rural in location. This non-ideal geographic distribution leaves nearly 4% of the Ohio population more than one hour away from definitive care at a Level I or II trauma center, whether by ground or air transport (American Trauma Society TIEP data, 2009). Regions with “gaps” in their ability to provide timely trauma care need state involvement and assistance to solve the access problems these underserved areas represent. Addition of a State Trauma Medical Director would be expected to solve problems such as these and facilitate implementation of the Ohio Trauma Plan.

In 2008, the Ohio Trauma Committee convened to evaluate the strengths and weaknesses of the current system. A general assessment was conducted utilizing the *Model Trauma Systems Planning and Evaluation* document created by HRSA. In 2009, a workgroup was formed by the Ohio Trauma Committee to develop a strategic plan for Ohio's trauma system based on the results of the system assessment. In October 2010, the EMS Board approved *A Framework for Improving Ohio's Trauma System*. The “Trauma Visionary Committee,” including members of the Trauma Committee and the EMS Board, has been tasked with developing the Ohio Trauma Plan. Implementation challenges will follow Trauma Plan development. The membership of this new workgroup appears conducive to successful inclusive trauma system development.

Finally, as Ohio looks to improve disaster preparedness, the broad distribution of trauma centers throughout the State makes an excellent foundation for medical plans for disasters, either manmade or natural. Similarly, as homeland defense planning efforts mature, the “hub and spoke” trauma system model should not be overlooked as the base on which patient and medication distribution strategies can be built.

Recommendations

The Legislature should:

- **Modify existing trauma system legislation to establish criteria for and develop an inclusive trauma system for Ohio.**
 - **Develop Ohio criteria for verification of Level IV (and consider Level V) trauma centers (even if the American College of Surgeons has not/will not).**
- **Create and fund the position of State Trauma Medical Director.**

The DEMS should:

- **Complete and implement the Ohio Trauma Plan based on the preliminary document, “*A Framework for Improving Ohio’s Trauma System.*”**
 - **Formalize the Trauma Visionary Committee as a permanent adjunct to the trauma program.**
 - **Provide adequate support for current and future work of the Trauma Visionary Committee in developing and implementing the Ohio Trauma Plan.**
- **Provide additional FTE’s for the DEMS to be able to manage the trauma program.**
- **Overcome apparent obstacles to full use of trauma system data to support statewide and national quality assurance and prevention efforts and to support future trauma system maturation.**
 - **Develop strategies to ensure trauma patient data is submitted from all Ohio hospitals to the Ohio Trauma Acute Care Registry.**
 - **Work with the Ohio Attorney General to be authorized to publish statewide aggregate trauma and EMS data and submit statewide aggregate data to the National Trauma Data Bank and NEMSIS.**
 - **Develop and implement an evidence-based injury prevention and control plan integrated with interested agencies.**
- **Appoint a State Trauma Medical Director.**
 - **Ideally, this should be a trauma/critical care surgeon (of at least 0.25 FTE)**

J. EVALUATION

Standard

Each State should implement a comprehensive evaluation program to assess effectively and to improve a statewide EMS system. State and local EMS system managers should:

- Evaluate the effectiveness of services provided to victims of medical or trauma-related emergencies;
- Define the impact of the system on patient care and identify opportunities for system improvement;
- Evaluate resource utilization, scope of service, patient outcome, and effectiveness of operational policies, procedures, and protocols;
- Evaluate the operation of regional, accountable emergency care systems including whether the right patients are taken to the right hospital;
- Evaluate the effectiveness of prehospital treatment protocols, destination protocols and 911 protocols including opportunities for improvement;
- Require EMS operating organizations to collect NEMSIS compliant data to evaluate emergency care in terms of the frequency, category, and severity of conditions treated and the appropriateness of care provided; Assure protection from discoverability of EMS and trauma peer review data;
- Ensure data-gathering mechanism and system policies that provides for the linkage of data from different data sources through the use of common data elements;
- Ensure compatibility and interoperability of data among local, State and national data efforts including the National EMS Information System and participation in the National EMS Database;
- Evaluate both process and impact measures of injury prevention, and public information and education programs; and
- Participate in the State Traffic Records Coordinating Committee (TRCC) – a policy-level group that oversees the State’s traffic records system, to develop and update a Statewide Traffic Records System Strategic Plan that ensures coordination of efforts and sharing of data among various State safety data systems, including EMS and Trauma Registry data.

Status

The Division of EMS requires all EMS patient encounters be reported to the EMS Incident Reporting System (EMSIRS) by the transporting agency. This system was built by the state and is transitioning to NEMSIS V2 compliance. The state has provided grants to EMS agencies to help facilitate the access to EMSIRS and simplify data submission. The EMSIRS is compatible with commercial PCR programs through a batch file and FTP transfer.

Currently, there is no mechanism to monitor compliance with the data submission requirement nor is there provision for enforcement but the DEMS reports around 85% of all patient encounters are submitted. However, these submissions are from ground transport agencies and may not necessarily reflect care provided by first responder agencies or air medical services. Agency data submission is tied to state EMS grant eligibility. Ohio does not submit to the national EMS database (NEMSIS) over concern of an Ohio law addressing release of medical information that tends to reveal patient identity. The DEMS has published annual benchmark reports including regionalized breakdowns of incident time intervals and procedure success rates.

The Trauma Registry (TR) is used to compile all trauma related admissions greater than 48 hours, trauma deaths, and trauma transfers from hospital to hospital. It is currently being upgraded to be National Trauma Data Standard (NTDS) compliant. The Ohio Office of Traffic Safety has provided \$350,000 in Section 408 grant funding to facilitate the upgrade of this registry.

The Division of EMS participates in the Ohio Traffic Records Coordination Committee. This committee's focus is on the collection and analysis of traffic safety data to reduce crash-related deaths and injuries. The upgrade of both the TR and EMSIRS will allow high-quality data submissions into Ohio's Crash Outcome Data Evaluation System (CODES) program.

Several EMS agencies have utilized information from both of these databases for system enhancements and research projects. Several papers have been published by outside researchers including in peer-reviewed medical journals.

The use of these databases by the DEMS and the EMS Board has been limited mainly due to the lack of personnel to analyze the data. When benchmarked against other states, the DEMS lacks the human resources to optimally analyze the acquired data.

The EMS Board requires each EMS agency to implement a peer-review and quality assurance program. This program is focused on improving the ability to provide effective trauma care and takes into account the trauma care guidelines developed by the board. This peer-review and QA process is protected from discovery for liability purposes.

Recommendations

- **The DEMS should require all hospitals to submit trauma registry data for all trauma admissions, deaths and transfers.**
- The Department of Public Safety should provide funding for additional staff for increased analysis of database data.
- **The DEMS should seek clarification of law in order to submit EMSIRS data to the national EMS database (NEMSIS) and trauma registry data to the NTDB.**
- The DEMS should increase analysis of database information to drive EMS and trauma system design and policies including patient destination criteria and appropriate use of air medical resources.
- The DEMS should resolve the confidentiality issues which currently restrict access to de-identified data for public purposes.
- The DEMS should use the EMSIRS and TR data to regularly provide reports to hospitals and EMS providers.

K. PREPAREDNESS

Standard

EMS is a critical component in the systematic response to day-to-day emergencies as well as disasters. Building upon the day-to-day capabilities of the EMS system each State should ensure that EMS resources are effectively and appropriately dispatched and provide prehospital triage, treatment, transport, tracking of patients and documentation of care appropriate for the incident, while maintaining the capabilities of the EMS system for continued operations, including:

- Clearly defining the role of the State Office of EMS in preparedness planning and response including their relationship with the State's emergency management, public health and homeland security agencies;
- Establishing and exercising a means to allow EMS resources to be used across jurisdictions, both intrastate and interstate, using the Emergency Management Assistance Compact and the National Incident Management System;
- Identifying strategies to protect the EMS workforce and their families during a disaster;
- Written protocols, approved by medical control, for EMS assessment, triage, transport and tracking of patients during a disaster;
- A current statewide EMS pandemic influenza plan; and
- Clearly defining the role of emergency medical services in public health surveillance and response.

Status

Statutorily, the roles of the EMS Board and the DEMS in domestic preparedness are defined in Ohio Revised Code (ORC). The ORC requires the EMS Board to provide a liaison to the Ohio Emergency Operations Center (EOC) when there is a disaster that warrants a Governor's emergency declaration. This requirement is being met through the DEMS participation at the state Emergency Operations Center (EOC). The EMS Board is required to establish a statewide emergency medical services plan, and a plan for the regulation of EMS during periods of disaster. The latter must be consistent with the statewide plan and the State EOP, and must be sent to the Ohio Emergency Management Agency (EMA).

Although the statutory responsibilities and authority of the EMS Board and the DEMS are somewhat limited concerning domestic preparedness, both the EMS Board and DEMS work to ensure that the needs of the EMS community related to preparedness are met. The Ohio Emergency Management Agency and Ohio Homeland Security are also divisions of the Department of Public Safety. As components of the same department, cooperation between the agencies is enhanced. The DEMS provides staff support through its Homeland Security Coordinator. The lack of authority to regulate EMS agencies inhibits the DEMS's ability to adequately identify and track resources, thus being a barrier in terms of planning for mass casualty events.

The DEMS works with the Ohio Department of Health (ODH) in developing protocols and training to deploy both EMS and hospital based CHEMPACKS. In partnership with ODH, the EMS Board and DEMS completed the deployment of regional equipment caches, as well as supporting a training capacity expansion project. Funding for EMS agencies to purchase radios compatible with the Multi Agency Radio Communications System (MARCS) was authorized by the EMS Board.

In 2009, the DEMS and the EMS Board worked with the ODH to address the H1N1 influenza outbreak. As a result of the declared public health emergency, certified EMT-Intermediate and EMT-Paramedic personnel were made available to local public health officials to perform H1N1 immunizations under physician direction.

In order to meet the requirements of the ORC, the EMS Board adopted the Ohio Fire Chiefs' Association's Ohio Fire Service Emergency Response System (ERS) as Ohio's plan. The ERS provides local fire chiefs with easy access to large quantities of fire service resources that may be needed to respond to a major fire or natural or man-made disaster. This system provides for rapid activation and response of fire service resources in quantities beyond the means of a single fire department and local mutual aid.

The ERS is a database of typed resources maintained and updated regularly by regional coordinators. Activation of the plan is through the Ohio Central Dispatch Facility, and in time of disaster is coordinated through the State Emergency Operations Center. The system includes validation of all necessary mutual aid and emergency management assistance compact documentation. The success of this plan has been validated through actual uses, and exercises. Although this system is predominately centered around fire service resources, non-fire based agencies may choose to participate.

Recommendations

- **The EMS Board and the DEMS should require the use of a statewide patient tracking system by all ambulances during a multiple casualty or mass casualty incident.**
- **The EMS Board and the DEMS should develop a comprehensive data base of EMS resources to be utilized during multiple casualty or mass casualty incident.**
- **The DEMS should work closely with the ODH to support the continued development of hospital preparedness planning and effective use of HPP and other grant funds targeted to increase medical facility surge capabilities.**

L. CURRICULUM VITAE

Christoph (Chris) R. Kaufmann, MD, MPH, FACS

Professor of Surgery, East Tennessee State University
Medical Director, Trauma and Acute Care Surgery Services
Johnson City Medical Center
400 N. State of Franklin Road
Johnson City, TN 37604
(423) 431-1896
Cell: (423) 747-7478

Final Report of the Workgroup on Provisional Trauma Center Designation

Amended Senate Bill 138 of the 123rd General Assembly was signed into law in July 2000¹. It set into motion the development of an organized system of care for the seriously injured patient in Ohio. As work progressed on various tasks mandated by the law, it became clear that it was legally difficult, if not impossible, for hospitals not verified as a trauma center by November 3, 2002 to gain the experience needed in order to do so. Discussions among stakeholders in the trauma system lead to proposals of various provisional designation processes, including which organization or agency should assume the authority to oversee the process.

Formation of and Charge to the Workgroup

In late April 2002, J. Nick Baird, MD, Director of Health, requested that Virginia Haller, MD, liaison from the Ohio Department of Health (ODH) to the Trauma Committee, form a workgroup to examine the issues of provisional designation of trauma hospitals in Ohio. Dr. Baird's charge to the Workgroup was to present to him by November 2002 the arguments for and against a series of options for handling provisional designation. Members of the Workgroup were to include representatives from the ODH, the Ohio Department of Public Safety (ODPS), the Trauma Committee and Ohio hospitals. Members of the Workgroup on Provisional Trauma Center Designation are listed in Appendix A

At about the same time but unrelated to the workgroup, the Ohio General Assembly sought to provide immediate relief to hospitals seeking to operate as trauma centers under a provisional status as of November 2002. Substitute Senate Bill 124 (SB 124) served as the vehicle and was signed into law with an effective date of November 2002². Members of the Workgroup viewed SB 124 as short term relief for the need for provisional designation. Long term resolution would require a process for provisional designation that focused on clinical criteria and the establishment of a designating authority. Thus, the Workgroup chose to compare the provisional designation process mandated by SB 124 with several other options.

The Evolution of Trauma Care

Twentieth century military experience first demonstrated that patients with severe multiple injuries could survive if they received prompt coordinated care from a team of specialists. Later, urban hospitals expanded the team model, showing that patient outcomes were enhanced by a smooth flow of care between the emergency room and intensive care units. As well-trained emergency physicians and trauma surgeons moved from urban settings to rural areas, they found that dedicated equipment, resources and personnel were as critical as their own knowledge and abilities in saving the lives of trauma patients³.

Accidental Death and Disability: The Neglected Disease of Modern Society, published in 1966, highlighted the enormous costs of death and disability in the United States due to preventable injury⁴. The authors of Accidental Death and Disability underlined the need for partnership between government and those in the health care field in resolving the

complex conditions which often lead to injury. Public policy was considered essential to the community infrastructures that supported effective prevention efforts, as well as the coordination of health care services delivered in the field and in the hospital.

Over the next twenty years, several states and large urban areas developed systems for delivering trauma care which integrated government and health services. Evaluation of efforts undertaken in Maryland, Florida, Illinois, Oregon and in Orange County and San Diego demonstrated marked survival of trauma patients after implementation of the systems. At the same time, the medical field was working to develop guidelines to standardize the approach to care of the injured patient³.

Development of the ACS Guidelines and the Verification Process

The American College of Surgeons (ACS) was founded in 1913 on the basic principles of improving the care of the surgical patient and the education of surgeons. The ACS Committee on Trauma (ACS COT) is the oldest of the standing committees of the College. Established in 1922 this committee focuses on improving care of the injured patient. In the mid 1970s, the ACS COT formalized its recommendations for care of the injured patient via the publication of a document entitled *Optimal Hospital Resources for Care of the Injured Patient* (1976). This document provided a foundation for the development of the ACS COT Verification Review Committee (ACS COT VRC). The mission statement of the Verification Review Committee states the following: "To create national guidelines for the purpose of optimizing trauma care in the United States. This [objective] may be accomplished through a voluntary review of potential and existing trauma centers to ensure that they provide an organized and systematic approach to the care of the injured patient. Essential elements include trained and capable personnel, adequate facilities, and ongoing self-assessment as outlined in the "Resources for Optimal Care of the Injured Patient", 1998 document. The goals of the ACS COT VRC are 1) that hospitals providing care for injured patients request consultation and/or verification from the American College of Surgeons to assist in the development and implementation process; 2) that the guidelines be updated at periodic intervals to reflect changes in patient care consistent with new diagnostic and treatment modalities. Socioeconomic issues are to be considered as well. And, 3) that the consultation/verification process be monitored in order to identify issues and opportunities for improvement of the program.

An obvious outgrowth of the ACS COT guidelines for optimal care was the development of a verification process whereby a hospital could be evaluated to determine whether ACS criteria were being met. This verification process was established in 1987 and by 2001 more than 1100 verification and consultation visits were completed. Currently, the ACS COT Verification Review Committee stands as the recognized authority on the provision of care for the injured patients. The guidelines of the ACS COT as published in the *Optimal Resources handbook* are utilized (either verbatim or as guidelines) by the majority of legislated trauma systems in the United States. Trauma center verification is the process by which the ACS confirms that the hospital is performing as a trauma center and meets the criteria contained in the *Resources for Optimal Care of the Injured Patient* document⁵.

In 1998, researchers conducted a survey of all state emergency medical directors on the status of trauma system development in their state. 41 of 51 respondents indicated that

their criteria for determining trauma center status was based on or actually utilized ACS criteria. 2 states did not use ACS criteria. The remaining 8 states had not undertaken significant trauma system development⁶. During its deliberations, members of the Workgroup on Provisional Trauma Center Designation contacted 23 states regarding their use of ACS criteria in determining trauma center status. Of the 23 states, all either utilized the ACS verification process in its entirety or based their criteria on ACS guidelines (Appendix B).

The process of ACS verification is well-established. Following the receipt of a request for a consultative site visit from a hospital and the completion of a pre-review questionnaire, the ACS proposes a review team and a date for the review. All reviewers are from out-of-state and selected from present and past members of the COT, thus ensuring an objective review process. The hospital to be reviewed must agree with the reviewers selected and the date for the visit.

The consistency of the review process is facilitated by

- 1.) a pre-review questionnaire which allows the site visitors to have a better understanding of the existing trauma care capabilities and the performance of the hospital and medical staff before beginning the review
- 2.) the guidelines used by the site visitors to conduct the review, in which evaluation of the quality improvement activities and review of medical charts are emphasized.
- 3.) an organized agenda for the review and an outline for writing the report in a standard format
- 4.) final review of the report by the Verification Consultation Committee, and
- 5.) a formalized appeal process to the VRC.

The entire process encompassing the VRC and the publication of the *Resources* document is a dynamic and constantly evolving process. The standards of the *Resources* publication are constantly reviewed and updated every three to five years to reflect the most current medical data regarding the optimal resources for care of the injured patient. Through state commitment to the standards of the ACS COT and the verification process as described in the *Resources for Optimal Care of the Injured Patient*, the citizens of Ohio may be assured of the finest trauma care.

Not all stakeholders in a developing or mature trauma system support use of the ACS standards in their entirety. Those states whose trauma systems were organized prior to the establishment of the ACS verification process tend to use ACS standards as minimum criteria for participation in the state trauma system, with some standards being set much higher. Still other states use ACS standards or the ACS verification process itself for designation of Level I and Level II hospital facilities. It is common for states to use ACS standards as a model for Level III and Level IV facility designation, modifying the standards to varying degrees. In these states, facility designation must be conducted by the state apart from ACS verification.

Ohio Legislation

Amended Substitute House Bill 138 (HB 138) of the 123rd Ohio General Assembly

HB 138, as signed into law July 2000, amended Chapters 3727 and of the Ohio Revised Code. It established critical elements of a statewide trauma system. Beginning November 3, 2002, hospitals cannot represent themselves as trauma centers unless they are verified by the ACS. The legislation mandated that emergency medical services and hospitals develop protocols for the triage and treatment of seriously injured patients, as well as quality improvement activities that would assure continual self-evaluation and correction. HB 138 broadened the membership of the EMS Board and established the Trauma Committee to support the EMS Board in its work. The integrity of data gathered through the trauma registry was increased by adding risk adjustment parameters and confidentiality protections. EMS and Trauma Grant programs were expanded. Finally, HB 138 called for special studies through ODPS and two Commissions through ODH to provide information for further development of the trauma system¹.

Impact of SB 124

The intent of HB 138 was to lay the groundwork for a statewide trauma system with the goal of matching the needs of injured patients to available health care resources. Trauma hospitals are a key resource for Ohio's trauma system. As population and injury patterns throughout the state change, it will be important to develop and support new trauma hospitals. Likewise, should existing trauma hospitals relinquish or lose their trauma center status, the state will require flexibility to respond to the needs of injured patients.

During initial trauma system development it was determined that new trauma hospital development may be difficult due to conflicts in the state's definition of a trauma hospital, state triage rules, and criteria for trauma center verification by the American College of Surgeons (ACS). Therefore, a need for provisional trauma center designation was identified.

SB 124 made several changes to chapter 3727 of the Ohio Revised Code². Prior to SB 124, a hospital was required to have ACS verification in order to function as a trauma center in Ohio. SB 124 created a mechanism for a hospital to operate as a provisional trauma center before completing ACS verification. To attain provisional trauma center designation, a hospital must undergo a consultative or re-verification visit by the ACS. Based on the report from this visit, a hospital can attain provisional trauma center status after completing the following tasks: (1) the hospital's chief medical officer and chief executive officer certify in writing to the hospital's governing board that the hospital is committed and able to provide trauma care consistent with the level of verification being sought; (2) the hospital's governing board adopts a resolution stating that the hospital is committed and able to provide trauma care consistent with the level being sought; and (3) the hospital's governing board approves a written plan and timetable for obtaining the level of verification being sought, including provisions for correcting any deficiencies identified during the ACS review. Status as a provisional trauma center is terminated if the hospital withdraws its application for verification, the ACS terminates or suspends the

application, or if the hospital is not an ACS verified trauma center within 18 months after operating under provisional status (12 months if the hospital is being re-verified).

All hospitals must notify the Director of Health of any changes in their trauma center status (See ORC 3727.101-102). This would include achievement or loss of provisional trauma center status and achievement, loss, or change in their level of trauma center verification. The Director may request a copy of the hospital's ACS report and timetable for correcting any identified deficiencies. While these documents are confidential, they can be used in any action brought by the Director against the trauma center or a person that authorized, approved, or created the original documents and the information in them. There is no statutory authority for the Ohio Department of Health to administer a provisional designation system. There is also no funding to support activities related to provisional designation.

Benefits

SB 124 sets forth a simple approach to the complex problem of provisional designation and requires no formal implementation process. Prior to the passage of SB 124, many constituents believed that a provisional designation system should be in place prior to the November 2002 trauma system implementation deadline (as specified in HB 138). There was concern that, without provisional designation, hospitals actively pursuing trauma center status would not be able to develop the track record of patient care required for ACS. SB 124 addressed this concern and may have prevented a possible delay in trauma system implementation. Hospitals desiring provisional trauma center status will like this law because it provides an easy mechanism for them to function as trauma centers while building experience and a database for ACS verification. Advocates for SB 124 further point out that, although there is no regulatory oversight of provisional trauma center designation, liability concerns will constrain hospitals from operating outside their capabilities.

Risks

SB 124 lists no minimum clinical criteria with which provisional trauma centers must comply. The ACS lists over 170 possible criteria deficiencies that may be identified in the course of either a consultative or verification visit. Among the criteria are both administrative and clinical deficiencies, and within these categories are deficiencies that have either major or minor impact on patient outcomes. It is possible that provisional trauma center status could be attained in the presence of major clinical deficiencies. The realization of provisional status without consideration of the impact of a hospital's specific criteria deficiencies erodes the intent of HB 138 to match trauma care resources with patient needs.

There is no authority for any group to monitor hospitals operating as provisionally designated trauma centers. Therefore, there is no mechanism to insure that these centers are providing an appropriate level of care or making significant progress toward successful ACS verification. Even if such authority existed, this new law contains no actions or penalties associated with non-compliance of the criteria for attaining provisional trauma center status. While advocates for SB 124 argue that liability is a significant deterrent to hospitals operating outside their capabilities to provide trauma

care, hospital staff may misinterpret ACS criteria and unknowingly provide substandard care.

The workgroup was concerned that, while SB 124 addresses the needs of hospitals wanting to become trauma centers, it does not adequately address the needs of patients. This concern was based upon the lack of clinical criteria associated with provisional status and lack of system oversight. SB124 should be viewed as a short-term solution. Ultimately, a comprehensive long-term solution must be defined. The rest of this report will outline potential actions related to this issue.

Justification of the Need for a Designating Authority

In order to appreciate the interplay of the ACS and Ohio law in the development of a statewide trauma system, it is necessary to understand key terminology and concepts.

Verification is the ACS COT process which uses experienced on-site reviewers to evaluate the trauma care capabilities and performance of an institution.⁷ Verification is an entirely voluntary process initiated by the institution¹. Once achieved, verification as a Level I, II, III or IV Trauma Center is granted for three years. ACS does not monitor performance of a verified trauma center within those three years, although the institutional performance is evaluated at the re-verification visit. “The **designation** of trauma facilities is a political process enacted by bodies of government duly authorized to designate.”⁸ Designating authorities establish trauma systems, select participating institutions and designate the role of those institutions within the trauma system. Provisional designation, though built on the ACS verification process, is a function of a designating authority. Monitoring of poor patient outcomes between ACS verification visits would also be a role for the state designating authority.

Provisional designation can take place without a designating authority, as Ohio is now doing. SB 124 addressed several circumstances in which hospitals can complete the process of ACS verification as a trauma center while continuing to receive trauma patients. Evolution of the science underlying trauma medicine, shifting population demographics and economic pressures can be expected to create a demand for ongoing changes in the trauma system. For example, an ACS verified trauma center may decide to close its trauma services due to loss of key staff or financial constraints. Other hospitals willing to fill the void would need time to prepare for ACS verification. The existence of a designating authority in the state could facilitate their ability to provide valuable services to many seriously injured patients, while safeguarding the most critical patients who need care elsewhere. Areas of Ohio are currently underserved in terms of trauma facilities, most notably, southeastern Ohio. The ability to function under provisional trauma center status would allow a local hospital to obtain the track record necessary to satisfy ACS verification requirements.

In states with a designating authority, the ACS shares results of its activities with that entity. In the 1998 survey of state EMS Directors, 39 of 51 respondents indicated their

¹ In those states with a legally established designating authority, the ACS will respond only to a request for verification of an institution when approved by the state designating authority.

state had a designating authority. (Appendix B.) Recall that 8 of the 51 had no trauma system whatsoever.

A state designating authority not only allows response to changing conditions that affect the hospitals, but also allows focus on the quality of clinical care. Under SB 124, a hospital with deficiencies of any magnitude may operate as a trauma center if they develop the requisite resolutions and action plans for correction. Yet the affect on patient outcomes may be dramatically different. A designating authority can address such differences. The locus for a state designating authority, as established in law, can reside with a state agency or a private organization.

Options for the Designation of Provisional Trauma Centers in Ohio

What are the benefits and risks inherent in the current approach to designation of provisional trauma centers? What other options might Ohio pursue as its trauma system evolves? The Provisional Trauma Center Designation Workgroup debated the merits of several methods for recognizing provisional trauma centers. Each option is presented below, along with its benefits and challenges. Special note is made for the legal authority, legislative changes and funding issues required by each. The Workgroup also addressed confidentiality issues which would have a bearing on the willingness of hospitals to share data with a designating authority.

As stated earlier in this document, the Workgroup strongly supports ACS verification and the continued use of the ACS criteria for trauma center designation in Ohio. Options for creating a non-ACS based designation process are not presented here.

Option 1

ODH would be given the statutory authority to establish a provisional designation program and rules to govern that program. A group of professionals with expertise in trauma would advise and assist ODH on the development of criteria, the writing of rules, the granting of provisional status, etc.

Option 1A – Use of the Trauma Committee as the Advisory Body (See Figure 1).

Currently, ODH has neither the expertise nor the resources to undertake provisional designation activities. The Trauma Committee, which was created under HB 138 to advise and assist the EMS Board. Its focus under EMS has been on pre-hospital activities. The Trauma Committee is composed of a cross-section of professionals, many of whom have experience with hospital verification by the ACS. They also have in-depth knowledge of the development of the trauma system to date. In this option, the Trauma Committee would assist and advise ODH on hospital matters related to trauma and trauma care within Ohio. A statutory connection between ODH and the Trauma Committee would be required. The Trauma Committee would then assist ODH in the writing of rules related to provisional designation. A major advantage of this option would be the inclusion of clinical criteria necessary for successful designation as a provisional trauma center. Any hospital meeting provisional trauma center criteria would be designated as such. The Ohio General Assembly would need to assign authority for provisional designation to ODH. Ohio public record laws would need to be amended to protect the sharing of sensitive data between hospitals and ODH. Under this option, few

additional resources would be needed. The Workgroup envisioned one FTE (or less) at ODH to coordinate provisional designation activities. No site visits would be conducted, eliminating a major expense. The membership of the Trauma Committee may need to be expanded to accommodate additional expertise and work volume. Any necessary funding would be dependent either upon the General Revenue fund (unlikely) or fees generated from the hospitals.

Ohio law equates ACS verification with designation. Many hospitals pursued ACS verification prior to passage of HB 138 as a means of improving their own performance and recognition as trauma centers. This limits the number of hospitals seeking provisional designation. It is anticipated that between 10 and 20 hospitals will seek provisional trauma center status under SB 124 during the first few months after implementation of HB 138/SB 124. Members of the Workgroup estimate that only 3 or 4 hospitals per year will seek provisional status afterwards. It seems efficient to rely on an already existing group of experts to perform specialized oversight of a process involving so few hospitals.

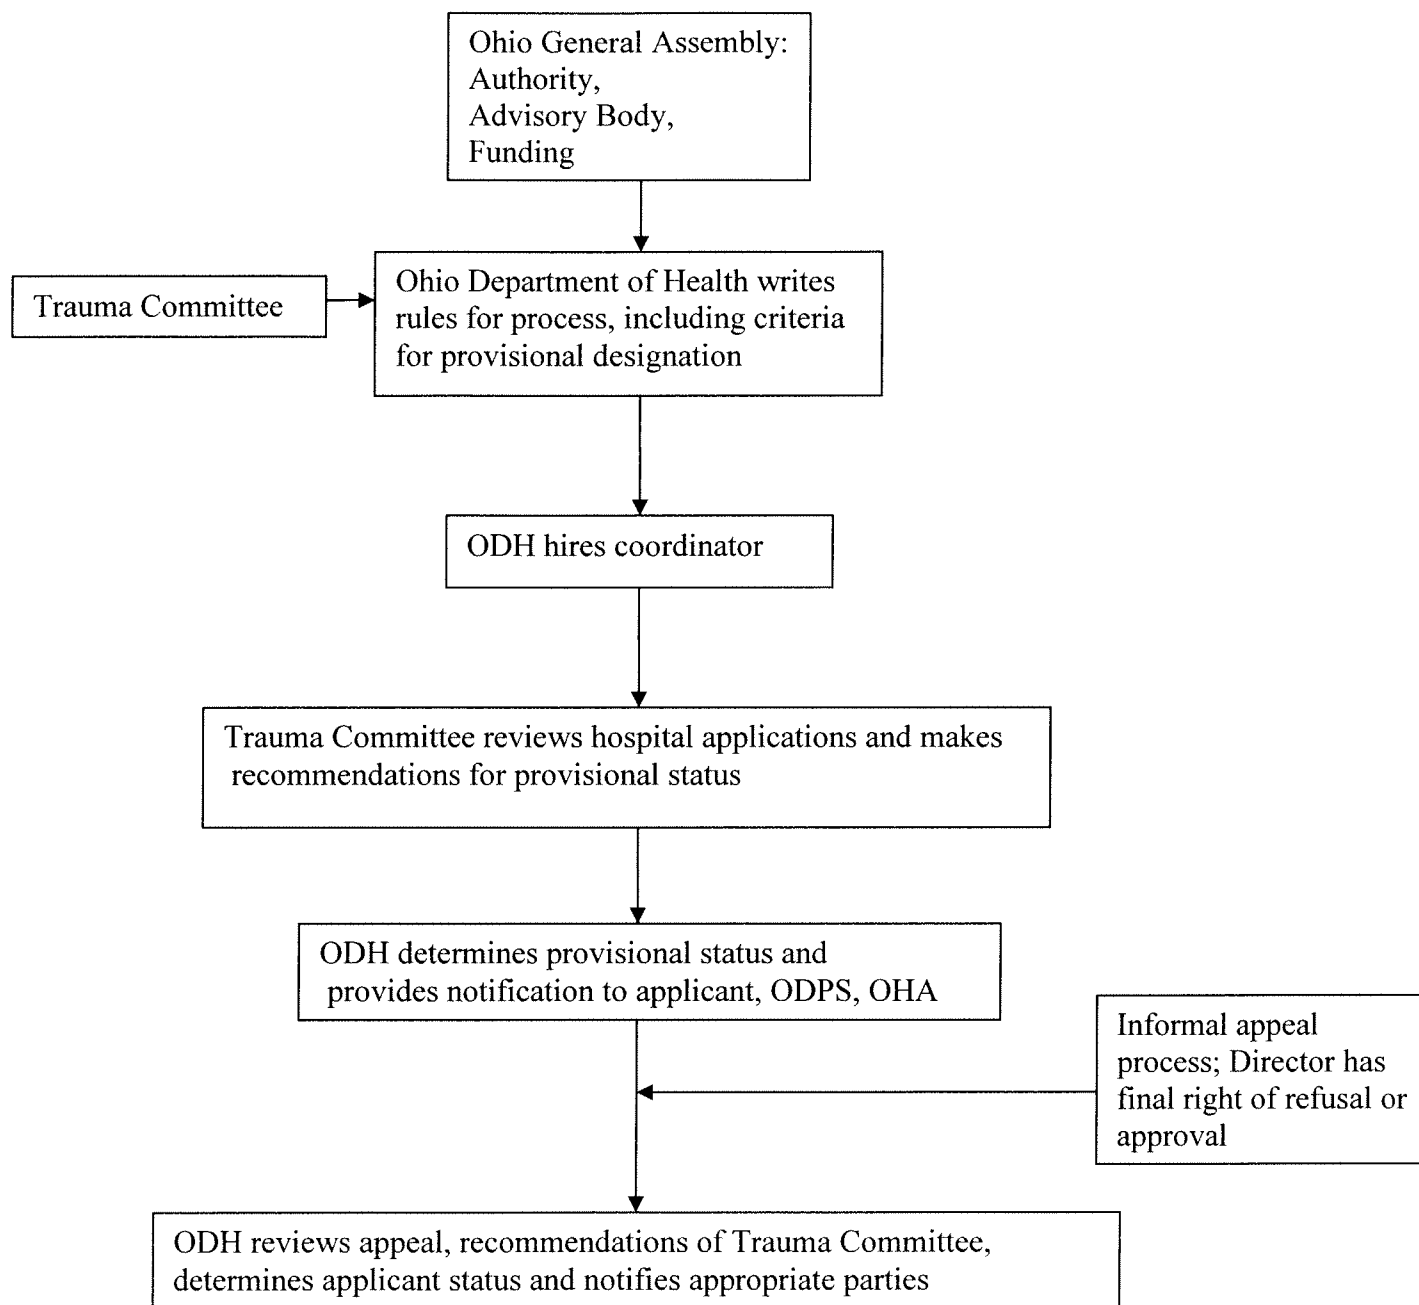

Figure 1

Table 1. Risk/Benefit Analysis of Option 1A

Benefits/Pros	Risks/Cons
Trauma Committee already is established in statute as a committee of the EMS Board	Statutory connection between Trauma Committee and ODH would be needed
Trauma Committee members offer a broad range of clinical and administrative expertise	Membership of Trauma Committee may require expansion due to need for additional expertise and increased responsibilities
Meetings have been open and involved participation by a large number of stakeholders, along with the voting members	ODH currently does not want authority for provisional designation
Trauma Committee has track record of completing work on schedule or before	Those opposed to ODH involvement in designation during negotiation of the original trauma bill may remain opposed to a role for ODH
Continuity of care would be aided by one body (Trauma Committee) drafting work products for two major components (EMS and Trauma Centers) of a comprehensive trauma system	EMS/ODPS is concerned that the Trauma Committee will be given more responsibility than it can handle, thus weakening its effectiveness.
Trauma Committee could handle wide variations in the number of hospitals seeking provisional designation over time	Confidentiality of data would need to be addressed
Trauma Committee decision process has been by consensus	Set-up of an appeals process would need to be addressed; could be handled informally
	May require additional FTE within ODH to act as program coordinator.

Option 1B - ODH has statutory authority to establish a provisional designation program and the rules to govern that program. All major activities would be contracted out to a third party (See Figure 2).

This possibility was discussed extensively among members of the Trauma Committee in late 2001 and early 2002 when the need for provisional designation was first recognized. Those discussions centered on awarding a competitively bid contract to a 501-C-3 organization. A number of potential organizations for providing this service were considered. As in option 1A, statutory authority for provisional designation would need to be assigned to ODH. The same Ohio public record laws, third party involvement, and funding would also need to be addressed. While an existing 501-C-3 organization would need some time to prepare to administer a provisional designation process, it is likely to take less time than developing the process de novo from within a state agency. Of caution is that the amount of work associated with provisional designation may not be large enough to justify the ongoing involvement of an outside organization.

Figure 2

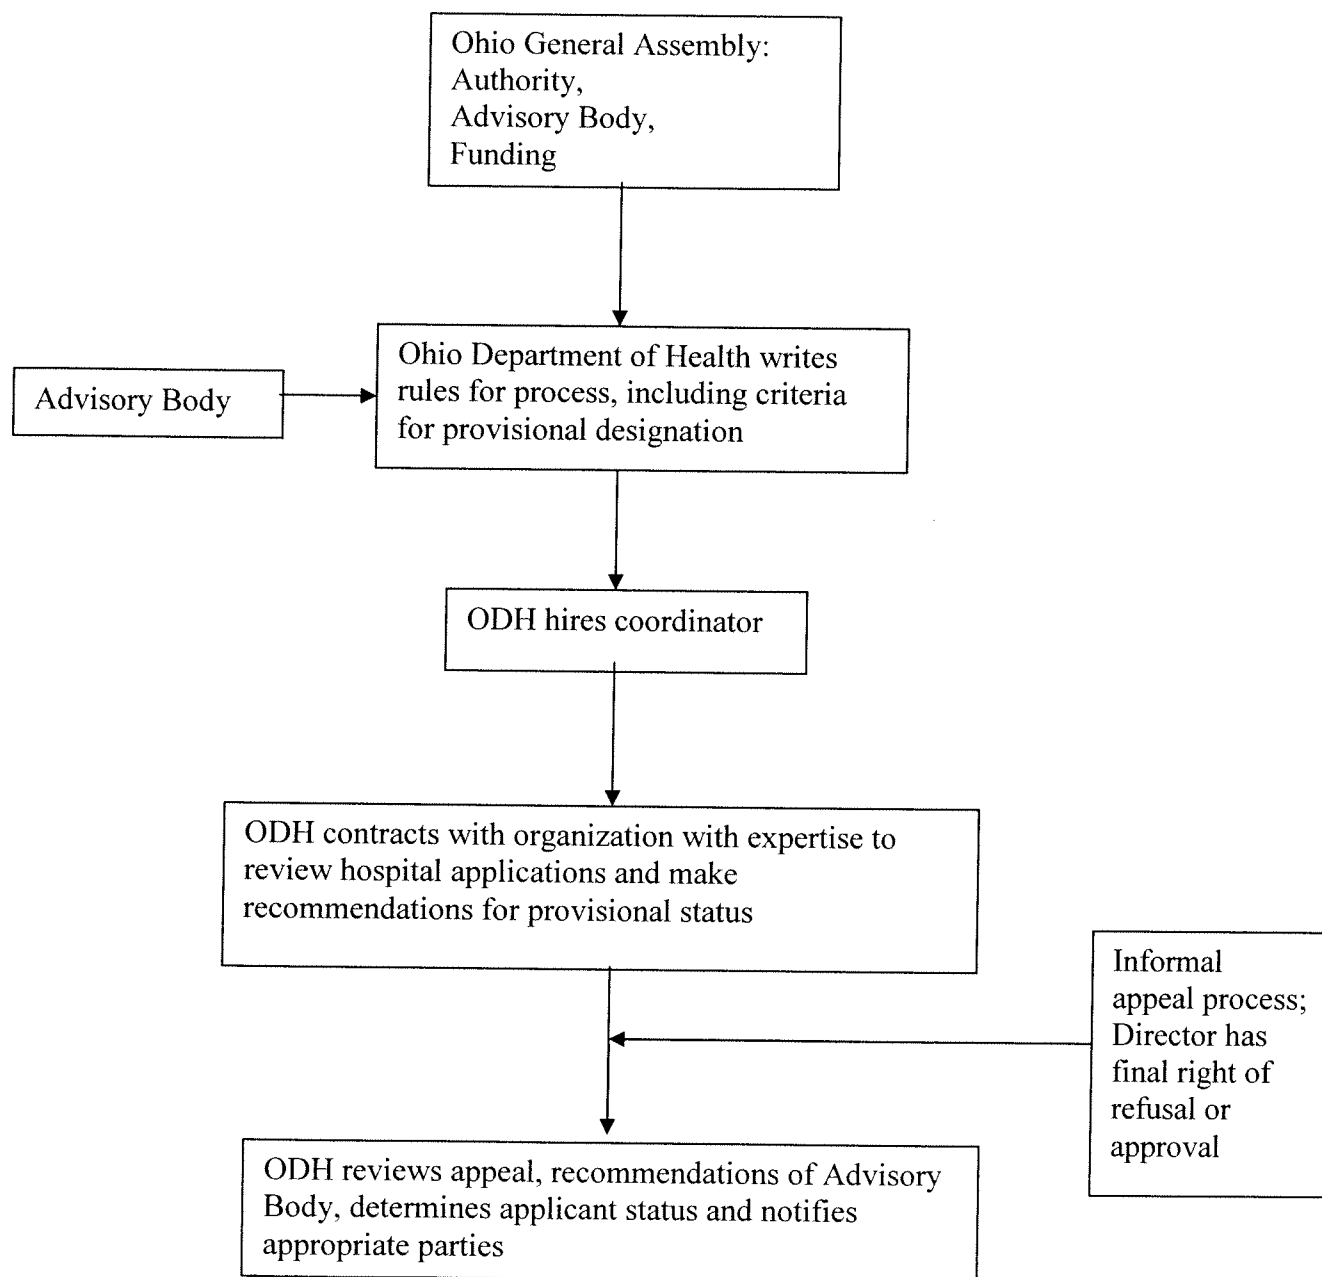

Table 2. Risk/Benefit Analysis of Option 1B

Benefits/Pros	Risks/Cons
Clear locus of authority and responsibility (ODH)	Selected 501-C-3 may not be fully prepared to handle provisional designation
Existing 501-C-3 with at least some administrative structure in place; better able to expand or contract as number of hospitals seeking provisional designation changes	Those opposed to ODH involvement in designation during negotiation of the original trauma bill may remain opposed to a role for ODH in provisional designation
RFP would solicit bids from organizations with expertise in trauma care/systems	ODH may be uncomfortable with ultimate authority, despite recommendations offered by the 501-C-3
Rules promulgated by ODH would direct work of 501-C-3; contract process could further specify desired work	Funding would need to be addressed as in the previous model
Once contract signed, 501-C-3 can administer funds with greater ease than ODH	Confidentiality of data would need to be addressed
	Set-up of an appeals process would need to be addressed; could be handled informally

Option 2 - A private agency (501-C-3) handles all provisional designation situations, including the time period between a hospital's consultative visit and new level of trauma center verification, focused review periods for trauma centers undergoing re-verification (See Figure 3).

The State of Pennsylvania, with one of the nation's oldest trauma systems, provides a robust model for creation of a designating authority that includes but is not dominated by representatives of state government. In 1985, the Pennsylvania Legislature directed the establishment of the Pennsylvania Trauma Systems Foundation. Four members of the legislature and a representative of the Director of Health, along with 15 representatives of other disciplines/agencies, compose the Board of the Foundation. While the legislation refers to the Foundation as a "private, voluntary accreditation program", it also states that no hospital can hold itself forward as a trauma center unless it is accredited by the Foundation.⁹

The Pennsylvania Trauma Systems Foundation pre-dated the development of the current ACS verification process. Today, the Foundation considers the ACS criteria as a minimum for hospital accreditation, with several criteria aimed at higher standards. The Foundation is responsible for all aspects of trauma center designation. While the Pennsylvania Legislature designated certain fees for operation of the Foundation, the bulk of its funding comes from its member hospitals. Annual fees per hospital are approximately \$35,000 - \$40,000. The Foundation maintains a trauma registry, used for accreditation and performance improvement. It employs outside reviewers, many of whom review for ACS, to conduct consultative and verification site visits. In addition to these basic functions, Foundation staff provides limited assistance to hospitals as they develop aspects of their trauma program.

Establishing an "Ohio Trauma System Foundation" would require extensive changes in Ohio statute. The Ohio General Assembly would need to assign responsibility for provisional designation to a separate 501-c-3. The relationship among the Foundation, the Ohio Department of Public Safety and the Ohio Department of Health would need to be stated in this legislation. While funding would eventually be drawn from hospital fees, initial "seed money" would be needed.

Pennsylvania has an enviable system. It had considerable influence on the development of the ACS verification process as we know it today. It is important to remember, however, that it is a mature system. Since it encompasses all designation activities, and hospitals must be designated to advertise themselves as trauma centers, the Pennsylvania Trauma Foundation has a large membership that depends on its smooth operation.

In Ohio, all hospitals verified by the ACS will be designated hospitals. Only those hospitals seeking provisional designation would require the services of a comparable Ohio Foundation. The workgroup is concerned that after these 10 – 20 hospitals complete their verification process, there may be only 3 – 4 hospitals that seek provisional status in any given year. Hence, it seems doubtful there would be enough sustained interest to merit the expense of building a new foundation.

Figure 3

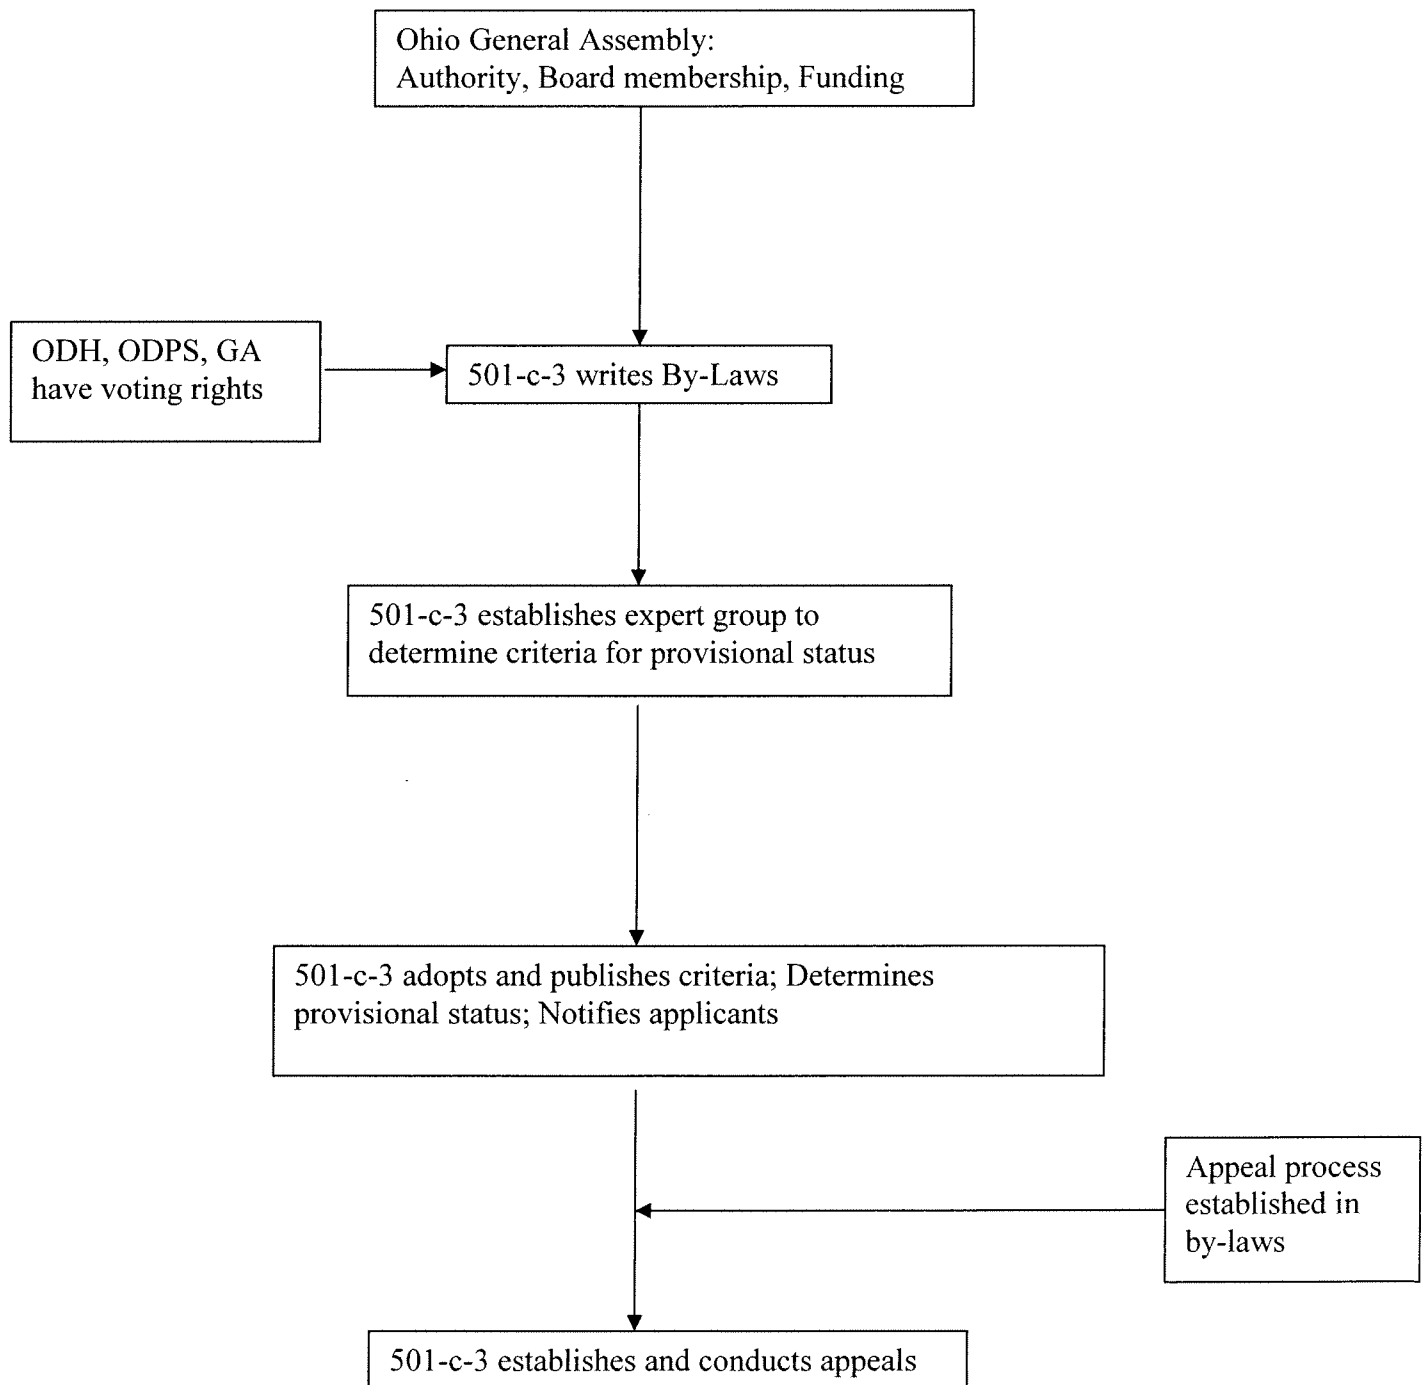

Table 3 – Risk/Benefit Analysis of Option 2

Benefits/Pros	Risks/Cons
Governing Board composed of representatives of many stakeholders with important connections to the state legislature and executive branches; no one group dominates	Executive Director must serve at the will of and be directed by the Board of Governors, as established in by-laws
Foundation has statutory authority and responsibilities	Foundation activities could be disconnected from other Trauma System activities conducted by state agencies
PA. Statute also requires Director of Health to integrate Foundation designation activities with EMS, injury prevention and rehabilitation activities	Relatively small number of hospitals seeking provisional designation probably would be insufficient to sustain separate foundation (Note: PA. Foundation is responsible for all designation, not just provisional.)
Foundation funding relies on fees from the hospitals it serves rather than on state general revenue fund	The success of foundations is dependent on their value to sustaining organizations. Efficient and effective management is critical and not always realized.
Relative ease of administration compared to program in state system	Would need to work carefully within HIPAA regs to utilize and share data
Uses ACS criteria as minimum needed for designation	The foundation would need access to the Trauma Registry and EMS Incident Run database to accomplish performance improvement and designation activities.
Foundation staff provide education and consultation to hospitals throughout the trauma system	Data gathered would require protection (through change of Ohio public record laws) in order to gain hospital participation
Successful 20 year track record of Solid Organ Transplant Consortium in Ohio demonstrates potential for this approach	
In Ohio, an independent Foundation may engender more trust and participation than designation activities under control of ODH	

Option 3 - The Ohio Department of Health handles all provisional designation situations using in-house staff.

Improving outcomes for the seriously injured patient is affected by prompt response in the field; minimized transport time to definitive care in an appropriate trauma center, and the immediate availability of experts in trauma care and rehabilitation at the receiving hospital. In Ohio, the Ohio Department of Public Safety, Division of Emergency Services, along with the Emergency Services Board, shoulders responsibility for oversight of field operations. ODPS leadership believes oversight for the hospital segment of the trauma system is not within their purview. The Ohio Department of Health traditionally has been the state agency most strongly associated with the operation of hospitals and health care facilities. Yet debates surrounding the passage of HB 138 resulted in there being only a few temporary roles for ODH in regard to operation of a trauma system. In re-examining a role for ODH, what are the advantages and disadvantages to basing designation activities within a state agency?

In discussions among workgroup members and with the Trauma Advisory Committee and its Hospital Subcommittee, it appears several of the risks (See Table 4) could be minimized or resolved. For example, changes in the Revised Code discussed previously under Option 1 of this report would address barriers related to hospitals sharing information with ODH. The Revised Code could be amended to allow such hospital fees to be deposited in an account for the sole purpose of conducting provisional designation activities. By virtue of being a state agency, ODH would still be hampered by the slowness of the bureaucratic process. Slow response might seriously impact patient care if hospitals were to fail a re-verification visit by the ACS and ODH were unable to determine provisional status before disrupting patient triage. The reluctance of ODH to take on any designation activities will take time to heal. Continued development of working relationships with key agencies, such as the Ohio Hospital Association and ODPS, will be needed. The workgroup views this as a less desirable option.

Figure 4

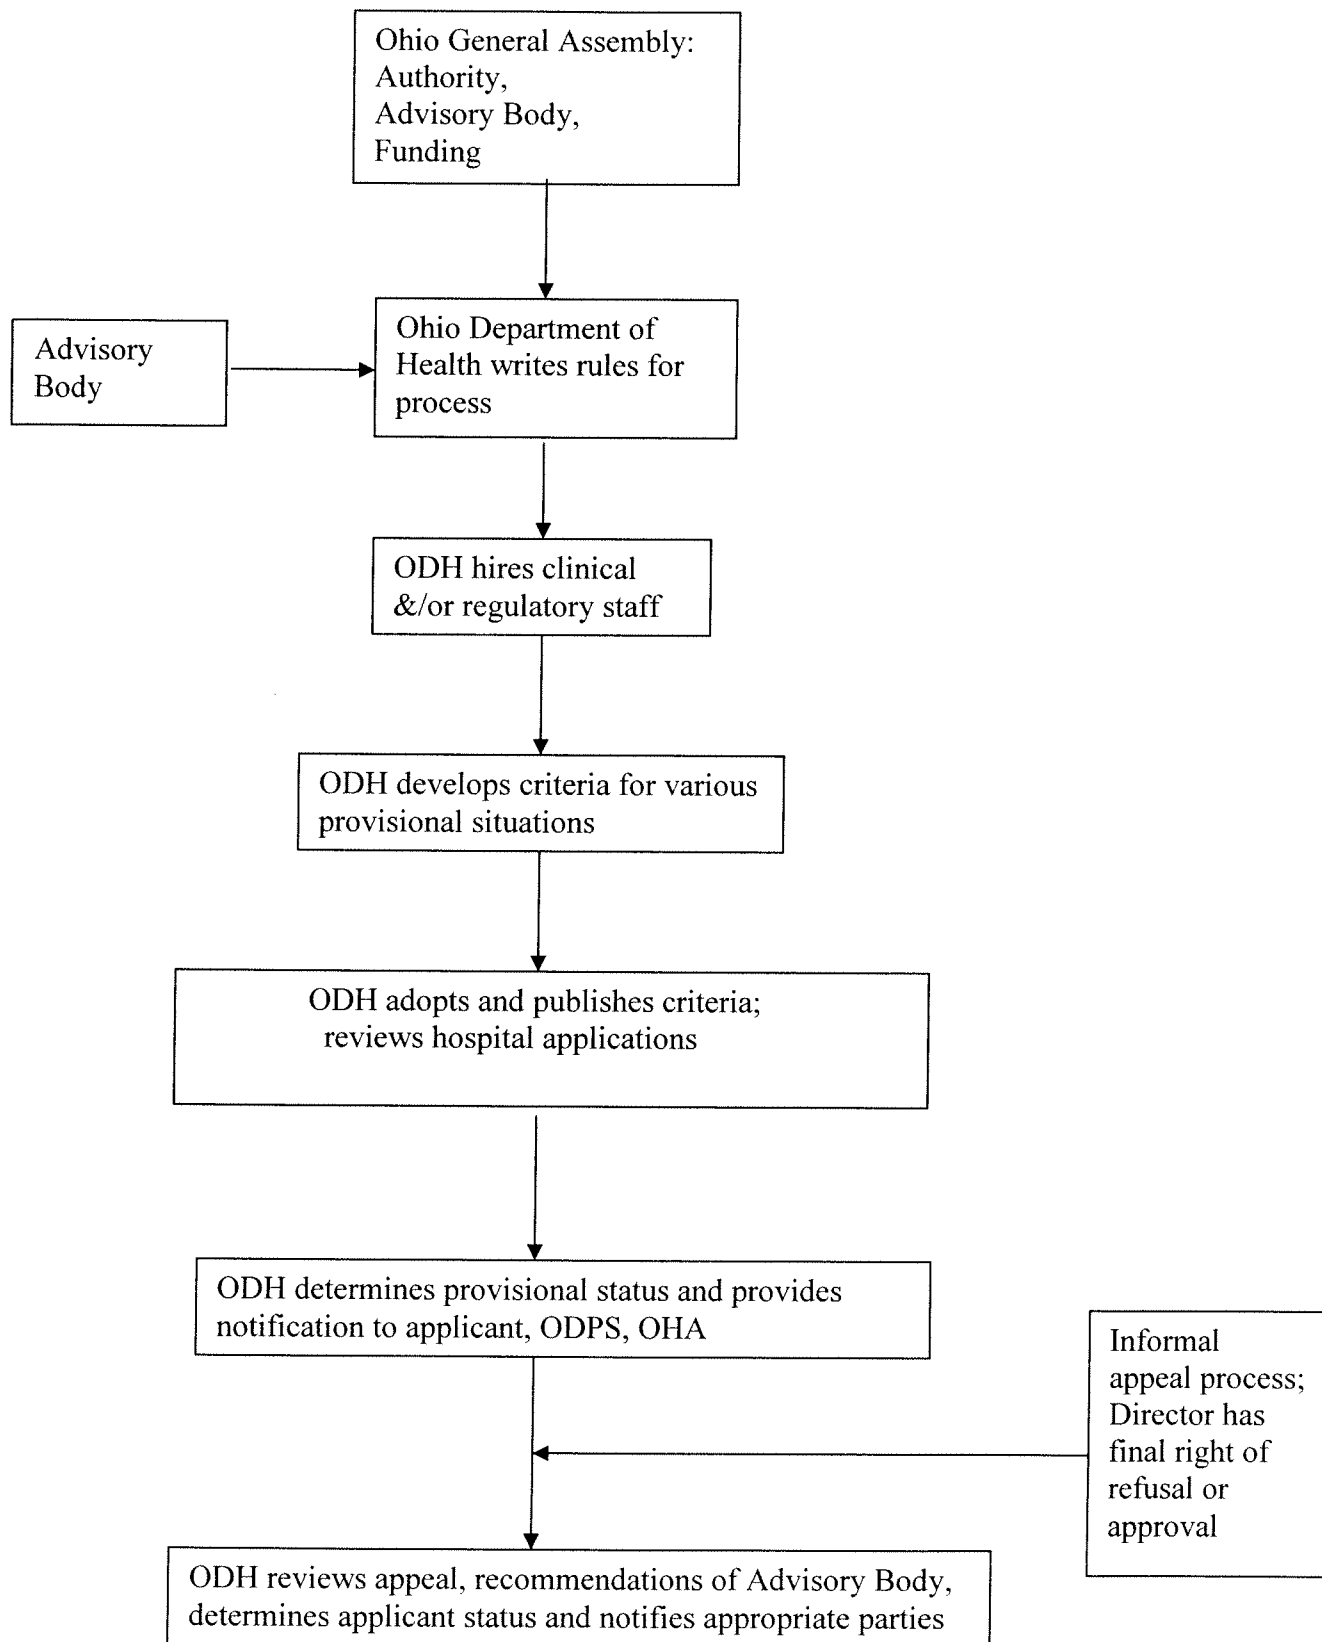

Table 4 – Risk/Benefit Analysis of Option 3

Benefits/Pros	Risks/Cons
Clearly identifiable authority and responsibility	Ohio's public record laws confound issues of data collection that is sufficient for effective performance improvement, yet protective of individual and institutional confidentiality
Many administrative functions necessary to support programmatic activities are already in place	Lack of agency staff expertise in trauma care and lack of resources necessary to implement provisional designation exist
Organizationally situated close to injury prevention, health care facilities and health care services activities	Dependency of state agency on General Revenue Fund, which is severely constrained by current economic downturn
Established rulemaking process with several opportunities for public input	Insistence during negotiation of original trauma bill that ODH not play a role in trauma center designation has left agency resistant to involvement
ODPS views their role as concerned with pre-hospital activities and ODH as agency to take lead in relationship to hospitals	Timely program activity and production slowed by bureaucratic process

Option 4 - No change in Ohio Revised Code (Appendix C)

Under existing Ohio law, a hospital may operate as a provisional trauma center prior to completing ACS verification. To attain provisional trauma center designation, the hospital must undergo a consultative or re-verification visit by the ACS. Based on the report from this visit, the hospital will attain provisional trauma center status after completing the following tasks: (1) the hospital's chief medical officer and chief executive officer must certify in writing to the hospital's governing board that the hospital is committed and able to provide trauma care consistent with the level of verification being sought; (2) the hospital's governing board must adopt a resolution stating that the hospital is committed and able to provide trauma care consistent with the level being sought; and (3) the hospital's governing board must approve a written plan and timetable for obtaining the level of verification being sought, including provisions for correcting any deficiencies identified during the ACS review. Status as a provisional trauma center is terminated if the hospital withdraws its application for verification, the ACS terminates or suspends the application, or if the hospital is not an ACS verified trauma center within 18 months after operating under provisional status (12 months if the hospital is being re-verified). All hospitals must notify the Director of Health of any changes in their trauma center status¹⁰. This would include achievement or loss of provisional trauma center status and achievement, loss, or change in trauma center verification. The Director may request a copy of the hospital's ACS report and timetable for correcting any identified deficiencies. While these documents are confidential, they can be used in any action brought by the Director against the trauma center or a person that authorized, approved, or created the original documents and the information in them. There is no statutory authority for the Ohio Department of Health to administer the system. There is also no funding to support activities related to provisional designation.

Table 5 – Risk/Benefit Analysis of Option 4

Benefits/Pros	Risks/Cons
Already in statute: No legislation, or change in legal authority is necessary	There are no minimum clinical criteria necessary for provisional designation
Relatively easy to implement: No funding is necessary	Hospitals self-monitor; no oversight or authority
Provides mechanism for non-verified hospitals to develop track record for future ACS verification	No penalties for failure to follow plan for correcting deficiencies
Allows for development of new trauma centers in areas currently underserved or where population shifts or facility closures might demand	Potentially greater liability for hospitals attempting to serve trauma victims beyond their capacity
Directly dependent on ACS consultation and ACS criteria	

Financing Considerations

Information from other states that have undertaken designation activities can provide guidance to Ohio in determining the resources it will need to implement and sustain a program of its own.

Assumptions

Current Ohio law establishes that trauma centers are those hospitals that have been verified by the ACS as such or, under provisional status, have undergone a consultative visit by the ACS and formally adopted an action plan and timeline that will lead them to ACS verification. The cost of the process is borne directly by the hospital seeking verification, except for the minimal cost incurred by ODH staff in reviewing, acknowledging and filing notification by hospitals of their intent to operate under provisional status. The discussion below assumes Ohio law will continue to equate ACS verification with automatic designation as a trauma center. Should Ohio law change in regard to use of the ACS process or standards as the basis for our state trauma system, the approach to financing will need to change as well. Departure from ACS is likely to increase costs as Ohio either replicates or redesigns a trauma designation system. Although monitoring of trauma center performance between ACS verification visits is an appropriate role for a designating authority, the workgroup decided not to include such activity at this time. Once the newly implemented trauma system has stabilized and databases, such as the Trauma Registry and EMS Incident Run Reports, are receiving regular statewide input, monitoring of hospital improvement by the designating authority could be re-considered.

Required Resources

Human, financial, data and equipment resources are necessary supports for the verification and/or designation process. The cost to a hospital seeking verification is roughly \$10,000 per visit, usually with a minimum of two visits (one consultative and one verification) by the ACS. This includes time and travel reimbursements for the site

visitors who conduct the visit. The majority of states with legislated responsibilities for a trauma system look to out-of-state experts for review of their level I and II trauma centers. Some use out-of-state reviewers for level III and IV trauma centers. Other states have substituted in-state staff to conduct visits to Level III and IV hospitals. According to a 2001 survey by the Trauma Resource Network¹¹, Illinois is the only state which pays the cost for site visits for all its trauma centers. Two other states pay for site visits for Level III and IV trauma centers. In the remainder of states, individual hospitals shoulder all the costs of site visit review.

Of the 23 states surveyed directly by the Workgroup, only 7 had staff assigned to administration of the trauma system (Appendix B). The amount of time dedicated to administration ranges from 0.65 FTE in South Carolina to 2.5 FTE in Texas. It is difficult to equate the number of FTE in any of these 7 states with a specific workload. The following resource table compares the options presented in this paper.

Table 6 – Suggested Resources the Provisional Trauma Center Designation Options

Option No.	Type	ODH - in-house and FTE (nurse coordinator)	Other Expenses	Source of funding*
1A	Trauma Committee	.25 or less ODH indirect for processing expenses	Reimbursed expenses of participating TC members	Hospital fee
1B	Contract	.25 ODH indirect for administrating contract	Administrative overhead for contractor; expenses and honorariums for reviewers	Hospital fee
2	501-c-3		Start-up costs – mostly for incorporation	General revenue fund or fines/license surcharges, etc; Hospital fees after start-up
3	All ODH	1.0	N/A	Hospital fees
4	No change	N/A	N/A	N/A

* Hospitals participating in the various discussion groups have stated they would be willing to pay fees in order to maintain a provisional designation authority in Ohio. The small number of hospitals likely to seek provisional designation on an annual basis will limit the amount of funding available.

Confidentiality Concerns

Members of the workgroup were concerned about the willingness of hospitals to participate in a provisional designation process that would allow public access to their ACS consultative reports. Sections 3727.101 to 3727.102 of the Revised Code were reviewed and several changes recommended. These changes will allow the provisional designation process to have confidentiality protections similar to the peer review sections of the Revised Code. In addition, HIPPA was also examined for its potential impact on the provisional designation process. HIPPA does not appear to apply meaningfully to the system of provisional designation put in place by Substitute Senate Bill 124 (124th General Assembly). The recommended changes to Sections 3727.101 and 3727.102 of the Revised Code are attached in Appendix D.

Conclusion

There has been a marked increase in the survival of trauma patients after the establishment of organized systems of trauma care. Over 80% of states have enacted legislation authorizing major elements of a trauma care system. In Ohio, HB 138 initiated the development of a statewide trauma system. The Emergency Medical Services (EMS) Board, in conjunction with ODPS, is responsible for implementing and overseeing the pre-hospital component of the state system. As the date for mandatory triage of seriously injured patients to designated trauma centers approached, it became clear that HB 138 had not addressed situations requiring some type of provisional designation of trauma centers. SB 124 was signed into law to cover three of the situations in which non-ACS verified hospitals would need to operate under a provisional status. Other legitimate situations have arisen, however, to point out the need for a state designating authority which would consider exceptions to provisional designation as permitted in SB 124. In addition, several stakeholders have been concerned about the ability of hospitals to operate under provisional status without a set of minimum clinical criteria in place to guard the quality of patient care.

The Workgroup on Provisional Trauma Center Designation presents here several options for developing a legal designating authority in Ohio. Foremost in the minds of Workgroup members was the provision of excellent care to seriously injured persons. At the same time, resolutions need to be found which address hospitals' concerns about over triage of patients. Discussions took place in light of current economic conditions, particularly the constraints on the state budget.

As the Ohio statewide trauma system matures, there may be other roles to play for a state designating authority. Investigating complaints and monitoring trauma center performance between ACS verification visits may be the next challenge. Ohio may want to follow the lead of Pennsylvania and move towards a state authority responsible for all accreditation. The Workgroup believes it is too soon to pursue these activities.

Finally, the Workgroup emphasizes the desirability of a comprehensive statewide trauma system. A state designating authority should work closely with ODPS, the EMS Board, the Ohio Hospital Association, the Health Forum and health professional organizations to ensure optimal transition of the patient from the field through definitive hospital care and rehabilitation. Formalized opportunities for sharing responsibility should be sought among these groups.

Proposed Changes to the Revised Code Regarding Public Record Laws

MEMORANDUM

TO: Members of the Work Group

THROUGH: Kathy Haley, Children's Hospital

FROM: Jeff Kading, ODH
Carol Ray, ODH
Heather Reed, ODPS

DATE: July 2, 2002

SUBJECT: Confidentiality Issues with Substitute Senate Bill 124 (124th General Assembly)

I. Background

In its meeting on June 12, 2002, the workgroup on provisional designation (after this "the group") asked us to review Substitute Senate Bill 124 (124th General Assembly) for the adequacy of its confidentiality provisions. The group instructed us to make sure the records submitted by a hospital--other than the certification, application, and resolution specified in division (E)(1) of section 3727.101 of the Revised Code, which are all public records--are strictly confidential. The group believes confidentiality will ensure that hospitals fully disclose and discuss any deficiencies identified by the American College of Surgeons in a consultative visit and other sensitive documents relating to provisional designation when seeking provisional status.

II. Approach

We compared the confidentiality provisions of Substitute Senate Bill 124 (124th General Assembly) against the provisions governing the confidentiality of peer reviews as set forth in sections 2305.24 to 2305.26 of the Revised Code. We then "lifted" any peer review language that we thought was of use to accomplish the group's confidentiality goal. Attached as attachment I is the result of the above process. Suggested changes to Substitute Senate Bill 124 (124th General Assembly) are indicated in red.

We also reviewed the provisions of the Health Insurance Portability and Accountability Act of 1996 (HIPPA) to ensure that it does not create any issues of which the group needs to be aware. Based on our review of HIPPA, specifically 45 C.F.R. 164.512, a hospital, a "covered entity", may use or disclose private health information to the Ohio Department of Health without the written consent or authorization of the individual to whom the private health information pertains. Further, a hospital does not need to grant the

individual the opportunity to agree or object to the use or disclosure of the information for provisional designation purposes.

III. Summary of suggested changes

Division (A) of section 3727.09 was changed to specify what is meant by the term "application" and to define "director" and "health care professional." The definition for "application" is needed to clarify that only the *Application for Site Visit* of the American College of Surgeons' Verification/Consultation Program for Hospitals is a public record and disclosable. The term "director" was defined to allow authorized members of the director of health's staff to do the same activities as the director. "Health care professional" was added because of the new immunity from the betrayal of a professional confidence language. See division (E)(2) of section 3727.101 of Attachment 1.

The lead in language to division (E) of section 3727.101 was changed to clarify that the director of health is subject to the language of division (E) as well as an adult or pediatric trauma center.

Division (E)(2) was changed to more clearly identify the documents that the director must keep confidential.

Immunity from betrayal of a professional confidence language was lifted from the peer review sections of the Revised Code and added to division (E)(2) of section 3721.101 of the Revised Code.

IV. Conclusion

With the addition of the recommended changes, sections 3727.101 to 3727.102 of the Revised Code will contain similar confidentiality protections to the peer review sections of the Revised Code. In addition, HIPPA does not appear to apply meaningfully to the system of provisional designation put in place by Substitute Senate Bill 124 (124th General Assembly).

Attachments(1)

Attachment I

Existing section 3727.09 (with suggested changes in red)

(A) As used in this section and sections 3727.10 and 3727.101 of the Revised Code:

- (1) "Application" means the *Application for Site Visit* of the American college of surgeons' verification/consultation program for hospitals;
- (2) "Director" means the director of health and any of his or her authorized employees;
- (3) "Health care professional" means any of the following who provide medical, dental, or other health-related diagnosis, care, or treatment:
 - (a) Physicians authorized under Chapter 4731. of the Revised Code to practice medicine and surgery or osteopathic medicine and surgery;
 - (b) Registered nurses and licensed practical nurses licensed under Chapter 4723. of the Revised Code;
 - (c) Physician assistants authorized to practice under Chapter 4730. of the Revised Code;
 - (d) Dentists and dental hygienists licensed under Chapter 4715. of the Revised Code;
 - (e) Physical therapists licensed under Chapter 4755. of the Revised Code;
 - (f) Chiropractors licensed under Chapter 4734. of the Revised Code;
 - (g) Optometrists licensed under Chapter 4725. of the Revised Code;
 - (h) Podiatrists authorized under Chapter 4731. of the Revised Code to practice podiatry;
 - (i) Dietitians licensed under Chapter 4759. of the Revised Code;

(j) Pharmacists licensed under Chapter 4729. of the Revised Code.

(3) "Trauma," "trauma care," "trauma center," "trauma patient," "pediatric," and "adult" have the same meanings as in section 4765.01 of the Revised Code; and

(4) "Stabilize" and "transfer" have the same meanings as in section 1753.28 of the Revised Code.

(B) On and after November 3, 2002, each hospital in this state that is not a trauma center shall adopt protocols for adult and pediatric trauma care provided in or by that hospital; each hospital in this state that is an adult trauma center and not a level I or level II pediatric trauma center shall adopt protocols for pediatric trauma care provided in or by that hospital; each hospital in this state that is a pediatric trauma center and not a level I and II adult trauma center shall adopt protocols for adult trauma care provided in or by that hospital. In developing its trauma care protocols, each hospital shall consider the guidelines for trauma care established by the American college of surgeons, the American college of emergency physicians, and the American academy of pediatrics. Trauma care protocols shall be written, comply with applicable federal and state laws, and include policies and procedures with respect to all of the following:

(1) Evaluation of trauma patients, including criteria for prompt identification of trauma patients who require a level of adult or pediatric trauma care that exceeds the hospital's capabilities;

(2) Emergency treatment and stabilization of trauma patients prior to transfer to an appropriate adult or pediatric trauma center;

(3) Timely transfer of trauma patients to appropriate adult or pediatric trauma centers based on a patient's medical needs. Trauma patient transfer protocols shall specify all of the following:

(a) Confirmation of the ability of the receiving trauma center to provide prompt adult or pediatric trauma care appropriate to a patient's medical needs;

(b) Procedures for selecting an appropriate alternative adult or pediatric trauma center to receive a patient when it is not feasible or safe to transport the patient to a particular trauma center;

(c) Advance notification and appropriate medical consultation with the trauma center to which a trauma patient is being, or will be, transferred;

(d) Procedures for selecting an appropriate method of transportation and the hospital responsible for arranging or providing the transportation;

(e) Confirmation of the ability of the persons and vehicle that will transport a trauma patient to provide appropriate adult or pediatric trauma care;

provisions conforming to the requirements for trauma care protocols set forth in division (B) of this section.

(D) A hospital shall make trauma care protocols it adopts under division (B) of this section and trauma patient transfer agreements it adopts under division (C) of this section available for public inspection during normal working hours. A hospital shall furnish a copy of such documents upon request and may charge a reasonable and necessary fee for doing so, provided that upon request it shall furnish a copy of such documents to the director of health free of charge.

(E) A hospital that ceases to operate as an adult or pediatric trauma center under provisional status is not in violation of divisions (B) and (C) of this section during the time it develops different trauma care protocols and enters into different patient transfer agreements pursuant to division (D)(2)(c) of section 3727.101 of the Revised Code.

Existing section 3727.101 (with suggested changes in red)

(A) If a hospital is seeking initial verification as an adult or pediatric trauma center, verification at a different level, or reverification after having ceased to be verified for one year or longer, the hospital shall submit an application to the American college of surgeons for a consultation visit. If a hospital is seeking reverification after having ceased to be verified for less than one year, the hospital shall submit an application for either a consultation visit or a reverification visit, except when operating pursuant to division (C)(1)(b) of this section.

The hospital shall undergo the visit and obtain a written report of the results of the visit. If the report is not obtained by the date that occurs one year after the application for the visit is submitted, the hospital shall submit a new application.

(B) Not later than one year after obtaining a report under division (A) of this section, a hospital may apply to the American college of surgeons for verification or reverification as an adult or pediatric trauma center if, based on the report, all of the following occur:

(1) The hospital's chief medical officer and chief executive officer certify in writing to the hospital's governing board that the hospital is committed and able to provide adult or pediatric trauma care consistent with the level of verification or reverification being sought.

(2) The hospital's governing board adopts a resolution stating that the hospital is committed and able to provide adult or pediatric trauma care consistent with the level of verification or reverification being sought.

(3) The hospital's governing board approves a written plan and timetable for obtaining the level of verification or reverification being sought, including provisions for correcting at the earliest practicable date any deficiencies identified in the report obtained pursuant to division (A) of this section.

(f) Assured communication with, and appropriate medical direction of, the persons transporting a trauma patient to a trauma center;

(g) Identification and timely transfer of appropriate medical records of the trauma patient being transferred;

(h) The hospital responsible for care of a patient in transit;

(i) The responsibilities of the physician attending a patient and, if different, the physician who authorizes a transfer of the patient;

(j) Procedures for determining, in consultation with an appropriate adult or pediatric trauma center and the persons who will transport a trauma patient, when transportation of the patient to a trauma center may be delayed for either of the following reasons:

(i) Immediate transfer of the patient is unsafe due to adverse weather or ground conditions.

(ii) No trauma center is able to provide appropriate adult or pediatric trauma care to the patient without undue delay.

(4) Peer review and quality assurance procedures for adult and pediatric trauma care provided in or by the hospital.

(C)(1) On and after November 3, 2002, each hospital shall enter into all of the following written agreements unless otherwise provided in division (C)(2) of this section:

(a) An agreement with one or more adult trauma centers in each level of categorization as a trauma center higher than the hospital that governs the transfer of adult trauma patients from the hospital to those trauma centers;

(b) An agreement with one or more pediatric trauma centers in each level of categorization as a trauma center higher than the hospital that governs the transfer of pediatric trauma patients from the hospital to those trauma centers.

(2) A level I or level II adult trauma center is not required to enter into an adult trauma patient transfer agreement with another hospital. A level I or level II pediatric trauma center is not required to enter into a pediatric trauma patient transfer agreement with another hospital. A hospital is not required to enter into an adult trauma patient transfer agreement with a level III or level IV adult trauma center, or enter into a pediatric trauma patient transfer agreement with a level III or level IV pediatric trauma center, if no trauma center of that type is reasonably available to receive trauma patients transferred from the hospital.

(3) A trauma patient transfer agreement entered into by a hospital under division (C)(1) of this section shall comply with applicable federal and state laws and contain

(C)(1) A hospital may operate as an adult or pediatric trauma center under provisional status, as follows:

- (a) On submission of an application under division (B) of this section;
- (b) Until it receives the final result of its reverification if the application was submitted within one year before it ceased to be verified.

(2) A hospital operating as an adult or pediatric trauma care center under provisional status is subject to both of the following:

- (a) The hospital shall limit its provisional status activities to those activities authorized by the level of verification or reverification being sought.
- (b) The hospital shall make a reasonable, good faith effort to comply with all requirements established by the American college of surgeons that must be met for the level of verification or reverification being sought.

(D)(1) A hospital shall cease to operate as an adult or pediatric trauma center under provisional status if any of the following applies:

- (a) The application for verification or reverification is denied, suspended, terminated, or withdrawn.
- (b) In the case of a hospital seeking initial verification, verification at a different level, or reverification after having ceased to be verified for one year or longer, the hospital has not obtained verification or reverification by the date that occurs eighteen months after commencing to operate under provisional status.
- (c) In the case of a hospital seeking reverification after having ceased to be verified for less than one year, the hospital has not obtained reverification by the date that occurs one year after commencing to operate under provisional status.

(2) A hospital that ceases to operate as an adult or pediatric trauma center under provisional status pursuant to division (D)(1) of this section shall do all of the following:

- (a) Except as otherwise provided by federal law, at the earliest practicable date transfer to one or more appropriate trauma centers all trauma patients in the hospital to whom the hospital is not permitted to provide trauma care.
- (b) Promptly comply with section 3727.10 of the Revised Code according to its current status.
- (c) Not later than one hundred eighty days after ceasing to operate under provisional status, comply with section 3727.09 of the Revised Code according to its current status.

(3) A hospital that ceases to operate as an adult or pediatric trauma center under provisional status may not operate as an adult or pediatric trauma center under provisional status until two years have elapsed since it ceased to operate under that status.

(E) With respect to the availability of documents and other information prepared pursuant to this section, the director and an adult or pediatric trauma center operating under provisional status is are subject to both of the following:

(1) The trauma center shall make available for public inspection during normal working hours a copy of the certification, resolution, and application prepared pursuant to division (B) of this section. On request, the trauma center shall provide a copy of the documents. A reasonable fee may be charged to cover the necessary expenses incurred in furnishing the copies, except that no fee shall be charged if the copies are being furnished to the director of health.

(2) On request, the trauma center shall furnish to the director of health a copy of the report of the consultative or reverification visit obtained from the American college of surgeons pursuant to division (A) of this section and a copy of the plan and timetable approved pursuant to division (B)(3) of this section for obtaining verification or reverification. The documents provided may omit patient-identifying information. Submission of the documents to the director does not waive any privilege or right of confidentiality that otherwise applies to the documents and the information in them.

The ~~documents~~ report, plan and timetable and the information in them are ~~not public records~~ confidential and shall not be disclosed to any person except employees of the department of health who are expressly authorized by the director of health to examine the ~~copies~~ report, plan and timetable, and information in them. The ~~documents~~ report, plan and timetable and information in them are not subject to discovery or introduction into evidence in a civil action, ~~except an action brought by the director against the trauma center or a person that authorized, approved, or created the original documents and the information in them.~~

No health care professional or hospital furnishing report, plan and timetable, information, data, or records to the director with respect to any patient examined or treated by the health care professional or confined in the hospital shall, by reason of the furnishing, be deemed liable in damages to any person, or be held to answer for betrayal of a professional confidence within the meaning and intent of section 4731.22 of the Revised Code.

(F) Notwithstanding any provision of this section regarding the receipt of a report of the results of a consultation visit or reverification visit from the American college of surgeons, if a hospital submitted an application for a consultation visit or

reverification visit as an adult or pediatric trauma center on or before May 20, 2002, the hospital may operate as an adult or pediatric trauma center under provisional status. The hospital shall do all of the following:

- (1) Comply with divisions (B)(1) and (2) of this section as though the report has been received;
- (2) Approve through its governing board a written plan and timetable for obtaining the level of verification or reverification being sought, including provisions for correcting at the earliest practicable date any deficiencies identified in the exit interview following the consultation or reverification visit and any subsequent report received;
- (3) Comply with all other provisions of this section applicable to the operation of a trauma center under provisional status, including the requirements of division (D) of this section regarding the ceasing of operation under provisional status.

STATE OF OHIO
EMS BOARD
REGIONAL PHYSICIANS ADVISORY BOARD
EMERGENCY MEDICAL SERVICES
GUIDELINES AND PROCEDURES MANUAL

INTRODUCTION

Ohio emergency medical services (EMS) providers strive every day to deliver the highest standard of emergency medical services to the people of Ohio. On behalf of the State Board of Emergency Medical Services, the Regional Physician Advisory Board was charged with drafting proposed guidelines that EMS agencies could use in setting that standard.

Please note that the proposed guidelines are not mandatory for Ohio EMS agencies. The guidelines and procedures manual is meant to assist in the development of local protocols. It is the Board's hope that individual regions or agencies will review these guidelines with their medical directors and legal counsel when drafting their own individualized protocols. The guidelines were updated in 2012 and will be periodically reviewed by the Regional Physician Advisory Board in order to maintain the most current information available.

MEDICAL CONTROL

ABDOMINAL PAIN

GENERAL CONSIDERATIONS

- A. It is important to remember that abdominal pain can be caused by a large number of different disease processes. The organ systems that may be involved in abdominal pain include esophagus, stomach, intestinal tract, liver, pancreas, spleen, kidneys, male and female genital organs, bladder, as well as referred pain from the chest that can involve the heart, lungs or pleura. Abdominal pain may also be caused by muscular and skeletal problems.
- B. There are a limited number of problems that present with abdominal pain that are life-threatening or may become life-threatening.
1. Myocardial Infarction
 2. Perforated stomach, gallbladder, or bowel
 3. Gastrointestinal bleeding with pain - usually due to an ulcer
 4. Hemorrhagic pancreatitis
 5. Appendicitis
 6. Diabetic ketoacidosis
 7. Ruptured esophagus (this usually presents with chest pain)
 8. Dissecting or ruptured abdominal aortic aneurysm
 9. Certain toxic mushrooms ingestion and other toxic ingestion
 10. Ectopic pregnancy
- C. Abdominal pain emergencies are likely to lead to death due to blood or fluid loss with resultant shock. There may also be severe electrolyte abnormalities that can cause arrhythmias.

Myocardial Infarction may present as abdominal pain especially in the diabetic and elderly.

EMT

- A. Secure airway
1. Administer oxygen as needed to treat shock and/or respiratory distress
 2. Apply pulse oximeter and treat per pulse oximeter procedure, if available.
- B. Evaluate patient's general appearance, relevant history of condition and determine:
- | | |
|-----------------------|--|
| <u>O</u> nset | <u>A</u> llergies |
| <u>P</u> rovokes | <u>M</u> edication |
| <u>Q</u> uality | <u>P</u> ast Medical History - especially, recent surgery, any abnormal ingestion, previous trauma, related medical diseases |
| <u>R</u> adiates | |
| <u>S</u> everity | |
| <u>T</u> ime | <u>L</u> ast Meal |
| <u>I</u> nterventions | <u>E</u> vents leading to present illness |

Abdominal Pain (cont'd)

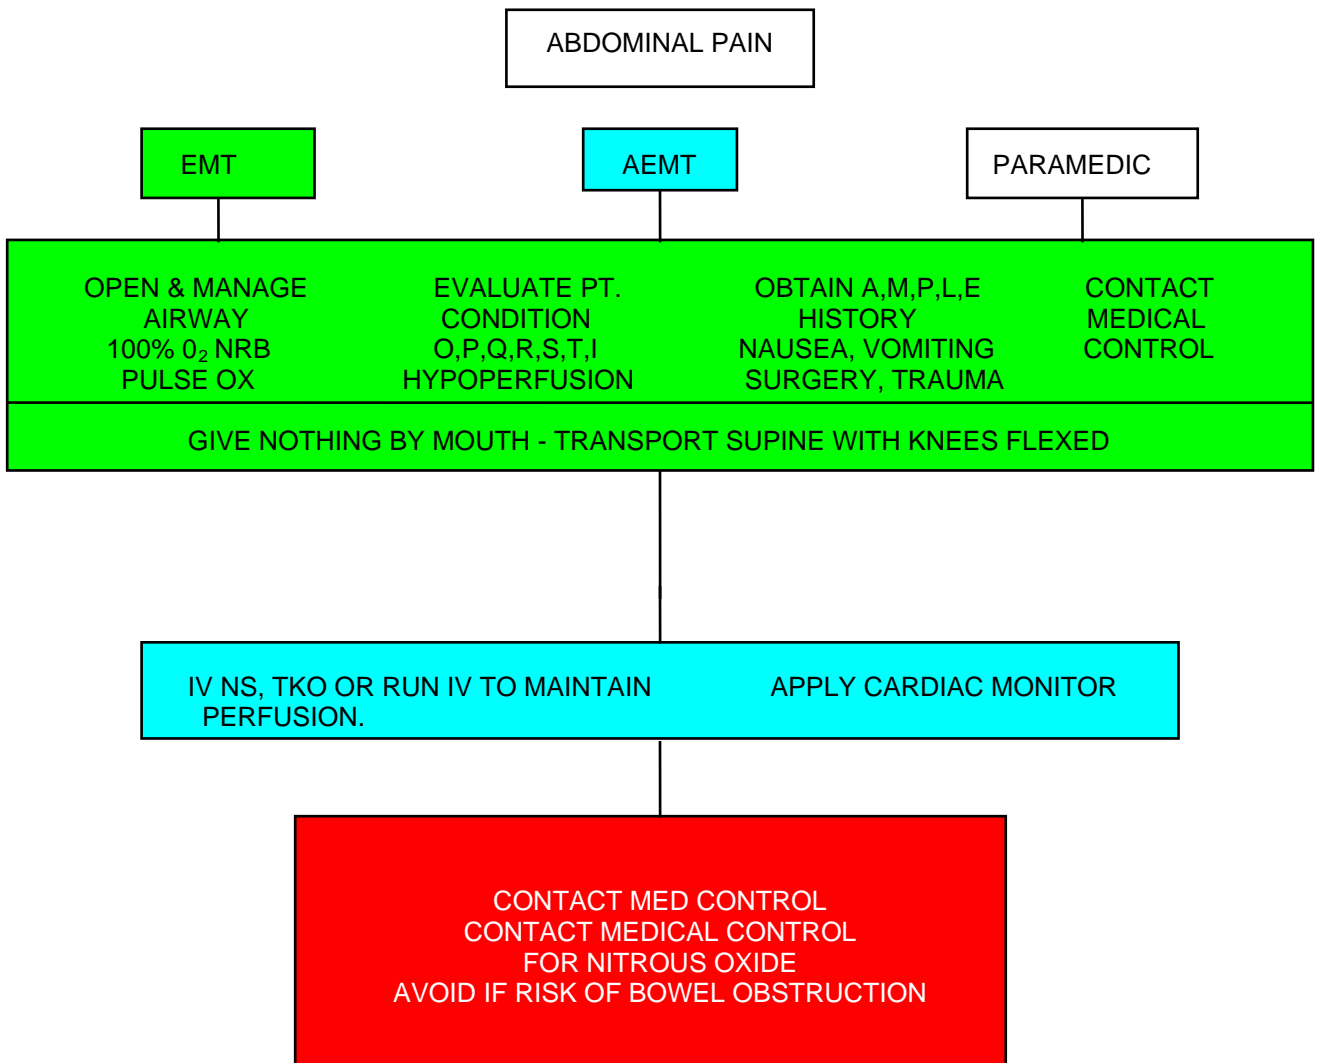

- C. Assess additional associated signs and symptoms:
 - 1. Nausea / vomiting blood or coffee grounds
 - 2. Constipation / diarrhea - black, tarry or bloody bowel movements
 - 3. Problems with urination
 - 4. Menstrual abnormality
 - 5. Fever
 - 6. Tenderness, rigidity, and presence or absence of bowel sounds.
 - 7. Cardiac associated symptoms: Dyspnea, diaphoresis, shortness of breath (SOB)
- D. Transport in position of comfort, preferable supine with knees flexed, unless there is respiratory distress
- E. Give nothing by mouth

AEMT

- A. If there is concern about the possibility of blood or fluid loss, start an IV of saline, and run at a keep open rate or saline lock. If hypotensive, administer IV fluids at a rate to maintain perfusion.
- B. Apply a cardiac monitor during transport if appropriate.

PARAMEDIC

- A. Obtain orthostatic vital signs and if hypotensive, administer IV fluids at a rate to maintain perfusion.
- B. Apply a cardiac monitor during transport if appropriate.

ALTERED LEVEL OF CONSCIOUSNESS

EMT

- A. Secure airway, and consider cervical spine injury
 - 1. Administer 100% oxygen by NRB mask
 - 2. Apply pulse oximeter and/or capnography device and use measurements to guide treatment
 - 3. Be prepared to hyperventilate and/or assist ventilations with an oral or nasal airway and bag valve mask (BVM) or positive pressure ventilation (PPV)
- B. Evaluate patient's general appearance, relevant history of condition and determine:

Onset
Provokes
Quality
Radiates
Severity
Time
Interventions

Allergies
Medication
Past Medical History - especially, diabetic, seizures, stroke, head injury, drug abuse
Last Meal
Events leading to present illness

Assess the unresponsive patient using the Glasgow Coma Scale (GCS). Patients with GCSs of 8 or less have poor prognosis and need advanced life support (ALS) as soon as possible.

In possible stroke patients who are alert, assessment of language, motor responses and sensation must be completed to establish baselines for future changes.

- C. Obtain a blood glucose measurement if the equipment is available. Consider administration of glucose with intact gag reflex.
- D. Transport IMMEDIATELY unless an ALS unit is enroute and has an ETA of less than 5 minutes to the scene.

AEMT

- A. Assist EMS professionals, obtain patient condition and circumstance
- B. If the patient does not have a secure, protected airway, intubate per Intubation Procedure
- C. Apply monitor and check rhythm
- D. Start IV saline, TKO, while enroute to hospital
- E. Consider determination of blood sugar level, if available.
 - 1. If blood sugar less than 80, administer IV bolus, 50 ml of 50% dextrose. May be repeated in 10 minutes if blood sugar remains below 80.
 - 2. If blood sugar greater than 400 and signs of hypoperfusion are present, administer IV fluid bolus of at least 250 ml of saline. May be repeated if no response in 10 minutes.
 - 3. If unable to check blood sugar and LOC is decreased administer IV bolus, 50 ml of 50% dextrose

ALTERED LOC (cont'd)

F. If respirations are impaired, or there is a high index of suspicion of narcotic overdose and patient does not respond to dextrose or fluid bolus, administer naloxone (Narcan®) 2 mg by IV push, nebulizer, IM or SQ. If patient improves somewhat with Narcan® but is not fully awake, repeat dose

CONSIDER PATIENT RESTRAINT BEFORE ADMINISTRATION OF NARCAN®
SEE RESTRAINT POLICY

H. Re-evaluate patient condition, contact Medical Control, and transport to hospital
Check blood sugar or draw blood chemistry tube.

F. If blood sugar greater than 400 and signs of hypoperfusion are present, administer IV fluid bolus of at least 250 ml of saline. May be repeated if no response in 10 minutes.

DO NOT DELAY TRANSPORT

PARAMEDIC

A. Assume charge of situation and confer with EMS professionals about condition of patient and situation

B. If patient does not have a secure, protected airway, intubate per Intubation Procedure

C. Apply monitor and check rhythm

D. Start IV saline TKO.

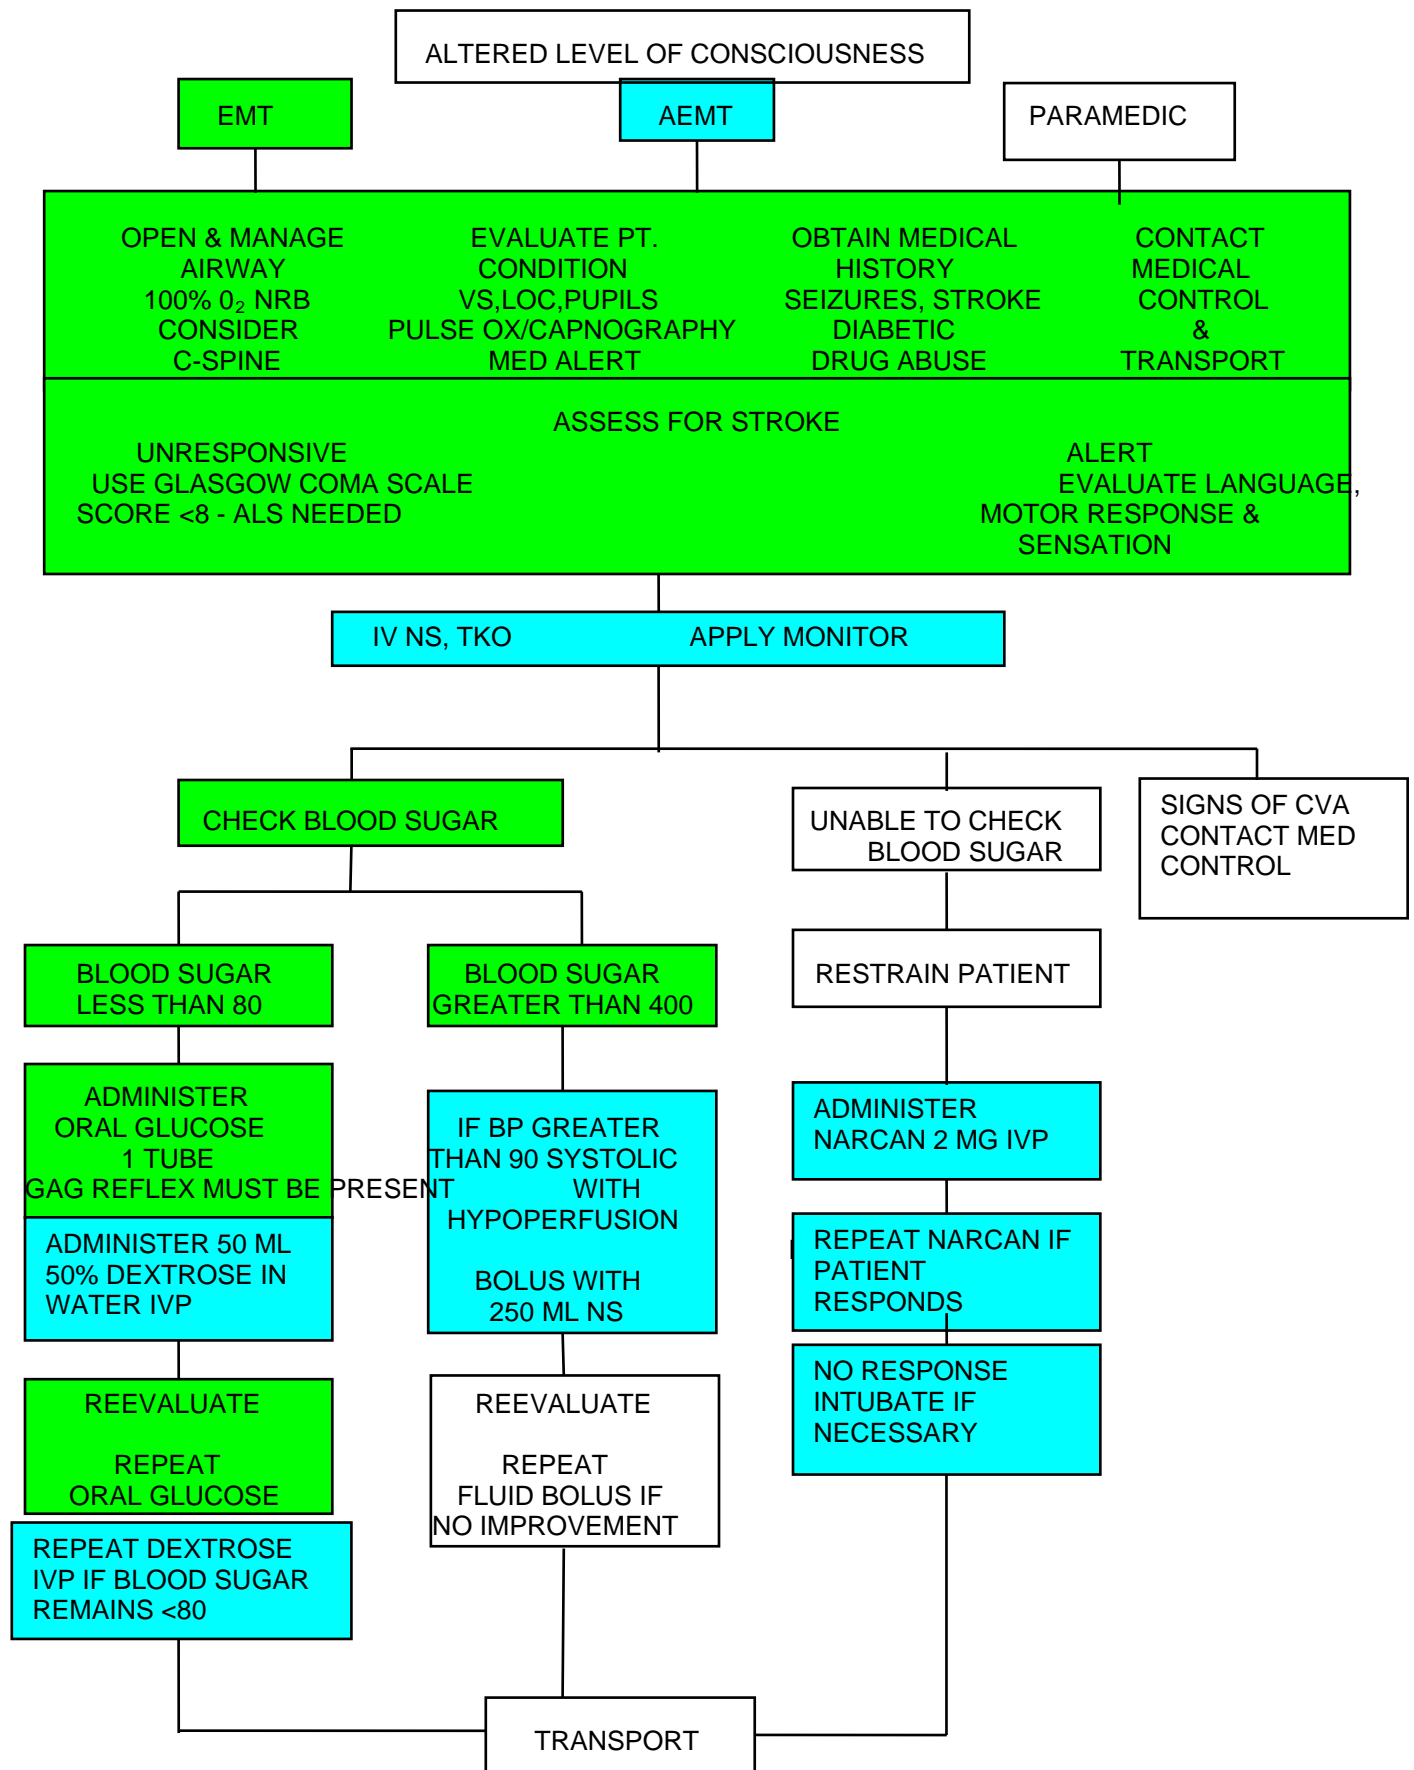

E. If signs of CVA, contact Med Control.

F. Consider determination of blood sugar level, if available.

1. If blood sugar less than 80, administer IV bolus, 50ml of 50% dextrose. May be repeated in 10 minutes if blood sugar remains below 80.
 2. If blood sugar greater than 400 and signs of hypoperfusion are present, administer IV fluid bolus of at least 250 ml of saline. May be repeated if no response in 10 minutes.
 3. If unable to check blood sugar and LOC is decreased administer IV bolus, 50 ml of 50% dextrose
- G. If respirations are impaired, or there is a high index of suspicion of narcotic overdose and patient does not respond to dextrose or fluid bolus, administer naloxone (Narcan®) 2 mg by IV push, nebulizer, IM or SQ. If patient improves somewhat with Narcan® but is not fully awake, repeat dose

CONSIDER PATIENT RESTRAINT BEFORE ADMINISTRATION OF NARCAN®
SEE RESTRAINT POLICY

H. Re-evaluate patient condition, contact Medical Control, and transport to hospital

ARRHYTHMIAS

GENERAL CONSIDERATIONS

- A. In the treatment of cardiac arrhythmias, current American Heart Association guidelines were referenced for guideline development
- B. Always provide oxygen support, make the patient comfortable, and provide reassurance
- C. Transport is essential when Advanced Cardiac Life Support is not available within 10 minutes of receipt of the call

EMT / AEMT

- A. Open and manage the airway and provide 100% oxygen by non-rebreather (NRB) mask. Apply pulse oximeter.
- B. Make patient comfortable and provide reassurance
- C. Evaluate patient's general appearance, relevant history of condition and determine:
 - Onset
 - Provokes
 - Quality
 - Radiates
 - Severity
 - Time
 - Interventions
 - Allergies
 - Medication
 - Past Medical History - especially CARDIAC
 - Last Meal
 - Events leading to present illness
- D. If patient is experiencing an unusual and/or irregular heart rate or pulse, if available, application of the cardiac monitor may be applied by the AEMT with assistance from the EMT if necessary. The AEMT may obtain a monitor strip for evaluation by the physician at the emergency department. This should only be done during transport, and you must advise the patient you are doing this for the physician and cannot provide the patient with your interpretation of the strip.
- E. Establish communications with medical control and advise them of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Apply cardiac monitor and determine arrhythmia
- C. Start IV/IO normal saline (NS)

ARRHYTHMIAS (cont'd)

D. Treat arrhythmia as follows:

1. Bradycardia

If heart rate is < 60 beats per minute, assess patient's perfusion. Signs/symptoms of poor perfusion include:

- Hypotension
- Acutely altered mental status
- Signs of shock
- Ischemic chest discomfort
- Acute heart failure
- If patient is taking calcium channel blockers or is a possible beta blocker overdose, consider calling medical control for appropriate antidote.

a. Good perfusion

- i. Transport
- ii. If second degree heart block type II or third degree heart block, prepare patient for external pacing by applying external pacer pads. If the patient develops signs of poor perfusion, initiate external pacing.

b. Poor perfusion:

- i. Consider sedation Valium®/Versed® 3-5 mg IV
- ii. External pacemaker set at 80 beats per minute and start at 20 milliamps. Increase by 20 milliamps every ten seconds until mechanical capture is obtained;

NOTE: Atropine may be administered while preparing for pacing

- iii. Atropine 0.5 mg IVP, subsequent doses 0.5 mg every 3-5 minutes up to 3 mg (0.04 mg/kg), or until heart rate is 60 and an adequate systolic blood pressure (SBP) is obtained (SBP greater than 90 with adequate level of consciousness).
- iv. If perfusion is poor after maximum dose of atropine, initiate dopamine IV infusion of 2-10 mcg/kg/minute or epinephrine IV infusion of 2-10 mcg/minute titrated to a systolic BP of 90 or until the patient's level of consciousness improves.

2. Narrow complex tachycardias:

If heart rate is < 150 beats per minute, assess patient's perfusion. Signs/symptoms of poor perfusion include:

- Hypotension
- Acutely altered mental status
- Signs of shock
- Ischemic chest discomfort
- Acute heart failure

a. Good Perfusion

- i. Vagal maneuver or carotid massage
- ii. Adenosine (Adenocard®) 6 mg rapid IV push followed immediately by a 20 ml bolus of saline
- iii. If no response in 1-2 minutes, adenosine 12 mg rapid IV push followed immediately by a 20 ml bolus of saline.
- iv. If the patient does not respond to adenosine, consider contacting medical control for orders for additional medications.
- v. If patient remains stable, observe and transport.

****Note:** If at any time the patient becomes unstable with poor perfusion, go directly to synchronous cardioversion.

b. Poor perfusion:

****Note:** Based on assessment findings, the Paramedic may choose to administer adenosine before attempting synchronized cardioversion if there is a regular narrow complex. If patient is unstable with poor perfusion, the Paramedic may omit adenosine administration and proceed directly to synchronized cardioversion immediately.

- i. Adenosine 6 mg rapid IV push followed immediately by a 20 ml NS bolus IV.
- ii. If no response in 1-2 minutes, adenosine 12 mg rapid IV push followed immediately by a 20 ml NS bolus IV.
- iii. Consider sedation Valium®/Versed® 5mg IV
- iv. Initial synchronized cardioversion:
 - (a) 50-100 J (monophasic or biphasic) for narrow regular complexes
 - (b) 200 J monophasic or 120-200 J biphasic for narrow irregular complexes

3. Wide complex tachycardias (with a pulse):

Assess patient's perfusion. Signs/symptoms of poor perfusion include

- Hypotension
- Acutely altered mental status
- Signs of shock
- Ischemic chest discomfort
- Acute heart failure

a. Good Perfusion

- i. Administer an antiarrhythmic.

Antiarrhythmics that are indicated for a wide complex tachycardia are amiodarone, sotalol, or procainamide. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization. Please follow these guidelines for the administration.

- Amiodarone 150 mg IVP over 2- 3 minutes
 - If the patient's condition is unchanged ten minutes after the first dose, a second dose of amiodarone and a maintenance infusion of 1 mg/minute may be administered by medical direction order.
 - If at any time the patient becomes unstable, prepare for immediate cardioversion.
- Sotalol 100 mg (1.5 mg/kg) IV over 5 minutes
 - Avoid administration for a prolonged QT interval
- Procainamide IV infusion of 20-50 mg/minute
 - Maximum dose is 17 mg/kg
 - Discontinue infusion if the arrhythmia becomes suppressed, hypotension or signs and symptoms of CHF develop, development of a prolonged QRS complex greater than 50%, or the maximum dose of 17 mg/kg has been administered.
 - Consider contacting medical control for orders to begin a maintenance IV infusion of 1-4 mg/minute.

****NOTE:** If at any time the patient becomes unstable with poor perfusion, go directly to synchronous cardioversion.

***NOTE:** Do not administer more than one antiarrhythmic simultaneously to a patient. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization.

- ii. Consider sedation Valium®/Versed® 5mg IV
- iii. Initial synchronized cardioversion:
 - (a) 100 J (monophasic or biphasic) for wide regular complexes

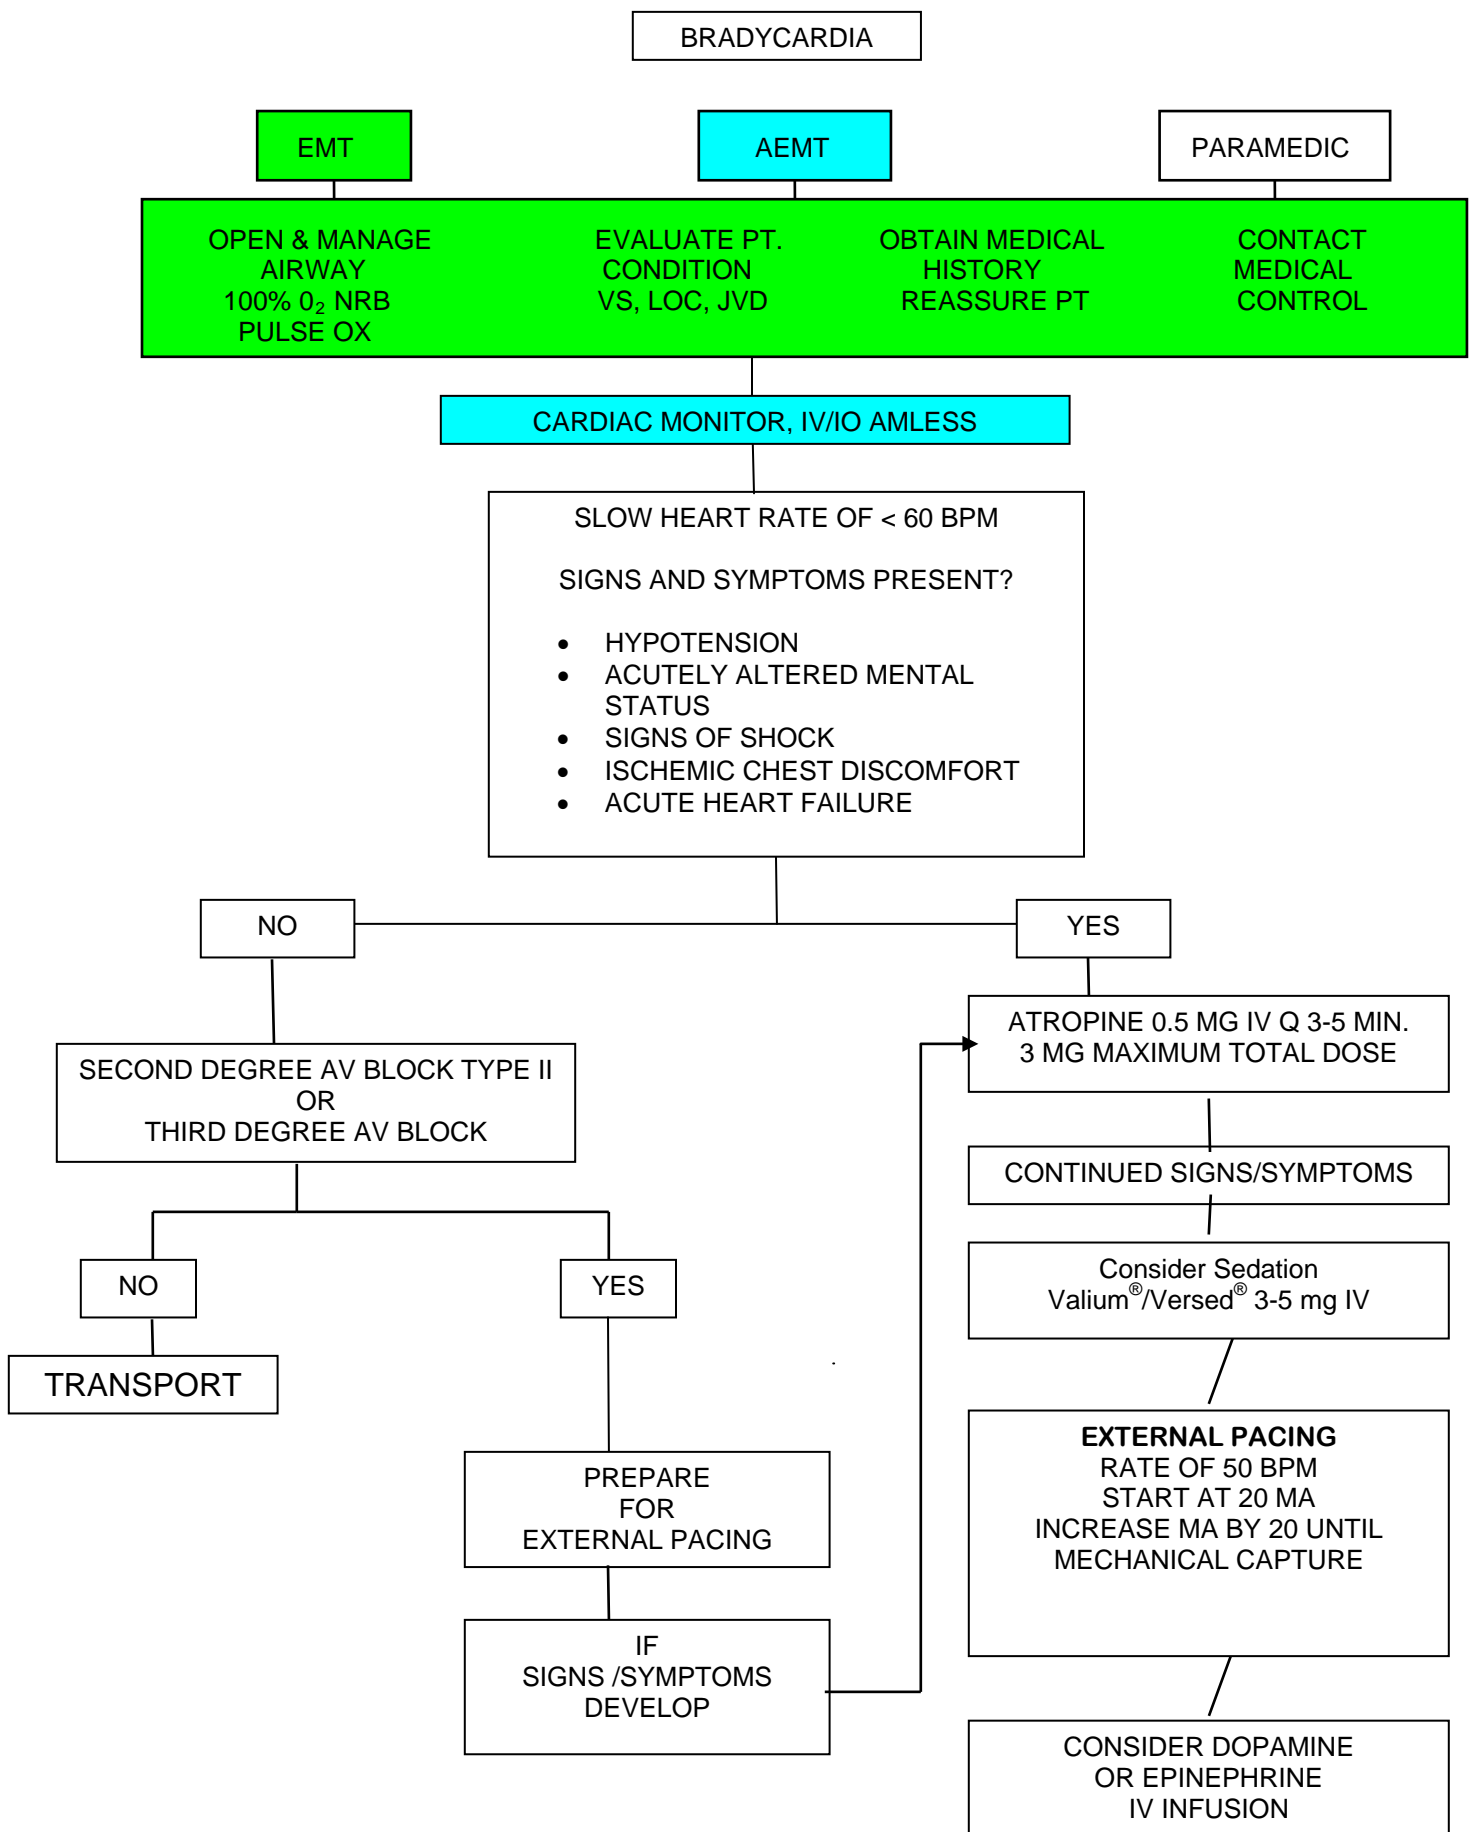

*** Wide irregular complexes are typically not associated with a stable patient with normal perfusion. Contact medical control for advise on these rare cases.

b. Poor perfusion (with a pulse):

- i. Prepare for immediate synchronized cardioversion
- ii. Consider sedation Valium®/Versed® 5mg IV
- iii. Synchronous cardioversion:
 - (a) 100 J (monophasic or biphasic) for wide regular complexes
 - (b) Defibrillation with high-energy UNSYNCHRONIZED shocks for wide irregular complexes
- iv. Administer an antiarrhythmic. Antiarrhythmics that are indicated for a wide complex tachycardia are amiodarone, sotalol, or procainamide. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization. Please follow these guidelines for the administration.
 - Amiodarone 150mg IVP over 2- 3 minutes
 - If the patient's condition is unchanged ten minutes after the first dose, a second dose of amiodarone and a maintenance infusion of 1 mg/minute may be administered by medical direction order.
 - If at any time the patient becomes unstable, prepare for immediate cardioversion.
 - Sotalol 100 mg (1.5 mg/kg) IV over 5 minutes
 - Avoid administration for a prolonged QT interval
 - Procainamide IV infusion of 20-50 mg/minute
 - Maximum dose is 17 mg/kg
 - Discontinue infusion if the arrhythmia becomes suppressed, hypotension or signs and symptoms of CHF develop, development of a prolonged QRS complex greater than 50%, or the maximum dose of 17 mg/kg has been administered.
 - Consider contacting medical control for orders to begin a maintenance IV infusion of 1-4 mg/minute

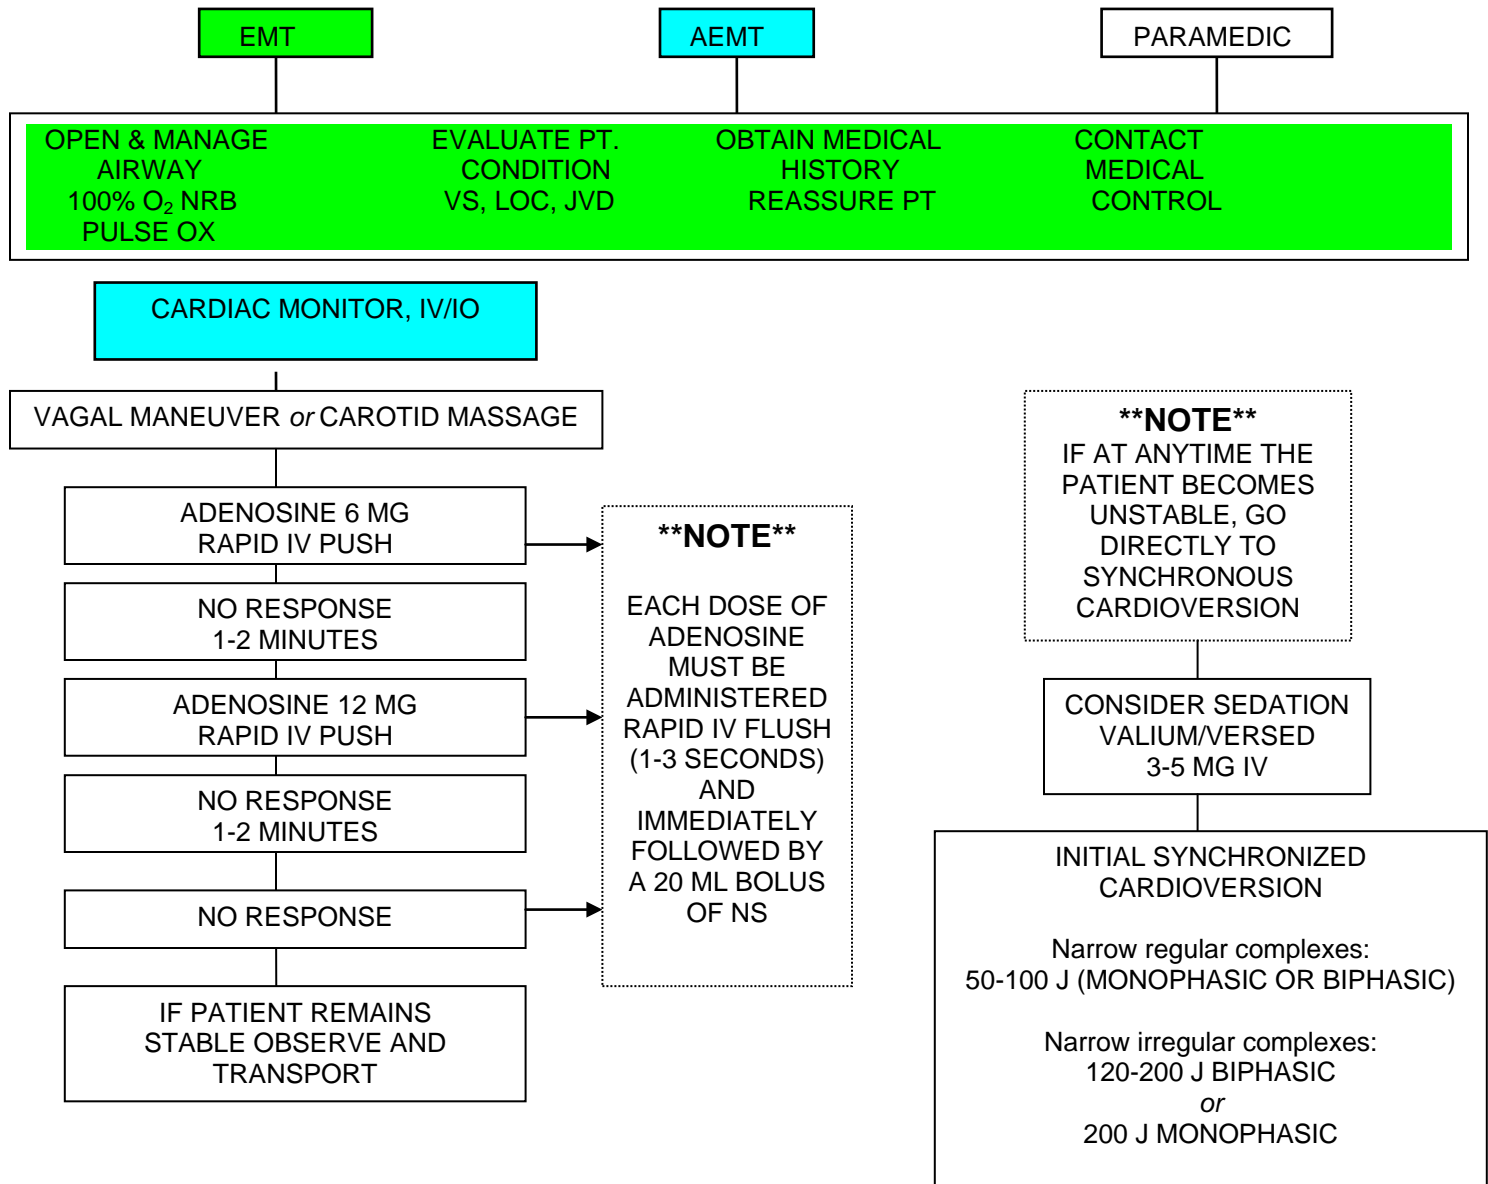

****NOTE:** Do not administer more than one antiarrhythmic simultaneously to a patient. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization.

- v. Repeat synchronized cardioversion.

STABLE NARROW COMPLEX TACHYCARDIA
(Heart Rate Greater Than 150)

PATIENTS WITH A PULSE, GOOD PERFUSION AND ALERT AND ORIENTED ARE CONSIDERED STABLE.

UNSTABLE NARROW COMPLEX TACHYCARDIAS
(Heart Rate Greater Than 150)

**PATIENTS WITH POOR PERFUSION, CHEST PAIN, SHORTNESS OF BREATH
AND/OR ALTERED LEVEL OF CONSCIOUSNESS ARE CONSIDERED UNSTABLE.**

PATIENTS WITH HYPOTENSION, ACUTELY ALTERED MENTAL STATUS, SIGNS OF SHOCK, ISCHEMIC CHEST DISCOMFORT, OR ACUTE HEART FAILURE ARE CONSIDERED UNSTABLE

BURNS

GENERAL

- A. The first priority is to assure scene safety and then remove the patient from heat and flame, electrical or chemical exposure
- B. Airway, breathing, and circulation must be stabilized before attending to the burn
- C. Patient with extensive burns must be monitored for hypothermia and the use of ice and/or prolonged cold compresses should be avoided. When in doubt, always cover with dry dressing
- D. In caring for the burn, the EMS professional should:
 - 1. Stop the burning
 - 2. Reduce the pain
 - 3. Prevent contamination
- E. Patients with critical burns must be transported per local protocol.
- F. When dealing with contaminated environments, EMS professionals must have appropriate protective clothing. If not available, contact appropriate HazMat service for such equipment.
- G. Gross decontamination must be done at the scene. Advise receiving facility if complete decontamination was not done at the scene, and be prepared to transport to decontamination area.

EMT

- A. Open and manage airway and provide oxygen as appropriate.
- B. Determine type of burn and treat as follows:
 - 1. Thermal (dry and moist):
 - a. Stop burning process: i.e. remove patient from heat source, cool skin, remove clothing
 - b. If patient starts to shiver or skin is cool, stop cooling process
 - c. Estimate extent (%) and depth of burn (see chart). Determine seriousness (see chart) of burn. Contact Medical Control and transport accordingly.
 - d. Cover burn areas with sterile dressing
 - 2. Radiation Burns:
 - a. Treat as thermal burns except when burn is contaminated with radioactive source, then treat as chemical burn
 - b. Wear appropriate protective clothing when dealing with contamination
 - c. Contact HAZMAT TEAM for assistance in contamination cases

BURNS (cont'd)

3. Chemical Burns:
 - a. EMS professionals must wear appropriate protective clothing and respirators
 - b. Remove patient from contaminated area and move the patient to the decontamination site (NOT TO THE SQUAD)
 - c. Determine chemicals involved; contact appropriate agency for chemical information
 - d. Remove patient's clothing and flush skin
 - e. Leave contaminated clothes at scene. Cover patient over and under before loading into squad.
 - f. Patient should be transported by personnel not involved in decontamination process
 - g. Determine severity (see chart), contact Medical Control and transport accordingly
 - h. Relay type of substance involved to Medical Control.
4. Electrical Burns
 - a. Shut down electrical source; do not attempt to remove patient until electricity is CONFIRMED to be shut off.
 - b. Assess for visible entrance and exit wounds and treat as thermal burns
 - c. Assess for internal injury, i.e., vascular damage, tissue damage, fractures, and treat accordingly
 - d. Determine severity of burn, contact Medical Control and transport accordingly
5. Inhalation Burns:
 - a. Always suspect inhalation burns when the patient is found in closed smoky environment and/or exhibits any of the following: burns to face/neck, singed nasal hairs, cough and/or stridor, soot in sputum,
 - b. Provide oxygen therapy, contact Medical Control and transport

AEMT

- A. Assist EMS professional with airway. Intubate if necessary per the Intubation procedure guidelines
- B. Assist in determining type of burn and its treatment
- C. For hypovolemia, start IV per shock protocol

DO NOT DELAY TRANSPORT FOR IV

BURNS (cont'd)

PARAMEDIC

- A. Assume charge - confer with EMS professionals about patient condition and circumstances
- B. Apply cardiac monitor and treat arrhythmia, especially with electrical burns
- C. Provide endotracheal intubation per procedure guidelines.
- D. Consider pain relief per local protocol.

RULE OF NINES

Percentage of Adult Body Surface

Percentage of Child Body Surface

Percentage of Infant Body Surface

1% is equal to the surface of the palm of the patient's hand. If unsure of %, describe injured area.

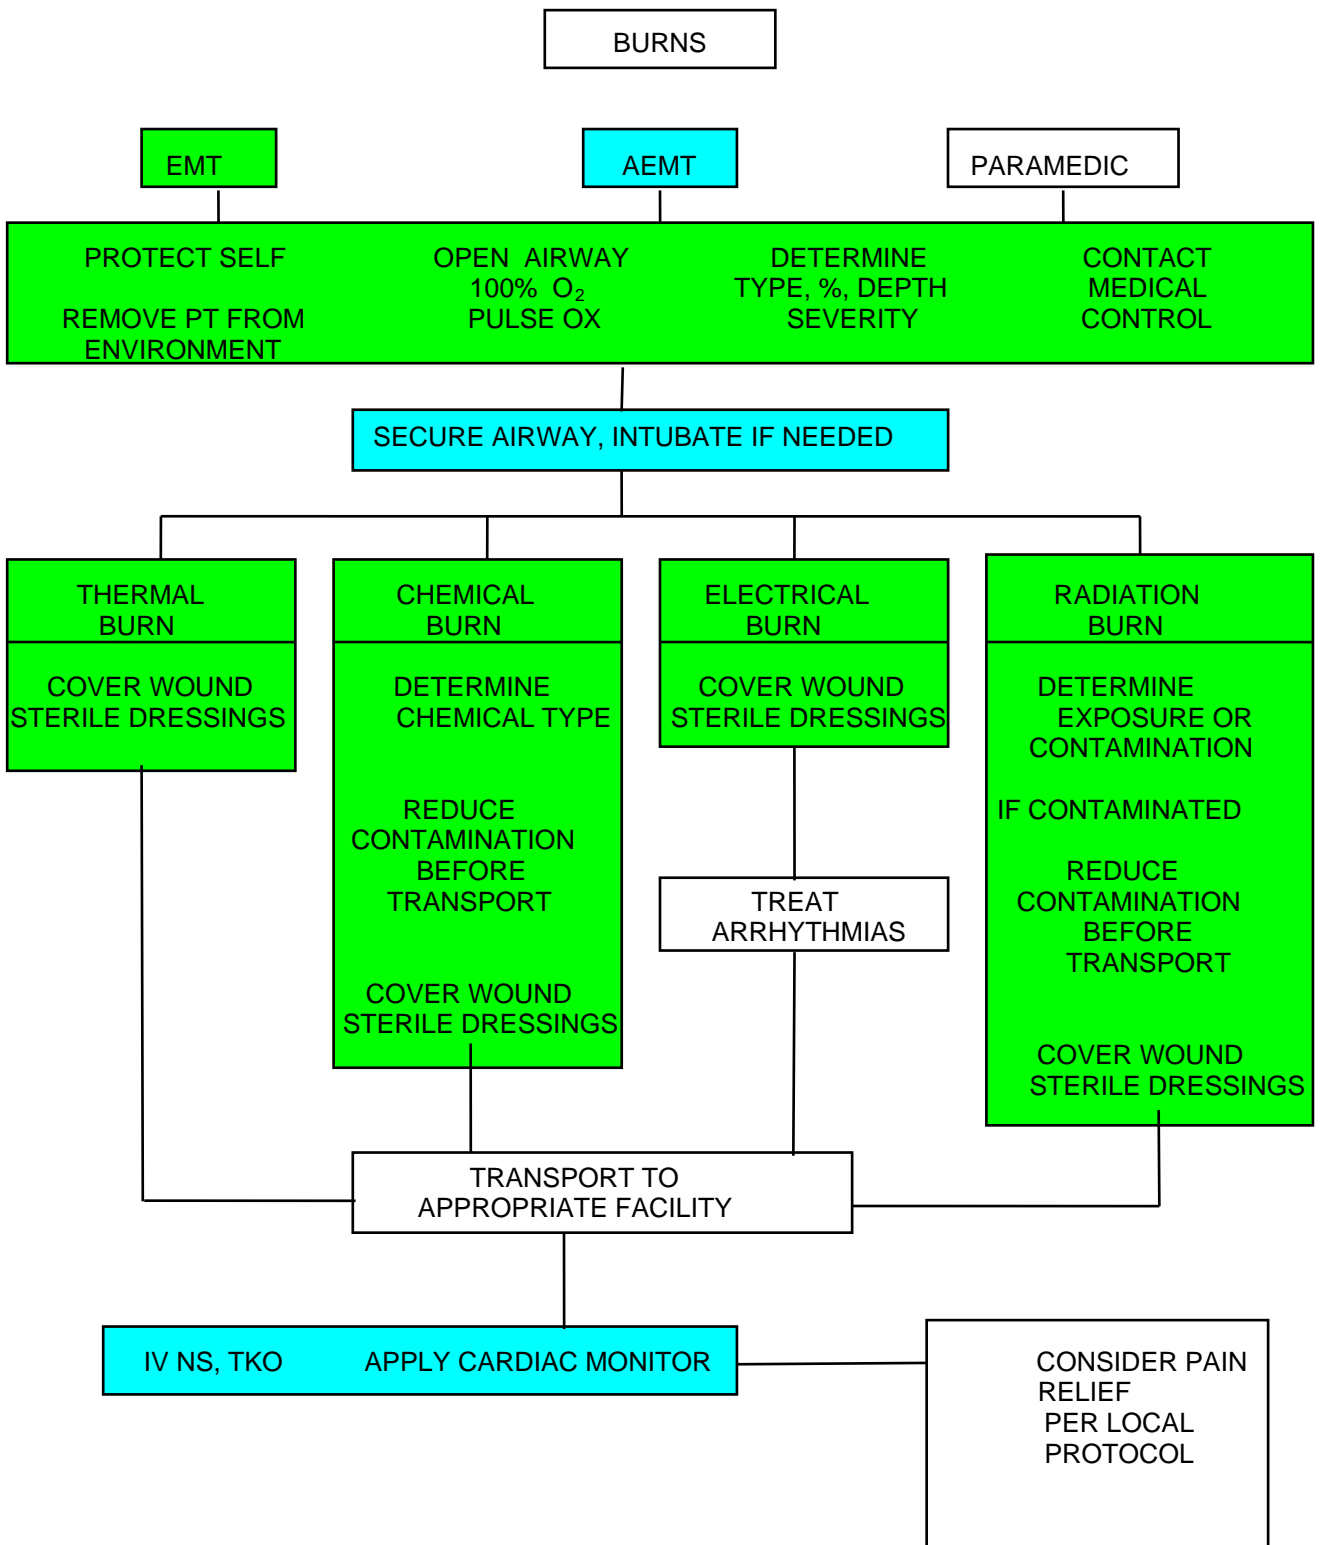

SERIOUSNESS OF BURNS

MINOR
1st degree < 70%
2nd degree < 10%
+3rd degree < 2%

+ Only if hands, face, feet or genitalia are NOT involved.

MODERATE
1st degree > 70%
+2nd degree 10-30%

CRITICAL
2nd degree > 30%
3rd degree > 2%
Any burns with trauma.
Any burns with head, face, feet, genitalia involved.

CARDIAC ARREST

GENERAL INSTRUCTIONS

- A. Quality CPR should be initiated immediately and should not be interrupted for more than 15 seconds until spontaneous pulse is established
Compression Ratio for Adult - 30:2
Consider administration of two minutes of quality CPR prior to defibrillation.
- B. Quantitative waveform capnography is recommended for monitoring the quality of CPR (with the goal of maintaining end tidal CO₂ (P_{ETCO2}) less than 10 mmHg), detection of the return of spontaneous circulation, and the confirmation of tracheal tube placement.
- C. If IV/IO cannot be established, epinephrine, and atropine may be administered through the endotracheal tube
- D. When a defibrillator (automated or manual) is immediately available, a single shock should be delivered, if indicated after assessment and a shockable rhythm identified
- E. If there is no response to an adequate trial of ALS on scene, termination of resuscitation should be considered (see Termination protocol)
- F. Each IV/IO push medication should be followed by a 20 ml NS or LR flush
- G. The ideal defibrillation dose using a biphasic defibrillator is the dose at which the device waveform has been shown to be effective in terminating VF. The initial selected dose for attempted defibrillation using a biphasic manual defibrillator is 150 J to 200 J for a biphasic truncated exponential waveform or 120 J for a rectilinear biphasic waveform. The second dose should be the same or higher. If the rescuer does not know the type of biphasic waveform in use, a default dose of 200 J is acceptable.
- H. The induction of post-arrest hypothermia following a successful resuscitation may be considered if the patient can be transported to a facility that can continue this therapeutic measure.
- I. The acquisition and/or transmission of a 12-lead EKG, completed in accordance with the Ohio EMS scope of practice, following a successful resuscitation should be considered. If the 12-lead EKG demonstrates an acute ST segment myocardial infarction (STEMI), medical direction should be contacted immediately to facilitate the patient's transport to directly to a facility with percutaneous cardiac intervention capability (PCI) if possible.

EMT

- A. If an Automated External Defibrillator (AED) is available:
 - 1. Assess patient for respiratory and cardiac arrest
 - 2. Immediately provide quality CPR
 - 3. Apply AED and activate device. Start verbal documentation which must include:
 - EMS unit delivering care and ID of EMT
 - Initial call information (i.e. man down, drowning, etc.)
 - Initial patient assessment, findings, and impression
 - Care given to this point
 - Ongoing outcomes of care delivered to patient

Cardiac arrest (cont'd)

- a. "No Shock Advised"
 - i. Resume quality CPR
 - ii. Ventilate with 100% oxygen by two-person BVM or oxygen-powered, manually-triggered ventilation device; and oral or nasal airway adjunct. Ventilation should be delivered over two seconds.
 - iii. Contact medical control and advise of cardiac arrest
 - iv. Transport IMMEDIATELY unless an advanced life support unit is enroute and has ETA less than 5 minutes
- b. "Shock Advised"
 - i. Deliver single shock
 - ii. Resume quality CPR for two minutes. Manage airway and oxygenate.
 - iii. Contact medical control and advise of cardiac arrest
 - iv. After two minutes of quality CPR, analyze the rhythm with the AED and deliver a single shock, if indicated
 - Defibrillate 120-200 J biphasic or 360 J monophasic
 - v. Continue quality CPR and transport patient to ambulance

"TURN AED OFF DURING MOVEMENT OF PATIENT"
--

- vi. Before transport – analyze the rhythm with the AED and deliver single shock, if indicated
 - Defibrillate 120-200 J biphasic or 360 J monophasic
- vii. Transport IMMEDIATELY, unless an advanced life support unit is enroute and has ETA less than 5 minutes

AEMT

- A. Assume charge and confer with EMS professional as to patient condition and circumstances

ALLOWS AED TO COMPLETE "SHOCK" SEQUENCE IF IN PROGRESS

- B. Apply cardiac monitor and check rhythm
- C. If monitor shows ventricular fibrillation or pulseless ventricular tachycardia:
 1. Defibrillate 120-200 J biphasic or 360 J monophasic

Cardiac arrest (cont'd)

2. Deliver two minutes of quality CPR.
 3. Check rhythm
 4. Defibrillate 120-200 J biphasic or 360 J monophasic
 5. Resume quality CPR, manage the patient's airway and provide 100% oxygen, start NS IV/IO, contact medical control and advise of patient condition
 6. Continue quality CPR
 7. Assess rhythm and pulse
 8. No change – defibrillate 120-200 J biphasic or 360J monophasic
 9. Assess rhythm and pulse, no change
 10. Resume quality CPR
 11. No change – defibrillate 120-200 J biphasic or 360 J monophasic
- D. After an advanced airway is placed, rescuers no longer deliver “cycles” of CPR. Give continuous chest compressions without pauses for breaths. Give 8 to 10 breaths/minute. Check rhythm every two minutes.

PARAMEDIC

- A. Assume charge and confer with EMS professional as to patient condition and circumstances

**ALLOWS AED TO COMPLETE “SHOCK” SEQUENCE IF IN PROGRESS
ALLOWS AEMT TO COMPLETE MANUAL DEFIBRILLATION CYCLE IN PROGRESS**

- B. Apply cardiac monitor and check rhythm
- C. If monitor shows ventricular fibrillation or pulseless ventricular tachycardia:
1. Defibrillate 120-200 J biphasic or 360 J monophasic
 2. Deliver two minutes of quality CPR.
 3. Check rhythm
 4. Defibrillate 120-200 J biphasic or 360 J monophasic
 5. Resume quality CPR, manage patient's airway and provide 100% oxygen, start NS IV/IO, contact medical control, and advise of patient condition
 6. Administer epinephrine 1 mg 1:10,000 IV/IO every 3-5 min or a single dose of vasopressin 40 units IV/IO to replace the first two doses of epinephrine.

Cardiac arrest (cont'd)

7. Resume quality CPR
 8. Assess rhythm and pulse
 9. If no change, defibrillate 120-200 J biphasic or 360 J monophasic
 10. Assess rhythm and pulse. If no change, continues quality CPR
 11. Administer antiarrhythmic
 - Amiodarone 300 mg IV/IO (second dose 150 mg IV/IO)
 - If amiodarone is not available, lidocaine 1-1.5 mg/kg IV/IO [(second dose 0.5 - 0.75 mg/kg IV/IO) Max 3 mg/kg]
 - Magnesium 1-2 g IV/IO (only for torsades de pointes)
 12. Continue CPR
 13. Assess rhythm and pulse
 14. If no change, defibrillate 120-200 J biphasic or 360 J monophasic
- D. After an advanced airway is placed, rescuers no longer deliver “cycles” of CPR. Give continuous chest compressions without pauses for breaths. Give 8 to 10 breaths/minute. Check rhythm every two minutes.
- E. Consider reversible causes:
- Hypovolemia
 - Hypoxia
 - Hydrogen ion (acidosis)
 - Hypokalemia/Hyperkalemia
 - Hypothermia
 - Tension pneumothorax
 - Tamponade (cardiac)
 - Toxins
 - Thrombosis (pulmonary)
 - Thrombosis (coronary)

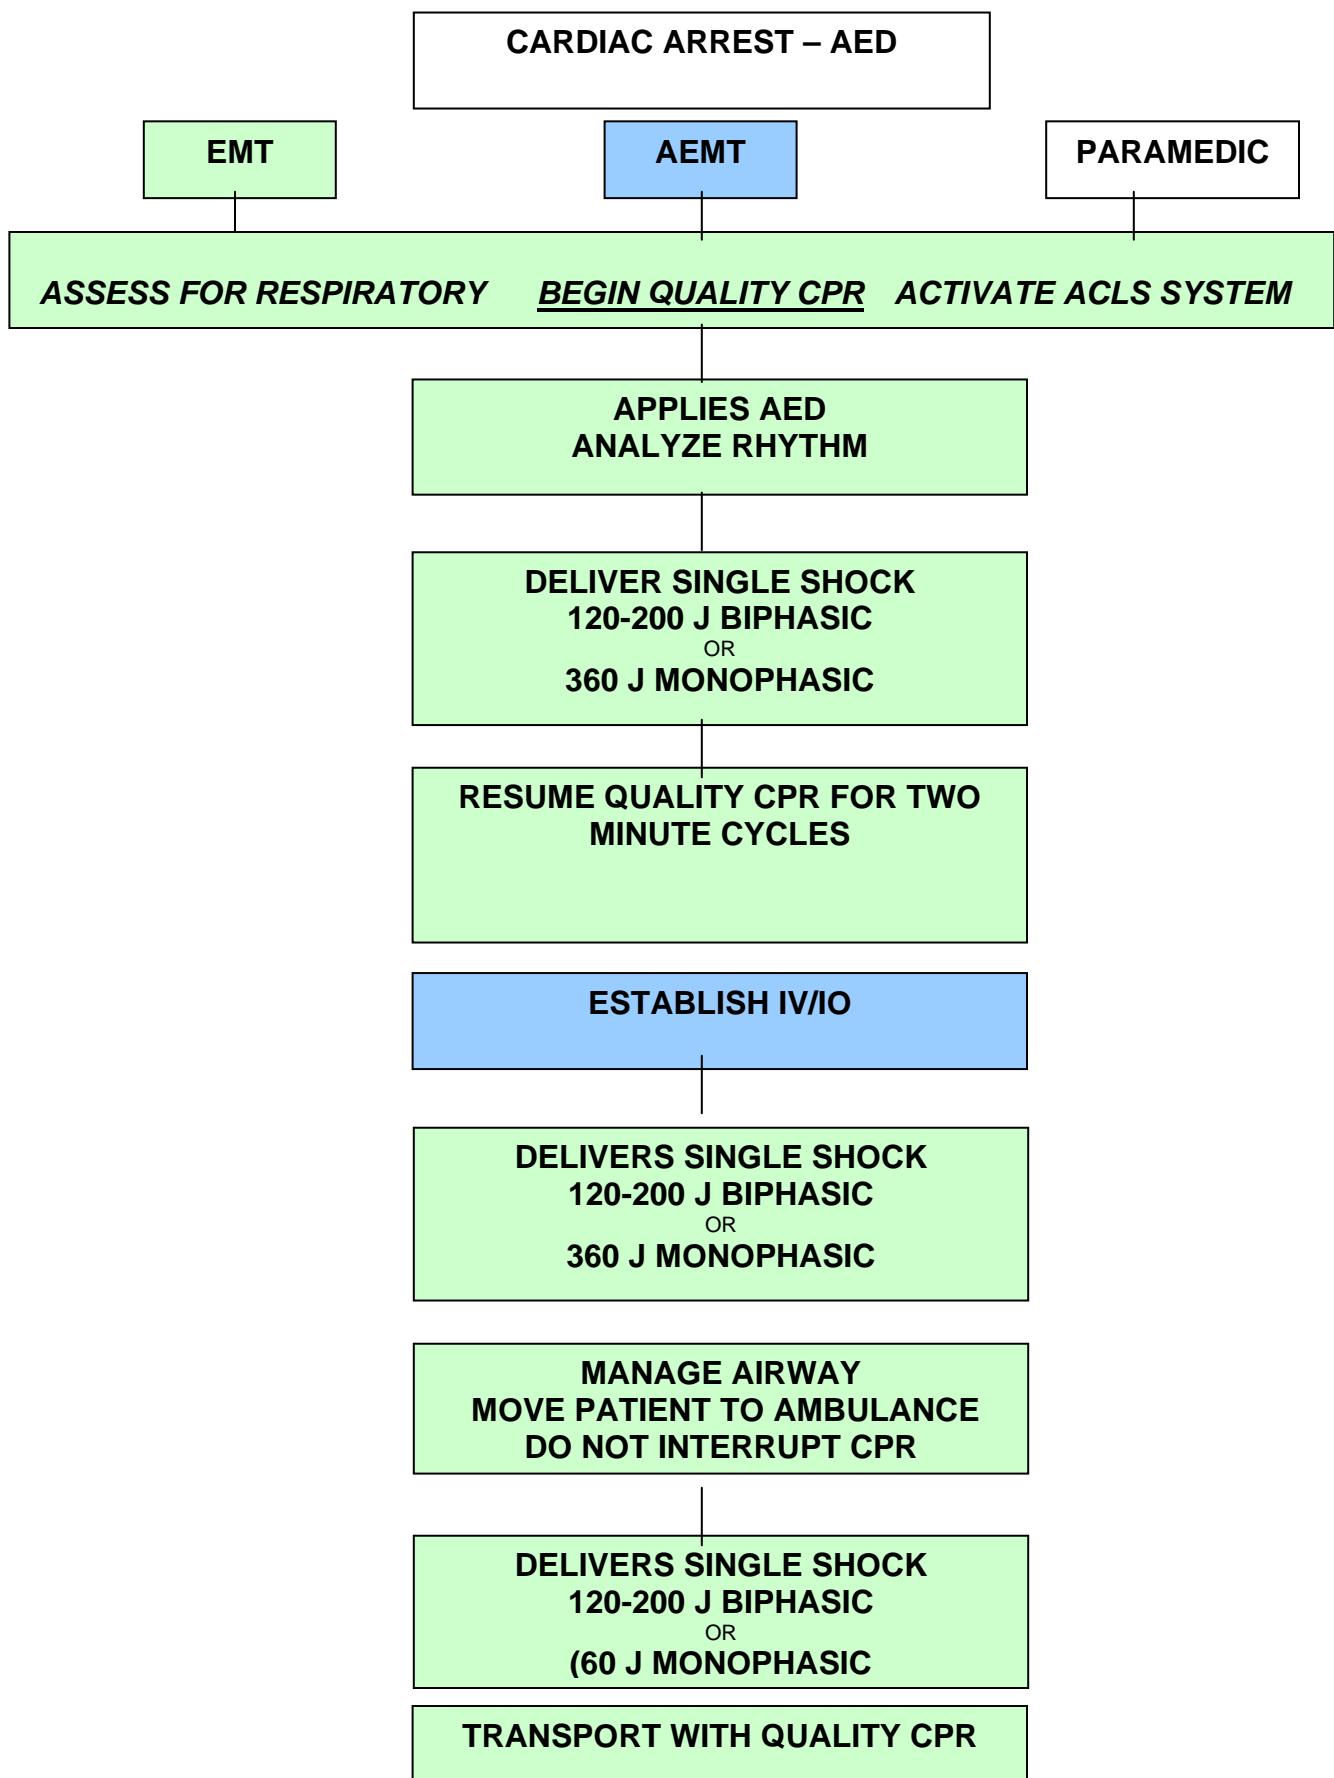

NOTE: Value of sodium bicarbonate has not been demonstrated during cardiac arrest, and it is not recommended for the routine cardiac arrest sequence. Consideration of its use is appropriate with during special resuscitation situations only, specifically when preexisting metabolic acidosis, hyperkalemia, or tricyclic antidepressant overdose is suspected.

Pulseless Electrical Activity (PEA)/Asystole

- a. Check pulse, immediately initiate quality CPR, and minimize any interruption in CPR
- b. Apply the cardiac monitor/defibrillator and reassess rhythm every 2 minutes
- c. Obtain IV/IO access
- d. Administer epinephrine 1:10,000 1 mg IVP every 3 to 5 minutes or vasopressin 40 units IVP to replace the first two doses of epinephrine
- e. Consider placement of an advanced airway

Cardiac arrest (cont'd)

- f. Epinephrine 1:1,000 2 mg to 2.5 mg diluted with NS 10 ml may be administered via an ETT if IV/IO access has not be obtained or is delayed
- g. Consider treatable causes:
 - Hypovolemia
 - Hypoxia
 - Hydrogen ion (acidosis)
 - Hypokalemia/Hyperkalemia
 - Hypothermia
 - Tension pneumothorax
 - Tamponade (cardiac)
 - Toxins
 - Thrombosis (pulmonary)
 - Thrombosis (coronary)

CARDIAC ARREST VENTRICULAR FIBRILLATION/ PULSELESS VENTRICULAR TACHYCARDIA

DELIVER SINGLE SHOCK
120-200 J BIPHASIC *or*
360 J MONOPHASIC

TRANSPORT

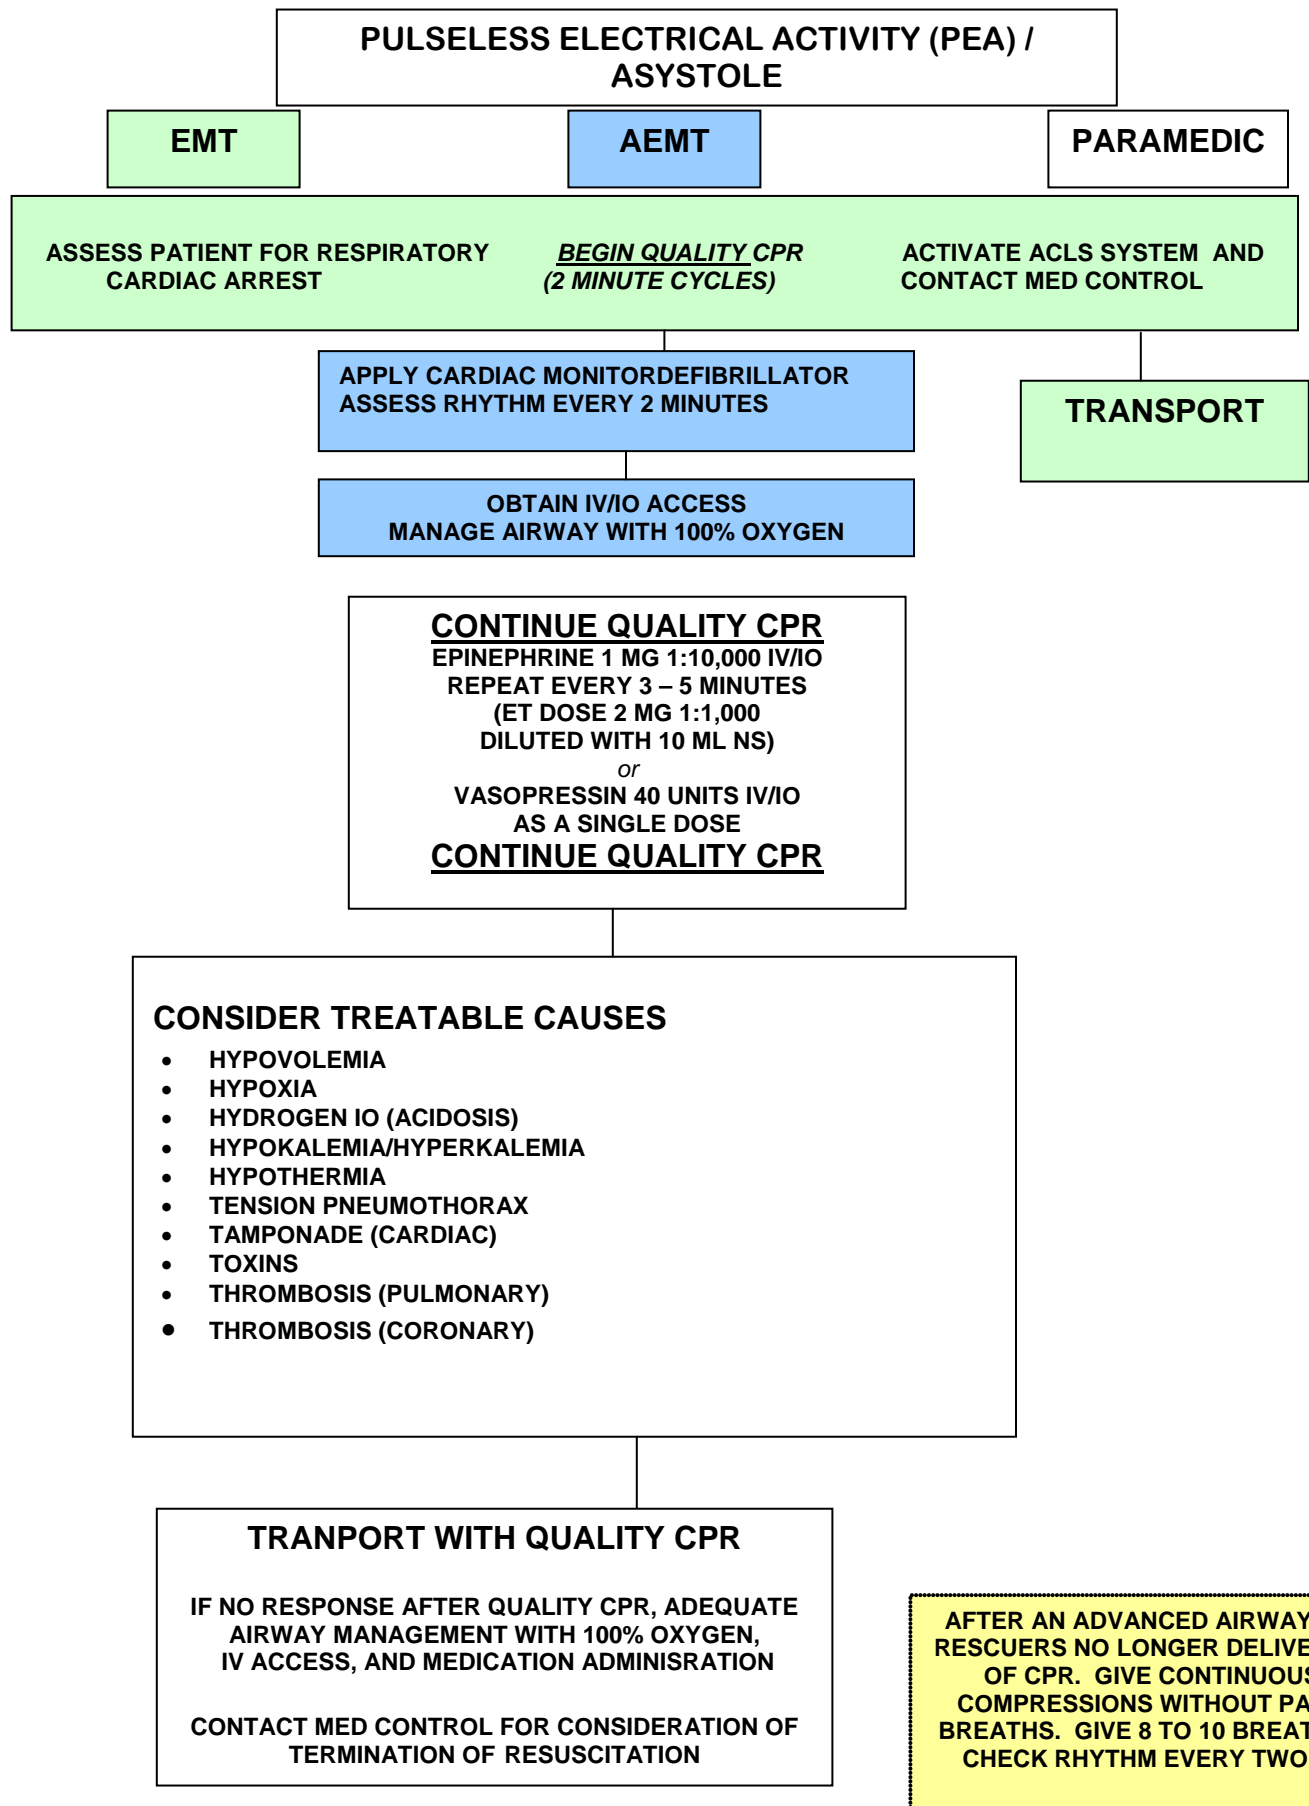

AMIODARONE
300 MG IV/IO

AFTER 10 MIN: PATIENT REMAINS IN VT/VF OR
CONVERTS TO PERFUSING RHYTHM:
AMIODARONE 150 MG IV/IO

BIPHASIC EQUIVALENT BY WAVEFORM

- * TRUNCATED EXPONENTIAL = 150 J - 200 J
- * RECTILINEAR = 120 J
- * BIPHASIC WAVEFORM UNKNOWN = 200J

DO NOT ADMINISTER MORE THAN ONE ANTIARRHYTHMIC TO A PATIENT

SPECIAL RESUSCITATION SITUATIONS

Special resuscitation situations are cardiopulmonary arrest or other life-threatening emergency that require modification or extension of conventional life support techniques.

NEAR DROWNING

GENERAL INFORMATION

- A. The key to success is the provision of early, effective pulmonary support
- B. It is essential that the EMS professional exercise caution and take steps to insure their own safety while retrieving the victim from the water
- C. Drowning is classified as trauma in Ohio. Victims of drowning or near drowning that could require admission to a hospital should be transferred to the appropriate trauma center.
- D. Maintenance of hypothermia in cold-water drowning may be recommended by local medical direction if the patient can be transported to a facility that is capable of continuing this therapeutic measure. A drowning that occurs in a body of water that is located outdoors or is not artificially heated should be classified as a cold-water drowning.

EMT

- A. Open airway and start rescue breathing as soon as possible, even if the victim has not been removed from the water
- B. Ventilate with 100% oxygen by two-person BVM or oxygen-powered, manually-triggered or automatic transport ventilation device with oral/nasal airway. Oxygen should be warmed to 42°C, if available. Ventilation should be delivered over two seconds and cricoid pressure should be considered to help reduce gastric distension
- C. Always consider the possibility of a cervical spine injury
- D. It is not recommended to drain fluid from lungs unless ventilations are impaired. If ventilation impairment should occur, suction airway for not more than 15 seconds
- E. Start quality CPR as soon as victim is removed from the water and onto a hard surface
- F. Patient may show signs of hypothermia. Handle patient VERY gently; rough handling or movement can cause cardiac arrhythmia. Warm patient by removing wet clothes and cover with blankets
- G. Transport IMMEDIATELY

AEMT

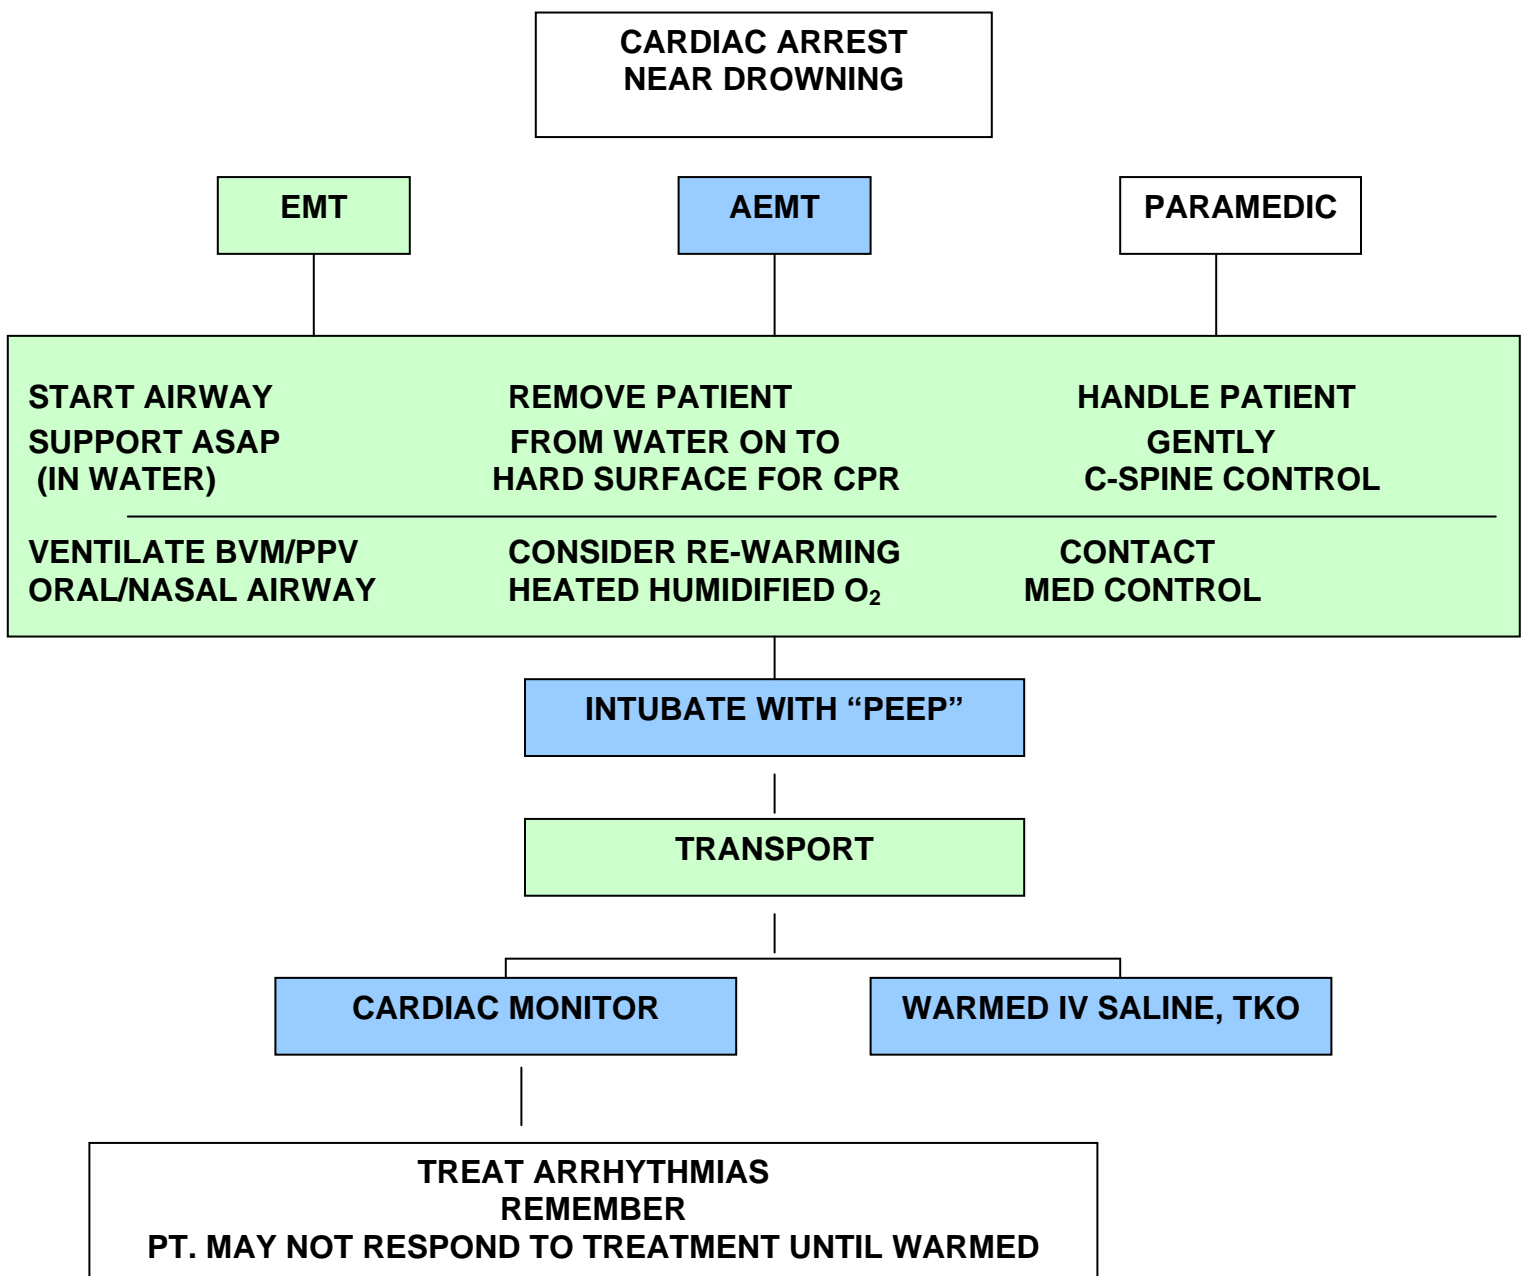

- A. Assume charge and confer with the EMS professional as to patient condition and circumstance
- B. Apply cardiac monitor and assess rhythm. Follow cardiac arrest protocol.

Special resuscitation (cont'd)

- C. Start IV of saline, warmed to 46° C if possible.
- D. Check pulse, intubate patient, suction airway and provide ventilation with positive end-expiratory pressure (PEEP). Continue quality CPR.

PARAMEDIC

- A. Assume charge and confer with the EMS professional as to patient condition and circumstance
- B. If EMS professional is in a cycle of defibrillation, allow to complete cycle before continuing
- C. Apply cardiac monitor and assess rhythm. Follow hypothermia cardiac arrest protocol

CARDIAC CHEST PAIN

EMT

- A. Open and manage the airway and provide oxygen by nasal cannula 4 l/minute and increase as needed for respiratory distress. Apply pulse oximeter and treat per procedure. Be prepared to provide CPR and defibrillation.
- B. Make patient comfortable and provide reassurance.
- C. Evaluate patient's general appearance, relevant history of current condition and determine:

Onset
Provokes
Quality
Radiates
Severity
Time
Interventions

Allergies
Medication
Past Medical History - especially cardiac, stroke, recent surgeries, bleeding problems CNS problems and/or pregnancy
Last Meal
Events leading up to present illness

- D. Assess the patient to determine if pain is cardiac in origin. For patients with pain of cardiac origin with one or more of the following, fibrinolysis may be contraindicated and medical control should be contacted:
 - Systolic BP > 180-200 mm Hg or diastolic BP > 100-110 mm Hg
 - Right versus left arm systolic BP difference > 15 mmHg
 - History of structural central nervous system disease
 - Significant closed head/facial trauma within the previous 3 weeks
 - Stroke > 3 hours or < 3 months
 - Recent (within 2-4 weeks) major trauma, surgery (including laser eye surgery), gastrointestinal/genitourinary bleed
 - Any history of intracranial hemorrhage
 - Bleeding, clotting problem, or blood thinners
 - Pregnant female
 - Serious systemic disease (e.g. advanced cancer, severe liver or kidney disease)

Additional criteria which classify a patient as high risk and considered for transfer to a PCI facility are:

- Heart rate \geq 100 beats per minute and systolic BP < 100 mm Hg
- Pulmonary edema (rales)
- Signs of shock (cool, clammy)
- Contraindications to fibrinolytic therapy
- Required CPR

THIS ASSESSMENT SHOULD BE DONE DURING TRANSPORT

- E. May give 2 baby ASA per EMS stock drug procedure. Note true ASA allergies as opposed to adverse side effects such as peptic distress.
- F. If patient is conscious and alert with previous history of angina pain and is taking nitroglycerin or Nitrostat[®], administer 0.4 mg tablet or spray of nitroglycerin sublingually. Assure medication is prescribed for patient, is not out-of-date and contact medical control.

CARDIAC CHEST PAIN (cont'd)

- G. Monitor patient's condition, especially blood pressure. Dosage may be repeated in 5 minutes if pain does not subside, blood pressure does not drop below 100 systolic and there is no change in level of consciousness.
- H. If patient is experiencing an unusual and/or irregular heart rate or pulse, if available, the AEMT or Paramedic may apply a cardiac monitor run a strip for evaluation by the physician at the emergency department. This should only be done during transport, and you must advise the patient you do not have the ability to interpret the strip; however, the emergency physician will.
- I. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY.
- J. If 12-lead EKG is applied and medical control or a Paramedic interprets this data as an acute ST segment myocardial infarction (STEMI), medical direction should be contacted immediately and the patient should be transported directly to a percutaneous cardiac intervention capability (PCI) center if possible.

AEMT

- A. Assist EMT, obtain patient condition and circumstance.
- B. Apply monitor and check rhythm.
- C. Start IV, saline, TKO, while enroute to hospital. DO NOT DELAY TRANSPORT
- D. If patient is conscious and alert, administer 0.4 mg tablet or spray of nitroglycerin sublingually after establishment of an IV. Monitor patient's condition. Dosage may be repeated in 5 minutes intervals if pain does not subside and SBP is above 90mm Hg.
- E. If patient is alert, complaining of severe pain, systolic BP is above 90mm Hg and pain is not relieved by nitroglycerin, contact Medical Control, if required, and request nitrous oxide or morphine sulfate.
 - i. Morphine dosage: Small frequent titrated IV dose 5 mg every 5 minutes as needed until desired effect is achieved.
 - ii. Use caution when morphine is administered to patient with COPD or volume depletion.
 - iii. With morphine and nitrous oxide, monitor respiration and blood pressure every five minutes.

CARDIAC CHEST PAIN (cont'd)

PARAMEDIC

A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.

B. With chest pain, even if it clearly cannot be determined to be cardiac in origin, the Paramedic should:

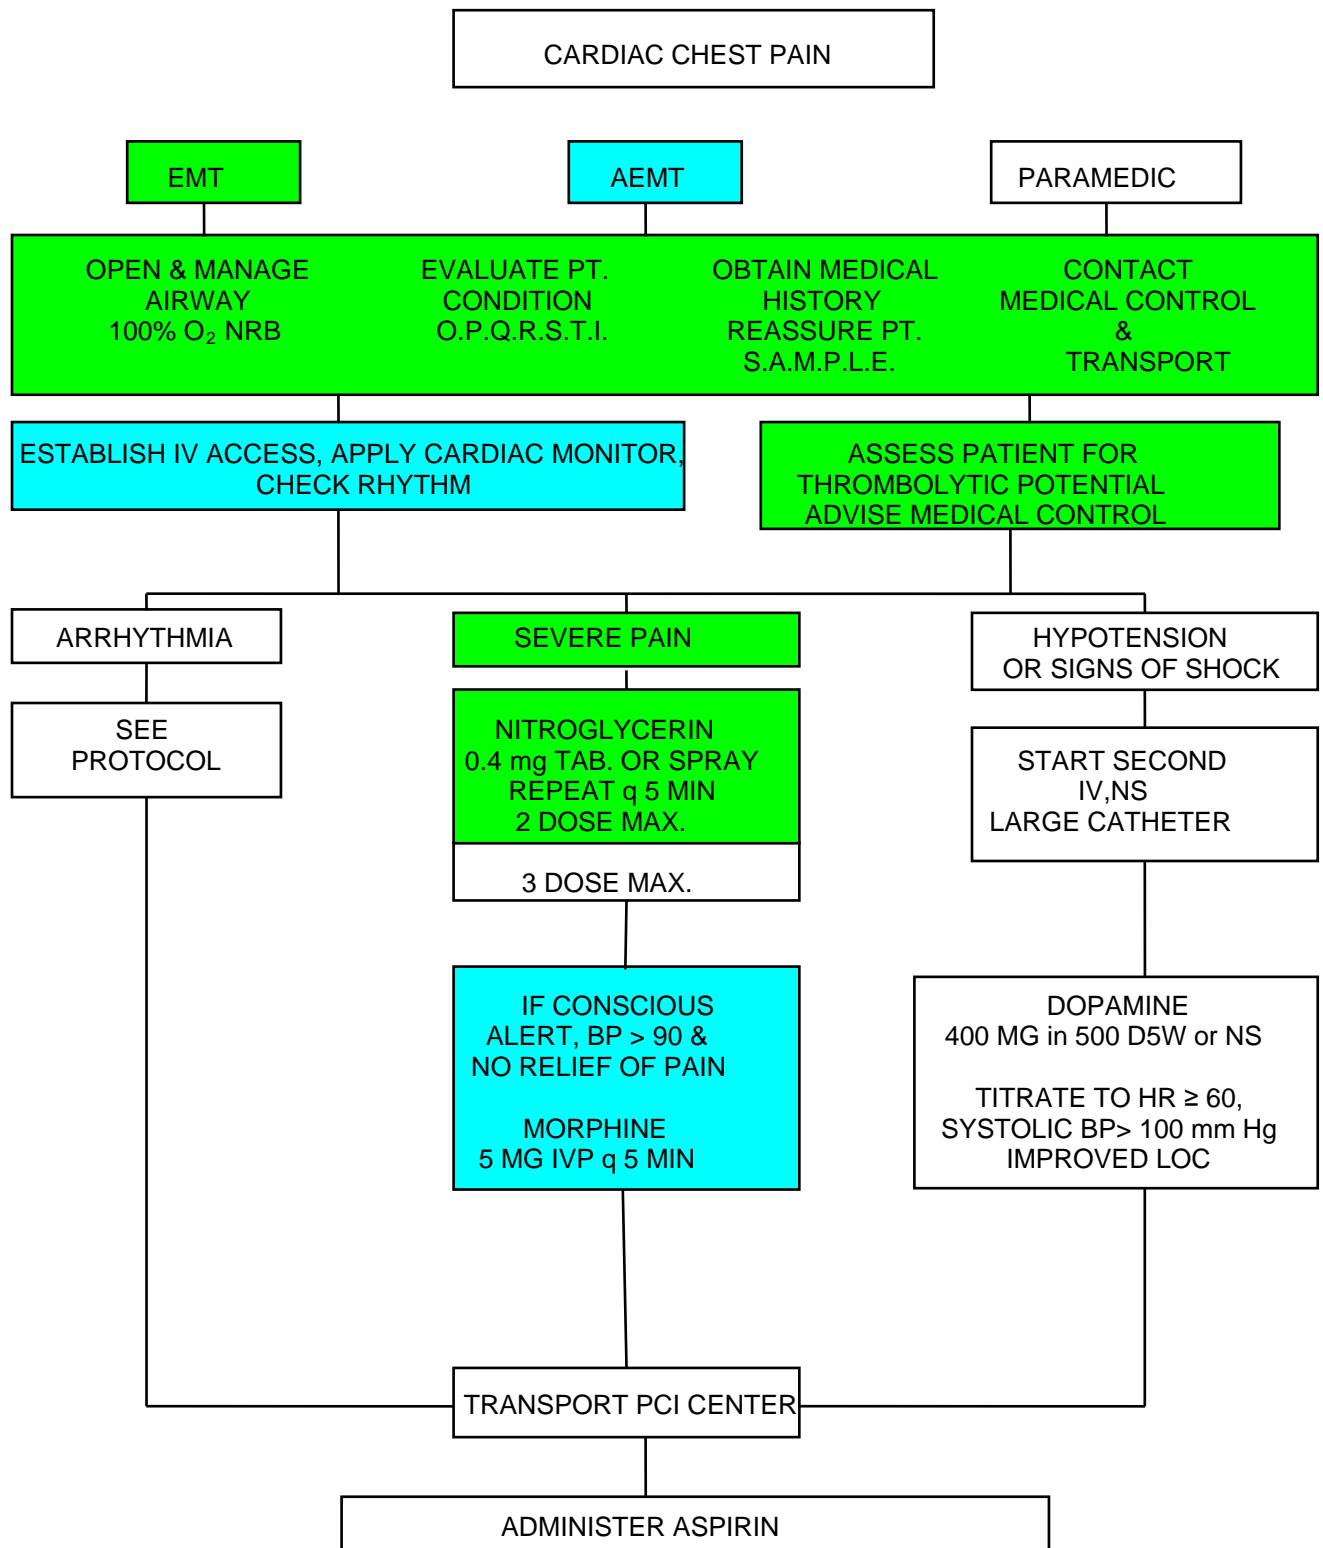

1. Support the airway and provide oxygen.
2. Hypotension with signs of shock and patient is suspected of being in cardiogenic shock (BP less than 70-90 mm Hg systolic with poor perfusion):
 - a. Establish IV saline in large vein. Administer normal saline bolus until systolic BP >90 or signs of poor perfusion resolve. Auscultate for rales, observe patient for SOB, or tachypnea. Slow fluids to TKO if these occur.
 - b. Elevate feet
 - c. Establish second IV in large major vessel for dopamine administration, 400mg dopamine in 500 ml D5W to yield a solution of 800 mcg/ml;

Start infusion at 5 mcg/kg/min (9 gtts/min) and titrate the infusion until heart rate is ≥ 60 or improved BP and LOC.

IF IV INFILTRATES OR IV ATTEMPT UNSUCCESSFUL,
INFORM ED PERSONNEL AS SOON AS POSSIBLE.

3. Relieve pain
 - a. If patient is conscious and alert, administer 0.4 mg tablet or spray of nitroglycerin sublingually after establishment of an IV. Monitor patient's condition. Dosage may be repeated in 5 minutes intervals if pain does not subside and SBP is above 90 mm Hg.
 - b. If patient is alert, complaining of severe pain, systolic BP is above 90 mm Hg and pain is not relieved by nitroglycerin, contact medical control, if required, and request morphine sulfate.
 - i. Morphine dosage: Small frequent titrated IV dose 5 mg every 5 minutes as needed until desired effect is achieved.
 - ii. Do not use morphine on COPD or volume depletion.
 - iii. With morphine, monitor respiration and blood pressure every five minutes.
4. Correct cardiac arrhythmia - Arrhythmia protocol.
5. Start IV, saline, TKO, while enroute to hospital. DO NOT DELAY TRANSPORT.
6. When patient fits thrombolytic profile, administer aspirin.

BE SURE TO CHECK FOR TRUE ASPIRIN ALLERGY vs PEPTIC DISTRESS

CHILDBIRTH/OBSTETRICAL EMERGENCIES

GENERAL INSTRUCTIONS

- A. Unless delivery is imminent, transport to a hospital with obstetrical capabilities
- B. Imminent delivery is when the baby's head is visible in the vaginal opening during a contraction (crowning)
- C. A visual inspection of the perineal area should only be done when contractions are less than 5 minutes apart and/or there is bleeding or fluid discharge
- D. The EMS professional should not place a gloved hand inside the vagina except in the case of breech delivery with entrapped head or a prolapsed umbilical cord.
- E. During delivery, gentle pressure with a flat hand on the baby's head should be applied to prevent an explosive delivery
- F. A mother in active labor should be placed on the cot or floor to prevent the newborn from falling after delivery

EMT

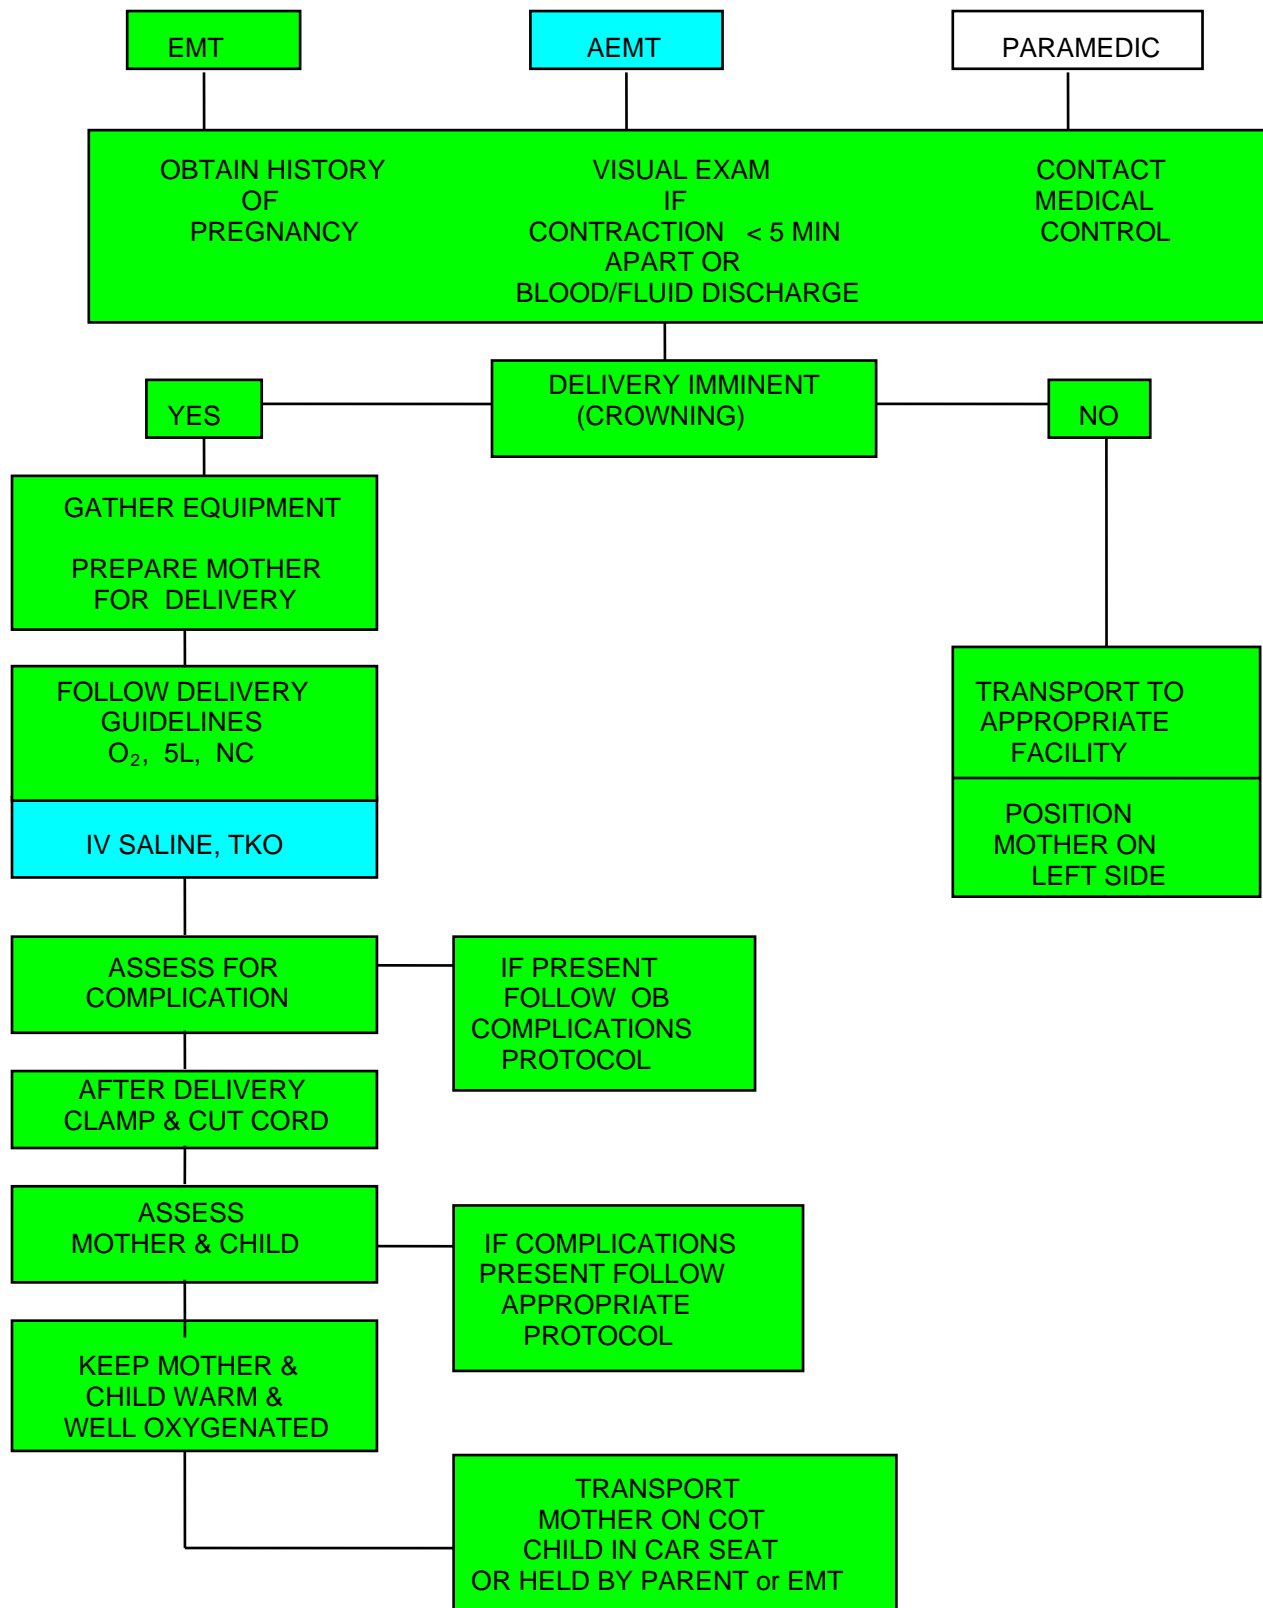

- A. Obtain history of patient condition and pregnancy: Contraction duration and interval, due date, number of pregnancies and number of live children, prenatal care and possible complications.
- B. Determine transport or delivery. Transport unless crowning is present during a contraction; contact Medical Control
- C. Always try to transport mother to her hospital designated for delivery.

Transport mother on left side with head slightly elevated to relieve pressure on mother's vena cava created by baby. Pressure could cause a decrease in mother's and baby's heart rate.
- D. If delivery is imminent, prepare equipment and follow guidelines for delivery.
 - 1. Equipment: OB Kit, oxygen and BVM, towels and blankets, cot, large dressings
- D. After delivery, transport mother on cot and baby in car seat if available, or have parent or EMS professional hold the baby during transport
- F. Keep mother and child warm and monitor airways and signs of shock

AEMT / PARAMEDIC

- A. Assist EMS professional, obtain patient condition and circumstance
- B. Start IV saline if hypovolemic shock or excessive bleeding is present

EMERGENCY CHILDBIRTH
NORMAL DELIVERY

DELIVERY COMPLICATIONS

CONTACT MEDICAL CONTROL AS SOON AS ANY COMPLICATION IS DISCOVERED

A. Cord Around Baby's Neck:

1. As baby's head passes out the vaginal opening, feel for the cord. Initially try to slip cord over baby's head; if too tight, clamp cord in two places and cut between clamps.

B. Breech Delivery:

1. Footling breech, which is one or both feet delivered first
2. Frank breech, which is the buttocks first presentation
 - a. When the feet or buttocks first become visible, there is normally time to transport patient to nearest facility.
 - b. If upper thighs or the buttock have come out of the vagina, delivery is imminent.
 - c. If the child's body has delivered and the head appears caught in the vagina, the EMS professional must support the child's body and insert two fingers into the vagina along the child's neck until the chin is located. At this point, the two fingers should be placed between the chin and the vaginal canal and then advanced past the mouth and nose.
 - d. After achieving this position a passage for air must be created by pushing the vaginal canal away from the child's face. This air passage must be maintained until the child is completely delivered.

C. Excessive Bleeding Pre-delivery:

1. If bleeding is excessive during this time and delivery is imminent, in addition to normal delivery procedures, the EMS professional should use the hypovolemic shock protocol.
2. If delivery is not imminent, patient should be transported on her left side and shock protocol followed.

D. Excessive Bleeding Post-delivery:

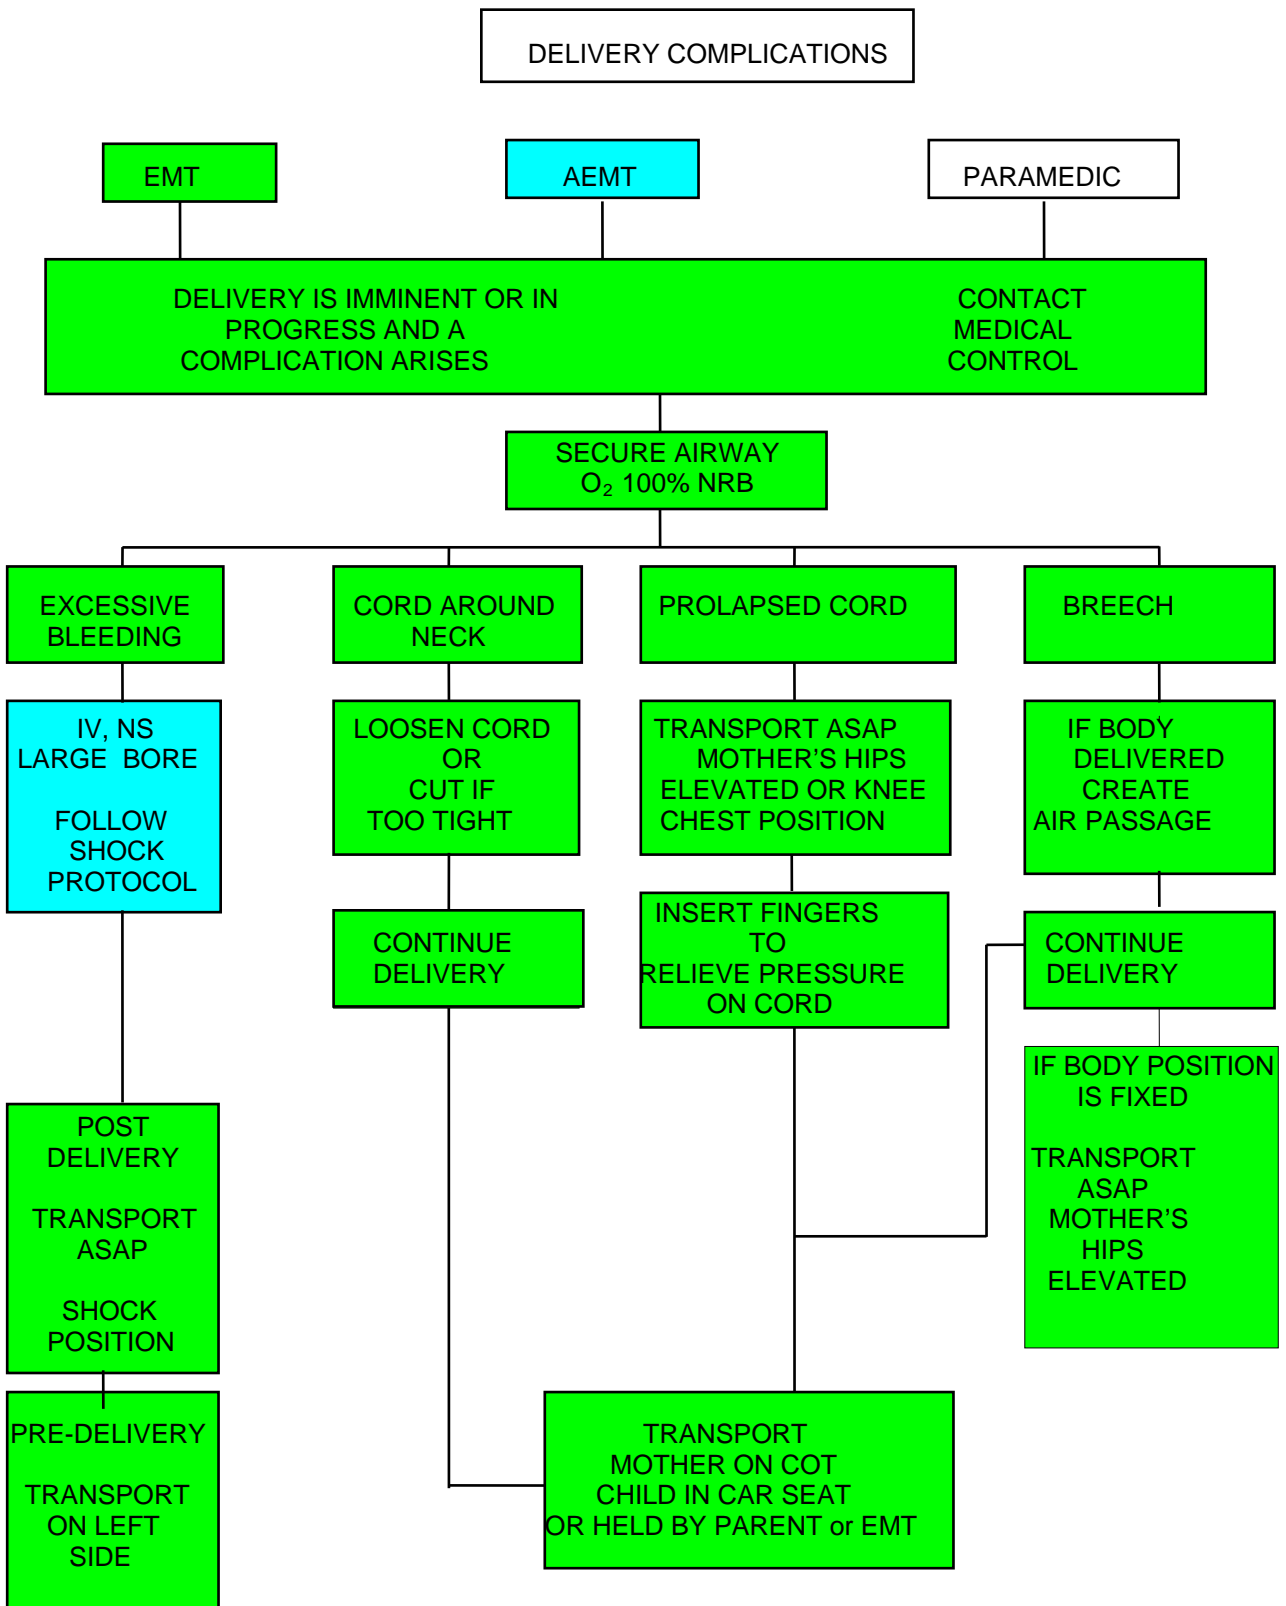

1. If bleeding appears to be excessive, start IV of saline.
2. If placenta has been delivered, massage uterus and put baby to mother's breast.
3. Follow hypovolemia shock protocol.

E. Prolapsed Cord:

1. When the umbilical cord passes through the vagina and is exposed, the EMS professional should check cord for a pulse.
2. The patient should be transported with hips elevated or in the knee chest position and a moist dressing around cord.
3. If umbilical cord is seen or felt in the vagina, insert two fingers to elevate presenting part away from cord, distribute pressure evenly when occiput presents
4. DO NOT attempt to push the cord back

DELIVERY COMPLICATIONS (cont'd)

5. High flow oxygen and transport IMMEDIATELY

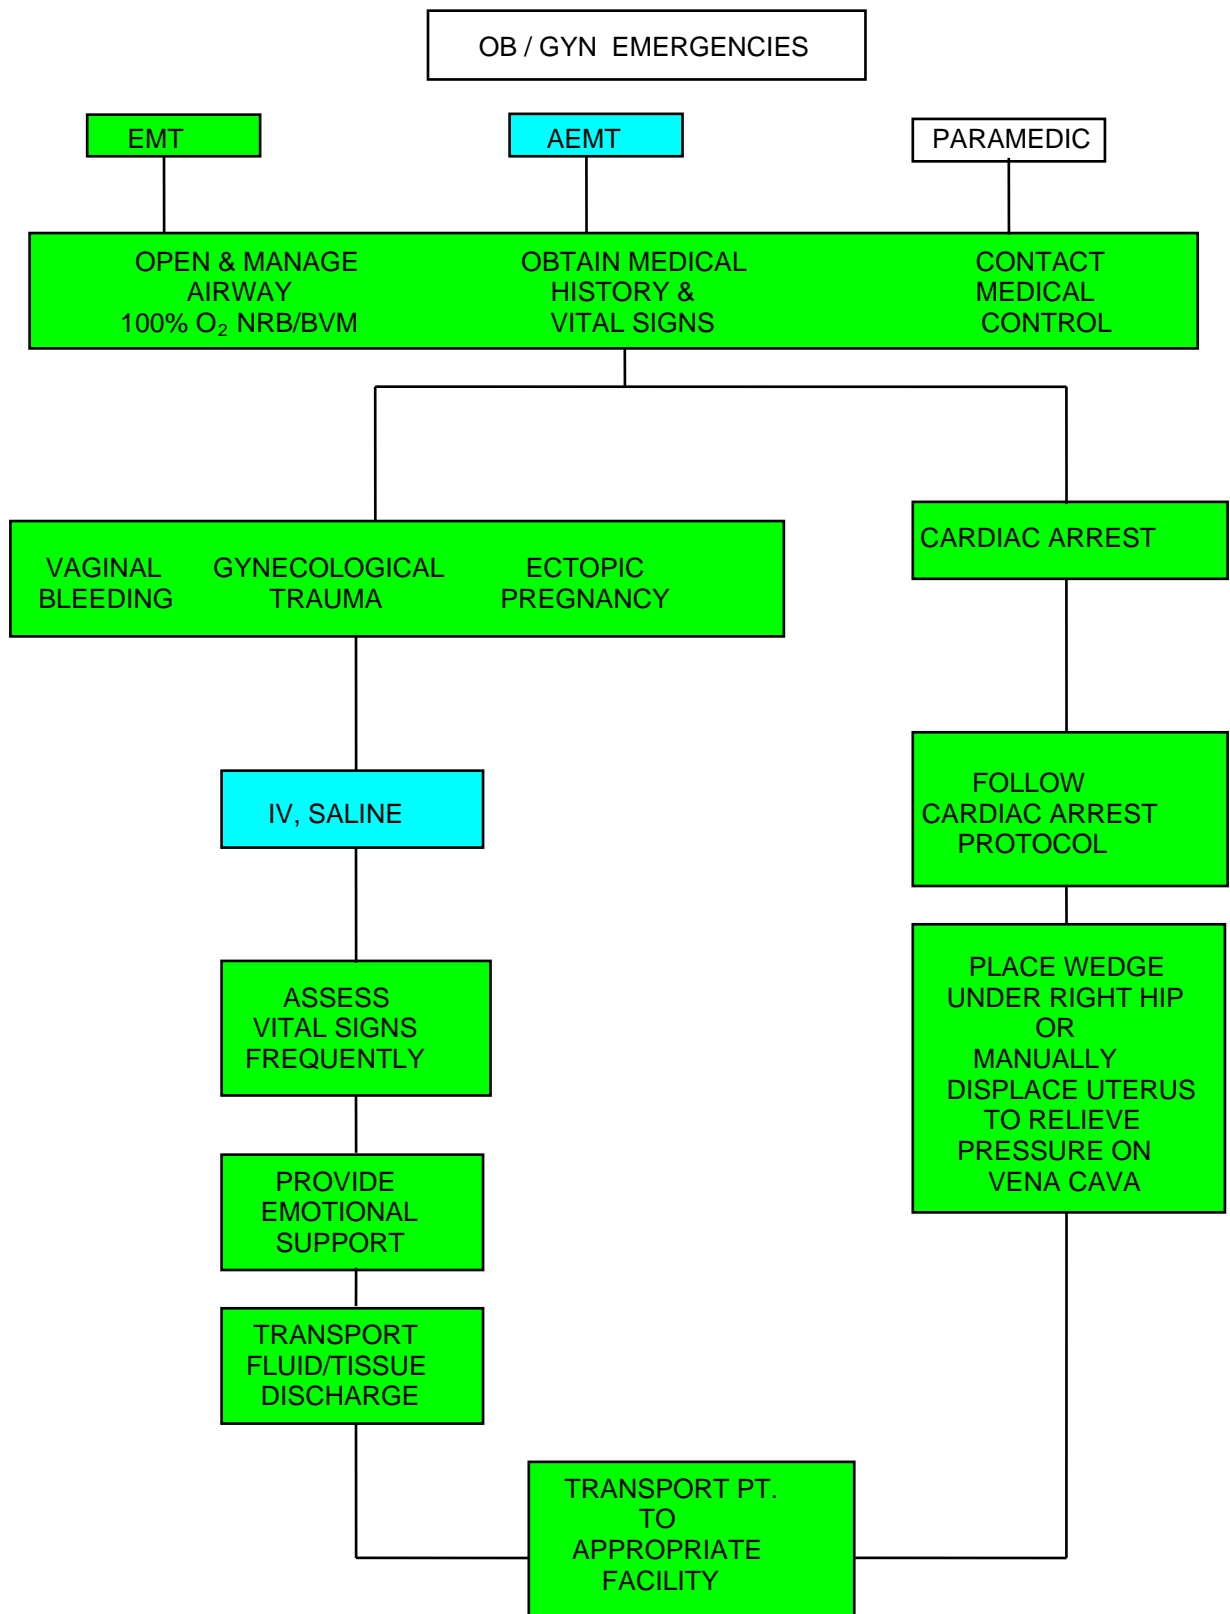

OBSTETRICAL EMERGENCIES

- A. Miscarriage: Premature termination of a pregnancy
 - 1. Assess for shock and treat per shock protocol.
 - 2. Give psychological support to patient and/or family
 - 3. Be sure to take all expelled tissue with you to the hospital

- B. Ectopic Pregnancy: When growth and development of a fertilized egg occurs outside the uterus
 - 1. Patient may experience severe abdominal pain.
 - 2. May have intra-abdominal and/or vaginal bleeding and discharge.
 - 3. Patient may not know she is pregnant
 - 4. Treat for hypovolemic shock
 - 5. Transport supine with knees flexed
 - 6. Take any expelled tissue with you to the hospital

- C. Cardiac Arrest: Cardiac resuscitation of the expectant mother is unique due to the changes in the maternal cardiovascular and respiratory physiology
 - 1. Precipitating events for cardiac arrest include pulmonary embolism, trauma, hemorrhage or congenital or acquired cardiac disease.
 - 2. Standard resuscitative protocol should be carried out.
 - 3. When the mother is supine, the fetus may compress the iliac vessels, the inferior vena cava, and the abdominal aorta. To minimize effects of the fetus pressure on venous return:
 - a. Place a wedge (pillow) under the right abdominal flank and hip, or
 - b. Apply continuous manual displacement of the uterus to the left

- D. Third Trimester Bleeding.
 - 1. Abruptio placenta - premature separation of placenta from uterine wall and is characterized by abdominal pain and vaginal bleeding
 - a. Bleeding may be dark
 - b. Uterus tender
 - 2. Placenta previa - placenta partially or completely covers the cervical (birth) canal and is characterized by painless vaginal bleeding
 - a. Bleeding may be bright red
 - b. Uterus may be non-tender
 - 3. Never do vaginal exam

DIABETIC EMERGENCIES

EMT

- A. Secure and maintain airway. Support with 100% O₂ by NRB mask.
- B. Obtain relevant medical history: OPQRST
 - 1. Has patient eaten today?
 - 2. Has patient taken insulin?
 - 3. Onset
 - 4. Medication - Type and time taken
- C. Determine blood sugar level
 - 1. Blood sugar less than 80, administer oral glucose to conscious and alert patients only
 - 2. Unable to obtain blood sugar, transport and contact medical control for guidance
- B. Establish communications with medical control and advise of patient condition. Consider transport time if <5 minutes.

AEMT

- A. Assist EMS professional, obtain patient condition and circumstance
- B. Apply monitor and check rhythm
- C. Start IV saline, TKO, while enroute to hospital.
- D. Determine blood sugar level
 - 1. Blood sugar less than 80, administer 50 ml D50 IV push immediately or glucagon 1 mg IM.
 - 2. Blood sugar greater than 400, and hypoperfusion is present, infuse patient with 250 ml bolus of saline
 - 3. Unable to obtain blood sugar, transport and contact medical control for guidance

DO NOT DELAY TRANSPORT

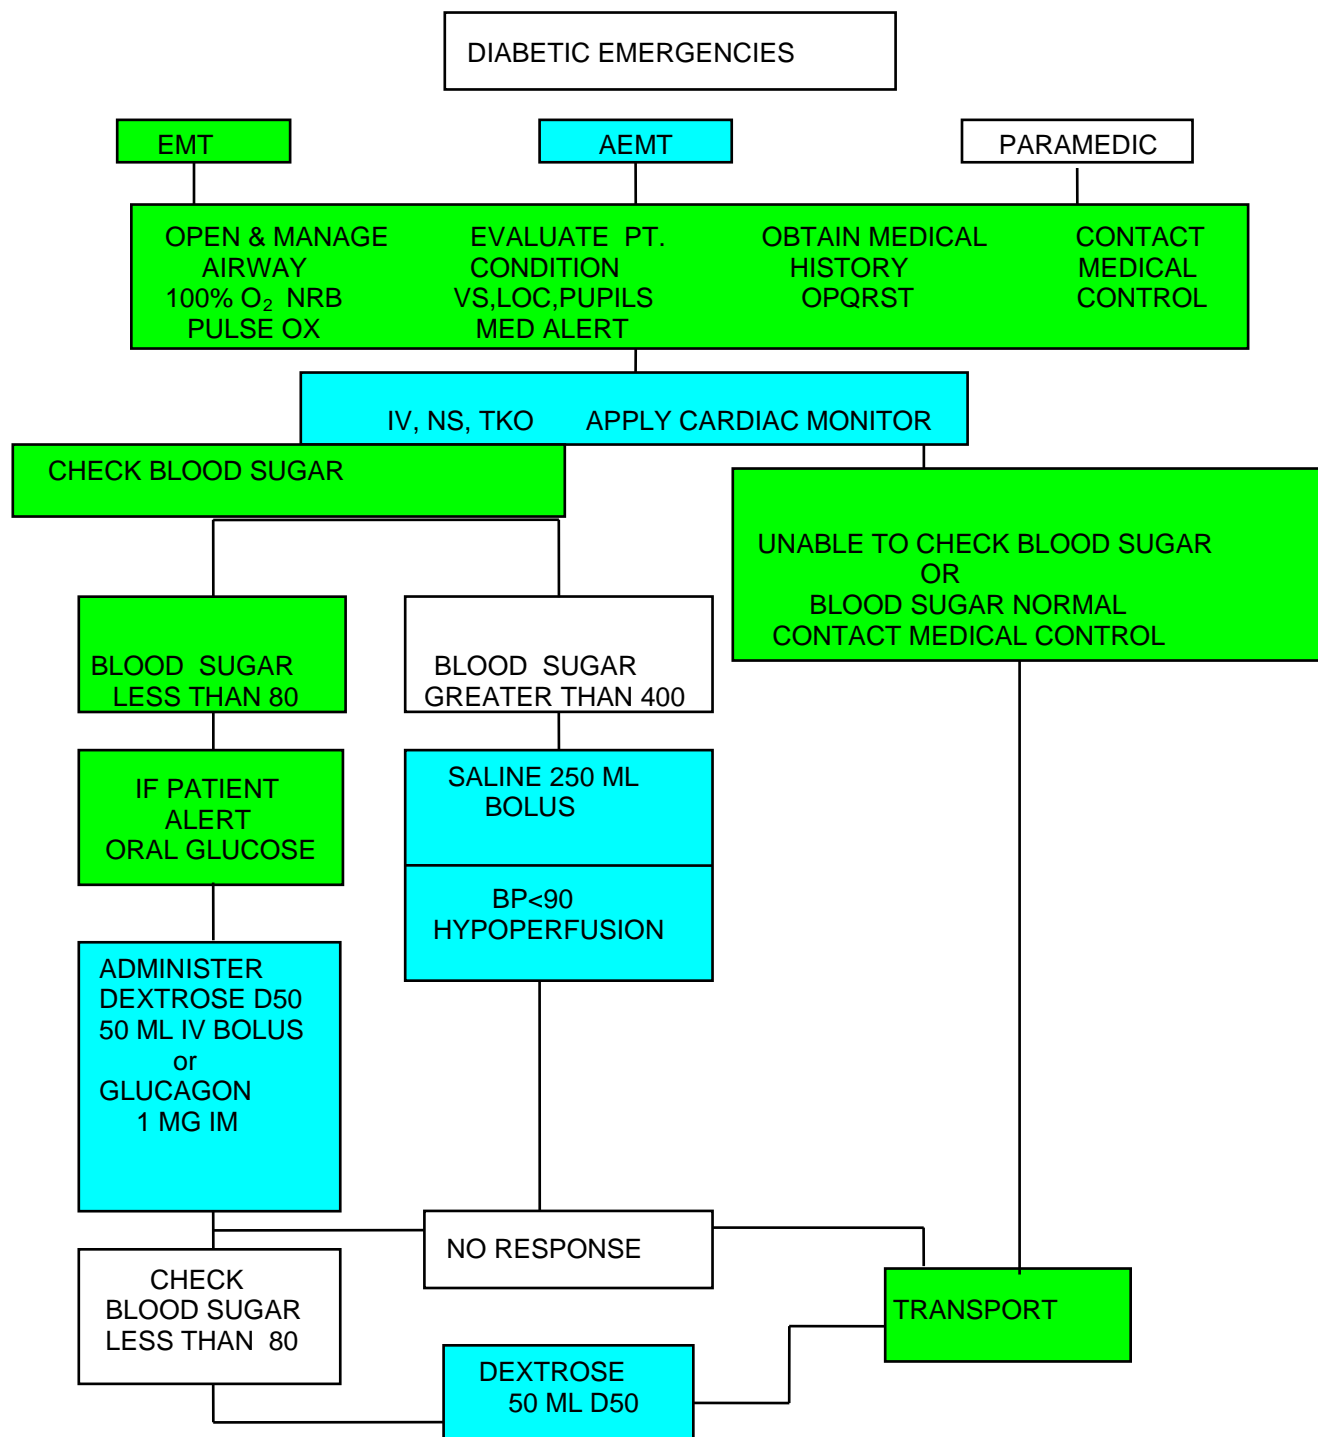

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Apply monitor and check rhythm
- C. Start IV saline, TKO.
- D. Determine blood sugar level

DIABETIC EMERGENCIES (cont'd)

1. Blood sugar less than 80, administer 50 ml D50 IV push immediately or glucagon 1 mg IM.
2. Blood sugar greater than 400, and hypoperfusion is present, infuse patient with 250 ml bolus of saline
3. Unable to obtain blood sugar, transport and contact Medical Control for guidance

E. If patient has an altered level of consciousness, follow Altered LOC Protocol

EYE INJURY

GENERAL CONSIDERATIONS

TRAUMA

- A. Do not allow eye injury to distract you from the basics of trauma care
- B. Do not remove any foreign body imbedded in the eye or orbit. Stabilize any large protruding foreign bodies.
- C. With blunt trauma to the eye, if time permits, examine the globe briefly for gross laceration as the lid may be swollen tightly shut later. Scleral rupture may lie beneath an intact conjunctiva.
 - 1. Exert no pressure on the globe when doing the exam or when covering for transport
 - 2. A light sterile wet dressing may be used to cover the eye for transport - avoid pressure directly to the eye by covering with a protective shield, (metal patch, drinking cup)

Do not delay transport by covering the eye if the patient has other life-threatening injuries.
- D. Covering both eyes when only one eye is injured may help to minimize trauma to the injured eye, but in some cases the patient is too anxious to tolerate this
- E. Transport patient sitting upright unless other life threats prohibit this from being done.

CHEMICAL BURNS

- A. When possible determine type of chemical involved first. The eye should be irrigated with copious amounts of water or saline using IV tubing wide open for a minimum of 15 minutes started as soon as possible. Any delay may result in serious damage to the eye.
- B. A topical ophthalmic anesthetic should be placed in the eye prior to irrigation. Always check to determine if the patient has any allergy to anesthetic agents
- C. Always obtain name and, if possible, a sample of the contaminant or ask that they be brought to the hospital as soon as possible

CONTACT LENSES

- A. If possible, contact lenses should be removed from the eye; be sure to transport them to the hospital with the patient. If the lenses cannot be removed, notify the ED personnel as soon as possible.
- B. If the patient is conscious and alert, it is much safer and easier to have the patient remove their lenses

ACUTE, UNILATERAL VISION LOSS

- A. When a patient suddenly loses vision in one eye with no pain, there may be a central retinal artery occlusion. Urgent transport and treatment is necessary.
- B. Patient should be transported flat.

EYE INJURIES (cont'd)

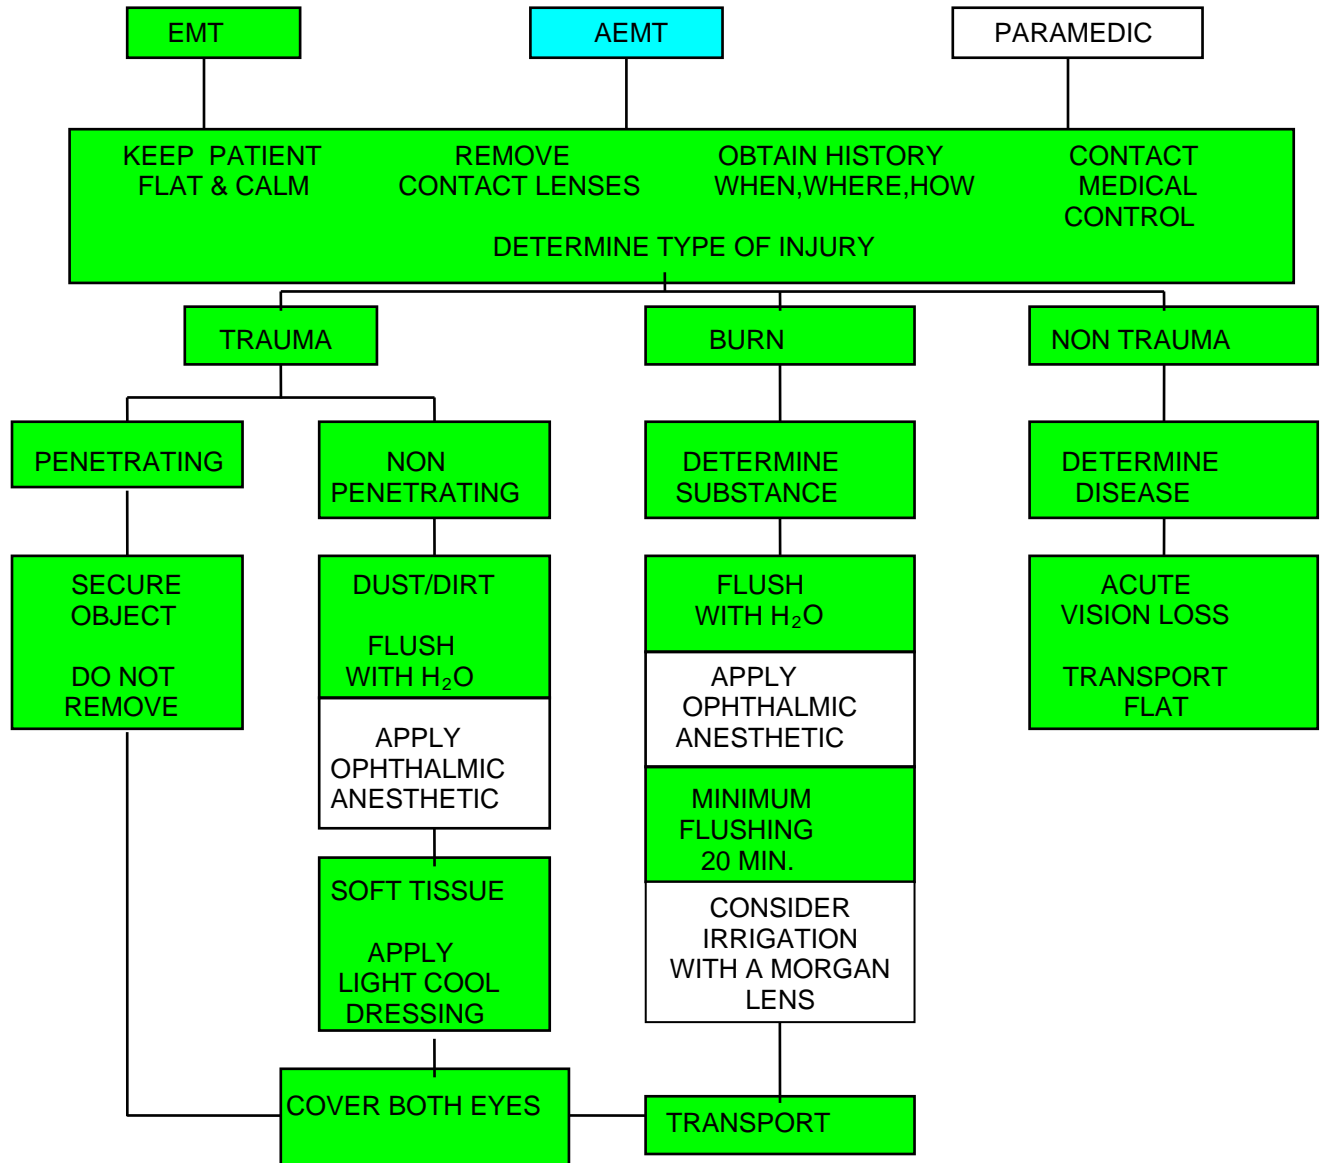

EMT / AEMT

- A. Keep patient calm and lying flat, unless otherwise indicated
- B. Obtain history of injury: Type, Where, When, How.
- C. Establish communications with Medical Control and advise of patient condition. Transport immediately, unless an advanced life support unit is enroute and has an ETA of less than 5 minutes.

PARAMEDIC

- A. Assume charge of situation and confer with EMS professional about condition of patient and situation.
- B. In cases where eyes may need irrigation, administer two (2) drops of topical ophthalmic anesthetic (i.e. tetracaine) in eyes and irrigate with copious amounts of water or saline using IV tubing wide open or a Morgan lens.

EYE INJURIES

HYPOTHERMIA / FROSTBITE

GENERAL CONSIDERATIONS

- A. This guideline was written to assist those instances of hypothermic injury involving long evacuation and transport time. When possible, all treatment should be left for a hospital setting.
- B. Generalized Hypothermia:
1. The most common mechanism of death in hypothermia is ventricular fibrillation (VF). If the hypothermia victim is in ventricular fibrillation, CPR should be initiated. If VF is not present, then all treatment and transport decisions should be tempered by the fact that VF can be caused by rough handling, noxious stimuli or even minor mechanical disturbances, this means that respiratory support with 100% oxygen should be done gently, including intubation, avoiding hyperventilation.
 2. In the absence of monitor-confirmed V fib, the decision to initiate CPR must consider the following:
 - a. Hypothermia may produce profound bradycardia and the pulse should be taken for at least 60 seconds before concluding that the patient is pulseless.
 - b. Hypothermia can exert a protective effect on body tissues. The hypothermia victim's own cardiac activity, even when profoundly bradycardic may be preferred to CPR perfusion, especially in light of the fact that CPR may well precipitate VF.
 3. The heart is most likely to fibrillate between 85-88° F. (29°-31° C.) Defibrillate VF / VT up to a total of three shocks (200 J, 300 J, 360 J).
 4. Since fibrillation is so difficult to convert without rewarming, measures to rewarm should be instituted in any hypothermia victim with VF. The decision to rewarm should be made in consultation with Medical Control and should consider the following factors:
 - a. Method of rewarming available
 - b. Time / distance from hospital
 - c. Squad capability of treating VF (ALS or BLS)
 5. Shivering stops below 90° F. (32° C).
 6. Consider hypoglycemia in the hypothermic patient.
 7. Wet clothing robs heat from the body more than it insulates and should be removed, protecting victim from wind.
 8. Never give hot liquids by mouth.
 9. Generalized hypothermia can occur whenever the ambient temperature is less than body temperature and the body is not capable of maintaining that temperature. For example, an elderly debilitated patient sitting over night in a room which is at 66° F. may become hypothermic from that exposure alone. Suspect hypothermia in the injured, elderly, or debilitated patient.
- C. Local Hypothermia (frostbite):
1. Thawing should be done under controlled conditions. It is extremely painful.

HYPOTHERMIA/FROSTBITE (cont'd)

2. Complete rewarming requires active heating for prolonged period. Partial rewarming is worse than none. Therefore, rewarming should rarely be done in the field.

EMT

- A. Secure airway, and consider cervical spine injury
 1. Administer warmed 100% oxygen, if available, by NRB mask and or BVM.
- B. Move patient to warm environment, remove any wet clothing and cover with blankets.
- C. Evaluate patient's general appearance, relevant history of condition and determine:

<u>O</u> nset	<u>A</u> llergies
<u>P</u> rovokes	<u>M</u> edication
<u>Q</u> uality	<u>P</u> ast Medical History - especially, length of exposure,
<u>R</u> adiates	unconsciousness, was the patient wet,
<u>S</u> everity	drugs/alcohol ingestion, did injured
<u>T</u> ime	areas thaw and freeze.
<u>I</u> nterventions	<u>L</u> ast Meal
	<u>E</u> vents leading to present illness
- D. Assess vital signs, mental status, temperature of patient and environment and evidence of local injury.
- E. Generalized Hypothermia with Arrest
 1. CPR and Transport unless AED or ALS is available in less than 5 minutes.
 2. If an Automated External Defibrillator (AED) is available:
 - a. Assess patient for respiratory and cardiac arrest.
 - b. Apply AED and activate device. Start verbal documentation which must include:
 - * EMS delivering care, unit number and ID of EMT
 - * Initial call information (i.e. man down, drowning, etc.)
 - * Initial patient assessment, findings and impression
 - * Care given to this point
 - * Ongoing outcomes of care delivered to patient
 - i. "No Shock Advised"
 - (a) Provide quality CPR as recommended by the American Heart Association.
 - (b) Establish communications with medical control and advise of cardiac arrest.
 - (c) Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.)
 - ii. "Shock Advised"
 - (a) Defibrillate 120 J-200 J biphasic or 360 J monophasic

HYPOTHERMIA/FROSTBITE (cont'd)

- (b) Provide quality CPR for two minutes
- (c) Analyze rhythm and defibrillate again if shock advised

F. Generalized Hypothermia Without Arrest

1. Do not initiate CPR if there is any pulse present, no matter how bradycardic.
2. Use oxygen, high flow. Do not hyperventilate. Do not use adjunctive airway equipment unless absolutely necessary. If necessary, use least intrusive measures which will adequately assure airway and ventilation.
3. Avoid rough handling, unnecessary stimulation.
4. If rewarming is undertaken, rewarm rapidly by applying warm packs or hot water bottles to trunk, neck and groin only.
5. Do not allow conscious patients to ambulate, exercise or move about.

G. Local Hypothermia (frostbite):

1. Protect the injured areas from pressure, trauma, friction. Remove all covering from injured parts. Do not rub. Do not break blisters.
2. Do not thaw injured part with local heat in excess of 100-110° F. (water that is comfortably hot to the touch without burning).
3. Do not allow limb to thaw if there is a chance that limb may refreeze before evacuation is complete.
4. Maintain core temperature by keeping patient warm with blankets, warm fluids, etc.
5. Transport and contact medical control of situation

AEMT

A. Confer with EMS professionals and confirm assessment.

B. During Transport :

1. Apply cardiac monitor, check rhythm and treat according to cardiac protocol. Provide quality CPR if pulseless and defibrillate per cardiac arrest protocol.
2. Intubation, oxygenate with 100% O₂, warm/humidified if available.
3. IV / warm NS, if available. If hypotension, 200-300 NS ml push. Contact medical control.
4. Evaluate blood sugar for possible dextrose administration.

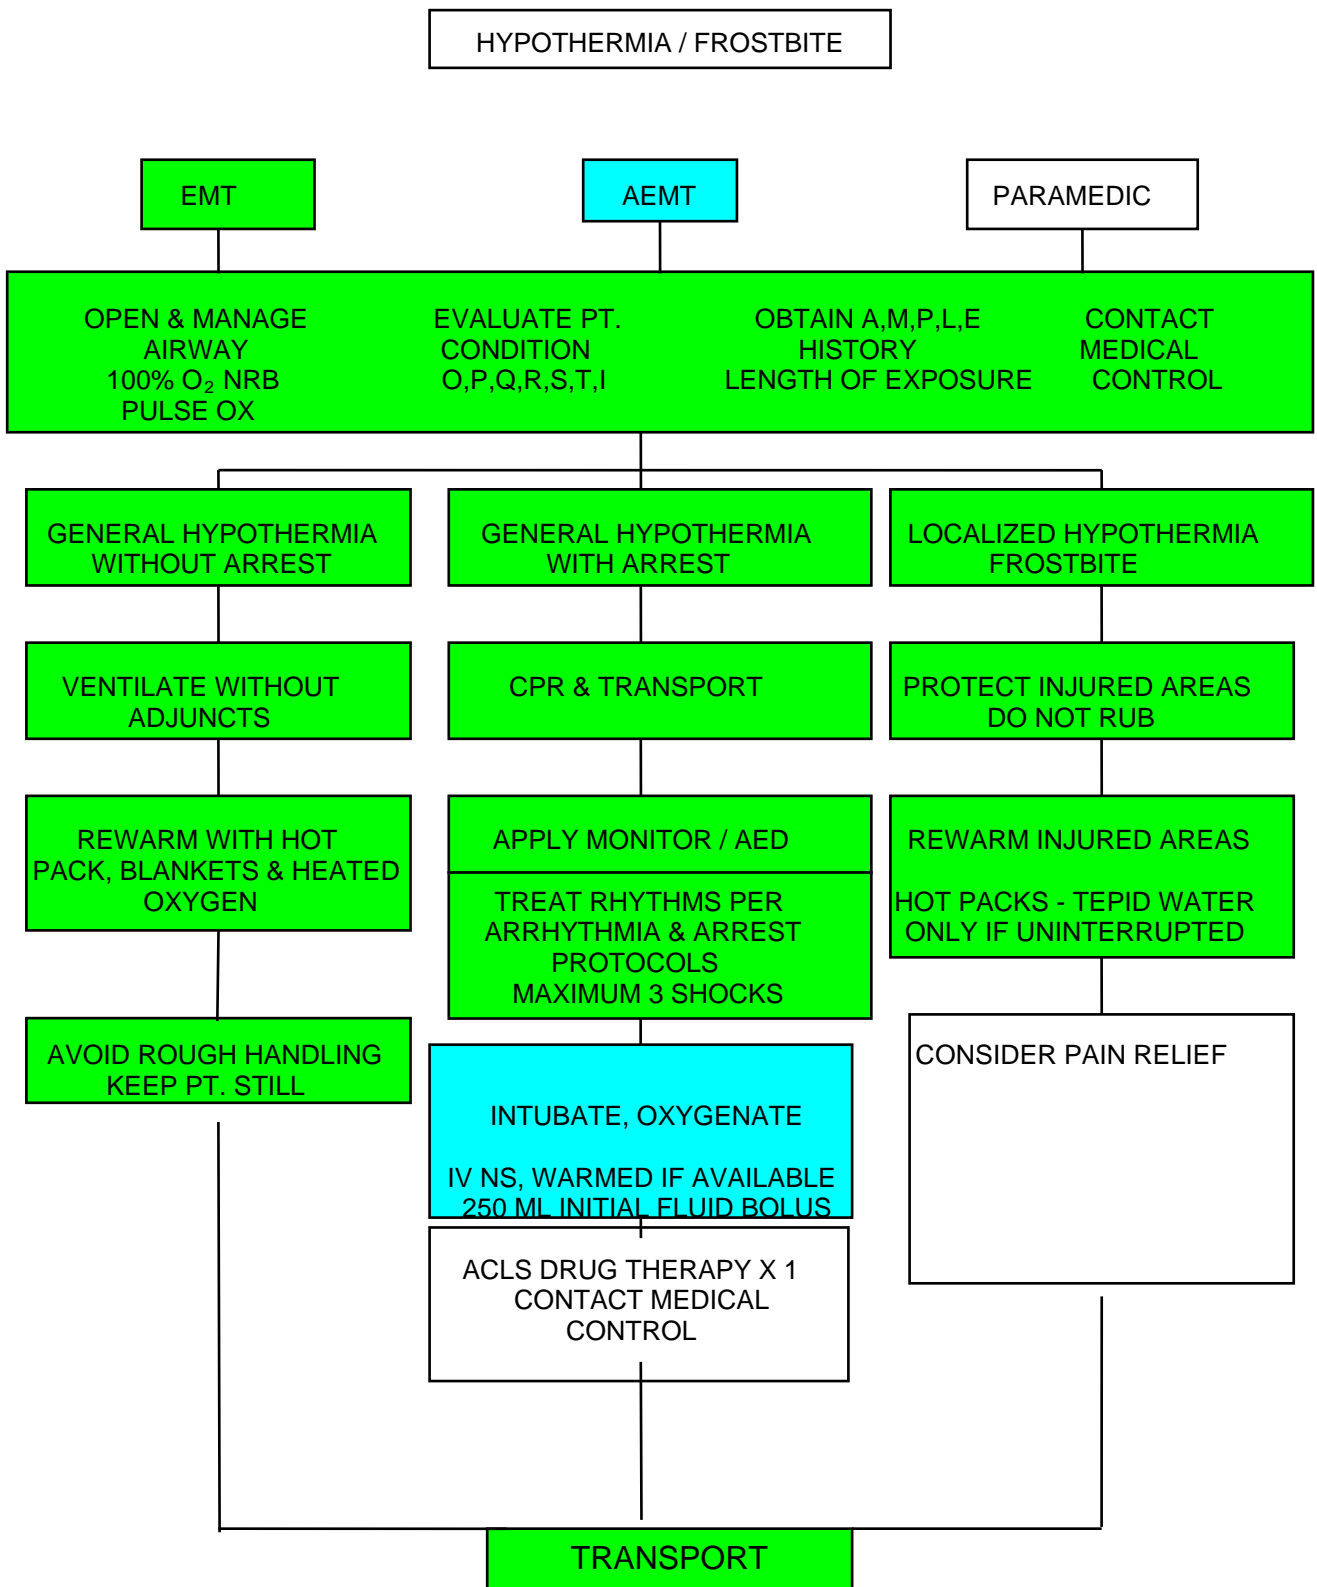

PARAMEDIC

A. Confer with EMS professionals and confirm assessment.

HYPOTHERMIA/FROSTBITE (cont'd)

B. During Transport :

1. Apply cardiac monitor, check rhythm and treat according to cardiac protocol.
2. Intubation, oxygenate with 100% O₂, warm/humidified if available.
3. IV / warm NS, if available. If hypotension, 250 ml NS IVP.
4. Evaluate blood sugar for possible dextrose administration
5. One round of ACLS medication
6. When rewarming patients consider pain relief.

HEAT EXPOSURE

GENERAL CONSIDERATIONS

- A. Recognize that the very old, very young and patients with a history of spinal injury are the ones most likely to suffer related illness. Other contributory factors may include heart medications, diuretics, cold medications and/or psychiatric medications.
- B. Heat exposure can occur either due to increased environmental temperatures or prolonged exercise or a combination of both. Environments with temperature above 90°F and humidity over 60% present the most risk.
- C. Types of heat related illness:
 - 1. Heat Stroke-The most serious type of exposure illness, usually due to prolonged exposure to heat, inadequate fluid replacement and deficient thermoregulatory function.
The patient will often experience inadequate perspiration with body temperatures reaching 105°F or greater. The skin is usually hot and dry and there may be an altered LOC and/or coma.
Seizures may also occur.
Cardiovascular collapse is the usual cause of death.
 - 2. Heat Exhaustion – a more moderate form of heat exposure associated with dehydration combined with overexertion. The skin is cooler and the core temperature is below 105°F. The patient may experience syncope with orthostatic hypotension.
 - 3. Heat Cramps – The mildest form of heat exposure caused by dehydration, overexertion and electrolyte abnormalities. The skin is moist with muscle cramps, usually affecting large muscle groups.
- D. When altered mental status is present consider other causes such as hypoglycemia, stroke and/or shock.

EMT

- A. Secure airway, and consider cervical spine injury.
 - 1. Administer oxygen, maintaining a 95% SpO₂ or BVM.
- B. Move patient to cool environment, remove any tight clothing.
- C. Evaluate patient's general appearance, relevant history of condition and determine:

Onset
Provokes
Quality
Radiates
Severity
Time
Interventions

Allergies
Medication
Past Medical History – especially, length of exposure, unconsciousness,
Drugs/alcohol ingestion

Last Meal
Events leading to present illness

HEAT EXPOSURE (cont'd)

- D. Assess vital signs every 15 minutes, mental status, temperature of patient and environment.
- E. Determine type of exposure:
 - 1. Heat stroke (hot and insufficient sweating)
 - a. Patient alert and oriented, may give fluid orally if there is no nausea and/or vomiting.
 - b. Patient with altered LOC, transport and:
 - i. cool with mist or cool wet sheet with fan, air conditioning and/or open windows.
 - ii. apply cold packs to axilla, groin, and neck. (Avoid shivering)
 - 2. Heat Exhaustion (pale, moist, may be orthostatic)
 - a. Patient alert and oriented, may give fluid orally if there is no nausea and/or vomiting.
 - b. Patient with altered LOC, transport and:
 - i. apply cold packs to axilla, groin and neck. (Avoid shivering)
 - 3. Heat Cramps
 - a. Patient alert and oriented, may give fluid orally if there is no nausea and/or vomiting.

AEMT

- A. Confer with EMS professionals and confirm assessment.
- B. During transport:
 - 1. Apply cardiac monitor, check rhythm and treat according to cardiac protocol.
 - 2. IV NS if hypoperfusion is present, 250 ml NS IVP. Contact medical control.

PARAMEDIC

- A. Confer with EMS professionals and confirm assessment.
- B. During transport:
 - 1. Apply cardiac monitor, check rhythm and treat according to protocol.
 - 2. Intubation, oxygenate with 100% O₂, if indicated.
 - 3. IV NS if hypoperfusion is present, 250 ml NS IVP. Contact medical control.
 - 4. Treat seizures per seizure protocol.

POISONING

GENERAL CONSIDERATIONS

EMS professionals should consider the possibility of accidental or self-poisoning under the following conditions:

- A. History of observed or admitted accidental or intentional ingestion
- B. Coma
- C. History of known suicide gesture
- D. Suggestive intoxicated behavior (hyperactive, hypoactive, unstable walk, lethargic)

EMT

- A. Establish airway
- B. Obtain relevant history
 - 1. What, when, why taken (if known)
 - 2. Quantity taken (if known)
 - 3. Victim's age and weight
- C. Take whatever container the substance came from to the hospital along with readily obtainable samples of medication unless this results in an unreasonable delay of transport
- D. Evaluate the patient's:
 - 1. Breath sounds (rales)
 - 2. Level of consciousness
 - 3. Pupil size
 - 4. Evidence of head injury
- E. Depending on route poison entered body apply the following:
 - 1. Ingested Poisons - Transport (contact Medical Control for prolonged transports, >30 minutes or for recommendation for charcoal administration)
 - 2. Inhaled Poisons
 - a. Remove from toxic area
 - b. Secure airway, support with 100% oxygen
 - c. Assist in ventilation if necessary
 - 3. Absorbed Poisons
 - a. Remove victim's clothing
 - b. Identify substance
 - c. Flush skin with water before and during transport if possible - at least 10-15 minutes
 - d. If eyes are involved flush with water or saline for 10-15 minutes
 - 4. Injected Poisons
 - a. Secure and maintain airway
 - b. Find substance and introduction system, if possible

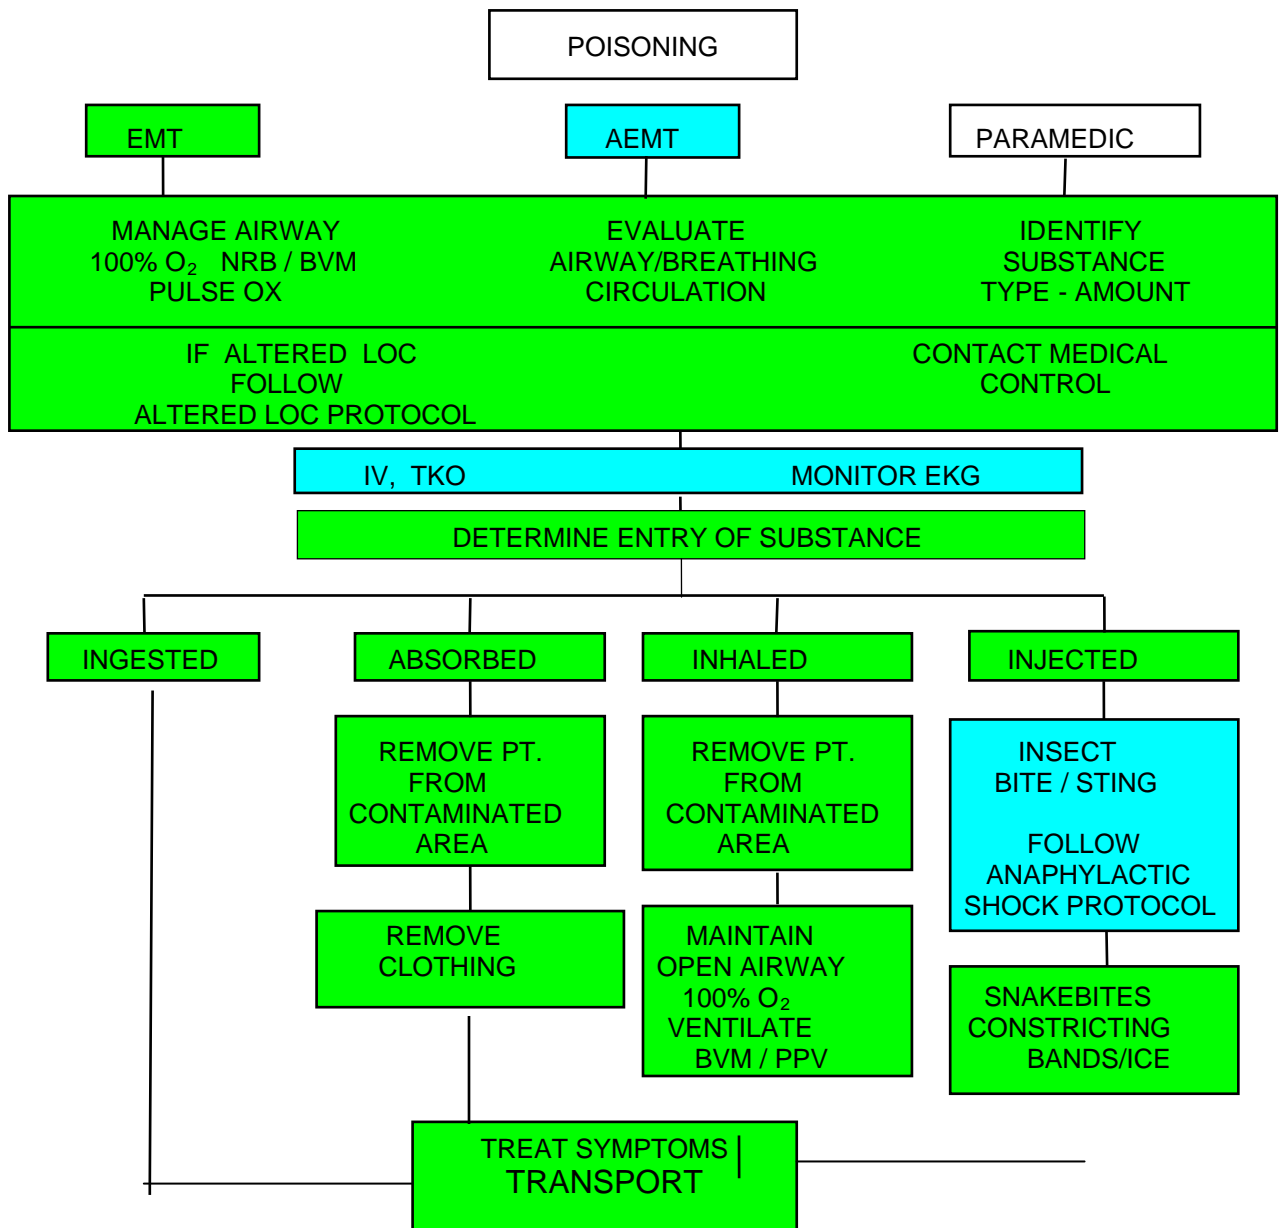

POISONING (cont'd)

AEMT

- A. Assist EMS professionals, obtain patient condition and circumstance
- B. Apply monitor and check rhythm
- C. Start IV saline, TKO, while enroute to hospital. DO NOT DELAY TRANSPORT

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. If patient has an altered level of consciousness, follow the Altered Level of Consciousness Protocol
- C. Start IV saline, TKO
- D. Contact Medical Control for prolonged transports, >30 minutes or for recommendation for charcoal administration.

PSYCHIATRIC EMERGENCIES

EMT / AEMT / PARAMEDIC

- A. Obtain relevant history:
 - 1. Previous psychiatric hospitalization, when and where
 - 2. Where does patient receive psychiatric care?
 - 3. What drugs does patient take (including alcohol)?
- B. Calm the patient
- C. Evaluate the patient's:
 - 1. Vital signs
 - 2. General appearance
- D. Contact Medical Control and advise of patient condition
- E. Transport patients to appropriate facility.
- F. Contact local law enforcement for assistance with violent, homicidal, or suicidal patients

NOTE: Restraints may be used to protect the patient, technicians, and bystanders.
See restraint policy.

- G. ALL patients who are not making rational decisions should be transported for medical evaluation.*

Threat of suicide, overdose of medication, drugs, or alcohol, and/or threats to the health and well being of others are NOT considered rational.

*Refer to Refusal Protocol

RESPIRATORY DISTRESS

EMT

- A. Open airway and check for breathing
1. Airway obstructed:
 - a. Manual clearing
 - b. Abdominal or chest thrust
 - c. Suction orally or endotracheally through an established airway or a stoma
 - d. If airway cannot be cleared in 60 seconds:
 - i. Transport immediately to nearest hospital
 - ii. Do not take history
 - iii. Do not make further physical assessment
 2. Airway is open, breathing absent, pulse present:
 - a. Ventilate patient 100% oxygen by two person bag valve mask or oxygen powered, manually triggered or automatic transport ventilation device with nasal or oral airway once every five seconds
 - b. Ventilation should be delivered over two seconds and cricoid pressure should be considered to help reduce gastric distention
 3. Airway is open and patient is in distress:
 - a. Administer 100% O₂ by NRB mask and consider continuous positive airway pressure (CPAP-see Special Procedures)
 - b. Be prepared to assist ventilations;
 - c. Evaluate breath sounds:
 - i. Clear breath sounds: Treat cause - (MI, pulmonary embolism, metabolic disturbance, hyperventilation). Transport.
 - ii. Wheezes present:
 - (a) Minor allergic reaction: Support with oxygen, observe patient carefully. Transport
 - (b) Severe allergic reaction (allergy, asthma)
 - (i) Secure airway and support with oxygen
 - (ii) Ask patient or bystanders if epinephrine 1:1,000 by auto-injector has been prescribed for these situations and do they have the medication with them
 - (iii) IF MEDICATION IS NOT AVAILABLE - Transport immediately, unless ALS unit is enroute and has an ETA of less than 5 minutes (consider transport time)

RESPIRATORY DISTRESS (cont'd)

- (iv) IF MEDICATION IS AVAILABLE:
 - (aa) Assure medication is prescribed for patient
 - (bb) Check medication - cloudiness, expiration date, administration method
 - (cc) Contact Medical Control, if possible
 - (dd) Administer medication in mid-thigh and hold injector firmly against leg for at least ten seconds to assure all medication is injected
 - (ee) Record patient reaction to medication and relay to Medical Control - be sure to have vital signs
 - (ff) Transport immediately
- (c) Patient with COPD (emphysema, asthma, bronchitis)
 - (i) Minor distress;
 - (aa) Put patient in position of comfort, support with LOW flow oxygen
 - (ii) Severe distress;
 - (aa) Set patient up, assist ventilations with HIGH flow O₂, consider CPAP
 - (bb) Ask patient or bystanders if a bronchodilator by inhaler has been prescribed for these situations and do they have the medication with them
 - (cc) IF MEDICATION IS NOT AVAILABLE - Transport immediately, unless ALS unit is enroute and has an ETA of less than 5 minutes (consider transport time)
 - (dd) IF MEDICATION IS AVAILABLE:
 - (i) Assure medication is prescribed for patient
 - (ii) Check medication - expiration date, administration method
 - (iii) Contact Medical Control, if possible
 - (iv) Administer medication by having the patient exhale, then activate spray during inhalation, and have patient hold breath for ten seconds so medication can be absorbed. Use a spacer if available. If the patient has a nebulizer, the EMT may assist the patient with the patient's self-administration of nebulized medications.
 - (v) Record patient reaction to medication and relay to Medical Control - be sure to have vital signs
 - (vi) Transport immediately

RESPIRATORY DISTRESS (cont'd)

- D. Contact Medical Control, advise of patient condition, and TRANSPORT

AEMT

- and heart, apply ice pack to slow swelling and spread of poison

RESPIRATORY DISTRESS (cont'd)

- (d) Apply monitor and check rhythm
 - (e) Start IV saline, TKO, while enroute to hospital DO NOT DELAY TRANSPORT
 - (f) Administer Benadryl[®] (diphenhydramine) 1 mg/kg (maximum dose of 50 mg) IVP or IM.
- ii. Patient with asthma:
- (a) Minor distress:
 - (i) Put patient in position of comfort, support with oxygen
 - (ii) Consider Proventil[®] (albuterol) breathing treatment: 2.5 mg of Proventil[®] (albuterol) in 3 ml NS aerosol unit with oxygen flow at 8 liters per minute
 - (b) Severe distress:
 - (i) Sit patient up, assist ventilations with high flow oxygen, consider continuous positive airway pressure (CPAP-see Special Procedures)
 - (ii) Proventil[®] (albuterol) breathing treatment: 2.5 mg in 3 ml NS of Proventil[®] in aerosol unit with oxygen flow at 8 liters per minute
 - (iii) Contact Medical Control for possible administration of epinephrine or glucagon.
 - (c) Start IV saline
- iii. Patient with COPD:
- (a) Minor distress:
 - (i) Put patient in position of comfort, support with low flow oxygen
 - (ii) Proventil[®] (albuterol) breathing treatment: 2.5 mg of Proventil (albuterol) in 3 ml aerosol unit with oxygen flow at 8 lpm.
 - (b) Severe distress:
 - (i) Sit patient up, assist ventilations with high flow oxygen, consider continuous positive airway pressure (CPAP-see Special Procedures)
 - (ii) Proventil[®] (albuterol) breathing treatment: 2.5mg of Proventil[®] (albuterol) in 3 ml NS aerosol unit with oxygen flow at 8 lpm.
 - (iii) Start IV saline

RESPIRATORY DISTRESS (cont'd)

4. Rales present:

i. Pulmonary edema:

- (a) Look for and note cyanosis, hypotension, coughing, wheezing, labored breathing, diaphoreses, pitting edema, tachypnea, apprehension, and inability to talk
- (b) Patient has normal blood pressure or is hypertensive:
 - (i) Administer sublingual nitroglycerin 0.4 mg three times at five minute intervals (tablet or spray)

Maintain BP above 100 systolic
 - (ii) Consider morphine sulfate for analgesia as well as hemodynamic response. Morphine sulfate is of considerable usefulness in both AMI and acute pulmonary edema
 - (aa) Dosage: Small frequent titrated IV doses 5 mg every 5 minutes needed until desired effect is achieved
 - (bb) Do not use on COPD or volume depletion
 - (cc) Monitor vital signs, especially respirations and blood pressure, every 5 minutes
 - (iii). Transport patient

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Reassess breath sounds and treat as follows:
 - 1. Airway open, breath sounds absent
 - a. Endotracheal intubation per protocol.
 - b. Provide 100% O₂ by BVM or PPV
 - c. Treat cause and transport
 - 2. Airway obstructed:
 - a. Try to visualize obstruction with laryngoscope if basic procedures are unsuccessful
 - I. Remove foreign body using Magill Forceps if possible
 - b. If airway cannot be cleared, perform a cricothyrotomy
 - 3. Spontaneous breathing with breath sounds:
 - a. Clear breath sounds:
 - i. Treat cause - (MI, pulmonary embolism, metabolic disturbance, hyperventilation)
 - b. Wheezes present:

RESPIRATORY DISTRESS (cont'd)

- i. Severe systemic allergic reaction
 - (a) Start IV saline
 - (b) Give epinephrine 1:1,000 0.3 mg by intramuscular injection
 - (c) Consider seeking Medical Control
 - (d) If patient is hypotensive and IV has been established, epinephrine 1:10,000 0.5 mg IVP, SLOWLY
 - (e) If caused by sting or bite, apply constricting band between bite and heart, apply ice pack to slow swelling and spread of poison
 - (f) In patients with hypertension, CVA, CAD, pregnancy, consider glucagon 1 mg IM or IV instead of epinephrine.
 - (g) Benadryl® (diphenhydramine) administered 1 mg/kg (50 mg max) IM or IV.
- NOTE: This is especially indicated when drug reactions are suspected and systolic blood pressure is above 90.
- (h) Proventil® (albuterol) breathing treatment: 2.5 mg of Proventil® in 3 ml NS aerosol unit with oxygen flow at 8 liters per minute
- ii. Patient with asthma:
 - (a) Minor distress:
 - (i) Put patient in position of comfort, support with oxygen
 - (ii) Consider Proventil® (albuterol) breathing treatment: 2.5 mg of Proventil® (albuterol) in 3 ml NS aerosol unit with oxygen flow at 8 liters per minute
 - (b) Severe distress:
 - (i) Sit patient up, assist ventilations with high flow oxygen, consider continuous positive airway pressure (CPAP-See Special Procedures)
 - (ii) Proventil® (albuterol) breathing treatment: 2.5 mg of Proventil® in 3 ml NS aerosol unit with oxygen flow at 8 liters per minute
 - (iii) Contact Medical Control for possible administration of epinephrine or glucagon.
 - (c) Start IV saline
- iii. Patient with COPD:
 - (a) Minor distress:
 - (i) Put patient in position of comfort, support with low flow oxygen
 - (ii) Proventil® (albuterol) breathing treatment: 2.5 mg of Proventil® (albuterol) in 3 ml NS aerosol unit with oxygen flow at 8 l/min.

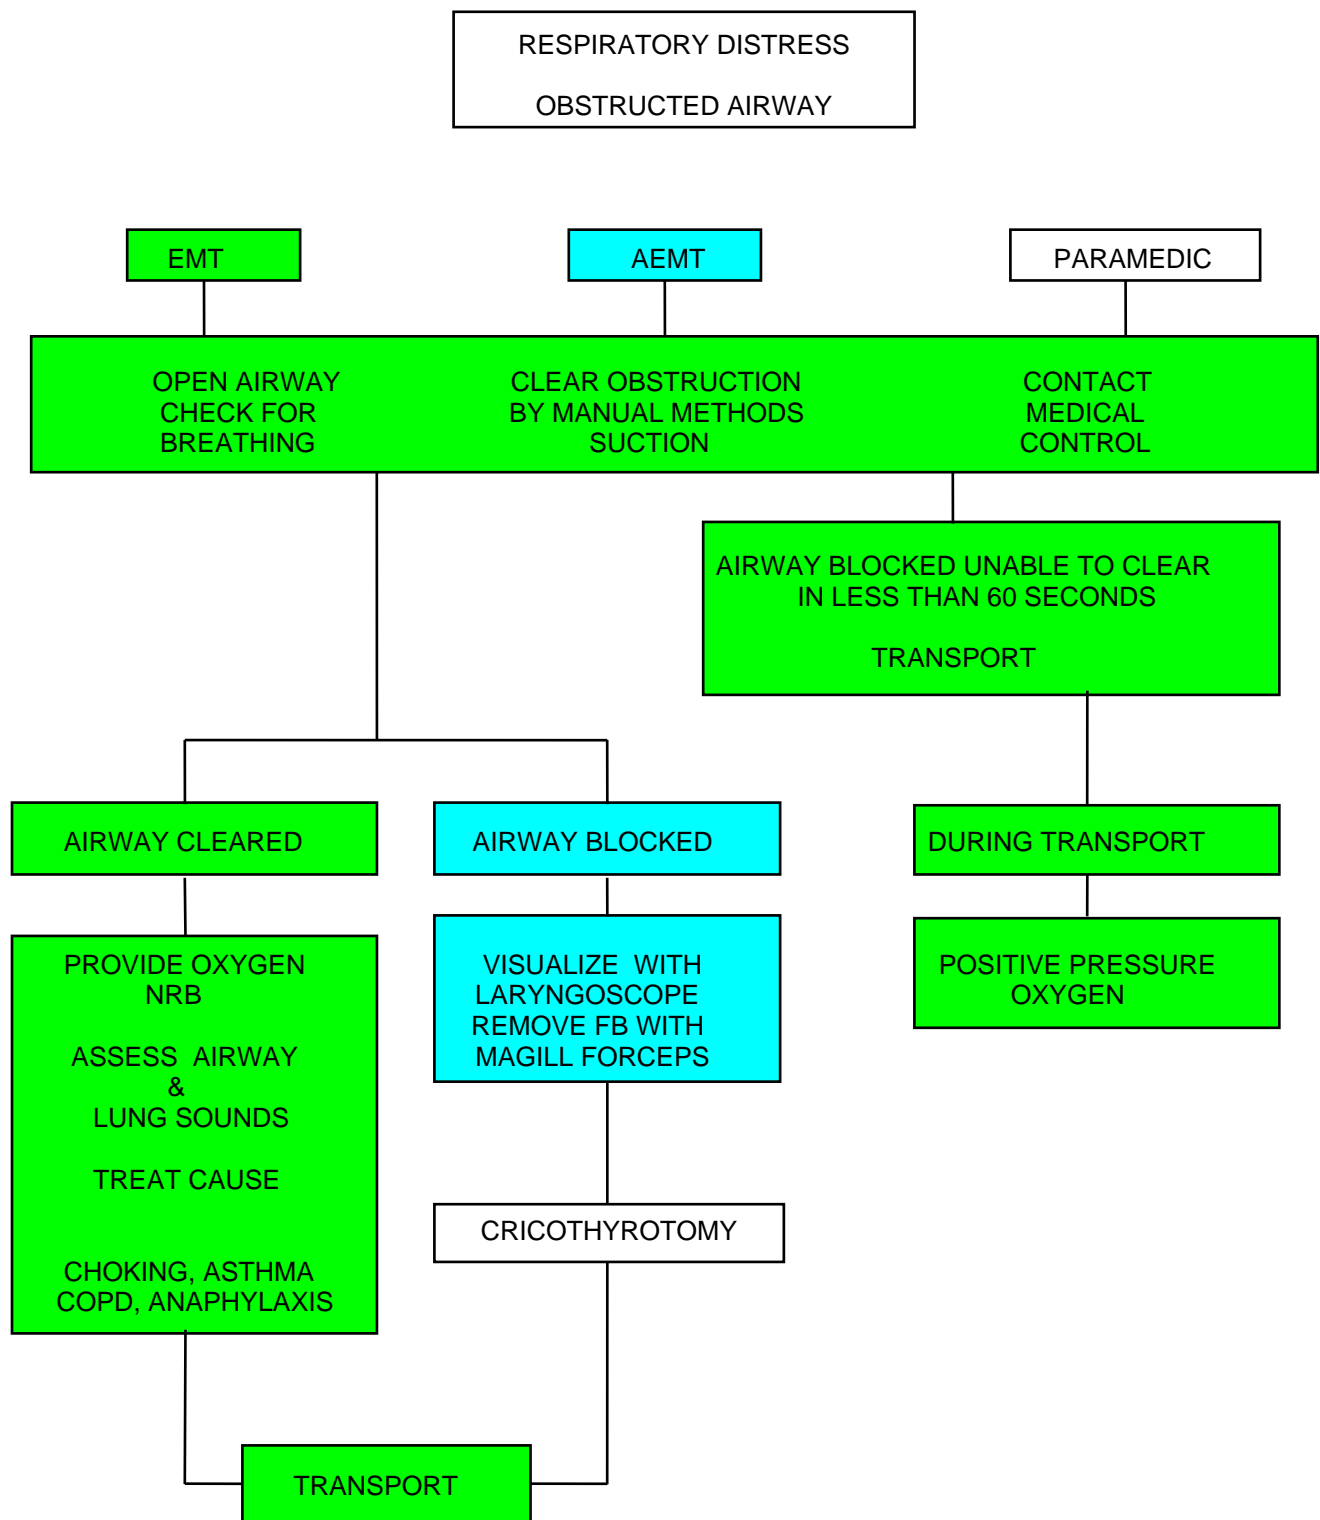

RESPIRATORY DISTRESS (cont'd)

- (b) Severe distress:
 - (i) Sit patient up, assist ventilations with HIGH flow oxygen, consider CPAP
 - (ii) Proventil® (albuterol) breathing treatment: 2.5 mg of Proventil® (albuterol) in 3ml NS aerosol unit with oxygen flow at 8 l/min.
 - (iii) Start IV saline
- c. Rales present:
 - i. Pulmonary edema:
 - (a) Look for and note cyanosis, hypotension, coughing, wheezing, labored breathing, diaphoreses, pitting edema, tachypnea, apprehension, and inability to talk
 - (b) Patient has normal blood pressure or is hypertensive:
 - (i) Administer sublingual nitroglycerin 0.4mg three times at five minute intervals (tablet or spray)

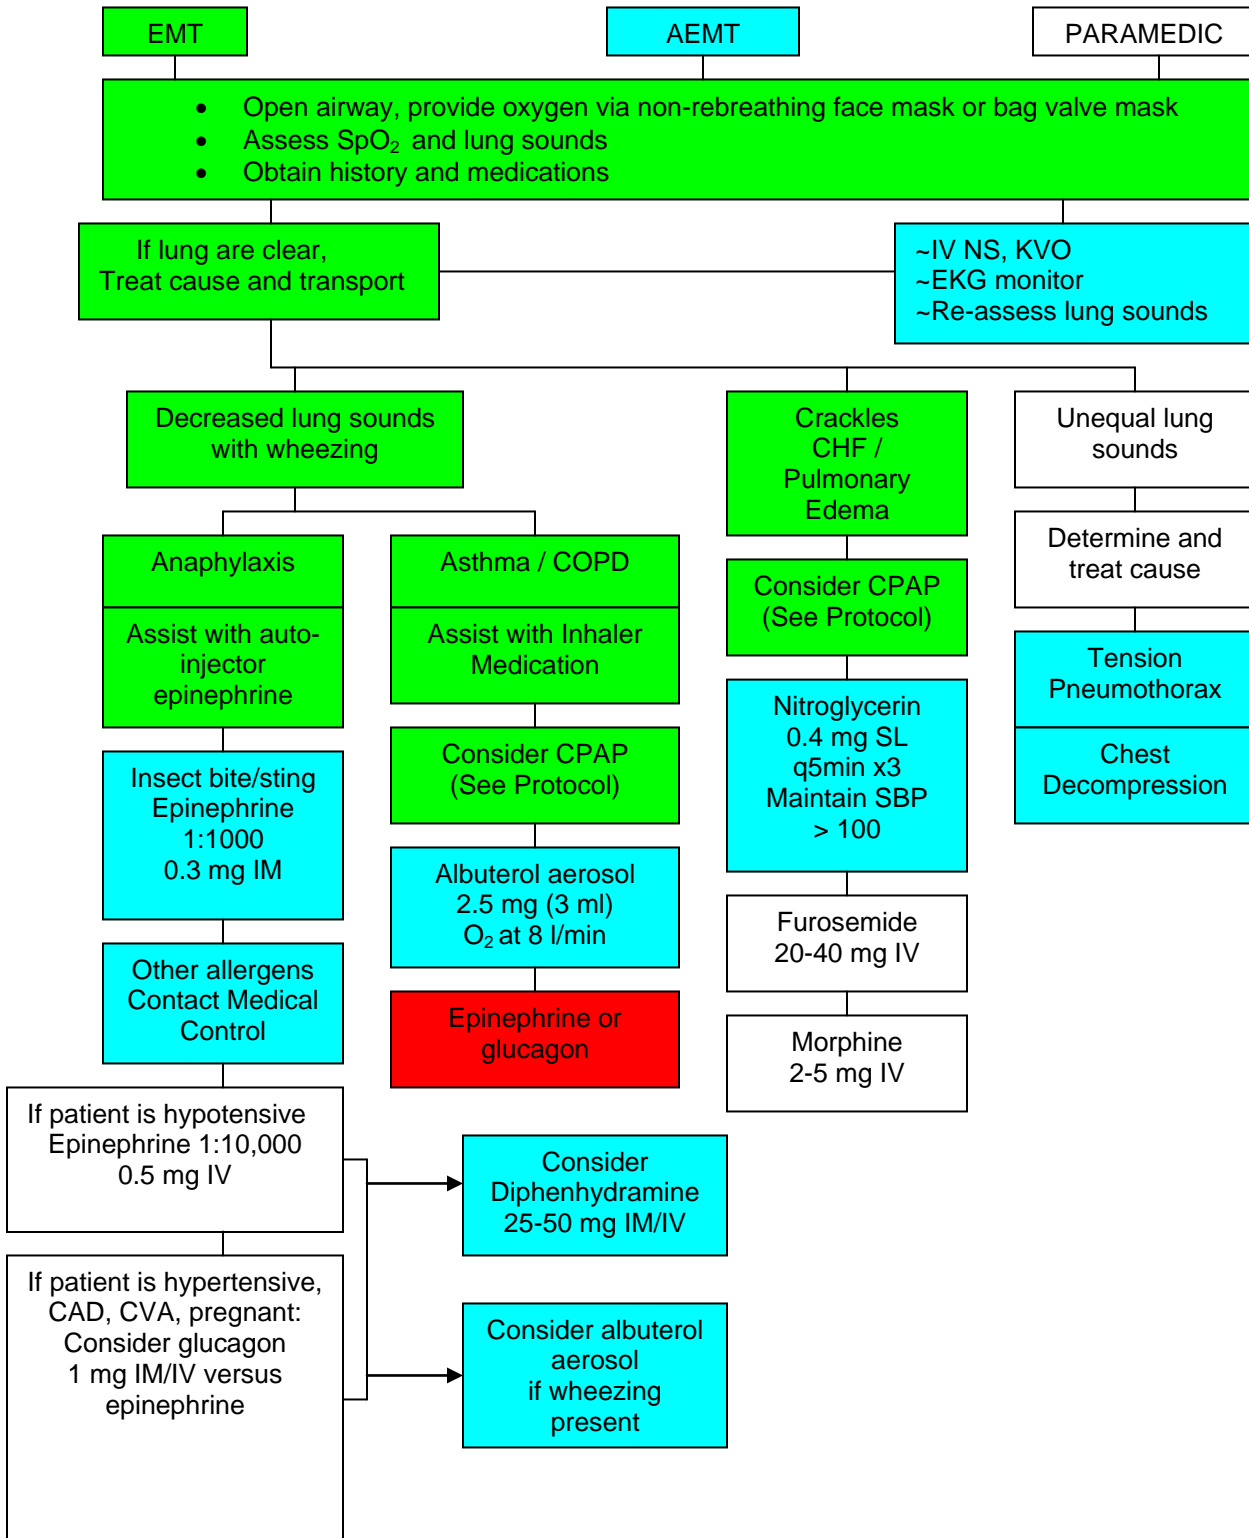

Maintain BP above 100 systolic
 - (ii) Establish IV and administer Lasix® 1 mg/kg IV over one to two minutes.
 - (iii) Transport patient.
 - (iv) Consider morphine sulfate for analgesia as well as hemodynamic response. Morphine sulfate is of considerable usefulness in both AMI and acute pulmonary edema
 - (aa) Dosage: Small frequent titrated IV doses 5 mg every 5 minutes needed until desired effect is achieved
 - (bb) Do not use on COPD or volume depletion
 - (ml) Monitor vital signs, especially respirations and blood pressure, every 5 minutes
 - d. Breath sound asymmetrical or absent:
 - i. Spontaneous Pneumothorax:
 - (a) Transport in position of comfort.
 - ii. Sucking chest wound:
 - (a) Seal open wound, 3 sides, monitor for tension situation
 - iii. Tension pneumothorax
 - (a) Pleural decompression
 - iv. Lower airway obstruction

RESPIRATORY DISTRESS (cont'd)

- (a) Place in position of comfort
- (b) 100% humidified O₂ by NRB

RESPIRATORY DISTRESS SPONTANEOUS BREATHING

SEIZURES

GENERAL CONSIDERATIONS

- A. The seizure has usually stopped by the time the EMS professionals arrive (postictal state)
- B. The basic rule with seizures is to "protect and support" the patient. If trauma, consider cervical immobilization.
- C. Aspiration precautions include:
 - 1. Coma position: a side lying position with the head lowered 15 to 30 degrees
 - 2. Suction readily available
 - 3. If possible, mouth cleared of foreign bodies (food, gum, dentures)

EMT

- A. Place patient away from objects on which they might injure themselves; protect but do not restrain them
- B. Clear and maintain airway, consider cervical spine injury
- C. Administer 100% oxygen with NRB mask
- D. Obtain history from bystanders:
 - 1. Seizure history
 - 2. Description of onset of seizure
 - 3. Medications
 - 4. Other known medical history (especially head trauma, diabetes, drugs, alcohol, stroke, heart disease)
- E. Evaluate:
 - 1. Evidence of head trauma
 - 2. Substance abuse
- F. Bring medication with patient if available
- G. Establish communications with medical control and advise of patient condition. Transport immediately, unless an Advanced Life Support unit is enroute and has an ETA of less than 5 minutes.

AEMT

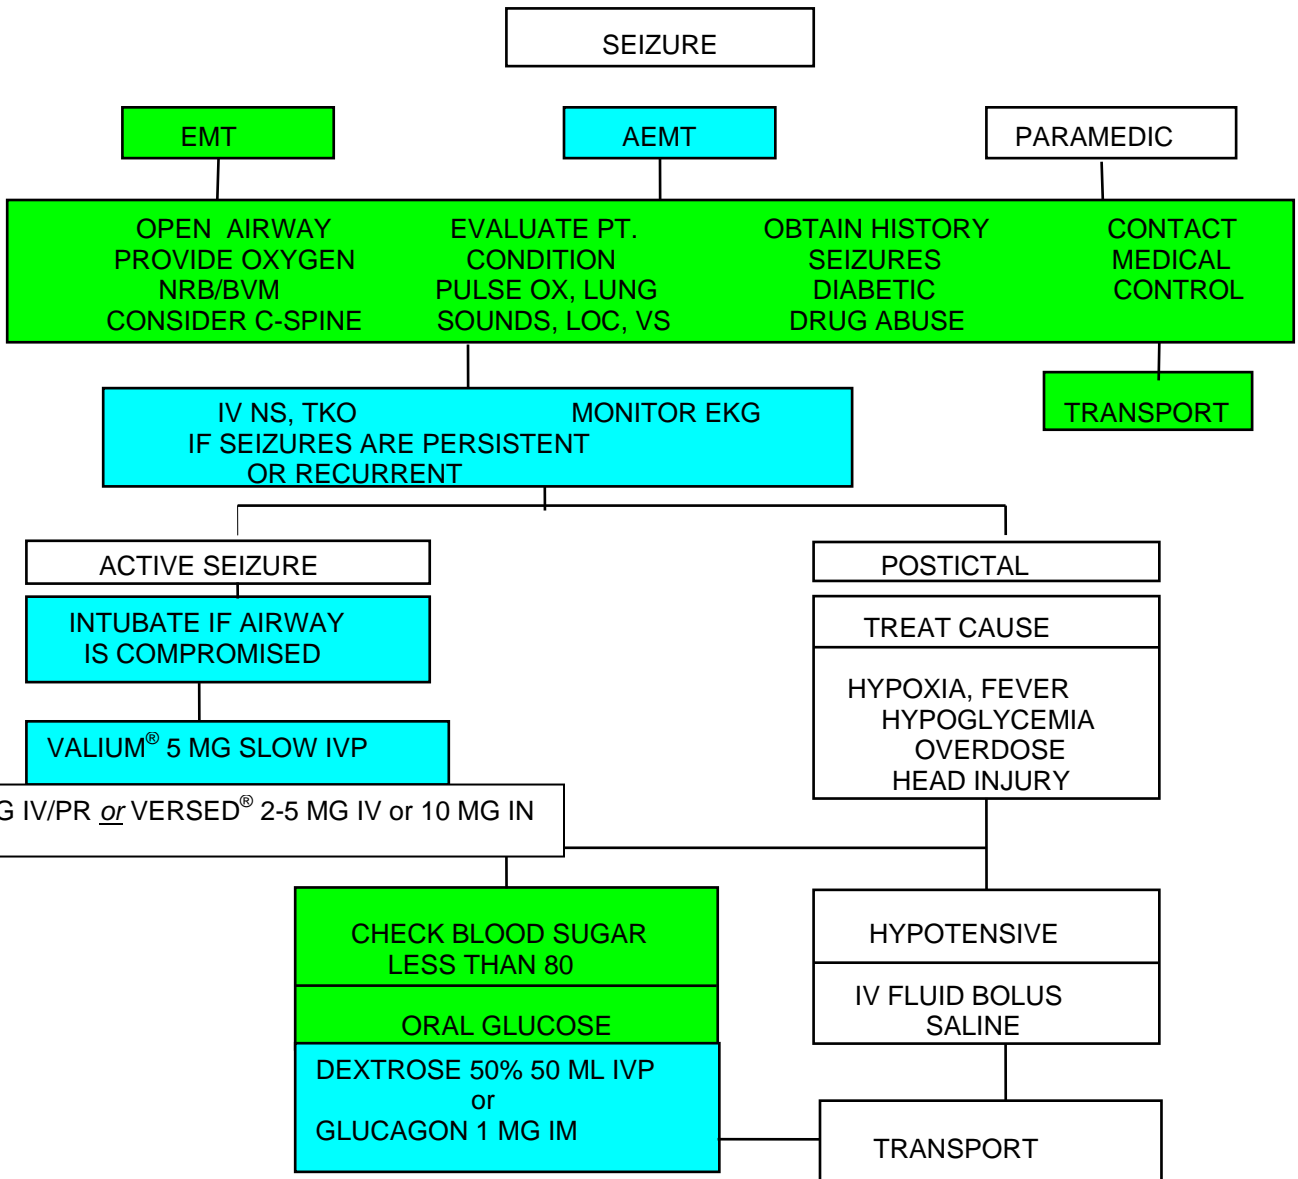

- A. Assist EMS professionals, obtain patient condition and circumstance
- B. Apply monitor and check rhythm
- C. Establish IV access with NS TKO while enroute to hospital if seizures are persistent or recurrent.
DO NOT DELAY TRANSPORT

SEIZURES (cont'd)

- D. Determine blood sugar level
 - 1. Blood sugar < 80, administer 50 ml of 50% dextrose IV push immediately or 1 mg glucagon IM.
- E. In repeated seizure activity administer Valium® (diazepam) IV
 - 1. Initial bolus of 5 mg and titrate to patient's condition up to a 10 mg maximum
- F. After Valium® monitor airway; be prepared to intubate and assist ventilation with BVM or PPV

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Make sure patient has good airway, if status epilepticus, nasotracheal intubation may be necessary
- C. Establish IV access with NS TKO if seizures are persistent or recurrent.
- D. Determine blood sugar level
 - 1. Blood sugar < 80, administer 50 ml of 50% dextrose IV push immediately or 1 mg glucagon IM.
- E. In repeated seizure activity administer Valium® (diazepam) IV/PR or consider Versed® (midazolam) IV/IM
 - 1. Initial dose of Valium® 5 mg IVP and titrate to patient's condition up to a 10 mg maximum
 - 2. Initial dose of Versed® 2-5 mg IVP with repeated doses every 2 minutes as needed or Versed® 10 mg intranasal
- F. After Versed® or Valium® monitor airway; be prepared to intubate and assist ventilation with BVM or PPV
In status epilepticus, nasotracheal intubation may be necessary

SHOCK

GENERAL CONSIDERATIONS

- A. Shock is the failure of the body to circulate blood and oxygen properly and perfuse body tissue
- B. Shock can be due to:
 - 1. Hypovolemic - fluid loss
 - 2. Cardiogenic - pump failure
 - 3. Neurogenic - vasodilation
 - 4. Anaphylactic - allergic reaction
 - 5. Septic - infection, vasodilatation
 - 6. Respiratory - lack of oxygen
- C. Priorities of care in shock situations are:
 - 1. Provide an adequate airway and oxygenation
 - 2. Recognize the type of shock present and its treatment
 - 3. Replace body fluids

EMT

- A. Establish airway; administer 100% oxygen by NRB mask. Assist ventilation as required with oral or nasal airway and BVM. Obtain pulse ox reading and treat accordingly.
- B. Obtain relevant medical history: CAUSE
- C. Place patient in proper shock position:
 - 1. Hypotension - lying flat with feet elevated
 - 2. Respiratory difficulty - head elevated
- D. Maintain body temperature:
 - 1. Patient cold - Warm them up
 - 2. Patient hot - Cool them down
- E. Treat the cause
- F. Evaluate the patient's:
 - 1. Respiratory status
 - 2. Circulatory status - pulse, B/P
 - 3. Level of consciousness
 - 4. Evidence of trauma to abdomen, chest, head
- G. Establish communications with medical control and advise of patient condition. Transport immediately, unless an advanced life support unit is enroute and has an ETA of less than 5 minutes.

SHOCK (cont'd)

AEMT

- A. Assist EMS professionals; obtain patient condition and circumstance
- B. Hypovolemic, Neurogenic, or Septic Shock:
 - 1. During transport to the hospital, start IV saline. DO NOT DELAY TRANSPORT
- C. Anaphylaxis from any cause (insect bite or sting, food, medication, unknown agent):
 - 1. Breathing difficulty with low blood pressure:
 - a. Start IV of normal saline and initiate a bolus until the hypotension resolves
 - b. Give epinephrine 1:1,000 0.3 mg intramuscularly
 - 3. Hives, itching, and/or swelling with a normal blood pressure: Contact Medical Control for as soon as possible.
- D. Apply monitor and check rhythm

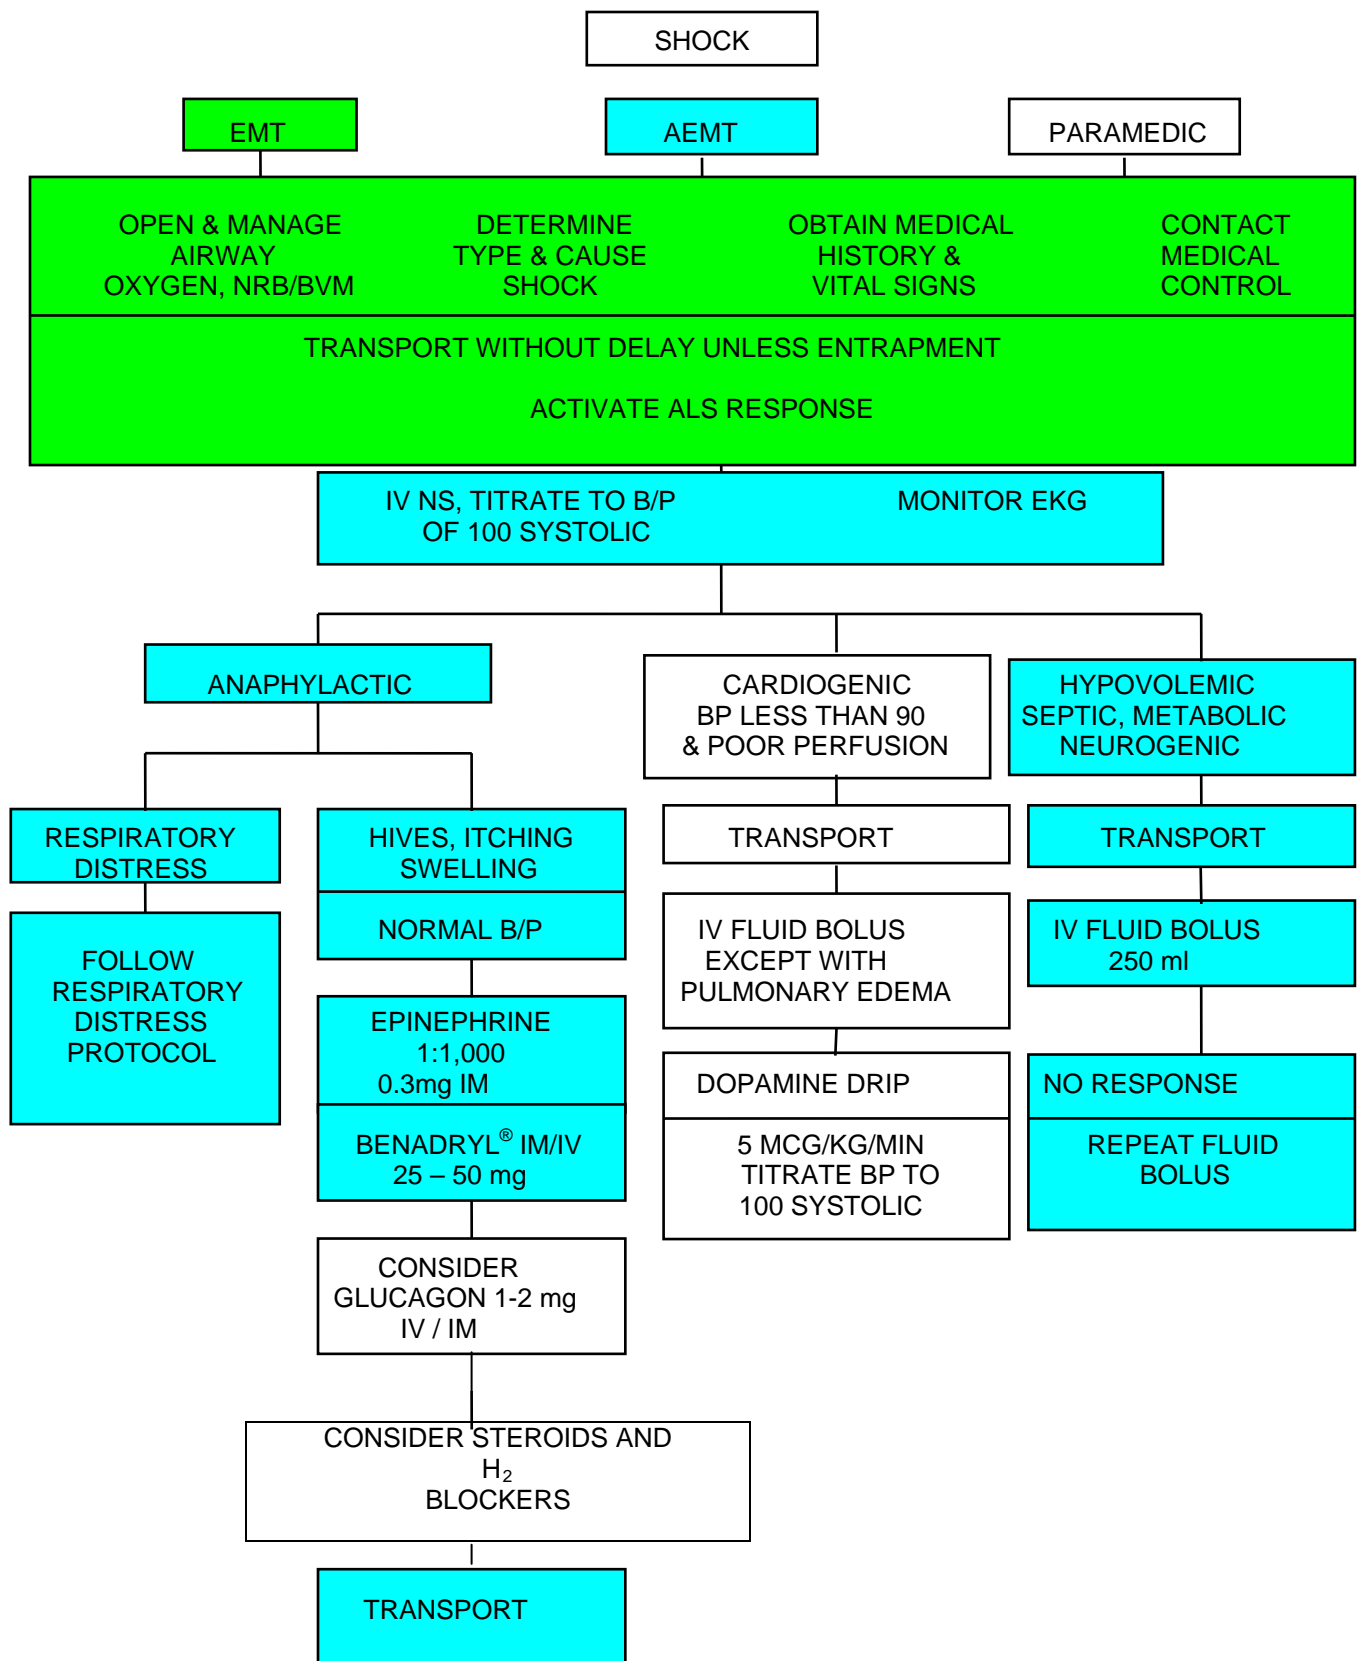

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Apply monitor and follow protocol for arrhythmias
- C. Identify type of shock and treat as follows:
 - 1. Hypovolemic, Neurogenic, Septic:
 - a. Start IV of normal saline. Infuse until systolic blood pressure is above 100.
 - b. If transport will be prolonged, or if entrapment exists, contact Medical Control
 - c. If hypovolemic shock persists despite above measures start second saline IV
 - 2. Cardiogenic:
 - a. Treat cause by following the appropriate arrhythmia, chest pain, or cardiac arrest protocols.
 - b. If patient has BP of less than 70-90 mm Hg systolic with poor perfusion:
 - i. Establish second IV in large peripheral vessel for dopamine administration:
 - (a) Dopamine 400 mg in 500 ml D5W or NS
 - (b) Start infusion at 5 mcg/kg/min and titrate the infusion until adequate heart rate, blood pressure, and level of consciousness are achieved.

NOTE: If IV infiltrates, report to the ED physician as soon as possible

SHOCK (cont'd)

- ii. Establish second IV normal saline TKO in large peripheral vein if time permits
- 3. Anaphylactic:
 - a. Respiratory distress, follow Respiratory Distress Protocol
 - b. Hives, itching, and/or swelling normal B/P: Contact Medical Control for possible administration of epinephrine and/or Benadryl®
 - c. If patient is on beta blocking medication, hypertensive, has known coronary artery disease and/or is pregnant, consider administering glucagon 1-2 mg IV or IM.

ACUTE STROKE

GENERAL CONSIDERATIONS

- A. Patients who experience transient ischemic attack (TIA) develop most of the same signs and symptoms as those who are experiencing a stroke. The signs and symptoms of TIA s can last from minutes up to one day. Thus the patient may initially present with typical signs and symptoms of a stroke, but those findings may progressively resolve. The patient needs to be transported, without delay, to the most appropriate hospital for further evaluation.
- B. Some patients who have had a stroke may be unable to communicate but can understand what is being said around them.
- C. Place the patient's affected or paralyzed extremity in a secure and safe position during patient movement and transport.
- D. Hypertension in stroke patients routinely should not be treated in the prehospital setting.

Any treatment of hypertension should be completed with on-line medical direction.

Nitroglycerin should not be used unless signs and symptoms consistent with AMI are present.
- E. New therapies for stroke are now available. However, successful use is only possible during a short time window after the start of symptoms. Early notification of the receiving hospital and minimizing scene time are important parts of a strategy to treat patients quickly.
- F. Time of onset of signs and symptoms must always be obtained, documented and relayed to the receiving facility.

Time of symptom onset needs to be accurately determined for consideration of thrombolytic therapy.

In patients whose symptoms were present upon awakening, their symptom onset is estimated from the last time that the patient's neurological status was known to be normal, or the time just prior to going to sleep.
- G. A simple method of physical exam for the stroke patient is:
 - 1. ask the patient to say " the sky is blue in Ohio",
 - 2. ask the patient to smile or show their teeth,
 - 3. ask the patient to hold their arms straight up in front with palms up, have the patient close their eyes and watch arm drift. (palms turns down)
 - a. if only one palm turns down the test is positive
 - b. if both arms drift down, the result are unclear
- H. Assessment should also include Glasgow Coma Score. Patients with scores of 8 or less have poor prognosis and need ALS as soon as possible.
- I. Patients for whom the onset of stroke symptoms can be confirmed within three hours or less of initiation of the emergency response system should be transported directly to a primary stroke center if possible or as a second option, to a hospital with a functioning CT scanner and emergent radiology services available.

ACUTE STROKE (cont'd)

EMT

- A. Open and manage the airway and provide oxygen by nasal cannula 4 l/min and increase as needed with respiratory distress.

Apply pulse oximeter and treat per procedure. Maintain 95% SpO₂.

Be prepared to hyperventilate and/or assist ventilations with oral or nasal airway and BVM or PPV

- B. Evaluate patient's general appearance, relevant history of condition and determine:

Onset
Provokes
Quality
Radiates
Severity
Time
Interventions

Allergies
Medication (i.e. Blood thinners; Coumadin[®], warfarin, heparin)
Past Medical History - especially, diabetic, seizures, stroke, TIA, head injury, drug abuse, hypertension, arrhythmias.
Last Meal
Events leading to present illness

- C. Determine blood sugar level.

1. For a blood sugar < 80, administer 1 tube of oral glucose. May be repeated in 10 minutes if blood sugar remains below 80.

PATIENT MUST HAVE A GAG REFLEX.

2. Blood sugar ≥ 80, begin IMMEDIATE TRANSPORT.

- D. If unable to check blood sugar, with signs of stroke, establish communications with Medical Control and advise of patient condition.

Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.

AEMT

- A. Assist EMS professionals, obtain patient condition and circumstance

- B. Apply monitor and check rhythm

- C. Start saline lock or IV saline TKO, while enroute to hospital
DO NOT DELAY TRANSPORT

- D. Determine blood sugar level.

1. If blood sugar less < 80, administer IV bolus, 50 ml of 50% dextrose or glucagon 1 mg IM/IV may be repeated in 10 minutes if blood sugar remains below 80.

DO NOT DELAY TRANSPORT

ACUTE STROKE (cont'd)

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. If patient does not have a secure, protected airway, intubate per Intubation Procedure
- C. Apply monitor and check rhythm
- D. Establish saline lock or IV saline TKO.
- E. Determine blood sugar level.
 - 1. If blood sugar < 80, administer IV bolus, 50 ml of 50% dextrose or glucagon 1mg IM/IV may be repeated in 10 minutes if blood sugar remains below 80.
- H. Re-evaluate patient condition, contact medical control, and transport to hospital

TRAUMA EMERGENCIES

GENERAL CONSIDERATIONS

- A. Assure scene is safe, determine mechanism of injury determine number of patients and request additional help if needed.
 - B. Rapid assessment and recognition of major trauma/multiple system trauma is essential to the subsequent treatment
 - C. Once the patient is determined to be an actual or potential major trauma/multiple system patient, personnel on scene and/or medical control must quickly determine the appropriate course of action including:
 - 1. Requesting aeromedical evacuation from scene (See Aeromedical Evacuation Procedure)
 - 2. Ground transportation directly to an appropriate facility. (When requesting bypass of nearest facility, this action must be approved by Medical Control)
 - D. In cases where the victim must be transported by ground units, because of transport times every effort should be made to limit on-scene time to 10 minutes or less
- THIS CANNOT BE STRESSED ENOUGH!!!**
- E. If patient is entrapped or inaccessible, contact Medical Control and advise of condition and circumstances
 - F. If time permits, each patient should be evaluated by the Glasgow Coma Scale and the score relayed to Medical Control

EMT

- A. Trauma Assessment
 - 1. Initial assessment - establish life threats, chief complaints, assess airway and initiate appropriate therapies, assess circulation and control major bleeding, establish a general impression of patient condition and prioritize patient for transport
 - 2. Urgent patient
 - a. Rapid trauma assessment - quick head to toe survey utilizing DECAP BTLS. Obtain baseline vital signs and SAMPLE history.
 - b. TRANSPORT IMMEDIATELY
 - c. Detailed physical exam and ongoing assessment - during transport, evaluate patient head to toe and assess effectiveness of treatments to this point.
 - 3. Non-urgent patient - single or non-life threatening injury
 - a. Focused physical exam of injured area and management of the situation.
 - b. Detailed physical exam and ongoing assessment - evaluate patient head to toe and assess effectiveness of treatments to this point.

TRAUMA EMERGENCIES (cont'd)

- c. Transport patient

B. Urgent trauma treatment

1. Establish airway, breathing and circulation; maintain cervical spine immobilization
2. Administer 100% oxygen and apply Oximeter
3. Control hemorrhage
4. TRANSPORT immediately unless ALS arrival on-scene is less than 5 minutes.
5. During transportation
 - a. Splint individual fracture
 - b. Evaluate the patient's:
 - i. Pulses distal to the fracture site
 - ii. Distal skin color, temperature, neurological status
 - c. Obtain relevant history:
 - i. Where, When, How
 - ii. Mechanism of injury
6. Establish communications with Medical Control and advise of patient condition and need for Trauma Team.

C. Non-urgent trauma treatment

1. Establish airway, breathing and circulation; maintain cervical spine immobilization
2. Administer 100% oxygen and apply pulse oximeter
3. Control hemorrhage
4. Splint all fracture(s) (IN NON-LIFE THREATENING SITUATION ONLY)
 - a. Evaluate patient's:
 - i. Pulses distal to the fracture site
 - ii. Distal skin color, temperature, neurological status
5. Obtain relevant history:
 - a. Where, When, How
 - b. Mechanism of injury

- H. Establish communications with Medical Control and advise of patient condition.

AEMT

- A. Assist EMS professionals; obtain patient condition and circumstance

TRAUMA EMERGENCIES (cont'd)

- B. Secure the airway and administer 100% oxygen. If the patient is apneic, intubate with cervical spine control
- C. Start IV saline to maintain perfusion and systolic BP \geq 90.
ESTABLISHING AN IV MUST NOT DELAY TRANSPORTATION
- D. Apply cardiac monitor and check rhythm
- E. If the patient is conscious and alert and complaining of severe pain, administer morphine sulfate as follows:
 - 1. Small frequent doses of 5 mg every 5 minutes and titrate to patient condition
 - 2. DO NOT USE ON HEAD TRAUMA, CHEST INJURY, RESPIRATORY DISTRESS DUE TO TRAUMA, OR ON ANY PATIENT WITH VOLUME DEPLETION OF ANY CAUSE.
 - 3. Consider morphine or other analgesic per local protocols

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Treat for shock per Shock Protocol
- C. If the patient is conscious and alert and complaining of severe pain, administer morphine sulfate as follows:
 - 1. Small frequent doses of 5 mg every 5 minutes and titrate to patient condition
 - 4. DO NOT USE ON HEAD TRAUMA, CHEST INJURY, RESPIRATORY DISTRESS DUE TO TRAUMA, OR ON ANY PATIENT WITH VOLUME DEPLETION OF ANY CAUSE.
 - 5. Consider morphine or other analgesic per local protocols

SPECIFIC INJURIES

- A. Chest Wounds:
 - 1. For sucking chest wounds or an open pneumothorax, always cover the wound with a non-porous dressing and seal 3 sides.
 - 2. Stabilize flail chest with trauma dressing
- B. Evisceration:
 - 1. Cover organs with sterile dressing moistened with saline
 - 2. Lay the patient flat and elevate the knees
- C. Complete Amputations:
 - 1. Control bleeding by the most appropriate method; remember tourniquet is a last resort

TRAUMA EMERGENCIES (cont'd)

2. Always take time to find the avulsed part, but do not delay patient transport, and transport it to the hospital as follows:

- a. Put part in a cool, dry sterile dressing

D. Pneumothorax / Hemothorax / Tension Pneumothorax:

1. Transport patient in position of comfort and watch for signs of a tension pneumothorax

2. Symptoms of tension pneumothorax:

- a. Chest pain or evidence of trauma
 - b. Tachypnea
 - c. Tachycardia
 - d. JVD
 - e. May initially exhibit hypertension progressing to hypotension
 - f. Hyperresonance on affected side
 - g. Diminished or absent breath sounds of affected side
 - h. Audible wheeze
 - a. Tracheal deviation away from affected side (latent sign)

NOTE: Significant tension pneumothorax may present exhibiting any or all of the above symptoms

3. Pleural decompression per procedure

E. Head Injury:

1. Evaluate patient condition:

- a. Level of Consciousness
 - b. Pupillary size and reaction
 - c. Glasgow Coma Scale results

2. Transport with head elevated 8 to 10 inches by tilting backboard, and C-spine immobilized

3. Maintain airway, support with 100% oxygen by NRB mask and/or BVM

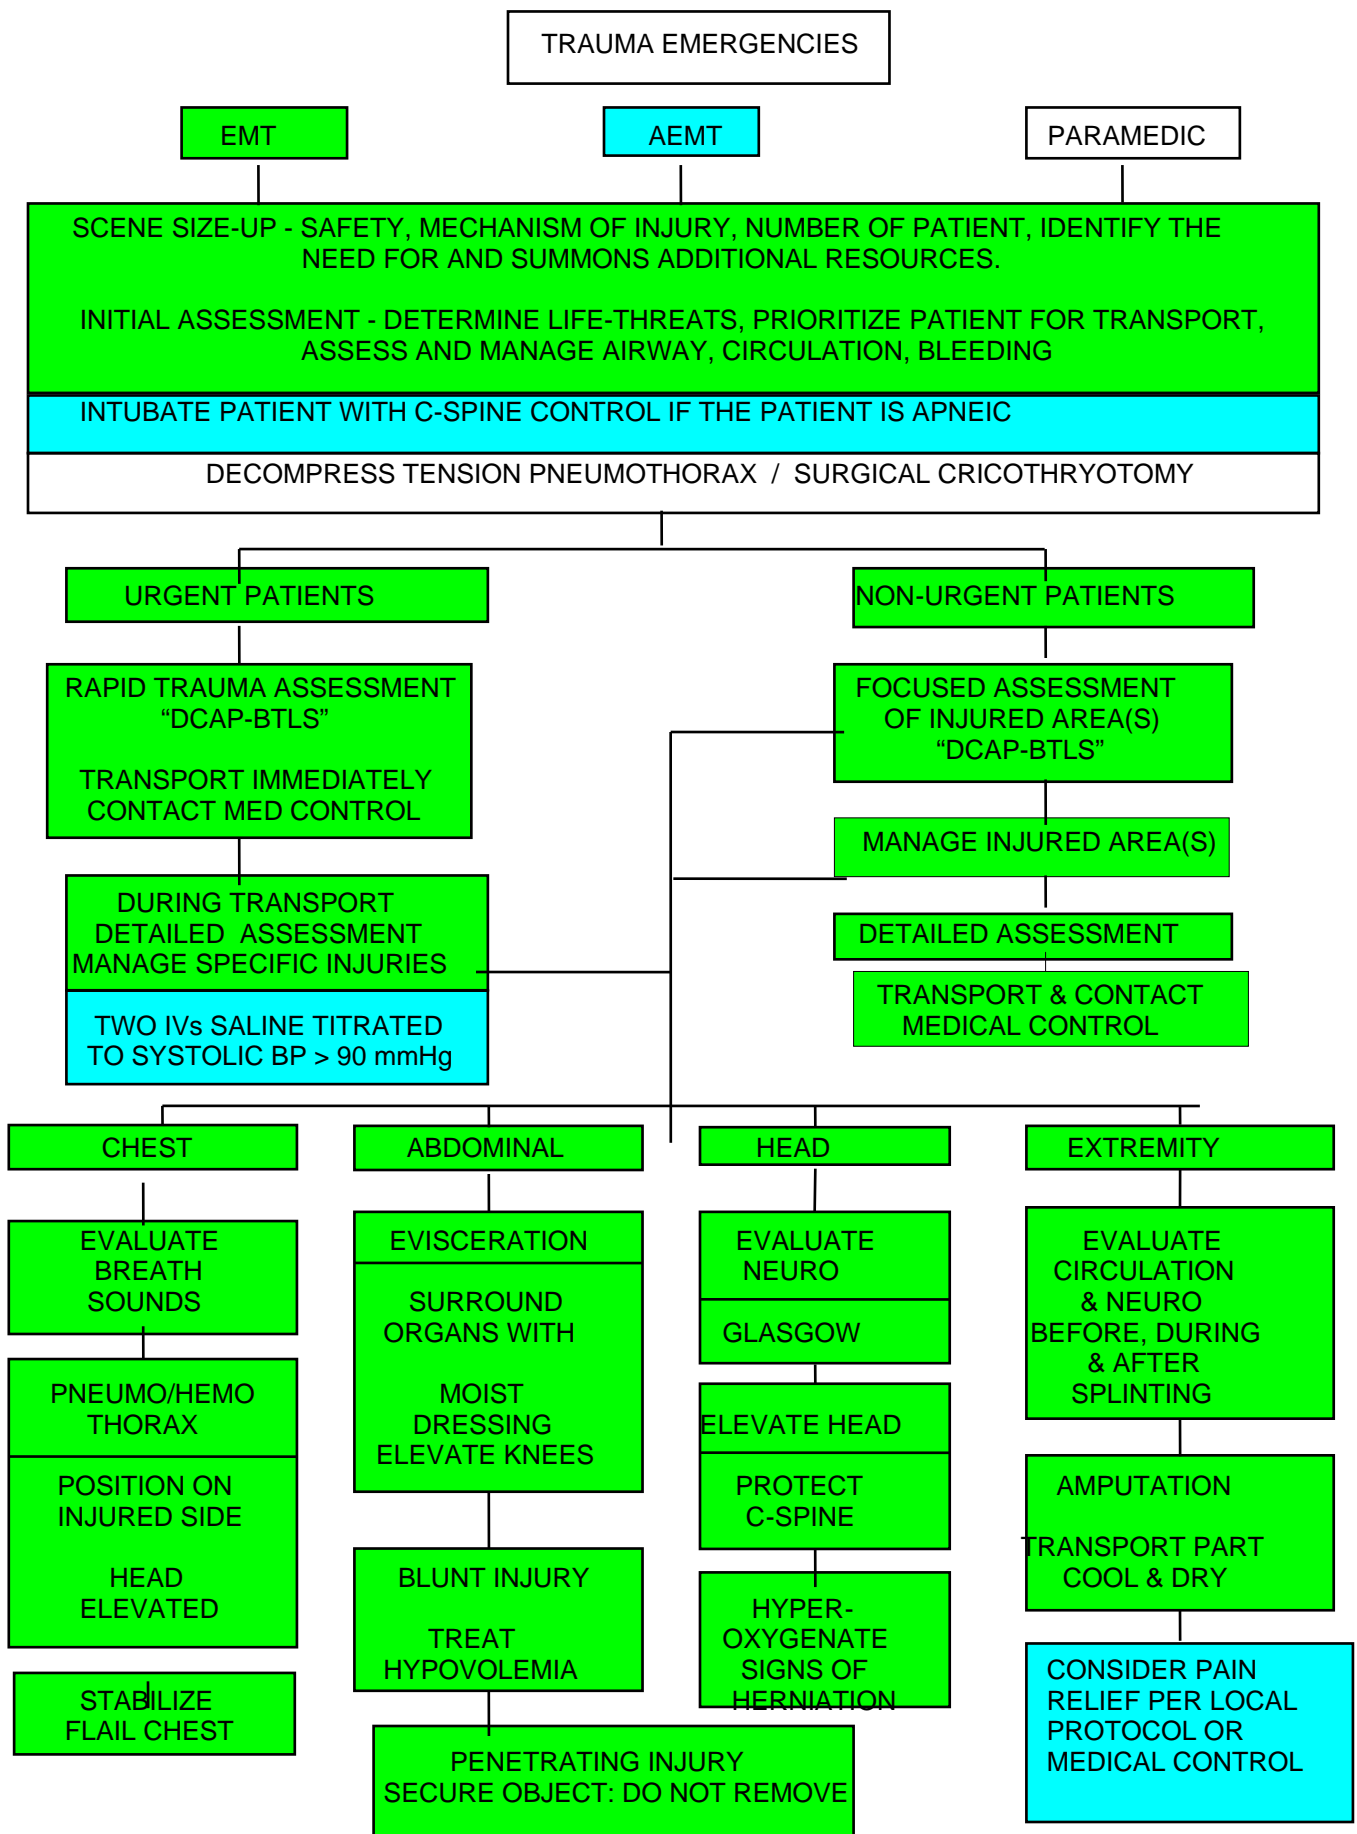

- a. Orotracheal, nasotracheal, or digital intubation may be indicated if the patient is apneic and should be accomplished gently maintaining in-line cervical spine immobilization
 - b. Do not hesitate to take control of airway
 - c. Hyperoxygenate when there are signs of cerebral herniation:
 - i. Blown pupils, bradycardia, posturing

F. Spinal Injuries:

1. Immobilize spine - See Cervical Immobilization Assessment Protocol

TRAUMA EMERGENCIES (cont'd)

2. Cervical Immobilization Assessment
 - a. Cervical immobilization should be used if the following criteria are met.
 - i. The patient complains of neck pain
 - ii. The patient has pain on palpation of the neck
 - iii. The patient complains of neurologic deficits or is found upon physical exam to have neurologic deficits. (subjective: numbness, tingling, weakness) (objective: loss or diminished sensation or motor weakness)
 - iv. The patient with altered LOC and impaired competence whether from drugs, alcohol or head injury and suggestive mechanism of injury for neck injury (refer to Refusal of Service for impaired competence criteria)
 - v. The patient with suggestive mechanism of injury for neck injury and the patient has other major distracting injuries.
 - vi. The patient has neck pain with any head motion
 - b. All patients that meet the above criteria should have full cervical immobilization.
3. If patient is wearing a helmet, see Helmet Removal Protocol in the Special Procedures Section
4. Always contact medical control and relay information regarding patient to the hospital. Spinal cord injury patients may need to be delivered to another facility if the hospital initially contacted cannot handle this injury.
5. If patient is alert and complaining of severe pain consider pain relief per local protocol.

TRAUMA ARREST

GENERAL INFORMATION

- A. Resuscitation should not be attempted in cardiac arrest patients with hemicorporectomy, decapitation, or total body burns, nor in patients with obvious, severe blunt trauma who are without vital signs, pupillary response, or an organized or shockable cardiac rhythm at the scene. Patients in cardiac arrest with deep penetrating cranial injuries and patients with penetrating cranial or truncal wounds associated with asystole and a transport time of more than 15 minutes to a definitive care facility are unlikely to benefit from resuscitative efforts.

Trauma victims who are initially found by EMS professionals in cardiac arrest or found at the scene without vital signs may be considered dead and follow the DOA policy.

- B. Extensive, time-consuming care of trauma victims in the field is usually not warranted. Unless the patient is trapped, they should be enroute to a medical facility within 10 minute after arrival of the ambulance on the scene

EMT

- A. Ventilate with 100% oxygen by two-person bag valve mask or oxygen powered, manually triggered or automatic transport ventilation device with an oral or nasal airway

Ventilation should be delivered over two seconds and cricoid pressure should be considered to help reduce gastric distention

Always consider cervical spine injury

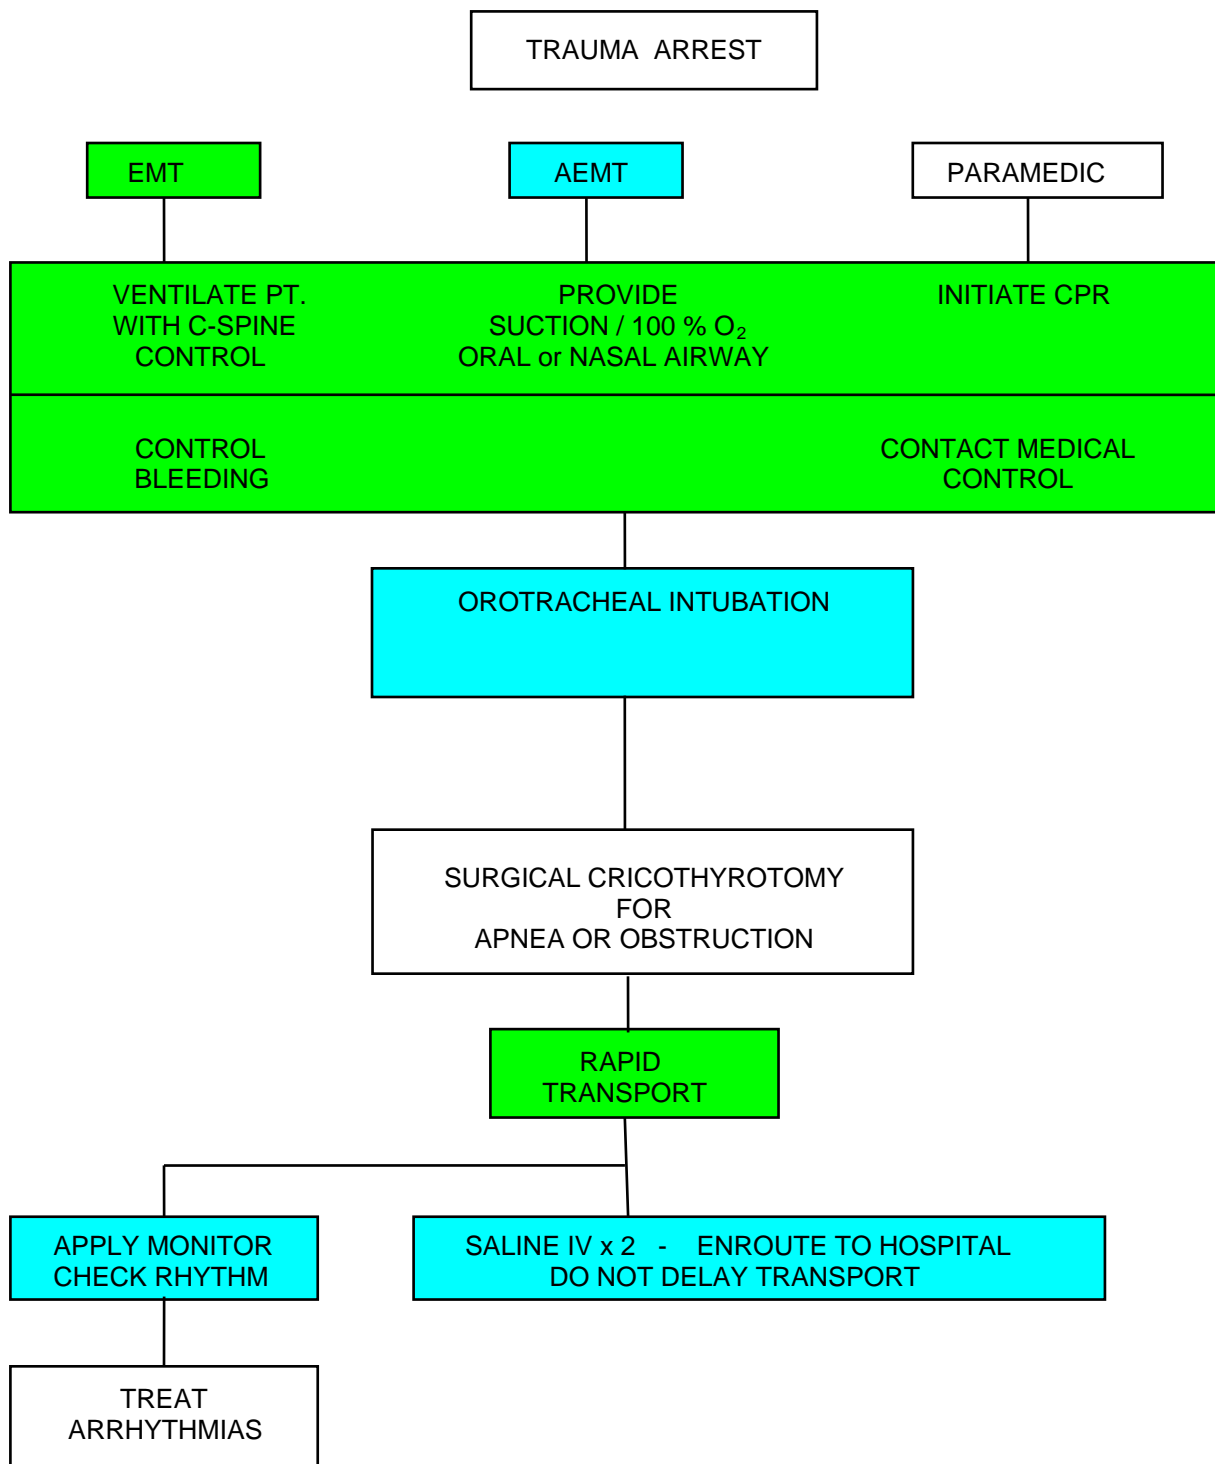

- B. Basic CPR with consideration of cervical spine
- C. Immobilize cervical spine and TRANSPORT IMMEDIATELY

AEMT

- A. Assist EMS professionals, obtain patient condition and circumstance
- B. Start two IVs of normal saline and transport to the hospital
- C. Check pulse, intubate patient, contact medical control and advise of patient condition, while continuing CPR

PARAMEDIC

- A. Assume charge and confer with EMS professionals as to patient condition and circumstances
- B. Intubate patient:
 - 1. Patients should be intubated orotracheally without movement of the cervical spine
 - 2. If orotracheal intubation is not possible, or an obstruction is present, then a cricothyrotomy may be necessary per local protocol.
- C. Assess cause of patient's condition and treat according to appropriate guidelines.

AEROMEDICAL TRANSPORT

- 1) Rotor wing air medical services may be requested directly to the scene by:
 - a) an on-scene EMS organization
 - b) hospitals and healthcare facilities
- 2) A request for rotor wing air medical service response may be initiated when one or more of the following conditions exists:
 - a) The patient's airway, breathing, or hemorrhage/circulation can not be controlled by conventional means and the estimated arrival time of the air medical service is less than the time required for ground transport to the nearest hospital.

OR

- b) Air transport to a medical facility/the most appropriate trauma center will occur in a shorter time than ground transport to a medical facility/them most appropriate trauma center.
 - a. Time estimation should be made from the time the patient is ready for transport to arrival at the medical facility/the most appropriate trauma center. This should include aircraft response to the scene.

Destinations

- a) An appropriate medical facility/the most appropriate trauma center based upon, but not limited to the following factors:
 - i) Time to definitive care
 - ii) Capabilities of receiving hospitals
 - iii) Patient wishes and family continuity
 - iv) Maximizing utilization of resources

COMMUNICATIONS

A member of the prehospital care team must contact medical control at the earliest time conducive to good patient care. This may be a brief early notification or “heads up”. It may mean that the hospital is contacted from the scene if assistance is needed in the patient's immediate care or permission is required for part of the patient care deemed necessary by the EMS professional in charge.

When possible, the member of the team most knowledgeable about the patient should be the one calling in the report.

Although all EMS professionals have been trained to give a full, complete report, this is often not necessary and may interfere with the physician's duties in the emergency department. Reports should be as complete but concise as possible to allow the physician to understand the patient's condition. It is not an insult for the physician to ask questions after the report is given. This is often more efficient than giving a thorough report consisting mostly of irrelevant information.

If multiple victims are present on the scene, it is advisable to contact medical control with a preliminary report. This should be an overview of the scene, including the number of victims, seriousness of the injuries, estimated on-scene and transport times to the control hospital or possible other nearby facilities. This allows preparation for receiving the victims and facilitates good patient care.

When contacting the receiving facility or medical direction, the patient report it should begin with the identification of the squad calling, and the highest level of care which is able to be provided to the patient (i.e., EMT, AEMT, or Paramedic), and the nature of the call (the physician or nurse to whom you need to speak directly).

CODE THREE PATIENTS – MOST SERIOUSLY ILL

This category is for the most seriously ill or injured patients.

1. Type of Squad: EMT, AEMT, Paramedic
2. Age and Sex of Patient:
3. Type of Situation: Injury and/or Illness
4. Specific Complaint: Short and to the point (i.e., chest pain, skull fracture)
5. Mechanism: MVA / MCA / Fall
6. Vital Signs: BP / Pulse / Resp. / LOC / EKG
7. Patient Care: Airway Management, Circulatory Support, Drug Therapy
8. General Impression: Stable / Unstable
9. ETA to Medical Facility

CODE TWO PATIENTS –SIGNIFICANTLY ILL

This category is for individuals who have significant signs or symptoms of illness or injury, and at this time are stable.

1. Type of Squad: EMT, AEMT, Paramedic
2. Age and Sex of Patient:
3. Type of Situation: Injury and/or Illness
4. Specific Complaint: Short and to the point (i.e. 10% 2nd degree burn to leg)
5. Mechanism: MVA / MCA / Fall

COMMUNICATIONS (cont'd)

6. Vital Signs: BP / Pulse / Resp. / LOC / EKG
7. ETA to Medical Facility

CODE ONE PATIENTS—MINOR ILLNESSES

This category covers all minor illness or injury circumstances and the patient is in no danger of developing any significant signs or symptoms.

1. Type of Squad: EMT, AEMT, Paramedic
2. Age and Sex of Patient:
3. Type of Situation: Injury and/or Illness
4. Specific Complaint: Short and to the point (i.e., abdominal pain for the last two weeks)

Code I (non-transport) for minors

If after evaluation of a minor, the EMS professional and medical control agree that the patient is a Code I, that minor can be left in the care of a responsible adult that is not the parent or legal guardian. The responsible adult may be a family friend, neighbor, school bus driver, teacher, school official, police officer, social worker, or other person at the discretion of medical control and the EMS professional.

Once the above information is given, wait for further requests and/or orders from Medical Control.

If the patient requires special care; (i.e., security; interpreter; additional people for lifting, isolation for infection, vermin infestation, or hazardous material) this information should also be relayed.

TYPES OF PATIENTS ACCORDING TO TRIAGE PRIORITY

CODE THREE PATIENTS

Airway and/or Breathing Difficulty
Cardiac Arrest
Circulation Difficulty (Bleeding and/or Shock)
Open Chest and Abdominal Injury
Complicated Childbirth
Chest Pain

Unconsciousness
Severe Head Injury
Severe Burns
Severe Poisoning
Status Epilepticus
Altered LOC
Multiple Fractures

CODE TWO PATIENTS

Cervical Spine Injury
Acute Abdominal Pain
Moderate Burns

Normal Childbirth
Violent and/or Combative Patient
Psychiatric

CODE ONE PATIENTS

Minor Injury
Minor Illness

PROTOCOL FOR DOA

GENERAL STATEMENT

- A. When a DOA is encountered, the squad members should avoid disturbing the scene or the body as much as possible, unless it is necessary to do so in order to care for and assist other victims. Once it is determined that the victim is, in fact, dead the squad members should move as rapidly as possible to transfer responsibility or management of the scene to the police department and/or Coroner's Office. It is the squad member's responsibility to notify the Coroner's Office directly or to ensure that the Coroner's Office has been notified by a police officer on the scene.

A determination that the victim is dead rests with the squad members. Any of the following may be used as guidelines to support the determination that a victim is deceased:

1. There is an injury which is incompatible with life (i.e., decapitated, or burned beyond recognition).
 - a. Cardiac arrest, secondary to massive blunt trauma without signs of exsanguinating hemorrhage (i.e. limb amputation).
2. The victim shows signs of decomposition, rigor mortis, or extremely dependent lividity.
3. If the patient is an adult with an unwitnessed cardiac arrest, has a history of an absence of vital signs for greater than 20 minutes, and is found in asystole, not secondary to hypothermia or cold water drowning.
4. If there are valid DNR (Do Not Resuscitate) orders, see DNR Protocol.
5. If the patient has a history of terminal disease, the family refuses resuscitation and permission to pronounce the patient dead is given by Medical Control.

CAUTION: IF ANY DOUBT EXISTS THAT THE VICTIM IS DEAD AT THE TIME OF ARRIVAL OF THE SQUAD, RESUSCITATIVE MEASURES SHOULD BE INSTITUTED IMMEDIATELY. WHENEVER RESUSCITATIVE MEASURES ARE INSTITUTED, THEY MUST BE CONTINUED UNTIL ARRIVAL AT A HOSPITAL OR UNTIL A PHYSICIAN HAS PRONOUNCED THE VICTIM DEAD OR A VALID DNR IS PRONOUNCED.

DO NOT RESUSCITATE/SUPPORT CARE GUIDELINES

BACKGROUND

In 1999, the Ohio Department of Health successfully established a Do-Not-Resuscitate Comfort Care (DNR Comfort Care) Protocol within the Ohio Revised Code. In the past, do-not-resuscitate (DNR) orders could not be honored without contacting medical direction when EMS or the 911 system was activated. The DNR Comfort Care Protocol will permit EMS to honor DNR orders without immediately contacting medical direction and provides guidelines for the prehospital management of these patients.

A DNR Comfort Care patient has completed a living will or has been issued a DNR order. The DNR Comfort Care protocol can be performed immediately by EMS for these patients. There is a subset of patients who are DNR Comfort Care-Arrest patients. This protocol is to be activated only in the event of a cardiac or respiratory arrest for these patients. EMS should follow the State of Ohio EMS Guidelines for these cases unless they present as a cardiac or respiratory arrest. In the event of a cardiac or respiratory arrest in a DNR Comfort Care-Arrest patient, the patient care should then be diverted to the Do Not Resuscitate (Comfort Care) Protocol. For the purposes of this protocol, a cardiac arrest is defined as the absence of a palpable pulse, and a respiratory arrest is defined as the absence of spontaneous respirations or presence of agonal respirations. The patient's DNR order or DNR identification should be checked very carefully to distinguish between the DNR Comfort Care and the DNR Comfort Care-Arrest classifications.

A DNR Comfort Care designation does not imply that the patient does not want to be treated for illnesses or injuries unrelated to a terminal disease process. For example, if the patient sustained a bee sting and was developing anaphylaxis, EMS providers should follow the anaphylaxis protocol. Medical direction should be contacted as soon as possible for further guidance and potential temporary revocation of the DNR Comfort Care order.

A reasonable effort should be made to positively identify the patient with DNR orders, but it is not required for the performance of this protocol. Patients of health care facilities do not require verification of identity when the DNR order is present on the patient chart. Acceptable methods of patient identification verification include a driver's license, passport, picture ID, institution identification band, or personal identification by a family member, caregiver, friend, or health care worker.

A patient's DNR Comfort Care or DNR Comfort Care-Arrest status can be confirmed by one of the following:

1. A DNR Comfort Care card or form completed for the patient.
2. A completed State of Ohio living will (declaration) form that states that the patient does not want CPR (in the case of a patient who has been determined by two doctors to be in a terminal or permanently unconscious state).
3. A DNR Comfort Care necklace or bracelet bearing the DNR Comfort Care official logo.

4. A DNR order signed by the patient's attending physician or, when authorized by section 2133.211 of the Ohio Revised Code, a certified nurse practitioner (CNP) or clinical nurse specialist (CNS).
5. A verbal DNR order is issued by the patient's attending physician, CNP, or CNS.

EMS providers are not required to search a patient to locate DNR identification. Copies of the documents listed under items 1, 2, or 4 are sufficient. The EMS provider must verify the identity of a physician or CNP/CNS issuing a verbal DNR order. Acceptable methods of verification include personal knowledge of the physician or CNP/CNS, a return telephone call to verify the information provided, or a list of practitioners with other identifying information such as addresses.

DO NOT RESUSCITATE/SUPPORT CARE GUIDELINES (cont'd)

A DNR order is considered current if it is present in a health care facility's records or patient chart. A DNR order for a patient outside of a health care facility is considered current unless it is revoked by the patient or by the patient's attending physician or CNP/CNS. EMS providers are not required to research whether a DNR order that appears to be current has been discontinued.

The DNR Comfort Care patient always retains the right to request resuscitation even if the protocol has been activated. A request for resuscitation by the patient revokes the DNR Comfort Care status and the EMS providers should immediately follow the resuscitation procedures in the State of Ohio EMS Guidelines.

Once the DNR Comfort Care protocol has been activated, the wishes of family members or bystanders demanding or requesting resuscitation should not be honored. Any and all resuscitative measures should continue to be withheld. Attempts should be made to help the family understand the dying process and the patient's choice not to be resuscitated.

When the DNR Comfort Care Protocol has been activated, EMS personnel will provide the following care as clinically indicated:

1. Suction the airway.
2. Administer oxygen.
3. Position for comfort.
4. Splint or immobilize.
5. Control bleeding.
6. Provide pain medication.
7. Provide emotional support.
8. Contact medical direction
9. Contact other appropriate health care providers such as hospice, home health, attending physician, CNP/CNS as time or patient scenario permits.

When the DNR Comfort Care Protocol has been activated, EMS personnel will not perform the following:

1. Administer chest compressions.
2. Insert an artificial airway.
3. Administer resuscitative drugs.
4. Defibrillate or cardiovert.
5. Provide respiratory assistance other than the methods listed above.
6. Initiate resuscitative IV access.
7. Initiate cardiac monitoring.

NOTE: If any of these actions have been initiated prior to confirmation of the patient's DNR Comfort Care status, discontinue them when the DNR Comfort Care protocol is activated. Any and all respiratory assistance, IV medications, or other therapies that have been part of a patient's ongoing course of treatment for an underlying disease may be continued.

When the DNR Comfort Care protocol is performed, the suggested documentation on the patient care report should include the following information:

1. The document identifying the DNR Comfort Care status of the patient.
2. The method of verification of the patient's identity, if any was found through reasonable efforts.
3. DNR Comfort Care or DNR Comfort Care-Arrest classification.
4. All actions taken to implement the DNR Comfort Care protocol.
5. Any and all unusual events occurring enroute or on scene including interactions with family members, bystanders, or health care providers.

Any and all questions or concerns that arise during the management of DNR Comfort Care patients may be directed to and discussed with medical direction for assistance and guidance.

PROTOCOL FOR PATIENT REFUSAL

GENERAL STATEMENT

A. Competent adult patients have the right to give consent for, or refuse, any or all treatments. EMS professionals should attempt to obtain vital signs on all patients. Competent adult patients also have the right to give consent for, or refuse ambulance transport. Each agency should have established guidelines for patient consent and refusal. A performance improvement (PI) process should be in place to review these runs.

1. Consent

a. When waiting to obtain lawful consent from the person authorized to make such consent would present a serious risk of death, serious impairment of health or would prolong severe pain or suffering of the patient, treatment may be undertaken to avoid those risks without consent. In no event should legal consent procedures be allowed to delay immediately required treatment.

b. Adults

A competent patient may withdraw consent for treatment at any time.

1. Prior to discontinuing or withdrawing treatment, the EMS professionals should determine if the patient is competent

2. Mental Competence - Decision Making Capability

- a. A person is mentally competent if he:
 1. Is capable of understanding the nature and consequences of the proposed treatment.
 2. Has sufficient emotional control, judgment, and discretion to manage his own affairs.
- b. Ascertaining that the patient is oriented, has an understanding of what happened and may possibly happen if treated or not treated, and a plan of action - such as whom he will call for transportation home - should be adequate for these determinations.

3. Impairment

- a. Patients may be considered incompetent to refuse care and/or transportation when they appear impaired. Patients who appear impaired include:
 - Suicidal Patients
 - Patients impaired by alcohol
 - Patients impaired by illicit drugs
 - Patients impaired by prescription or nonprescription drugs
 - Patients impaired by medical conditions such:
 - Hypoglycemia
 - Hypoxemia
 - Hypoperfusion
 - Head trauma
 - Psychiatric conditions

PROTOCOL FOR PATIENT REFUSAL (cont'd)

c. Pediatric

1. A critically ill or injured child should be treated and transported immediately
2. In non-emergency cases involving minors, consent should be obtained from the parent or legal guardian prior to undertaking any *treatment*. All children must be evaluated for acuity of illness, regardless of obtaining parental consent.
3. Each agency should have policies which delineate situations in which children may be left at the scene, emancipated status, and instances when medical control should be contacted.

PROCEDURE FOR REFUSAL

- A. If a patient wishes to refuse treatment, examination or transportation, each agency should have steps which will be followed and optimally all of these runs will be reviewed as part of the PI process.
- B. The completion of a Patient Refusal Checklist by the EMS professional is suggested (see enclosed example)
 1. The patient must be advised of the benefits of treatment and transport as well as the specific risks of refusal of treatment and transport.
 2. The patient must be able to relate to the EMS professional in his or her own words what the risks and benefits of refusal of transport.
 3. The patient will be provided with a refusal information sheet, also attached. A copy of this refusal information sheet or the refusal section of the check list will be signed by the patient, dated, and both will be kept with the patient's file.

EMS PATIENT REFUSAL CHECKLIST

1. ASSESSMENT OF PATIENT (CIRCLE APPROPRIATE RESPONSE)

ALCOHOL / DRUGS INGESTION PER HISTORY OR EXAM	Y	/	N
ALTERED LEVEL OF CONSCIOUSNESS	Y	/	N
HEAD INJURY	Y	/	N
ORIENTED TO: PERSON PLACE TIME SITUATION			

2. MEDICAL CONTROL

CONTACTED VIA: PHONERADIO TIME _____
 UNABLE TO CONTACT () MEDICAL CONTROL PHYSICIAN _____

If medical control not able to be contacted, explain in comment section of checklist
 ORDERS:

- () INDICATED TREATMENT / TRANSPORT MAY BE REFUSED BY PATIENT
- () USE REASONABLE FORCE / RESTRAINT TO PROVIDE TREATMENT
- () USE REASONABLE FORCE AND / OR RESTRAINT TO TRANSPORT

OTHER _____

3. PATIENT ADVISED (CIRCLE APPROPRIATE RESPONSE)

*	MEDICAL TREATMENT / EVALUATION NEEDED	Y	/	N
*	AMBULANCE TRANSPORT NEEDED	Y	/	N
*	FURTHER HARM MAY RESULT WITHOUT MEDICAL TREATMENT OR EVALUATION	Y	/	N
*	TRANSPORT BY MEANS OTHER THAN AMBULANCE COULD BE HAZARDOUS IN LIGHT OF THE PATIENT'S PRESENT ILLNESS OR INJURY	Y	/	N
*	PATIENT PROVIDED WITH REFUSAL ADVICE SHEET	Y	/	N
*	PATIENT WOULD NOT ACCEPT REFUSAL SHEET	Y	/	N

4. DISPOSITION

- () REFUSED ALL EMS SERVICES
- () REFUSED TRANSPORT, ACCEPTED FIELD TREATMENT
- () REFUSED FIELD TREATMENT, ACCEPTED TRANSPORT

REFUSAL INFORMATION SHEET

PLEASE READ AND KEEP THIS FORM

This form has been given to you because you have refused treatment and/or transport by the Emergency Medical Service. Your health and safety are our primary concern, so even though you have decided not to accept our advice, please remember the following:

1. The evaluation and/or treatment provided to you by EMS professionals is not a substitute for medical evaluation and treatment by a doctor. We advise you to get medical evaluation and treatment.
2. Your condition may not seem as bad to you as it actually is. Without treatment your condition or problem could become worse. If you are planning to get medical treatment, a decision to refuse treatment or transport by the EMS may result in a delay which could make your condition or problem worse.
3. Medical evaluation and/or treatment may be obtained by calling your doctor, if you have one, or by going to any hospital emergency department in this area, all of which are staffed 24 hours a day by emergency physicians. You may be seen at these emergency departments without an appointment.
4. If you change your mind or your condition becomes worse and you decide to accept treatment and transport by the Emergency Medical Service, please do not hesitate to call us back. We will do our best to help you.
5. ☐ **If the box at the left has been checked**, it means that your problem or condition has been discussed with an emergency physician at the medical control hospital by radio or telephone, and the advice given to you by the Emergency Medical Service has been issued or approved by the emergency physician.

*** I have been informed of the dangers of my not being treated and/or transported by the Emergency Medical Services, for my condition, for treatment by an emergency department or private physician. I release _____ and consulting hospital their employees and officers from all liability for any adverse results caused by my decision.

I have received a copy of this information sheet.

Signature: _____

Print Name: _____

Signature of EMS professional: _____ Witness: _____

Print Name: _____

Report Number: _____ Date: _____

NON-TRANSPORTS

A number of EMS calls result in non-transport of the patient or victim. If an individual is not transported by the squad, the following guidelines will apply:

1. In the event of a patient assist call and no Emergency Medical Services are rendered, a report should be made but Medical Control need not be contacted.
2. If the patient refuses treatment or transport, the patient refusal procedure should be followed.
2. If the patient is requesting transport and the EMS professionals in charge does not feel it is necessary to transport the patient, Medical Control must be contacted and approve the EMS refusal. This includes any case that might be transported by car or private ambulance.
 - a. A Code I Advisory Sheet should be initiated and given to the patient. (See Code I Advisory Sheet)
4. Code I (non-transport) for minors

If after evaluation of a minor, the EMS professional and medical control agree that the patient is a Code I, that minor can be left in the care of a responsible adult that is not the parent or legal guardian. The responsible adult may be a family friend, neighbor, school bus driver, teacher, school official, police officer, social worker, or other person at the discretion of medical control and the EMS professional.

CODE I ADVISORY SHEET

You have been evaluated by an EMS professional in communication with a physician over a radio. It has been determined that you do not need an ambulance at this time. **THIS DOES NOT MEAN THAT YOU SHOULD NOT BE SEEN BY A PHYSICIAN. THE EVALUATION AND TREATMENT YOU RECEIVED WAS TO DETERMINE THE SEVERITY OF YOUR PROBLEM AND WHETHER OR NOT YOU NEEDED AN AMBULANCE; IT IS NOT A SUBSTITUTE FOR FINAL EVALUATION AND TREATMENT BY A PHYSICIAN.**

We advise you to see a physician at this time. You may decide that you don't need to see a physician now, but if you don't then you must take the risk that you will not receive treatment that you need and that this may cause problems for you later on. The following may help you decide:

1. If you have a cut, only a physician should decide whether or not you need stitches. Most physicians recommend stitches within 8 hours because after that the risk of an infection becomes much greater.
2. If you have a cut, scrape or burn and have not had a tetanus (lockjaw) shot within 5 years, you may need one. You do not need to get a tetanus shot immediately, but you should not delay this more than 24 hours.
3. Many burns do not appear to be as bad as they really are. Also, serious problems can develop from some burns which may be prevented by early medical treatment.
4. If the pain or other discomfort you had has gone away, it does not necessarily mean the problem that caused it has gone away.
5. If you decide you don't need to see a physician and then change your mind, don't wait. The longer you wait, the more problems you may have.

USE COMMON SENSE!!!

"IF I DON'T HAVE A PHYSICIAN, OR CAN'T SEE MY PHYSICIAN NOW, WHAT CAN I DO?"

GO TO THE NEAREST EMERGENCY DEPARTMENT OR CALL BACK EMERGENCY MEDICAL SERVICES.

HEAVY PATIENTS

GENERAL CONSIDERATIONS

Less than one percent of the population has a weight in excess of 300 pounds. This means that in any community there may be one or more individuals who fall into this extreme. As patients, these individuals are frequently classed as high risk because of the increased medical complications associated with their excess weight. In the EMS system they present the additional problem of movement and transportation. These individuals have the right to expect prompt and expert emergency medical care. Therefore, in order to facilitate the care of these individuals without risking the health of EMS professionals, the following protocol is established.

- A. In managing a patient with weight over 300 pounds, at no time should the patient be moved without at least 6 individuals to assist. At the scene, as many EMS professionals as can be mobilized may be supplemented by police or other safety personnel as appropriate. If 6 individuals are not available, mutual aid will be required.
- B. It may be necessary to remove doors, walls or windows. The situation is no different than extrication from a vehicle, although property damage may be higher. At all times the patient's life must be the first priority.
- C. The patient is to be placed on at least 2 (double) backboards or other adequate transfer device for support.
- D. The patient is to be loaded on a cot that is in the down position, and the cot is to be kept in the down position at all times.
- E. Three (3) EMS professionals are to accompany the patient during transport. If additional personnel are available they are to travel in a separate vehicle.
- F. The patient will be loaded directly from the squad onto a special hospital bed for this type of patient, which will be brought to the ED entrance.
- G. It is NECESSARY TO NOTIFY THE HOSPITAL WELL IN ADVANCE of arrival so that preparations can be completed in a timely fashion.
- H. If individuals in the community are known to fall within this special category it is appropriate to inform them in advance of the type of assistance they can expect from the EMS system, and help them make plans well in advance to assist you. When calling for the squad, and if they identify themselves and their special needs, it will promote the timeliness of your efforts.

PATIENTS WITH FUNCTIONAL NEEDS

In 1980, the World Health Organization created a classification called the International Classification of Impairments, Disabilities, and Handicaps (ICHDH) to identify populations with health components of special needs and/or disability. The list of conditions cited under this classification has been expanded several times over the years and remains in a fluid state. In 2001, the World Health Assembly amended the title of this classification to the International Classification of Functioning, Disability, and Health (ICF), and over time, the term “special needs” has been replaced with “functional needs”. In the United States, the Americans with Disabilities Act of 1990 (ADA) was the initial broad civil rights law to address individuals with disabilities. Many states, including Ohio, passed similar legislation to support individuals with disabilities and patients with functional needs. Per the ADA, disability is defined as “a physical or mental impairment that substantially limits a major life activity”.

EMS professionals must be cognizant of the protocols provided by the EMS medical director for the prehospital management of functional needs patients as well as the existing state and federal legislation. Most importantly, the quality of medical care should not intentionally be diminished or adversely altered during the triage, treatment, and transport of functional needs patients. Although your EMS medical director may provide additional parameters and protocols, the following provides a basic overview of the patient management scenarios most frequently seen by EMS professionals.

Communication Barriers

Language Barriers: EMS professionals may accept the assistance of family members or bystanders during communication with a patient who has expressive and/or receptive aphasia, is nonverbal, or who speaks a different language than the EMS professional. Documentation of the identification of the person assisting with the communication and, if possible, transport of this individual to the hospital with the patient is advised. For differences in language, there are a number of products on the market (translation cards, symbols, telephone-accessible services with live interpreters, etc.) specifically created for the medical environment to assist EMS professional in obtaining a patient’s chief complaint, medical history, medication, allergies, and other critical information. The methods through which the patient augments their communication skills (eye blinking, nodding, etc.) should be noted and communicated to the receiving facility.

Sensory Barriers: Sensory barriers, i.e. visual or auditory impairment, may present challenges in the prehospital setting, particularly during the acquisition of a patient history and the completion of patient assessment. The methods through which the patient augments their communication skills (use of Braille, sign language, lip reading, etc.) should be noted and communicated to the receiving facility. Written communication between the patient and the EMS professional is part of the medical record, even if it is on a scrap sheet of paper, and it should be retained with the same collation, storage, and confidentiality policies and procedures that are applicable to the written or electronic patient care report.

Assistance Adjuncts

Assistance devices: The devices that facilitate the activities of life for the patient with functional needs should be noted. These devices include, but are not limited to, magnifiers, white or sensory canes, hearing aids, tracheostomy speaking valves, or extremity prostheses. These devices should accompany the patient if possible during transport as their availability to the patient can facilitate the interaction between the patient and the healthcare provider and enhance the patient’s safety and overall well-being.

Service Animals: A service animal, usually a dog, is not classified as a pet and should, by law, always be permitted to accompany the patient. A service animal as defined by the ADA is “any guide dog, signal dog, or other animal individually trained to do work or perform tasks for the benefit of an individual with a disability, including, but not limited to guiding individuals with impaired vision, alerting individuals with impaired hearing to intruders or sounds, providing minimal protection or rescue work, pulling a wheelchair, or fetching dropped items.” The service animal is not required to wear a vest or a leash, and it is illegal to make a request for special identification or documentation from the service animal’s partner. EMS professionals may only ask the patient if the service animal is required because of a disability and the form of assistance the animal has been trained to perform. EMS professionals are not responsible for the care of service animals. If the patient is incapacitated and cannot personally care for the service animal, a decision can be made whether or not to transport the animal in this situation. Animals that provide emotional support, comfort, or companionship do not qualify as service animals.

ON SCENE EMS INTERVENER

On an EMS run where an unknown EMS professional from outside the responding EMS agency wishes to intervene in the care of patients, the following steps should be initiated:

1. Ideally, if no further assistance is needed, the offer should be declined.
2. If the EMS intervener's assistance is needed or may contribute to the care of the patient:
 - a. An attempt should be made to obtain proper identification and confirm the possession of a valid Ohio EMS certificate. Acceptance of borderline states' EMS certification or licensure documents is at the discretion of individual EMS services. Notation of the EMS intervener's name, address and certification numbers must be documented on the run report.
3. Significant involvement with patient care or variance from protocols will require the EMS intervener to accompany the patient to the hospital.

PHYSICIAN AT THE SCENE

GOOD SAMARITAN PHYSICIAN

This is a physician with no previous relationship to the patient, who is not the patient's private physician, but is offering assistance in caring for the patient. The following criteria must be met for this physician to assume any responsibility for the care of the patient:

1. Medical Control must be informed and give approval.
2. The physician must have proof they are a physician. They should be able to show you their medical license. Notation of physician name, address, and certification numbers must be documented on the run report.
3. The physician must be willing to assume responsibility for the patient until relieved by another physician, usually at the emergency department.
4. The physician must not require the EMS professional to perform any procedures or institute any treatment that would vary from protocol and/or procedures outlined in the protocols provided by the medical director of the EMS agency or is not within the Ohio EMS scope of practice.

If the physician is not willing or able to comply with all the above requirements, his assistance must be courteously declined.

PHYSICIAN IN HIS/HER OFFICE, OR URGENT CARE CENTER

1. EMS should perform its duties as usual under the supervision of medical control or by protocol.
2. The physician may elect to treat the patient in his office.
4. The EMS professional should not provide any treatment under the physician's direction that varies from protocols provided by the medical director of the EMS agency or is not within the Ohio EMS scope of practice. If asked to exceed these boundaries, the EMS professional should decline the request until contact is made with Medical Control.
4. Once the patient has been transferred into the squad, the patient's care becomes entirely under medical control.

RESTRAINTS

GENERAL GUIDELINES

- A. Soft restraints are to be used only when necessary in situations where the patient is potentially violent and may be of danger to themselves or others. Patients who are clinically competent retain a right to refuse transport. EMS professionals must remember that aggressive violent behavior may be a symptom of medical conditions such as but not limited to:
 - 1. Head trauma
 - 2. Alcohol/drug related problems
 - 3. Metabolic disorders (i.e., hypoglycemia, hypoxia, etc.)
 - 4. Psychiatric/stress related disorders
- B. Patient health care management remains the responsibility of the EMS professional. The method of restraint shall not restrict the adequate monitoring of vital signs, ability to protect the patient's airway, compromise peripheral neurovascular status or otherwise prevent appropriate and necessary therapeutic measures. It is recognized that evaluation of many patient parameters requires patient cooperation and thus may be difficult or impossible.
- C. All restraints should have the ability to be quickly released, if necessary.
- D. The person who was responsible for applying a restraining device that requires a key or special releasing device must physically remain with the patient regardless of the vehicle of transport in the interest of the patient's safety. This policy is not intended to negate the need for law enforcement personnel to use appropriate restraint equipment to establish scene control.
- E. Patients should be transported in the supine or decubitus position to ensure adequate respiratory and circulatory monitoring and management. The prone position should be a position of last resort and rarely used. All restrained patients should be placed on a stretcher with adequate foam padding particularly underneath the head if the patient is positioned in the prone position. Extremity restraints should be secured to the stationary portion of the stretcher frame in a fashion where they can be removed quickly in the event of an emergency. Stretcher straps should be placed on all patients as these are analogous to seatbelts during transport. Restraint of the extremities in a spread eagle fashion significantly reduces the strength the patient can generate from the large muscle groups. Restraints that use multiple knots or that may restrict chest wall motion are unacceptable.
- F. Restrained extremities should be monitored for color, nerve and motor function, pulse quality, and capillary refill at the time of application and frequently thereafter. The patient's ventilatory status, pulse oximetry, or waveform capnography should be monitored during transport.
- G. After addressing and/or treating metabolic causes of aggressive or violent behavior, administration of a benzodiazepine and/or antipsychotic as a chemical restraint should be considered.

RESTRAINTS (cont'd)

- H. Restraint documentation on the EMS report shall include:
 - 1. Reason for restraint
 - 2. Agency responsible for restraint application (i.e., EMS, Police)
 - 3. Documentation of serial cardio-respiratory status and peripheral neurovascular status
- I. Prehospital care providers reserve the right to refuse elective transport of patients who are deemed too violent or uncooperative to be controlled by the restraint methods and devices permitted by their prehospital protocols. The safety of prehospital care providers will be maintained at all times during transport. The prehospital care provider reserves the right to request completion of transport by law enforcement personnel. The prehospital care provider may administer an appropriate dose of a benzodiazepine and/or antipsychotic as a pharmacological restraint prior to transport of the patient. The prehospital care provider reserves the right to suggest to medical facilities the use of adequate pharmacological restraints prior to acceptance of the patient. A decision to refuse elective transport of a violent or uncooperative patient may be made by any member of the prehospital care team or its supervisor. Medical direction may be contacted at any time for advice or for pharmacological orders.

TRANSPORT TO FREE-STANDING EMERGENCY/URGENT CARE CLINICS

EMS units should not transport patients to free-standing emergency care clinics (***free-standing emergency departments are acceptable destinations***), urgent care facilities, or private physicians' offices in response to emergency calls except:

1. When directed by Medical Control.
2. If specifically authorized by on-line medical direction.
3. When the EMS unit is following protocols approved by medical control.
4. When the EMS unit is a private service responding to a call in which the patient and/or the family requests transport to such facility and the patient is clearly in stable condition.
5. During a declared emergency disaster as directed by medical control, a public health authority, or the governor.

NON-HOSPITAL TRANSFER POLICY

GUIDELINES FOR TRANSFER FROM A NON-HOSPITAL LOCATION TO A NON-HOSPITAL LOCATION: HOME TO HOSPICE; HOSPICE TO HOME

- A. On occasion, the out-of-hospital EMS professional(s) will be called upon to transport a patient from a non-hospital location to another non-hospital facility such as hospice center or from hospice to home or a doctor's office. The provider(s) will follow the written or pre-existing orders of the patient's physician or physician approved hospice center orders for the transport. At times, a hospice nurse may arrive or already be at the scene. He/she should be able to help review orders and/or advance directives such as DNR or "Support Care" orders to enable transport in accordance with the wishes of the patient and his/her family. A hospice patient by definition is DNR.

Medical Control does not need to be contacted unless the DNR is revoked. However, if the EMS professional(s) feels the need to contact Medical Control for advice or direction, the professional(s) will clearly advise Medical Control of the patient's terminal condition and DNR status.

If medication(s) needs to be "wasted", e.g., morphine, Valium® or Versed®, then the receiving hospice supervisor, nurse or EMS supervisor may witness and document appropriate disposal of the said medication(s) and administration equipment, e.g., needle(s), syringe(s), IV catheter(s), heparin or saline lock(s) or IV lines and/or solutions. Medications or equipment should never be transported to an emergency department to be disposed of or wasted. Any and all waste materials will be disposed into approved and appropriately labeled containers.

INTERFACILITY PATIENT TRANSPORT GUIDELINES

The transportation of patients from one healthcare facility to another should be carried out in an orderly and expeditious manner. Regardless of origin or destination, patients remain the responsibility of the transferring physician until received by the accepting physician or his/her agent. The transfer papers and accompanying record must document the reason for transfer as well as the time of contact and the name of the receiving facility, physician and/or accepting agent in accordance with nationally recognized standards and federal regulations.

The decision regarding the level and scope of practice of the out-of-hospital transporting agency and the individual providers should be made in consultation with the receiving physician and must be appropriate to the stability of the patient and their medical and equipment needs. The provider will be responsible for carrying out the orders of the transferring physician during the transfer unless acting as the agent of the receiving facility with superseding medical control, or if a physician accompanies the patient. Any questions or concerns regarding those orders, including but not limited to Do Not Resuscitate (DNR) orders, medications or treatments, must be answered or clarified prior to departure. The route(s) of travel, possible diversionary medical facilities and their phone or radio call numbers should also be determined.

If unanticipated problems or concerns arise during transport, direct, on-line medical control will be obtained. If for technical or logistical reasons this is not possible, the transporting agent should follow written protocols or standing orders until the transferring, receiving or nearest diversionary facility can be contacted on-line.

TERMINATION OF RESUSCITATION EFFORTS

"Resuscitation may be discontinued in the prehospital setting when the patient is nonresuscitable after an adequate trial of ACLS."

In accordance with the Journal of American Medical Association's guidelines for cardiopulmonary resuscitation and emergency cardiac care, the above statement encourages local medical directors to develop guidelines for prehospital care providers to terminate resuscitation efforts when the patient's survivability is questionable.

A trial of ACLS, according to the guidelines, occurs when:

- 1) adequate BLS has been provided for a reasonable length of time;
- 2) endotracheal intubation has been successfully accomplished;
- 3) intravenous access has been achieved and rhythm-appropriate medications and countershocks for ventricular fibrillation have been administered according to protocol; and
- 4) persistent asystole or agonal electrocardiographic patterns are present and no reversible causes are identified.

The State of Ohio Regional Physician Advisory Board has adopted the following criteria for termination of resuscitation efforts at the scene following unmonitored, out of hospital, adult, primary cardiac arrest.

Paramedic personnel under local medical control authority may terminate resuscitation when:

- 1) adult cardiopulmonary arrest (not associated with trauma, body temperature aberration, respiratory etiology, or drug overdose);
- 2) standard ACLS in accordance with American Heart Association guidelines has been carried out for over 20 minutes;
- 3) no restoration of circulation (spontaneous pulse rate of greater than 60 beats per minute for at least a 5 minute period); and
- 4) absence of persistent, recurring, or refractory ventricular fibrillation/tachycardia or any continuous neurological activity (e.g., spontaneous respirations, eye opening or motor response).

When the above conditions have been met, the Paramedic should contact medical control and request termination of resuscitation.

Documentation should be completed and forwarded to the appropriate medical control authority within 48 hours of the run.

CENTRAL LINE MONITORING

1. All fluids, medications, modified total parenteral nutrition (TPN), and hyperalimentation can be administered via central lines.
2. Central sites should be monitored for bleeding, swelling, redness, pain or leaking of the infusing fluid. If any of these complications occur, the infusion should be discontinued immediately. Firm pressure should be applied on the entrance site if bleeding or fluid leakage persists.
3. Do not remove central venous catheters.
4. Common central venous sites include the internal jugular, subclavian, femoral, and antecubital veins.
5. Central catheters may have single or multiple lumens. Medications can be administered simultaneously using one continuous medication per lumen.
6. Swan-Ganz catheters are used to measure cardiac output and pulmonary artery and central venous pressure as well as to infuse fluids.
 - a. Disconnect the Swan-Ganz catheter from the transducer.
 - b. Continue fluid infusion through the catheter port or have the nurse close the port with a cap or heparin lock port.
 - c. Have the nurse check the balloon port to insure that it is deflated.

CHEST DECOMPRESSION

GENERAL CONSIDERATIONS

The treatment of tension pneumothorax involves decompression of the affected chest cavity to release the pressure that has developed.

Decompression can be achieved, with minimal risk, by the insertion of a 14 or 16 gauge needle into the second inter-costal space at the midclavicular line. Also an approach in the mid-axillary line between the fifth and sixth rib is possible, and considered safer by some physicians.

The needle must be inserted superior to the rib because the intercostal artery, vein and nerve follow the inferior portion of the rib.

INDICATION

Tension pneumothorax indicated by:

- A. Diminished or absent lung sounds
- B. Cyanosis and difficulty breathing
- C. Distended neck veins
- D. Tachycardia, tachypnea, hypotension, narrow pulse pressure
- E. Tracheal shift to the unaffected side (May not always be present)

PROCEDURE

- A. Prepare equipment: 14 or 16 gauge needle, antiseptic solution (Intracath[®] needle with stylet removed is preferred, because sheath provides one-way valve.)
- B. Locate site:
 - 1. Second or third intercostal space, midclavicular
 - 2. Fourth intercostal space between the fourth and fifth rib, midaxillary
- C. Prep site, if time permits
- D. Insert the needle just superior to the rib until a rush of air is felt and/or heard
- E. Secure needle in place
- F. Support patient with 100% oxygen and transport without delay

CONTRAINDICATIONS

Insufficient training.

CHEST DECOMPRESSION (cont'd)

CHEST TUBE MONITORING

Chest tubes, which drain intrathoracic air or fluid, are positioned in the fourth or fifth intercostal space at the mid-axillary line or the second or third intercostal space at the mid-clavicular line. They are secured with sutures and tape and the entrance site covered with a clean, sterile dressing.

Chest tubes are connected to suction via a drainage system. The transferring nurse should check the suction control and record its pressure on the transfer form. The collection chamber of the drainage system contains the intrathoracic fluid if present. The collection chamber should be emptied by the nurse prior to transfer. The water seal chamber of the drainage system prevents reentry of air or fluid into the intrathoracic space. Bubbles in the water may be seen and may vary with the patient's respirations. Chest tubes usually require 15 to 20 cm of water pressure in the suction chamber to drain properly.

Prior to transfer of the patient, inspect for and remove all kinks and loops in the tubing. The connection between the chest tube and drainage system should be secure and taped. The drainage system is to be placed in the upright position below the level of the patient's chest.

If a chest tube comes out during transfer, treat as a sucking chest wound. Cover the entrance site with an occlusive dressing, preferably Vaseline[®] gauze. If Vaseline[®] gauze is unavailable, cover the entrance site with sterile gauze and apply firm, continuous pressure with the hand.

Call medical direction immediately for:

- Deterioration of respiratory status
- Chest tube fluid drainage greater than 100 ml/hour
- New onset of bloody fluid drainage from chest tube

CONTINUOUS POSITIVE AIRWAY PRESSURE (CPAP)

Continuous positive airway pressure (CPAP) has been shown to rapidly improve vital signs, gas exchange, the work of breathing, decrease the sense of dyspnea, and decrease the need for endotracheal intubation in the patients who suffer from shortness of breath from congestive heart failure and acute cardiogenic pulmonary edema. CPAP is also shown to improve dyspnea associated with pneumonia, chronic obstructive pulmonary disease (asthma, bronchitis, emphysema). In patients with CHF, CPAP improves hemodynamics by reducing preload and afterload.

Indications:

Dyspnea and/or hypoxemia secondary to congestive heart failure, acute cardiogenic pulmonary edema, pneumonia, chronic obstructive pulmonary disease (asthma, bronchitis, emphysema) and:

- A. Any patient who is complaining of shortness of breath for reasons other than pneumothorax or chest trauma
- B. Is awake and oriented
- C. Has the ability to maintain an open airway (GCS>10)
- D. Has a respiratory rate greater than 25 breaths per minute
- E. Has a systolic blood pressure above 90 mmHg
- F. Uses accessory muscles during respirations

Contraindications:

1. Pneumothorax
2. Respiratory arrest
3. Agonal respirations
4. Unconscious
5. Shock associated with cardiac insufficiency
6. Penetrating chest trauma
7. Persistent nausea/vomiting
8. Facial anomalies / stroke obtundation / facial trauma
9. Has active upper GI bleeding or history of recent gastric surgery

Procedure:

1. Assess patient for signs / symptoms of pneumothorax
2. Place patient in a sitting position
3. Assess vital signs and SpO₂ frequently
4. AEMT and Paramedic: Attach ECG monitor
5. If BP <90 systolic contact Medical Control prior to beginning CPAP
6. Begin at lowest level of positive pressure available
7. Explain the procedure to the patient:
 - i. Patient requires reassurance to be used effectively.
 - a. Example: "You are going to feel some pressure from the mask but this will help you breath easier."
 - ii. Place delivery device over mouth and nose.
 - iii. Instruct patient to breath in through their nose slowly and exhale through their mouth as long as possible (count slowly and aloud to four then instruct to inhale slowly).

CONTINUOUS POSITIVE AIRWAY PRESSURE (cont'd)

8. For CHF/Pulmonary Edema, titrate to 10 cm H₂O. For all other SOB, titrate to 5 cm H₂O
9. Check for air leaks
10. Treatment should be given continuously throughout transport to the emergency department.
11. Continue to coach patient to keep mask in place and readjust as needed
12. If respiratory status or level of consciousness deteriorates, remove device and begin bag valve mask ventilation.
13. Documentation on the patient care record should include:
 - a. CPAP level
 - b. Frequent SpO₂ and vital sign assessment
 - c. Response to treatment
 - d. Any adverse reactions

Special Notes:

1. CPAP should not be used in children under 12 years of age
2. Advise receiving hospital as soon as possible so they can prepare for the patient's arrival
3. Do not remove CPAP until transfer of care has taken place at receiving hospital
4. Continuous reassessment of patient airway

CRICOTHYROTOMY

INDICATIONS

Unable to intubate by another route. This may be seen with:

- A. Cervical spine injuries
- B. Maxillofacial trauma
- C. Laryngeal trauma
- D. Oropharyngeal obstruction from:
 - 1. Edema from infection, caustic ingestion, allergic reaction, and/or inhalation injuries
 - 2. Foreign body
 - 3. Mass lesion
- E. Orotracheal or nasotracheal intubation is contraindicated for any reason

COMPLICATIONS

- A. Postoperative bleeding
- B. Late bleeding
- C. Abscess behind packing
- D. Cellulitis of neck
- E. Subcutaneous emphysema
- F. Voice change
- G. Feeling of lump in throat
- H. Persistent stoma
- I. Obstructive problems
- J. Misplacement of the airway

NEEDLE CRICOTHYROTOMY PROCEDURE

If time permits, prep the area with appropriate antiseptic solution. Attach a large angiocath (14-16 ga) to a syringe, and insert the needle through the cricothyroid membrane (CTM) and aspirate. Aspiration of air indicates proper placement.

If the intention is to use this as a temporary means of oxygenation then the catheter should then be slid into place.

If the needle is going to be used as a guide for formal cricothyrotomy then the catheter should not be used in order to prevent the possibility of shearing off the catheter when the scalpel is used.

A jet ventilator should be used to provide sufficient volume of oxygen at a pressure of no more than 30 psi.

Needle cricothyrotomy is the preferred method in children less than 11 years of age.

14 Gauge Catheter Insertion

SURGICAL CRICOTHYROTOMY PROCEDURE

Make a 2 to 4 cm vertical skin incision over cricothyroid membrane. Once the membrane has been exposed, make a 1.5 to 2 cm horizontal incision into the membrane and through to the trachea. Maintain a slight caudal direction, with the blade, to avoid damage to vocal cords.

Use forceps or dilator to spread the aperture in the cricothyroid membrane. Again, caution against vocal cord injury by angling instruments caudally.

If time does not allow or equipment is not available, the blunt end of the scalpel can be placed in the incision and twisted to open the aperture.

Insert an appropriate size endotracheal tube (6 cm tube). Advance caudally and inflate balloon. When the tube is in place, check breath sounds and secure the tube.

ENDOTRACHEAL INTUBATION

INDICATION

Endotracheal intubation is to be utilized for any victim with respiratory arrest and/or insufficiency to achieve complete control over the airway. It protects the airway from aspiration of foreign material and it allows for intermittent positive pressure ventilation to be achieved with 100% oxygen. It makes the trachea and the respiratory tract available for suctioning, and also eliminates the problem of gastric distention.

NOTE: Orotracheal intubation is outside of the Ohio EMS scope of practice for EMTs effective **January 13, 2013**.

HAZARDS

- A. Esophageal intubation
- B. Tracheal rupture
- C. Right mainstem bronchus intubation
- D. Broken teeth
- E. Laryngospasms
- F. Trauma to the oropharynx
- G. Trauma or puncture of trachea due to misplacement of stylet

OROTRACHEAL INTUBATION

- A. Always begin artificial ventilation as soon as possible using mouth-to-mouth, nose-to-nose, bag-valve-mask or oxygen powered manually triggered or automatic transport ventilation device.
- B. Assemble and ready equipment:
 - 1. Endotracheal tubes of various sizes
 - 2. Laryngoscope and blades
 - 3. Malleable stylet
 - 4. Magill forceps
 - 5. 10 ml syringe
 - 6. Suction apparatus and catheters
 - 7. Water soluble lubricant
 - 8. ET tube tape
 - 9. Oropharyngeal airway
- C. Check cuff on tube for leaks and lubricate tube. First attempt should be without stylet. Insert stylet into tube, if necessary.
- D. Assemble laryngoscope and check bulb
- E. Put victim's head in sniffing position. Do not allow the head to hang over the end of the table or bed; the occiput of the head should be on the same horizontal plane as the back of the shoulders, with the neck somewhat elevated.

ENDOTRACHEAL INTUBATION (cont'd)

- F. Holding the laryngoscope in the left hand, insert the blade to the right of the midline, moving the tongue up and to the left, with the blade ending up in the midline, giving clear visualization of the glottic opening
- G. Suction the mouth and the pharynx
- H. Visualize the epiglottis and vocal cords
- I. Select the proper size tube and insert in with the right hand, starting at the corner of the mouth down into the trachea, past the vocal cords approximately 2 inches
- J. Remove laryngoscope and stylet (if used), holding the tube securely with the right hand
- K. Attempt to ventilate with mouth-to-tube or bag-valve-mask and check for breath sounds in BOTH lungs
- L. If breath sounds are heard, inflate the tube's cuff with 4-6 ml of air and secure the tube in place with oropharyngeal airway used as bite block
- M. Maintain ventilation until adequate respirations resume or victim is delivered to an emergency department
- N. Recheck lungs sounds and verify tube placement each time patient is moved or every 10 minutes
- O. Document the intubation by noting the following:
 - 1. Number of attempts
 - 2. Person(s) making attempts
 - 3. Size of tube used
 - 4. Type of laryngoscope blade used on each attempt
 - 5. Lung sounds before intubation
 - 6. Lung sounds after intubation and time of each check
 - 7. Measurement on tube at lips of patient when lung sounds are present
 - 8. Any complications

NASOTRACHEAL INTUBATION

- A. Nasotracheal intubation of the airway may be used when the patient has an unprotected, inadequate airway creating hypoxia
- B. Nasotracheal intubation is indicated in:
 - 1. Patients with spontaneous breathing when all other methods of airway control and oxygenation proved to be inadequate.
 - 2. Trauma patients when cervical spine manipulation must be kept to a minimum and all other methods of airway control and oxygenation prove to be inadequate.
- C. Nasotracheal intubation is contraindicated in patients with fractures in the base of the skull or face, and in any patients who are apneic
- D. Hazards of nasotracheal intubation include:
 - 1. Nasal hemorrhage
 - 2. Laryngeal damage due to increased manipulation
 - 3. Rupture of cuff balloon from use of Magill forceps

ENDOTRACHEAL INTUBATION (cont'd)

E. When attempting nasotracheal intubation:

1. Always begin basic airway control and oxygenation as soon as possible.
2. Assemble and ready equipment:
 - a. Endotracheal tubes of various sizes with directional distal tip control
 - b. Laryngoscope and blades
 - c. Magill forceps
 - d. 10 ml syringe
 - e. Water soluble lubricant
3. Determine size of tube based on size of nasal opening.
4. Check tube cuff for leaks and lubricate tube; seat 15 mm connector firmly into tube
5. Holding tube in dominant hand, place thumb against the 15 mm connector and index finger in the ring loop
6. Insert the tube into the right nostril and advance tube gradually, anterior to posterior, avoiding superior movement which will be met with resistance and could cause injury
7. As the tube enters the pharynx, listen for breathing and pull on the tip control ring loop to turn the tube anterior towards the trachea
8. When the patient takes a breath, advance the tube into the trachea.
9. Listen for lung sounds, inflate the tube's cuff, maintain ventilation and oxygenation. Confirm tube placement with breath sounds, fogging of tube and end tidal CO₂ monitoring.
10. Intubation attempt should not take longer than 30 seconds.
11. If any resistance is encountered during insertion, abandon procedure and utilize another method of airway control and oxygenation
12. Recheck lungs sounds and verify tube placement each time patient is moved or every 10 minutes
13. Document the intubation by noting the following:
 - a. Number of attempts
 - b. Person(s) making attempts
 - c. Size of tube used
 - d. Lung sounds before intubation
 - e. Lung sounds after intubation and time of each check
 - f. Measurement on tube at nose of patient when lung sounds are present
 - g. Any complications

ENDOTRACHEAL INTUBATION (cont'd)

TUBE REMOVAL

If the patient begins to breathe spontaneously and effectively and is resisting the presence of the tube, removal of the tube may be necessary. The following procedures will be followed:

- A. Explain procedure to victim
- B. Prepare suction equipment with large-bore catheter and suction secretions from endotracheal tube, mouth and pharynx
- C. The lungs should be completely inflated so that the patient will initially cough or exhale as the tube is taken from the larynx. This is accomplished in 2 ways:
 - 1. The patient is asked to take the deepest breath they possibly can and, at the very peak of the inspiratory effort, the cuff is deflated and the tube removed rapidly; or
 - 2. Positive pressure is administered with a hand-held ventilator and, at the end of deep inspiration, the cuff is deflated and the tube rapidly removed
- D. Prepare to suction secretions and gastric content if vomiting occurs
- E. Appropriate oxygen is then administered
- F. The patient's airway is immediately evaluated for signs of obstruction, stridor or difficulty breathing. The patient should be encouraged to take deep breaths and to cough.
- G. The patient is not to be left unattended until there is no doubt of their ability to function without the artificial airway.

TUBE SIZING

The size of tube that can be passed easily into most adults is 8.0 mm (id). Therefore this tube should be tried first on the average adult. The size of tube is judged by the size of the adult, not by age.

For children, the proper tube is usually equal to the size of the child's little finger. The following guide will also help in determining the proper size tube:

Premature.....3 mm (id)	18-24 months.....5-6 mm (id)
14-24 weeks....4 mm (id)	2-4 years.....6 mm (id)
6-12 months....4-5 mm (id)	4-7 years.....6-7 mm (id)
12-18 months....5 mm (id)	7-10 years.....7 mm (id)

All the above tube sizes are still dependent on the child's size in consideration of age.

Children before puberty should have a cuffless tube, or if the tube has a cuff it should not be inflated after insertion.

ADMINISTRATION OF MEDICATION THROUGH ENDOTRACHEAL TUBE

In the event an intravenous or intraosseous route for administration of medication cannot be established, but an endotracheal tube (ETT) has been properly put in place, medications such as Narcan[®], atropine, epinephrine and lidocaine can effectively be administered through the tube.

EMS personnel under this protocol administer the medication via the lumen of the ETT. ETTs with an integral injection port that delivers the medication to the distal end of the tube are preferred as they allow the care providers to administer medications without interrupting CPR or disconnecting the ETT from the BVM. For medications that are delivered via a catheter that is inserted into the lumen of the ETT, the catheter should be passed beyond the tip of the endotracheal tube, compressions stopped, and the medication sprayed quickly into the lower airway.

Medications should be administered at two (2) times the IV dosage and diluted with 10 ml of saline or sterile water before administration.

If ETTs without integral injection ports are used or when medication injection catheters are not available, the following procedure should be followed:

1. Remove needle from syringe
2. Hyperventilate patient and make sure ETT and airway are clear of mucous
3. Disconnect ventilation device from tube and squirt medication rapidly into tube
4. Reconnect ventilation device and rapidly ventilate patient to assure passage of medication down tube and airway

SPECIAL NOTE: Do not take longer than 15 seconds to administer medication in order to prevent hypoxia of the patient.

CAPNOGRAPHY

Capnography allows the EMS professional to measure and monitor a patient's concentration or partial pressure of end tidal carbon dioxide (P_{ETCO_2}). In addition to the use of capnography in the post-arrest patient, the continuous monitoring of end tidal carbon dioxide facilitates early detection of displaced ETTs and allows the EMS professional to detect hypoventilation and/or hypercarbia.

Although quantitative capnography is acceptable, the use of waveform capnography is preferred in intubated patients. EMS professionals should apply and utilize these capnography devices according to the manufacturer's recommendations.

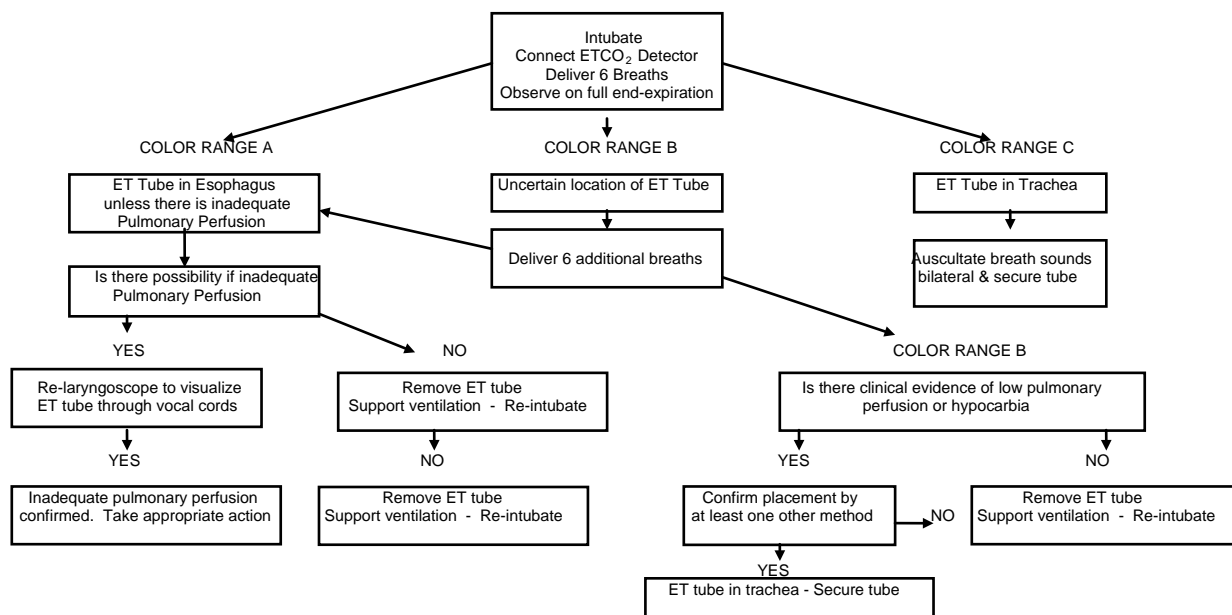

ENDOTRACHEAL INTUBATION (cont'd)

END TIDAL CO₂ MONITORING

In order to assure placement of the ET tube into the trachea after intubation, end tidal CO₂ monitoring is highly suggested. This can be achieved through the use of an end tidal CO₂ detector after each intubation attempt.

Procedure for use:

- A. Remove the end tidal CO₂ detector from package (Do not remove end caps until ready to use device)
- B. Remove end caps immediately before use and shake device to introduce room air
- C. Match initial color of the indicator to the purple color labeled "CHECK" on the product dome. If the purple indicator color is not the same or darker, do not use.
- D. Insert endotracheal tube (Inflate cuff if tube is equipped with one)
- E. Firmly attach the end tidal CO₂ detector between the endotracheal tube and the breathing device
- F. Ventilate patient with six breaths of moderate tidal volume (may be done quickly). Interpreting result with less than six breaths can yield false results.
- G. Compare color of indicator on full end-expiration to color chart on product dome. SEE ALGORITHM
- H. If initial intubation attempts fail, the end tidal CO₂ detector can be used for re-intubation on the same patient provided the indicator color still matches the "CHECK" color standard on product dome
- I. The end tidal CO₂ detector may left in place during ventilation to assist in monitoring tube placement
- J. This device is not to be used for:
 1. Detection of hypercarbia
 2. Detect mainstem bronchial intubation
 3. During mouth to tube ventilations

EXTERNAL PACEMAKER

INDICATIONS

An external pacemaker may be used in the following situations:

- A. Bradycardia: External pacemakers are indicated as first line therapy associated with second degree heart block Mobitz II and third degree heart block when a pulse is present. External pacing may also be indicated for the treatment of sinus bradycardia or ventricular rhythms <60 beats per minute unresponsive to atropine if the patient symptomatic with chest pain, shortness of breath or hypotension when a pulse is present.
- B. External pacing is not effective for asystole or pulseless electrical activity that is bradycardic in any situation and should not be used to treat asystole or pulseless electrical activity. Specifically, do not delay other therapies such as airway control, medication and CPR to institute external pacing.
- C. Additional patients at the discretion of the on-line Medical Control Physician

APPLICATION

For conscious patients with bradycardia, set the rate at 70 beats per minute and current at 20 milliamperes initially. Increase the amperage by 20 milliamperes every 10 seconds till capture is obtained.

For unconscious patients with bradycardia, set the rate at 100 beats per minute and 200 milliamperes.

Once electrical capture is obtained, check for mechanical capture (a pulse).

On-line medical consultation is indicated for all pediatric patients prior to using an external pacemaker.

Remove nitroglycerin patches prior to using an external pacemaker.

IV PROCEDURES

GENERAL CONSIDERATIONS

IVs will be started by the Advanced Emergency Medical Technician and/or the Paramedic as allowed by each patient care protocol.

IV placement must not delay transport of any critical patient involved in trauma.

Generally, no more than two (2) attempts or more than five minutes should be spent attempting an IV. If unable to initiate IV line, transport patient and notify hospital IV was not able to be started.

IVs may be started on patients of any age providing there are adequate veins and patient's condition warrants an IV

Blood draws for hospital laboratory testing will not be required under this protocol.

IV SOLUTION

Normal saline (0.9% sodium chloride) will be the only fluid used in the pre-hospital setting under this protocol. Normal saline is provided in 250 ml bags and 3 ml syringes for TKO IVs and 1000 ml bag for fluid replacement.

The normal saline is to be infused as directed by specific treatment protocols.

IV TUBING

The following tubing will be used for this protocol:

- A. For all adult fluid lines, use regular administration set (15 drop/min) tubing.
- B. For child and infant patients, use 15 gtt/min set with 3-way stopcock and extension tubing.
- C. For all patients needing TKO lines, use extension tubing with pre-pierced adapter as saline lock.

MECHANICS FOR STARTING PERIPHERAL IV

- A. Prepare equipment
- B. The initial attempt should be the dorsum of hand. Further attempts should proceed to the forearm; do not use the antecubital fossa unless necessary
- C. Apply tourniquet
- D. Cleanse site with Betadine[®] solution and alcohol. (The only time Betadine[®] is not required is when the patient has an allergy to Betadine[®] type solutions)
- E. First attempt at insertion on an adult patient should be:
 - 1. 16 ga IV catheter for trauma patients
 - 2. 18 ga IV catheter for medical patients

IV PROCEDURES (cont'd)

- G. Attach IV tubing
- H. Secure IV using appropriate measures to insure stability of the line
- I. Check for signs of infiltration
- J. Adjust flow rate
- K. Document IV procedure on run sheet.

MECHANICS FOR STARTING EXTERNAL JUGULAR IV LINE

- A. Locate external jugular vein
- B. Cleanse site with Betadine® solution and alcohol. (The only time Betadine® is not required is when the patient has an allergy to Betadine® type solutions)
- C. Select IV catheter
 - 1. On adults, a large bore (16ga or 18ga) may be used
 - 2. Use 2" IV catheter when available
- D. Position yourself at patient's head
- E. Turn patient's head so as to maximally expose vein and minimize interference of jaw
- F. Cannulate the vein by directing the needle caudal at an angle nearly parallel to the neck
- G. Attach IV tubing
- H. Secure IV using appropriate measures to insure stability of the line
- I. Check for signs of infiltration
- J. Adjust flow rate
- K. Document IV procedure on run sheet.

MECHANICS OF STARTING SALINE LOCK

- A. Prepare equipment: Attach pre-pierced adapter to extension tubing, Inject saline (approx. 1 ml) in to tubing and leave syringe attached to tubing
- B. The initial attempt should be the dorsum of hand. Further attempts should proceed to the forearm; the antecubital fossa should not be used for saline locks.
- C. Apply tourniquet
- D. Cleanse site with Betadine® solution and alcohol. (The only time Betadine® is not required is when the patient has an allergy to Betadine® type solutions)

IV PROCEDURES (cont'd)

- E. A 20 ga IV catheter should be used for all saline locks.
- G. Attach IV tubing and push remaining saline through tubing and catheter. Remove syringe.
- H. Secure IV using appropriate measures to insure stability of the line
- I. Check for signs of infiltration
- J. Document IV procedure on run sheet.

DOCUMENTATION

ALL IV attempts must be recorded on run sheet and include the following:

- A. When successful:
 - i. time IV was started
 - ii. type and amount of solution hung and infused during run
 - iii. flow rate
 - iv. size of catheter or needle used
 - v. location of IV site
 - vi. Initials of all EMS professionals who attempted and/or started IV
 - vii. Signature of EMS professionals in-charge of run
- B. When unsuccessful:
 - i. time IV was attempted
 - ii. type of solution
 - iii. size of catheter or needle used
 - iv. location of attempted site
 - v. Initials of all EMS professionals who attempted and/or started IV
 - vi. Signature of EMS professionals in-charge of run
- C. Record all IV medications given
 - i. Name of medication
 - ii. Dosage and amount given
 - iii. Time ordered (if applicable)
 - iv. Time given
 - v. Initial of all EMS professionals who administered medication
 - vi. Signature of EMS professionals in-charge of run

INTRAOSSIOUS INFUSION

INDICATIONS

- A. To establish parenteral means to administer fluids, blood products and parenteral medications, and to draw blood (except for CBCs)
- B. May be used in any instance that an IV route would be appropriate
- C. Its use should be considered after two IV attempts have failed or if no peripheral IV sites are found
- D. This procedure is indicated primarily in children

CONTRAINDICATIONS

- A. Osteomyelitis or cellulitis over the proposed site
- B. Fracture at or above the proposed site
- C. Previous IO attempt at the proposed site

EQUIPMENT

- A. 16ga intraosseous Needle
- B. Betadine® and Alcohol
- C. IV setup
- D. Syringe for aspiration
- C. Lidocaine prn

PROCEDURE

- A. Prepare as for a surgical procedure, using sterile technique
- B. Attempt to have feet in flexed position against board or sandbag
- C. If the patient is alert, consider using a local anesthetic
- D. The preferred site is the proximal anteromedial tibia, 1-3 cm below the tibial tuberosity
Secondary site is the distal femur, midline, 3 cm above condyle
- E. Needle insertion varies between seventy and ninety degree angle to the skin surface, approximately one to two finger breadths distal to the tibial tuberosity. With a straight steady push and/or rotary motion, push needle through subcutaneous tissue and bone until a drop or pop is felt.
- F. Once the needle has reached the bone marrow, saline should be injected via syringe to clear needle and then aspiration should be attempted. The infusion should flow freely without evidence of subcutaneous infiltration.

INTRAOSSEROUS INFUSION (cont'd)

- G. The needle should feel firm in position and stand upright without support.
- H. Infusion via this route is the same as venous access without limit to rate of administration, drugs pushed or fluid type infused.
- I. After removing needle (for successful or unsuccessful attempt), apply pressure to area for five minutes and apply dressing to area.
- J. Intraosseous infusions of fluid may cause subcutaneous infiltration, osteomyelitis or subcutaneous infections.

Proximal tibial site for intraosseous infusion.

Distal femur site for intraosseous infusion.

Distal tibial site for intraosseous infusion.

MAINTENANCE OF BLOOD ADMINISTRATION

Blood products may be infusing into patients that require interfacility transport. Blood contains hemoglobin, the protein that carries oxygen to the vital organs and tissues of the body. Blood administration is indicated for hypovolemic shock that is unresponsive to crystalloid fluid bolus or when the estimated blood loss is obviously significant. The packed red blood cells that are most commonly available in the hospital setting has all of the other elements (plasma, serum antibodies, etc.) separated and removed.

The prehospital care provider must be able to recognize the clinical complications that may occur with blood administration. Blood is typically classified using two major blood groups systems, the ABO system and the Rh system. The classifications are based upon antigens and antibodies present in blood on a genetic level.

The ABO system includes four blood groups: A, B, AB, and O. The letter classification describes the presence of a genetic antigen present on the **red blood cell**. Antibodies to the other genetic antigens are present in the **serum**. Antibodies will destroy incompatible antigens. In other words, antibodies will destroy a red blood cell that has a conflicting antigen.

For example, a person with group A blood will have serum antibodies that destroy the B antigen. If a person with group A blood receives group B or AB blood, the anti-B serum antibodies will attack and destroy the group B or AB red blood cell causing a massive intravascular hemolysis (transfusion reaction). Therefore, a person with group A blood should never receive group B or AB blood.

Group O red blood cells are the only blood group that has no antigens. A person with group O blood has anti-A and anti-B serum antibodies in the serum. A person with group O blood will have a transfusion reaction if they receive group A, B, or AB blood. Individuals with group A, B, or AB blood can receive group O blood because it there are no antigens on the group O red blood cell.

Packed red blood cells are gathered by taking whole blood and removing all other blood components, including serum and the antibodies they contain. Group O packed red blood cells are inherently antigen-free and have all serum antibodies removed.

The Rh system is based on the presence or absence of the D (Rh) antigen. The red blood cells of the majority of the population have the D antigen and are classified as Rh-positive. Individuals who lack the D (Rh) antigen on the red blood cell are classified as Rh-negative.

Patients with Rh-negative blood will develop antibodies against the Rh-positive antigen if they receive Rh-positive blood. Once the antibodies against the Rh-positive antigen are formed, the patient with Rh-negative blood will develop a severe transfusion reaction and hemolytic anemia if they receive Rh-positive blood again. A small amount of exposure to Rh-positive blood is required to form antibodies in the serum of an Rh-negative patient. The small amount of placental blood exchange during the delivery of a baby places the Rh-negative mother at risk for having a “blue baby” if a subsequent fetus is Rh-positive.

Blood type is described by stating the ABO group and the Rh group, i.e. A-positive, AB-negative. The blood type of packed red blood cells which is essentially free of major antigens is O-negative. Thus, O-negative is considered the “universal donor” as all patients may receive this blood type with minimal chance of a transfusion reaction.

MAINTENANCE OF BLOOD TRANSFUSIONS (cont'd)

Packed red blood cells from the blood bank are stored under refrigeration and have a blood bank tag attached to the fluid bag. There are blood bank identification numbers on the blood bank tag as well as the requisition sheet accompanying the fluid bag. The nursing staff will check the identification numbers to insure that the numbers on the blood bag correspond to the numbers on the requisition sheet. They will document these identification numbers on the patient's record. The prehospital care provider should confirm that the blood bank identification numbers are included in the copies of the chart that accompanies the patient before the interfacility transfer is initiated.

Blood should be administered through an IV catheter that is 20 gauge or larger. The intravenous access for blood administration must be a dedicated IV line through which no other medication or solution other than normal saline may be infused. If medications have been administered through an IV, the IV should be flushed well prior to the initiation of the blood administration.

The patient should be constantly observed for clinical signs of a transfusion reaction or intravascular hemolysis. A transfusion reaction will occur if the patient's serum contains antibodies against an antigen in the transfused blood. Administration of type O-negative blood significantly reduces the risk of this event; however, there are several less significant blood types and antigen classifications genetically present in blood. Also, if the patient has had a prior remote blood transfusion, antibodies against the more minor blood antigens are more likely to be present in the patient's serum.

Symptoms of a transfusion reaction include nausea, flushing of the skin, chest and/or lumbar pain, anxiety, restlessness, tachypnea, tachycardia, and dark or bloody urine. If a patient develops a transfusion reaction, the blood administration should be terminated and medical direction should be notified **immediately**. The remaining packed blood cells should be secured and transported with the patient for further investigation. Documentation of the onset of symptoms, vital signs, and the blood bank identification numbers on the prehospital care report is imperative. Maintenance of kidney function after a transfusion reaction is imperative. Crystalloid fluids should be given liberally to maintain an adequate urine output.

NITRONOX®
(Nitrous Oxide - Oxygen Administration)

Nitronox® is a self-administered analgesic gas containing a mixture of 50% oxygen and 50% nitrous oxide. Nitronox® is supplied in a carrying case containing two cylinders; one of nitrous oxide and one containing oxygen, with a mixing valve and supply tubing. These agents are mixed on administration to deliver a 50% concentration of each to the patient. Negative pressure is required to open the valve, so the patient must have an airtight seal at the face mask.

INDICATIONS

Nitronox® should be given to any patient who is alert and complaining of severe pain.

Examples:

- Abdominal pain
- Chest pain secondary to infarction or angina
- Acute urinary retention
- Fractures
- Severe burns
- Kidney stones
- Musculoskeletal trauma

CONTRAINDICATIONS

Nitronox® is not to be used in patients with these conditions:

- Altered level of consciousness
- Head injuries
- Chest injuries (blunt or penetrating)
- Intoxication
- Maxillofacial injuries
- Psychiatric problems
- COPD (because of the 50% oxygen mixture)
- Pediatric patients under 12 years of age
- Pregnancy
- Respiratory distress

APPLICATION

- A. Instruct patients to administer Nitronox® to themselves by placing the mask tightly against their face and breathing deeply and slowly
- B. Allow mask to fall away from face spontaneously when effects are felt
- C. Check Blood Pressure - Nitronox® may cause the blood pressure to drop in some cases

SPECIAL CONSIDERATIONS

- A. Nitronox[®] should never be administered by the EMT, AEMT, or Paramedic. Only self-administration by the patient is to be used.
- B. Upon administration of Nitronox[®], constantly monitor patient to see he does not fall asleep with mask in place.
- C. The side effects of nitrous oxide, in addition to analgesia, include light-headedness, drowsiness, and very occasionally nausea and vomiting. Changes in heart rate and respiratory rate are minimal.
- D. Nitrous oxide and oxygen are both non-flammable gases, but both support combustion. For this reason do not use Nitronox[®] in areas where there is a combustion hazard.
- E. SPECIAL NOTE TO EMTs, AEMTs, AND PARAMEDICS:

There is an increased risk of liver cancer and birth defects to individuals who are exposed to repeated applications of nitrous oxide. For this reason, Nitronox[®] should be used in a well-ventilated environment.

SAFETY ISSUES

- A. The Nitronox[®] unit must be stored in the EMS vehicle with its gas cylinders in an "OFF" position when not in use
- B. The unit must not be used in any environment where:
 - 1. There are possible ignition sources
 - 2. Other patients are in close proximity (less than 10 ft. away)
 - 3. The room is small and no nitrous oxide alarm is monitoring the gas concentration in ambient air
- C. The unit should not be used if the mixture pressure is not in the 30-35 PSI range
- D. Any problem with the mechanical status of the apparatus shall be immediately reported to the person in charge, so appropriate evaluation and/or repair can be made before further use

PULSE OXIMETRY

GENERAL CONSIDERATIONS

Pulse oximetry is used in conjunction with other assessment processes to determine the actual available oxygen in the blood for use by body tissue. Pulse oximetry measures the oxygen saturation of the red blood cells, (%SpO₂).

Studies have shown that EMS personnel are fairly accurate in the assessment and treatment of patients in profound hypoxia. However in mild to moderate hypoxic states, EMS personnel sometimes do not react until the patient has progressed to profound hypoxia. Signs of progressive hypoxia need to be identified rapidly and the condition treated before profound hypoxia occurs.

Use of pulse oximetry in conjunction with other assessment processes may sometimes identify those patients in mild to moderate hypoxia, and with proper intervention profound hypoxia can be prevented.

If available, pulse oximetry should be used on all patients. Pulse oximetry should be maintained and evaluated until the patient is delivered to the Emergency Department.

REMEMBER, INITIATE NORMAL AIRWAY AND OXYGENATION SUPPORT REGARDLESS OF THE AVAILABILITY OF PULSE OXIMETRY.

NEVER BASE ANY TREATMENT OR OXYGEN THERAPY SOLELY ON THE READING FROM THE PULSE OXIMETER.

PROCEDURE

A. Select sensor and apply according to manufacturer's recommendations. The following should be noted:

1. Finger Clip Sensors - These are designed for spot-check monitoring of older pediatric and adult patients and/or continuous monitoring less than 30 minutes where patient movement is not expected.
 - a. Insert finger (preferably left or right index finger) completely into sensor, keeping fingernail side facing the sensor top. It is specifically recommended that the thumb not be used in the finger clip sensor.
 - b. For best results when using the finger clip in longer term monitoring or with active patients, secure the sensor cable independently from the sensor, preferably around the base of the finger. Make sure blood supply to the finger is not impaired by the application of the tape.

Finger Clip Sensor Positioning

PULSE OXIMETRY (cont'd)

2. Flex Sensor - This sensor is designed for monitoring pediatric and adult patients in which moderate patient movement is expected.
 - a. Position the sensor on the top and bottom of the end of the finger or toe. Place the light emitter portion on the finger/toe-nail side and the detector of the side opposite of the nail, making sure to align the emitter and detector through the tissue.
 - b. Secure the sensor with 3M Micropore® tape, making sure not to restrict blood flow. Attach the sensor cable independently at the base of the finger, again being careful not to restrict blood flow.

Infant Sensor Placement on Big Toe

3. Infant and Neonatal Sensors - These sensors are designed for continuous monitoring of infants and neonates since fingertip monitoring is impractical.
 - a. The infant sensor is designed for application on the big toe of infants greater than 2 kilograms (5 pounds).
 - b. The neonatal sensor is designed for application on the foot of infants less than 2 kilograms in weight.
 - c. Apply and secure these sensors as described for the flex sensor, being sure not to restrict blood supply to the monitored area.

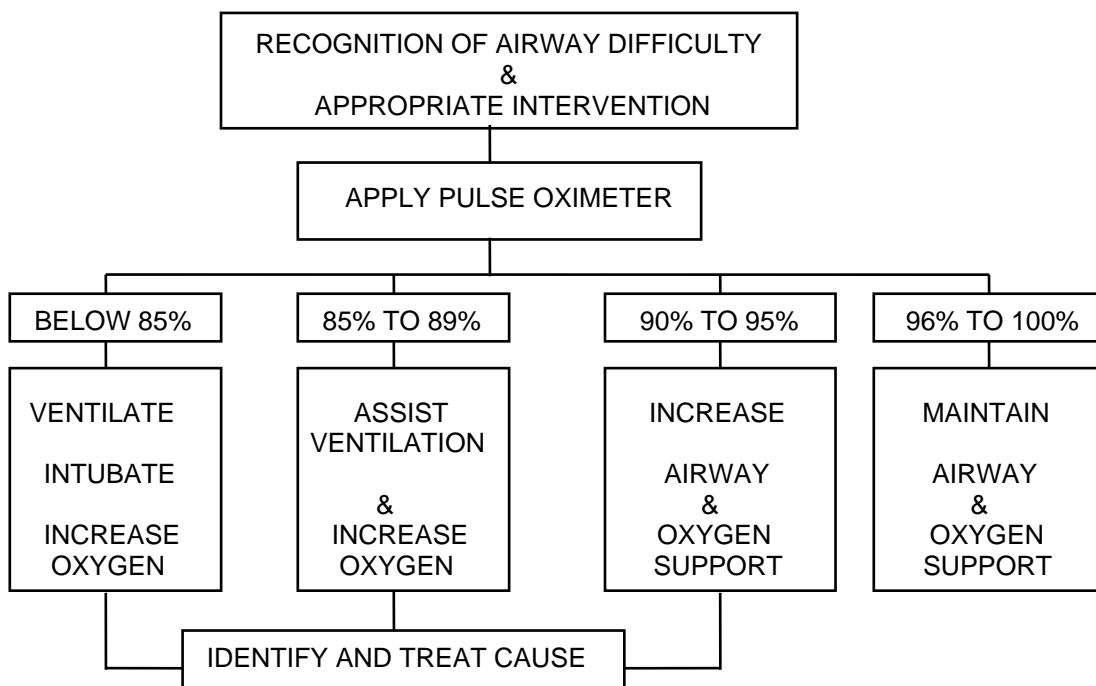

Infant and Neonatal Sensor Placement on Foot

PULSE OXIMETRY (cont'd)

4. Ear Clip Sensor - This sensor is used when finger clip sensing is not possible. Be sure to clean the ear lobe with alcohol before applying the sensor. Be aware pierced ears may allow some light to pass directly to the detector and result in an accurate reading.
 5. Reflectance Sensor - This sensor is used on well vascularized skin surfaces in adult patients only. This method is not preferred in the pre-hospital setting.
- B. Turn oximeter on and verify operation according to manufacturer's operating procedure.
 - C. A relative operation check can be achieved by applying the sensor to your own finger.
 - D. Always cleanse sensor site of blood and dirt for reliable reading. Some fingernail polishes may have to be removed to obtain a reading.
 - E. Apply sensor to patient and obtain reading.

Interpretation of Reading:

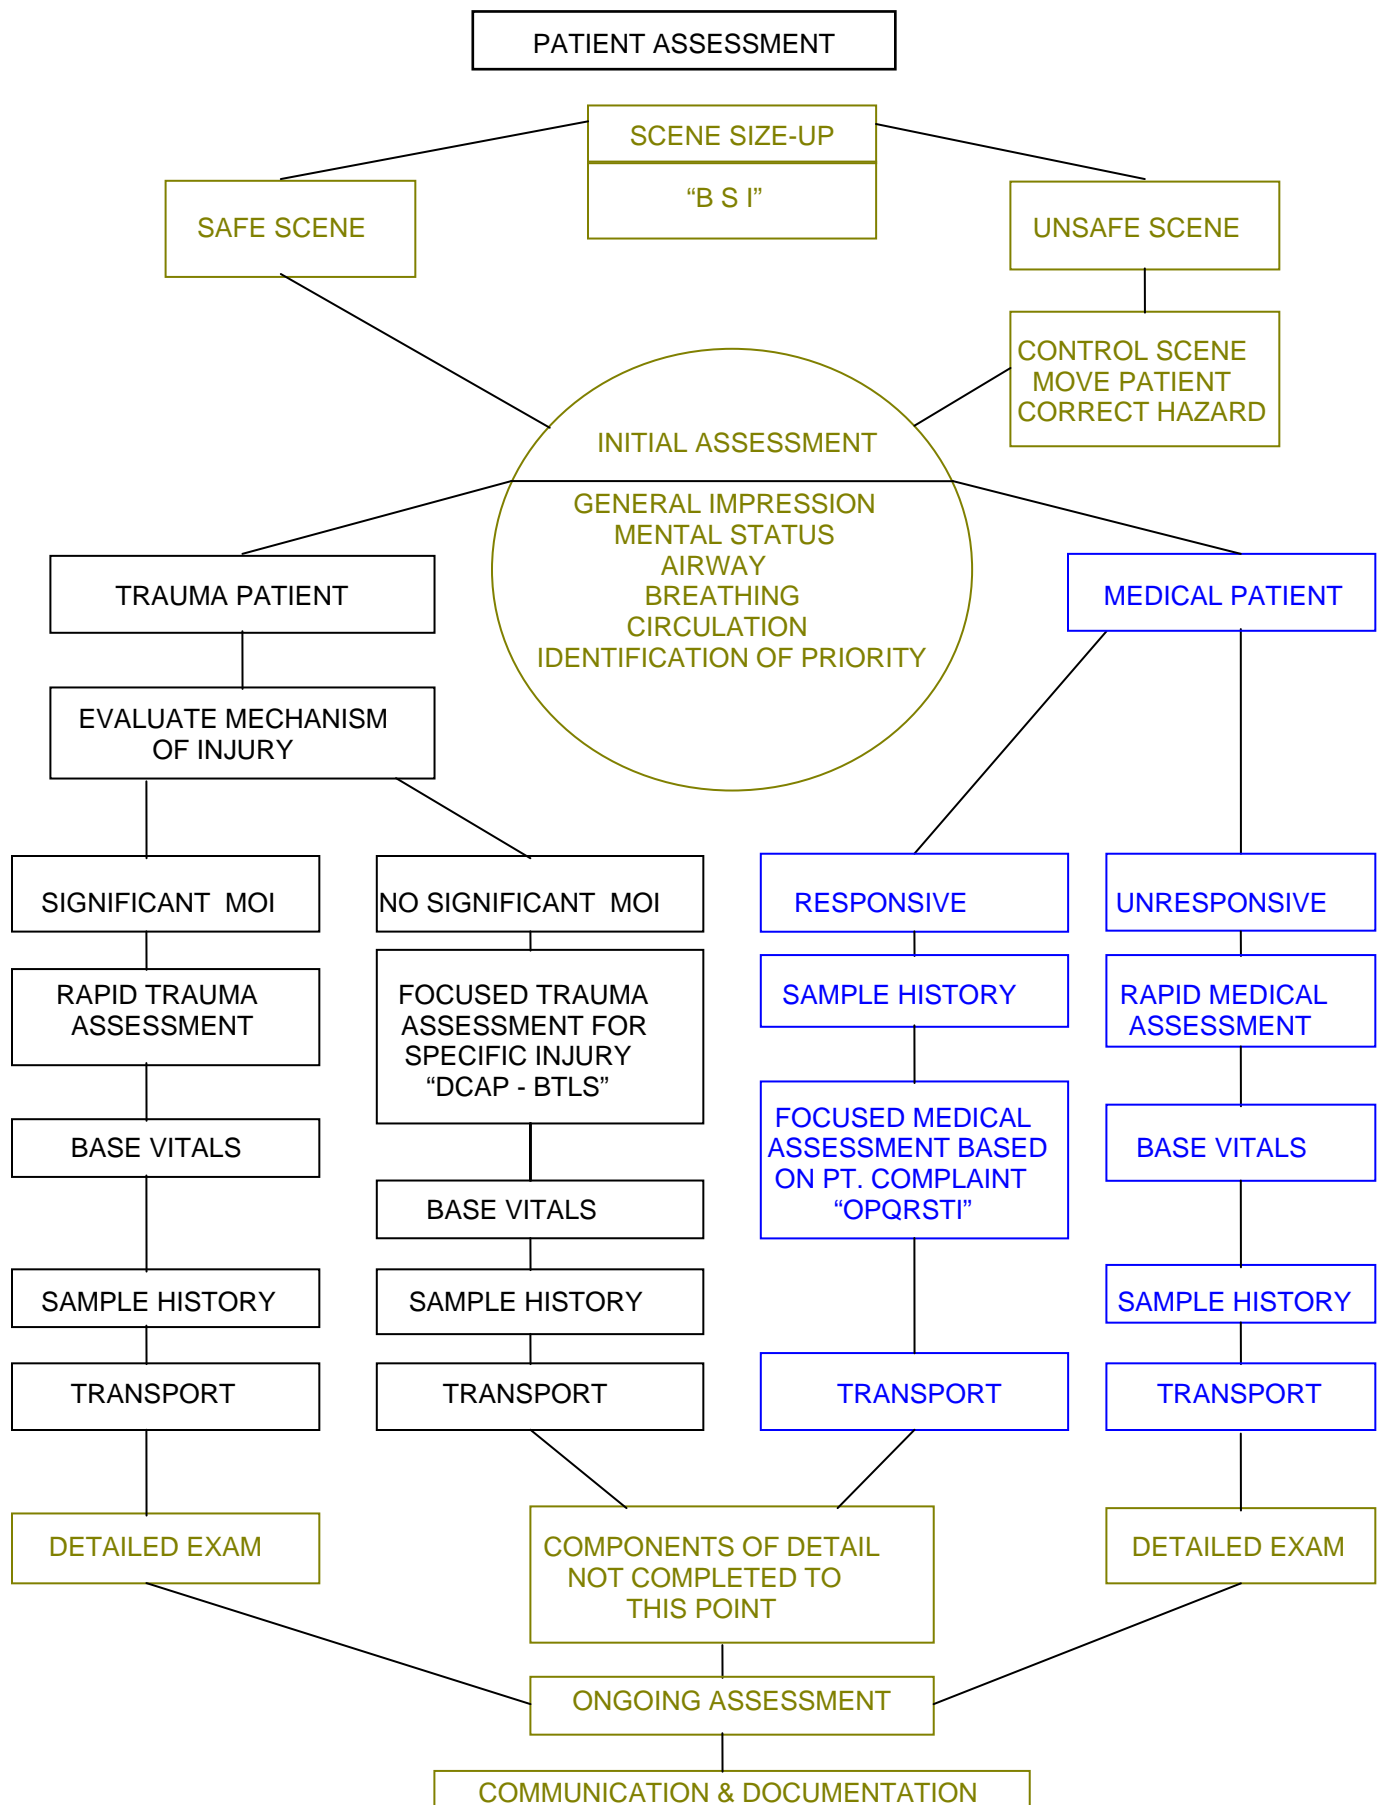

100% to 96%	Ideal Range - Maintain oxygen and airway support methods being used
95% to 90%	Mild to Moderate Hypoxemia - Check airway and increase oxygen support until ideal range is achieved
89% to 85%	Severe Hypoxemia - Aggressive airway and oxygen support is essential Look for and treat cause: i.e. COPD, metabolic imbalance, peripheral vascular shutdown
Below 85%	BE PREPARED TO INTUBATE AND/OR ASSIST VENTILATION

PULSE OXIMETRY (cont'd)

CONSIDERATIONS

- A. Hypovolemic, hypothermic, and peripheral vascular disease patients may not be suitable candidates for pulse oximetry due to peripheral shutdown
- B. Be aware that there may be a 30 to 60 second delay between changes in %SpO₂ conditions and pulse oximetry readings
- C. A pulse must be detected by the oximeter to determine the %SpO₂
- D. Pulse oximetry is not indicated in carbon monoxide poisoning
- E. COPD patients will normally have a low %SpO₂ and should not be treated in accordance with this guideline

MEDICATION APPENDIX

MEDICATION LIST

Adenosine (Adenocard®)
Amiodarone
Aspirin
Atropine Sulfate
25% Dextrose (D25)
50% Dextrose (D50)
Diazepam (Valium®)
Diphenhydramine (Benadryl®)
Dopamine (Inotropin®)
Epinephrine (Adrenalin®)
Furosemide (Lasix®)
Glucagon
Lidocaine (Xylocaine®) 2%
Methylprednisolone (Solumedrol®)
Midazolam (Versed®)
Morphine Sulfate
Naloxone (Narcan®)
Nitroglycerin
Oxygen (O₂)
Procainamide
Proventil®/Ventolin® (Albuterol)
Sodium Bicarbonate
Sotalol (Betapace®)
Vasopressin (Pitressin®)

PHARMACOLOGY REVIEW

I. ACTIONS OF DRUGS

- A. Local effects
- B. Systemic effects

II. EFFECTS DEPENDS UPON

- A. Age of patient
- B. Condition of patient
- C. Dosage
- D. Route of administration

III. ROUTE OF ADMINISTRATION

- A. Intravenous (IV)
 - * Most rapidly effective
 - * Most dangerous
 - * Give SLOWLY through an established IV line
- B. Intramuscular (IM)
 - * Takes longer to act
 - * Longer duration of action
 - * Deltoid or gluteus maximus Site
 - * Absorption VERY dependent on blood flow
- C. Subcutaneous (SQ)
 - * Slower and more prolonged absorption
 - * Under skin of upper arms, thigh, abdomen
- D. Inhalation
 - * Bronchodilators
 - * Steroids
- E. Endotracheal
 - * Epinephrine, atropine, lidocaine, Narcan[®]
 - * Dilute usual IV dose with 10 ml of sterile water
- F. Sublingual (SL)
 - * Rapid absorption

- G. Oral
 - * Ipecac
 - * Charcoal
- H. Rectal
 - * Rapid but unpredictable absorption
- I. Intracardiac
 - * Dangerous
 - * No advantage over IV or endotracheal routes
 - * Dilute usual IV dose with 10ml of sterile water

IV. RATES OF ABSORPTION

- A. "Directly related to route of administration"
 - * IV -- Fastest
 - * IM
 - * SQ
 - * Oral -- Slowest

V. ELIMINATION

- A. Many methods
- B. Usually metabolized by the liver
- C. Eliminated by the kidneys, lungs, skin

VI. TERMS

- A. Indications - Conditions for which the drug is used
- B. Contraindications - Conditions for which the drug should not be used
- C. Depressants - Lessens / decreases activity
- D. Stimulant - Increases activity
- E. Physiologic Action - Action from the body from a normal dose of the drug
- F. Therapeutic Action - Beneficial action expected
- G. Untoward Reaction - Harmful side effect
- H. Irritation - Damage to tissue
- I. Antagonism - Opposition between effects of drugs
- J. Cumulative Action - Increased action after several doses
- K. Tolerance - Decreased effects after repeated doses

- L. Synergism - Combined effects greater than sum of parts
- M. Potentiation - Enhancement of one drug by another
- N. Habituation - Drug necessary for feeling of "well being"
- O. Idiosyncrasy - Unexpected, abnormal response to a drug
- P. Hypersensitivity - Exaggerated response, allergy

VII. AUTONOMIC NERVOUS SYSTEM

Controls Automatic or Involuntary Actions

- A. Parasympathetic - Controls vegetative functions
- B. Sympathetic - "Flight or fight"

VIII. PARASYMPATHETIC NERVOUS SYSTEM

- A. Mediated by vagus nerve
- B. Acetylcholine is transmitter (cholinergic)
- C. Atropine is acetylcholine blocker

IX. SYMPATHETIC NERVOUS SYSTEM

- A. Mediated by nerves from sympathetic chain
- B. Norepinephrine is transmitter (adrenergic)
- C. Epinephrine is released from adrenals

X. SYMPATHETIC RECEPTORS

- A. Alpha (α)
- B. Beta (β)

XI. COMMON SYMPATHETIC AGENTS

- A. Isoproterenol (Isuprel[®]) - pure BETA
- B. Epinephrine (Adrenalin[®]) - predominately BETA
- C. Dobutamine (Dobutrex[®]) - predominately BETA, slight ALPHA
- D. Norepinephrine (Levophed[®]) - predominately ALPHA
- E. Dopamine (Intropin[®]) - BETA at low dose: ALPHA at high dose
- F. Metaraminol (Aramine[®]) - predominately ALPHA

G. Phenylephrine (Neo-Synephrine®) - pure ALPHA

XII. SYMPATHETIC BLOCKERS

A. Propranolol (Inderal®) - BETA BLOCKER

XIII. DRUG ADMINISTRATION

Appropriate:

1. Indication
2. Order
3. Dose
4. Observation
5. Dilution
6. Route
7. Rate

ADENOSINE (ADENOCARD[®])

THERAPEUTIC EFFECTS:	Adenosine slows tachycardias associated with the AV node via modulation of the autonomic nervous system without causing negative inotropic effects. It acts directly on sinus pacemaker cells and vagal nerve terminals to decrease chronotropic and dromotropic activity. Adenosine is the drug of choice for paroxysmal supraventricular tachycardia (PSVT) and can be used diagnostically for stable, wide-complex tachycardias of unknown type after two doses of lidocaine.	
INDICATIONS:	Conversion of PSVT to sinus rhythm	
CONTRAINDICATIONS:	Second or third degree AV block, or sick-sinus syndrome Hypersensitivity to adenosine	
SIDE EFFECTS:	Facial flushing Lightheadedness Paresthesia Headache Diaphoresis Palpitations	Chest pain Hypotension Shortness of breath Nausea Metallic taste
HOW SUPPLIED:	6 mg/2 ml and 12 mg/4 ml vials or prefilled syringes	
ADULT DOSAGE:	Initial Dose:	6 mg rapid IVP (over 1-3 sec.) immediately followed with a 20 ml saline flush
	Repeat Dose:	If no response is observed after 1-2 min., administer 12 mg rapid IVP (over 1-3 sec.) immediately followed with a 20 ml saline flush
PEDIATRIC DOSAGE:	Initial Dose:	0.1 mg/kg rapid IVP followed with a 10 ml saline flush
	Repeat Dose:	If no response is observed after 1-2 min., administer 0.2 mg/kg rapid IVP followed with a 10 ml saline flush

AMIODARONE

THERAPEUTIC ACTIONS:	Amiodarone prevents or suppresses cardiac arrhythmias by prolongation of the myocardial action potential duration and refractory period and via non-competitive alpha- and beta-adrenergic inhibition.
INDICATIONS:	Recurrent ventricular fibrillation Recurrent hemodynamically unstable ventricular tachycardia
CONTRAINDICATIONS:	Severe sinus node dysfunction Marked sinus bradycardia Second-degree or third-degree atrio-ventricular heart block Bradycardia resulting in syncope (except for patients with pacemakers) Known allergy or hypersensitivity to amiodarone
SIDE EFFECTS:	Hypotension, particularly with repeated doses Hypotension, heart block and/or severe bradycardia if administered with other Drugs that prolong the QT interval (i.e. procainamide)
HOW SUPPLIED:	150 mg and 300 mg vials
ADMINISTRATION:	Can be administered via IV or IO routes
DOSAGE:	ADULT: 300 mg IV or IO (150 mg IV or IO for second dose) PEDIATRIC: 5 mg/kg IV or IO

ASPIRIN

THERAPEUTIC EFFECTS:	Aspirin exhibits analgesic, anti-inflammatory and antipyretic activity. Due to aspirin's ability to inhibit platelet aggregation and cause vasodilation, there is a decreased likelihood of thrombosis.
INDICATIONS:	Cardiac related chest pain
CONTRAINDICATIONS:	Aspirin hypersensitivity Active or history of GI lesions Impaired renal function Pregnancy Trauma
SIDE EFFECTS:	GI bleeds Mucosal lesions Bronchial spasm in some asthma patients
HOW SUPPLIED:	325 mg coated tablets
ADMINISTRATION:	Orally
ADULT DOSAGE:	160-325 mg upon onset of cardiac signs and symptoms

ATROPINE SULFATE

THERAPEUTIC EFFECTS: By blocking parasympathetic (vagal) action on the heart, atropine increases the rate of discharge by the sinus node, enhances conduction through the AV junction, and accelerates the heart rate, thereby improving cardiac output. In addition, by speeding up a slow heart to a normal rate, atropine reduces the chances of ectopic activity in the ventricles and thus of ventricular fibrillation.

Atropine is most effective in reversing bradycardia due to increased parasympathetic tone or to morphine; it is less effective in treating bradycardias due to actual damage to the AV or SA node.

INDICATIONS: SINUS BRADYCARDIA when accompanied by hypotension

SECOND and THIRD DEGREE HEART BLOCK when accompanied by bradycardia

In some cases of ASYSTOLE to remove any type of heart block

As an antidote in ORGANOPHOSPHATE POISONING (mega doses)

CONTRAINDICATIONS: Atrial flutter or atrial fibrillation where there is a rapid ventricular response

Glaucoma - narrow angle

Use with caution in myocardial infarction

SIDE EFFECTS: The patient should be warned that they may experience some of the following side effects and that these side effects are part of the drug's usual and expected actions:

- * Blurred vision, headache, pupillary dilatation
- * Dry mouth, thirst
- * Flushing of the skin

HOW SUPPLIED: Prefilled syringes containing 1 mg in 10 ml

ADMINISTRATION: In the field, atropine is usually given intravenously for bradycardia

For organophosphate poisoning, a combination of intravenous and intramuscular administration is commonly used

In resuscitation from cardiac arrest, if an intravenous route cannot be established, atropine may be given through the endotracheal tube

ATROPINE SULFATE (cont)

ADULT DOSAGE: In bradycardia: 0.5 mg IV, repeated at 5-minute intervals until the desired heart rate is achieved

The total dose should not, however, exceed 3 mg. (Except in organophosphates)

Doses smaller than 0.5 mg, or a dose given too slowly, may slow rather than speed up the heart rate

Excessive doses may precipitate ventricular tachycardia or fibrillation

* For asystole, 1mg IV, repeated in 5 minutes if asystole persists.

* For organophosphate poisoning: 2 mg IM and 1 mg IV.

The IV dose may be repeated every 5 to 10 minutes as needed until a decrease in secretions is observed

Endotracheal Dosage: 1.0-2.0 mg diluted in 10ml NS

PEDIATRIC DOSAGE: In bradycardia: 0.02 mg/kg; may be repeated one time

Minimum dose - 0.1 mg

Maximum dose - 0.5 mg in child/1.0mg in adolescent

Endotracheal Dosage: 0.02 mg/kg diluted in 10ml NS

25% DEXTROSE (D25)

THERAPEUTIC EFFECTS:	Restores circulating blood sugar level to normal in states of hypoglycemia. Acts transiently as an osmotic diuretic.
INDICATIONS:	When blood sugar reading is below 70 with Glucometer in symptomatic patients: to treat coma caused by HYPOGLYCEMIA; to treat COMA OF UNKNOWN CAUSE; to treat STATUS EPILEPTICUS OF UNCERTAIN CAUSE; and some cases of REFRACTORY CARDIAC ARREST
CONTRAINDICATIONS:	Avoid in cases of presumed intracranial hemorrhage
SIDE EFFECTS:	Will cause tissue necrosis if it infiltrates; should therefore be given only through a good, rapidly flowing IV line
HOW SUPPLIED:	Prefilled syringes and vials containing 10 ml of 25% dextrose (2.5 gm of dextrose)
ADMINISTRATION:	Given intravenously, <u>through a free-flowing intravenous line</u> , preferably in a large vein. If possible, draw blood for serum glucose determinations before administering the dextrose.
PEDIATRIC DOSAGE:	2 ml/kg in children under 50 pounds Newborn dose: 1 ml/kg

50% DEXTROSE (D50)

THERAPEUTIC EFFECTS:	Restores circulating blood sugar level to normal in states of hypoglycemia. Acts transiently as an osmotic diuretic.
INDICATIONS:	When blood sugar reading is below 70 with glucometer in symptomatic patients: Treatment of coma caused by HYPOGLYCEMIA; Treatment of COMA OF UNKNOWN CAUSE; Treatment of STATUS EPILEPTICUS OF UNCERTAIN CAUSE; and Treatment of some cases of REFRACTORY CARDIAC ARREST
CONTRAINDICATIONS:	Avoid in cases of presumed intracranial hemorrhage
SIDE EFFECTS:	May precipitate severe neurologic symptoms in alcoholics For this reason, when given to a known alcoholic, should be accompanied by <u>thiamine</u> , 50 mg IV and 50 mg IM, which will prevent this neurologic syndrome Will cause tissue necrosis if it infiltrates; should therefore be given only through a good, rapidly flowing IV line
HOW SUPPLIED:	Prefilled syringes and vials containing 50 ml of 50% dextrose (25 gm of dextrose)
ADMINISTRATION:	Given intravenously, <u>through a free-flowing intravenous line</u> , preferably in a large vein If possible, draw blood for serum glucose determinations before administering the dextrose
ADULT DOSAGE:	50 ml of 50% dextrose (25 g) as a bolus IV
PEDIATRIC DOSAGE:	1 ml/kg in children over 50 pounds

DIAZEPAM (VALIUM®)

THERAPEUTIC EFFECTS:	Through its depressant action on the central nervous system, can terminate some seizures. Also has a calming effect in anxiety or violent behavior.
INDICATIONS:	Status epilepticus Sedation (e.g. prior to cardioversion in conscious patients)
CONTRAINDICATIONS:	Allergy to benzodiazepines Dangerous with prior ingestion of alcohol or other sedative drug Respiratory depression from any source Hypotension
SIDE EFFECTS:	Hypotension Confusion, unconsciousness In some patients, especially the elderly, the critically ill, and those with pulmonary disease, may cause respiratory arrest and/or cardiac arrest.
HOW SUPPLIED:	In prefilled syringes and ampules of 2 ml and in vials of 10 ml, frequently in a concentration of 5 mg/ml.
ADMINISTRATION:	Intravenously in slow titrated doses or rectally. Although it can be given IM, the absorption is poor and unpredictable.
ADULT DOSAGE:	2-5 mg IV or per rectum, titrate additional doses up to a total of 10 mg.
PEDIATRIC DOSAGE:	0.2-0.3 mg/kg IV to a maximum dose of 10 mg. 0.5 mg/kg per rectum to a maximum dose of 10 mg.

DIPHENHYDRAMINE (BENADRYL[®])

THERAPEUTIC EFFECTS:	Blocks histamine effects in allergic reactions Sedative Reverses side effects of some phenothiazines.
INDICATIONS:	Allergic reactions As an adjunct to epinephrine in the treatment of anaphylactic shock Extrapyramidal reactions (Parkinson-like movements) secondary to phenothiazines
CONTRAINDICATIONS:	Narrow angle (acute) glaucoma Prostate enlargement Ulcer disease with symptoms of obstruction
SIDE EFFECTS:	Drowsiness, confusion Blurring of vision Dry mouth Thickening of bronchial secretions
HOW SUPPLIED:	In vials of 10 or 30 ml, containing 10 mg/ml In vials of 10 ml containing 50 mg/ml In ampules of 1 ml containing 50 mg/ml In prefilled syringes containing 50 mg in 1 ml
ADULT DOSAGE:	25-50 mg IVP or IM
PEDIATRIC DOSAGE:	1 mg/kg IV or IM to a maximum dose of 50 mg

DOPAMINE (INTROPIN®)

THERAPEUTIC EFFECTS:	<p>β-sympathetic drug causes an increase in the force and rate of cardiac contractions as well as dilation of renal and mesenteric arteries.</p> <p>This latter effect promotes urine flow, and for this reason, dopamine is sometimes preferred over norepinephrine (which constricts renal arteries) in shock.</p> <p>Dopamine causes less increase in oxygen consumption by the myocardium than does isoproterenol.</p> <p>At low doses, the β effects of dopamine predominate. At high doses, dopamine has α effects as well and thus will cause vasoconstriction.</p>
INDICATIONS:	<p>To increase cardiac output in cardiogenic shock while maintaining good renal perfusion</p>
CONTRAINDICATIONS:	<p>Should not be used as first-line therapy in hypotension caused by hypovolemia (e.g., hemorrhagic shock), where volume replacement should precede the use of vasopressors</p> <p>Pheochromocytoma (a tumor that produces epinephrine and/or related substances)</p> <p>Should not be given in the presence of uncorrected tachyarrhythmia or ventricular fibrillation</p> <p>Do not mix with bicarbonate since dopamine may be inactivated by alkaline solutions</p>
SIDE EFFECTS:	<p>Ectopic beats, palpitations, tachycardia</p> <p>Nausea, vomiting</p> <p>Dyspnea, angina</p> <p>Headache</p>
HOW SUPPLIED:	<p>400 mg in 250 ml D5W</p>
ADMINISTRATION:	<p>Given by titrated intravenous infusion (microdrip infusion set)</p>
ADULT DOSAGE:	<p>Start the infusion at a rate of 5 mcg/kg/min and titrate the infusion until adequate heart rate, blood pressure, and level of consciousness are achieved.</p>

EPINEPHRINE (ADRENALIN[®])

THERAPEUTIC EFFECTS:	<p>In cardiac arrest, may restore electric activity in asystole; increases myocardial contractility; and decreases the threshold for defibrillation--all through its actions as a beta sympathetic agent.</p> <p>In addition, the alpha effects of epinephrine, causing vasoconstriction, elevate the perfusion pressure and may thus improve coronary blood flow during external cardiac compressions.</p> <p>In anaphylaxis, acts as a bronchodilator (beta effect) and helps maintain blood pressure (alpha effect).</p>
INDICATIONS:	<p>In CARDIAC ARREST, to restore electric activity in asystole or to enhance defibrillation potential in ventricular fibrillation; also to elevate systemic vascular resistance and thereby improve perfusion pressure during resuscitation.</p> <p>To treat the life-threatening symptoms of ANAPHYLAXIS</p> <p>To treat acute attacks of ASTHMA</p>
CONTRAINDICATIONS:	<p>Must be used with caution in patients with angina, hypertension, or hyperthyroidism</p> <p>THERE ARE NO CONTRAINDICATIONS TO THE USE OF EPINEPHRINE IN THE SITUATION OF CARDIAC ARREST OR ANAPHYLACTIC SHOCK</p>
SIDE EFFECTS:	<p>In a conscious patient, may cause <u>palpitations</u>, from tachycardia or ectopic beats, and <u>elevations of blood pressure</u> (which may not be desirable if the patient is already hypertensive)</p> <p>The asthmatic with preexisting heart disease may experience <u>dysrhythmias</u> if treated with epinephrine</p>
HOW SUPPLIED:	<p>Prefilled syringes containing 1 mg in 10 ml (1:10,000 solution)</p> <p>Ampules containing 1 mg in 1 ml (1:1,000 solution)</p> <p>Multi-dose vial: 30 mg in 30 ml (1:1,000 solution)</p>
ADMINISTRATION:	<p>In <u>cardiac arrest</u>, epinephrine is given intravenously in an escalating dose every 3 minutes</p> <p>If an IV route cannot be established quickly, the drug may be instilled in the tracheo-bronchial tree via catheter through an endotracheal tube</p> <p>For <u>anaphylactic reactions</u>, epinephrine is given via the intramuscular route</p>

EPINEPHRINE (ADRENALIN®) (Continued)

ADULT DOSAGE:

In cardiac arrest situations:

Initial Dose: 1.0 mg (10 ml of 1:10,000 solution) IVP

Second Dose: 1.0 mg (10 ml of 1:10,000) or 3 mg (3 ml of 1:1,000) IVP

Third and subsequent dose: 5 mg (5 ml of 1:1,000) IVP

Endotracheal dose: 2 mg (1:1,000) diluted with 10 ml normal saline given via catheter during ventilation

In anaphylactic reactions:

Mild reactions: 0.3 mg intramuscular, (0.3 ml of a 1:1,000 solution)
(Do not, however, inject fingers or toes)

Another 0.3 ml is given SQ can be administered on another extremity

Severe reactions, with shock: 0.5 mg slow IV. (5 ml of a 1:10,000 solution)

For mild to moderate asthmatic attacks: 0.3 to 0.5 ml of a 1:1,000 solution, SQ

PEDIATRIC DOSAGE:

Bradycardia: 0.01 mg/kg 1:10,000 every 3 minutes

Cardiac Arrest:

Initial Dose: 0.01 mg/kg 1: 10,000 IVP or IO push

Second & Subsequent Dose: 0.1 mg/kg 1:1000 IVP or IO push

Endotracheal: 0.1 mg/kg 1:1,000 diluted with 2 ml of NS

Newborn Cardiac Arrest: 0.02 mg/kg 1:10,000 every 5 min. By IV, IO

Allergic Reaction/Asthma: 0.01 mg/kg 1:1,000 SQ Max 0.3 mg. No response and IV in place, 0.1 mg/kg 1:10,000 IVP

FUROSEMIDE (LASIX[®])

THERAPEUTIC EFFECTS:	<p>Potent diuretic, causing the excretion of large volumes of urine within 5 to 30 minutes of administration, thus useful in ridding the body of excess fluid in conditions such as congestive heart failure (CHF).</p> <p>However, furosemide may be useful in long range transports of patients in marked heart failure (especially catheterized patients) where there is a need to begin definitive therapy before the patient arrives at the hospital.</p>
INDICATIONS:	To reverse fluid overload associated with CONGESTIVE HEART FAILURE and PULMONARY EDEMA
CONTRAINDICATIONS:	<p>Should not be given to pregnant women</p> <p>Hypokalemia may be suspected in a patient who has been on chronic diuretic therapy or whose EKG shows prominent P waves, diminished T waves, and the presence of U waves</p>
SIDE EFFECTS:	Immediate side effects may include <u>nausea</u> and <u>vomiting</u> , <u>potassium depletion</u> (with attendant cardiac dysrhythmias), and <u>dehydration</u>
HOW SUPPLIED:	Pre-filled syringes of 10 ml in a concentration of 10 mg/ml
ADMINISTRATION:	In the field, furosemide is given intravenously
ADULT DOSAGE:	40 mg SLOWLY IV (injected over 1-2 min) If a response is not obtained, a second dose of 60 to 80 mg may be given in 30 minutes.

GLUCAGON

THERAPEUTIC EFFECTS:	<p>Accelerates the breakdown of glycogen to glucose in the liver, causing an increase in blood glucose level.</p> <p>Glucagon also relaxes the smooth muscle of the GI tract</p> <p>Glucagon is helpful, in hypoglycemia only if the liver glycogen is available. Because glucagon is of little or no help in states of starvation, adrenal insufficiency, or chronic hypoglycemia, glucose should be considered for the treatment of hypoglycemia.</p>
INDICATIONS:	<p>For the treatment of hypoglycemia when IV Dextrose is not available</p> <p>Anaphylaxis</p>
CONTRAINDICATIONS:	<p>Glucagon is contraindicated in patients with known hypersensitivity to it or in patients with pheochromocytoma</p>
SIDE EFFECTS:	<p>Glucagon is relatively free of adverse reactions except for occasional nausea and vomiting which may also occur with hypoglycemia</p> <p>Generalized allergic reactions including urticaria, respiratory distress and hypotension, have been reported in patients who receive glucagon by injection</p>
HOW SUPPLIED:	<p>Vials of 1 mg glucagon with 1 ml of diluting solution</p>
ADMINISTRATION:	<p>For adults and for children weighing more than 20 kg, administration may be by subcutaneous intramuscular or intravenous injection</p> <p>Glucagon must be reconstituted with dilution solution provided and used immediately. If dose is higher than 2 mg, reconstitute with sterile water for injection and use immediately</p> <p>Glucagon is compatible with dextrose solutions, but precipitates may form in solutions of sodium chloride, potassium chloride or calcium chloride</p>
ADULT DOSAGE:	<p>In hypoglycemia, 0.5 to 1.0 mg IV, SC or IM injection. Response is usually seen in 5 to 20 minutes. If response is delayed, dose may be repeated 1 to 2 times</p>
PEDIATRIC DOSAGE:	<p>In hypoglycemia for children weighing more than 20 kg, 0.5 to 1.0 mg IV, SC or IM injection. Response is usually seen in 5 to 20 minutes. If response is delayed, dose may be repeated 1 to 2 times</p>

LIDOCAINE (XYLOCAINE[®]) 2%

THERAPEUTIC EFFECTS:	Suppresses ventricular ectopic activity by decreasing the excitability of heart muscle and the cardiac conduction system.
INDICATIONS:	<p>Lidocaine is the drug of first choice:</p> <p>To SUPPRESS PREMATURE VENTRICULAR CONTRACTIONS (PVCs) in the appropriate setting</p> <p>To PREVENT RECURRENCE OF VENTRICULAR FIBRILLATION after electric conversion</p> <p>To treat VENTRICULAR TACHYCARDIA</p> <p>To suppress reflex rise in ICP during intubation</p>
CONTRAINDICATIONS:	<p>Known history of allergy to lidocaine or local anesthetics (e.g., Novocaine[®])</p> <p>Second or third degree heart block</p> <p>Sinus bradycardia or sinus arrest</p> <p>Idioventricular rhythm</p>
SIDE EFFECTS:	<p>By decreasing the force of cardiac contractions as well as decreasing peripheral resistance, may cause a <u>fall in cardiac output and blood pressure</u></p> <p>May cause <u>numbness</u>, <u>drowsiness</u>, or <u>confusion</u> when given in high doses, especially to the elderly or to patients in heart failure, may cause <u>seizures</u></p>
HOW SUPPLIED:	Ampules and prefilled syringes containing 100 mg in 5 ml (20 mg/ml) for bolus injection
ADMINISTRATION:	<p>Given by intravenous bolus</p> <p>Reduce the dosage (both bolus and infusion) by half for patients in congestive heart failure or shock and for patients over 70 years old</p> <p>If an intravenous route cannot be established, lidocaine may be given via catheter through an endotracheal tube</p>
ADULT DOSAGE:	<p>1.5 mg/kg IV push, followed by 50 mg bolus every 20 minutes</p> <p>1 mg/kg IV push prior to intubation of head injured patient</p>
PEDIATRIC DOSAGE:	Ventricular fibrillation: 1 mg/kg IVP, IO push or ET

METHYLPREDNISOLONE (SOLUMEDROL[®])

THERAPEUTIC EFFECT:	Methylprednisolone is a synthetic glucocorticoid that is used as an anti-inflammatory or immunosuppressive agent. Glucocorticoids are naturally occurring hormones that prevent or suppress inflammation and immune responses when administered at pharmacological doses. These drugs have very little mineralocorticoid activity and are therefore not used to manage adrenal insufficiency.
INDICATIONS:	Wheezing
CONTRAINDICATIONS:	Corticosteroid hypersensitivity Fungal infection
SIDE EFFECTS:	Hypertension Impaired wound healing Fluid retention Increased risk of infection Muscle weakness Osteoporosis
HOW SUPPLIED:	Injectable solution: 40 mg, 80 mg, 125 mg, 500 mg, 1g, 2g, 20 mg/ml, 40 mg/ml, 80 mg/ml
ADMINISTRATION:	IV or IM
ADULT DOSE:	125 mg IV or IM .
PEDIATRIC DOSE:	0.5-1 mg/kg IV or IM

MIDAZOLAM (VERSED®)

THERAPEUTIC EFFECTS:	May potentiate the effects of GABA, depress the CNS, and suppress the spread of seizure activity.
INDICATIONS:	Seizures Sedation
CONTRAINDICATIONS:	Hypersensitivity to the medication Narrow angle glaucoma
SIDE EFFECTS:	Hypotension Respiratory depression Amnesia
HOW SUPPLIED:	5 mg/2 ml
ADMINISTRATION:	Intravenous Intramuscular Intranasal
ADULT DOSAGE:	2-5 mg IVP every 5 minutes as needed 10 mg IN
PEDIATRIC DOSAGE:	0.1m mg/kg IV, IO, or IM

MORPHINE SULFATE

THERAPEUTIC EFFECTS:	Primary use is as an analgesic Helps to allay the anxiety associated with pulmonary edema.
INDICATIONS:	To treat the anxiety associated with PULMONARY EDEMA in CONGESTIVE HEART FAILURE To RELIEVE PAIN in myocardial infarction and other, selected conditions
CONTRAINDICATIONS:	Marked hypotension. Respiratory depression, except that caused by pulmonary edema, where the drug may be used if ventilatory support is provided.
SIDE EFFECTS:	<u>Hypotension</u> (most likely in volume depleted patients). Increased vagal tone, leading to <u>bradycardia</u> . (This effect can be reversed with atropine.) <u>Respiratory depression</u> . (This effect can be reversed with naloxone.) <u>Nausea and vomiting</u> .
HOW SUPPLIED:	Prefilled (Tubex®) syringes containing 10mg.
ADMINISTRATION:	Given by titrated intravenous injection. If hypotension occurs, keep the patient flat, and do not give more of the drug. Watch for respiratory depression.
ADULT DOSAGE:	2 to 5 mg by IV push every 5 to 30 minutes until the desired therapeutic effect is achieved. Do not exceed 15 mg in the field.

NALOXONE (NARCAN[®])

THERAPEUTIC EFFECTS:	<p>Specific antidote for narcotic agents.</p> <p>Reverses the actions of all narcotic drugs including heroin, morphine, methadone, codeine, Demerol[®], Dilaudid[®], Darvon[®], paregoric, and Percodan[®].</p> <p>Naloxone is thus effective in counteracting the effects of overdose from any of these agents, although large doses are required to reverse the effects of Darvon overdose.</p> <p>Naloxone will reverse stupor, coma, respiratory depression, etc. when these are due to narcotic overdose.</p>
INDICATIONS:	<p>To treat known NARCOTIC OVERDOSE or coma suspected to be due to narcotic overdose.</p>
CONTRAINDICATIONS:	<p>None</p>
SIDE EFFECTS:	<p>Too rapid administration may precipitate <u>projectile vomiting</u> and <u>ventricular dysrhythmias</u>.</p> <p>Administration to people who are physically dependent on narcotics may cause an acute withdrawal syndrome.</p> <p>For this reason, naloxone should be given very slowly, using improvement of respiratory status as an end point.</p> <p>In general, the duration of action of naloxone is shorter than that of the narcotics it is used to counteract.</p> <p>Thus, the patient who has been successfully roused with naloxone may fall back into stupor or coma as the naloxone wears off.</p> <p>These patients must therefore be watched closely, and the dose of naloxone should be repeated as necessary.</p> <p>Has been reported to cause pulmonary edema and sudden death in rare cases.</p>
HOW SUPPLIED:	<p>2 mg in 2 ml prefilled syringe.</p>

NALOXONE (NARCAN[®]) (cont'd)

ADMINISTRATION:	<p>In the field, given slowly by slow intravenous injection.</p> <p>As soon as there is improvement in the respirations, stop giving the drug.</p> <p>It is preferable that the patient NOT wake up fully in the field, as these patients may be violent when brought abruptly out of coma.</p> <p>USE RESPIRATIONS AS A GUIDE.</p> <p>If there is no response to two doses, suspect overdose with another, non-narcotic drug.</p>
ADULT DOSAGE:	<p>Initial dose: 2 mg Administer this solution VERY SLOWLY IV while monitoring the rate and depth of the patient's respirations.</p> <p>If there is no response to the full dose of naloxone, it may be repeated in 5 minutes in the same fashion.</p>
PEDIATRIC DOSAGE:	<p>0.1 mg/kg</p> <p>Newborn dose (narcotic dependent with decreased respiration):</p> <p>0.1 mg/kg every 3 minutes until respiration is improved.</p>

NITROGLYCERIN

THERAPEUTIC EFFECTS:	<p>The primary pharmacologic effect of nitroglycerin and related drugs is to relax smooth muscle, and the effects of nitroglycerin on the cardiovascular system are chiefly due to relaxation of <u>vascular</u> smooth muscle (hence vasodilatation).</p> <p>Nitroglycerin provides relief of pain in angina, probably by dilating coronary arteries and thereby increasing blood flow through them as well as by decreasing myocardial oxygen demand.</p> <p>Through its vasodilatation action on peripheral vessels, nitroglycerin promotes pooling of the blood in the systemic circulation and decreases the resistance against which the heart has to pump (the afterload); these effects may be useful in treating congestive heart failure.</p>
INDICATIONS:	<p>To relieve the pain of ANGINA.</p> <p>To treat selected cases of PULMONARY EDEMA due to LEFT HEART FAILURE</p>
CONTRAINDICATIONS:	<p>Use with caution in presumed right ventricular myocardial infarction.</p>
SIDE EFFECTS:	<p>Transient, throbbing <u>headache</u>.</p> <p><u>Hypotension</u></p> <p><u>Dizziness, weakness</u></p>
HOW SUPPLIED:	<p>Many forms, including ointment, spray, tablets, sustained release capsules.</p> <p>For use in the field, tablets or spray of 0.4 mg strength are preferred.</p>
ADMINISTRATION:	<p>Given sublingually (under tongue).</p> <p>The patient should be semi-sitting or recumbent.</p> <p>Monitor blood pressure and be prepared for hypotension.</p>
ADULT DOSAGE:	<p>One 0.4 mg tablet or spray under the tongue.</p> <p>May repeat once every 5 minutes as long as blood pressure remains normal.</p>

OXYGEN (O₂)

THERAPEUTIC EFFECTS:	Reverses the deleterious effects of hypoxemia on the brain, heart, and other vital organs.
INDICATIONS:	<p>Any condition in which global or local hypoxemia may be present:</p> <p>CARDIAC or RESPIRATORY ARREST (given with artificial ventilation). DYSPNEA or RESPIRATORY DISTRESS from any cause. CHEST PAIN. SHOCK. COMA from any cause. CHEST TRAUMA. NEAR-DROWNING. PULMONARY EDEMA. TOXIC INHALATIONS (smoke, chemicals, carbon monoxide). ACUTE ASTHMATIC ATTACK. ACUTE DECOMPENSATION OF COPD. STROKE, HEAD INJURY. REPEATED SEIZURES. Any patient in CRITICAL CONDITION.</p>
CONTRAINDICATIONS:	<p>None.</p> <p>May depress respirations in rare patients with chronic obstructive pulmonary disease. This is <u>not</u> a contraindication to its use, but simply means that such patients must be watched closely and assisted to breathe if the respiratory rate declines.</p>
SIDE EFFECTS:	None when given for short periods to adults (less than 24 hrs)
HOW SUPPLIED:	As a compressed gas in cylinders of varying sizes.
ADMINISTRATION:	<p>Administered by inhalation from a dosage mask, nasal cannula, endotracheal tube, etc.</p> <p>A patent airway and adequate ventilation must be ensured.</p>
ADULT DOSAGE:	Depends on the condition being treated. For cardiac arrest and other critical conditions, 100% oxygen should be given as soon as possible.

PROCAINAMIDE

THERAPEUTIC EFFECTS: Suppresses diastolic repolarization by reducing the automaticity of all myocardial pacemakers and slowing intraventricular conduction.

INDICATIONS: Ventricular fibrillation or pulseless ventricular tachycardia that reoccurs after periods of non-ventricular fibrillation rhythms.

CONTRAINDICATIONS: Complete or first degree heart block, presence of congestive heart failure, torsades de pointes, patients with lupus or myasthenia gravis, patients taking quinidine or disopyramide.

SIDE EFFECTS: Hypotension, widening of the QRS complex, heart block.

HOW SUPPLIED: 1000 mg/10 ml

ADMINISTRATION: Intravenously as an infusion.

ADULT DOSAGE: Infuse at 20 mg/min up to a total dose of 17 mg/kg to load the patient with procainamide, then infuse at 1 to 4 mg/min for patients with normal renal function. For patients with renal failure, the total loading dose is 12 mg/kg followed by an infusion of 1 mg/min.

PROVENTIL[®] / VENTOLIN[®] (ALBUTEROL)

THERAPEUTIC EFFECTS:	Beta-2 agonist (stimulator), dilates smooth muscle, bronchodilator
INDICATIONS:	Shortness of breath caused by bronchoconstriction May help transiently decrease potassium levels in patients with hyperkalemia
CONTRAINDICATIONS:	<ul style="list-style-type: none">* Allergy to drug* Excessive prior use of beta stimulants* Shortness of breath not from bronchoconstriction
SIDE EFFECTS:	<ul style="list-style-type: none">* Nervousness* Weakness* Tremor* Increased heart rate
HOW SUPPLIED:	Unit dose 2.5 mg vials (3 ml)
ADMINISTRATION:	By inhalation through a breathing aerosol device.
ADULT DOSAGE:	2.5 mg in NS via aerosol device with oxygen at 8 liters per minute.
PEDIATRIC DOSAGE:	2.5 mg (3 ml) in aerosol device with oxygen at 8 liters per minute

SODIUM BICARBONATE

THERAPEUTIC EFFECTS:	By neutralizing excess acid, helps return the blood towards a physiologic pH, in which normal metabolic processes and sympathomimetic agents (such as epinephrine) work more effectively.
INDICATIONS:	<p>To treat severe METABOLIC ACIDOSIS</p> <p>To treat HYPERKALEMIA (high serum potassium)</p> <p>To promote the excretion of some types of drugs taken in OVERDOSE.</p>
CONTRAINDICATIONS:	None
PRECAUTIONS:	<p>Because each meq of bicarbonate comes along with a meq of sodium, sodium bicarbonate has the same effect as any other salt-containing infusion, i.e., it increases the vascular volume.</p> <p>Three 50 ml syringes of sodium bicarbonate (1 meq/ml) contain approximately the same amount of salt as 1 liter of normal saline.</p> <p>Patients in borderline heart failure cannot tolerate salt loads of this magnitude.</p>
SIDE EFFECTS:	<p>Administration of sodium bicarbonate lowers serum potassium.</p> <p>In some cases, this is the desired effect, as when bicarbonate is used to treat hyperkalemia.</p> <p>However, in cardiac patients, if the potassium falls too low, the heart becomes irritable, and dysrhythmias may occur.</p> <p>This is especially likely in patients taking diuretics.</p> <p>Sodium bicarbonate administration transiently raises the arterial carbon dioxide level, and thus its administration must be accompanied by adequate ventilation.</p>
HOW SUPPLIED:	Vials and prefilled syringes of 50 ml, containing 1 meq/ml.
ADMINISTRATION:	Given by intravenous bolus injection

SODIUM BICARBONATE (cont'd)

ADULT DOSAGE:

For cardiac arrest:

If used at all, 1 meq/kg after the first 10 minutes of CPR.

Acidosis should thereafter be prevented with adequate ventilation.

Do not give bicarbonate in the same syringe with epinephrine or calcium.

For other conditions: As ordered by physician.

PEDIATRIC DOSAGE:

Cardiac Arrest:

1 meq/kg diluted with 1 ml/kg NS

Newborn: 0.5 meq/kg diluted with .5 ml/kg NS

SOTALOL (BETAPACE[®])

THERAPEUTIC EFFECTS: Sotalol is a β -blocker that also inhibits potassium channels at the cellular level resulting in prolongation of PR and QT intervals.

INDICATIONS: Wide complex ventricular tachycardia.

CONTRAINDICATIONS: Asthma, congestive heart failure, COPD, second or third degree AV block

SIDE EFFECTS: Bradycardia, prolongation of QT intervals, dizziness, dyspnea

HOW SUPPLIED: Injectable solution 15 mg/ml

ADMINISTRATION: Intravenous

ADULT DOSAGE: 1.5 mg/kg (to a maximum of 100 mg) IV over 5 minutes.

,

VASOPRESSIN (PITRESSIN[®])

THERAPEUTIC EFFECTS: Vasoconstriction, as an α agonist, with shunting of the blood to the brain and the heart.

INDICATIONS: Ventricular fibrillation, pulseless ventricular tachycardia

CONTRAINDICATIONS: Known hypersensitivity. This is a naturally occurring substance in the body; hence, adverse or allergic reactions are extremely rare.

SIDE EFFECTS: Mesenteric or limb ischemia secondary to arterial vasospasm, nausea, vomiting, diarrhea

HOW SUPPLIED: 20 units/1 ml

ADMINISTRATION: Intravenous

ADULT DOSAGE: 40 units IVP

STATE OF OHIO

EMS BOARD

Emergency Medical Services Pediatric Guidelines and Procedures Manual

INTRODUCTION

On behalf of the State Board of Emergency Medical Services, the Ohio Emergency Medical Services for Children Program was charged with drafting proposed pediatric guidelines that EMS agencies could use in setting a standard for emergency medical services to the children of Ohio.

Please note that the proposed guidelines are not mandatory for Ohio EMS agencies. The guidelines and procedures manual is meant to assist in the development of local protocols. It is the Board's hope that individual regions or agencies will review these guidelines with their medical directors and legal counsel when drafting their own individualized protocols.

February 6, 2012

USING THE PEDIATRIC GUIDELINES

The pediatric guidelines are color coded for quick and easy reference, and represent the scope of practice as recommended by the Ohio EMSC Committee. In some cases, this differs from Ohio's scope of practice. Consult your medical director should questions arise regarding scope of practice.

Please see the color coded key below to determine how to use the guidelines.

PARAMEDICS may perform all instructions coded:

ADVANCED EMERGENCY MEDICAL TECHNICIANS (AEMT) may perform all instructions coded:

EMERGENCY MEDICAL TECHNICIANS (EMT) may perform all instructions coded:

EMERGENCY MEDICAL RESPONDERS (EMR) may perform all instructions coded:

MEDICAL CONTROL RECOMMENDATION

TABLE OF CONTENTS

PEDIATRIC PROTOCOL

Pediatric Altered Level of Consciousness	3
Arrhythmias	7
Pediatric Bradycardia	12
Pediatric Narrow Complex Tachycardia	13
Pediatric Stable Wide Complex Tachycardia	14
Pediatric Unstable Wide Complex Tachycardia	15
Cardiac Arrest	16
Pediatric Cardiac Arrest: AED Use-Ages 1-8 Years	20
Pediatric Cardiac Arrest: AED Use-Age 8 Years and Older	21
Pediatric Cardiac Arrest	22
Child Abuse / Neglect	23
Fever	26
Fluid and Drug Administration	27
Multiple Trauma	28
Newborn Resuscitation	29
Pediatric Respiratory Distress	34
Upper Airway Obstruction	34
Lower Airway Obstruction	36
Pediatric Seizure	40
Pediatric Shock	43
Special Needs Children	47
Emergencies in Children with Tracheostomies	49
Emergencies in Children with In-Dwelling Central Lines	51
Emergencies in Children with Gastrostomy Tubes	53
Emergencies in Children on Ventilators	55
APPENDIX	
Normal Pediatric Vital Signs	57
Pediatric Coma Scoring	57
Pediatric Prehospital Medications	58

PEDIATRIC ALTERED LEVEL OF CONSCIOUSNESS

EMR

- A. Assess ABCs. Manually stabilize cervical spine as per Multiple Trauma Protocol if cause of unconsciousness is unknown.
- B. If not breathing, assist ventilation with bag-valve-mask while administering 100% oxygen or provide mouth to mouth ventilation using barrier device.
- C. If breathing, administer 100% oxygen by NRB mask.
- D. Evaluate patient's general appearance, relevant history of condition and determine:
 - Allergies
 - Medication
 - Past Medical History - especially, diabetic, seizures, stroke, head injury, drug abuse
 - Last Meal
 - Events leading to present illness
- E. Obtain and document a pulse oximetry and/or capnography measurement.

EMT

- A. Determine blood sugar level by available means.
 - 1. If blood sugar is less than 70 mg/dl, administer oral glucose if alert. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl.

PATIENT MUST HAVE A GAG REFLEX.
 - 2. If blood sugar is greater than 400 mg/dl, TRANSPORT.
- B. If unable to check blood sugar or blood sugar is between 70 mg/dl and 400 mg/dl, establish communications with Medical Control and advise of patient condition.
- C. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.

AEMT

- A. Assist EMS professionals; obtain patient condition and circumstances.
- B. Check heart rhythm.
- C. Start IV saline, TKO.
- D. If any of the following are present: unresponsiveness, dehydrated or dry appearance, tachycardia, low BP, poor capillary refill and/or blood sugar is above 400 mg/dl, IV fluid bolus 20 ml/kg of normal saline.

PEDIATRIC ALTERED LEVEL OF CONSCIOUSNESS (cont'd)

- E. Determine blood sugar level by available means. Treat accordingly:
1. Blood sugar less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose (D25)
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl
 2. Blood sugar greater than 400 mg/dl and signs of hypoperfusion are present, administer an IV fluid bolus:
 - a. 20 ml/kg of saline
 - b. May be repeated if no response in 10 minutes.
- F. If blood sugar is normal, respirations are impaired, or patient does not respond to dextrose or fluid bolus, administer Narcan® 0.1 mg/kg IV, IO, ET. Refer to most current version of length based drug treatment guide (e.g. BROSELOW® PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage.
- If patient improves somewhat with Narcan® but is not fully awake, contact medical control for repeat dose.
- G. Re-evaluate patient condition, contact medical control, and transport to the hospital.
- H. In some cases, patient may require restraint, and should not be transported until appropriately restrained.

DO NOT DELAY TRANSPORT

PARAMEDIC

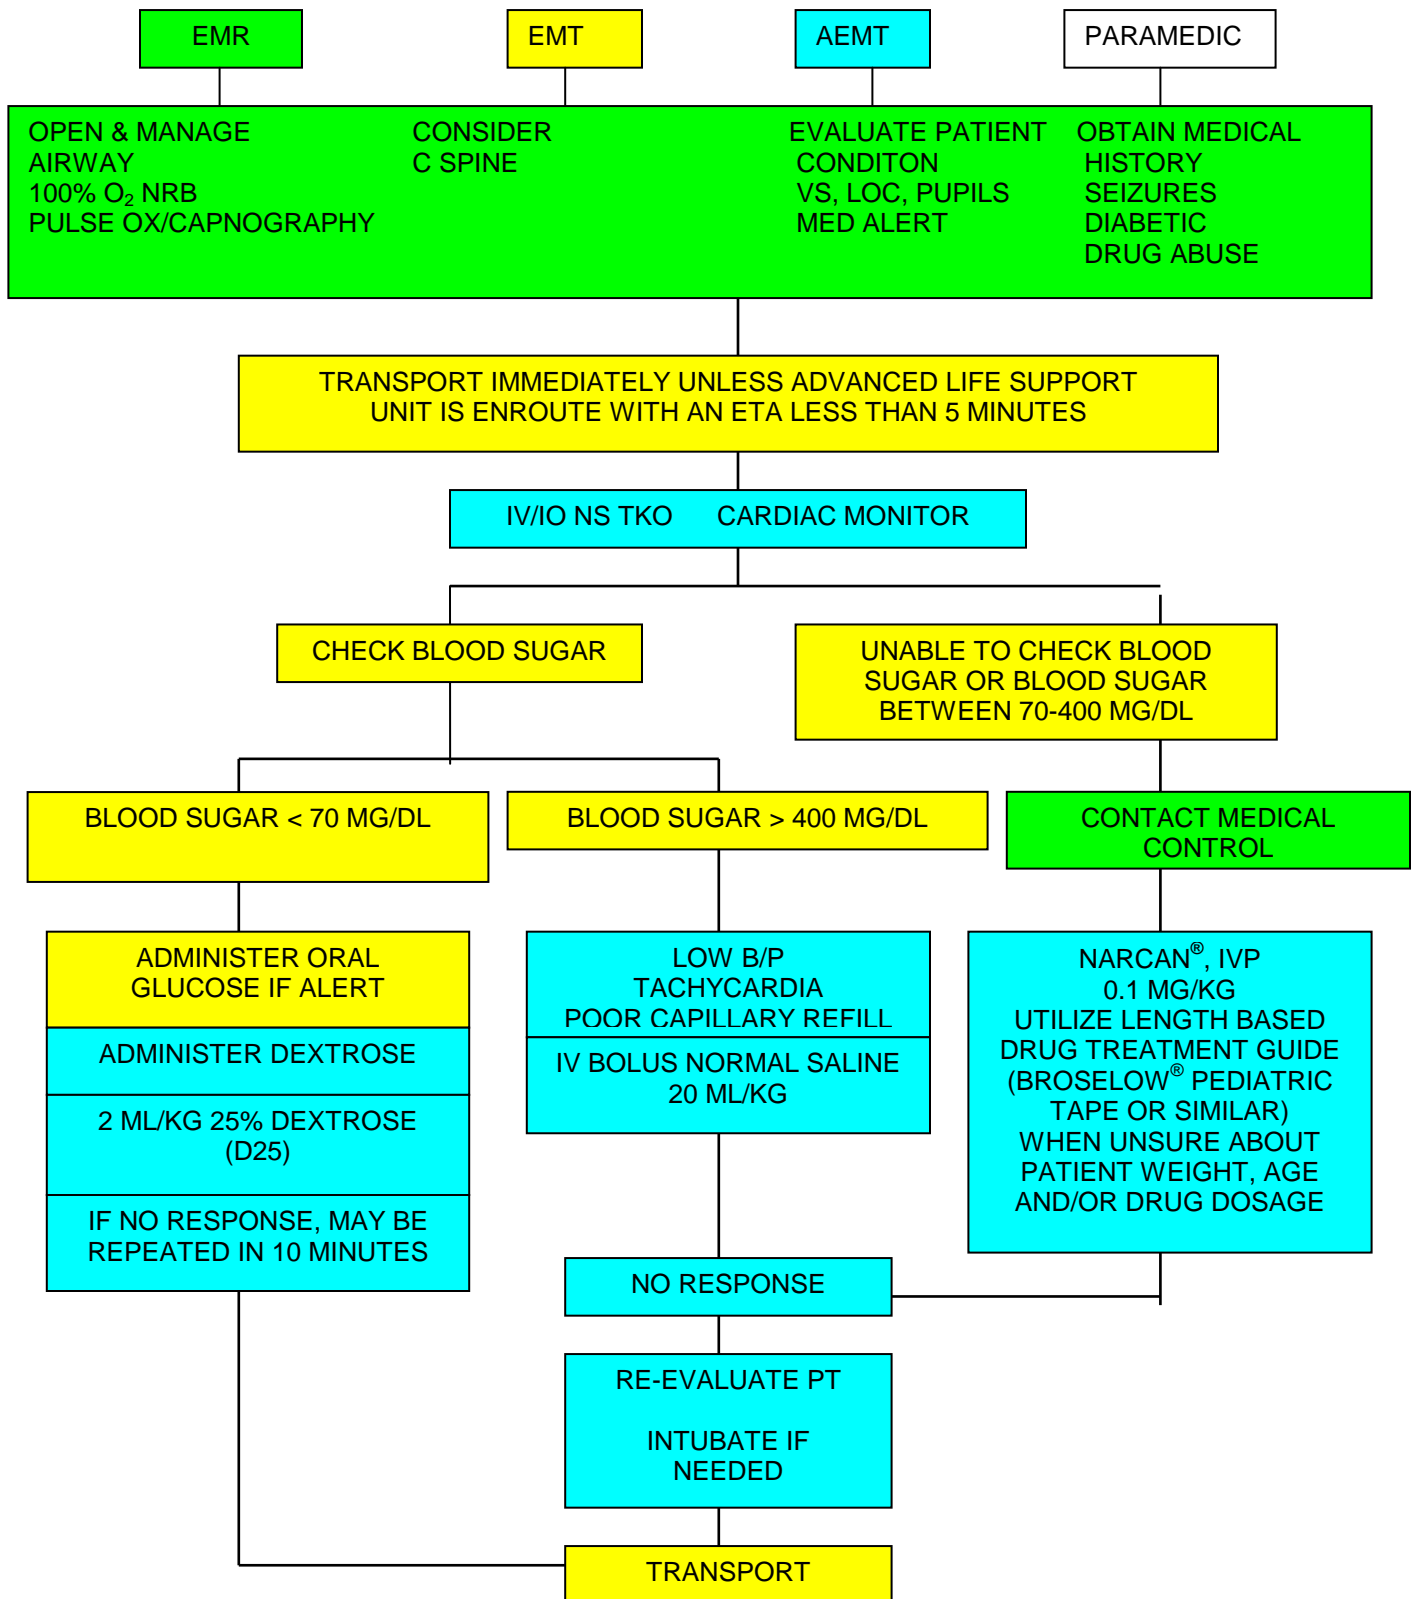

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Assess airway adequacy and assist ventilation with bag-valve-mask while administering 100% oxygen. May consider intubation.
- C. Check heart rhythm.
- D. Start IV/IO of normal saline. If any of the following are present: unresponsiveness, dehydrated or dry appearance, tachycardia, low BP, or poor capillary refill, administer a fluid bolus of 20 ml/kg normal saline IV/IO push.
- E. Determine blood sugar level by available means. Treat accordingly:
1. Blood sugar less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose (D25)
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl
 2. Blood sugar greater than 400 mg/dl and signs of hypoperfusion are present, administer an IV fluid bolus:

PEDIATRIC ALTERED LEVEL OF CONSCIOUSNESS (cont'd)

- a. 20 ml/kg of normal saline
 - b. May be repeated if no response in 10 minutes.
- F. If blood sugar is normal, respirations are impaired, or patient does not respond to dextrose or fluid bolus, administer Narcan[®] 0.1 mg/kg IV, IO, ET. Refer to most current version of length based drug treatment guide (e.g. BROSELOW[®] PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage.

If patient improves somewhat with Narcan[®] but is not fully awake, contact medical control for repeat dose.
- G. Re-evaluate patient condition, contact medical control, and transport to the hospital.
- H. In some cases, patient may require restraint, and should not be transported until appropriately restrained.

PEDIATRIC ALTERED LEVEL OF CONSCIOUSNESS

PEDIATRIC ARRHYTHMIAS

GENERAL CONSIDERATIONS

- A. In the treatment of cardiac arrhythmia, current American Heart Association guidelines were referred to for protocol development.
- B. Life-threatening cardiac rhythm disturbances in children are more frequently the result rather than the cause of acute cardiovascular emergencies with hypoxia being the primary cause.
- C. In infants and children, an arrhythmia should be treated if:
 - 1. the arrhythmia compromises cardiac output (poor perfusion), or
 - 2. the arrhythmia has the potential for degenerating into a rhythm that compromises cardiac output
- D. Initial therapy in children will consist of proper ventilation and oxygenation, along with the assessment of cardiac output
- E. Quality CPR consists of pushing hard with compression of the chest to $\geq 1/3$ of the anteroposterior diameter of the chest, compressions of at least 100 per minute, and allowing complete chest recoil.
- F. For two-person CPR, the rate of chest compressions without the presence of an advanced airway is 3:1 in newborns with a suspected primary etiology of respiratory compromise, and 15:2 in children and newborns in arrest with a suspected cardiac etiology. If an advanced airway is in place, 8-10 breaths per minute should be administered with continuous chest compressions.
- G. Transport is essential when advanced cardiac life support is not available within ten minutes of receipt of the call
- H. Refer to length based drug treatment guide (e.g. BROSELOW[®] PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage.

EMR

- A. Per current American Heart Association Pediatric Basic Life Support guidelines, establish unresponsiveness, activate the emergency response system, get the AED/defibrillator, and check for a pulse.
- B. If the patient has a pulse and is not breathing or only gasping, give one breath every three minutes and recheck the pulse every 2 minutes. Assist ventilation with bag-valve-mask while administering 100% oxygen or provide mouth to mouth ventilation using barrier device.
- C. If the patient does not have a pulse, immediately provide quality CPR for two minutes, apply the AED, analyze the rhythm, and deliver a shock if indicated. If the patient remains unresponsive, resume quality CPR for two minutes and analyze the rhythm after each two minute cycle of CPR until the patient starts to Move or ALS providers assume care
- D. Immobilize the patient's cervical spine only if clinically indicated.

EMT

- A. Open and manage the airway and provide 100% oxygen by NRB mask
 - 1. Assist ventilations if rate is below or above normal limits and signs of hypoxia are present
 - 2. Apply pulse oximeter and obtain reading
- B. If patient show signs of decreased cardiac output (decreased LOC, poor capillary refill, low blood pressure,) and a heart rate less than 60 bpm that is unimproved with oxygenation, start quality CPR.

PEDIATRIC ARRHYTHMIAS (cont'd)

- C. Evaluate patient's general appearance and determine:
 - 1. Vital signs
 - 2. Level of consciousness
 - 3. Cardiac output
 - 4. Lung sounds
- D. Obtain relevant history of current condition.
- E. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.
- F. If cardiac monitor is available, and patient has an unusual and/or irregular heart rate or pulse, may assist the AEMT or Paramedic with the application of a cardiac monitor and the acquisition of a strip for interpretation by ED physician, during transport only.

AEMT

- A. Start IV normal saline (NS), TKO.
- B. Assess airway adequacy and assist ventilation with bag-valve-mask while administering 100% oxygen. May consider intubation.
- C. Apply monitor and determine arrhythmia.
- D. Treat arrhythmias as follows:
 - 1. Bradycardia. Treat only if:
 - a. Infant or child's heart rate < 60 bpm and the patient has poor perfusion.
 - b. Airway management and 100% oxygenation does not improve patient condition.
 - i. Begin quality CPR
 - ii. Transport immediately

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Assess airway adequacy and assist ventilation with bag-valve-mask while administering 100% oxygen. Perform appropriate airway management (airway adjuncts or intubation).
- C. Apply monitor and determine arrhythmia.
- D. Treat arrhythmias as follows:
 - 1. Bradycardia. Treat if:
 - a. Infant or child's heart rate < 60 bpm and patient has poor perfusion.
 - c. Airway management and 100% oxygenation does not improve patient condition.
 - i. Begin quality CPR

- ii. Administer epinephrine IV, IO, or ET every three to five minutes or until perfusion improves
 - (a) When IV or IO routes are available, administer 0.01 mg/kg (0.1 mL/kg) of 1:10,000
 - (b) When administering through ET tube, use 0.1 mg/kg (0.1 mL/kg) of epinephrine 1:1,000 ET that must be diluted with 3-5 ml of NS.
 - iii. If no response, administer atropine
 - (a) When IV or IO routes are available, 0.02 mg/kg. (minimum dose 0.1 mg, maximum single dose 0.5 mg)
 - (b) When administering through ET tube, administer 0.04 mg/kg
 - (c) Atropine may be repeated once if the patient is not improved in 3-5 minutes
 - (d) Refer to length based drug treatment guide (e.g. BROSELOW® PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage.
 - iv. Transport and contact medical control for possible cardiac pacing
2. Narrow Complex Tachycardia:
- a. If patient is asymptomatic, transport immediately.
 - b. Consider normal pulse for age of patient
 - d. Consider hypovolemia and follow Hypovolemic Shock Protocol.
 - d. Inquire about a history of Wolfe Parkinson White syndrome or other arrhythmias.
 - e. Consider vagal maneuver. Success of vagal maneuvers are variable and depend upon the presence of underlying conditions, the patient's level of cooperation, and age. Regardless of what type of vagal maneuver is attempted, obtain a cardiac monitor tracing before and during the attempt. The following vagal maneuvers may be attempted in pediatric patients:
 - Ice water applied to the face
 - Crushed ice in a plastic bag/glove applied to the face without obstructing ventilation
 - Have child blow through a straw
 - f. If patient is symptomatic (poor perfusion, shock, hypotension, respiratory difficulty, SOB, signs of CHF, altered LOC) and heart rate is ≥ 220 /minute in an infant or ≥ 180 /minute in a child:
 - i. Administer adenosine, 0.1 mg/kg (maximum 6mg) RAPID IV bolus over 1 to 3 seconds followed IMMEDIATELY with a 5-10 ml NS bolus IV.

- ii. If the first dose is ineffective, repeat adenosine in 1-2 minutes, 0.2 mg/kg (maximum 12 mg) RAPID IV bolus followed IMMEDIATELY with a 5-10 ml NS bolus IV.
- iii. Contact medical control
- iv. Consider sedation Valium®/Versed® 0.2 mg/kg IV
- v. Synchronous cardioversion at
 - (a) : 0.5-1 joules (monophasic or biphasic)
 - (b) : 2 joules/kg (monophasic or biphasic)
 - (c) If the second synchronized cardioversion is unsuccessful, consider contacting medical control for an antiarrhythmic (amiodarone or procainamide)

3. Wide Complex Tachycardia (With a pulse)

Assess patient's perfusion. Signs/symptoms of poor perfusion include

- Hypotension
- Acutely altered mental status
- Signs of shock

a. Good perfusion

i. If the rhythm is regular and the QRS complex is monomorphic, consider the administration of adenosine 0.1 mg/kg (maximum 6 mg) RAPID IV bolus over 1 to 3 seconds followed IMMEDIATELY with a 5-10 ml NS bolus IV. If the first dose is ineffective, repeat adenosine in 1-2 minutes, 0.2 mg/kg (maximum 12 mg) RAPID IV bolus followed IMMEDIATELY with a 5-10 ml NS bolus IV.

Antiarrhythmics that are indicated for a wide complex tachycardia are amiodarone or procainamide. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization. Do not routinely administer amiodarone and procainamide together. If the patient is stable or has a history of congenital heart disease, please discuss with the medical control physician at the receiving facility prior to administration of an antiarrhythmic. Otherwise, follow these guidelines for administration:

ii. If the rhythm is not regular and/or the QRS complex is not monomorphic or the EMT is unsure about the rhythm, contact medical direction for potential orders for an antiarrhythmic.

- Amiodarone 5 mg/kg IV over 20-60 minutes
- Procainamide IV infusion of 15 mg/kg over 30-60 minutes
 - Max dose is 15 mg/kg
 - Discontinue infusion if hypotension develops, development of a prolonged QRS complex greater than 50%, the arrhythmia resolves, or the maximum dose of 15 mg/kg has been administered.

****NOTE: If at anytime the patient becomes unstable with poor perfusion, go directly to synchronous cardioversion.**

****NOTE: Do not administer more than one antiarrhythmic to a patient. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization.**

- ii. Consider sedation Valium®/Versed® 0.2 mg/kg IV

- iii. Synchronous cardioversion at:
 - (a) : 0.5-1 joules/kg (monophasic or biphasic)
 - (b) : 2 joules/kg (monophasic or biphasic)
- b. Poor perfusion (with a pulse):
 - i. Prepare for immediate cardioversion
 - ii. Consider sedation Valium®/Versed® 0.2 mg/kg IV
 - iii. Synchronous cardioversion at:
 - (a) : 0.5 joules/kg (monophasic or biphasic)
 - (b) : 2 joules/kg (monophasic or biphasic)
 - iv. Administer an antiarrhythmic

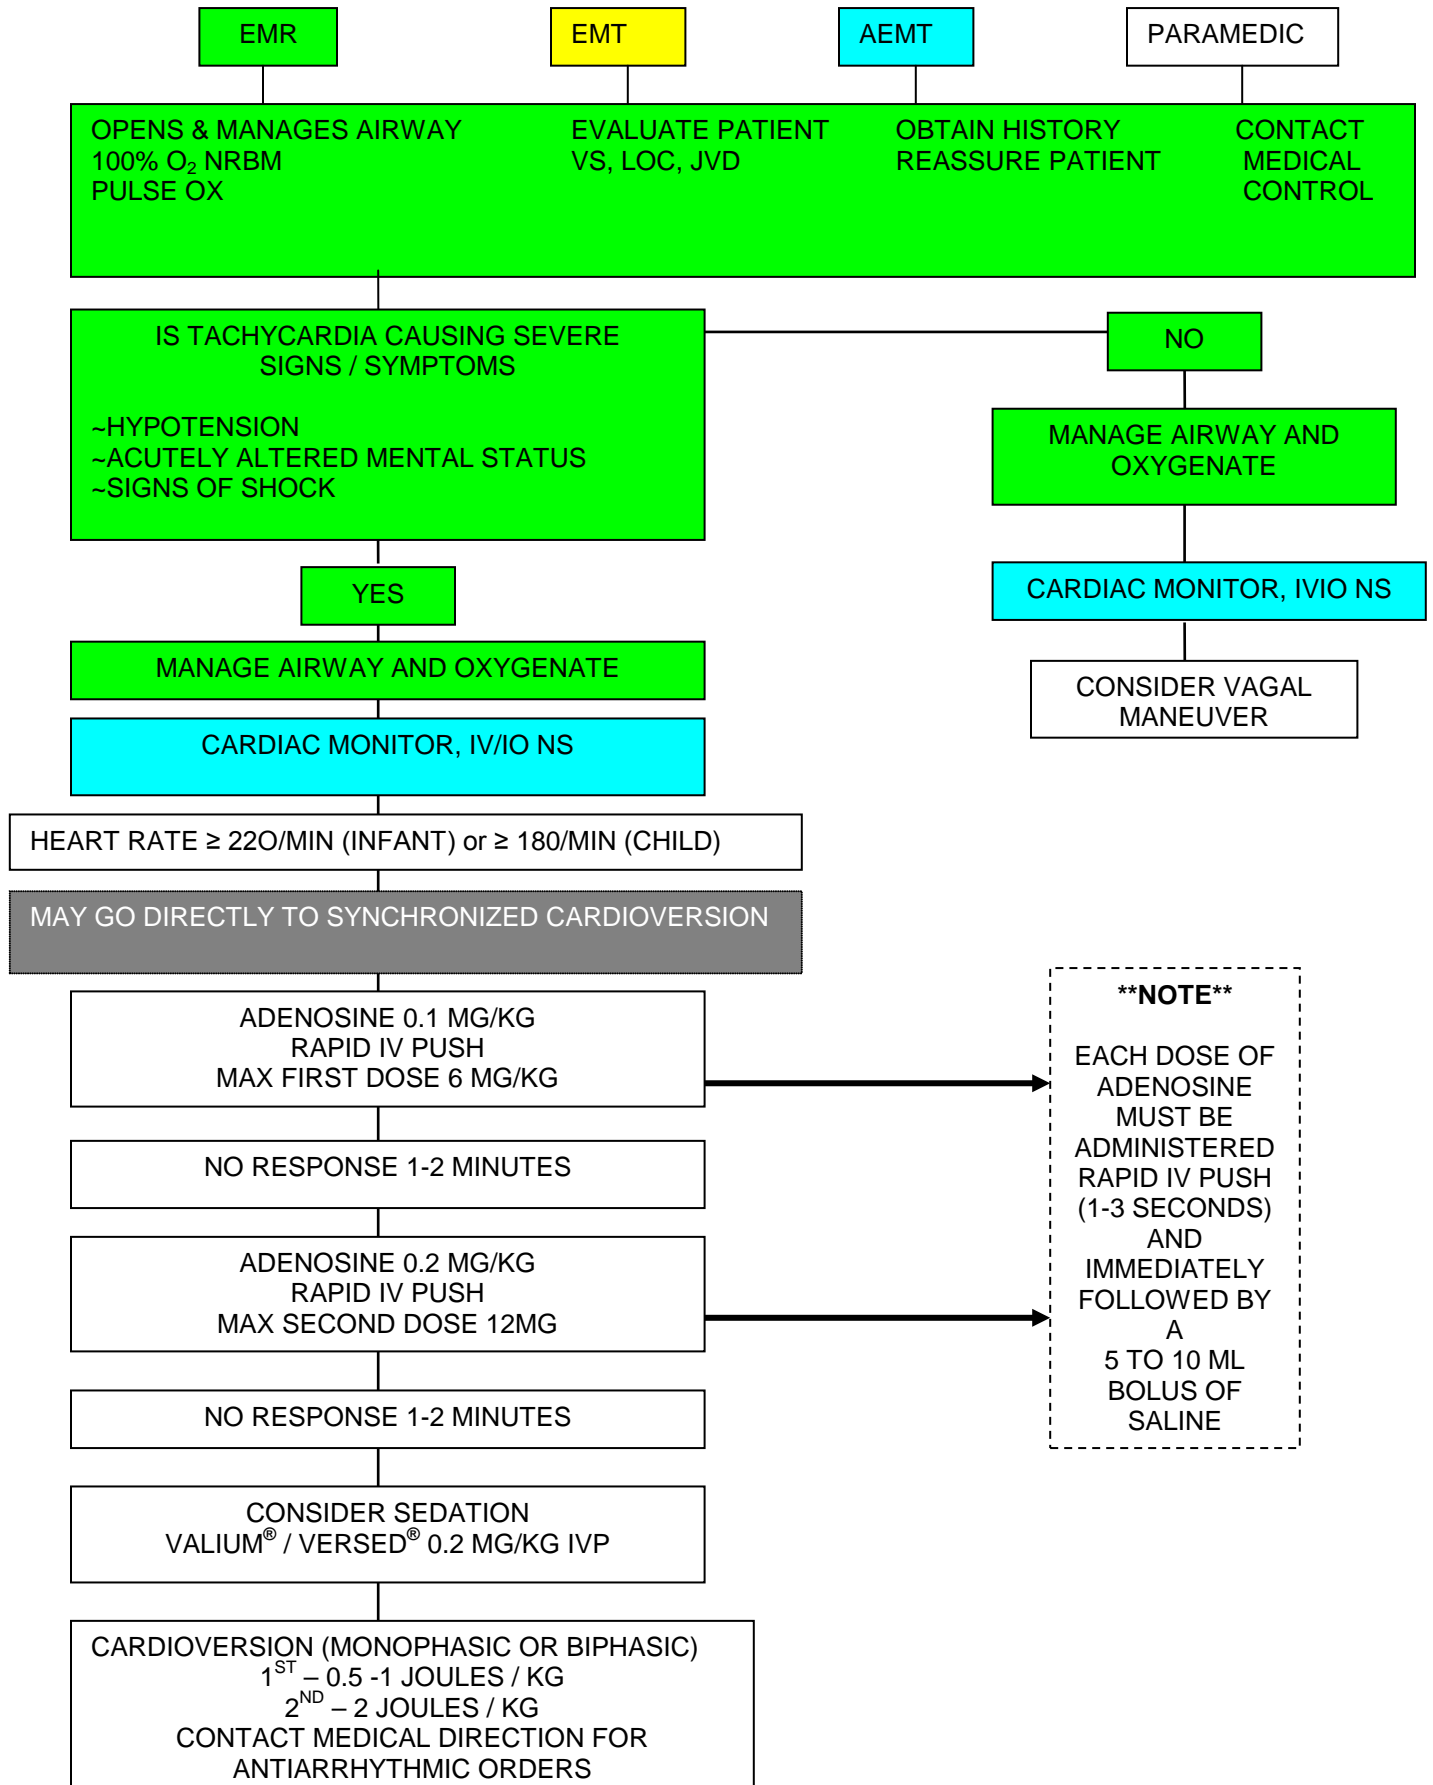

Antiarrhythmics that are indicated for a wide complex tachycardia are amiodarone or procainamide. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization. Do not routinely administer amiodarone and procainamide together. If the patient is stable or has a history of congenital heart disease, please discuss with the medical control physician at the receiving facility prior to administration of an antiarrhythmic. Otherwise, follow these guidelines for administration:

- Amiodarone 5 mg/kg IV over 20-60 minutes
- Procainamide IV infusion of 15 mg/kg over 30-60 minutes
 - Maximum dose is 15 mg/kg
 - Discontinue infusion if hypotension develops, development of a prolonged QRS complex greater than 50%, if the arrhythmia resolves, or the maximum dose of 15 mg/kg has been administered.

****NOTE: Do not administer more than one antiarrhythmic to a patient. The choice of the antiarrhythmic should be predetermined by the Medical Director for your organization.**

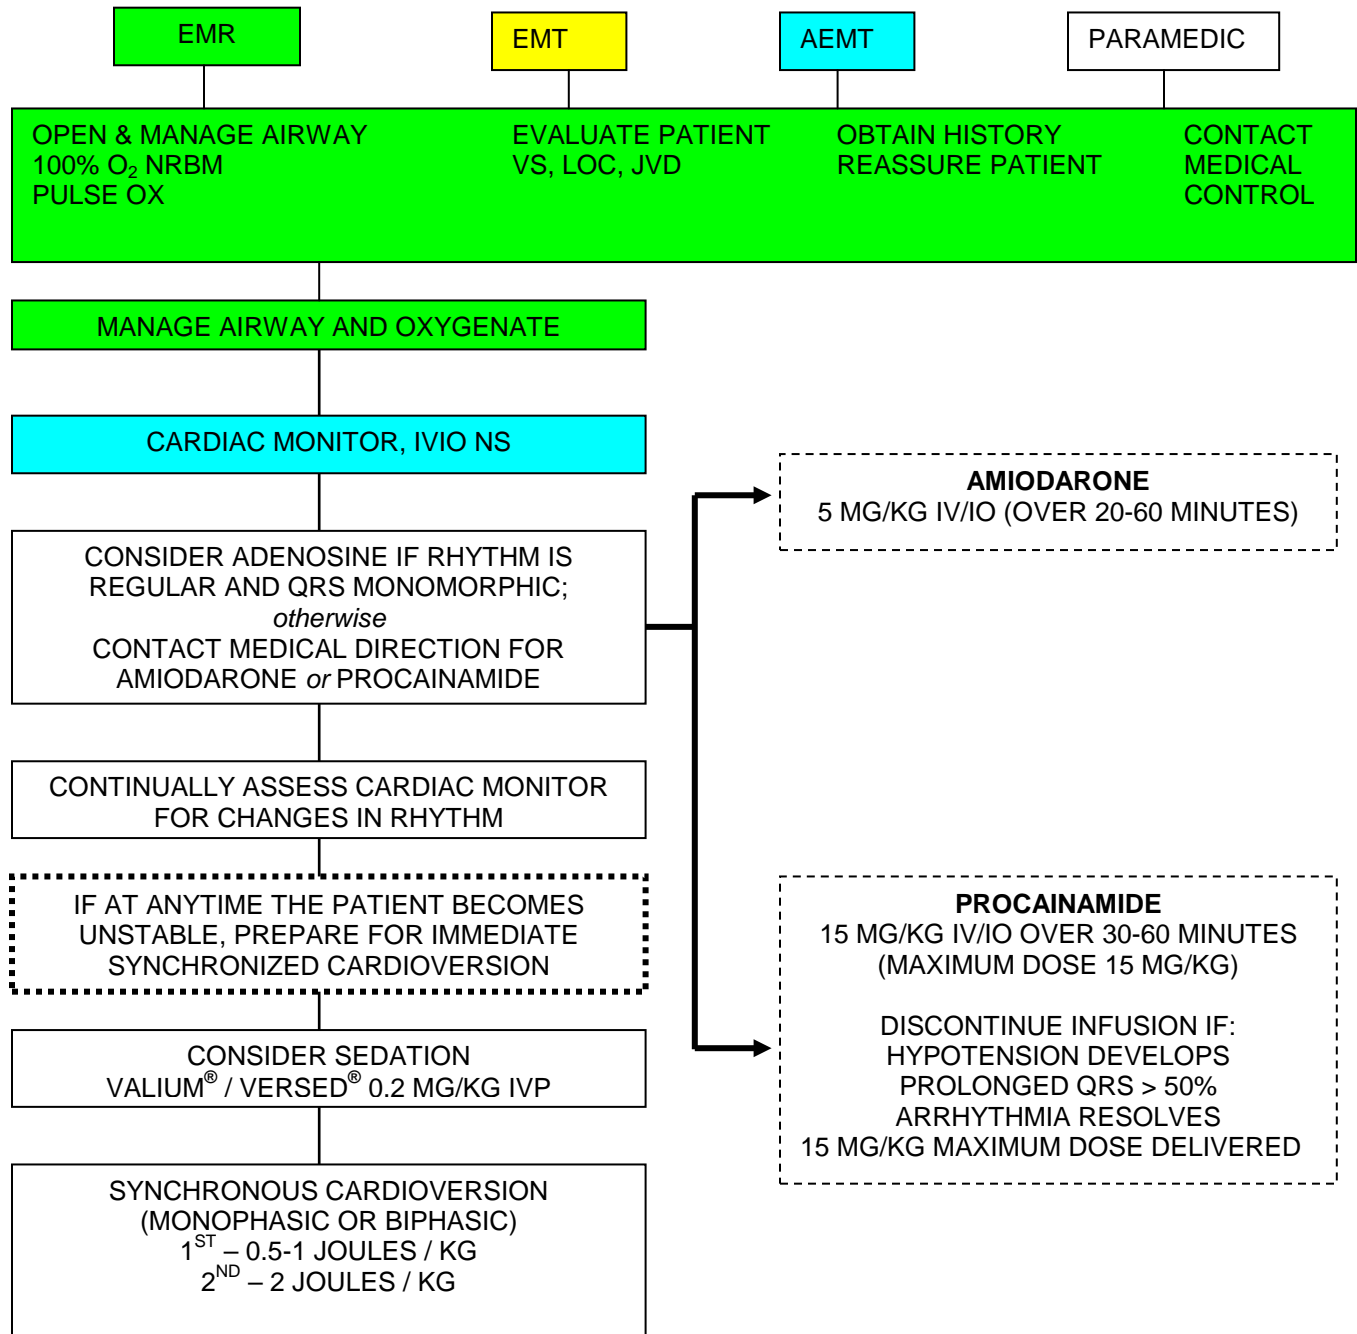

PEDIATRIC ARRHYTHMIA NARROW COMPLEX TACHYCARDIA

**PEDIATRIC ARRHYTHMIAS
STABLE WIDE COMPLEX TACHYCARDIA**

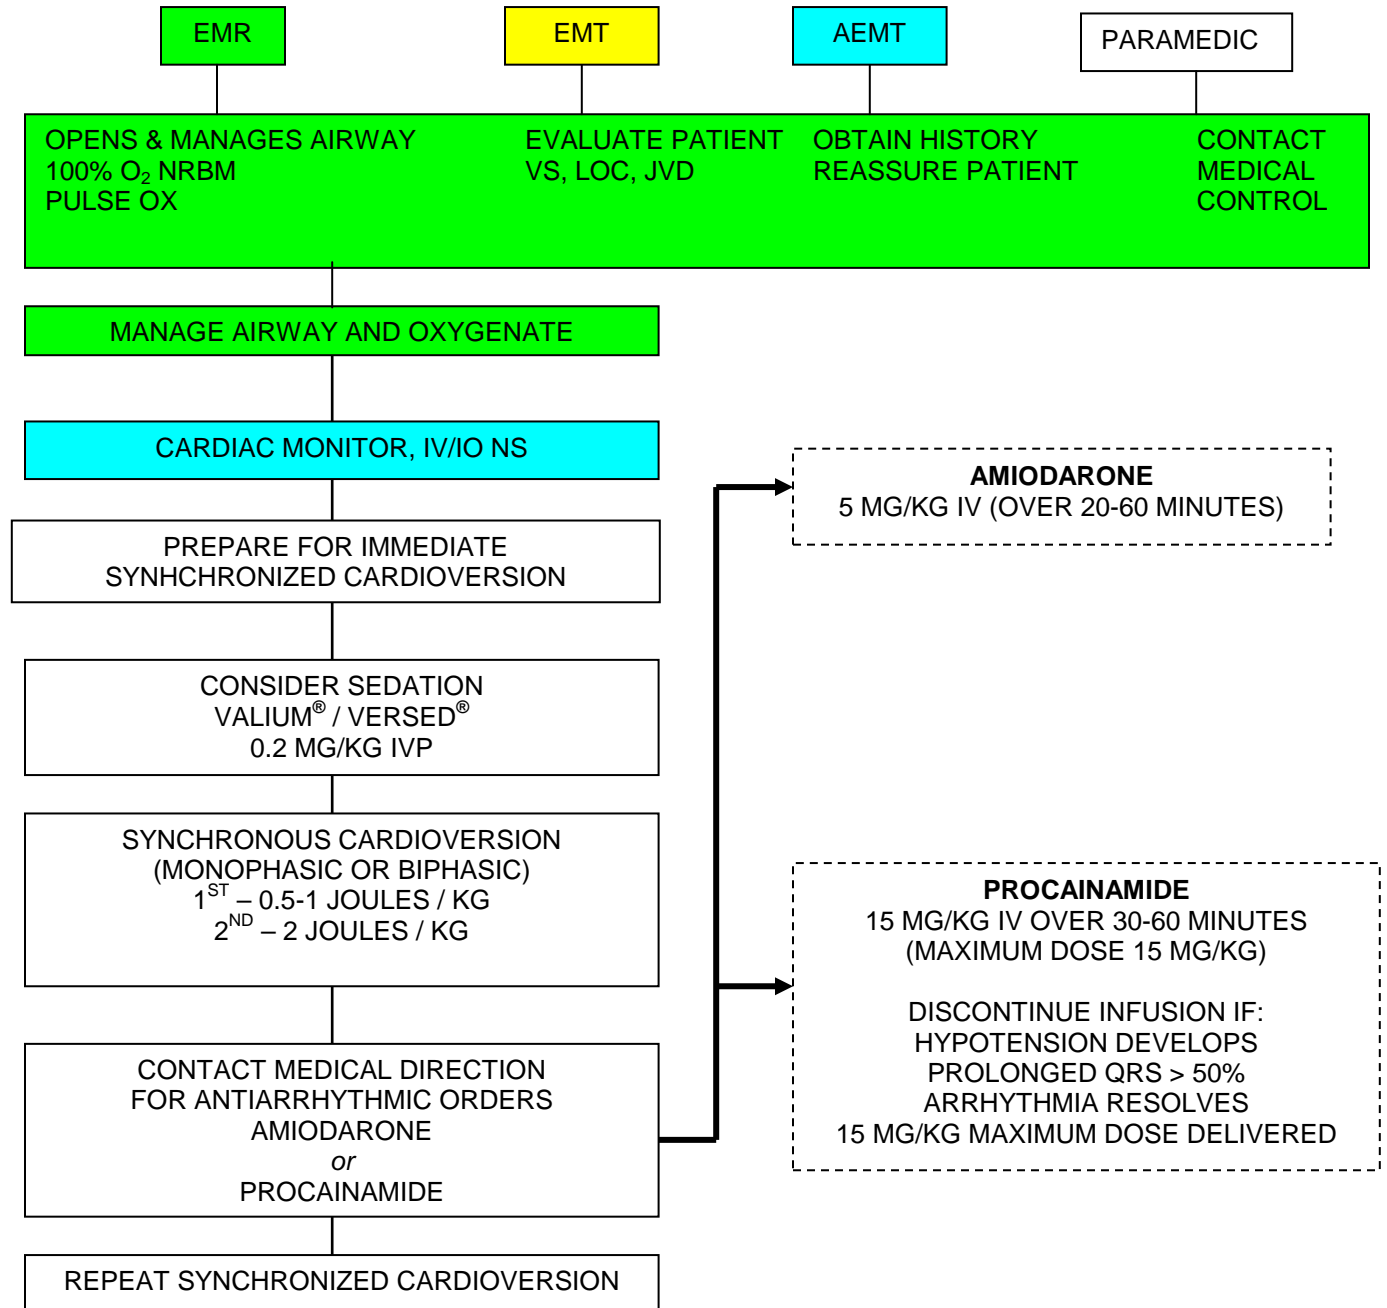

**PATIENTS WITH A GOOD PULSE, FOOD PERFUSION, WHO ARE ALERT AND
ORIENTED ARE CONSIDERED STABLE**

DO NOT ADMINISTER MORE THAN ONE ANTIARRHYTHMIC TO A PATIENT

**PEDIATRIC ARRHYTHMIAS
UNSTABLE WIDE COMPLEX TACHYCARDIAS**

**PATIENTS WITH POOR PERFUSION / SHOCK / HYPOTENSION, RESPIRATORY
DIFFICULTY, PULMONARY CONGESTION, AND/OR ALTERED LOC ARE
CONSIDERED UNSTABLE**

DO NOT ADMINISTER MORE THAN ONE ANTIARRHYTHMIC TO A PATIENT

PEDIATRIC CARDIAC ARREST

GENERAL CONSIDERATIONS

- A. Cardiac arrest in children is primarily due to lack of an adequate airway, resulting in hypoxia
- B. All EMS professionals must concentrate on opening and maintaining the airway and providing 100% oxygen
- C. Quality CPR consists of pushing hard with compression of the chest to $\geq 1/3$ of the anteroposterior diameter of the chest, compressions of at least 100 per minute, and allowing complete chest recoil.
- D. For two-person CPR, the rate of chest compressions without the presence of an advanced airway is 3:1 in newborns with a suspected primary etiology of respiratory compromise, and 15:2 in children and newborns in arrest with a suspected cardiac etiology. If an advanced airway is in place, 8-10 breaths per minute should be administered with continuous chest compressions.
- E. During BVM ventilation or endotracheal intubation, routine cricoid pressure to prevent aspiration is no longer recommended.
- F. Transport IMMEDIATELY when excessive hemorrhage or hypothermia is present. ALS measures should be carried out during transport
- G. If peripheral IVs cannot be established, venous access should be obtained by the intraosseous route
- H. If IV or IO access cannot be established, administer appropriate medications through the ET tube
- I. **NOTE:** AEDs should not be used on patients under one year of age. Pediatric AED pads are preferred for patients between the ages of 1 and 8 years of age. Adult AED pads should be used for patients greater than 8 years of age, but they may be used in patients between the ages of 1 and 8 years of age if pediatric AED pads are unavailable.
- J. If Sudden Infant Death Syndrome (SIDS) is suspected:
 - 1. Initiate basic and advanced life support, unless apparent rigor mortis or signs of lividity are present
 - 2. Communicate with and reassure the parents
 - 3. Encourage family to have friends or neighbors accompany them to the hospital
 - 4. If infant is not resuscitated, refer parents to social services at the nearest appropriate emergency department to initiate counseling
- K. Refer to BROSELOW[®] PEDIATRIC EMERGENCY TAPE when unsure about patient weight, age and/or drug dosage

EMT

- A. Open and maintain airway in sniffing position
- B. Ventilate with 100% oxygen via BVM with oxygen reservoir
- C. Initiate quality CPR in accordance with American Heart Association guidelines
- D. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY unless ALS unit is en route and has an ETA of less than 5 minutes

CARDIAC ARREST (cont'd)

- E. If an Automated External Defibrillator (AED) is available:
1. Assess patient for respirations and cardiac arrest
 2. Apply AED and activate the device.
 3. Start documentation that must include:
 - EMS unit delivering care and ID of EMS professionals
 - Initial call information (i.e. accidental ingestion, drowning, etc.)
 - Initial patient assessment, findings, and impression
 - Care given to this point
 - Ongoing outcomes of care delivered to patient
 - a. "No Shock Advised"
 - i. Continue quality CPR for two minutes
 - ii. Continue ventilation with 100% oxygen via BVM with oxygen reservoir
 - iii. Contact medical control and transport IMMEDIATELY
 - b. "Shock Advised"
 - i. Deliver a single shock
 - ii. Resume quality CPR for two minutes
 - iii. Contact medical control, advise of cardiac arrest, and transport IMMEDIATELY
 - iv. After each two minute cycle of quality CPR, activate AED to assess rhythm and deliver a single shock if indicated
 - v. Resume quality CPR

"TURN AED OFF DURING MOVEMENT OF PATIENT"

AEMT

- A. Assume charge and confer with EMS professionals to patient condition and circumstances
- B. Apply cardiac monitor
- C. If monitor shows ventricular fibrillation or pulseless ventricular tachycardia:
 1. Defibrillate at 2 joules/kg
 2. If no response, Five cycles of quality CPR
 3. Defibrillate at 4 joules/kg
 4. If no response, resume quality CPR and TRANSPORT
- D. Start IV or IO of saline and give 20 ml/kg NS IV bolus. IV access should be accomplished en route to hospital.

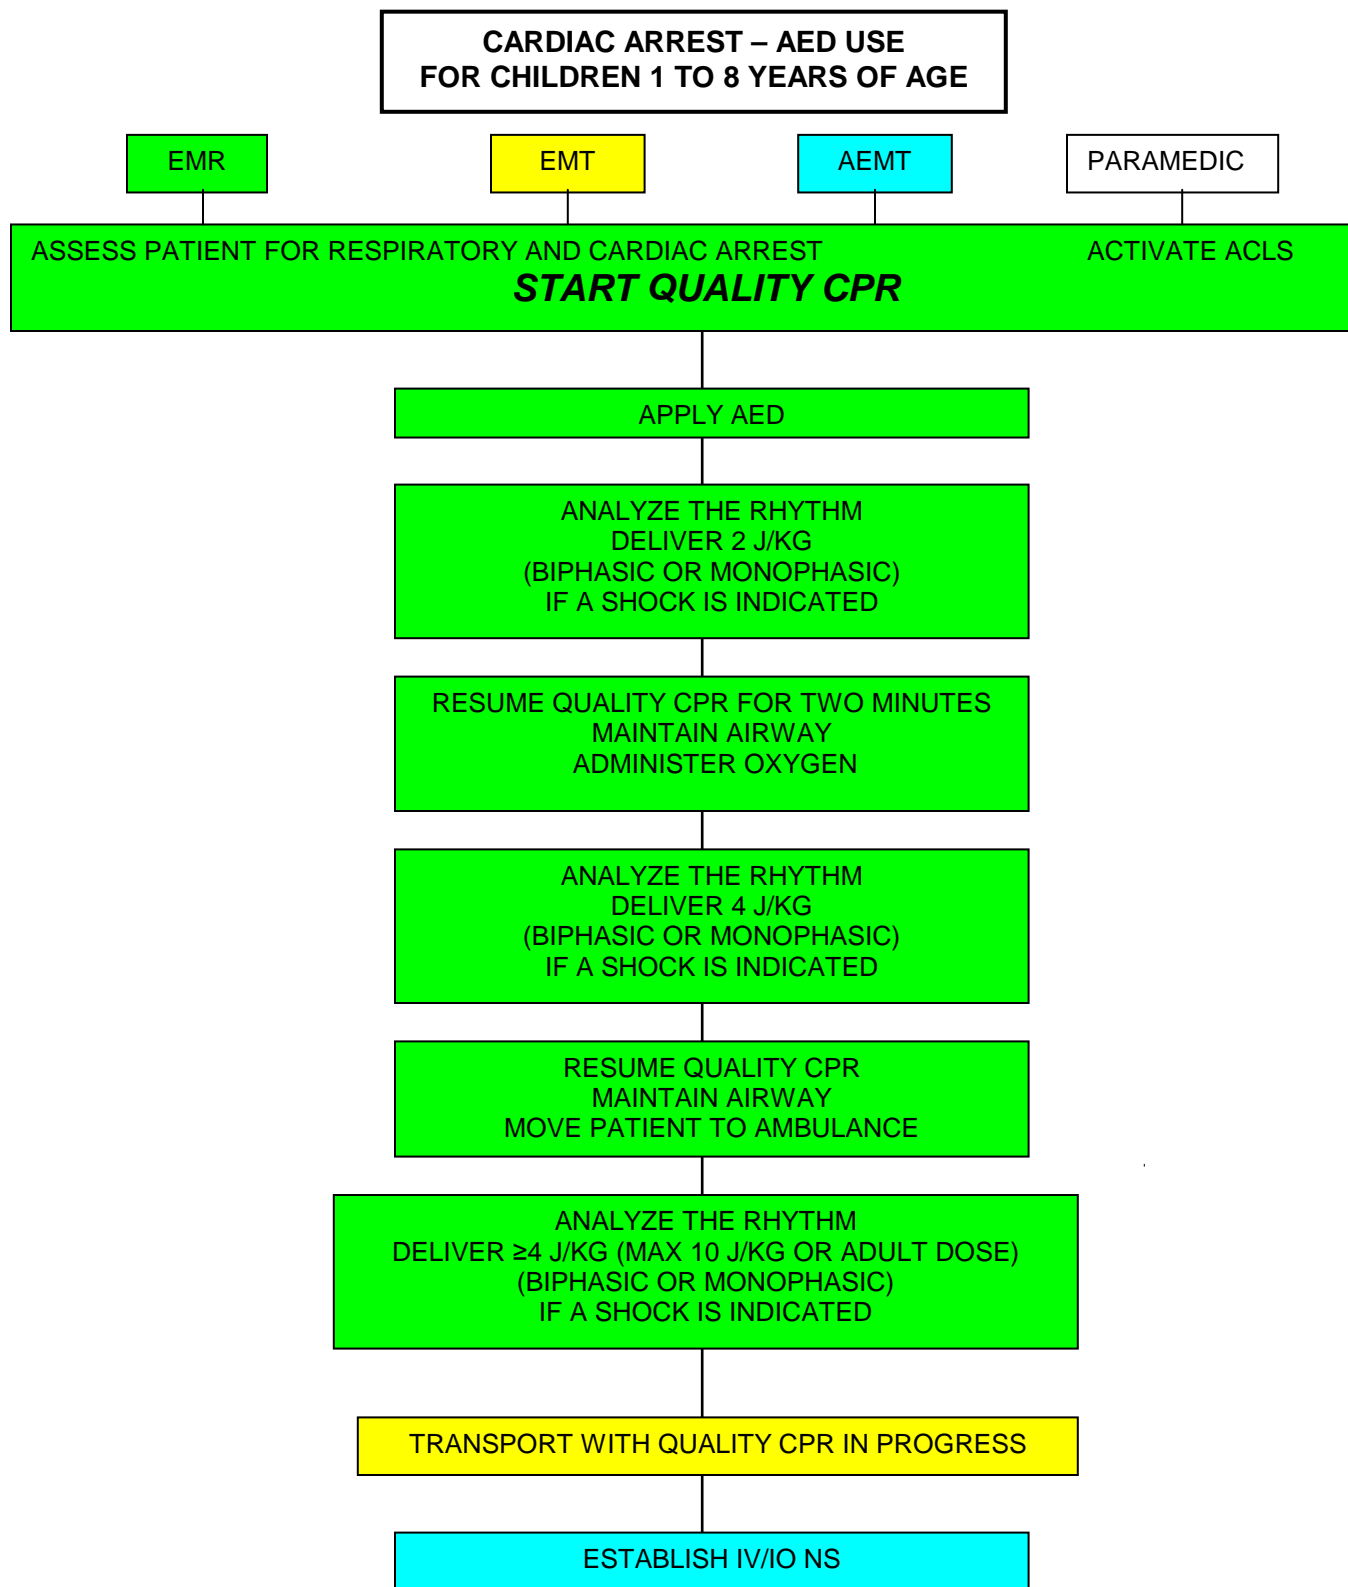

DO NOT DELAY TRANSPORT

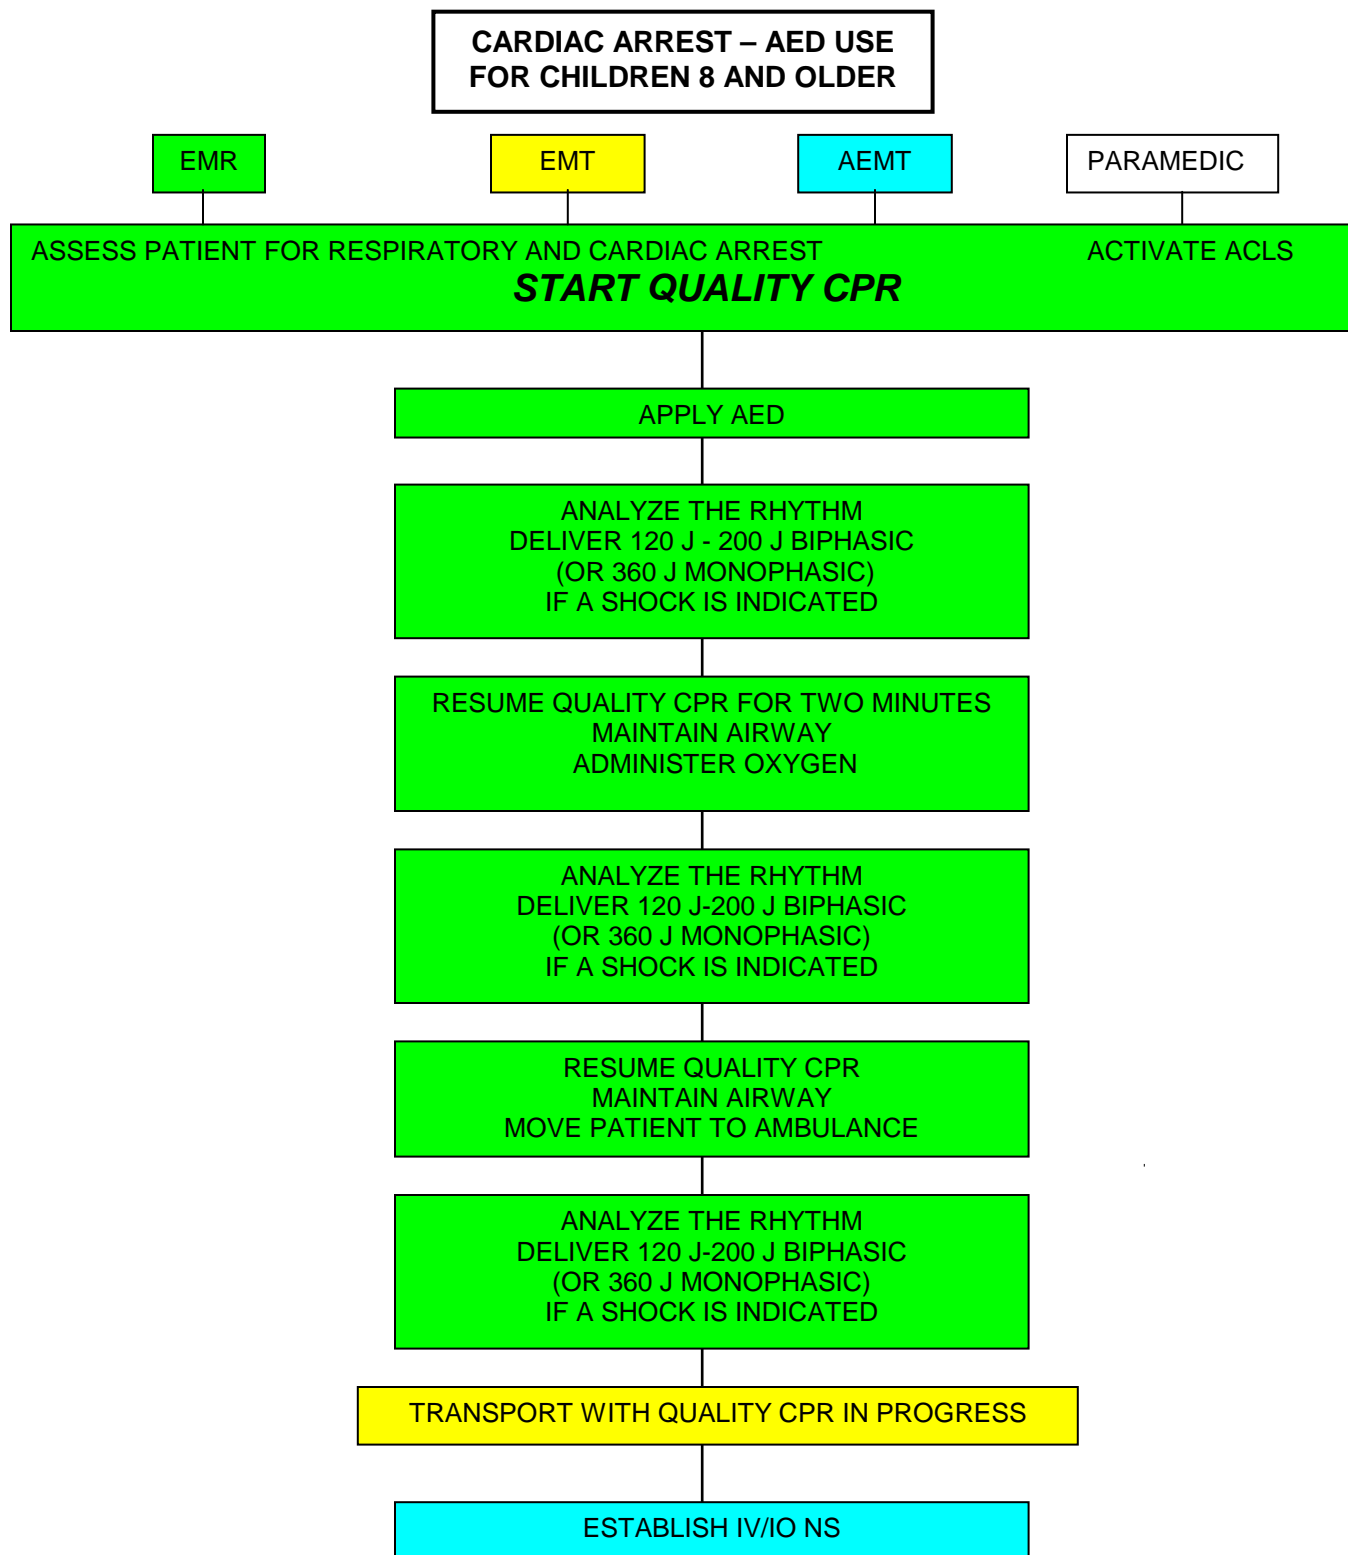

EMT-P

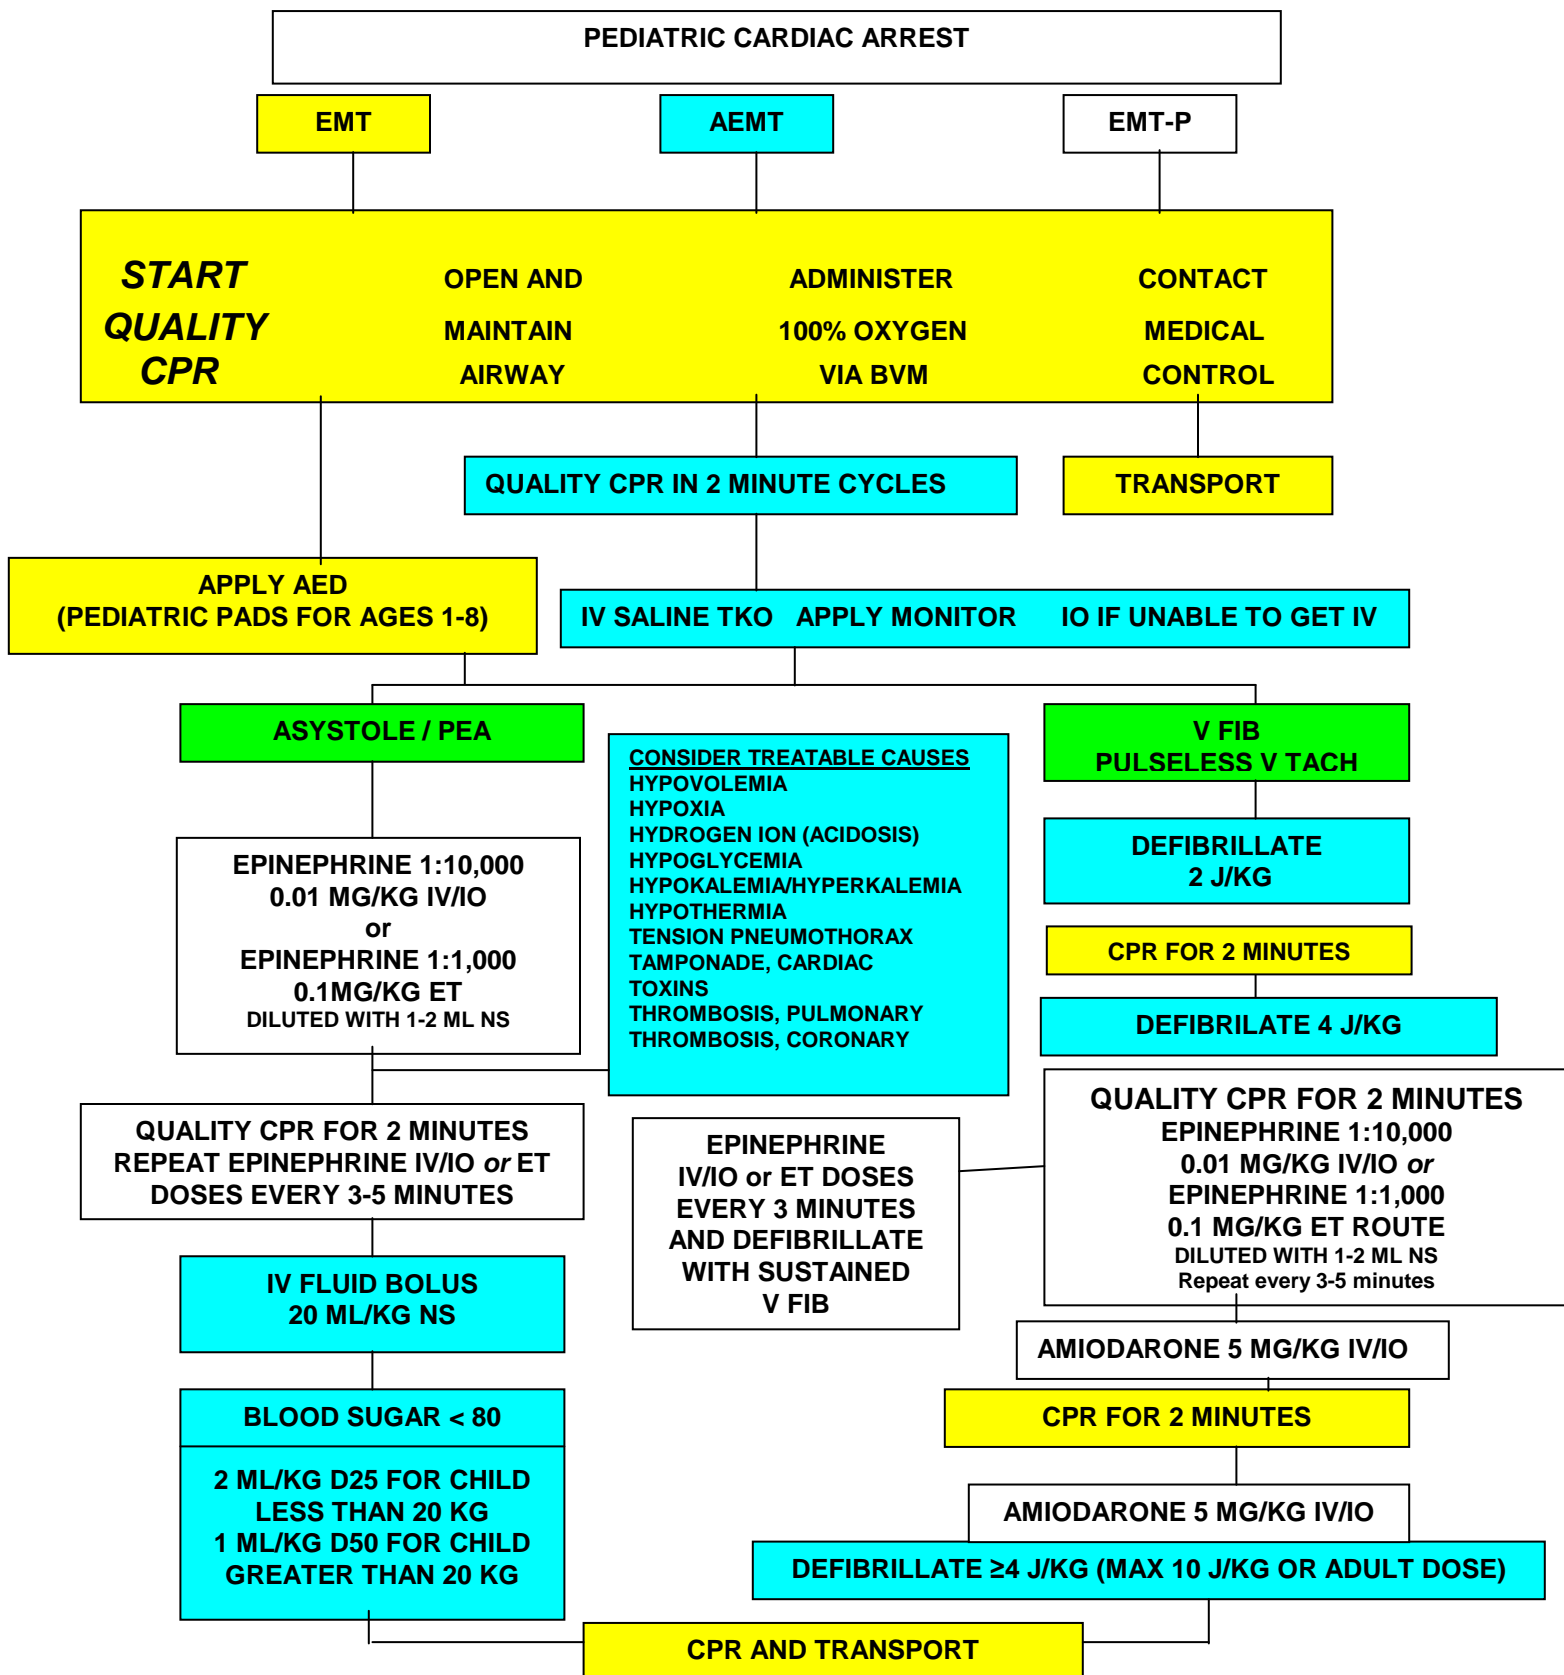

- A. Assume charge and confer with EMS professionals as to patient condition and circumstances
- B. If an AEMT is in a cycle of defibrillation, allow to complete cycle
- C. Assess airway and intubate if needed
- D. Establish IV or IO, whichever is quickest
- E. Apply monitor. If one of the following conditions exists, treat as follows:
 1. Ventricular fibrillation or pulseless ventricular tachycardia
 - a. Defibrillate at 2 joules/kg
 - b. If no response, quality CPR for two minutes
 - c. Defibrillate at 4 joules/kg
 - d. If no response, continue quality CPR for two minutes
 - e. Administer epinephrine IV, IO or ET every 3-5 minutes
 - IV / IO doses – 0.01 mg/kg of 1:10,000 (0.1 ml/kg)
 - ET tube doses – 0.1 mg/kg of 1:1,000 (0.1 ml/kg) diluted with 1-2 ml of saline
 - f. If no response, defibrillate at ≥ 4 joules/kg to a maximum of 10 joules/kg or the adult dose
 - g. If no response, continue quality CPR for two minutes
 - h. Administer one antiarrhythmic
 - Amiodarone 5 mg/kg IV/IO, may repeat dose up to 2 times for refractory ventricular fibrillation or pulseless ventricular tachycardia
 - i. If no response, continue quality CPR and TRANSPORT
 - j. Consider the treatment of reversible causes
 - Hypovolemia: administer 20 ml/kg NS IV fluid boluses
 - Hypoxia
 - Hydrogen ion (acidosis)
 - Hypoglycemia: administer 2 ml/kg of D25 IV/IO for children under 20 kg or 1 ml/kg of D50 IV/IO for children over 20 kg if the blood glucose is less than 80
 - Hypokalemia/hyperkalemia
 - Hypothermia
 - Tension pneumothorax
 - Tamponade, cardiac
 - Toxins
 - Thrombosis, pulmonary
 - Thrombosis, coronary
 2. Asystole / Pulseless Electrical Activity (PEA)
 - a. Begin quality CPR immediately
 - b. Obtain IV/IO access

CARDIAC ARREST (cont'd)

- c. Continue quality CPR for two minutes and administer epinephrine IV, IO or ET every 3-5 minutes
 - i. IV/IO doses – 0.01 mg/kg of 1:10,000 (0.1 ml/kg)
 - ii. ET tube doses – 0.1 mg/kg of 1:1,000 (0.1 ml/kg) diluted with 1-2 ml of saline
- c. Confirm asystole in two different leads
- d. If rhythm is unclear and possibly ventricular fibrillation, follow ventricular fibrillation/pulseless ventricular tachycardia guideline
- e. Consider treatable causes:
 - Hypovolemia: administer 20 ml/kg NS IV boluses
 - Hypoxia
 - Hydrogen ion (acidosis)
 - Hypoglycemia: administer 2 ml/kg of D25 IV/IO for children under 20 kg or 1 ml/kg of D50 IV/IO for children over 20 kg if the blood glucose is less than 80
 - Hypokalemia/hyperkalemia
 - Hypothermia
 - Tension Pneumothorax
 - Tamponade, cardiac
 - Toxins
 - Thrombosis, pulmonary
 - Thrombosis, coronary
- f. If no response, continue quality CPR and TRANSPORT

**AFTER AN ADVANCED AIRWAY IS PLACED
RESCUERS NO LONGER DELIVER "CYCLES"
OF CPR. GIVE CONTINUOUS CHEST
COMPRESSIONS WITHOUT PAUSES FOR
BREATHS. GIVE 8 TO 10 BREATHS/MINUTE.
CHECK RHYTHM EVERY TWO MINUTES.**

CHILD ABUSE / NEGLECT

GENERAL CONSIDERATIONS

- A. Child abuse or neglect are widespread enough that nearly all EMS professionals will see these problems at some time. The first step in recognizing abuse or neglect is to accept that they exist and to learn the signs and symptoms.
- B. Initiate treatment as necessary for situation using established protocols.
- C. If possible remove child from scene, transporting to hospital even if there is no medical reason for transport.
- D. If parents refuse permission to transport, notify law enforcement for appropriate disposition. If patient is in immediate danger, let law enforcement handle scene.
- E. Advise parents to go to hospital. **AVOID ACCUSATIONS** as this may delay transport. Adult with child may not be the abuser.
- F. Carefully document findings and report to physicians at the hospital. An EMS professional must also report or assure that actual or suspected child abuse/neglect is reported to the local law enforcement agency or the Children's Services Board.

DOCUMENT THIS NOTIFICATION

DO NOT JEOPARDIZE YOUR SAFETY

SIGNS AND SYMPTOMS

The incidence of child abuse and neglect has no socioeconomic, racial, cultural, or religious boundaries. Child abuse and neglect occurs in all segments of our population. Prehospital personnel are in a unique position in their ability to make the initial identification of these victims. EMS professionals should always believe what the child says, document the exact statements on the prehospital care report, and communicate them clearly to the healthcare providers upon arriving to the receiving facility.

The signs and symptoms of child abuse and neglect may include the following:

Physical Abuse

- A. Bruises
 - i. Infants rarely bruise accidentally
 - ii. Active children normally sustain bruises on the front of the body (knees, shins, elbows, foreheads)
 - iii. Bruises in recognizable shape of an object are suspicious
 - iv. Multiple bruises in different stages of healing are suspicious
- B. Skin injuries-cuts, scrapes, bruises, burns, bites, redness, swelling

C. Burns

- i. Scald burns are common
- ii. Immersion burns characterized by clear lines of demarcation (accidental burns are more likely to have a splash pattern due to the child's withdrawal from the heat source)
- iii. Inflicted contact burn (recognizable by a shape of the object used to produce it)
- iv. Burns in less exposed or unexposed areas, deeper or larger burns

D. Bites

- i. Adult human bite marks
- ii. Multiple, random, or well-defined bite marks
- v. Multiple defined tooth marks (differ from animal bites)

E. Fractures

- i. Suspected fractures discovered "accidentally" by the guardian
- ii. Skeletal injury inconsistent with history
- iii. Multiple fractures in different stages of healing
- iv. Suspected fractures accompanied by other injuries

F. Reported or alleged falls

- i. Falls from a standing position or low object (less than child's height) rarely result in serious injuries
- ii. Falls from greater than child's height are usually required to sustain serious injury

G. Injuries to face and head

- i. Unintentional injuries usually involve the front of body
- ii. Injuries to the side of the face, the cheeks, or the ears are suspicious for abuse
- iii. Direct blows to the mouth usually results in lip injuries, possibly with fractures to the jaw or teeth
- iv. Considerable force is required to cause severe head trauma

H. Hair loss

- i. Can be sign of child abuse from dragging by the hair
- ii. May simply be the result of excessive force during hair brushing or from certain types of hair braiding
- iii. May be self-inflicted to relieve stress
- iv. Blood may be seen at the surface or beneath the scalp

I. Shaken baby syndrome

- i. Most common in children less than 2 years old
- ii. There may be no external evidence of trauma
- iii. Possible signs include decreased consciousness, seizures, vomiting,
- iv. other signs of head injury, unusual cry
- v. Altered mental status may be the only sign
- vi. Recognition of the possibility of this syndrome should trigger suspicion of abuse

Sexual Abuse

- A. Signs of recent abuse may include pain, bleeding, or discharge from urethra, vagina, or rectum
- B. Signs of chronic or concealed abuse occurring over weeks or months may include nonspecific abdominal pain, vaginal inflammation, or painful urination
- C. The physical examination is normal in most cases

Emotional Abuse

- A. A component of all forms of child abuse
- B. Most cases are mild, but early recognition is important
- C. Signs
 - i. Encouragement of destructive or antisocial behaviors
 - ii. Verbal assault of the child or verbal attacks on the child's development of self and social competence
 - iii. Humiliation of the child
 - iv. Ignoring the child

CHILD ABUSE/NEGLECT (cont'd)

- v. Isolation of the child
- vi. Rejection of the child's needs and requests

Neglect

- A. Most common form of child abuse, yet it is the most under-recognized and under-reported form of child abuse
- B. Signs
 - i. Inadequate care, including inadequate provision of food, clothing, or shelter
 - ii. Inadequate medical attention, including delay in seeking care for known illness
 - iii. Poor personal hygiene
 - iv. Unsanitary conditions
 - v. Inadequate sleeping arrangements
 - vi. Lack of supervision
 - vii. Evidence of substance abuse
 - viii. Structural, fire, environmental hazards

FEVER

GENERAL CONSIDERATIONS

- A. If febrile, remove excess clothing, but take great care to avoid shivering. Consider environment and temperature of vehicle.
- B. DO NOT sponge child unless treating for heat exposure. (This includes use of moist towels to “cool” the child)
- C. Transport all infants < 8 weeks of age with a reported temperature > 100.4° F (38° C) or < 96° F (35.5° C)

PEDIATRIC FLUID AND DRUG ADMINISTRATION

AEMT

- A. Peripheral venous access, in the form of an IV or an IO, will be the first route for fluid and drug administration for any life or limb threatening emergency situation.
- B. Unless there are compelling factors, no more than two attempts at peripheral access should be made in the pediatric patient.
- C. In a **life-threatening situation** where venous access appears futile, immediately establish intraosseous access.
- D. Intraosseous Infusion
 - 1. The following are guidelines for the UNSTABLE child requiring alternative vascular access AFTER insuring that the airway and ventilations are established:
 - a. **Indications:** Intraosseous access should be established if you cannot rapidly achieve venous access in a patient in decompensated shock or cardiopulmonary arrest.
 - c. **Contraindications:** Recently fractured bone, known bone disorder, previous unsuccessful attempt of IO placement at site.
 - d. **Relative contraindications:** cellulitis or infected burn at site.
 - c. **Equipment:** Bone marrow aspiration needle, iodine and alcohol preps, 5 ml syringe.
- E. Fluid of choice is normal saline or Lactated Ringers, utilizing a macrodrip administration set. If child is less than 2 years old a microdrip set should be used if available.

PARAMEDIC

- A. When peripheral or IO access is not available for administering medications:
 - 1. If an ET tube is in place, the ET tube should be the route of administration for
 - Lidocaine
 - Atropine
 - Narcan[®]
 - Epinephrine
 - 2. Intramuscular (IM) route may be used for Versed[®] or morphine.
 - 3. Rectal route may be used for Valium[®] (diazepam).

MULTIPLE TRAUMA

GENERAL CONSIDERATIONS

- A. The basics of trauma care apply to pediatric patients and should primarily follow the general adult trauma protocol.
- B. Drowning is classified as trauma in Ohio. Victims of drowning or near drowning that could require admission to a hospital should be transferred to the appropriate trauma center.
- C. Areas where special focus should occur:
 - 1. May involve both respiratory failure and shock.
 - 2. Assessment and support of cardiopulmonary function is fundamental.
- D. Common errors of pediatric trauma resuscitation are:
 - 1. Failure to open and maintain the airway.
 - 2. Failure to provide appropriate fluid resuscitation to children with head injury.
 - 3. Failure to recognize and treat internal hemorrhage.
- E. An IO infusion is indicated in the trauma setting when shock needs to be treated and rapid venous access is unobtainable.
- F. The proper size equipment is very important to resuscitation care. Refer to length based drug treatment guide (e.g. BROSELOW[®] PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage and when choosing equipment size.

****NOTE: FOLLOW APPLICABLE REGIONAL
PEDIATRIC TRAUMA TRIAGE PROTOCOL**

NEWBORN RESUSCITATION

GENERAL CONSIDERATIONS

A. The five initial questions to assess in every newborn are as follows:

- Is the baby full term and how many babies are expected?
- Is there THICK meconium present?
- Is the baby breathing or crying?
- Does the baby have good muscle tone?
- Is the baby's color pink?

These questions will help determine the amount of intervention needed. Most term healthy infants do not require ALS intervention. This initial assessment should be completed within 30 seconds.

- B. Body heat must always be maintained. As soon as the baby is born, wipe the baby dry and place in a warm environment. Cover the infant's head, place against mother's skin, and cover both. Use indirect heated, humidified oxygen, if available. Avoid direct application of cold oxygen to infant's face as this may cause respiratory depression. Avoid inducing hyperthermia (elevated body temperature) in babies who may have had a hypoxic-ischemic event.
- C. Position infant in sniffing position (with a 1 inch towel under the shoulders). This will provide an optimally opened airway and adequate drainage of secretions.
- D. Suction secretions with a bulb syringe from the mouth and then nose for newborns who have obvious obstruction to spontaneous breathing or who require positive pressure ventilation.
- E. Open and manage airway
- F. Meconium aspiration is a major cause of death and morbidity among infants. If thick meconium is present and not removed, 60% of these infants will aspirate the meconium. If meconium staining of the amniotic fluid is present, *routine intrapartum oropharyngeal and nasopharyngeal suctioning for infants is not advised*. Endotracheal suctioning for the presence of meconium or meconium staining should be reserved for infants who are not vigorous and should be performed immediately after birth. If thick meconium is present, it may be necessary to visualize the trachea and suction the lower airway. Lower airway suction is achieved by intubating the infant and suctioning directly through the ET tube. Each time this suctioning is done, the infant will have to be re-intubated with a new tube if available. If a new ETT of the appropriate size is not available, the ETT should be flushed with normal saline or sterile water and reused. Watery or thin meconium does not require suctioning of the lower airway. Prolonged and/or unsuccessful attempts at intubation may result in bradycardia. Ventilation with BVM should be considered, particularly if there is persistent bradycardia.
- G. If drying and suctioning has not provided enough stimulation, try rubbing the infant's back or flicking their feet. If the infant still has poor respiratory effort, poor tone or central cyanosis, consider them to be distressed. Most distressed infants will respond quickly to 100% oxygen via BVM or T-piece. Continuous positive airway pressure (CPAP) should be considered for persistent labored breathing, cyanosis, or low pulse oximetry.
- H. The APGAR score should be used in the initial assessment of normal newborns and is a measure of the effectiveness of interventions for the distressed newborn. Scoring must not delay intervention in the distressed newborn. The score is completed at 1 and 5 minutes after delivery. If the 5-minute score is less than 7, repeat every 5 minutes for the next 20 minutes.

APGAR SCORE

Sign	0	1	2
Color	Blue / Pale	Pink Body, Blue Extremities	Completely Pink
Heart Rate	Absent	Below 100	Above 100
Irritability (response to stimulation)	No Response	Grimace	Cries
Muscle Tone	Limp	Flexion of Extremities	Active Motion
Respiratory Effort	Absent	Slow and Regular	Strong Cry

- I. Refer to length-based drug treatment guide (e.g. Broselow[®] Pediatric emergency tape or similar device) when unsure about patient weight or drug dosage.

EMR

- A. The EMR may assist in the management of emergency childbirth.
- B. After delivery of the infant, assess airway and breathing while drying and positioning head down. If thick meconium is present or the infant is not vigorous, suction the oropharynx and nasopharynx with a bulb syringe prior to ventilation and stimulation. Keep infant warm. Wrap in dry blankets.
- C. If infant not breathing, assist ventilations via mouth to mouth using barrier device or a bag valve mask.
- D. If no pulse or pulse < 60 bpm, begin quality CPR.
- E. Keep infant warm. Wrap in dry blankets.

EMT

- A. If heart rate is < 100 bpm, BVM or T-piece ventilation is necessary to increase heart rate.
- B. If heart rate is < 60 bpm despite adequate ventilation, quality CPR should be initiated.
- C. BVM or T-piece ventilation is also indicated for apnea and persistent central cyanosis.
- D. BVM or T-piece ventilation rate should be between 40 and 60 breaths per minute. Cardiac compression rate should be at a rate of 120 times per minute with a compression to breath ratio of 3:1.
- E. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.

AEMT

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Intubate patient if thick meconium is present in lower airway; suction through ET tube using a meconium aspirator and re-intubate with new tube.
- C. Apply monitor and check rhythm.
- D. Establish IV or IO.
- E. If infant shows signs of hypovolemia, administer normal saline 10 ml/kg IV/IO over 5 minutes
- F. Narcan[®] administration should not be administered during the initial resuscitation and should be avoided in babies whose mothers are suspected of having had long-term exposure to opiates. Heart rate and oxygenation should be resorted by supporting ventilation.
- G. Check blood sugar level and administer 1 ml/kg of 12.5% dextrose the blood sugar is < 40.
- H. Transport to hospital.

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Intubate patient if thick meconium is present in lower airway; suction through ET tube using a meconium aspirator and re-intubate with new tube.
- C. Apply monitor and check rhythm.
- D. Establish IV or IO.
- E. If asystole or spontaneous heart rate is < 60 bpm despite adequate ventilation:
 - 1. Administer epinephrine 0.01-0.03 mg/kg (0.1-0.3 ml/kg) of 1:10,000 via IV/IO or up to 0.1 mg/kg (0.1 mg/kg) of 1:1,000 ET.
 - 2. If no response, repeat epinephrine administration every 3-5 minutes.
- F. If infant shows signs of hypovolemia, administer normal saline 10 ml/kg IV/IO over 5 minutes
- G. Narcan[®] administration should not be administered during the initial resuscitation and should be avoided in babies whose mothers are suspected of having had long-term exposure to opiates. Heart rate and oxygenation should be resorted by supporting ventilation.
- H. Check blood sugar level and administer 1 ml/kg of 12.5% dextrose if level is < 40.
- I. Transport to hospital.

PEDIATRIC RESPIRATORY DISTRESS

GENERAL CONSIDERATIONS

- A. In children, open airway by using the sniffing position.
- B. In suspected cases of upper airway obstructions, DO NOT attempt to visualize the airway; unless a foreign body is suspected. Keep patient calm and transport upright.
- C. If BVM ventilation is necessary, cricoid pressure can be applied to minimize gastric distention until airway is secured.
- D. Refer to length based drug treatment guide (e.g. BROSELOW® PEDIATRIC EMERGENCY TAPE) when unsure about patient weight, age and/or drug dosage.
- E. Evaluate patient's general appearance, relevant history of condition and determine:

Allergies

Medication

Past Medical History – especially RESPIRATORY

Last Meal

Events leading to present illness

UPPER AIRWAY OBSTRUCTION

Stridor, gagging or choking in the breathing patient with respiratory distress may indicate upper airway obstruction.

EMR

- A. Quickly obtain history and non-invasive respiratory assessment.
 - 1. Total Airway Obstruction/History of foreign body airway.
 - a. Manual clearing only if foreign body is visible - NO BLIND FINGER SWEEP
 - b. Backblows and chest thrust in children less than 1 year of age.
 - c. Abdominal and/or chest thrusts in children over 1 year of age.
 - d. If airway cannot be cleared in 60 seconds:
 - i) Activate the emergency response system for immediate transport immediately to the nearest hospital.
 - ii) Do not take history.
 - iii) Do not make further physical assessment.
 - 2. Partial Airway Obstruction
 - a. DO NOT AGITATE CHILD, DO NOT EXAMINE THROAT.
 - b. Administer oxygen by NRB if tolerated or by “blow-by”.

PEDIATRIC AIRWAY OBSTRUCTION (cont'd)

- B. Allow the child to assume a position of comfort. The child may assume the tripod position. Encourage parent to hold the child in a secure position. Keep child and parent (or caregiver) CALM. Do not agitate child.

EMT

- A. Transport the child in a secure upright position immediately to the nearest appropriate hospital.

AEMT

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Reassess breath sounds and treat as follows:
1. Do not establish IV access unless child is in arrest. DO NOT agitate child.
 2. If foreign body in airway is suspected in unconscious patient with complete obstruction and basic procedures are unsuccessful, try to visualize obstruction with laryngoscope.
 3. Do not attempt invasive airway unless child has respiratory arrest. Bag-valve mask ventilation is acceptable.
 4. If foreign body in airway is suspected in unconscious patient with complete obstruction, and basic procedures are unsuccessful, try to visualize obstruction with laryngoscope and remove with Magill forceps.

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Reassess breath sounds and treat as follows:
1. If cause of upper airway obstruction is unknown and child is calm, a normal saline aerosol may be administered. DO NOT further agitate child.
 2. Do not attempt invasive airway unless child has respiratory arrest. Bag-valve mask ventilation is acceptable.
 3. If foreign body in airway is suspected in unconscious patient with complete obstruction, and basic procedures are unsuccessful, try to visualize obstruction with laryngoscope and remove with Magill forceps.
 4. If airway is completely obstructed, a needle, or surgical cricothyrotomy may be life saving. Contact medical control. If patient has a tracheostomy tube, see page 40.

LOWER AIRWAY OBSTRUCTION

Wheezing in the breathing patient with respiratory distress indicates lower airway disease, which may come from a variety of causes. The patient with severe lower airway disease may have altered LOC, be unable to talk, may have absent or markedly decreased breath sounds and severe retractions with accessory muscle use.

EMR

- A. Place child in position of comfort, encourage parent to hold child secure position. Keep child and parent CALM.
- B. Quickly obtain history and non-invasive respiratory assessment.
- C. Administer 100% oxygen in the least threatening manner.
- D. If respiratory effort is insufficient or patient is becoming unconscious, assist ventilations with bag-valve-mask.
 - 1. If allergic reaction is suspected:
 - a. Secure airway and support with oxygen.
 - b. If the patient has been prescribed an epinephrine auto-injector for these situations and requests assistance, assist with the administration of the epinephrine auto-injector or verbally contact on-line medical direction for orders to administer EMS-provided epinephrine.
 - c. Activate the emergency response system immediately.

EMT

- A. IF MEDICATION IS NOT AVAILABLE- Transport immediately, unless ALS unit is enroute and has an ETA of less than 5 minutes
- B. Ask patient or bystanders if a bronchial dilator by inhaler has been prescribed for these situations. If they have the medication with them, assist with the administration of medication per protocol, then transport patient.

AEMT

- A. Assume charge of situation.
- B. Reassess breath sounds.
- C. DO NOT establish IV access unless child is in arrest. Do not agitate child.
 - 1. If allergic reaction is suspected.
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml))
 - 2. For other causes of wheezing:
 - a. Administer 2.5 mg albuterol aerosol with 6 l/min oxygen over 10-15 minutes. Observe and document child's response. If no improvement, notify receiving facility or Medical Control.
 - b. DO NOT attempt invasive airway unless child has respiratory arrest.

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situations.
- B. Reassess breath sounds and treat as follows
 - 1. If allergic reaction is suspected:
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose 0.3 mg (0.3 ml)) as the primary treatment of symptoms of anaphylaxis or as the secondary treatment following Benadryl[®] administration for worsening symptoms of an allergic reaction
 - b. Administer Benadryl[®] (diphenhydramine) 1 mg/kg IM or IV (maximum dose 50 mg)
NOTE: This is especially indicated when drug reactions are suspected.
 - 2. For other causes of wheezing:
 - a. Administer 2.5 mg albuterol aerosol with 6 l/min oxygen over 10-15 minutes. Observe and document child's response. If no improvement, notify receiving facility or Medical Control.
 - b. DO NOT attempt invasive airway unless child has respiratory arrest.

**PEDIATRIC RESPIRATORY DISTRESS
UPPER AIRWAY OBSTRUCTION**

**PEDIATRIC RESPIRATORY DISTRESS
LOWER AIRWAY DISEASE**

PEDIATRIC SEIZURE

GENERAL CONSIDERATIONS

- A. The seizure may be stopped by the time the EMS professionals arrive. The patient will normally be in the postictal state.
- B. The basic rule with seizures is to "protect and support" the patient.
- C. Aspiration precautions should include:
 - 1. Coma position: a left side-lying position with the head lowered 15 to 30 degrees.
 - 2. Suction readily available.
 - 3. Clear mouth of foreign bodies (food, gum, etc.)
- D. Febrile Seizures (seizures with fever) are common in children and should be treated like other seizures.

EMR

- A. Place patient away from objects on which they might injure themselves; protect but do not restrain them.
- B. Clear and maintain airway; consider cervical spine injury.
- C. Administer 100% oxygen with NRB as needed for ventilation.
- D. Obtain history from family and/or bystanders:
 - 1. Seizure history
 - 2. Description of onset of seizure
 - 3. Medication
 - 4. Other known medical history, especially fever, head trauma, diabetes, drugs
- E. Evaluate any evidence of injury, especially head trauma.

EMT

- A. Bring any medications with child to the hospital.
- B. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.
- C. Check blood sugar level.

AEMT

- A. Assist EMS professionals, obtain patient condition and circumstances.
- B. Apply cardiac monitor and check rhythm.
- C. If seizure activity persists:
 - 1. Establish airway
 - 2. Start IV

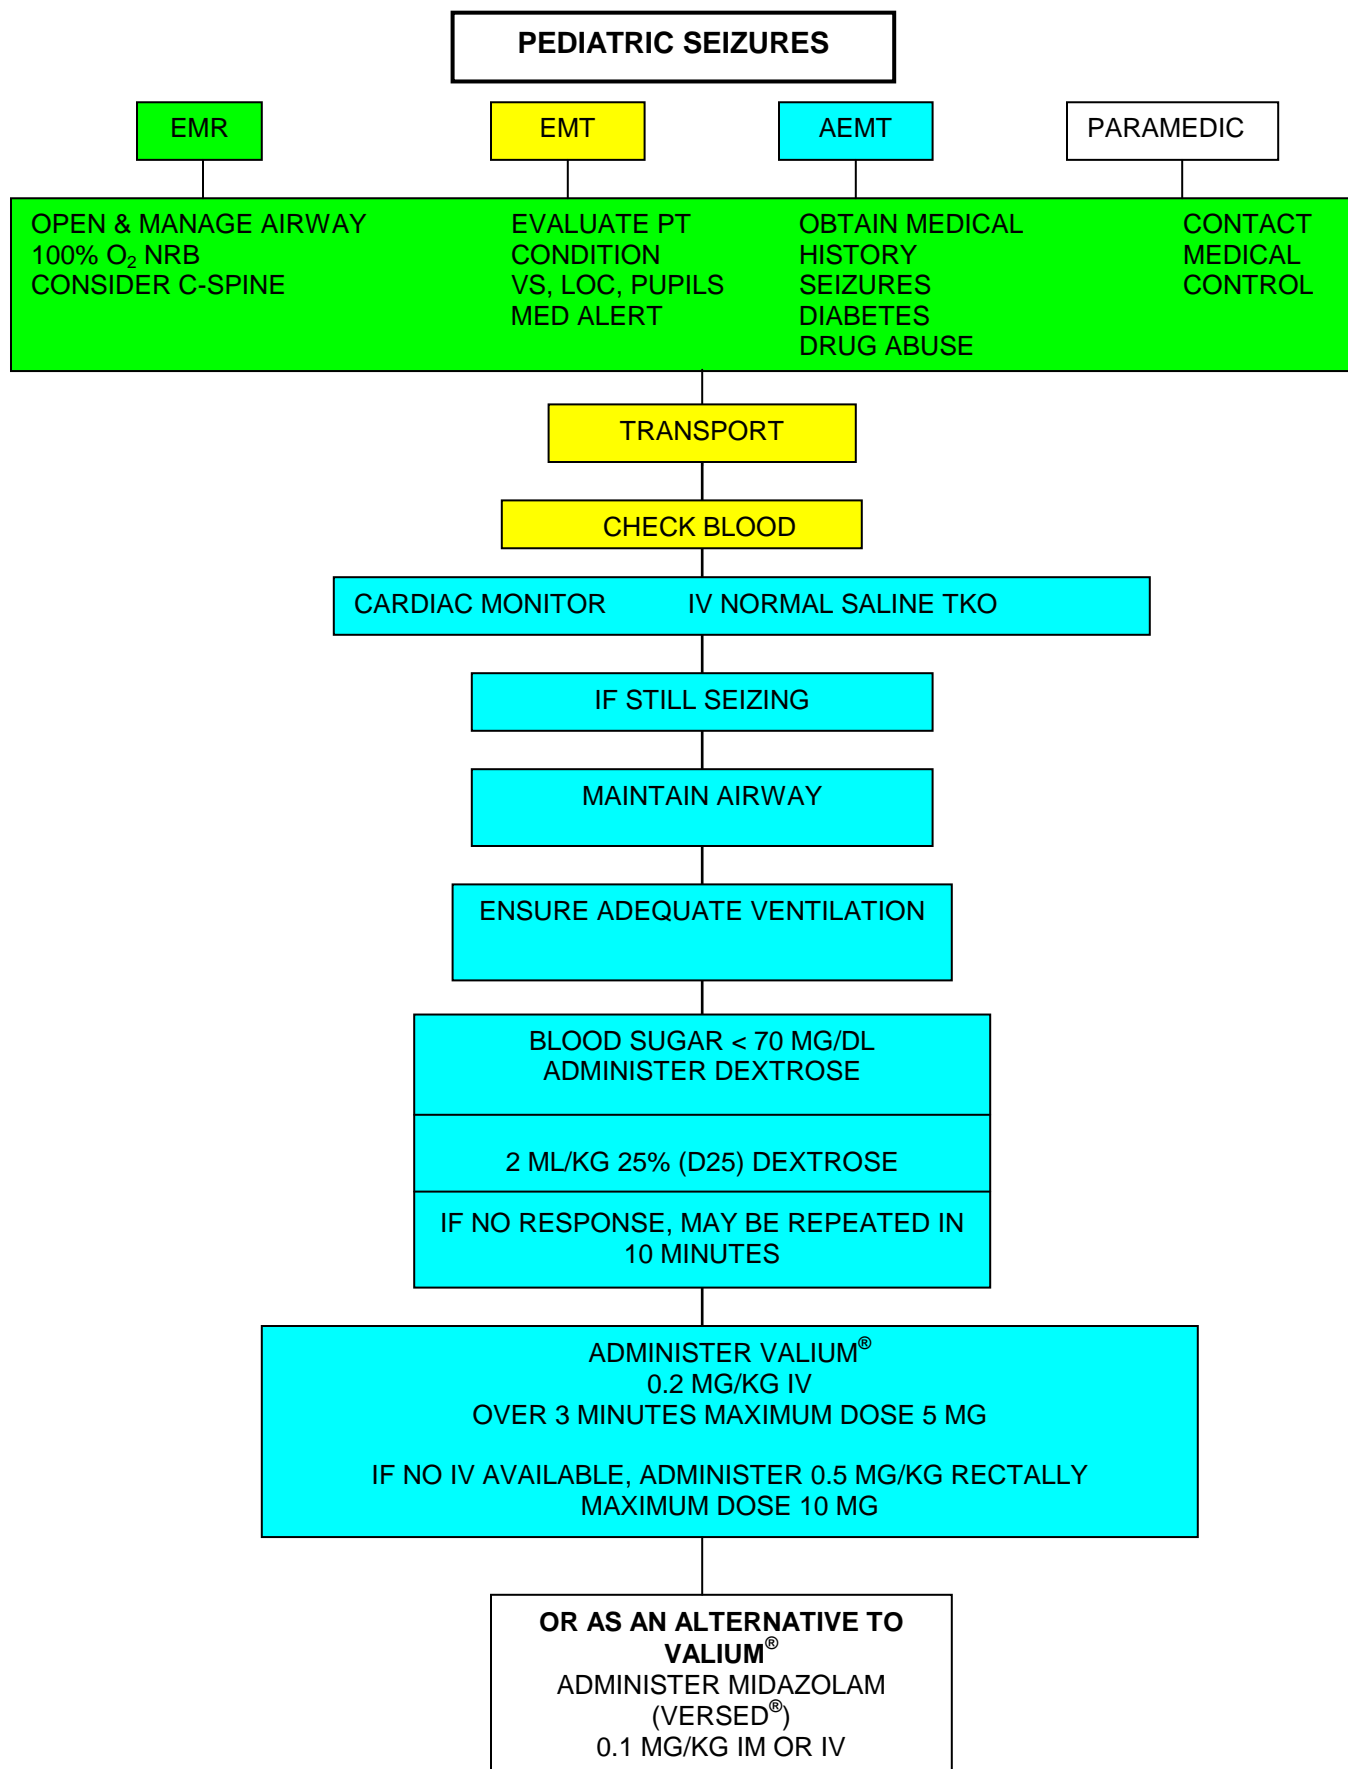

PEDIATRIC SEIZURE (cont'd)

D. Check blood sugar level.

1. If the blood sugar less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose for children
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl
2. Administer Valium[®], 0.2 mg/kg, slow IV push over three minutes, to a maximum dosage of 5 mg.
 - a. If no IV is available, administer Valium[®] rectally, 0.5 mg/kg, to a maximum dose of 10 mg.

PARAMEDIC

- A. Assume charge of the situation and confer with EMS professionals about patient and situation
- B. Make sure patient has good airway. In some cases intubation may be necessary.
- C. If seizure activity persists, determine blood sugar level and treat accordingly
 1. Blood sugar less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose for children
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl
 2. Administer midazolam (Versed[®]) 0.1 mg/kg IM **OR**, administer Valium[®], 0.2 mg/kg, slow IV push over three minutes, to a maximum dosage of 5 mg.
 - a. If no IV is available, administer Valium[®] rectally, 0.5 mg/kg, to a maximum dose of 10 mg.

PEDIATRIC SHOCK

GENERAL CONSIDERATIONS

- A. Shock is not only caused by blood loss. The EMS professional must evaluate for fluid loss from other causes such as excessive vomiting and/or diarrhea, heat exposure, severe infection, severe allergic reaction (anaphylaxis), spinal trauma, and heart failure.
- B. Do not use only the patient's blood pressure in evaluating shock; also look for lower body temperature, poor capillary refill, decreased level of consciousness, increased heart rate, and/or poor skin color or turgor. **Tachycardia is often the first sign of shock.**

NOTE: Do NOT depend on blood pressure.

- C. Transport should not be delayed. The airway must be secured and then transport immediately. It is preferable IVs and/or IOs be done during transportation.

EMR

- A. Open and maintain the airway with sniffing position and the use of an oral airway if needed.
- B. Control all external bleeding and evaluate for internal hemorrhage and/or dehydration.
- C. Provide 100% oxygen through NRB mask, and if needed assist ventilations with a BVM.
- D. Obtain vital signs: pulse and respirations.
- E. For anaphylactic shock, the EMR may assist the patient with the administration of an epinephrine auto-injector prescribed for the patient with a written protocol upon request of the patient or the patient's legal guardian. The EMR may assist with the administration of an EMS-provided epinephrine auto-injector with verbal medical direction.

EMT

- A. Establish communications with Medical Control and advise of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.

AEMT

- A. Assist EMS professionals, obtain patient condition and circumstance.
- B. Hypovolemic, neurogenic or septic shock:
 - 1. Start IV of normal saline and apply cardiac monitor during transport to the hospital.

DO NOT DELAY TRANSPORT FOR IV

- 2. Administer IV fluid bolus of 20 ml/kg of NS if signs of hypoperfusion or dehydration are present

PEDIATRIC SHOCK (cont'd)

3. Transport. Repeat bolus during transport if patient does not respond to first bolus.
 4. Check blood sugar; if less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose (D25).
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl.
- C. Anaphylactic shock:
1. Respiratory distress
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
 - b. Administer Benadryl® (diphenhydramine) to be administered 1 mg/kg IM or IV (maximum dose 50 mg). NOTE: This is especially indicated when drug reactions are suspected.
 - c. When wheezes are present and not cleared by epinephrine, provide albuterol breathing treatment: 1 unit dose, 2.5 mg (3 ml), by child aerosol mask over 10-15 minutes.
 2. Hives, itching, and/or swelling with normal blood pressure:
 - a. Administer epinephrine 1:1,000 0.01 ml/kg (0.01 mg/kg) SQ (maximum dose 0.3 mg (0.3 ml)).
 - b. Administer Benadryl® (diphenhydramine) to be administered 1 mg/kg IM or IV (maximum dose 50 mg). NOTE: This is especially indicated when drug reactions are suspected.
 3. If breathing difficulty with low blood pressure establish IV saline during transport.
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
 4. Hives, itching, and/or swelling:
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
- D. Apply monitor and check rhythm.

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Apply monitor and follow protocol for arrhythmias.
- C. Identify type of shock and treat as follows:
 1. Hypovolemic, neurogenic, septic:
 - a. Start IV or IO and administer NS fluid bolus of 20 ml/kg if sign of hypoperfusion or dehydration are present (low BP, tachycardia, poor capillary refill, poor skin turgor)
 - b. Repeat bolus during transport

PEDIATRIC SHOCK (cont'd)

- c. Check blood sugar; if less than 70 mg/dl , administer IV bolus:
 - i. 2 ml/kg of 25% dextrose (D25).
 - ii. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl.
- 2. Anaphylactic:
 - a. Respiratory distress
 - i. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
 - ii. Administer Benadryl® (diphenhydramine) to be administered 1 mg/kg IM or IV (maximum dose 50 mg). NOTE: This is especially indicated when drug reactions are suspected.
 - iii. When wheezes are present and not cleared by epinephrine, provide albuterol breathing treatment: 1 unit dose, 2.5 mg (3 ml), by child aerosol mask over 10-15 minutes.
 - b. Hives, itching, and/or swelling with normal blood pressure:
 - i. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
 - ii. Administer Benadryl® (diphenhydramine) to be administered 1 mg/kg IM or IV (maximum dose 50 mg). NOTE: This is especially indicated when drug reactions are suspected.

EMS and Children with Special Health Care Needs: The TEAM APPROACH

The medically fragile child is one who depends on some form of technology assistance. This can be anything from a nasal cannula to a child who requires total ventilatory support. While such a child may not meet one's definition of "normal", he/she is loved and valued by parents and family. Even though the days are filled with uncertainties and the ride on the emotional roller coaster is unending, we count every day as a gift to enjoy the blessing of these special children.

Caring for a medically fragile child requires a full **TEAM** = **T**rust **E**very **A**vailable **M**ember. Do not be concerned about removing the family from the crisis situation but *inform* them about what you are doing and *include* them in your plan of care. In most cases, the parents and/or home care providers can be of great assistance to the EMS providers. It is vitally important that their knowledge and experience is utilized when treating the child. Parents/caregivers can supply valuable and time saving information. When given direction, they can provide an often needed extra pair of hands (e.g. hold the IV bag, bag ventilate, etc.). Most importantly, they can console, comfort and calm their child.

If at all possible, arrange to meet with families of medically fragile children before an emergency arises. This will allow you to become familiar with the child's needs, baseline condition and the parents' capabilities to provide care prior to your arrival. You will know what to expect and will feel more prepared and confident to treat the child in a crisis situation. This will enhance the **TEAM** approach.

This **TEAM** approach produces an outcome that will always be positive for everyone – the EMS providers, the parents, and most importantly, the child.

Thank you for the privilege of being a part of the EMSC team by serving as the parent advocate for the State of Ohio.

*Linda Eckfeld
Ohio EMSC Parent Advocate*

CHILDREN WITH SPECIAL NEEDS (CSHCN)

SPECIAL CONSIDERATIONS

- A. Treat the ABCs first. Treat the child, not the equipment. If the emergency is due to an equipment malfunction, manage the child appropriately using your own equipment.
- B. Children formerly cared for in hospitals or chronic care facilities are often cared for in homes by parents or other caretakers. These children may have self limiting or chronic diseases. There are a multitude of underlying medical conditions that may categorize children as having special needs. Many are often unstable and may frequently involve the EMS system for evaluation, stabilization, and transport. Special needs children include technology-assisted children such as those with tracheostomy tubes with or without assisted ventilation, children with gastrostomy tubes, and children with indwelling central lines. The most serious complications are related to tracheostomy problems due to the high risk of airway compromise and resultant hypoxia.
- C. CSHCN have many allergies. Children with spina bifida are often allergic to latex. Before treating a patient, ask the caregivers if the children are allergic to latex or have any other allergies. If possible, keep latex-free equipment. (Some regularly used equipment that contains latex includes gloves, oxygen masks, IV tubing BVM, blood pressure cuff, IV catheters, etc.)
- D. Knowing which children in a given area have special needs and keeping a log book is encouraged.
- E. Parents and caretakers are usually trained in emergency management and can be of assistance to EMS personnel. Listen carefully to the caregiver and follow his/her guidance regarding the child's treatment.
- F. Children with chronic illnesses often have different physical development from well children. Therefore, their baseline vital signs may differ from normal standards. The size and developmental level may be different from age-based norms and length based tapes used to calculate drug dosages. Ask the caregiver if the child normally has abnormal vital signs. (i.e. a fast heart rate or a low pulse oxymeter reading)
- G. Some CSHCN may have sensory deficits (i.e. they may be hearing impaired or blind) yet may have age-appropriate cognitive abilities. Follow the caregivers' lead in talking to and comforting a child during treatment and transport. Do not assume that a CSHCN is developmentally delayed.
- H. When moving a special needs child, a slow careful transfer with two or more people is preferable. Do not try to straighten or unnecessarily manipulate contracted extremities as it may cause injury or pain to the child. Certain medical conditions will require special care. Again, consult the child's caregiver.
- I. Caregivers of CSHCN often carry "go bags" or diaper bags that contain supplies to use with the child's medical technologies and additional equipment such as extra tracheostomy tubes, adapters for feeding tubes, suction catheters, etc. Before leaving the scene, ask the caregivers if they have a "go bag" and carry it with you.
- J. Caregivers may also carry a brief medical information form or card. The child may be enrolled in a medical alert program whereby emergency personnel can get quick access to the child's medical history. Ask the caregivers if they have an emergency information form or some other form of medical information for their child.
- K. Caregivers of CSHCN often prefer that their child be transported to the hospital where the child is regularly followed or the "home" hospital. When making the decision as to where to transport a CSHCN, take into account: local protocols, the child's condition, capabilities of the local hospital, caregivers' request, ability to transport to certain locations and the ability to request helicopter transport for distant home hospitals.

EMERGENCIES IN CHILDREN WITH TRACHEOSTOMIES

GENERAL CONSIDERATIONS

- A. The child should be examined for other possible problems. Do not assume the problem is with the tracheostomy tube.

EMR

- A. Examine the child quickly for possible causes of distress which may be easily correctable, such as a detached oxygen source.
- B. Try to establish the child's baseline: the child may never look normal.
- C. If on a ventilator, remove the child from the ventilator and bag the child with a secure oxygen source; there may be a problem with the ventilator or oxygen source.

EMT

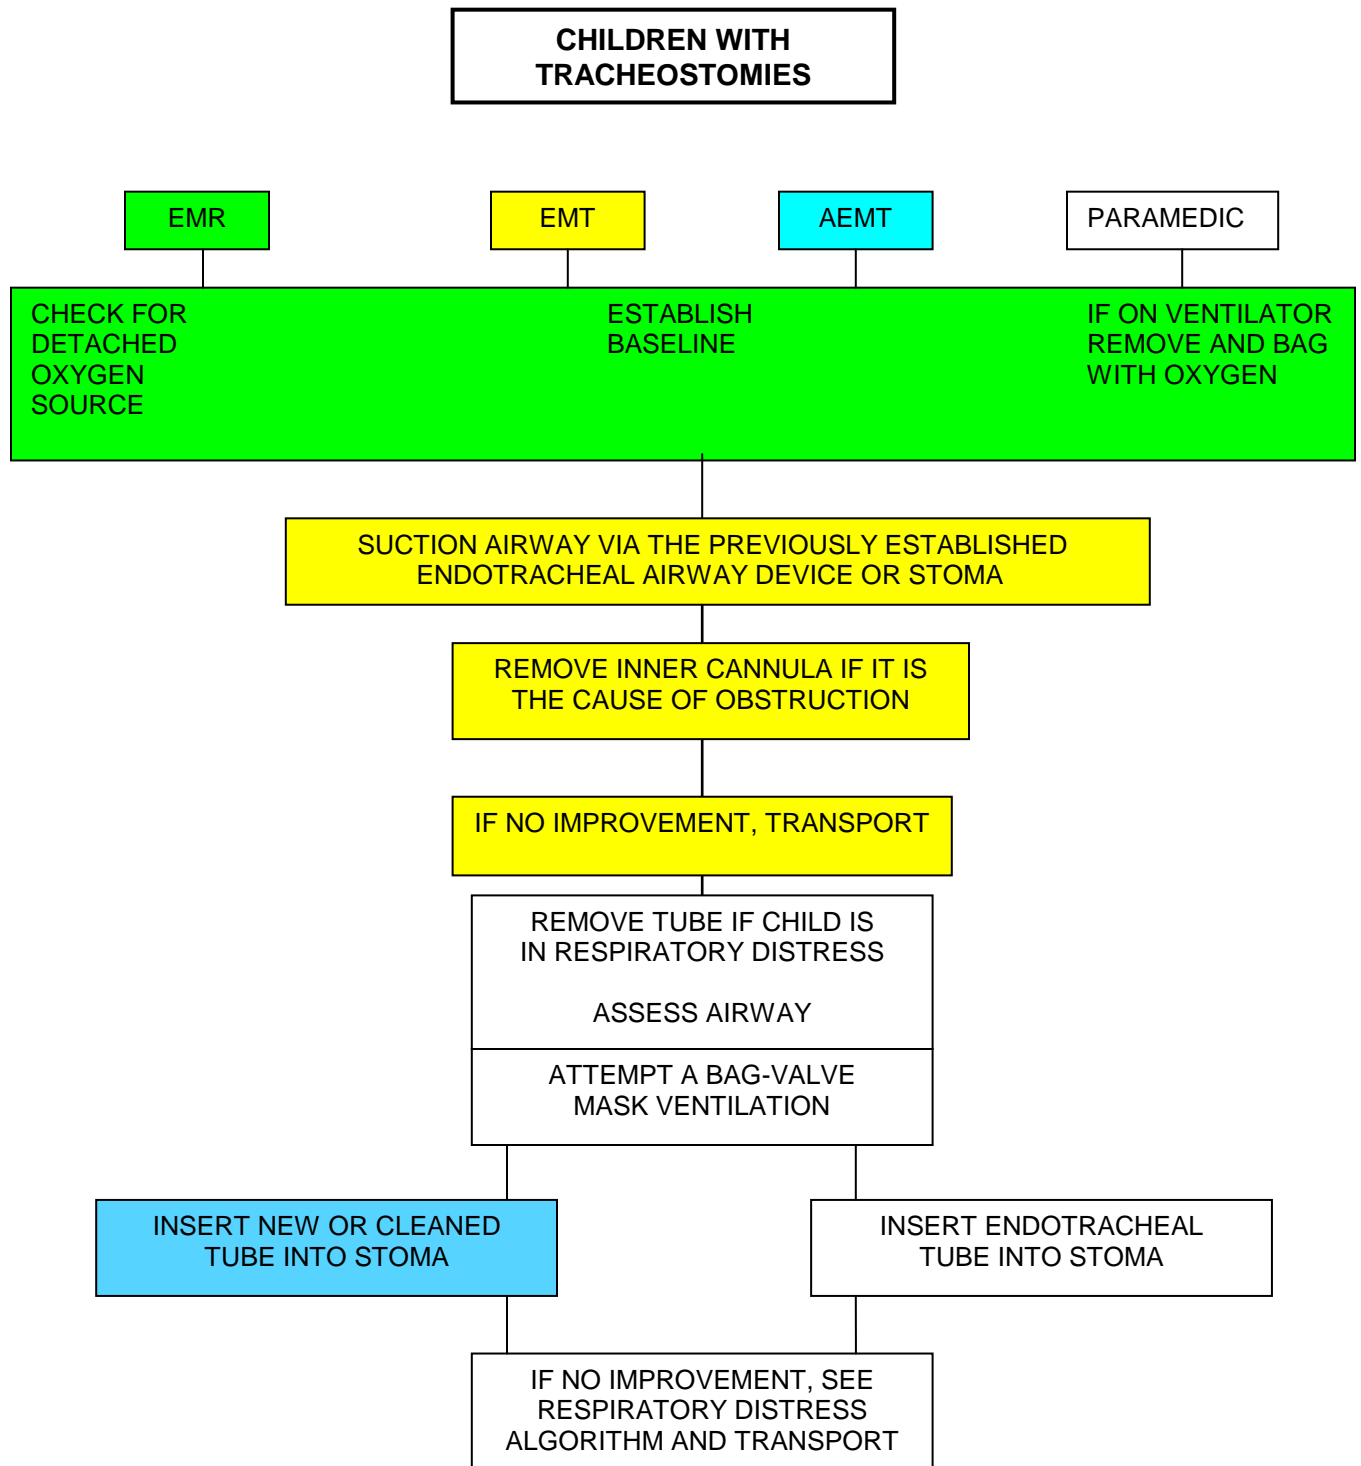

- A. If still no improvement immediately transport to the nearest medical facility; initiate appropriate resuscitation as needed. Suction the child through the previously established endotracheal airway device or stoma as accumulation of debris is a common cause of obstruction.

AEMT

- A. If suctioning does not relieve the obstruction and the tracheostomy tube has a cannula, remove it. If it is the cause of obstruction, there should be immediate improvement. A tracheostomy tube that has been previously removed may be replaced after ensuring that the lumen has been cleaned and all obstructive debris has been cleared from the lumen.

PARAMEDIC

- A. If there is no improvement after suctioning and/or removal of the inner cannula and the child is in severe respiratory distress, an occluded tracheostomy tube should be removed and ventilation via bag valve mask and should be attempted. The removal of endotracheal devices following recent surgical placement should be avoided due to increased potential of airway collapse and resultant respiratory compromise. If an endotracheal or tracheostomy tube is available, insert it into the stoma and resume ventilation (a previously used tracheostomy tube following cleansing and removal of any obstructive debris from the lumen can be inserted.)
- B. If there is still no improvement see the respiratory distress protocol.

EMERGENCIES IN CHILDREN WITH IN-DWELLING CENTRAL LINES

GENERAL CONSIDERATIONS

- A. Children may have central lines in several locations and some complications are due to location; some central lines are located under the skin and can be felt but not seen.
- B. The most common emergencies with central lines include, blockage of the line, complete or partial accidental removal, complete or partial laceration of the line, or possible infection in the central line which may lead to sepsis.

EMR

- A. Always evaluate child for cardiovascular stability as some complications may be life threatening.
- B. Children may be experiencing complications from their underlying medical condition; ask caretakers about the child's condition.

EMT

AEMT

PARAMEDIC

- A. If line is blocked, do not attempt to force the catheter open, transport to a facility capable of managing central lines.
- B. For complete removal, do not attempt to reinsert; transport to the nearest emergency department. Infections are a common complication; don't try to push a line back in, even if it is only slightly out.
- C. For complete removal, maintain pressure on site until bleeding has stopped; transport child and catheter to nearest emergency department (part of the catheter may have broken off.) Always bring the line with you to the hospital.
- D. For partial or complete laceration of the line, clamp proximally to laceration utilizing a padded clamp and transport child and catheter to nearest emergency department.
- E. For children with sudden deterioration begin basic resuscitation and transport to nearest emergency facility (child may have pneumothorax or internal bleeding.)
- F. If there are fluids infusing through the central line, determine the nature of the fluid and the time that the fluid was started.
- G. For paramedic only: May use central line for IV access if permitted by protocol, and given clearance by medical control

EMERGENCIES IN CHILDREN WITH IN-DWELLING CENTRAL LINES

EMERGENCIES IN CHILDREN WITH GASTROSTOMY TUBES

GENERAL CONSIDERATIONS

- A. Children with gastrostomy tubes may have complications of obstruction or dislodgment; obstruction is usually not an emergency but the child may require transport; dislodgment is not life threatening but the tube should be replaced as soon as possible. Both conditions are easily recognized.
- B. The child should be examined for any other possible problems.

EMR

- A. Children who have problems with their tubes may have problems with regurgitation or aspiration.
- B. Be aware of and address any other possible problems from their underlying medical condition.

EMT

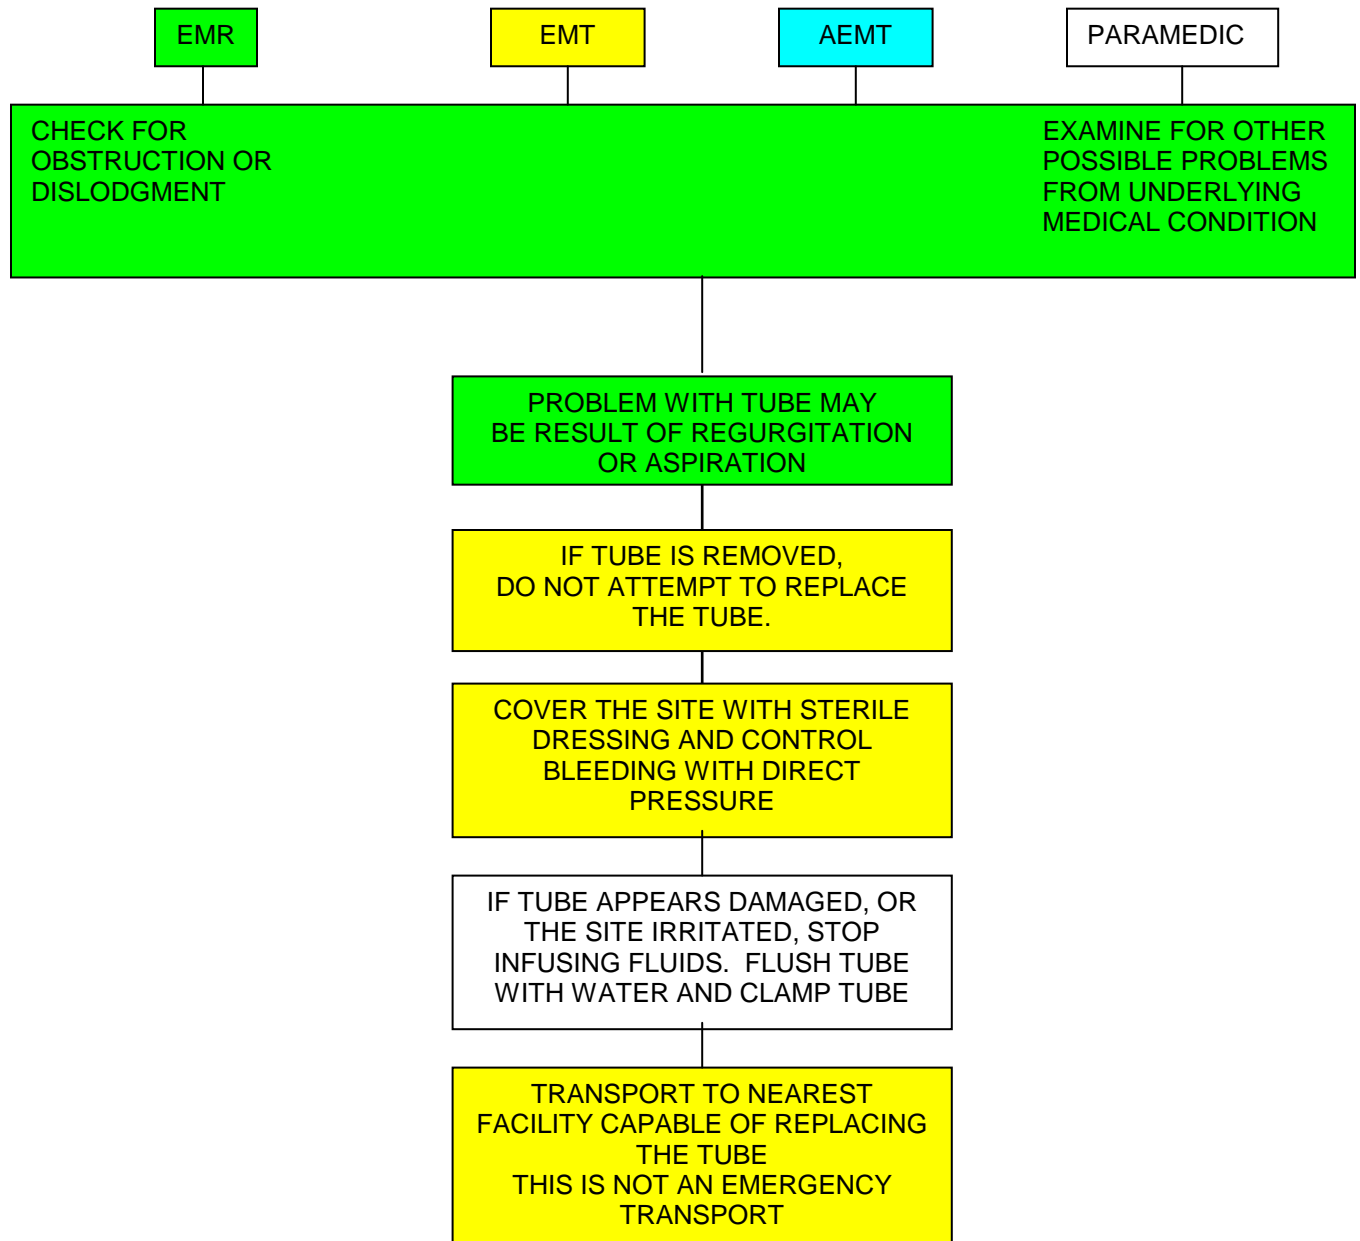

AEMT

- A. Transport the child and the tube to the nearest facility capable of replacing the tube; this is not an emergency transport.
- B. Do not attempt to replace the tube; it is not as easy as it seems and there may be other complications.
- C. Cover the site with a sterile dressing and control any bleeding with direct pressure.

PARAMEDIC

If there are fluids infusing through the feeding tube, determine the nature of the fluids and the time that the fluids were started. If the tube appears damaged, or the site is irritated, stop all infusing fluids, flush the tube with water, and clamp the tube.

EMERGENCIES IN CHILDREN WITH GASTROSTOMY TUBES

EMERGENCIES IN CHILDREN ON VENTILATORS

GENERAL CONSIDERATIONS

- A. Children on mechanical ventilation may exhibit sudden or gradual deterioration, cardiac arrest, increased oxygen demand, increased respiratory rate, retractions, or change in mental status.
- B. Examine the child quickly for possible causes of distress which may be easily correctable (e.g. detached oxygen source) the caretakers will often have done this but double check.
- C. Medications the child is presently taking may be the cause of deterioration.
- D. Try to establish the child's baseline; the child may never look normal.

EMR

- A. Remove the child from the ventilator and bag the child with a secure oxygen source; if the child improves there may be a problem with the ventilator or oxygen source.

EMT

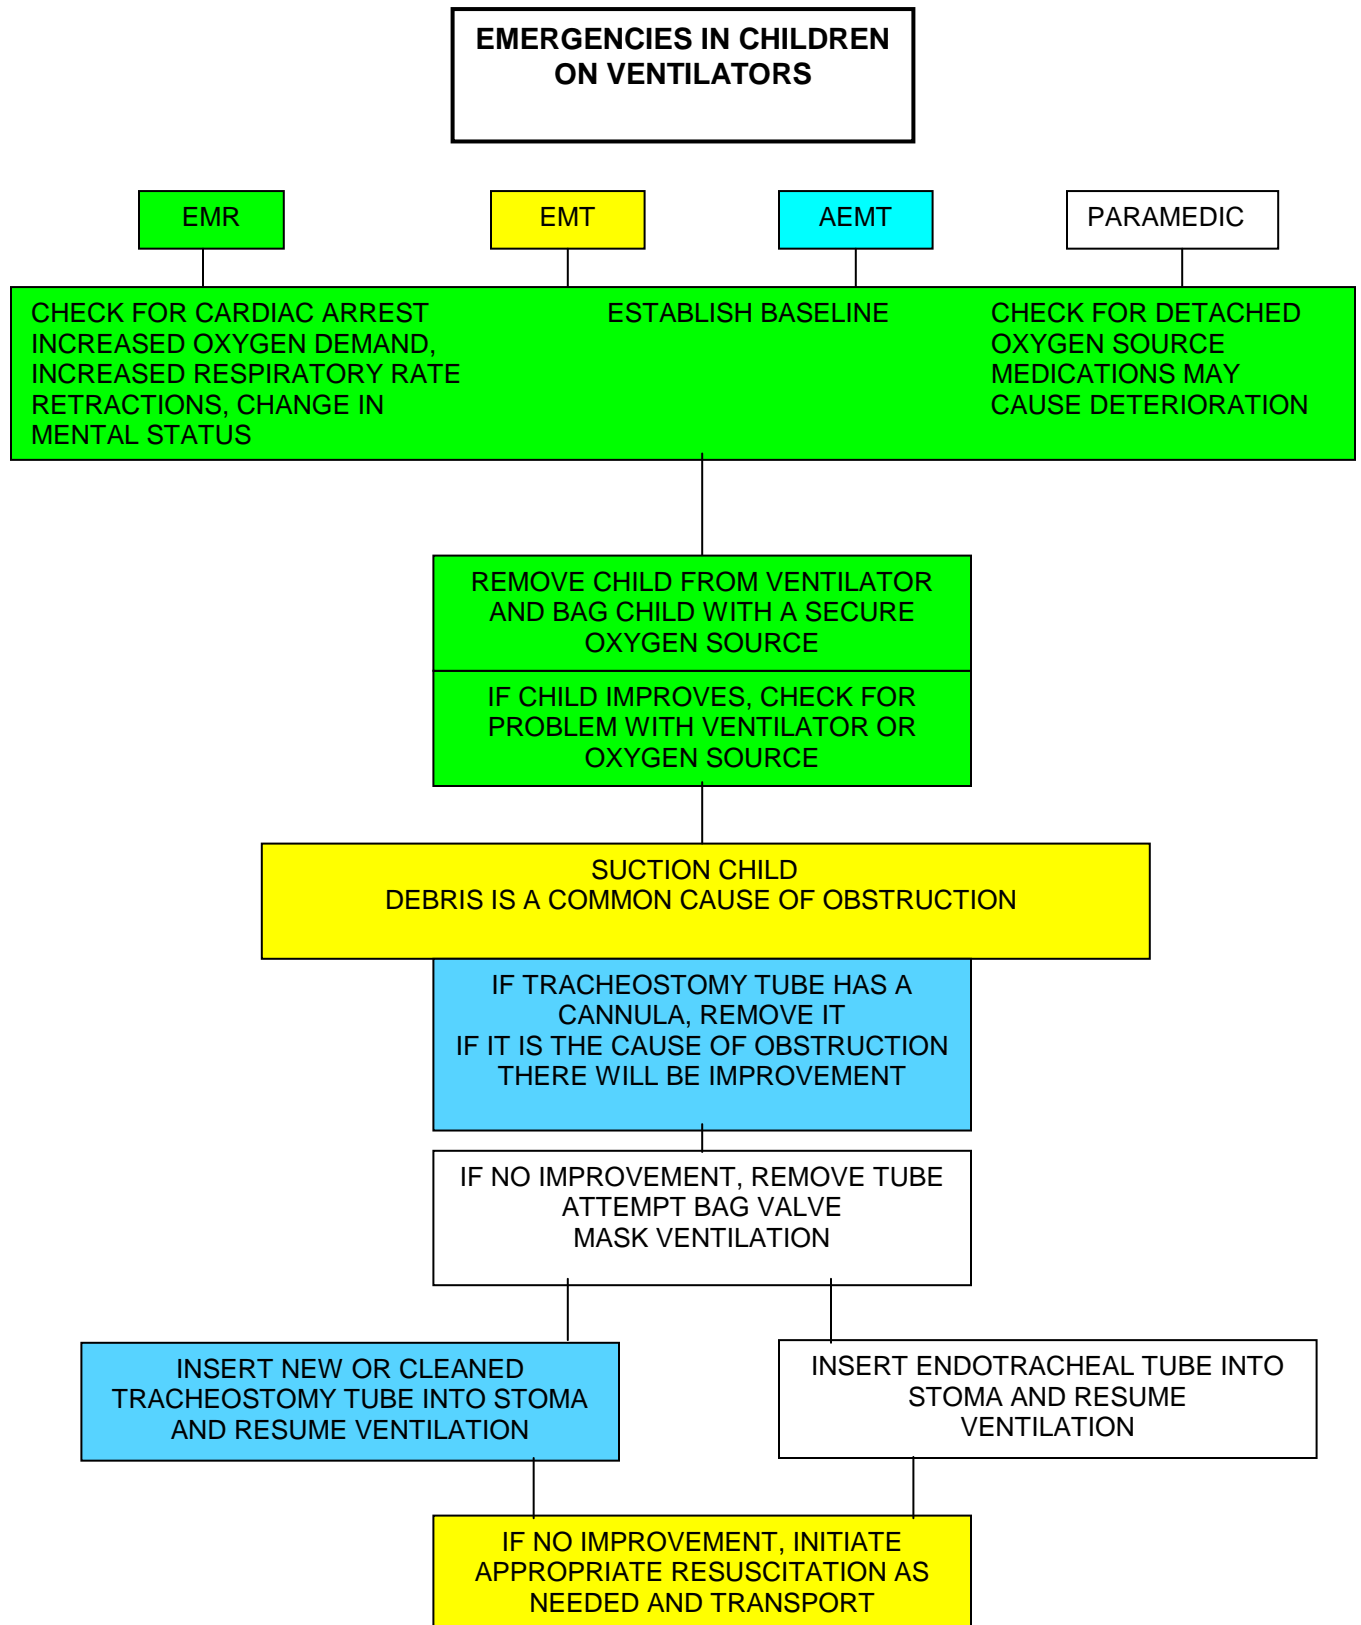

- A. If there is no improvement immediately transport to the nearest medical facility; initiate appropriate resuscitation as needed. Suction the child through a previously established endotracheal device as accumulation of debris is a common cause of obstruction.

AEMT

- A. If suctioning does not relieve the obstruction and the patient has a tracheostomy tube, remove the inner cannula. If it is the cause of obstruction, there should be immediate improvement. A tracheostomy tube that has been previously removed may be replaced after ensuring that the lumen has been cleaned and all obstructive debris has been cleared from the lumen.

PARAMEDIC

- A. If there is no improvement after suctioning and/or removal of the inner cannula and the child is in severe respiratory distress, an occluded endotracheal or tracheostomy tube should be removed and ventilation via bag valve mask and should be attempted. The removal of endotracheal devices following recent surgical placement should be avoided due to increased potential of airway collapse and resultant respiratory compromise. If another endotracheal or tracheostomy tube is available, insert into the stoma and resume ventilation (a previously used tracheostomy tube following cleansing and removal of any obstructive debris from the lumen can be inserted.)
- B. If there is still no improvement see the respiratory distress protocol.

NORMAL PEDIATRIC VITAL SIGNS¹

Age	Pulse	Respiratory Rate	Systolic BP*
Preterm < 1 kg	120-160	30-60	36-58
Preterm 1 kg	120-160	30-60	42-66
Preterm 2 kg	120-160	30-60	50-72
Newborn	126-160	30-60	60-70
Up to 1 year	100-140	30-60	70-80
1-3 years	100-140	20-40	76-90
4-6 years	80-120	20-30	80-100
7-9 years	80-120	16-24	84-110
10-12 years	60-100	16-20	90-120
13-14 years	60-90	16-20	90-120
15 years and older	60-90	14-20	90-130

- Blood pressure is a late and unreliable indicator of shock in children

PEDIATRIC COMA SCORING²

	<u>Glasgow</u>	<u>Glasgow Modified for Infant</u>	
Eye opening	Spontaneous To voice To pain None	Spontaneous To voice To pain None	4 3 2 1
Verbal response	Oriented Confused Inappropriate Garbled speech None	Coos, babbles Irritable cry, inconsolable Cries to pain, Moans to pain None	5 4 3 2 1
Motor response*	Obeys commands Localizes pain Withdraws to pain Flexion Extension Flaccid	Normal movements Withdraws to touch Withdraws to pain Flexion Extension Flaccid	6 5 4 3 2 1

*** NOTE: MOTOR RESPONSE IS MOST INDICATIVE OF LEVEL OF INJURY**

¹ Reference: Children's Hospital Pediatric Reference Code Card, Columbus, Ohio, 1999

² A score of < 8 is generally an indication to hyperventilate the child.

PEDIATRIC PREHOSPITAL MEDICATIONS

<u>Medication</u>	<u>Dose</u>	<u>Route</u>	<u>Remarks</u>
• Acetaminophen (Tylenol®)	10 mg/kg	PO	Useful for musculoskeletal pain and fever control
• Activated charcoal	1 gm/kg	PO	Do not give to child with altered level of consciousness
• Adenosine	0.1 mg/kg	IV, IO	Indicated for SVT. First dose 6mg, second dose 6mg. Max dose 12mg
• Albuterol	2.5 mg	Aerosol	Indicated for wheezing as per protocol
• Amiodarone	5 mg/kg	IV, IO	Over 20-60 minutes, maximum 15 mg/kg per day. For shock-refractory pulseless VT/VF: 5 mg/kg rapid IV/IO
• Atropine	0.02 mg/kg	IV, IO, ET	Minimum dose 0.1 mg; max dose for child 0.5 mg; max dose for adolescent 1.0 mg; may repeat x1; Also useful before intubating children < 5 years old, blocks bradycardia due to vagal nerve stimulation
• Dextrose 25%	2 ml/kg	IV, IO	Try to obtain bedside glucose level before administering ----administer if blood glucose < 60; dilute 50% 1:1 with sterile water; consult Medical Control if infant < 1 month as solution may need to be further diluted.
• Diazepam (Valium®)	0.2-0.3 mg/kg	IV	Indicated for uncontrolled seizure activity; anticipate respiratory depression. Max. dose 10 mg.
• Diazepam (Valium®)	0.5 mg/kg	Rectal	Indicated for uncontrolled seizure activity; anticipate respiratory depression. Max. dose 10 mg.
• Diphenhydramine (Benadryl®)	1 mg/kg	IV	Useful in allergic reactions and anaphylaxis. Max dose 50 mg
• Epinephrine (1:10,000)	0.1 ml/kg (0.01 mg/kg)	IV, IO	Commonly used in cardiac arrest rhythms as first dose. Increase second dose 10 X (may use 1:1,000 solution).
• Epinephrine (1:1,000)	0.1 ml/kg (0.1 mg/kg)	ET, IV, IO	Commonly used in cardiac arrest rhythms. Use for all ET doses, and second and subsequent IV/IO doses. *The ET route has limited absorption, use IV/IO route whenever possible
	0.01ml/kg	IM or SQ	Used for anaphylaxis. Max dose is 0.3 ml
• Morphine	0.1 mg/kg	IV/IM	Useful for moderate pain, may cause respiratory depression. Hypotension and reflex bradycardia may develop from histamine release
• Midazolam (Versed®)	0.1 mg/kg	IV/IO/IM	Indicated for uncontrolled seizure activity; anticipate respiratory depression Useful to facilitate advanced airway management in combative patients
• Naloxone (Narcan®)	0.1 mg/kg	IV, IO, ET	Useful for unknown unconscious, known narcotic overdoses
• Procainamide	15 mg/kg	IV	Over 30-60 minutes. Alternative treatment for recurrent or refractory VT, SVT.

ET = endotracheal IM = intramuscular injection IO = intraosseous IV = Intravenous SQ = subcutaneous injection

Notice of changes to trauma triage rules

This document details the changes have been made to the portions of the Ohio Administrative Code (OAC) that cover trauma triage. These changes, based on research performed by the State Board of Emergency Medical Services, create a definition of ‘geriatric trauma patient’ and create specific criteria for the triaging of geriatric trauma patients.

Summary of changes to trauma triage rules (OAC 4765-14)

4765-14-01 Definitions

- Added (H), definition of “body regions”
- Added (I), definition of “evidence of traumatic brain injury”

4765-14-02 Determination Of A Trauma Victim

- Changed (A) to define “adult trauma victim” as being between 16 and 69 years of age
- Added (C) to define “geriatric trauma victim”

4765-14-03 Enforcement Of State Or Regional Trauma Triage Protocols

- No changes or additions

4765-14-04 Education Of State And Regional Trauma Triage Protocols

- No changes or additions

4765-14-05 Exceptions To Mandatory Transport

- No changes or additions

4765-14-06 Amendments Affecting Regional Protocols

- New rule describing how amendments to triage rules affect regional triage variants

Note on formatting of this document:

New language added to this rule is in underline format.
Geriatric criteria that are different from adult criteria are in **bold** format.

4765-14-01 Definitions.

(A) As used in this chapter and section 4765.01 of the Revised Code, "trauma" or "traumatic injury" means severe damage to or destruction of tissue that satisfies both of the following conditions:

(1) It creates a significant risk of any of the following:

- (a) Loss of life;
- (b) Loss of a limb;
- (c) Significant, permanent disfigurement;
- (d) Significant, permanent disability; and

(2) It is caused by any of the following:

- (a) Blunt or penetrating injury;
- (b) Exposure to electromagnetic, chemical, or radioactive energy;
- (c) Drowning, suffocation, or strangulation;
- (d) A deficit or excess of heat.

(B) "Evidence of poor perfusion" means physiologic indicators of hemorrhage or decreased cardiovascular function, which may include any of the following symptoms:

- (1) Weak, distal pulse;
- (2) Pallor;
- (3) Cyanosis;
- (4) Delayed capillary refill;
- (5) Tachycardia.

(C) "Evidence of respiratory distress or failure" means physiologic indicators of decreased ventilatory function, which may include any of the following symptoms:

- (1) Stridor;
- (2) Grunting;
- (3) Retractions;
- (4) Cyanosis;
- (5) Hoarseness;
- (6) Difficulty speaking.

(D) "Evidence of hemorrhagic shock" means physiologic indicators of blood loss that may include any of the following symptoms:

- (1) Delayed capillary refill;
- (2) Cool, pale, diaphoretic skin;
- (3) Decreased systolic blood pressure with narrowing pulse pressure;
- (4) Altered level of consciousness.

(E) "Seatbelt sign" means abdominal or thoracic contusions and abrasions resulting from the use of a seatbelt during a motor vehicle collision.

(F) "Signs or symptoms of spinal cord injury" means physiologic indicators that the spinal cord is damaged, including, but not limited to, paralysis, weakness, numbness, or tingling of one or more extremities.

(G) "Evidence of neurovascular compromise" means physiologic indicators of injury to blood vessels or nerves including, but not limited to, pallor, loss of palpable pulses, paralysis, paraesthesia, or severe pain.

(H) “Body region” means a portion of the trauma victim’s body divided into the following areas:

- (1) Brain
- (2) Head, face and neck
- (3) Chest
- (4) Abdomen and pelvis
- (5) Extremities
- (6) Spine

(I) “Evidence of traumatic brain injury” means signs of external trauma and physiologic indicators that the brain has suffered an injury caused by external force including, but not limited to:

- (1) Decrease in level of consciousness from the victim’s baseline
- (2) Unequal pupils
- (3) Blurred vision
- (4) Severe or persistent headache
- (5) Nausea or vomiting
- (6) Change in neurological status

4765-14-02 Determination Of A Trauma Victim.

Emergency medical service personnel shall use the criteria in this rule, consistent with their certification, to evaluate whether an injured person qualifies as an adult trauma victim, geriatric trauma victim, or pediatric trauma victim, in conjunction with the definition of trauma in section 4765.01 of the Revised Code and this chapter.

(A) An adult trauma victim is a person between the ages of sixteen and sixty-nine years of age inclusive exhibiting one or more of the following physiologic or anatomic conditions:

(1) Physiologic conditions

- (a) Glasgow coma scale less than or equal to thirteen;
- (b) Loss of consciousness greater than five minutes;
- (c) Deterioration in level of consciousness at the scene or during transport;
- (d) Failure to localize to pain;
- (e) Respiratory rate less than ten or greater than twenty-nine;
- (f) Requires endotracheal intubation;
- (g) Requires relief of tension pneumothorax;
- (h) Pulse greater than one hundred twenty in combination with evidence of hemorrhagic shock;
- (i) Systolic blood pressure less than ninety, or absent radial pulse with carotid pulse present;

(2) Anatomic conditions

- (a) Penetrating trauma to the head, neck, or torso;
- (b) Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;
- (c) Injuries to the head, neck, or torso where the following physical findings are present:
 - (i) Visible crush injury;
 - (ii) Abdominal tenderness, distention, or seatbelt sign;
 - (iii) Pelvic fracture;
 - (iv) Flail chest;
- (d) Injuries to the extremities where the following physical findings are present:

- (i) Amputations proximal to the wrist or ankle;
- (ii) Visible crush injury;
- (iii) Fractures of two or more proximal long bones;
- (iv) Evidence of neurovascular compromise;

- (e) Signs or symptoms of spinal cord injury;
- (f) Second degree or third degree burns greater than ten per cent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway.

(B) A pediatric trauma victim is a person under sixteen years of age exhibiting one or more of the following physiologic or anatomic conditions:

(1) Physiologic conditions

- (a) Glasgow coma scale less than or equal to thirteen;
- (b) Loss of consciousness greater than five minutes;
- (c) Deterioration in level of consciousness at the scene or during transport;
- (d) Failure to localize to pain;
- (e) Evidence of poor perfusion, or evidence of respiratory distress or failure.

(2) Anatomic conditions

- (a) Penetrating trauma to the head, neck, or torso;
- (b) Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;
- (c) Injuries to the head, neck, or torso where the following physical findings are present;

- (i) Visible crush injury;
- (ii) Abdominal tenderness, distention, or seatbelt sign;
- (iii) Pelvic fracture;
- (iv) Flail chest;

- (d) Injuries to the extremities where the following physical findings are present:

- (i) Amputations proximal to the wrist or ankle;
- (ii) Visible crush injury;
- (iii) Fractures of two or more proximal long bones;
- (iv) Evidence of neurovascular compromise.

- (e) Signs or symptoms of spinal cord injury;
- (f) Second or third degree burns greater than ten per cent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway.

(C) A geriatric trauma victim is a person seventy years of age or older exhibiting one or more of the following causes of injury or physiologic or anatomic conditions:

(1) Physiologic conditions

(a) Glasgow coma scale less than or equal to fourteen in a trauma patient with a known or suspected traumatic brain injury

- (b) Glasgow coma score less than or equal to thirteen;
- (c) Loss of consciousness greater than five minutes;
- (d) Deterioration in level of consciousness at the scene or during transport;
- (e) Failure to localize to pain;
- (f) Respiratory rate less than ten or greater than twenty-nine;
- (g) Requires endotracheal intubation;

- (h) Requires relief of tension pneumothorax;
- (i) Pulse greater than one hundred twenty in combination with evidence of hemorrhagic shock;
- (j) **Systolic blood pressure less than one-hundred**, or absent radial pulse with carotid pulse present;

(2) Anatomic conditions

- (a) Penetrating trauma to the head, neck, or torso;
- (b) Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;

(c) Injuries to the head, neck, or torso where the following physical findings are present:

- (i) Visible crush injury;
- (ii) Abdominal tenderness, distention, or seatbelt sign;
- (iii) Pelvic fracture;
- (iv) Flail chest;

(d) Injuries to the extremities where the following physical findings are present:

- (i) Amputations proximal to the wrist or ankle;
- (ii) Visible crush injury;
- (iii) Fracture of one proximal long bone sustained as a result of a motor vehicle crash;**
- (iv) Fractures of two or more proximal long bones;
- (v) Evidence of neurovascular compromise.

- (e) Signs or symptoms of spinal cord injury;
- (f) Second degree or third degree burns greater than ten per cent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway;
- (g) Injury sustained in two or more body regions.**

(3) Cause of injury

- (a) Pedestrian struck by a motor vehicle**
- (b) Fall from any height, including standing falls, with evidence of a traumatic brain injury**

(D) Emergency medical service personnel shall also consider mechanism of injury and special considerations, as taught in the EMT-basic, EMT-intermediate, or EMT-paramedic curriculum, when evaluating whether an injured person qualifies as a trauma victim.

4765-14-03 Enforcement Of State Or Regional Trauma Triage Protocols.

(A) EMS medical directors shall be responsible for enforcing state or regional trauma triage protocols for EMS personnel under their medical direction through a performance improvement or peer review process.

(B) EMS medical directors may request assistance from the RPABs to address issues related to quality improvement and peer review of state or regional trauma triage protocols.

(C) The board shall investigate all complaints regarding violations of state or regional trauma triage protocols consistent with its current procedures for investigations.

4765-14-04 Education of State and Regional Trauma Triage Protocols.

The board shall consult with the state trauma committee, emergency medical service organizations and personnel, regional directors and regional physician advisory boards, emergency medical service instructors, and persons who regularly provide medical direction to emergency medical service personnel in this state for assistance in developing and implementing educational opportunities regarding state and regional trauma triage protocols. The board may also enlist the assistance of the division of EMS or direct the division of EMS to participate in developing and implementing educational opportunities regarding state and regional trauma triage protocols in a manner to be determined by the board.

4765-14-05 Exceptions to Mandatory Transport.

(A) Emergency medical service personnel shall transport a trauma victim, as defined in section 4765.01 of the Revised Code and this chapter, directly to an adult or pediatric trauma center that is qualified to provide appropriate adult or pediatric care, unless one or more of the following exceptions apply:

- (1) It is medically necessary to transport the victim to another hospital for initial assessment and stabilization before transfer to an adult or pediatric trauma center;
 - (2) It is unsafe or medically inappropriate to transport the victim directly to an adult or pediatric trauma center due to adverse weather or ground conditions or excessive transport time;
 - (3) Transporting the victim to an adult or pediatric trauma center would cause a shortage of local emergency medical service resources;
 - (4) No appropriate adult or pediatric trauma center is able to receive and provide adult or pediatric trauma care to the trauma victim without undue delay;
 - (5) Before transport of a patient begins, the patient requests to be taken to a particular hospital that is not a trauma center or, if the patient is less than eighteen years of age or is not able to communicate, such a request is made by an adult member of the patient's family or a legal representative of the patient.
-

4765-14-06 Amendments Affecting Regional Protocols

If the state trauma triage protocols are amended to include criteria that do not appear in a region's protocols, such amendments will automatically be applied to the region's protocols until such time as the region amends their protocols, in accordance with section 4765.40 of the Revised Code.

DEDICATION

This report reflects the work of many dedicated professionals in every community throughout the State of Ohio who have committed themselves to gaining a better understanding of how and why children die. Their work is driven by a desire to protect and improve the lives of young Ohioans. Each child's death represents a tragic loss for the family, as well as the community. We dedicate this report to the memory of these children and to their families.

ACKNOWLEDGEMENTS

This report is made possible by the support and dedication of more than 500 community leaders who serve on Child Fatality Review (CFR) boards throughout the State of Ohio. Acknowledging that the death of a child is a community problem, members of the CFR boards step outside zones of personal comfort to examine all of the circumstances that lead to child deaths. We thank them for having the courage to use their professional expertise to work toward preventing future child deaths.

We also extend our thanks to the Ohio Child Fatality Review Advisory Committee members. Their input and support in directing the development of CFR in Ohio has led to continued program improvements.

We acknowledge the generous contributions of other agencies in facilitating the CFR program including the Ohio Children's Trust Fund; the Ohio Department of Health (ODH), divisions of Family and Community Health Services and Prevention, and Office of Healthy Ohio; state and local vital statistics registrars; and the National Center for the Review and Prevention of Child Death.

The collaborative efforts of all of these individuals and their organizations ensure Ohio children can look forward to a safer, healthier future.

Dear Friends of Ohio Children:

We respectfully present the Twelfth Annual Ohio Child Fatality Review (CFR) Report containing information from reviews of child deaths that occurred in calendar year 2010, as well as a summary of the data for deaths that occurred during the five-year period from 2006 to 2010. In facts and figures, this report tells the story of why Ohio children are dying and outlines the work of the CFR program and local and state efforts to prevent these deaths. We hope this report will lead to a reduction in the incidence of the untimely and preventable deaths of Ohio children.

Established by the Ohio General Assembly in July 2000, the CFR program works to examine the factors contributing to Ohio children's deaths. It is only through careful review of child deaths that we are better prepared to prevent future deaths. This report was created to raise awareness of preventable child deaths and understanding of prevention initiatives to ensure the health and well-being of our state's children.

In 2010, 1,580 Ohio children died and 98 percent of these deaths were reviewed by local CFR boards. The CFR process begins at the local level where local boards consisting of professionals from public health, children's services, recovery services, law enforcement and health care review the circumstances surrounding every child death in their county. Through their collective expertise and collaborative assessment, solutions are identified and local prevention initiatives created.

All of us must work together to prevent future child deaths by:

- Educating families, children, neighbors, organizations and communities on preventable child deaths.
- Encouraging community and individual involvement in recognizing and preventing risk factors that contribute to child deaths.
- Assisting and supporting families to achieve healthy parenting practices through education and resources.
- Empowering individuals to intervene in situations where violence and neglect harm children.
- Improving systems of care so all children receive optimal health care before and after birth and throughout their lives.

We encourage you to consider the facts, analysis and recommendations presented in this report and make a commitment to create a safer and healthier Ohio for our children. Only *together* can we eliminate preventable child deaths.

Sincerely,

Theodore E. Wymyslo, MD
Director of Health
Ohio Department of Health

Kristen Rost

Ohio Children's Trust Fund

Ohio Child Fatality Review

EXECUTIVE SUMMARY

The 2012 Child Fatality Review (CFR) Annual Report presents information from the reviews of deaths that occurred in 2010, as well as a summary of the data for deaths that occurred from 2006 to 2010.

Every child's death is a tragic loss for the family and community. Through careful review of these deaths, we are better prepared to prevent future deaths.

The Ohio CFR program was established in 2000 by the Ohio General Assembly in response to the need to better understand why children die. The law mandates CFR boards in each of Ohio's counties (or regions) to review the deaths of all children younger than 18. Ohio's CFR boards are composed of multidisciplinary groups of community leaders. Their careful review process results in a thorough description of the factors related to child deaths.

In 2005, Ohio CFR boards began using a new case report tool and data system developed by the National Center for Child Death Review. The tool and data system underwent slight revisions in 2007, 2010 and 2011, based on feedback from users. As a result, the revised tool more clearly captures information about the factors related to each child death and better documents the often complex conversations that happen during the review process.

The comprehensive nature of the case report tool and the functionality of the data system have allowed more complete analysis for all groups of deaths. Each section of this report contains detailed data regarding the circumstances and factors related to child deaths. The sections offer in-depth information about identified groups of deaths by age group and by special circumstances such as suicides, homicides and child abuse deaths, demonstrating the potential of data analysis combined with the review process to identify risk factors and to give direction for prevention activities.

CFR does make a difference. This report highlights many of the local initiatives that have resulted from the CFR process. These collaborations, partnerships and activities are proof that communities are aware that knowledge of the facts about a child death is not sufficient to prevent future deaths. The knowledge must be put into action.

The mission of CFR is to reduce the incidence of preventable child deaths in Ohio. Through the process of local reviews, communities and the state acknowledge that the circumstances involved in most child deaths are too complex and multidimensional for responsibility to rest with a single individual or agency. The CFR process has raised the collective awareness of all participants and has led to a clearer understanding of agency responsibilities and possibilities for collaboration on all efforts addressing child health and safety. It is only through continued collaborative work that we can hope to protect the health and lives of our children.

Key Findings

A total of 1,546 reviews of 2010 child deaths were reported by Ohio's 88 local CFR boards. Of these, 1,542 reviews were complete for manner and cause of death and were used for analysis. This represents 98 percent of all 1,580 child deaths for 2010 reported in data from Ohio vital statistics. Deaths that were not reviewed include cases still under investigation or involved in prosecution and out-of-state deaths reported too late for thorough reviews.

Black children and boys died at disproportionately higher rates than white children and girls for most causes of death. Thirty-one percent (482) of deaths reviewed were to black children and 56 percent (864) were to boys. Their representation in the general population is 17 percent for black children and 51 percent for boys.

Reviewed cases are categorized by manner and by cause of death. Manner of death is a classification of deaths based on the circumstances surrounding a cause of death and how the cause came about. The five manner of death categories on the Ohio death certificate are natural, accident, homicide, suicide or undetermined/pending/unknown.

- Natural deaths accounted for 73 percent (1,128) of all deaths reviewed.
- Accidents (unintentional injuries) accounted for 15 percent (223) of the deaths.
- Homicides accounted for 3 percent (53) of the deaths.
- Suicides accounted for 2 percent (28) of the deaths.
- Seven percent (110) of deaths reviewed were of an undetermined, pending or unknown manner.

Seventy-two percent (1,130) of the deaths reviewed were due to medical causes.

- Seventy-eight percent (882) of deaths due to medical causes were to infants less than 1 year of age.
- The most frequent medical cause of death was prematurity (512).

Twenty-two percent (334) of all deaths reviewed resulted from external causes.

- Vehicular crashes were the leading cause of death from external injuries. Vehicular deaths accounted for 6 percent (88) of all deaths reviewed. Of the 59 deaths that occurred in cars, trucks, vans or SUVs, only 34 percent (20) of the children killed were reported to be using appropriate restraints.
- Five percent (78) of all deaths reviewed were from asphyxia, including suffocation, strangulation and choking. More than half of the deaths (46) were children less than 1 year of age, many of which occurred in a sleep environment. Of the 24 asphyxia deaths to children 10-17 years old, 67 percent (16) were suicides.
- Weapons, including body parts used as weapons, accounted for 4 percent (54) of all deaths reviewed. Fifty-two percent (28) were youth 10 to 17 years of age and 48 percent (26) were black children. The manner of death was accident for only one of the weapons deaths.
- Fire, burn and electrocution accounted for 2 percent (30) of all deaths reviewed. Eighty-three percent (25) of victims were less than 5 years old.
- Less than two percent (28) of all deaths reviewed were from drowning and submersion. Fifty percent (14) of the drowning deaths were to children under 5 years of age.
- Poisoning deaths represented 1 percent (16) of all deaths reviewed. Seventy-five percent (12) of poisoning deaths occurred to children 15-17 years old.

Deaths to infants younger than 1 year accounted for 68 percent (1,044) of the reviews.

- Infants less than 1 month old accounted for 69 percent (717) of all infant deaths and 46 percent of

all deaths reviewed.

- Prematurity was the most frequent cause of infant deaths, accounting for 49 percent (509).
- Congenital anomalies accounted for 13 percent (140) of all infant deaths.
- For 810 reviews where gestational age was known, 70 percent (568) of the infants were born preterm (before 37 weeks gestation).
- Sleep-related deaths (including sudden infant death syndrome or SIDS) accounted for 14 percent (148) of the 1,044 total reviews for infant deaths in 2010, more than any single cause of death except prematurity. Forty-six percent (68) of sleep-related deaths were to black infants, which is disproportionate to their representation in the Ohio child population (17 percent). Sixty-two percent (91) of the sleep-related deaths occurred in locations considered unsafe such as in adult beds and on couches. Fifty-five percent (81) occurred to infants who were sharing a sleeping surface (bedsharing) with someone else at the time of death.
- SIDS accounted for 3 percent (28) of the 1,044 total reviews for infant deaths. At least fifty-four percent (15) of SIDS victims were exposed to smoke in utero.

Three percent (53) of all deaths reviewed resulted from homicide.

- Homicide deaths to boys (72 percent) and black children (53 percent) were disproportionately higher than their representation in the general population (51 percent for boys and 17 percent for black children).
- Fifty-one percent (27) of homicide deaths were to children younger than 5 years. Thirty-six percent (19) were to children 15-17 years old.

Two percent (28) of all deaths reviewed resulted from suicide.

- Suicides represent 12 percent of all reviews for children ages 10 to 17.
- Suicide deaths among boys (86 percent) were disproportionately higher than their representation in the general population (51 percent).
- Twenty-nine percent (8) of the suicide deaths reviewed were from suburban counties, which is disproportionately higher than the proportion of children living in those counties (18 percent).

Local CFR boards reviewed 24 deaths to children resulting from child abuse and neglect in 2010. These represent less than 2 percent of all 1,542 deaths reviewed.

- Eighteen of the 24 reviews indicated that physical abuse caused or contributed to the death, while eight reviews indicated that neglect caused or contributed to the death.
- All but two of the reviews were for children younger than 10 years.

Of the 1,542 deaths reviewed, CFR boards determined 22 percent (340) were probably preventable.

- Eighty-seven percent (193) of accidental deaths were deemed probably preventable.
- Fifty-six percent (76) of deaths to children 15 to 17 years of age were deemed probably preventable.

For the five-year period 2006-2010, 8,247 deaths were reviewed, which represents 96 percent of the 8,554 child deaths reported by Ohio vital statistics.

- The mortality rate for Ohio children has decreased from 65 deaths per 100,000 population in 2006 to 58 in 2010.
- The percentage of deaths from external causes due to vehicular crashes decreased from 28 percent in 2006 to 23 percent in 2009, then increased to 26 percent in 2010.
- The percentage of deaths from external causes due to asphyxia has increased from 26 percent in 2006 to 29 percent in 2009, then decreased to 23 percent in 2010.

The reviews for the five-year period were analyzed by age group.

- Fifty-eight percent (309) of the infant deaths due to external causes were due to asphyxia.
- Vehicular crashes were the leading external cause of death for children older than 1 year.
 - Nineteen percent (68) of the 353 reviews for external causes for children 1 to 4 years old were due to vehicular crashes.
 - Thirty-eight percent (66) of the 176 reviews for external causes for children 5 to 9 years old were due to vehicular crashes.
 - Thirty-five percent (89) of the 255 reviews for external causes for children 10 to 14 years old were due to vehicular crashes.
 - Forty-three percent (288) of the 670 reviews for external causes for children 15 to 17 years old were due to vehicular crashes.

Local CFR boards continue to make numerous recommendations for prevention and share their recommendations and findings with others in the community. More than half of the 88 counties shared information about local prevention initiatives and activities that have resulted from the CFR process in 2010.

Limitations

Calculation of rates is not appropriate with Ohio's CFR data because not all child deaths are reviewed. Instead of rates, CFR statistics have been reported as a proportion of the total reviews. This makes analysis of trends over time difficult, as an increase in the proportion of one factor will result in a mathematical decrease in the proportion of other factors. Complex analysis is needed to determine if such changes in proportion represent true trends in the factors of child deaths.

For this report, cases with multiple races indicated were assigned to the race that represents the least proportion of the general child population of Ohio. For example, if a case indicated both black and Asian, the case was assigned to Asian, because the proportion of Asian children is less than the proportion of black children in Ohio.

The CFR case report tool and data system record Hispanic ethnicity as a variable separate from race. A child of any race may be of Hispanic ethnicity.

The ICD-10 codes used for classification of vital statistics data in this report were selected to most closely correspond with the causes of death indicated on the CFR Case Report Tool and may not match the codes used for some causes of death in other reports or data systems. The codes used for this report can be found in the appendices.

Since the inception of statewide data collection in 2001, Ohio CFR has used two different data systems, and the latest system has undergone improvements and revisions. Because of the differences in data elements and classifications, data in this annual report may not be comparable to data in previous reports. In-depth evaluation of contributing factors associated with child deaths is limited in some cases by small cell numbers and lack of access to relevant data.

Of the 1,580 deaths of Ohio children in 2010, 2 percent (28) occurred out-of-state. The first step of the review process, identification of a child death, is difficult when the death occurs out-of-state. Death certificates are recorded in the state where the death occurs and a process is not in place to routinely notify the county of residence for a timely review. This is a particular problem in rural Appalachian counties, where 8 percent (18) of the 233 deaths occurred outside Ohio. By contrast, less than 1 percent (8) of the 913 deaths to children of metropolitan counties died out-of-state. The state coordinator continues to work with the Ohio Vital Statistics to improve the timely notification of out-of-state deaths.

PREVENTION INITIATIVES

Within the 2000 law that established the Ohio Child Fatality Review (CFR), goals for local CFR boards include making recommendations and developing plans for implementing local service and program changes for prevention of future deaths. Recommendations become initiatives only when resources, priorities and authority converge to make change happen. Again this year, more than half of the counties reported over 100 examples of successful implementation of CFR recommendations. This means that CFR boards have shared their findings and recommendations and engaged partners for change. What follows is a sample of the initiatives and activities taking place across Ohio.

SIDS and Sleep-related Deaths

The largest number of initiatives deal with reducing the risk of sudden infant death syndrome (SIDS) and other sleep-related deaths. A variety of programs target minority families, grandparents, caregivers, health professionals and the whole community with risk reduction messages that include Back to Sleep and the risks of inappropriate bedding and bedsharing. Many of these initiatives are on-going, being incorporated into existing programs such as prenatal clinics, Help Me Grow (HMG) and Special Supplemental Food Program for Women, Infants and Children (WIC). Efforts to reach the whole community include the use of billboards, displays at fairs and festivals and distribution of educational materials at popular sites for families, such as zoos, playgrounds and family restaurants.

- In **Clark** County, funding was secured from a local foundation to provide a one-piece infant garment with a safe sleep message to each new baby born at the local birthing center.
- The **Cuyahoga** County CFR board and board of health provides education to the medical and nursing staff in the maternity hospitals. The education stresses the importance of role modeling safe sleep practices in the hospital and engaging parents and family members in a discussion of safe sleep.
- Clients of programs throughout the health department in **Erie** County were provided infant safe sleep information, based on a survey of knowledge and practices that was conducted the previous year. The health department also provided education and a safe crib display at the county fair.
- The **Franklin** County Infant Safe Sleep and SIDS Risk Reduction Task Force created a public service announcement focusing on the “ABC’s of Safe Sleep.” The video was featured on the health department’s website, partner websites and YouTube.
- The **Franklin** County CFR board partnered with the police department, health department, childrens’ protective services, coroner’s office and ODH to conduct a statewide infant death investigation training to encourage agencies to conduct scene investigations for all unexplained infant deaths. The training promoted the use of CDC’s Sudden Unexplained Infant Death Investigation form to collect the necessary information during the investigation. More than 100 professionals from 29 counties participated in the hands-on training.
- Findings from the **Fulton** County CFR helped secure an ODH Child and Family Health Services grant to fund a safe sleep campaign, including billboards and movie theater advertisements.
- **Hamilton** County’s innovative partnership with the Cincinnati Police Department has expanded to include the Fire Department. Police and firefighters have been trained in the importance of safe sleep and reducing risks through safe sleep arrangements. A referral process was developed for families who do not have cribs or who need other kinds of social service assistance.
- A pamphlet about infant safe sleep and risk reduction practices was developed and is being distributed to clients of the **Jefferson** County Children’s Services.
- Information on reducing the risk of SIDS and providing a safe sleep environment was presented to parents of newborns in **Lucas** County. Families in need are referred to Cribs 4 Kids[®], which provided cribs to 276 families in 2010.
- In **Mahoning and Trumbull Counties**, the United Way of Youngstown and the Mahoning Valley Health and Wellness Vision Council/Infant Mortality Task Force are collaborating on an initiative to

promote safe sleep education. Discharge teaching instructions at one local hospital were evaluated to insure consistent education of new parents at the time of discharge. The unit nursing staff were educated on sleep positioning and bedding, communication to families, and role modeling. An on-line infant safe sleep continuing education course for nurses was developed.

- The impact of an ongoing safe sleep campaign in **Montgomery** County is being evaluated. Over 12,000 one-piece infant garments imprinted with a safe sleep message were distributed through the prenatal, child health and Special Supplemental Food Program for Women, Infants and Children (WIC) clinics. Changes in knowledge, attitudes and behavior are measured through pre- and post-surveys.
- The **Stark** County Safe Sleep Task Force is a Cribs 4 Kids® provider. In addition to providing cribs to needy families who participate in a 90-minute class on safe sleep practices the task force teaches classes on infant sleep safety to various groups, including local high schools and prenatal support groups.
- The **Summit** County CFR board contacted community agencies that collect and distribute donated cribs with information about crib safety and recall information regarding drop-side cribs. CFR data and safe sleep guidelines were shared during grand rounds at the children's hospital and through a press conference and an article in the local newspaper.

Child Abuse and Neglect

The CFR process can identify opportunities for improvement in programs and policies to prevent child abuse and neglect. Responsibility for prevention activities is shared among all the member agencies.

- A community program developed by Children's Services in **Allen** County to address child abuse at the hands of a parent's significant other is now in its third year. With community and professional input, a parenting curriculum "Choose Your Partner Carefully; Your Child's Life Depends on It" has been developed and shared with other organizations to use with staff and clients. **Jackson** and **Ross** Counties are using a similar campaign.
- A task force of 30 professionals from a wide variety of social service and legal fields in **Cuyahoga** County developed recommendations focusing on decision points during the family reunification process, permanency and use of evidence-based practice. Many recommendations are now being implemented.
- Using findings from the CFR process, **Muskingum** County Children's Services and the prosecuting attorney's office developed public service announcements to increase awareness and prevention of shaken baby syndrome.
- As a result of the CFR process, the **Harrison** County Help Me Grow (HMG) is soliciting referrals of at-risk pregnant women and those with children under age 3 years. The HMG curriculum includes discussion of caregiver issues.
- The **Montgomery** County Children's Services is reviewing and revising practices regarding closing cases, in an effort to avoid children and families being lost to follow-up or without needed prevention and supportive services from other agencies.
- The **Montgomery** County prosecutor's office and police jurisdictions have implemented a new search warrant template to be used during child death investigations when there is probable cause to believe that the caregiver was under the influence of alcohol or drugs.
- Children taken into protective services in **Wood** County are provided health services such as immunizations, physicals and developmental screenings. Services are funded by the county health levy.

Suicide

The need for youth suicide prevention is also being addressed as a result of the CFR process. In many counties, such as **Lucas, Allen, Franklin and Coshocton**, CFR findings are shared with county suicide

prevention coalitions and task forces to focus on awareness of suicide and develop strategies to reduce the factors that increase the risk of suicide, identify youth at risk and increase the availability of mental health services.

- In an effort to better review and understand youth suicide, **Clermont** County CFR board with the help of the mental health and recovery board looked at recent research on key factors for youth suicide, including impulsiveness.

Vehicular Injuries

Vehicular crashes continue to be a leading cause of injury and death to children. Many local CFR boards were involved in efforts to pass Ohio's Distracted Driving law which took effect in August, 2012. Boards are active in educating families about the new law, in addition to Ohio's Booster Seat law and Graduated Driver License law. In addition to continued efforts in most counties to improve teen driver education and infant car seat programs, local CFR boards are addressing specific issues regarding vehicular deaths in their community.

- A teen driving summit sponsored by the **Clermont** County Safe Communities program encouraged and empowered teen leaders to develop programs for their schools to get peers to slow down, buckle up and eliminate cell phone use while driving.
- The **Clinton** County CFR is researching prevention strategies for all-terrain vehicular injuries, using the recommendations of the American Academy of Pediatrics.
- Using Partnerships for Success Grant funding, the **Fulton** County "Parents Who Host" campaign continues to educate parents and the community about underage drinking and driving.
- Several counties, including **Fulton, Greene and Butler**, sponsor 4-H CarTeens, a traffic safety program conducted by 4-H for juvenile traffic offenders. 4-H CarTeens goals include reducing the number of repeat juvenile traffic offenders, decreasing the number of teen traffic offenders, and increasing teen awareness of traffic/vehicular safety.
- A school district in **Lucas** County changed its policy so that students no longer must cross the street when exiting or entering the bus if the speed limit is 35 miles per hour or more. In addition, the district is testing the use of video cameras mounted on four buses to document activity on the driver's side, including the license plate number of vehicles passing the buses illegally. During the 2010-2011 school year, 39 citations were issued.

Infant Deaths

In response to needs identified through the reviews of infant deaths, collaborative groups have been organized and continue in many counties, such as **Allen, Cuyahoga, Fulton, Hamilton and Lucas**, to promote early prenatal care and healthy lifestyles for pregnant women and to educate women to be as healthy as possible before becoming pregnant. Typical partners include HMG, WIC, Child and Family Health Services projects, local physicians, schools and other health and social service providers.

- **Hardin** County is using Facebook and agency websites to promote early prenatal care.
- **Scioto** County is investigating screening all newborns for exposure to drugs.
- An infant death scene investigation task force has begun in **Trumbull** County.

Substance Abuse

The misuse and abuse of prescription drugs and other substances harms youth and children, who suffer intentional or accidental overdose and prenatal exposure as well as inadequate care and supervision when adults use. Local CFR boards have joined with other community agencies to combat this epidemic and protect children.

- The CFR process in **Allen** County prompted discussion of the impact of "bath salts," which led to a regional summit attended by participants from ten surrounding counties. Post-summit activities are increasing education and awareness of the dangers.

- A growing concern with prescription drug use among teens in **Clark** County resulted in the formation of Cole's Warriors, a coalition to address the problem.
- **Vinton** County is improving inter-agency communication and referrals to identify high-risk children in families with drug use, violence or criminal activity.
- The **Fairfield** CFR board is seeking more information on prenatal use of drugs and alcohol by mothers who experience an infant death due to prematurity, so preventive services can be developed.

General Health and Safety

Countywide collaborations and partnerships produced many programs to increase the general health and safety of children.

- A collaboration between the Child and Family Health Services and the **Fulton** County Safety Task Force distributed best practice-materials for improving safety for young children by ensuring entrances and exits from the home are child-proofed and pools and ponds are gated or blocked.
- Activities in **Holmes, Lawrence, Perry** and **Richland** Counties are addressing fire safety education and distribution and proper use of smoke alarms, especially in mobile homes.
- General home and child safety information is shared by the **Hardin** County CFR via the health department's website and Facebook. The dangers of unstable televisions and tall furniture were featured.

Systems Improvements

One of the goals set by Ohio law for CFR is to promote cooperation, collaboration and communication among all groups that serve families and children. The CFR process continues to have a positive impact on participating agencies. Many boards report an increase in cooperation and understanding between participating agencies and some have developed written policies to facilitate communication. The review process stimulates discussion about existing services in communities, identifying gaps in services, access to service barriers, the need to maximize use of existing services and opportunities for increased collaboration.

- The **Franklin** County CFR board invited local, state and federal elected officials to a meeting to learn more about the CFR process and how they can support efforts to prevent child deaths.
- The **Montgomery** County CFR board has been working with the legal representatives from the local hospitals, health department and prosecutor's office to form an agreement for all county hospitals to participate in the CFR process. This is an effort to improve the sharing of information.
- Several counties including **Wood** and **Logan**, have identified a need for bereavement services and are forming partnerships to improve services.
- The **Clermont** County CFR published its first report to the community. The goal was to increase awareness of preventable deaths by making the data from the past five years more public. Geographic Information System (GIS) analysis was included.

Ohio Children's Trust Fund

The Ohio Children's Trust Fund (OCTF) is Ohio's sole public funding source for child abuse and neglect prevention. OCTF was created in Ohio law in 1984 and is governed by a board of 15 members representing a broad public-private partnership. The board consists of representatives from children's services agencies, education, law enforcement and the pediatric community. Eight members are appointed by the Governor to represent the citizens of Ohio, four members are legislative appointees and three members are agency directors (ODH, ODJFS and the Ohio Department of Alcohol and Drug Addiction Services). The Board supervises the policies and programs of the Trust Fund and the ODJFS serves as the administrative agent for procurement and budgeting purposes.

OCTF receives revenues from surcharges on birth and death certificates and divorce and dissolution decrees. As provided under Ohio law, OCTF invests this revenue in three areas: county allocations, statewide prevention programs and initiatives, and child advocacy centers (CACs). OCTF also receives federal dollars through the Community Based Child Abuse Prevention (CBCAP) Grant. The purpose of the grant is to fund community based primary and secondary child abuse prevention programs with statewide significance.

In 2011, OCTF became the Ohio Chapter of Prevent Child Abuse America. The OCTF and Prevent Child Abuse America share a common mission and the OCTF Board was excited for the opportunity to align Ohio's statewide prevention efforts under one entity and to further the work of Prevent Child Abuse Ohio.

In transforming OCTF into Ohio's leader and authority on child maltreatment prevention, the 2009 – 2014 strategic plan incorporates three critical areas: child maltreatment as a public health problem, promoting protective factors, and investing in evidence informed practices. It is through these three areas that OCTF works to fulfill its mission of preventing child abuse and neglect through investing in strong communities, healthy families, and safe children. In addition, the 2009–2014 strategic plan shifts OCTF from focusing solely on funding prevention programs to prioritizing increased attention to consumer education, social marketing and public policy initiatives.

2012 DATA REPORTING

By April 1 of each year, local Child Fatality Review (CFR) boards must submit to ODH the following information with respect to each child death reviewed:

- Cause of death.
- Factors contributing to death.
- Age.
- Gender.
- Race.
- Geographic location of death.
- Year of death.

In addition to the case review information, the local boards submit a report of their activities and recommendations for actions that might prevent future deaths. This report contains no case-identifying information and is a public record.

There were a total of 1,546 reviews of 2010 child deaths reported by April 1, 2012. Of these, 1,542 were complete for manner and cause of death and used for analysis. This represents 98 percent of all child deaths (1,580) in Ohio for 2010, based on data from Ohio vital statistics. All 88 counties submitted reports, although not all counties reported reviews. More than 200 recommendations for prevention were submitted. More than half of the 88 counties shared information about local prevention initiatives and activities that have resulted from the CFR process.

According to Ohio Vital Statistics, the number of Ohio child deaths has decreased from 1,800 in 2006, when 1,708 reviews (95 percent) were completed, to 1,580 in 2010. The child mortality rate has decreased from 65 deaths per 100,000 children in 2006 to 58 in 2010.

Ohio Child Deaths by Year, 2006-2010

Ohio Child Mortality Rate by Year, 2006-2010

REVIEWS FOR 2010 DEATHS

Reviews by Demographic Characteristics

Local child fatality review (CFR) boards reviewed the deaths of 1,542 children who died in 2010. Sixty-eight percent (1,044) of the reviews were for children less than 1 year of age. There were greater percentages of reviews among boys (56 percent) and among black children (31 percent) relative to their representation in the general Ohio child population (51 percent for boys and 17 percent for black children, per U.S. Census data¹). Five percent (75) of all reviews were for children of Hispanic ethnicity, which closely compares to their representation in the general Ohio child population (5 percent).

*37 cases with multiple races indicated were assigned to the minority race.

Reviews by Manner of Death

Manner of death is a classification of deaths based on the circumstances surrounding a cause of death and how the cause came about. The five manner-of-death categories on the Ohio death certificate are natural, accident, homicide, suicide and undetermined. For deaths being reviewed, CFR boards report the manner of death as indicated on the death certificate. For deaths that occurred in 2010, the 1,542 reviews were classified as follows:

- Seventy-three percent (1,128) were natural deaths.
- Fifteen percent (223) were accidents.
- Three percent (53) were homicides.
- Two percent (28) were suicides.
- Seven percent (110) were of an undetermined or unknown manner.

Since 2004, the proportional distribution of reviews across the manners has changed very little. See Appendix V for additional tables including manner of death by demographic information.

Reviews by Cause of Death

The CFR case report tool and data system implemented in 2005 classify causes of death by medical or external causes. Medical causes are further specified by particular disease entities. External causes are further specified by the nature of the injury. In 2010, the 1,542 reviews were classified as follows:

- Seventy-two percent (1,130) were due to medical causes.
- Twenty-two percent (334) were due to external causes.
- In 78 reviews, the cause of death could not be determined as either medical or external.

DEATHS FROM MEDICAL CAUSES

Background

Deaths from medical causes are the result of a natural process such as disease, prematurity or congenital defect. A death due to a medical cause can result from one of many serious health conditions.

Many of these conditions are not believed to be preventable in the same way accidents are preventable. But with some illnesses such as asthma, infectious diseases and screenable genetic disorders, under certain circumstances, fatalities may be prevented. Many might be prevented through better counseling during preconception and pregnancy, earlier or more consistent prenatal care and smoking cessation counseling. While some conditions cannot be prevented, early detection and prompt, appropriate treatment can often prevent deaths.

Vital Statistics

Ohio vital statistics reported 1,224 children who died of medical causes in 2010. For further information on the ICD-10 codes used to produce vital statistics data, see Appendix V.

CFR Findings

Seventy-two percent (1,130) of the 1,542 reviews for 2010 deaths were from medical causes.

- Seventy-eight percent (882) of the 1,130 reviews for medical causes were to infants under the age of 1 year.
- Fifty-four percent (610) of the 1,130 reviews for medical causes were to male children.
- Thirty-one percent (355) of the 1,130 reviews for medical causes were to black children, which is disproportionate to their representation in the Ohio child population (17 percent).
- The CFR data system provides a list of 15 medical conditions in addition to an “Other” category for classifying deaths from medical causes more specifically. Prematurity, congenital anomalies and pneumonia/other infections were the three leading medical causes of death.
 - Forty-five percent (512) of the deaths from medical causes were due to prematurity.
 - Sixteen percent (186) were due to congenital anomalies.
 - Six percent (69) were due to pneumonia and other infectious conditions.
 - Sudden infant death syndrome (SIDS) is a medical cause of death. Two percent (28) of the deaths from medical causes were due to SIDS.
- The leading medical cause of death for children older than 1 year was cancer. Nineteen percent (48) of 248 deaths from medical causes to children older than 1 year were due to cancer.

For additional tables including all medical causes of death by demographic information, please see Appendix VII.

DEATHS FROM EXTERNAL CAUSES

Background

External causes of death are injuries, either unintentional or intentional, resulting from acute exposure to forces that exceed a threshold of the body's tolerance, or from the absence of such essentials as heat or oxygen.²

Vital Statistics

Ohio vital statistics reported 356 children who died of external causes in 2010. For further information on the ICD-10 codes used to produce Vital Statistics data, see Appendix V.

CFR Findings

Twenty-two percent (334) of the 1,542 reviews for 2010 deaths were due to external causes.

- Twenty-eight percent (93) of the 334 reviews of deaths from external causes were for children ages 15 to 17 years.
- Twenty-seven percent (90) of the 334 reviews for external causes were for black children, which is disproportionate to their representation in the Ohio child population (17 percent).
- Sixty-two percent (208) of the 334 reviews for external causes were for boys, which is disproportionate to their representation in the population (51 percent).
- Vehicular injuries, asphyxia, and weapons injuries were the three leading external causes for the 334 reviews. In 2008 and 2009, asphyxia was the leading external cause of death.
 - Twenty-six percent (88) were due to vehicular injuries.
 - Twenty-three percent (78) were due to asphyxia.
 - Sixteen percent (54) were due to weapons injuries, including the use of body parts as weapons.

For additional tables including all external causes of death by demographic information, please see Appendix VII.

Reviews of 2010 Deaths from External Causes, N=334

Reviews of 2010 Deaths from External Causes, N=334

REVIEWS BY COUNTY TYPE

Background

ODH categorizes Ohio's 88 counties into four county-type designations (rural Appalachian, rural non-Appalachian, suburban and metropolitan) based on similarities in terms of population and geography. The current county type designations originated with the Ohio Family Health Survey in 1988 and are based on the U.S. Code and U.S. Census information. See Appendix VI for a map of Ohio counties by county type.

To analyze the CFR data by county type, the computer-assigned case number was used to determine the county of review. In nearly all cases, the county of review is the county of the child's residence.

In 2010, Ohio's child population was distributed as follows:

- 12 percent rural Appalachian;
- 15 percent rural non-Appalachian;
- 18 percent suburban;
- and 55 percent metropolitan.³

According to Ohio vital statistics, the 2010 child deaths were distributed as follows:

- 15 percent rural Appalachian;
- 13 percent rural non-Appalachian;
- 14 percent suburban;
- and 58 percent metropolitan.⁴

The percentage of all deaths that were reviewed varied by county type:

- 94 percent rural Appalachian;
- 99 percent rural non-Appalachian;
- 91 percent suburban;
- and 100 percent metropolitan.

For an explanation of deaths not reviewed, please see "Limitations" on page 9 and "Overview of Ohio Child Fatality Review Program" on page 72.

It is known that many factors related to child deaths are not evenly distributed across the county types. Complex analysis is needed to determine the significance of the CFR county-type findings.

CFR Findings

The 1,542 reviews of deaths that occurred in 2010 were distributed as follows:

- Fourteen percent of reviews (218) were from rural Appalachian counties.
- Thirteen percent of reviews (206) were from rural non-Appalachian counties.
- Thirteen percent of reviews (206) were from suburban counties, which is disproportionately lower than the proportion of children living in suburban counties (18 percent).
- Sixty percent of reviews (912) were from metropolitan counties, which is disproportionately higher than the proportion of children living in metropolitan counties (55 percent).

Manner of Death by County Type

- Sixty-one percent (689) of natural deaths reviewed were from metropolitan counties, which is disproportionately higher than the proportion of children living in metropolitan counties (55 percent).
- Twenty-five percent (56) of reviews for accidental deaths were from rural Appalachian, which is disproportionately higher than the proportion of children living in those counties (12 percent).

- Twenty-eight percent (8) of suicide deaths reviewed were from suburban counties, which is disproportionately higher than the proportion of children living in those counties (18 percent).
- The percentage of reviews for homicide deaths was higher in metropolitan (67 percent) and in rural Appalachian (19 percent) counties than the proportion of children living in those counties (55 percent and 12 percent).

Manner of Death by County Type, N=1,542									
	Rural Appalachian		Rural Non-Appalachian		Suburban		Metro-politan		Total
	#	%	#	%	#	%	#	%	#
Natural	139	12	154	14	146	13	689	61	1,128
Accident	56	25	35	16	40	18	92	41	223
Suicide	3	11	3	11	8	29	14	50	28
Homicide	10	19	5	9	3	6	36	67	54
Undetermined/Unknown	10	9	9	8	9	8	82	75	110
Total	218	14	206	13	206	13	912	59	1,542

Percents may not total 100 due to rounding.

Medical Causes of Death by County Type

- Sixty-one percent (687) of the reviews of deaths from medical causes were from metropolitan counties, which is disproportionately higher than the proportion of children living in metropolitan counties (55 percent). Reviews of deaths due to prematurity were particularly over-represented in metropolitan counties. Seventy-two percent (368) of deaths due to prematurity were from metropolitan counties. In contrast, only 11 percent (54) of the deaths due to prematurity were from suburban counties, which is disproportionately less than the proportion of children living in suburban counties (18 percent).

Medical Causes of Death by County Type, N=1,130									
	Rural Appalachian		Rural Non-Appalachian		Suburban		Metro-politan		Total
	#	%	#	%	#	%	#	%	#
Prematurity	46	9	44	9	54	11	368	72	512
Congenital Anomaly	28	15	28	15	23	12	107	58	186
Pneumonia/Other Infection	9	13	13	19	12	17	35	51	69
All Other Medical Causes	60	17	68	19	58	16	177	49	363
Total	143	13	153	14	147	13	687	61	1,130

Percents may not total 100 due to rounding.

External Causes of Death by County Type

- Twenty-eight percent (25) of vehicular deaths were from rural Appalachian counties, which is disproportionately higher than the proportion of children living in rural Appalachian counties (12 percent).
- Fifty-three percent (16) of fire and burn deaths reviewed were from rural Appalachian counties, which is disproportionately higher than the proportion of children living in those counties (12 percent).

External Causes of Death by County Type, N=334									
	Rural Appalachian		Rural Non-Appalachian		Suburban		Metro-politan		Total
	#	%	#	%	#	%	#	%	#
Vehicular	25	28	18	21	13	15	32	36	88
Asphyxia	11	14	6	8	18	23	43	55	78
Fire/Burn	16	53	4	13	3	10	7	23	30
All Other External Causes	19	14	17	12	19	14	83	60	138
Total	71	21	45	14	53	16	165	49	334

Percents may not total 100 due to rounding.

Reviews of Special Interest

The distribution of the 148 reviews for sleep-related deaths varies from the population distribution by county type.

- Seven percent of reviews (10) were from rural Appalachian counties.
- Seven percent of reviews (11) were from rural non-Appalachian counties.
- Nine percent of reviews (13) were from suburban counties.
- Seventy-seven percent of reviews (114) were from metropolitan counties.

The distribution of the 24 reviews for child abuse and neglect deaths also varies from the population distribution by county type. Fifty-eight percent (14) of the reviews were from metropolitan counties.

For more data regarding reviews of 2010 deaths, see Appendix VII.

REVIEWS FOR 2006-2010 DEATHS

SUMMARY OF REVIEWS

To gain more understanding of the factors related to child death, data have been analyzed for the five-year year-of-death period 2006-2010. For the five-year period, Ohio CFR boards have completed 8,247 reviews, which represent 96 percent of the 8,554 child deaths reported by Ohio vital statistics.

- Sixty-six percent (5,456) of the reviews were for children less than 1 year of age.
- There were greater percentages of reviews among boys (58 percent) and among black children (33 percent) relative to their representation in the general Ohio population (51 percent for boys and 17 percent for black children, per U.S. Census data⁵).
- Five percent (381) of all reviews were for children of Hispanic ethnicity.

* 173 cases with multiple races were assigned to the minority race.

Reviews by Manner of Death

For the five-year period 2006-2010, the 8,247 reviews were classified as follows:

- Seventy-two percent (5,912) were natural deaths.
- Sixteen percent (1,284) were accidents.
- Five percent (367) were homicides.
- Three percent (220) were suicides.
- Six percent (464) were of an undetermined or unknown manner.

Reviews by Cause of Death

The CFR case report tool and data system implemented in 2005 classify causes of death by medical or external causes. Medical causes are further specified by particular disease entities. External causes are further specified by the nature of the injury. For the five-year period 2005-2009, the 8,247 reviews were classified as follows:

- Seventy-three percent (5,991) were due to medical causes.
- Twenty-four percent (1,988) were due to external causes.
- For three percent (268) of the cases, the cause of death could not be determined as either medical or external.

Reviews of 2006-2010 Deaths from Medical Causes, N=5,991

See Appendix VII for additional review information regarding demographics for 2006-2010 deaths.

TRENDS OVER FIVE YEARS

For the five-year period 2006-2010, the proportional distribution of reviews across many factors, such as manner of death, age, race, gender and preventability, has changed very little.

- Seventy-two percent (5,912) of the reviews were natural manner of death. The percentage changed little over the period, from a high of 73 percent in 2007 to a low of 70 percent in 2008.
- Sixty-six percent (5,456) of the reviews were for infants less than 1 year old. The percentage has increased slightly each year, from 65 percent in 2006 to 68 percent in 2010. The increase is likely due to improved processes to identify and review these deaths.
- Fifty-eight percent (4,770) of the reviews were for boys. The percentage changed little over the period, from a high of 59 percent in 2006 and 2007 to a low of 56 percent in 2010.
- Thirty-three percent (2,714) of the reviews were for black children. The percentage has changed little over the period, from 33 percent in 2006 to 35 percent in 2008 and 31 percent in 2010.
- Twenty-three percent of the deaths reviewed were deemed probably preventable. The percentage changed little over the period, from a high of 24 percent in 2006 and 2008 to a low of 22 percent in 2007, 2009 and 2010.
- Reviews for sleep-related infant deaths account for 10 percent (830) of all reviews. The percentage was 11 in 2006 and remained at 10 for the rest of the five-year period.

Over the five-year period, changes were noted in the percentage of reviews for some groups of death, particularly vehicular injuries and asphyxia.

- Seven percent (533) of all reviews were due to vehicular crashes. This is 27 percent of the 1,988 reviews for deaths from external causes. The percentage of deaths from external causes due to vehicular crashes has decreased from 28 percent in 2006 to 23 percent in 2009, before increasing to 26 percent in 2010. The overall five year trend is a decrease in the percentage of deaths due to vehicular crashes. White boys ages 15 – 17 years accounted for 30 percent (158) of all vehicular deaths.

- Seven percent (537) of all reviews were due to asphyxia. This is 27 percent of the 1,988 reviews for deaths from external causes. The percentage of deaths from external causes due to asphyxia increased from 26 percent in 2006 to 29 percent in 2009, before decreasing to 23 percent in 2010. Each year, the largest numbers of asphyxia deaths are suffocation deaths to infants less than 1 year old. Forty-eight percent (260) of the asphyxia deaths were sleep-related infant deaths.

The comprehensive nature of the case report tool and the functionality of the data system have allowed more complete analysis for all groups of deaths. The following sections of this report offer in-depth information about reviews of deaths to Hispanic children, poisoning deaths, deaths by special circumstances, such as suicides, homicides and child abuse deaths, and by age group. Each section contains detailed data regarding the circumstances and factors related to child deaths.

DEATHS TO HISPANIC CHILDREN, ALL AGES

The CFR case report tool and data system record Hispanic ethnicity as a variable separate from race. A child of any race may be of Hispanic ethnicity.

For the five-year period 2006-2010, 381 of the 8,247 total reviews were for children of Hispanic ethnicity. During the five-year period, the population of Hispanic children living in Ohio increased from 3 percent of the total child population in 2006 to 5 percent in 2010.⁶ The increase is reflected in the percentage of all reviews for Hispanic children which increased from 4 percent in 2006 to 5 percent in 2010.

- Seventy percent (267) of the reviews for Hispanic children were for infants.
- Prematurity and congenital anomalies were the leading medical causes of death, accounting for 44 percent (167) of the reviews for Hispanic children.
- The leading external cause of death was vehicular crashes (20), followed by asphyxia (19) and weapons (18).
- Fifteen percent (41) of the reviews were for infant sleep-related deaths.

Reviews of Deaths to Hispanic Children by Medical Causes, 2006-2010, N=278

Reviews of Deaths to Hispanic Children by External Causes, 2006-2010, N=87

POISONING DEATHS, ALL AGES

Combining data from five years allows more analysis for deaths due to poison, where in-depth analysis is limited by small numbers in a single year.

- Local CFR boards reviewed 77 poisoning deaths for 2006-2010. These deaths represent four percent of the 1,988 deaths from external causes for the period. Seventy-one percent (55) of the deaths were of accidental manner. Twelve percent (9) were suicides.
 - Sixty-four percent (50) of the deaths occurred to 15 to 17 year olds.
 - The poison agents for this age group included prescription and over-the-counter medications, methadone, street drugs, alcohol and carbon monoxide.
 - Twenty-three percent (18) of the poisoning deaths occurred to children younger than 10 years.
 - The poison agents for this age group included prescription and over-the-counter medications, methadone, and street drugs. None were poisoned by household cleaners or plants.

Prescription Drug Abuse, Misuse and Overdose in Ohio

From 1999 to 2010, Ohio's death rate due to unintentional drug poisonings increased 372 percent, and the increase in deaths has been driven largely by prescription drug overdoses. In an effort to curb prescription drug abuse and diversion in Ohio, House Bill 93 was passed unanimously in the Ohio legislature and signed into law by Governor John Kasich in May, 2011. This bill provides the state medical and pharmacy boards and law enforcement agencies with additional tools to shut down pill mills, and investigate and prosecute those providers that are illegally and unethically prescribing and dispensing medication. Since the implementation of HB 93, Ohio law enforcement has been able to shut down more than a dozen pill mills operating in Scioto County alone.

The Ohio Department of Alcohol and Drug Addiction Services, the Ohio Attorney General's Office and ODH are actively engaged in addressing this problem through funding community coalitions, promoting public awareness campaigns, implementing drug disposal events, funding prevention programs in schools, colleges and work sites, and revising and expanding criminal justice and treatment programs to respond appropriately to increasing needs related to prescription drug abuse.

Ohio is making great progress in its efforts to curb prescription drug abuse, misuse and overdose. Through these endeavors, the state hopes to promote the health and safety of parents, which will ultimately promote the well-being of Ohio's children. For additional information and resources about this topic and details on program activities are available on the ODH Violence and Injury Prevention Program Drug Overdose Web site at <http://www.healthyohioprogam.org/vipp/drug/dpoison.aspx> .

HOMICIDE, ALL AGES

Background

The CFR case report tool and data system capture information about homicide as a manner of death and as an act of commission, regardless of the cause of death. Because homicide has unique risk factors and prevention strategies, homicide reviews from all causes of death have been combined for further analysis as a group.

According to the National Center for Injury Prevention and Control, in 2009 homicide was the third-leading cause of death for young people ages 10 to 17 years and accounted for 12 percent of the deaths in this age group. Homicide was the leading manner of death for black children ages 10 to 17 years, accounting for 27 percent.⁷

CFR Findings

For the five-year period 2006-2010, local CFR boards reviewed 367 deaths to children resulting from homicide. Homicides represent five percent of the total reviews and fourteen percent of all reviews for children ages 15 to 17 years. The percentage of all reviews due to homicide was 4 percent in 2008 and 2009, and 5 percent in 2006, 2007 and 2010.

- Homicide deaths to boys (67 percent) were disproportionately higher than their representation in the general population (51 percent).
- The proportion of homicide deaths to black children (57 percent) was more than 3 times their representation in the general population (17 percent).
- Of the 175 deaths from all causes to black boys ages 15 to 17 years, 53 percent (92) were homicides, while only 3 percent (14) of the 451 deaths from all causes to white boys ages 15 to 17 years were homicide.

Homicides by Cause of Death, 2006-2010, N=367

Homicides by Weapon Type, 2006-2010, N=267

For a better understanding of the factors related to homicides, the 367 reviews were divided by age: 213 reviews for children 0 to 9 years old, and 154 reviews for children 10 to 17 years old.

- Seventy-three percent (267) of homicide deaths were caused by a weapon, including body parts.
 - Eighty-one percent (125) of the homicides to children 10 to 17 years old involved firearms as the weapon. Fifteen percent (31) of the homicides to children 0 to 9 years old involved firearms.
 - Thirty-six percent (77) of the homicides to children 0 to 9 years old involved the use of body parts as weapons.
- The perpetrator was more often a family member for children less than 10.
 - For children less than 10 years old, the perpetrator was a parent, stepparent, parent's partner or other relative in 74 percent (157) of reviews.
 - For children ages 10 to 17, the most frequently reported perpetrator was an acquaintance or friend (33 percent). There were 12 children ages 10 to 17 killed by a gang member (8 percent).

- In 49 percent (180) of the homicide reviews, the place of incident was the child's home.
 - For children less than 10 years old, the place of incident was the child's home in 74 percent of reviews.
 - For children ages 10 to 17 years, the commonly reported places of incident were roadways (19 percent), sidewalks (18 percent), child's home (23 percent), and friend's home (23 percent).

SUICIDE, ALL AGES

Background

Suicide is death caused by self-directed injurious behavior with intent to die.⁸ The CFR case report tool and data system capture information about suicide as a manner of death and as an act of commission, regardless of the cause of death. Because suicide has unique risk factors and prevention strategies, suicide deaths from all causes have been combined for further analysis.

According to the National Center for Injury Prevention and Control, suicide accounted for 13 percent of the deaths for young people ages 10 to 17 years nationally in 2009.⁹

CFR Findings

For the five-year period 2006-2010, local CFR boards reviewed 220 deaths to children from suicide. These represent three percent of the total 8,247 reviews and 15 percent of all reviews for children ages 10-17. The largest number of suicides occurred in 2008 (58) and the fewest occurred in 2010 (28).

- Suicide deaths were disproportionately higher among boys (82 percent) than their representation in the general population (51 percent).
- Seventy-four percent (163) of the suicide deaths reviewed were to children ages 15 to 17.

- Sixty-three percent (138) of the suicide deaths were caused by asphyxiation and 29 percent (63) were caused by a weapon.
- The most frequently indicated factors that might have contributed to the child's despondency included family problems, such as divorce and arguments with parents; arguments and break-ups with friends; school issues including failure; drug and alcohol use; victimization by bullying; and other personal crises.
- Twenty percent (44) of reviews for suicide deaths indicated the child had a history of child abuse or neglect. Fourteen had an open child protective services case at the time of the incident.
- Twenty-eight percent (62) of the suicide victims were receiving mental health services at the time

of the incident. Nineteen percent (42) had been prescribed medications for mental health conditions.

Percentages do not total to 100 due to rounding.

CHILD ABUSE AND NEGLECT, ALL AGES

Background

Child abuse and neglect is any act or failure to act on the part of a parent or caretaker that results in death, serious physical or emotional harm, sexual abuse or exploitation; or that presents an imminent risk of serious harm. Physical abuse includes punching, beating, shaking, kicking, biting, burning or otherwise harming a child and often is the result of excessive discipline or physical punishment that is inappropriate for the child's age. Head injuries and internal abdominal injuries are the most frequent causes of abuse fatalities. Neglect is the failure of parents or caregivers to provide for the basic needs of their children, including food, clothing, shelter, supervision and medical care. Deaths from neglect are attributed to malnutrition, failure to thrive, infections and accidents resulting from unsafe environments and lack of supervision.

Some deaths from child abuse and neglect are the result of long-term patterns of maltreatment, while many other deaths result from a single incident. According to Prevent Child Abuse America, there are several factors that put parents at greater risk of abusing a child: social isolation, difficulty dealing with anger and stress, financial hardship, mental health issues, apparent disinterest in caring for the health and safety of their child and alcohol or drug abuse.¹⁰

Many child abuse and neglect deaths are coded on the official death certificate as other causes of death, particularly unintentional injuries or natural deaths. In a study of 51 deaths identified as child abuse and neglect by local Ohio Child Fatality Review (CFR) boards in 2003 and 2004, 31 different causes of death were recorded on the death certificates. The causes included both medical and external injuries, both intentional and unintentional.¹¹

Best estimates are that any single source of child abuse fatality data, such as death certificates, exposes just the tip of the iceberg. The interagency, multidisciplinary approach of the CFR process may be the best way to recognize and assess the number and the circumstances of child maltreatment fatalities. Even the CFR process is likely to under count child abuse fatalities due to delays in reviews caused by lengthy investigation and prosecution procedures.

The CFR case report tool and data system capture information about child abuse and neglect deaths as acts of omission or commission, regardless of the cause of death. The tool collects details about the circumstances and persons responsible for the death.

CFR Findings

For the five-year period 2006-2010, local CFR boards reviewed 165 deaths from child abuse and neglect. These represent two percent of all 8,247 deaths reviewed. The percentage of reviews of child abuse and neglect deaths has not changed during the five-year period.

- Seventy-four percent (122) of the 165 reviews indicated that physical abuse caused or contributed to the death, while 36 percent (49) reviews indicated that neglect caused or contributed to the death. Six reviews indicated both abuse and neglect caused or contributed to the death.
- Eighty-six percent (142) of child abuse and neglect deaths occurred among children younger than 5 years old.
- A greater percentage of child abuse and neglect deaths occurred to black children (38 percent) relative to their representation in the general population (17 percent).

- The 165 deaths identified as child abuse and neglect were the result of several kinds of injuries.
 - Fifty-one percent (84) were the result of weapons including use of a body part as a weapon.
 - Other causes of death included asphyxiation, poison, drowning, fire/burn and medical causes.
- The majority of the 165 child abuse and neglect deaths reviewed were violent deaths, with 122 resulting from physical abuse, including 35 indicating the child had been shaken.

- Thirty-eight percent (62) of the 165 child abuse and neglect deaths reviewed indicated the child had a prior history of child abuse and neglect, and 22 percent (37) had an open child protective services case at the time of the incident.

- Fifty-nine percent (97) of the reviews indicated the person causing the death was a biological parent. The parent's partner was cited in 21 percent (34) of the reviews.
- For the 148 reviews where the type of residence was known, 92 percent (136) of the children were living in a parental home. Only seven were in official placement in foster homes, relative foster homes or licensed group homes.

Reviews of Child Abuse and Neglect Deaths by Person Causing Death, 2006-2010, N=165		
Person	#	%
Biological Parent	97	59
Stepparent/Foster Parent	6	4
Parent's Partner	34	21
Other Relative	5	3
Friend/Acquaintance	6	4
Unknown	14	9
Total	165	100

Percents may not total 100 due to rounding.

For all 8,247 deaths reviewed from all causes for the five-year period 2006-2010, 5 percent (401) indicated a prior history of child abuse or neglect, and 4 percent (315) had an open case with child protective services at the time of the death.

REVIEWS FOR 2006-2010, BY AGE GROUPS

In response to recommendations from the Ohio CFR Advisory Committee to present the data and findings in ways that are meaningful and useful to program developers and policy makers, this report presents the findings by age groups. It is reasonable to assume that some risk and protective factors may vary by age group. Presenting findings by age group may be beneficial for programs working with specific age groups.

INFANT DEATHS FROM ALL CAUSES

Background

Infant mortality is an important gauge of the health of a community because infants are uniquely vulnerable to the many factors that impact health, including socioeconomic disparities. The U.S. infant mortality rate for 2010 was 6.1 infant deaths per 1,000 live births.¹² This represents a decrease of 3.9 percent from the final 2009 rate of 6.4. With the exception of 2002 and 2005, the infant mortality rate has statistically remained the same or decreased significantly each year from 1958 through 2010.

In 2010, Ohio's overall infant mortality rate was 7.7. Of particular concern is the black infant mortality rate of 15.5, which is more than double the white infant mortality rate of 6.4. These rates and proportions have changed little over the past decade.¹³

Caution should be used in interpreting rates and trends due to small numbers

Vital Statistics

Ohio vital statistics data report 3,794 neonatal deaths (from birth to 28 days old) and 1,857 post-neonatal deaths (from 29 days to 1 year old) for a total of 5,651 infant deaths for the five-year period 2006-2010.

CFR Findings

Local child fatality review boards reviewed 5,456 infant deaths for 2006-2010. These represent 66 percent of all reviews for all ages.

- Sixty-eight percent (3,688) were infants from birth to 28 days old.
- Thirty-two percent (1,768) were infants from 29 days to 1 year old.

- Reviews for infant deaths were disproportionately higher among boys (56 percent) and among black infants (37 percent) relative to their representation in the general population (51 percent for boys and 17 percent for black children).
- Five percent (267) of the infant deaths reviewed were to Hispanic infants. Hispanic infants account for 6 percent of Ohio's infant population.
- Twelve percent (660) of the deaths were deemed probably preventable.

Reviews of infant deaths are grouped by cause of death:

- 4,686 (86 percent) of all infant deaths were due to medical causes.
- 534 (10 percent) were due to external injury causes.
- 236 (4 percent) were unknown if caused by medical or external causes.

Prematurity and congenital anomalies account for 70 percent (3,274) of all infant deaths from medical causes and 60 percent of infant deaths from all causes. Prematurity and congenital anomalies account for 78 percent (2,879) of the deaths to infants 0-28 days old.

Asphyxia is the leading cause of infant death due to external injury (49 percent of the infant deaths due to external injury). The next leading external cause of death is “undetermined” (20 percent of the infant deaths due to external injury).

Sleep-related deaths accounted for 15 percent (830) of all infant deaths and 41 percent (732) of the deaths to infants 29 days to 1 year old.

Other factors related to infant deaths:

- Thirteen percent (710) of the infants were from multiple births, including 79 from triplet or higher order births.
- Thirty-eight percent (2,084) of the infants were very low birthweight (<1,500 grams) and an additional 9 percent (505) were low birthweight (1,500-2,499 grams). Twenty percent (1,093) were of normal birthweight (2,500-3,999 grams) or heavier. Thirty-three percent (1,774) of the infants were of unknown or missing birthweight. For all births in Ohio in 2010, nine percent were low or very low birthweight.
- Fifty-one percent (2,764) of the infants were born preterm (<37 weeks gestation), 21 percent (1,166) were born full term (37-42 weeks gestation) and 28 percent (1,523) were of unknown or missing gestation. For all births in Ohio in 2010, 13 percent were born less than 37 weeks gestation.
- Twenty percent (1,107) of the infant deaths reviewed were infants born to mothers who smoked during the pregnancy. For all births in Ohio in 2010, 18 percent were born to mothers who smoked during the pregnancy.

Birth History Factors for Infant Deaths, 2006-2010, N=5,456		
	#	%
Multiple Birth	710	13
Very Low Birthweight (<1,500 g)	2,084	41
Low Birthweight (1,500-2,499 g)	505	10
Normal Birthweight (2,500-3,999 g)	1,042	20
Above Normal Birthweight (>3,999 g)	51	1
Unknown	1,412	28
Missing	362	
< 37 Weeks Gestation	2,764	53
37-42 Weeks Gestation	1,166	23
>42 Weeks Gestation	3	<1

Missing	279	
Mother Smoked during Pregnancy	1,107	20

Missing data have been excluded from the percentages.

Percentages may not total 100 due to rounding.

Ohio Collaborative to Prevent Infant Mortality

In November 2009, the Ohio Infant Mortality Task Force published its report, *Preventing Infant Mortality in Ohio*, which contained the following recommendations to eliminate infant mortality and disparities among population groups in Ohio:

1. Provide comprehensive reproductive health services and service coordination for all women and children before, during, and after pregnancy.
2. Eliminate health disparities and promote health equity to reduce infant mortality.
3. Prioritize and align program investments based on documented outcome and cost effectiveness.
4. Implement health promotion and education to reduce preterm birth.
5. Improve data collection and analysis to inform program and policy decisions.
6. Expand quality improvement initiatives to make measurable improvements in maternal and child health outcomes.
7. Address the effects of racism and the impact of racism on infant mortality.
8. Increase public awareness of the effect of preconception health on birth outcomes.
9. Develop, recruit, and train a diverse network of culturally competent health professionals statewide.
10. Establish a consortium to implement and monitor the recommendations of the Ohio Infant Mortality Task Force.

The Ohio Collaborative to Prevent Infant Mortality was formed in 2010 as a permanent organization dedicated to implementation of the task force's recommendations. Membership consists of government agencies (including ODH), advocacy groups, medical and public health providers, and a wide variety of other organizations and individuals committed to eliminating infant mortality and disparities. The collaborative operates through five workgroups: Coordinated Healthcare, Disparities/Racism, Data/Metrics/Quality Improvement, Education/Outreach, and Public Policy, and is guided by an executive/steering committee.

Recent efforts of the collaborative include raising awareness of safe sleep practices, instituting universal screening and progesterone treatment of women at high risk of preterm delivery, and creating a website of resources to help women achieve good health and raise healthy babies.

For more information on the collaborative, visit the website at www.odh.ohio.gov/odhPrograms/cfhs/OCTPIM/infantmortality.aspx.

INFANT SLEEP-RELATED DEATHS

Background

Since the beginning of the Ohio CFR program, local boards have been faced with a significant number of deaths of infants while sleeping. Some of these sudden unexpected infant deaths (SUIDs) are diagnosed as sudden infant death syndrome (SIDS), while others are diagnosed as accidental suffocation, positional asphyxia, overlay (the obstruction of breathing caused by the weight of a person or animal lying on the infant) or undetermined. SIDS is a subset of SUID and is a medical cause of death. It is the diagnosis given the sudden death of an infant under 1 year of age that remains unexplained after the performance of a complete postmortem investigation, including an autopsy, an examination of the scene of death and review of the infant's health history.¹⁴ The distinction between SIDS and other SUIDs is challenging. Many of the risk factors for SIDS and asphyxia are similar. Incomplete investigations, ambiguous findings and the presence of known risk factors for other causes of deaths result in many SUID being diagnosed as "undetermined cause" rather than SIDS.

The difficulty of obtaining consistent investigations and diagnoses of infant deaths led the CDC to launch an initiative to improve investigations and reporting.¹⁵ An Infant Death Investigation training was hosted by the Franklin County CFR board in June, 2011. Many Ohio counties have adopted the CDC's Sudden Unexpected Infant Death Investigation tool and procedures.

The CFR case report tool and data system captures information about deaths while sleeping as special circumstances, regardless of the cause of death. In order to better understand the contributing factors for these deaths and to develop prevention strategies, these sleep-related deaths including SIDS are analyzed and discussed as a group.

CFR Findings

From the reviews of deaths in the five-year period from 2006 to 2010, 931 cases of infants who died while in a sleep environment were identified. For the analysis of sleep-related deaths, cases of death from specific medical causes except SIDS were excluded, as were deaths from specific unrelated injuries such as fire, resulting in 830 infant sleep-related deaths. These cases include 207 SIDS reviews that included information about the circumstances.

The 830 infant sleep-related deaths account for 15 percent of the 5,456 total reviews for infant deaths from 2006 to 2010, more than any single cause of death except prematurity. Over the five-year period, the percentage of infant deaths that were sleep-related has decreased from 17 percent in 2006 to 14 percent in 2010.

- More than three Ohio infant deaths each week are sleep-related. If the sleep-related deaths were prevented, the Ohio infant mortality rate for 2010 would have been reduced from 7.7 to 6.6 deaths per 1,000 live births.
- Of the 1,768 reviews of infant deaths from 29 days to 1 year of age, 41 percent (732) were sleep related.
- Thirty-nine percent (324) of deaths in a sleep environment were to black infants. This is disproportionately higher than their representation in the general population (17 percent).
- Eighty-seven percent (724) of the deaths occurred before 6 months of age; 55 percent (457) occurred before 3 months of age.

As discussed earlier in this section, determining the cause of death for infants in sleep situations is difficult, even when a complete investigation has occurred. Forty percent (334) of the sleep-related deaths were diagnosed as unknown or undetermined cause, even though autopsies had been completed for 99 percent of the cases.

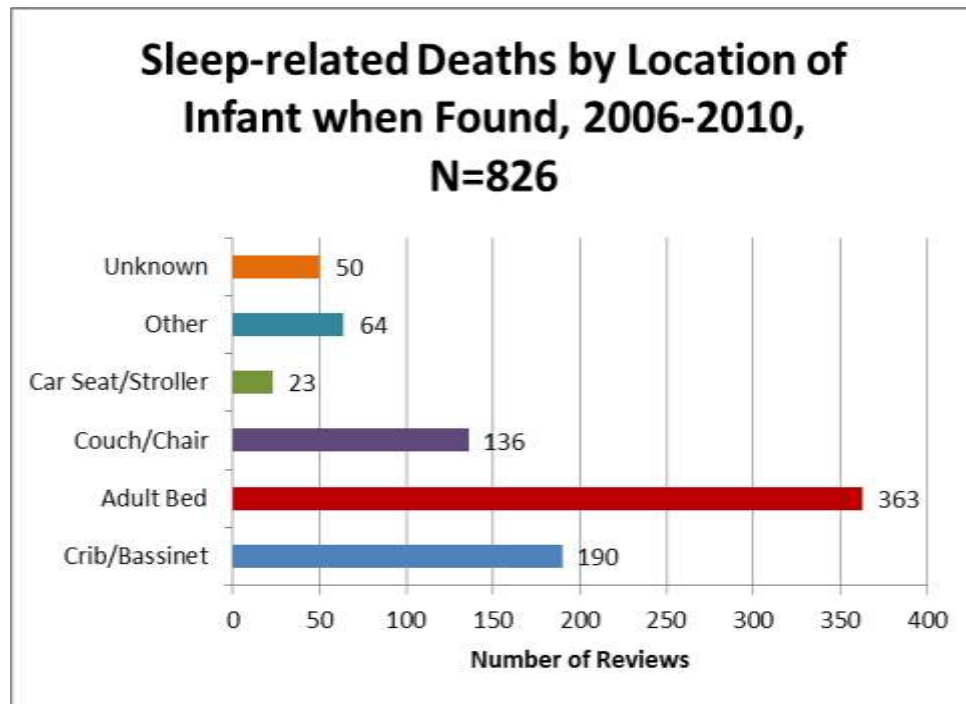

Sleep-related Deaths by Manner of Death, 2006-2010, N=830

Sleep-related Deaths by Cause of Death, 2006-2010, N=830

Twenty-three percent (190) of sleep-related deaths occurred in cribs or bassinets. Sixty percent (499) of sleep-related deaths occurred in adult beds, on couches or on chairs.

Bedsharing was a commonly reported circumstance for sleep-related deaths. Sixty-two percent (514) of sleep-related deaths occurred to infants who were sharing a sleep surface with another person at the time of death.

- Of those cases that indicated bedsharing, 401 of the infants were sharing a sleep surface with an adult, including 81 infants who were sharing with an adult and another child.
- An additional 33 infants were sharing with another child only.
- Two infants were sharing a sleep surface with pets.
- Forty-three reviews indicated an adult fell asleep while feeding the infant. Nineteen were bottle feeding; 18 were breast feeding. The feeding type was unknown or missing for 6 reviews.
- Of the 514 reviews indicating the infant was sharing a sleep surface, 358 (70 percent) indicated the infant's supervisor was impaired at the time of the incident.
 - Twenty-one supervisors (4 percent) were impaired by alcohol.
 - Thirteen supervisors (3 percent) were impaired by drugs.
 - Sixty-four percent (329) of the bedsharing supervisors were impaired by sleep.

Exposure to smoking was another commonly reported circumstance for sleep-related deaths.

- Forty-two percent (346) of the infants were exposed to smoke either in utero or after birth.
- Of the 401 infants sharing a sleep surface with an adult, 47 percent (188) were also exposed to smoke either in utero or after birth.

Infant Safe Sleep Recommendations

In October 2011, the American Academy of Pediatrics issued a policy statement expanding its 2005 recommendations for reducing the risk of SIDS and other sleep-related infant deaths. ODH continues to urge parents and caregivers to follow these recommendations as the most effective way to reduce the risk of infant death.

- Place infants for sleep wholly on the back for every sleep, nap time and night time.
- Use a firm sleep surface. A firm crib mattress is the recommended surface.
- Room-sharing without bedsharing is recommended. The infant's crib should be in the parents' bedroom, close to the parents' bed.
- Keep soft objects and loose bedding out of the crib.
- Pregnant women should receive regular prenatal care.
- Do not smoke during pregnancy. Avoid exposure to secondhand smoke.
- Avoid alcohol and illicit drug use during pregnancy and after birth.
- Breastfeeding is recommended.
- Offer a pacifier at sleep time after breastfeeding has been established.
- Avoid overheating.
- Avoid commercial devices marketed to reduce the risk of SIDS. None have been proven safe or effective.
- Encourage supervised "tummy time" when infant is awake to avoid flat spots on the back of the infant's head and to strengthen the upper torso and neck.
- All infants should be immunized in accordance with AAP and CDC recommendations.

The policy statement includes four recommendations directed toward health policy makers, researchers and professionals to endorse the recommendations; continue research and surveillance; adhere to safe sleep guidelines in media and manufacturing advertising; and expand the Back to Sleep campaign for parents, grandparents and all other caregivers with a major focus on the safe sleep environment.

DEATHS TO CHILDREN 1 TO 4 YEARS OLD

Background

No longer babies, toddlers and preschoolers experience increased mobility and more awareness of their surroundings, but lack the reasoning skills to protect themselves from many dangers.¹⁶ According to the National Center for Health Statistics, the leading causes of death for 1 to 4 year olds are accidents, congenital anomalies and homicides. Nationally, the 2010 mortality rate for this age group was unchanged from 27 per 100,000 population in 2009.¹⁷

CFR Findings

For the five-year period 2006-2010, local CFR boards reviewed 835 deaths to children ages 1 to 4 years. These represent 10 percent of all 8,247 deaths reviewed.

- Reviews were disproportionately higher among boys (57 percent) relative to their representation in the general population (51 percent).
- A greater percentage of deaths in this age group occurred among black children (28 percent) relative to their representation in the general population (17 percent).
- Six percent (51) of the reviews were for Hispanic children.
- Thirty-eight percent (313) of the deaths were deemed probably preventable.

The 835 reviews were classified by manner as follows:

- Fifty-four percent (450) were natural deaths.
- Twenty-nine percent (244) were of accidental manner.
- Twelve percent (102) were homicides.
- Five percent (39) were of an undetermined manner.

Fifty-five percent (460) of the 835 reviews for 1 to 4 year olds were from medical causes.

- Congenital anomalies were the leading cause of death in this age group.
- Twenty-three percent (104) of the deaths from medical causes were due to congenital anomalies.
- Eighteen percent (82) were due to pneumonia and other infections.
- Cancer accounted for 11 percent (52) of the deaths from medical causes.

Forty-two percent (353) of the 835 reviews for 1 to 4 year olds were due to external causes. Vehicular crashes, weapons injuries, and fire and burn injuries were the three leading external causes of death for this age group.

- Nineteen percent (68) were due to vehicular injuries.
- Nineteen percent (67) were due to weapons injuries, including the use of body parts as weapons.
- Eighteen percent (65) of the 338 reviews were due to fire and burn injuries.

Vehicular injuries were the leading external cause of death for 1-4 year olds, accounting for 68 deaths.

- Sixty-three percent (43) of the 68 were passengers in vehicles. The average age of the child's driver was 31 years. Twelve of the 43 drivers (28 percent) were impaired at the time of the incident.
- Fifty-four percent (37) of the 68 vehicular deaths indicated the child killed was a passenger in a car, truck, van or SUV, where by law, children must use seat belts and safety seats or boosters. Of those 37, 41 percent (15) were properly restrained.
- Thirty-five percent (24) of the vehicular deaths were to pedestrians or children on bicycles or tricycles. Seven were back-over incidents. Eleven of the 24 pedestrians or cyclists had supervision at the time of the incident.

Weapons deaths accounted for 67 deaths to 1 to 4 year olds. Sixty-three of the 67 weapons deaths were homicides.

- Of the 63 homicides, 29 percent (18) indicated the perpetrator was a biological parent. The parent's partner was cited in 40 percent (25) of the reviews.
- The weapon type was indicated as body parts in 63 percent (42) of the weapons deaths to 1 to 4 year olds. Firearms (handguns, shotguns and rifles) were indicated in 24 percent (16) of the reviews.

Local CFR boards identified 76 deaths from child abuse and neglect among 1 to 4 year olds. These represent 9 percent of all reviews for this age group, more than any other age group.

- Thirty-eight percent (29) of the reviews indicated the person causing the death was a biological parent.
- The parent's partner was cited in 36 percent (27) of the reviews.

Ohio's Booster Seat Law

Effective Oct. 7, 2009, Ohio's Child Restraint Law was revised to require Ohio's children to use belt-positioning booster seats when they outgrow their child safety seats (usually at 4 years old and 40 pounds). The belt-positioning booster seats must be used until the child is 8 years old, unless the child is at least 4 feet, 9 inches tall.

The revised law requires the following:

- Children younger than 4 years old or less than 40 pounds must use a child safety seat.
- Children younger than 8 years old must use a booster seat until they are at least 4 feet, 9 inches tall.
- Children ages 8 to 15 who have outgrown child safety seats and boosters must be restrained by the standard safety belts.

Booster seats raise the child so the shoulder and lap belt are correctly positioned across the strongest parts of the child's body, rather than riding up over the child's neck and stomach. By requiring the use of booster seats, the revised law will help prevent serious injuries and deaths to young children.

More information about the law and choosing the correct car seat or booster seat can be found at www.odh.ohio.gov/odhPrograms/hpr/cpsafe/childbooster.aspx.

DEATHS TO CHILDREN 5 TO 9 YEARS OLD

Background

Children ages 5 to 9 years continue to improve motor skills and have more regular contact with people outside their family. They have a growing understanding of consequences and of right and wrong.¹⁸ According to the National Center for Injury Prevention and Control, the leading causes of death for 5 to 9 year olds are accidents, cancers and congenital anomalies.¹⁹

CFR Findings

For the five-year period 2006-2010, local CFR boards reviewed 451 deaths to children ages 5 to 9 years. These represent 6 percent of all 8,247 deaths reviewed.

- Reviews were disproportionately higher among boys (55 percent) relative to their representation in the general population (51 percent).
- A greater percentage of deaths in this age group occurred among black children (23 percent) relative to their representation in the general population (17 percent).
- Four percent (17) of the reviews were for Hispanic children.
- Thirty-two percent (145) of the deaths were deemed probably preventable.

The 451 reviews were classified by manner as follows:

- Sixty percent (270) were natural deaths.
- Twenty-nine percent (132) were of accidental manner.
- Nine percent (42) were homicides.
- Less than 1 percent (1) were suicides.
- One percent (6) were of an undetermined manner.

Sixty-one percent (274) of the 451 reviews for 5 to 9 year olds were from medical causes.

- Cancer was the leading medical cause of death in this age group.
- Twenty-five percent (68) of the deaths from medical causes were due to cancer.
- Sixteen percent (44) were due to pneumonia and other infections.
- Congenital anomalies accounted for 12 percent (32) of the deaths from medical causes.

Thirty-nine percent (176) of the 451 reviews for 5 to 9 year olds were due to external causes. Vehicular crashes, fires and weapons injuries were the three leading external causes of death for this age group.

- Thirty-eight percent (66) of the 176 reviews were due to vehicular injuries.
- Twenty-three percent (40) were due to fires and burns.
- Fourteen percent (25) were due to weapons injuries, including the use of body parts as weapons.

Vehicular injuries accounted for 66 deaths to 5 to 9 year olds. One vehicular death was homicide; the remainder were accidental manner.

- Fifty-eight percent (38) of the 66 were passengers in vehicles. The average age of the child's driver was 32 years. Two of the 38 drivers (5 percent) were impaired at the time of the incident.
- Forty-eight percent (32) indicated the child killed was a passenger in a car, truck, van or SUV, where by law, children must use seat belts and safety seats or boosters. Of those 32, 47 percent (15) were properly restrained.
- Thirty-eight percent (25) of the vehicular deaths were to pedestrians or children on bicycles or other pedal cycles. Ten of the 25 pedestrians or cyclists had supervision at the time of the incident.

Fire and burn injuries (40) were the second leading cause of external death for 5 to 9 year olds. Twenty-five percent (10) of the 40 fire and burn deaths were homicides.

- Thirty-five percent (14) of the reviews indicated a smoke detector was present.

Local CFR boards identified 12 deaths from child abuse and neglect among 5 to 9 year olds. These represent 3 percent of all reviews for this age group, and 7 percent of the 165 child abuse and neglect deaths for all ages.

- Forty-two percent (5) of the reviews indicated the person causing the death was a biological parent.
- Other perpetrators included other relatives, parents' partner and unknown persons.

DEATHS TO CHILDREN 10 TO 14 YEARS OLD

Background

Children in early adolescence experience many physical, cognitive and social-emotional changes. As 10 to 14 year olds experience more independence, they also encounter strong peer pressure.²⁰ According to the National Center for Injury Prevention and Control, the leading causes of death for 10 to 14 year olds are accidents, cancers and homicides.²¹

CFR Findings

For the five-year period 2006-2010, local CFR boards reviewed 578 deaths to children ages 10 to 14 years. These represent 7 percent of all 8,247 deaths reviewed.

- Reviews were disproportionately higher among boys (57 percent) relative to their representation in the general population (51 percent).
- A greater percentage of deaths in this age group occurred among black children (22 percent) relative to their representation in the general population (17 percent).
- Three percent (16) of the reviews were for Hispanic children.
- Thirty-six percent (205) of the deaths were deemed probably preventable.

The 578 reviews were classified by manner as follows:

- Fifty-four percent (313) were natural deaths.
- Twenty-nine percent (170) were of accidental manner.
- Ten percent (56) were suicides.
- Five percent (28) were homicides.
- Two percent (11) were of an undetermined or unknown manner.

Fifty-five percent (317) of the 578 reviews for 10 to 14 year olds were from medical causes.

- Cancer was the leading medical cause of death in this age group.
- Twenty-six percent (82) of the deaths from medical causes were due to cancer.
- Thirteen percent (41) were due to pneumonia and other infections.
- Congenital anomalies accounted for 12 percent (38) of the deaths from medical causes.

Forty-four percent (255) of the 578 reviews for 10 to 14 year olds were due to external causes. Vehicular crashes, asphyxia and weapons injuries were the three leading external causes of death for this age group.

- Thirty-five percent (89) of the 255 reviews were due to vehicular injuries.
- Twenty-six percent (66) were due to asphyxia.
- Fourteen percent (36) were due to weapons injuries, including the use of body parts as weapons.

Vehicular injuries accounted for 89 deaths to 10 to 14 year olds. All but one of the vehicular deaths were accidental manner.

- Forty-six percent (41) of the 89 were passengers in vehicles. The average age of the child's driver was 29 years. Two of the 41 drivers (5 percent) were impaired at the time of the incident.
- Thirty-three percent (29) indicated the child killed was a passenger in a car, truck, van or SUV, where by law, children must use seat belts. Of those 29, 10 percent (3) were properly restrained.
- Thirty percent (27) of the vehicular deaths were to pedestrians or children on bicycles or other pedal cycles.

Asphyxia (66) was the second leading cause of external death for 10 to 14 year olds.

- Ninety-four percent (62) of the asphyxia deaths were due to strangulation. The remaining four were due to choking or suffocation.
- Sixty-five percent (43) of the 66 asphyxia deaths were suicides.

Local CFR boards reviewed 56 suicide deaths to 10 to 14 year olds. These represent 10 percent of all 578 reviews for this age group, and 26 percent of the 220 suicide deaths for all ages.

- Seventy-seven percent (43) of the suicides were by asphyxia. Twenty percent (11) were by weapons and two deaths were by poisoning.
- Twenty-seven percent (15) were receiving mental health services at the time of the incident.
- The most frequently indicated factors that might have contributed to the child's despondency were arguments with parents and friends, and school problems.

DEATHS OF CHILDREN 15 TO 17 YEARS OLD

Background

Known for challenging the limits, teenagers enjoy more independence from their family and develop strong relationships with peers.²² According to the National Center for Injury Prevention and Control, the leading causes of death for 15 to 17 year olds are accidents, homicides and suicides.²³

CFR Findings

For the five-year period 2006-2010, local CFR boards reviewed 927 deaths of children ages 15 to 17 years. These represent 11 percent of all 8,247 deaths reviewed.

- Reviews were disproportionately higher among boys (69 percent) relative to their representation in the general population (51 percent).
- A greater percentage of deaths in this age group occurred among black children (24 percent) relative to their representation in the general population (17 percent).
- Three percent (30) of the reviews were for Hispanic children.
- Fifty-eight percent (536) of the deaths were deemed probably preventable.

The 927 reviews were classified by manner as follows:

- Twenty-seven percent (253) were natural deaths.
- Forty-one percent (376) were of accidental manner.
- Eighteen percent (163) were suicides.
- Fourteen percent (126) were homicides.
- One percent (9) were of an undetermined or unknown manner.

Of the 175 deaths from all causes to black boys ages 15 to 17 years, 53 percent (92) were homicides, while only 3 percent (14) of the 451 deaths from all causes to white boys ages 15 to 17 years were homicide.

Twenty-seven percent (254) of the 927 reviews for 15 to 17 year olds were from medical causes.

- Cancer was the leading medical cause of death in this age group.
- Fifteen percent (38) of the deaths from medical causes were due to cancer.

- Cardiovascular disorders accounted for 13 percent (32) of the deaths from medical causes.
- Ten percent (25) were due to pneumonia and other infections; and 10 percent (25) were due to neurological disorders.

Seventy-two percent (670) of the 927 reviews for 15 to 17 year olds were due to external causes. Vehicular crashes, weapons injuries and asphyxia were the three leading external causes of death for this age group.

- Forty-three percent (288) of the 670 reviews were due to vehicular injuries.
- Twenty-six percent (176) were due to weapons injuries, including the use of body parts as weapons.
- Sixteen percent (107) were due to asphyxia.

Of the 288 reviews for deaths from vehicular injuries to 15 to 17 year olds, 3 percent (8) were suicides and 3 percent (8) were homicides.

- Vehicular deaths to 15 to -17 year olds outnumbered deaths from all medical causes combined.
- Eighty-six percent (249) of the vehicular deaths to 15 to 17 year olds were white children, while 11 percent (33) were black children.
- Forty-eight percent (137) of the reviews were for children who were driving the vehicle.
 - Eighty-two percent (113) of the 137 child drivers were deemed responsible for the incident. Twenty-one were impaired.

- Speed, recklessness and inexperience were the most frequently cited causes of crashes.
- Of the 114 children who were driving cars, trucks, vans and SUVs, where by law, children must use seat belts, 32 percent (37) were properly restrained.
- Thirty-six percent (104) of the 288 vehicular deaths occurred to children who were passengers.
 - Seventy-three percent (76) of the drivers of the child's vehicle were deemed responsible for the incident. Twenty-two were impaired.
 - Speed, recklessness and inexperience were the most frequently cited causes of crashes.
 - Of the 94 children who were passengers in cars, trucks, vans and SUVs, where by law, children must use seat belts, 23 percent (22) were properly restrained.
 - For children who were passengers, the average age of the child's driver was 21 years.
- Fourteen percent (40) of the vehicular deaths were to pedestrians or children on bicycles or other pedal cycles.
- Of the 33 vehicular deaths to black 15 to 17 year olds, 39 percent (13) were pedestrians or cyclists, while 10 percent (26) of the 249 white 15 to 17 year olds were pedestrians or cyclists.

Weapons injuries, including the use of body parts as weapons, were the second leading cause of death for 15 to 17 year olds.

- The 176 weapons deaths represent 19 percent of all deaths to 15 to 17 year olds.
- Weapons deaths were disproportionately higher among boys (88 percent) and black children (64 percent) relative to their representation in the general population (51 percent for boys and 17 percent for black children).
- Sixty-five percent (114) of the weapons deaths were homicides and 30 percent (52) were suicides. Only 6 percent (10) were of accidental manner.
- Firearms (handguns, shotguns and rifles) were involved in 94 percent (166) of the deaths. Other weapons included sharp instruments and other weapons.
- Forty-three percent (75) of the reviews for weapons deaths indicated the child had a delinquent or criminal history.

Asphyxia was the third leading cause of death for 15 to 17 year olds.

- The 107 asphyxia deaths represent 12 percent of all deaths to 15 to 17 year olds.
- Ninety-three percent (100) of the asphyxia deaths were due to strangulation. The remaining seven were due to suffocation or other mechanism.
- Eighty-eight percent (94) of the 107 asphyxia deaths were suicides.

Local CFR boards reviewed 163 suicide deaths to 15 to 17 year olds. These represent 18 percent of all 927 reviews for this age group, and 74 percent of the 220 suicide deaths for all ages.

- Fifty-eight percent (94) of the suicides were by asphyxia. Thirty-two percent (52) were by weapons. Other causes included vehicular crashes, poisoning, falls and other causes.
- Twenty-eight percent (47) were receiving mental health services at the time of the incident and twenty percent (33) were receiving medication for mental illness.
- Twenty percent (33) of the suicide reviews indicated a history of child maltreatment and 8 indicated an open case with children's protective services at the time of the incident.
- The most frequently indicated factors that might have contributed to the child's despondency were family discord including divorce and arguments with parents; arguments or breakups with boyfriend or girlfriend; and school problems.

PREVENTABLE DEATHS

The mission of the Ohio Child CFR program is to reduce the incidence of preventable child deaths in Ohio. A child's death is considered preventable if the community or an individual could reasonably have changed the circumstances that led to the death.²⁴ The review process helps CFR boards focus on a wide spectrum of factors that may have caused or contributed to the death or made the child more susceptible to harm. After these factors are identified the board must decide which, if any, of the factors could reasonably have been changed. Cases are then deemed "probably preventable" or "probably not preventable."

Even if a particular case is deemed "probably not preventable," the CFR process is valuable in identifying gaps in care, systemic service delivery issues or community environmental factors which contribute to less than optimal quality of life for vulnerable individuals. For this reason, many local boards make recommendations and initiate changes even when a particular death is not deemed preventable.

CFR Findings

Local boards indicated 23 percent (1,859) of the 8,247 deaths reviewed from 2006 to 2010 probably could have been prevented. The percentage changed little over the period, from a high of 23 percent in 2006, 2008 and 2010 to a low of 22 percent in 2007 and 2009. Preventability differed by manner of death and by age group.

- Eighty-four percent (1,074) of the 1,284 deaths of accidental manner were considered probably preventable.
- Fifty-eight percent (536) of the 927 deaths to 15 to 17-year-olds were considered probably preventable.
- Only 3 percent (125) of the 3,688 deaths to infants less than 29 days old were considered probably preventable.

Local CFR boards identify many deaths that likely could have been prevented through changes in laws or policies, such as mandating the use of booster seats in cars; or the implementation of programs, such as Cribs for Kids. Many other deaths likely could have been prevented through increased adult supervision, increased parental responsibility and the exercise of common sense. Through the sharing of perspectives during the CFR discussions, members have learned that often-repeated health and safety messages need to be presented in new ways to reach new generations of parents, caregivers and children.

CONCLUSION

The mission of CFR is the prevention of child deaths in Ohio. This report summarizes the process of local reviews by multi-disciplinary boards of community leaders, which results in data regarding the circumstances related to each death. Each child's death is a tragic story. As the facts about the circumstances of all the deaths are compiled and analyzed, certain risks to children become clear, including:

- Prematurity, which accounts for nearly half of all infant deaths.
- Unsafe sleep environments, which place healthy infants at risk of sudden death.
- Riding unrestrained in vehicles, which puts children at greater risk of death in the event of a crash.
- Racial disparity that results in black children dying from homicide at more than three times the expected rate.

This report is intended to be a vehicle to share the findings with the wider community to engage others in concern about these and other risks. Partners are needed to develop recommendations and implement policies, programs and practices that can have a positive impact in reducing the risks and improving the lives of Ohio's children. We encourage you to use the information in this report and to share it with others who can influence changes to benefit children. We invite you to collaborate with local CFR boards to prevent child deaths in Ohio.

APPENDIX I

OVERVIEW OF OHIO CHILD FATALITY REVIEW PROGRAM

Child deaths are often regarded as indicators of the health of a community. While mortality data provide us with an overall picture of child deaths by number and cause, it is from a careful study of each and every child's death that we can learn how best to respond to a death and how best to prevent future deaths.

Recognizing the need to better understand why children die, in July 2000 then Gov. Bob Taft signed the bill mandating child fatality review (CFR) boards in each of Ohio's counties to review the deaths of children under 18 years of age. For the complete law and administrative rules pertaining to CFR, refer to the ODH website at www.odh.ohio.gov/rules/final/f3701-67.aspx. The mission of these local review boards, as described in the law, is to reduce the incidence of preventable child deaths. To accomplish this, it is expected that local review teams will:

- Promote cooperation, collaboration and communication among all groups that serve families and children.
- Maintain a database of all child deaths to develop an understanding of the causes and incidence of those deaths.
- Recommend and develop plans for implementing local service and program changes and advise ODH of data, trends and patterns found in child deaths.

While membership varies among local boards, the law requires that minimum membership include:

- County coroner or designee.
- Chief of police or sheriff or designee.
- Executive director of a public children service agency or designee.
- Public health official or designee.
- Executive director of a board of alcohol, drug addiction and mental health services or designee.
- Pediatrician or family practice physician.

Additional members are recommended and may include the county prosecutor, fire/emergency medical service representatives, school representatives, representatives from Ohio Family and Children First Councils, other child advocates and other child health and safety specialists. The health commissioner serves as board chairperson in many counties.

CFR boards must meet at least once a year to review the deaths of child residents of that county. The basic review process includes:

- The presentation of relevant information.
- The identification of contributing factors.
- The development of data-driven recommendations.

Local CFR board review meetings are not open meetings and all discussion and work products are confidential.

Each local CFR board provides data to ODH by recording information on a case report tool before entering it into a national web-based data system. The report tool and data system were developed by the National Center for Prevention and Review of Child Death (NCPRCD) with a grant from the federal Maternal and Child Health Bureau. The tool captures information about the factors related to the death and the often-complex conversations that happen during the review process in a format that can be analyzed on the local, state or national level. This report is based on the analysis of data from the NCPRCD data system.

ODH is responsible for providing technical assistance and annual training to the CFR boards. In 2011, ODH provided two new board chair/coordinator orientations. ODH collaborated with the Franklin County CFR board and the SID Network of Ohio to present an Infant Death Investigation Training on June 8 and 9, 2011. The purpose of the training was to provide local teams from across Ohio with the knowledge and skills to complete consistent, thorough infant death investigations. The faculty was a team from Cuyahoga County that had been training in Sudden, Unexpected Infant Death Investigation (SUIDI) by the CDC. Throughout the year, NCPKCD webinars provided additional training opportunities for Ohio's local boards. ODH staff also coordinate the data collection, assure the maintenance of a Web-based data system and analyze the data reported by the local boards. The annual state report is prepared and published jointly with the Ohio Children's Trust Fund.

To assist moving CFR forward in Ohio, an advisory committee was established in 2002. The purpose of the advisory committee is to review Ohio's child mortality data and CFR data to identify trends in child deaths; to provide expertise and consultation in analyzing and understanding the causes, trends and system responses to child deaths in Ohio; to make recommendations in law, policy and practice to prevent child deaths in Ohio; to support CFR and recommend improvements in protocols and procedures; and to review and provide input for the annual report.

This report presents information from the reviews of deaths that occurred in 2010, as well as aggregate data for the five-year period 2006 to 2010. By reporting the information by year of death, it is possible to compare CFR data with data from other sources such as vital statistics. In making such comparisons, it is important to use caution and acknowledge the unique origins and purposes for each source of data. CFR data included in this report are the outcome of thoughtful inquiry and discussion by a multi-disciplinary group of community leaders who consider all the circumstances surrounding the death of each child. They bring to the review table information from a variety of agencies, documents and areas of expertise. Their careful review process results in a thorough description of the factors related to child deaths.

Despite their best efforts, CFR boards are not able to review every child death. Some reviews must be delayed until all legal investigations and prosecutions are completed. Some deaths occur outside the county of residence or outside the state, resulting in long delays in notification to the CFR board. Because of these variables, it is usually impossible to find an exact number-for-number match between CFR data and data from other sources such as vital statistics. The unique role of CFR data is to provide a comprehensive depth of understanding to augment other, more one-dimensional data sources.

APPENDIX V
ICD-10 CODES
USED FOR VITAL STATISTICS DATA
INCLUDED IN CFR REPORT

Cause of Death	ICD-10 Codes
Animal Bite or Attack	W53-W59, X20-27, X29
Asphyxia	W75-W84, X47, X66, X67, X70, X88, X91, Y17, Y20
Child Abuse and Neglect	Y06-Y07
Drowning	W65-W74, X71, X92, Y21
Environmental Exposure	W92, W93, W99, X30, X31, X32
Fall and Crush	W00-W19, W23, X80, Y01, Y02, Y30, Y31
Fire, Burn, Electrocution	X00-X09, X33, X76, X77, X97, X98, Y26, Y27, W85, W86, W87
Medical Causes (Excluding SIDS)	A000-B999, C000-D489, D500-D899, E000-E909, F000-F999, G000-G999, H000-H599, H600-H959, I000-I999, J000-J999, K000-K939, L000-L999, M000-M999, N000-N999, O000-O999, P000-P969, Q000-Q999, R000-R949
Other Causes (Residual)	All other codes not otherwise listed
Poisoning	X40-X49, X60-X65, X68, X69, X85, X87, X89, X90, Y10-Y16, Y18, Y19
Sudden Infant Death Syndrome	R95
Suicide	X60-X84
Vehicular	V01-V99, X81, X82, Y03, Y32
Weapon, Including Body Part	W26, W32-W34, X72-75, X78, X79, X93-96, X99, Y00, Y04, Y05, Y08, Y09, Y22-25, Y28-Y29, Y35.0 Y35.3

For this report, ICD-10 codes used for classification of Vital Statistics data were selected to most closely correspond with the causes of death indicated on the CFR case report tool. Therefore, the ICD-10 codes used for this report may not match the codes used for other reports or data systems.

APPENDIX VI 2010 OHIO COUNTY TYPE DESIGNATIONS

Ohio's 88 counties have been categorized into four county types: rural Appalachian; rural non-Appalachian; metropolitan; and suburban.

- The 29 rural Appalachian counties were identified from Section 403 of the U. S. Code, and most are geographically situated in the Southeast region of Ohio.
- The 12 metropolitan counties were defined as non-Appalachian counties containing at least one city with 50,000 or more inhabitants as of the 1990 census.
- The 17 suburban counties were non-metropolitan, non-Appalachian counties that met the criteria of an urbanized area as defined by the U.S. Census Bureau for the 1990 census. Thus, suburban counties are essentially urbanized areas without large cities. All suburban counties are also adjacent to at least one metropolitan county.
- The 30 counties that were not Appalachian, metropolitan, or suburban were classified as rural non-Appalachian.

In 2008, Ashtabula, Trumbull and Mahoning were added to the Appalachian counties. To maintain continuity for the five-year period 2006-2010, for the purpose of this report, Ashtabula remains rural non-Appalachian; Trumbull remains suburban; and Mahoning remains metropolitan.

Ohio County Designation

**APPENDIX VII
DATA TABLES**

Table 1: Reviews of 2010 Deaths by Manner of Death by Age, Race and Gender (N=1,542)						
	Natural	Accident	Homicide	Suicide	Undetermined/ Unknown	Total

Ohio's State Health Improvement Plan (SHIP) - 2012

Priority: INJURY & VIOLENCE PREVENTION

Goal Statement: Promote public awareness, policy, programs and data that demonstrate that injury & violence are preventable.

The following strategies will be implemented. Each strategy will involve specific activities leading to identified outcomes that put Ohio on the path to achieving the stated goal within the next 24 to 36 months.

What Is Being Done		Key Partners	Funding Source	12-Month Outcome	24-Month Outcome
Strategy	Action Step				
Promote public & professional awareness of injury & violence as preventable public health issues.	Hold a forum of injury stakeholders to share key points from existing IVP plans.	Leadership groups of relevant IVP groups & coalitions (e.g., OSPF, OAESV, ODVN, SADVPP, OIPP, VIPP and OH-VDRS Advisory Group)	CDC	Identify strategies for cross-collaboration and promotion of IVP plans.	Annual forums will be held to reassess strategies.
	Identify shared branding campaign.			Branding campaign will be promoted across IVP groups.	Use & usefulness of branding will be assessed.
	Promote existing IVP state plans to multidisciplinary professionals.				
Implement IVP policy.	Identify priority policy issues from key IVP groups.	Leadership groups of relevant state IVP coalitions	CDC / TBD	Policy document with identified priorities created.	Measured success (e.g., data available, decision-makers educated, coalition mobilization, etc.) in promoting identified policy changes.
	Identify strategies for joint support of identified policy priorities.				
Identify IVP program needs and gaps.	Identify and promote evidence-based IVP (e.g., <i>Tai Chi: Moving for Better Balance</i> for older adult falls prevention)	OIPP Falls Coalition & Evidence-Based Injury Prevention Action Group	CDC / TBD	At least 30 <i>Tai Chi: Moving for Better Balance</i> classes will be held throughout Ohio.	Assess gaps in availability of <i>Tai Chi: Moving for Better Balance</i> training.

				Recommendations will be developed for additional IVP programming related to priorities	
	Identify gaps in IVP capacity at the state & local level (e.g., lack of local funding for injury prevention)			Gaps in IVP capacity will be identified and recommendations developed for addressing them.	
	Promote effective strategies (e.g., resiliency / asset building) and cross collaboration to intervene with youth around suicide, relationship violence and youth violence prevention.	Leadership groups of relevant state IVP coalitions; Ohio Adolescent Health Partnership		IVP leadership groups will support development of the IVP action plan within the Ohio Adolescent Health Plan	TBD by Ohio Adolescent Health Partnership
	Identify gaps in statewide youth violence prevention efforts and capacity	Leadership groups of relevant state and local violence prevention groups		Gaps in statewide youth violence prevention efforts will be identified	Recommendations will be developed for statewide youth violence prevention efforts
Improve IVP data quality and accessibility	Identify data gaps and develop a plan to address them through data systems	Leadership groups of relevant state IVP coalitions; OIPP Data Action Group members	CDC / TBD	IVP data gaps will be identified	IVP data plan will be developed with recommendations for improving Ohio IVP data
	Explore existing sources or identify potential new sources to address gaps				
	Support external-cause-of-injury (E-coding) and other improvements to data sources			Assess changes in E-coding in transition of hospitals from ICD-9 to ICD-10 coding	If needed per 12-month outcome, identify resources to host E-coding training for Ohio hospital billing coders

* **Abbreviations:** Injury & violence prevention (IVP); Ohio Suicide Prevention Foundation (OSPF); Ohio Alliance to End Sexual Violence (OAESV); Ohio Domestic Violence Network (ODVN), Sexual Assault & Domestic Violence Prevention Program (SADVPP), Ohio Injury Prevention Partnership (OIPP), Violence & Injury Prevention Program (VIPP); Ohio Violent Death Reporting System (OH-VDRS) Advisory Group

A. Ohio Trauma System: Historical Perspective

Date	Action
Prior to 1982	EMS Advisory Panel (EMS personnel and fire chiefs) existed within Ohio Department of Education
1982	Cleveland Medical Association of Medicine introduced resolution to the house of delegates from the Ohio State Medical Association (OSMA) calling for establishment of state-wide trauma system
1983 – 1985	Ohio COT task force developed with collaboration from OSMA; guideline for trauma system development proposed; not adopted
1988	Ohio Society of Trauma Nurse Coordinators (later Ohio Society of Trauma Nurse Leaders) created
1990	NHTSA assessment – recommendations assisted development of SB 98 (1992)
1992	Ohio Alliance of Trauma Registrars (OATR) began meeting
Nov 1992	SB 98 effective, created the Division of EMS under ODPS; created EMS Board; established Trauma Care Advisory Group (TCAG-later Trauma Committee); mandated the formation of a trauma registry; required formation of an EMS incident reporting system; required a report on the development of a state-wide trauma system; development of Regional Physician Advisory Boards (RPAB)
Jan 1993	18 members of EMS Board seated; TCAG members selected with Dr. Richard Fratianne as chair
Oct 1994	ODPS received grant from HRSA for trauma system development
Nov 1994	Trauma Standards and Accreditation Draft Document developed by Trauma Committee, submitted to legislature as required by SB 98
March 1995 – Dec 1996	Trauma Liaison (Sally Jo Zuspan) hired by DEMS to help establish trauma systems
May 1995	Trauma Committee drafted Ohio Trauma Systems Proposal (OTSP) outlining essential components of trauma system
Oct 1995	Trauma forums held throughout Ohio to address trauma concerns
Nov 1995	Development of Trauma Systems seminar held to generate consensus on issues
Dec 1995	16 ACS verified trauma centers (10 level I, 6 level II)
Nov 1995 - Feb 1996	ODPS contracted Udell Research Associates (Dr. John Udell) to analyze Ohio 1993 injury data (via OHA hospital discharge data); OHA partial compliance with request led to incomplete report
April 1996	Columbus Dispatch first published articles on trauma system
May 1996	EMS Board approved OTSP(see May 1995) but supported a voluntary system only
Aug 1996	Trauma Committee membership expanded; work groups developed; second article published in Columbus Dispatch
Nov 1996	Trauma Registry rules passed; Representative Schuck expressed interest in trauma legislation
Dec 1996	Trauma Liaison position of ODPS terminated; new position changed to Trauma Liaison / RAP administrative assistant
1997-1999	DEMS eliminated trauma position; Ohio Committee on Trauma (Ohio COT) hired Sally Jo Zuspan as lobbyist
Feb 1997	Columbus Dispatch published large series of articles on trauma systems; American Medical News published article contrasting the efforts of Oregon vs. Ohio in trauma system development
Feb 1997	Representative Schuck pledges to introduce trauma legislation; Rep Schuck

March 1997	meets with several trauma surgeons to start drafting legislation OSTNL, ONA, ENA, AORN develop a joint position paper supporting state trauma legislation
May 1997	Trauma Committee votes to proceed with trauma legislation; EMS Board votes down motion to proceed with trauma legislation
Aug 1997	Governor supports trauma legislation; meets with ODPS, ODH Directors and Rep Schuck
1998	The Central Ohio Trauma System (COTS) was formally established as the first regional trauma consortium
Jan 1998	HB 681 introduced by Rep Schuck
May 1998	HB 681 (Trauma legislation) died in committee.
1999	Ohio Trauma Registry established within ODPS /DEMS (home grown system); scope limited to patients with greater than 48-hour hospital admit
Jan 1999	Letter writing campaign for legislation # of Trauma Centers before legislation: 20 ACS verified trauma centers (at least 11 level I)
July 2000	Amended HB 138 (23 rd General Assembly) signed into law. Beginning November 3, 2002, hospitals cannot represent themselves as trauma centers unless they are verified by the ACS; regional protocols for the triage and initial stabilization / treatment of seriously injured patients must be developed; broadened the membership of the EMS Board with trauma representation; revised Trauma Committee to support the EMS Board in its work; integrity of trauma registry data was increased by adding risk adjustment parameters and confidentiality protections; funding thought trauma / EMS grant program; special studies analysis to provide information for further trauma system development-
Fall 2000	State Trauma Program Manager within ODPS (Mike Glenn) hired
Nov 2000	Re-organization of Trauma Committee; Joe Luria MD- first chair; Trauma Registry Advisory Subcommittee (TRAS) re-organized and placed as subcommittee under Trauma Committee (approval by EMS Board)
2001	Tri-State Trauma Coalition (TSTC) formally established as regional system in southwest region
June 2001	OHA / Ohio Committee on Trauma collaborated to sponsor a day-long seminar on becoming a Level III trauma center
October 2001	Data Program Manager for EMSIRS / Trauma Registry (Tim Erskine) hired
October 2001	EMS Director Module (on-line education) developed
October 2001	AIS 3 day coding class held for trauma registrars across state
Nov 2001	NTHSA re-assessment done for ODPS
Dec 2001	First Ohio Level III trauma center verified by ACS
Nov 2000 – Nov 2002	Ohio Trauma Committee developed recommendations and placed into legislative rules for field triage to trauma centers and trauma registry risk adjustment.
2002-2003	Regional trauma triage approvals
April - Nov, 2002	Workgroup of representatives from ODH, ODPS, Trauma Committee, EMS Board and OHA developed a Final Report on Provisional Trauma Center Designation. Submitted to ODH (Nick Baird) in Nov 2002
April 2002	5 module EMS Medical Director course developed by ACEP available on line
Oct 2002	OHA developed template of model transfer as required ORC
Nov 2002	Passage of SB 124 which incorporating an eighteen month provisional trauma center designation status that allows hospitals to operate as trauma centers while completes the ACS verification process
Nov 2002	HB 138 into effect

July 2003	Seven special studies returned to Trauma Committee with 1-2 page synopsis developed; Grant funding with distribution of funds began
July 2003	Trauma Committee developed State Trauma PI Workgroup to develop system for trauma PI at state level
Sept 2003	State Medical Director with DEMS appointed (JD Polk, DO)
Oct 2003	The EMS Board has approved the proposal to conduct a project collecting trauma data on patients admitted for less than 48 hours; TRAS will be leading this effort in 2004
Nov 2003	7 Commission Reports on EMS and Trauma Topics (7 Special Studies) sent to Governor Taft and the 125 th General Assembly; 1-2 page synopsis / study
March 2004	State PI Indicators (from Trauma Committee PI Workgroup) approved for implementation by Trauma Committee; approved by EMS Board April 2004
July 2004	State Medical Director appointed (Carol Cunningham MD) replacing Dr. Polk
Nov 2004	Ohio's received a federal grant for the CODES (Crash Outcome Data Evaluation System) projects
Nov 2004	Public health council adopted rules require a trauma center to report information to the director of health describing the trauma center's preparedness and capacity to respond to MCI and bioterrorism.
May 2005	Approval by Trauma Committee for regional PI reports to be placed on website
July 2005	Geriatric Workgroup started – chair Howard Werman, MD
Jan 2007	Hiring freeze at state level. Tim Erskine replaced Mike Glenn as ODPS position of Chief, Trauma Systems and Research
2007	Funding of National HRSA Trauma / EMS grants to states eliminated
Sept 2007	Approval of Geriatric Trauma Triage report – Trauma Committee Nov 2007; EMS Board Dec 2007
Oct 2007	2 hour required CE for trauma triage education approved
Nov 2007	Ohio Injury Community Planning Group (now OIPP) under ODH started meeting
March 2008	MTPSE assessment at state level led by OSTNL
Oct 2008	EMS Board accepted recommended changes, to include geriatric trauma triage
Dec 2008	Pre-hospital Geriatric Triage Rules passed and in effect
Jan 2009	Adoption of National EMS Scope of Practice as minimal standards (check on this)
Feb 2009	Subcommittee began meeting to begin development of Trauma System Plan
April 2009	2 hour web-based CE for Trauma Triage Rules available on-line
Sept 2009	4-year grant of \$273,727/year received by the Department of Health's Violence and Injury Prevention Program from the CDC to develop the Ohio Violent Death Reporting System (OH-VDRS). Ohio becomes the 18th state
Dec 2009	Geriatric Task Force Report published, approved by EMS Board
Feb 2010	The following tasks have been assigned by the EMS Board to the Trauma Committee: Work to develop a process for validation of the information in the trauma registry to assure that the data is accurate; make any specific recommendations for change in the handling of data; research the specific opportunities and ways to merge the data in specific registries; and research the staffing of other state's trauma systems.
June 2010	Trauma Visionary Committee started (5 EMS Board, 5 Trauma Committee members)
July 2010	Open forum / comments completed on Ohio Trauma Framework
Oct 2010	Final approval Trauma Framework (i.e. Trauma System Plan) by EMS Board
Feb 2011	NHTSA Technical Team Re-assessment completed
Feb 2011	EMS Board approved grant (priority 2) to fund a state ACS trauma system review (for 2012-13)
March 2011	Initial consideration / work on developing a joint registry (EMS, Trauma, Rehab)

Sept 2011	New titles of Emergency Medical Responder (EMR), EMT, Advanced EMT, and Paramedic will go into effect in Ohio by law.
Nov 2011	3 year required review of trauma triage rules due
Dec 2011	Metrics scorecard approved by Trauma Committee (ie to measure trauma system development)
Jan 2012	EMS Board adopted the Ohio EMS 2015 Strategic Plan, which includes Trauma Framework within content. All committees (with exception of Trauma Committee which is written in ORC) were sunsetted in order for re-organization
Feb 2012	EMS Board voted to realign the RPAB regions to match the current Department of Homeland Security regions
March 2012	New chairs of the 10 trauma workgroups established
July 2012	Grant awarded by state to begin process for ACS Trauma System review

Delaware County Special Needs Program

The program was started in 2004 to identify special needs children in Liberty Township (population of 174,000 individuals; north of Columbus, Ohio) who would benefit from a tailored EMS response when 911 systems were initiated. Initially 24 children were enrolled, but the value of the program was quickly appreciated and by February 2010, it had expanded into a county-wide, secure, web-based registry for all ages of citizens with special needs. Currently, a resident must have one of the following disabilities to participate: 1) lifesaving medications required more than twice a day; 2) sight, hearing, or speech issues; 3) ventilator or oxygen dependent; 4) has mandatory medical equipment in order to sustain life; 5) mental issues; 6) mobility issues; 7) language barrier; or 8) requires a service animal.

A coalition of expert partners from Delaware County was developed to institute this program by using their expertise and creating a unique item where the most vulnerable would be identified and plans could be developed and implemented, if required. Patients and families enroll by visiting a website (<http://www.delcospecialneeds.com>) and sending an email of inquiry. HIPPA form is signed by the family at time of enrollment with the ability of family to update as needed. Capt. Piwtorak received this email and assigns the case to one of nineteen liaisons established between all the Fire and EMS organizations involved in the program. The liaison is responsible for meeting the registrant and ensuring that information to be used by public safety personnel is accurate. Once entered into the registry, special needs patient name and medical information are identified on the computerized emergency dispatch map and linked with the computerized EMS dispatch alerts, as well as the Delaware County Office of Homeland Security and Emergency Management, directed by Brian Galligher. The special needs patient data appears on computer maps that correlate with such things as Red Cross shelters, areas prone to flooding and electrical grid service, to name a few applications. This innovative registry was created using hardware and software already being utilized by the Delaware County EMA.

This information allows all public safety workers, especially EMS personnel, the ability to be educated to the level of need of their specific population requirements. Some agencies have changed their response plans to accommodate the individual's need, while other have changed EMS protocols to adapt to the specific medical requirement that are needed prior to arrival at the hospital. The impact of this innovative and incredible program continues as Capt. Piwtorak recently partnered with Ohio Representative John Peterson and worked to change Ohio SB 129 to include verbiage in which cell phone taxes used by 911 systems could use up to \$25,000 to purchase hardware and software to for communities to develop a similar registry.

This publication is a report by the State Board of Emergency Medical Services prepared by the staff of the Division of Emergency Medical Services, from research and information supplied by a number of organizations contracted with by the Division, and with assistance from members of the state Trauma Committee. This publication contains the recommendations of the State Board of Emergency Medical Services and summaries of the studies and research conducted on behalf of the Board and the Division.

The State Board of Emergency Medical Services authorized the state Trauma Committee and the Division of EMS staff to prepare this report pursuant to the mandate of Am. Sub. H.B. 138 of the 123rd General Assembly.

Executive Summary

The 123rd General Assembly, with the passage of Am. Sub. H. B. 138, tasked the State Board of Emergency Medical Services with producing seven reports on a variety of topics related to EMS and Trauma. The Division of EMS, serving as the administrative arm of the State EMS Board, contracted with seven groups to produce studies and /or research that would assist the EMS Board in responding to this mandate. The scope of the topics that the EMS Board was required to report on is very broad. In many instances the studies and research generated additional questions that need to be addressed. The EMS Board understands that, nationally, there continues to be a lack of quality research data in the published literature, upon which EMS practice can be improved. This situation is slowly improving, but remains a serious obstacle to EMS and Trauma System development. Secondly the EMS Board has discovered that in Ohio there appears to be a general lack of interest or ability on the part of EMS agencies, trauma centers and hospitals, and professional societies of healthcare providers to engage in large scale, meaningful EMS and trauma system research. This is a multifactorial problem, which is beyond the scope of this report to detail. The low level of interest in performing EMS specific research related to the reports required by the General Assembly was a considerable concern and this resulted in an important lack of data upon which to make recommendations.

The EMS Board believes that all seven of these EMS/Trauma system reports would be better served with additional, more focused research and study. Adequate funding for research of this nature and scope is essential. The Board further feels that a comprehensive EMS and Trauma research agenda will be of immense value. A comprehensive research agenda, that supports the national EMS research agenda, will permit appropriate state level facilitation of high quality research that can be used to support and improve EMS system development. It will allow for focusing of Ohio's limited EMS and Trauma research funding on priority research that is scientifically sound and builds upon the current body of knowledge in EMS. It will limit duplication of efforts and smaller scale research that could be more effectively coordinated as part of larger scientific efforts or clinical trials. It will permit Ohio to seek or participate in larger federal EMS and Trauma care grant opportunities, thus further expanding the research skills and experience within EMS in Ohio.

Among the significant findings of these reports, the EMS Board has found that there are ongoing needs in the areas of education, training and equipment for care of specialty populations that include but may not be limited to, pediatric and geriatric patients. Continual adaptation of advancing technology in data collection and reporting should be encouraged and supported. Improved communication between trauma surgeons and county coroners may lead to better utilization of autopsy data. There are ongoing needs for trauma specific continuing education for EMS providers and consideration should be given to expanding the type, nature and availability of that continuing education. Full development of a state wide EMS and Trauma system has been successfully undertaken in a number of states. Evaluation of the effects of these efforts on all participants, from first responders to rehabilitation providers, as well as continual evaluation of Ohio's system development, is crucial.

Authority/Mandate

Am. Sub. H.B. 138 Section 3.

The State Board of Emergency Medical Services, with the advice and assistance of its trauma committee, shall study and evaluate the following matters

- (A) The status and needs of emergency medical services and adult and pediatric trauma care provided between this state and other jurisdictions.
- (B) Methods to improve specialized care provided by emergency medical services organizations to pediatric and geriatric trauma victims.
- (C) The feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study shall include an analysis of the cost of acquiring, maintaining, and using such devices, potential sources of funding, and training required to ensure effective use of the devices.
- (D) Methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner;
- (E) Methods to increase advanced trauma life support, basic trauma life support, and prehospital trauma life support training among appropriate health care providers, particularly in rural areas of the state.
- (F) The roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in this state, and methods to enhance those roles.
- (G) The causes and impact of trauma on minority populations in this state and methods to improve emergency medical services and trauma care for those populations. This study shall be conducted in cooperation with the Commission on Minority Health;

In conducting its studies and developing its findings and recommendations, the Board shall consult the appropriate committees and subcommittees of the Board; regional directors; regional physician advisory boards; organizations that represent physicians, nurses, and hospitals that care for emergency and trauma patients; emergency medical services organizations; appropriate governmental entities; and the Ohio State Coroner's Association, as appropriate.

Not later than three years after the effective date of this act, the Board shall report its findings and recommendations to the Governor, the General Assembly, and other appropriate authorities and organizations.

Introduction

Passage of Am. Sub. H.B. 138 by the 123rd General Assembly required the State Board of Emergency Medical Services to create reports on seven EMS/Trauma topics. Shortly after the appointment of the Trauma Committee in November of 2000, the determination was made that the Division of EMS and the State Board of EMS did not have the internal resources or expertise to conduct the required studies. The Division of EMS and the State Board of EMS agreed that under the direction of the Trauma Committee, individuals and or organizations with the appropriate expertise and resources would be contracted with to conduct the studies in preparation for the Board to submit a report to the Governor and General Assembly in November 2003. Initially the state supported university medical schools and their associated research departments were contacted and asked to submit quotes for performing one or more of the studies required by the legislation. After several months it was apparent that there was not sufficient interest from the medical schools. Only one organization was under contract with ODPS by the fall of 2001 for completion of one study looking at the role of non trauma center hospitals.

The studies required by the legislation were very broad and the amount of funding available to fund all seven studies was viewed to be minimal or inadequate by many of the potential researchers. A decision was made within the Division of EMS to invite a larger pool of organizations and/or individuals to participate by offering a grant for completion of supportive research projects or reports on topics related to the required reports. In most cases, researchers were asked to narrow the focus of their research or report. This was done to ensure that all of the required topics would be addressed and extrapolation of a more narrow report to a larger population or issue would be done when statistically appropriate and relevant. A call for proposals was made in January/February 2002. Proposals were received in March and six grants were awarded for completion of reports on six of the seven required topics, with one report being performed under a contract from the original request for quote process.

Based upon feedback from the organizations interested in assisting the Board complete these reports, reports on topics A and B were combined so that all pediatric issues were in one report, and all adult/geriatric issues were in another. The State Board of Emergency Medical Services, through the Division of EMS, awarded six grants and one contract, totaling \$563,044 to the following organizations to conduct research and/or develop the reports required for the Board.

- **Columbus Children’s Hospital (\$185,371)**
Report A, the status and needs of emergency medical services and pediatric trauma care provided between this state and other jurisdictions and methods to improve specialized care to pediatric trauma victims.

- **Riverside Methodist Hospital, Senior Health Services (\$65,366)**
Report B, the status and needs of emergency medical services and adult trauma care provided between this state and other jurisdictions; and methods to improve care to geriatric trauma victims.
- **St. Vincent Mercy Medical Center (\$61,442)**
Report C, the feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study shall include an analysis of the cost of acquiring, maintaining, and using such devices, potential sources of funding, and training required to ensure effective use of the devices.
- **Central Ohio Trauma System & Ohio State Coroner's Association (\$87,500)**
Report D, methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner.
- **Ohio Chapter, American College of Surgeons & Ohio Society of Trauma Nurse Coordinators (\$49,320)**
Report E, methods to increase advanced trauma life support, basic trauma life support, and prehospital trauma life support training among appropriate health care providers, particularly in rural areas of the state.
- **Hospital Council of Northwest Ohio (\$64,500)**
Report F, the roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in this state, and methods to enhance those roles.
- **Columbus Children's Hospital (\$49,545)**
Report G, the causes and impact of trauma on minority populations in this state and methods to improve emergency medical services and trauma care for those populations. This study shall be conducted in cooperation with the Commission on Minority Health.

Four of the seven organizations completed their projects under budget by a total of \$61,759.02. The total cost of grants and contracts to complete these studies was \$501,284.98. This does not include ODPS, Division of EMS staff time.

Six of the seven organizations completed their work on or before June 30, 2003. The seventh, Ohio Health, Senior Health Services, expects to have data collection completed and a report submitted by December 2003)

Given the very broad scope of these reports required by the legislation, the relatively short time frame for completion and minimal funding, it should be understood that these reports cannot be considered exhaustive, or comprehensive in nature. What is clear from the data in these studies is that additional research and study is required in all seven of these areas. The focus of future studies should be narrowed to address very specific issues, some of which can be extrapolated from data in these reports. A comprehensive and inclusive approach to evaluating and studying the EMS and Trauma system in Ohio is needed. An Ohio EMS and Trauma research agenda, supporting the national research agenda, is needed to ensure that the funding available in Ohio for EMS and Trauma research is utilized with maximum effectiveness to improve clinical care, support educational and injury prevention activities and support the needs for system development.

Recommendations

- A. The status and needs of emergency medical services and pediatric trauma care provided between this state and other jurisdictions and methods to improve specialized care provided by emergency medical services organizations to pediatric trauma victims.**
1. Additional, focused studies on pediatric trauma care needs in our state EMS and Trauma System are needed.
 2. Mutual aid is not a concern; appropriate support between EMS provider agencies exists.
 3. EMS agencies require additional preparation (education, equipment, protocols/procedures) for children with special needs.
 4. The majority of EMS providers need more pediatric education, specifically in assessment, airway management and trauma management.
 5. There is a significant deficit of pediatric education and equipment, efforts to provide additional education and equipment need to be made.
 6. Medical Directors need to be more involved in EMS agencies requests for funding from the EMS/Trauma Grant program.
- B. The status and needs of emergency medical services and adult trauma care provided between this state and other jurisdictions and methods to improve specialized care provided by emergency medical services organizations to geriatric trauma victims.**
1. Additional, focused studies on adult trauma care needs in our state EMS and Trauma System are needed.
 2. Efforts should be made to support geriatric trauma research in areas of prehospital triage parameters and resuscitation.
- C. The feasibility of recording and reporting information to the state trauma registry by means of portable electronic devices, such as electronic notepads. The study shall include an analysis of the cost of acquiring, maintaining, and using such devices, potential sources of funding, and training required to ensure effective use of the devices.**
1. Additional, focused studies on electronic reporting of data to the state EMS and Trauma Registries are needed.
 2. Personal handheld devices, specifically the Palm Pilots tested, proved to be unfeasible for the collection of trauma registry data.
 3. Collection of registry data as directly as possible from the patient and family with concurrent entry into electronic format will have significant benefits both in cost savings and accuracy.
 4. Additional research into the use of wireless technology should be supported.

D. Methods to ensure that autopsies are performed on appropriate trauma victims and autopsy data are reported to the state trauma registry in a timely manner.

1. Additional, focused studies on the role of the county Coroner and data from autopsy reports to the state EMS and Trauma registries are needed.
2. The greatest barriers to performing autopsies on trauma victims are cost, family opposition, and lack of county coroner office staff.
3. Consensus needs to be developed between Ohio coroners and trauma medical directors on mechanism(s) of injury that require an autopsy.
4. Trauma medical directors do utilize the results of autopsies on trauma victims. Mechanisms to ensure that this data is accessible need to be in place.
5. No mandate to perform autopsies on trauma victims should be made without also providing for adequate financial and human resources for the county coroners, medical examiners or agencies/organizations performing the autopsies.
6. A single form (i.e. the death certificate) should be used statewide to report all required information as opposed to the creation of a special form just for injury reporting.
7. Autopsy reports should utilize a standardized format.
8. Efforts to promote complete documentation on the death certificate should be made.
9. The death certificate should include a field(s) to record the E codes (External Cause of Injury Code).
10. Resources need to be provided to county coroners to enable them to complete reports with tools that are designed to disseminate the information in an efficient and complete manner.

E. Methods to increase advanced trauma life support, basic trauma life support, and prehospital trauma life support training among appropriate health care providers, particularly in rural areas of the state.

1. Additional, focused studies on trauma education in Ohio are needed.
2. Exploring new options in education using existing technologies could improve accessibility and variety of courses, as well as resolve location issues.
3. On-line training, interactive educational software, and long distance education are options that should be evaluated for enhancement in learning opportunities.
4. Expanding trauma education programs beyond the basic level would be helpful in expanding continuing education options.

5. Statewide guidelines or standards for trauma education could also help identify the amount of trauma education needed.
6. Better communication about existing courses is needed to partially address issues with accessing courses.
7. Further study in the cost of education and investigating options for funding of trauma education is needed.

F. The roles hospitals that are not trauma centers play in the state trauma system and regional trauma systems in this state, and methods to enhance those roles.

1. Additional, focused studies on roles that all health care facilities play in the state EMS and Trauma System is needed.
2. The majority of hospitals, both trauma centers and non trauma centers, reported that they saw positive impacts, or reported no negative impacts, as a result of trauma system implementation. This should be monitored as the system matures.
3. Given that House Bill 138 has only been in operation since November of 2002, it was not possible to collect statistical data from the hospitals to determine what effects the trauma system changes have had on the non-trauma hospitals. A full year of data will be required to conduct the post-test and compare with the pre-test data collected during this project. Thus, a post-test should be conducted with Ohio hospitals in 2004 or 2005 to allow for at least a year's worth of experiences under the new trauma system guidelines. These data should be compared to the data collected through this project to determine the actual effect of House Bill 138 on the non-trauma centers.
4. For additional insight into the effects of House Bill 138, the State Trauma Committee believes the collection of objective data versus perception data would be more meaningful toward trauma system development.

G. The causes and impact of trauma on minority populations in this state and methods to improve emergency medical services and trauma care for those populations. This study shall be conducted in cooperation with the Commission on Minority Health.

1. Additional, focused studies on the impact of trauma on minority and specialty populations in Ohio are needed.
2. Information regarding race and ethnicity should be collected in such a manner as to be consistent and comparable between data sets such as the U.S. Census, the Ohio Bureau of Vital Statistics Death Certificate, the Ohio Trauma Registry and the EMS Incident Reporting System.
3. There are significant injury patterns, and causes specific to children in

minority populations. Additional research and increased efforts in injury prevention programming are needed.

4. Access to EMS by minority populations does not appear to be a problem, however additional research of this may be needed to assure that minority populations have ready access EMS in all areas of Ohio.

Trauma Committee Review of the Studies and Research

Trauma Committee Review of Special Study for Report A: “Identification of Issues Related to the Care and Management of Pediatric Trauma Patients Located Along the Border of Ohio”

General Description/Stated Goals:

This study focuses on the identification of issues related to the care and management of pediatric trauma patients located within 20 miles of the Ohio-West Virginia border within HSA regions 5 & 6. EMS Medical Directors, air medical physicians, EMS coordinators, and EMS providers were surveyed with regard to mutual aid concerns, transport of pediatric patients across state borders, availability of pediatric education and equipment, as well as availability of pediatric resources such as pediatric policies, protocols, and medications. Pediatric run reports from the study area were also reviewed.

Key findings:

1. Thirty two percent of EMS providers had taken a pediatric specific training course.
2. Only twelve and one half percent of agencies have all of the state recommended BLS equipment.
3. Eleven percent of the agencies surveyed are missing appropriate pediatric sized bag-valve-masks.
4. Seventy five percent of ALS units have transport monitors and even less had pediatric electrodes and defibrillator capability.
5. Fifty three percent of EMS agencies had pediatric length/weight dose charts and only seventy-six percent had resuscitation drugs and IV fluids.
6. Forty one percent of EMS coordinators indicated the need for pediatric specific equipment.
7. Ninety six percent of EMS coordinators indicated the need for more pediatric training but find cost and travel prohibitive.

8. Ninety two percent of EMS coordinators would be interested in applying for grant funding to obtain pediatric equipment and training.
9. Eighty percent of the EMS coordinators did not have protocols for children with special needs.
10. The average transport time to the closest hospital was 25.4 minutes, however run report review identified average accumulated time for a pediatric transport was 58.7 minutes.
11. All of the physician responders identified pediatric education as critical. Money and distance were listed as barriers.
12. EMS medical directors responded that they wanted assistance with review of pediatric run reports and were unaware of pediatric resources currently available to their agencies.
13. Based on run report review, the use of mutual aid does not appear to be an issue for the study region.
14. In general, there were limited issues regarding the interstate transport of pediatric trauma patients. Ranked by frequency, EMS providers listed (1) no issues, (2) longer transport times, (3) concerns over medical/legal issues, (4) service area left uncovered, (5) discrepancies in standards of care between states, and (6) discrepancies in the qualifications of the responders between states.

Strengths:

1. There is an adequate literature review to ground the study.
2. The investigators contacted a large group of rural providers. They received very good response rates for the air medical directors, EMS medical directors and EMS coordinators. The EMS providers responded to a mailed survey at a rate to be expected using this method.
3. The study resulted in the clear identification of needs for the EMS system in southeast Ohio:
 - a. EMS training in pediatrics that is locally provided and inexpensive.
 - b. Pediatric equipment by the majority of BLS and ALS units.
 - c. Training and protocol development for children with special healthcare needs.
4. Usable data was obtained using a methodology that is easily replicable.

Weaknesses:

1. Readers must be careful not to generalize the study results to other border areas of Ohio.
2. The authors state that there are no published studies regarding transport of patients across state lines or on mutual aid agreements. They do comment that some of the transport times seem excessive. Benchmark data or guidelines should be provided for comparison to justify such observations.
3. There is no information indicating the EMS agencies surveyed have attempted to obtain funding for equipment or training from available grant programs.
4. The bar graphs used to illustrate the data in Section 8 are confusing. The authors should either re-design the graphs or provide directions as to how to read the graph.

Comment:

This is a nicely designed and reported study regarding the adequacy of resources to respond to pediatric emergencies along the southeast Ohio border. The authors identify several major areas of concern related to training, equipment, protocol development and case review. The study should be replicated in other regions to gain a more complete picture of pediatric trauma care within Ohio. At a minimum, the authors indicate a need to facilitate resources for this area of the state. In a big picture sense, this report indicates a strong need for data driven trauma program improvement throughout the state.

Trauma Committee Review of Special Study for Report B: “Stand Up For Senior Independence Research-Preliminary Data”

General Description/Stated Goals:

This purpose of this study is to evaluate a program for decreasing falls in individuals over the age of sixty years. Study subjects are approached for enrollment if they experienced two falls in their home during a 30 day period. Local EMS providers, independent living housing workers, and health care providers identify potential study participants. Once enrolled, subjects are screened for risk factors linked with frailty and falling. Specific interventions were provided as necessary. The primary outcome was the number of falls post-intervention.

Key findings:

1. Issues related to the home environment, dementia, and nutrition were identified in study subjects.
2. Sixty-five percent of the patients enrolled experienced no falls 3 months after their intervention.

Strengths:

1. Reducing falls in older adults is a good goal.

Weaknesses:

1. Special Study # 3 is supposed to address the status and needs of emergency medical services and adult trauma care between this state and other jurisdictions, and methods to improve care to geriatric trauma victims. The study does not address this topic.

2. There is no needs assessment data to support the research.
3. There is a low enrollment rate for study subjects (40%).
4. There is a high drop-out rate for study subjects (30%).
5. There is no control group. How do the authors know that other forces did not account for the results they measured?
6. There is no consideration for other factors that may result in falls. This would include medications, neuromuscular dysfunction, vision impairment, mental retardation, etc.
7. There is conflicting data in the study. The authors state that “100% of the research subjects decreased their number of falls post intervention.” In one of the tables, however, 11% of the research subjects experienced three falls three months post-intervention.

***Trauma Committee Review of Special Study for Report C:
“Ohio Department of Public Safety HB 138 Special Project #6 Final Report”***

General Description/Stated Goals:

The purpose of this project was to study the feasibility of recording and reporting information to the Ohio Trauma Registry with portable electronic devices. The authors installed and tested a single software application and began testing it in January 2003. This report summarizes their experience.

Key findings:

Numerous problems were encountered. Most of the difficulties were related to the limited data capacity of the device tested. After four months, the authors concluded that portable handheld devices were not appropriate for this purpose and that laptops afforded the best approach for collecting data in a cost efficient and accurate manner. Implementation and testing of a wireless laptop computer system for recording trauma registry information is ongoing.

Strengths:

1. There is an adequate literature review to support the study.
2. The study identifies important limitations to the product and software studied.

Weaknesses:

1. This study does not meaningfully address the intent of the trauma legislation:
 - a. There was no listing/review of what products were available from alternative vendors.

- b. The authors tested only one system prior to abandoning hand held technology. There is no mention of why this was done.
2. The conclusions are limited by the technology and software used. There should have been some consideration for other handheld systems.
3. The study did not address potential sources of funding or training requirements for such a system.
4. The financial report on page 9 is unclear. How do the bold-faced values on the first line (untitled) related to the “Total” line?
5. On page 15, a reference to “typographical errors” is made. The reviewers believe the authors are referring to transcription errors. Typographical errors can be made whether writing down the information or entering it into an electronic database.

Comment on Study Recommendations:

The authors state that additional research into the use of wireless laptop computers should be supported. The information in the report does not support the notion that handheld technology should be abandoned for the purpose of reporting to the Ohio Trauma Registry. The State Trauma Committee believes that research into the use of all wireless technology, including handheld units, should be supported.

***Trauma Committee Review of Special Study for Report D:
“The Nature of Injury Related Autopsies in Ohio”***

General Description/Stated Goals:

The objectives of this study include:

1. Determine which injury types are appropriate for autopsy:
 - a. Determine rate of autopsy for these injury types.
 - b. Determine barriers to autopsy performance for these injury types.
2. To identify which stakeholders utilize autopsy data and for what purpose.
3. To survey the state county coroners, medical examiner, and a sampling of trauma medical directors for suggestions on how data might be submitted to the Ohio Trauma Registry.

These objectives were addressed through a review of death certificates from 1996-2001 and surveys sent to all Ohio coroners/medical examiner, coroners from neighboring states, and Ohio medical directors.

Key findings:

1. Sixty percent of unintentional injury deaths have an autopsy.
2. Sixty percent of intentional self-injury deaths have an autopsy.
3. Ninety-eight percent of homicides have an autopsy.
4. Ohio coroners indicated that among patients deemed appropriate for autopsy, only two percent did not receive an autopsy because of a barrier:
 - a. Barriers included cost, family opposition, and personnel.
5. Ohio and non-Ohio coroners consider trauma medical directors and EMS professionals infrequent users of autopsy data.
6. Trauma medical directors consider themselves and EMS professionals frequent users of autopsy data.
7. Trauma medical directors believed an autopsy after a motor vehicle crash was substantially more important when compared to Ohio coroners.
8. Much of the injury data included in the death certificate is missing (e.g. 59% of ICD9-10 data).
9. Over the five year study period, 2,936 injury deaths were not reviewed by a coroner, according to Ohio Vital Statistics. The consensus of the Ohio State Coroner's Association is that coroners are currently not being notified in these cases.
10. Ohio coroners expressed non-support for the creation of a new form and process to report autopsy injury data to the Ohio Trauma Registry.
11. Forty percent of coroners usually or always prepare their reports on manual typewriters.
12. While the majority of Ohio coroners are not in favor of a standardized reporting format, the non-Ohio coroners and Ohio trauma medical directors find this a reasonable request.

Strengths/Comment:

This is an extremely well done study that sends a simple message. There is a communication gap between coroners and trauma medical directors regarding the collection of autopsy data and how it is/should be utilized. Trauma medical directors want more autopsy information. Ohio coroners believe the information will serve no purpose and tax an already overburdened system. The solution is for the trauma care providers and coroners to outline a specific plan for the use of autopsy data. This would include when an autopsy is performed, what data is necessary to obtain and report, and how the data will be used to improve trauma care in the state. There should be a performance improvement process to insure appropriate deaths are being reported to the coroners and that appropriate information from autopsies is being reported. Another necessary step is to provide adequate funding and resources for obtaining autopsy information. Electronic reporting of autopsy information should be explored.

Weaknesses:

1. There is no data that indicates how Ohio compares to other states with regard to autopsy reporting.
2. The study indicates that there is a place on the death certificate to indicate if a case was reviewed by a coroner. This is incorrect. The death certificate has a place to indicate if the case was reported to the coroner.

Trauma Committee Review of Special Study for Report E: “HB 138 Special Projects #7: Evaluating Trauma Education”

General Description/Stated Goals:

The objectives of this study included:

1. Identify which trauma education courses are currently offered throughout Ohio.
2. To ascertain the number and size of the different trauma education courses offered in Ohio.
3. To determine what courses are most utilized by trauma care professionals.
4. To evaluate the barriers to offering trauma educational courses.

Surveys regarding accessibility, availability, barriers, and perceptions of trauma education in Ohio were developed and distributed to EMS providers, nurses, and physicians who care for trauma patients. Information regarding course offerings and other types of trauma education were collected from training centers and course coordinators. Perceptions regarding barriers to attending trauma education courses were also solicited at a state stakeholders meeting (EMS Board/Trauma Committee retreat). The data were categorized by population density, regions, and other factors.

Key findings:

1. Seventy eight percent of surveyed EMS providers indicated attendance of least one trauma course. BTLIS was the most common course (73%)
2. Sixty three percent of EMS providers indicated certification in at least one trauma course.
3. Forty two percent of EMS providers believe they are receiving the necessary education to provide quality trauma care.
4. Lack of financial support, frequency of courses, and having to take courses while off –duty were the most common barriers to trauma education (Urban EMS providers were more likely to attend a trauma course during normal working hours).

5. Sixty-seven percent of surveyed nurses indicated attendance of at least one trauma course. Sixty percent hold a course certification. The most common course attended was TNCC followed by BTLS.
6. Nurses cite time off work, lack of financial support as the major barriers to attending trauma courses.
7. Seventy-five percent of physicians indicated completion of a trauma course. ATLS was the most common course attended. Time off work and frequency of courses were cited as the major barriers.
8. Perceptions regarding course availability did not seem to differ with regard to population density.

Strengths:

1. This was a large and difficult undertaking. The surveys addressed the objectives.
2. The literature review demonstrates that trauma education results in improved knowledge and skill level. There is also literature available which supports the need for continuing trauma education. A 1990 study showed that BTLS skills deteriorate after approximately 18 months of initial training. (Prehospital and Disaster Medicine 5:137-144.)
3. There was an excellent distribution of EMS responses with regard to geography.
4. The recommendations could serve as a basis for more objective studies related to trauma education.

Weaknesses:

1. The results may be biased due to the low return rate (10%-25%) of surveys from EMS providers, nurses and physicians.
2. The survey format was necessary given the nature of the study. The value of this report is the issues it identifies. These issues will require more objective study (which the authors clearly point out). It must still be stated that the document is mostly comprised of perceptual data. Therefore the recommendations for increasing access to education are not evidence based.
3. There were no questions related to whether EMS agencies took advantage of existing programs for funding trauma education (i.e. the EMS Grants Program).
4. The document states that the ACSCOT developed the BTLS course. BTLS was developed by an independent group of EMS physicians under the guidance of John Campbell, MD.
5. The tables should have been better labeled.

***Trauma Committee Review of Special Study for Report F:
“The Roles of Hospitals That Are Not Trauma Centers In The State Of Ohio’s
Trauma System”***

General Description/Stated Goals:

The goals of this project included:

1. Profiling existing Ohio non-trauma center resources in terms of emergency care, laboratory, blood bank, in-patient care, diagnostic capabilities, surgical intensive care, and rehabilitation.
2. Profiling existing geographical relationships between non-trauma centers and trauma centers.
3. Measuring the impact of state trauma triage protocols on non-trauma hospitals.
4. Determining the level of collaboration between current non-trauma hospitals and trauma center hospitals on issues regarding patient care and follow-up.

To accomplish these goals, statistical information from hospitals was collected. Fact sheets identifying the number of trauma centers, projected number of trauma centers, number of staffed beds, number of ED injury visits, number of OR cases, and number of trauma center transfers within individual regions and throughout the state were developed. Additionally, subjective observations regarding the effect of the trauma legislation were compiled.

Key findings:

1. Ninety-six percent of all hospitals consider themselves to be very or somewhat familiar with Ohio’s trauma system.
2. Ninety percent of all hospitals thought trauma related communications were timely, useful, and understandable.
3. Over two-thirds of the respondents said they need more information about the trauma system. At least forty percent of all hospitals wanted more information about trauma performance improvement, peer review, and hospital trauma protocols.
4. Forty-three percent of hospitals had problems implementing required trauma system elements.
5. Twelve percent of hospitals believe trauma system implementation had a negative effect on their community.
6. Non-trauma centers were more likely to report a negative impact of the trauma legislation when compared to trauma centers.

Strengths:

1. The response rate to the survey was excellent (100%).

2. The regional and state data sheets provide good baseline data with regard to number of trauma centers as well as emergency department, ICU, acute care and pediatric beds, and emergency department visits for injuries.
3. The authors correctly identify that performing the study 6 months after trauma system implementation is too short of a time span.
4. The report identifies areas for state educational initiatives regarding the state trauma system.
5. It may be useful to compare the perceptions identified in the study to more objective measures of the effect of the trauma legislation.

Weaknesses:

1. The study title misrepresents the content. There is no discussion of the “role” of acute care hospitals in the trauma system.
2. Most of the report contains opinions which are not supported by fact. For instance, opinions regarding the effect of the trauma legislation on quality of trauma care were presented without any supporting data for these opinions. This is true for both the positive and negative effects stated in the study.
3. The study included only hospitals. EMS organizations, public officials, and local citizens could have provided helpful perceptions regarding the role of the non-trauma hospital.
4. Data for number of operative cases, and number of acute care hospital patients transferred to a trauma center are not trauma specific.
5. The study would have better served trauma system development if it had asked the hospitals what indicators should be measured to evaluate the trauma system so that baseline data could be collected.
6. The authors recommend the study be repeated one year after trauma system implementation. The effects of the trauma system would be better measured by waiting at least two years after implementation.

Comment on Study Recommendations:

The authors recommend one-on-one interviews with a random selection of non-trauma hospital CEO's and Emergency Supervisors to further gauge the effect of the trauma legislation. The State Trauma Committee believes the collection of objective data would be more meaningful toward trauma system development.

Trauma Committee Review of Special Study for Report G: “The Impact of Trauma on Minority Children”

General Description/Stated Goals:

The objectives of this study included:

1. Identify causes and outcomes of injuries among Ohio’s pediatric minority populations.
2. Identify rate of injury with regard to cause and outcome by location for each minority group.
3. Compare the rates of missing data across minority groups and location.
4. Compare the rates of patients discharged to rehabilitation facilities with an Injury Severity Score of > 16 across minority groups.
5. Compare the time from 911 call logged to arrival in the emergency department across minority groups. The times for Caucasian patients were used to determine if there were differences across racial groups.

These objectives were met by reviewing the records of children listed in the trauma registries of the regional pediatric trauma centers in Ohio. Patients were included in the final study group if they were less than 16 years of age, transported directly from the scene, and admitted to the hospital for the treatment of an injury (or died in the emergency department). Data from the US Census (2000) and Ohio Vital Statistics were also used in this evaluation.

Key findings:

1. Year 2000 census data indicates that minorities accounted for sixteen percent of Ohioans less than 16 years of age. (African Americans-12.3%, Native Americans-0.1%, Asians, 0.3%, Hispanic-1.1%, and Other-2.2%)
2. There were 1900 injury deaths in children from 1996-2001. Twenty-seven percent were of them were among minority children.
3. Of the 6084 direct from the scene admissions to regional pediatric trauma centers from 1998-2001, thirty-four percent (2060) were among minorities. African Americans accounted for twenty-eight percent of the total admissions.
4. African Americans have the highest rate of death and injury per 100,000 children. The relative risk of African Americans to injury death and trauma admissions is two to three times as great as the Caucasian population. Hispanics are at equal risk when compared to whites. Native Americans are at a little less risk and Asians are at substantially less risk when compared to Caucasians.

5. Hospital length of stay for minorities was the same as for Caucasians.
6. Risk of injury admission relative to the white population was led by burns (6.6 times as likely as Caucasians), followed by pedestrian injuries, gunshot wounds, assaults, drowning, and crush injuries.
7. The pattern of suicide injuries suggests prevention interventions should begin around age 10.
8. There was no relationship between distance to an EMS agency and the proportion of minorities within a given census block. In urban areas most residents are within three miles of an EMS agency regardless of minority status.

Strengths/Comment:

1. The study should provide valuable information for directing targeted injury prevention initiatives across the state.
2. The study maximized the use of data available in Ohio. There was good explanation of the data including strengths and limitations.
3. The study presents a clear data-based observation of how injuries among minority children compare to those in the Caucasian population.

Weaknesses:

1. While not practical, the study would have potentially been strengthened if all injured children would have been included. (That is, not only admissions directly from the scene to a trauma center.) The result is an underreporting of minority groups who may live in more rural areas of the state.
2. The study report could be strengthened by a literature review of how injury rates and deaths have historically compared between different races/ethnicities.
3. The authors should have included recommendations for addressing the differences observed.

Organizations

The following agencies and organizations were invited to review a preliminary copy of the studies and research conducted for this report and to provide feedback and comments to the Division of EMS for inclusion in the final publication of this report. Seven of these organizations requested copies of one or more of the research studies, however, none provided feedback or comments for inclusion in the final publication of this report.

Alliance of Ohio Trauma Registrars
Association of Ohio Children's Hospitals*
Association of Ohio Health Commissioners
Governors Council on People with Disabilities
Health Forum of Ohio*
Northern Ohio Firefighters
Ohio Ambulance and Medical Transportation Association
Ohio Association of Critical Care Transport
Ohio Association of Emergency Medical Services
Ohio Association of Professional Firefighters
Ohio Chapter of the American Academy of Pediatrics

Injury is the leading cause of death and disability for Ohioans ages 1 through 34 and the 6th leading cause of death for all age groups.

More than 5,000 Ohioans are killed each year from injury-related causes.

Motor vehicles and firearms are the leading causes of injury death overall.

EXECUTIVE SUMMARY

The Ohio Commission on the Prevention of Injury

Ohio's 123rd General Assembly passed House Bill 138 authorizing a statewide trauma system in November 2000. Section Five of this comprehensive legislation required the Ohio Department of Health to form a commission on the prevention of injury, with particular emphasis on the pediatric and geriatric populations in Ohio. The result of the commission's work is this comprehensive report examining the current status of injuries in Ohio with recommendations for future action. The report includes information on unintentional injuries, such as motor vehicle traffic crashes, falls, and drowning, and intentional injuries, including suicide, homicide and family violence. It is intended to guide subsequent statewide activities, including adoption of a state strategic plan for injury prevention, to make Ohio a safer and healthier place to live, work and play.

The Injury Problem

The consequences of injury can be far-reaching and severe. Injuries are the leading cause of death and disability for Ohioans ages 1 through 34 and the sixth leading cause of death for all age groups. More than 5,000 Ohioans are killed each year from injury-related causes. Motor vehicles and firearms are the two leading causes of injury death overall. Of the millions of Ohioans who survive injuries, many suffer long-term consequences such as permanent disability, time lost from work and family, costly medical expenses and pain and suffering. Injury leads to huge societal costs as well, amounting to billions of dollars annually in health care expenses, lost productivity, rehabilitation and criminal justice system expenses among others. The good news is that injuries largely follow predictable patterns and are therefore, preventable.

Common Themes

The consensus-based process used to develop this report led to the identification of the following overarching themes. These themes provide the foundation for core recommendations in this report. Risk factors and prevention strategies for unintentional and intentional injuries often differ, however there are factors common to both. Further examination of these common factors or intersection points will facilitate consolidating prevention efforts, and potentially reducing program-related costs. Decision makers and advocates addressing both should decide where consolidation efforts make sense.

- **Injuries are costly. Injury prevention saves lives and money.**
Injuries are associated with long-term disability, requiring in-depth and long-term health care services, reducing the participating workforce and consuming already scarce public resources. Investment in prevention programs prevents the much higher costs of dealing with injury consequences.
- **Improved injury surveillance efforts and program evaluation are needed.**
Monitoring changes in injury frequency and patterns is necessary for planning and evaluation. Deaths caused by injuries are captured statewide, however, deaths only represent the tip of the iceberg of the injury problem. Injury data in Ohio are incomplete and inadequate for nearly all injury categories.
- **Improved statewide coordination of programs is needed.**
Many statewide and local prevention efforts are underway, each targeting the injury problem from a unique perspective. Improved statewide coordination of injury prevention efforts would benefit all involved.
- **Injuries disproportionately affect those living in poverty, and the young and the old.**
Special programs targeted at these populations are important.
- **Alcohol use is an important risk factor for injury.**
Alcohol and other drug abuse is a far more complicated issue than can be addressed comprehensively in this report. There is a clear association between alcohol use and increased risk for injury.
- **Legislation can be an effective strategy for preventing injuries.**
Where appropriate, state and local legislation and policies that lead to the prevention of injuries should be enacted or strengthened, and their effects should be evaluated.

Conclusions

This report serves as a starting point. The most challenging work lies ahead in addressing the recommendations resulting from the commission's work. A coordinated statewide effort is needed to more effectively target limited resources and share information among those working to prevent injuries in Ohio. The identification of high-risk groups for injury prevention efforts is critical because resources are scarce. Improved statewide data are clearly needed to identify patterns of injury and associated risk factors. Injury prevention efforts are cost-effective and can save state dollars in health care expenses, worker compensation claims, law enforcement and criminal justice-related costs, rehabilitation expenses and lost productivity.

Common Themes and Core Recommendations to Prevent Injury in Ohio

Theme: *Injuries are costly. Injury prevention saves lives and money.*

A. Seek creative and collaborative solutions to funding.

1. Enhance communication and collaboration among key stakeholders.
2. Encourage insurance companies, employers and others to cover injury prevention programs and services to reduce health-care costs.

B. Provide state funding that adequately addresses injury - a leading cause of morbidity and mortality in Ohio.

Theme: *Improved injury surveillance efforts and program evaluation are needed.*

C. Improve injury surveillance efforts.

1. Develop and maintain injury data infrastructures as discussed below. Collect cost and payer information when possible to allow cost/benefit analyses of injury prevention interventions.
2. Form an ongoing, interagency workgroup to review and make recommendations regarding data needs and opportunities. The workgroup should consider coordination, linking and quality improvement of data-collection efforts. It should include representatives familiar with the relevant databases. This group should explore:
 - Funding opportunities to support data linkage.
 - Mechanisms to improve quality and access to data.
3. Continue to provide support for the:
 - Development and maintenance of the Ohio Emergency Medical Services Incident Reporting System (EMSIRS) and the Ohio Trauma Registry through the Ohio Department of Public Safety.
 - Implementation of the Ohio Youth Risk Behavior Survey (YRBS) and the Ohio Behavioral Risk Factor Surveillance Survey (BRFSS).
 - Collection of licensed child care center serious injury data through the Ohio Department of Job and Family Services.

4. Support new uses of injury data through:
 - The development of a Crash Outcomes Data Evaluation System (CODES) in Ohio. CODES links traffic crash reports, Emergency Medical Services Incident Reporting System (EMSIRS) data and hospital discharge data. Funding is available from the National Highway Traffic Safety Administration.
 - Ohio's participation in the Centers for Disease Control and Prevention's (CDC's) National Violent Death Reporting System (NVDRS).
 - External cause of injury coding (e-coding) of and increased access to the full set of Ohio hospital discharge data.
5. Create a permanent and stable funding mechanism for the development of:
 - A statewide emergency department surveillance system that uses the CDC's *Data Elements for Emergency Department Systems*. (www.cdc.gov/ncipc/pub-res/deedspage.htm)
 - A statewide coroners' database.
 - A statewide school injury surveillance system.
 - An occupational injury surveillance system based on the U.S. Bureau of Labor Statistics injury data collection system.
 - A statewide toxic exposure data collection system.
 - Incentives (e.g., related grant funding, etc.) to improve records completion for all statewide injury databases.

D. Promote the use of injury prevention guidelines and evaluation measures that are based upon current evidence-based research and literature.

As part of the statewide coalition (described below), create a committee with responsibility for ongoing review of the effectiveness of prevention programs.

Common Themes and Core Recommendations to Prevent Injury in Ohio

Theme: Improved statewide coordination of programs is needed.

E. Coordinate the development of leadership and infrastructure to identify, promote and respond to injury prevention needs at the state and local level.

1. Implement recommendations from the State and Territorial Injury Prevention Directors' Association's (STIPDA) report, *An Assessment of the Ohio Injury Program, March 19-22, 2001*.
2. Strengthen the structure and funding of the Ohio Department of Health's Injury Prevention Section to provide technical assistance, training and coordination of activities, and support to state and local injury prevention efforts.
3. Create a statewide, interdisciplinary injury prevention coalition and provide a permanent funding mechanism to hire a full-time coordinator.

F. Coordinate EMS, trauma care and public health agencies with other injury prevention programs at the national, state and local levels to increase collaboration.

1. Increase interagency collaboration and coordination between state agencies and organizations concerned with the prevention of injury, in particular the Ohio departments of Health and Public Safety, including the EMS Board and Trauma Committee, the Bureau of Workers' Compensation, Ohio departments of Education, Mental Health, Aging, Transportation, Natural Resources and other relevant agencies.

G. Promote the use of coordinated, community prevention programs - that are multifaceted, evidence-based, and use effective evaluation by public health agencies, trauma centers, emergency medical services and other programs.

1. As part of the statewide coalition, create a committee with responsibility for injury prevention education.

2. Increase awareness, through statewide public education programs, that injury is a preventable public health problem and promote strategies for prevention through collaborative community programs.
 - Create an injury prevention Web site, listserve and toll-free referral number.
 - Promote materials to health care, government, and other groups working with at-risk populations.
3. Provide relevant training on injury surveillance and prevention strategies for professionals including: policy makers, law enforcement, nurses, physicians, EMS, teachers, child care professionals, extended care facility and senior care workers, employers, public health professionals and others.
4. Incorporate age-appropriate education on injury prevention, life skills, conflict resolution, parenting skills, bullying and other related issues into school curricula. Provide and promote standardized training materials for classroom use by teachers and other school professionals.

Theme: Injuries disproportionately affect those living in poverty, and the young and the old.

H. Promote injury prevention programs that focus on populations most at risk based on injury surveillance. Children and older adults living in poverty should be high priority.

Theme: Alcohol use is an important risk factor for injury.

- I. Fund and support initiatives that address prevention of alcohol and other drug-related injuries. These initiatives should include education, legislation, coalition building, and screening and intervention by health care professionals.

Common Themes and Core Recommendations to Prevent Injury in Ohio

Theme: Legislation can be an effective strategy for preventing injuries.

J. Enact or strengthen state and local legislation and policies which lead to the prevention of injuries.

1. The statewide coalition should monitor and advocate for policies and legislation which enhance the safety of Ohioans.
2. Provide information and resources to relevant agencies to support injury prevention legislation.
3. Enact legislation and policy to prevent injuries. Refer to pages 31-32 for specific policy and legislative recommendations.

OTHER ACKNOWLEDGMENTS

Special thanks go to the following individuals for their work in supporting the commission:

Virginia Haller, MD, Ohio Department of Health, for her devoted support of and invaluable insights into the commission's work and report preparation.

Pamela Leimbach, administrative assistant, Ohio Department of Health, Bureau for Children with Medical Handicaps for her administrative support in scheduling and coordinating meetings, and in recording, preparing and distributing commission meeting minutes in an always reliable and timely manner.

Mike Glenn, RN, State Trauma Coordinator, Ohio Department of Public Safety for his support throughout the process.

Christy Beeghly, MPH, Center for Injury Research and Policy, Columbus Children's Hospital, for her knowledge and input regarding injury prevention and her outstanding contributions to the preparation of the commission's report.

We would like to acknowledge the following organizations for their contributions:

The Ohio State Medical Association for providing refreshments and excellent accommodations for the Commission's meetings.

The National SAFE KIDS Coalition, the USDA Natural Resources Conservation Service and the AAA Foundation for Traffic Safety for permission to use their photographs throughout the report chapters.

Printing of this report was made possible through the support of the Ohio Department of Health, with partial support from the Ohio Department of Public Safety.

This report is dedicated to the memory of Rich Van Horn, Ohio Department of Natural Resources.

Message from the Commission Chair

November, 2003

Dear Colleagues,

Injury is the great modern plague, and Ohio's challenge is clear. We must apply to injury the same public health approaches that have been successful in combating many other diseases and public health problems. Prevention of injury is within our grasp.

The magnitude of the injury problem in Ohio is staggering. Injury claims the lives of more than 5,000 Ohioans each year and is the leading cause of death and disability among Ohio citizens from age one through 34 years. The costs and long-term consequences of injury on the healthcare system, the workplace, and among survivors and their families are enormous. By any measure, injury is the most significant public health problem facing our state's population.

The Ohio Commission on the Prevention of Injury, whose creation was authorized by House Bill 138 in the year 2000, brought together experts in multiple disciplines from across the state. This report is the product of two years of work by commission members. It is a consensus document that incorporates the best information available on existing and potential injury prevention programs in Ohio. Though there are many existing activities to prevent injuries in our state, there are also critical gaps in our efforts to address the problem. There is a lack of injury surveillance systems that would provide the information needed to focus our limited resources more effectively. Ongoing prevention efforts too often lack coordination among state and local agencies and groups in the private sector. Indeed, many other states lead Ohio in efforts to prevent injury among their citizens. While acknowledging the successes of ongoing programs, this report makes recommendations for improvement of existing programs and implementation of new injury prevention efforts.

I wish to thank the members of the commission for their hard work and dedication. I am impressed by the collective knowledge, commitment and compassion that this group has demonstrated during the development of this report. I wish to thank Director Nick Baird, MD and Dr. Virginia Haller and other members of the Ohio Department of Health for their support of the Commission's work. I also wish to recognize and thank the representatives of other Ohio governmental agencies, the state legislature, and other professional and advocacy groups from around the state for their invaluable contributions to the commission's report. Special thanks goes to Ms. Pamela Leimbach for her administrative assistance, and to Ms. Christy Beeghly for her outstanding contributions to the final report.

It is my hope, and that of the entire commission, that this report will serve as a guide for new statewide efforts to combat the leading public health problem of injury. This report provides a blueprint for a state strategic plan for the prevention of injury. Through increased collaboration of state government, professional and advocacy organizations, and the private sector, and with increased commitment of resources that are commensurate with the magnitude of this public health problem, the high financial costs of injury will be reduced, and Ohioans will enjoy safer and healthier lives.

Gary A. Smith, MD, DrPH

The Ohio Commission on the Prevention of Injury

The Commission's Work

Ohio's 123rd General Assembly passed House Bill 138, authorizing a statewide trauma system in November 2000. Section Five of this legislation required the Ohio Department of Health to form a multi-disciplinary commission on the prevention of injury, with particular emphasis on the pediatric and geriatric populations in Ohio (*Appendix D contains the full text of Section Five of H.B. 138*).

In October 2001, commission members from across the state first gathered to discuss the current status of injuries and prevention efforts in Ohio. They developed a strategy and over the next two years, regularly convened to produce a consensus-based report.

Committees were formed to examine existing injury policies, programs and data sources, and document needs. Commission members identified chapter topics, drafted and carefully reviewed chapters, and achieved consensus in issuing recommendations. Common themes and needs emerged after assessing individual injury areas. The process resulted in core recommendations for improving injury prevention efforts in Ohio. The result of the commission's work is this comprehensive report examining the current status of injuries in Ohio with recommendations for future action. Reports for individual injury areas (e.g. fire/burn, motor vehicle-related injury, etc.) are available electronically at www.state.oh.us/odps/division/ems/ems_local/trauma/trauma_commissions.htm

Goals

The long-term goal of the Ohio Commission on the Prevention of Injury is to reduce injury and injury-related death to Ohioans. Implementation of the commission's report recommendations will facilitate achievement of this goal.

The commission largely used Healthy People 2010 (HP 2010) as a guideline for setting goals for Ohio. HP 2010 is a statement of national health objectives designed to identify the most significant preventable threats to health and to establish national goals to reduce these threats. The objectives are built on scientific knowledge and are designed to measure progress over time. Thirty-nine HP 2010 objectives relate to unintentional and intentional injury. HP 2010 objectives related to injury are defined throughout this report for most of the injury topics and, where available, Ohio injury rates are compared to those of the country as a whole. Additional information about HP 2010 and the methods used to set national goals can be found at www.healthypeople.gov/default.htm.

INJURY IN OHIO

Defining the Problem

Injury can be defined as physical damage caused by a transfer of energy to tissues of the body. This energy can come in various forms, kinetic/mechanical, thermal, chemical or electric. Injury also can be caused by a lack of needed elements such as heat or oxygen. Injury can result from unintentional (accidental) or intentional acts.

Injuries are largely classified by the:

- Events and activities that preceded them (e.g. motor vehicle-related, occupational-related).
- Outcome or result of the transfer of energy (e.g. traumatic brain injury, burns).
- Intention of the acts causing the injury (e.g. abuse, suicide, homicide).

This report will group injuries into these categories to organize a discussion of the topics. Overlap among these categories exist, for example, motor-vehicle crashes can cause traumatic brain injuries and burns can be used as a form of abuse. The report's chapters reflect this overlap as appropriate.

Throughout this report, "unintentional injuries" will be used to describe those injuries resulting from accidents. The word "accident" suggests something unpredictable, random and therefore not preventable. Most injuries are predictable and preventable. Using the word "accident" hides this fact.

Given the perspective that injuries are predictable and preventable, action can be taken to intervene. Epidemiologic studies and surveillance systems provide information to identify how, when and where injuries typically occur. We can identify who may be at the highest risk for injuries. We can also target interventions to prevent specific types of injuries.

Individual Injury Area Reports

The common themes and core recommendations found in this report are based on the findings of individual injury area reports (e.g. fire/burn, motor vehicle-related injury, etc.) that are available electronically at: www.state.oh.us/odps/division/ems/ems_local/trauma/trauma_commissions.htm

CDC State of Ohio Injury Profile

The Centers for Disease Control and Prevention has created injury profiles for each state to document the injury problem and compare states against a national profile. Ohio's profile can be found at: www.cdc.gov/ncipc/StateProfiles/sip_oh.pdf

Overall Goals

Reduce injury deaths of all causes and intents.

Goal	37.0 deaths per 100,000 (better than the best state)
OH 1998	43.7
US 1998	54.4

Data Source: NCHS Vital Statistics System for numbers of deaths. Bureau of Census for population estimates.

Reduce deaths caused by unintentional injuries.

HP 2010 Goal	17.5 deaths per 100,000
OH 1998	29.5
US 1998	35.0

Data source: National Vital Statistics System (NVSS), CDC, NCHS.

Reduce deaths caused by violence.

Goal	10.0 deaths per 100,000 (better than the best state)
OH 1988	13.8
US 1998	18.0

Data Source: NCHS Vital Statistics System for numbers of deaths. Bureau of Census for population estimates.

Reduce hospital emergency department visits caused by injuries.

HP 2010 Goal	126 hospital emergency department visits per 1,000.
OH	Identify baseline
US 1997	131

Data source: National Hospital Ambulatory Medical Care Survey (NHAMCS), CDC, NCHS.

Increase the number of states and the District of Columbia with statewide emergency department surveillance systems that collect data on external causes of injury.

HP 2010	All states and the District of Columbia.
OH	No system in place
US 1998	12 States

Data source: External Cause of Injury Survey, American Public Health Association (APHA).

Increase the number of states and the District of Columbia that collect data on external causes of injury through hospital discharge data systems.

HP 2010	All states and the District of Columbia.
OH	System exists but data is not easily accessed
US 1998	23 States

Data source: External Cause of Injury Survey, American Public Health Association (APHA).

DATA

Injury is one of the great modern plagues. When ranked among other public health problems, injury is arguably the leading threat to the health and well being of the general population in the United States. In 2000, intentional and unintentional injuries caused more than 148,000 deaths, 1.4 million hospitalizations and 29.5 million emergency department (ED) visits in the United States.

Injury is the leading cause of death and disability for Ohioans ages 1 to 34 and the sixth leading cause of death for all age groups. Thousands of Ohioans are killed each year from injury-related causes. More than 5,100 Ohioans died from injuries in 2000. Motor vehicle traffic, firearms, poisoning, falls, suffocation, fire/burn and drowning are the leading causes of injury death per 100,000 Ohioans (*Figure 1*). During 1999-2000, Ohio's injury death rate was 45.8 deaths per 100,000, which was less than the national rate of 54.0 but still higher than the HP 2010 target of 37.0 deaths per 100,000.

Injury death rates have remained relatively constant in the United States during the 20th century. In contrast, disease rates have declined (*Figure 2*). By 1980, death rates from tuberculosis and gastrointestinal disorders had declined by 99 percent compared to the turn of the century. Death rates from influenza and pneumonia declined by 85 percent. The decreased rates were a result of a focused energy and application of scientific principles to disease control. Infectious disease rates have decreased due to a better understanding of disease etiology, improved treatment and sanitary conditions, and targeted prevention

Figure 1.

Leading Causes of Injury Death per 100,000 Ohioans, 1999-2000

efforts. In contrast to disease, during this century, injury death rates have declined by only 30 percent. Injury is at present responsible for three times as many deaths as are influenza and pneumonia.

Unintentional causes lead to the greatest proportion of injuries and injury-related death. During one year in Ohio, unintentional injury fatalities exceed that of 12 jet crashes, each causing 260 casualties. Imagine one large jet crash every month in Ohio. This is the equivalent in fatalities to those that resulted from the 2001 terrorist attack on the World Trade Center. For the entire United States, annual injury fatalities equal more than 360 jumbo jet crashes with no survivors. That is nearly one jet crash **each day**. Such catastrophic events would merit immediate public action and attention. However, because injury deaths occur in isolation or in small clusters, they often go unnoticed except by those directly affected by the loss.

During one year in Ohio, the number of deaths caused by unintentional injuries exceeds that of one large jet crash per month, each causing 260 casualties.

Figure 2.

Death Rates from Injuries and Other Causes, United States, 1910 - 2000

* Ischemic Heart Disease

Many perceive these deaths to be accidents, unforeseen tragedies happening by chance. They are not.

The leading causes of unintentional injury death in Ohio are motor vehicle traffic, falls, poisonings, suffocations, fire/burns and drowning. Motor vehicle traffic accounted for 40 percent of unintentional injury deaths in 1999-2000.

When measured in Years of Potential Life Lost (YPLL), injuries account for almost one-third of all premature death (YPLL before age 65) in

the United States. They account for more YPLL than heart disease, cancer and stroke combined, which are the next leading causes of YPLL in the United States. Injury accounts for so many YPLL because it is the leading cause of death from ages 1 - 34 years.

In Ohio during 1999-2000, injuries accounted for the most YPLL before age 65 (*Figure 3*) and unintentional injuries alone accounted for the second most YPLL, after cancer (malignant neoplasms).

Figure 3.

Figure 4.

Source: National Center for Health Statistics (1999)

Although fatalities are the most severe and final consequence of injuries, they represent only the tip of the iceberg when examining the burden of injury. The injury pyramid (*Figure 4*) depicts that for each injury death in the United States, there are approximately 18 hospitalizations and 233 emergency department visits. At this time, we do not have corresponding Ohio data for non-fatal injuries, however, estimates can be made based on the injury pyramid. Given that approximately 5,000 Ohioans die from injuries each year, the Ohio injury pyramid is presented below (*Figure 5*).

Of the millions of Ohioans who survive injuries, many suffer long-term consequences such as permanent disability, time lost from work and family, costly medical expenses and pain and suffering.

During 2000 in the United States, unintentional falls were the leading cause of non-fatal injury for all ages, followed by unintentional struck by/against and unintentional motor vehicle occupant as the second and third causes, respectively (*Figure 6*). Corresponding Ohio-specific data is not available for non-fatal injuries.

Figure 5.

Figure 6.

**Leading Causes of Non-fatal Injury in the U.S.
per 1,000, 2000**

INTENTIONAL Vs. UNINTENTIONAL

This report discusses injuries resulting from both intentional and unintentional acts. There are clearly fundamental differences in the underlying causes of intentional and unintentional injuries. Efforts to prevent intentional injuries often involve more complex issues including mental health, family and group dynamics.

Approximately two-thirds of injuries are unintentional and one-third are intentional (*Figure 7*). During 1999–2000 in Ohio, the violence-related injury death rate was 13.8 per 100,000 compared to the U.S. rate of 16.9 per 100,000. These figures include suicides, homicides and legal intervention. Homicide alone was within the top eight leading causes of death in Ohio during 1999–2000 for all age groups from 1 to 44 years. The violence-related injury death rate in Ohio varies by age group and race (*Figure 8*). Black individuals in age groups from 15 to 39 years suffer the highest intentional injury death rates.

Figure 7.

Ohio and U.S. Injury Death Rates, 1998

Nationally, nonfatal violence-related injury rates increase up to age 24 and then decrease with age. During 2000, injury rates ranged from 217.5 per 100,000 ages 0-4, to a high of 1,828.6 per 100,000 ages 20-24, to a low of 50.3 per 100,000 ages 85 and older. The leading cause of violence-related nonfatal injury for all age groups is struck by/against assault followed by self-harm poisoning, however, the leading causes vary considerably among age groups.

Although there are fundamental differences in addressing intentional and unintentional injuries, factors common to both exist. Examining these common factors or intersection points will facilitate consolidating prevention efforts, and possibly reducing program-related costs. It is critical that planners and decision makers from concern with either type of intent sit at the table and decide where consolidation makes sense. Specific examples of such approaches are outlined in the intentional injury chapters that can be found online at www.state.oh.us/odps/division/ems/ems_local/trauma/trauma_commissions.htm.

Figure 8.

Ohio Intentional Injury Death Rates per 100,000 by Age & Race, 1996-1998

COSTS & CONSEQUENCES

The greatest cost of injury is measured in human suffering and loss. At the same time, the financial repercussions are staggering. In the United States, more than \$224 billion is spent annually on medical care, rehabilitation and lost income and productivity resulting from injury. The federal government pays about \$12.6 billion each year in injury-related medical costs and about \$18.4 billion in death and disability benefits. Insurance companies and other private sources pay approximately \$161 billion (*CDC Injury Fact Book 2001-2002*). Injury-related deaths and disabilities have a profound negative effect on the productivity of the U.S. workforce.

The total monetary cost of fatal injury incidences in Ohio from 1993 to 1997 for persons aged 24 years and younger was more than \$1 billion (*Table 1*). This total includes medical, legal, administrative costs and estimated lifetime productivity loss. Motor vehicle-related deaths account for 53 percent and firearm-related deaths account for 28 percent of the costs.

In State fiscal year (SFY) 2002, Ohio Medicaid provided health care services associated with an *inpatient diagnosis* of trauma for 11,616 people. Ohio Medicaid spent more than \$201 million in state and federal funds in SFY 2002 for services directly related to their trauma. This figure

understates total trauma spending because it does *not* include prescription drug or skilled nursing facility costs for services related to their trauma, and it does not include anyone with an outpatient diagnosis of trauma.

A recent assessment of injury-related Ohio Medicaid spending over a four-year period reveals the following. In SFY 1999, 9,096 Ohio Medicaid consumers used health care services due to a trauma incident occurring during SFY 1999. These consumers spent approximately \$235 million in total health care expenditures during the first year after the injury. One-third, or at least \$78 million, of these health care expenditures was directly related to the injury. Over the four-year period following the trauma incident, Ohio Medicaid spent \$566 million in total health care expenditures for this group, of which \$92.8 million was directly tied to the trauma.

Those connected with the victim also experience the consequences of the injury. A non-injured spouse may need to provide full-time care to a disabled spouse, resulting in loss of work productivity and possibly lost income for two individuals. Children are profoundly affected when parents are injured and can no longer care for them. These significant costs are more difficult to calculate.

Table 1.

Ohio Fatal Injury Incidences, Estimated Costs for Ages 0-24, 1993-97				
Cause of Death (All Intents)	Total Monetary Cost of Injuries	Total Years Potential Life Lost	Mean Annual Frequencies	Average Rate/100,000
MV Traffic	\$545,152,173.00	27,948	456.6	11.6
Firearm	\$298,899,271.00	16,753	279.6	7.1
Fire/Burn	\$48,015,535.00	3,599	51.8	1.3
Drowning/Submersion	\$47,796,514.00	3,219	48.8	1.2
Suffocation	\$47,382,041.00	3,223	48.6	1.2
Poisoning	\$20,877,871.00	1,152	19.4	0.5
Falls	\$11,856,837.00	732	11.6	0.3
Other Transport	\$10,343,542.00	596	9.8	0.3
Non MV Pedestrian	\$9,218,230.00	593	9.2	0.2
Cut/Pierce	\$5,139,705.00	287	4.8	0.1
Machinery	\$4,409,630.00	257	4.2	0.1
Struck by/Against	\$3,451,992.00	243	3.6	0.1
Non MV Pedal Cyclist	\$1,207,458.00	77	1.2	0
Natural/Environmental	\$818,553.00	50	0.8	0
Total	\$1,054,569,352.00	58,729	1042.8	26.6

RISK FACTORS

Factors that place a certain group of individuals at a higher risk for injury must be identified to effectively target prevention efforts. Risk factors vary according to the type of injury, however, there are some risk factors that are common to nearly every injury category.

LOW INCOME

Poverty is a risk factor for injury. Children from low income families are twice as likely to die in a motor vehicle crash, four times more likely to drown and five times more likely to die in a fire (*NSKC, Children at Risk Fact Sheet. Washington, DC, 2003*).

Approximately one out of 10 Ohioans were defined as having poverty status in 1999. Fourteen percent of children younger than 18 years and 8 percent of elders older than 64 years were living in poverty.

For these individuals, housing may be substandard and more hazardous. They may be living in neighborhoods with busy streets and without safe recreation spaces for children. In addition, increased exposure to physical hazards and lack of access to health care are contributing factors affecting the occurrence and severity of injury. Individuals living in poverty may not have access to prevention education or the resources to obtain safety devices such as child safety seats, bicycle helmets and smoke alarms. Other factors related to low income that may increase one's risk for injury include single-parent households, lack of education and young maternal age.

Violence and poverty have been positively correlated. Stress and frustration may lead to a higher likelihood of abuse and participation in violence-related activities.

Children from low-income families are twice as likely to die in a motor vehicle crash, four times more likely to drown and five times more likely to die in a fire.

Photo courtesy of the National SAFE KIDS Campaign

AGE

As recognized by the legislators who drafted House Bill 138, age is a significant factor affecting the occurrence and severity of injury. Children and older adults are disproportionately affected by injuries. As a result, the commission was given a specific mandate to emphasize the injury prevention needs of these groups. Where relevant, the authors of the report's chapters have brought attention to these issues.

Young Ohioans

Children are not small adults. They are developmentally, anatomically and physiologically different than adults. These differences place them at greater risk for injury and affect the severity of the injury. In addition, the developmental and cognitive abilities of children play a significant role in their vulnerability to injury. Appendix A contains tables listing some of the physical differences and describing the injury risks to children by age group.

Injuries take a significant toll on the young. Former Surgeon General C. Everett Koop said on the subject of childhood injury, "If some infectious disease came along that affected one out of every four children in the United States, there would be a huge public outcry and we would be told to spare no expense to find the cure – and to be quick about it."

- During the preschool, elementary and middle school years, injury accounts for approximately as many deaths as all other causes combined.
- Every day in the United States, more than 28,000 youth ages 19 years and younger are injured seriously enough to require medical treatment in an emergency department, totaling more than 10 million annually.
- Each year in the United States, more than 17,000 youth ages 19 years and younger will die as a result of injury (22.5 per 100,000). More than 630 will die in Ohio (20.0 per 100,000).
- Injuries have been the leading cause of death in children for nearly 40 years.
- One in four children will suffer an injury during the next year that will require medical attention.
- It is estimated that as many as 90 percent of unintentional injuries can be prevented.

Regardless of how the injury problem is measured, injury rises to the top of the list of public health threats to children.

**"If some infectious disease came along that affected one out of every four children in the United States, there would be a huge public outcry and we would be told to spare no expense to find the cure – and to be quick about it."
Former Surgeon General
C. Everett Koop**

Infants and Young Children

During the first year of life, risk of death due to injury is very high. In absolute numbers, more children die due to injury during this year than during any single one-year period during the preschool and early school years.

During 1999-2000 in Ohio, the unintentional injury death rate for infants younger than 1 year of age was 33 per 100,000. This is the highest age-specific unintentional injury death rate until age 17. The leading causes of unintentional injury death for infants are suffocation, fire/burn, motor vehicle traffic and drowning. Suffocation accounted for 72 percent of the deaths in 1999-2000.

For young children aged 1 to 4 years, fire/burn, motor vehicle traffic crashes and drowning accounted for 72 percent of unintentional injury deaths in Ohio during 1999-2000. Homicide was the second leading cause of death for this age group.

Children

For children aged 5 to 14 years, motor vehicle crashes, drowning and fire/burns accounted for more than 72 percent of the unintentional injury deaths in Ohio during 1999-2000. For children ages 5 to 9 years, homicide was the fourth-leading cause of death. For children ages 10 to 14 years, suicide was the third-leading cause and homicide was the fifth-leading cause of death. Firearms are the cause of death in nearly half of the homicides for ages 5-14.

For children ages 1 to 14, the leading cause of non-fatal intentional injury is struck by/against assault, followed by sexual assault.

Teens and Young Adults

During the teenage and young adult developmental period, risk-taking behavior, use of alcohol/other drugs and peer pressure contribute to a high risk for unintentional and intentional injury.

During 1999-2000 in Ohio, unintentional injuries, suicides and homicides were the three leading causes of death, respectively for youth ages 15 to 19. Firearms were the cause of death in 67 percent of homicides and 46 percent of suicides. Suffocation was the cause of death in 40 percent of suicides in this age group.

The Ohio Youth Risk Behavior Survey (YRBS) is a biennial survey conducted among 2,000 randomly sampled Ohio high school students to assess health-related risk factors. Summary findings related to unintentional and intentional injury from the 1999 YRBS are described below.

From 1993 to 1999, fewer teens reported carrying a weapon such as a gun, knife or club both on and off school property. Fewer students were involved in physical fights. Although Ohio's teenagers are less violent than in past years, there is still room for improvement. Fourteen percent of female students have been forced to have sexual intercourse when they did not want to. One out of 10 students were hit, slapped or physically hurt by their boyfriend or girlfriend in the last 12 months. Eight percent of Ohio high school students actually attempted suicide in 1999.

More Ohio teens are buckling up. Sixteen percent of teens reported that they never or rarely wore a seatbelt when riding in a car in 1999, a 33 percent decrease over the 24 percent in 1997 but still too high. Very few teens are wearing a helmet while riding a bicycle (92 percent rarely or never wear one). Helmet use while riding a motorcycle is more frequent, with 39 percent rarely or never wearing a helmet. Unfortunately, there has been a 41 percent increase in the percentage of teens who drive a vehicle after drinking alcohol (12 percent in 1993 to 17 percent in 1999). Trend data from 1993 through 1999 indicate a steady increase in males, females, white and African-American students driving a car or other vehicle after drinking alcohol.

Nationwide, unintentional struck by/against was the leading causes of non-fatal injury followed by motor vehicle traffic as the second-leading cause for ages 15-19.

Older Ohioans

At the other end of the age continuum, elders have an elevated risk for injury (*Figures 9 & 10*). As with children, anatomical, physiological and cognitive changes help to explain the heightened risk. Sight, balance and coordination may wane which may lead to a fall. Elders may be socially isolated and dependent leading to a higher risk for abuse or suicide. Reaction times may increase leading to risk for motor vehicle crashes. Poor sight or decreased mental capacity may lead to unintentional medication overdoses or poisonings. In addition, physical changes may lead to greater severity of injuries and less resiliency. Appendix A contains tables listing some of the physical and cognitive changes that cause greater injury risk for elders.

Ohio's population 60 years and older comprises more than 15 percent of the state's total and the percentage who are 85 years and older is rising steadily. If ignored, the injury problem to elders will grow as more Ohioans age into the risk category.

In Ohio during 1999-2000, motor vehicle traffic was the leading cause of unintentional injury death, followed by falls and suffocation for ages 65 to 74. For those over the age of 75 years, falls account for the most unintentional injury deaths, followed by motor vehicle traffic and suffocation. Nationwide, unintentional falls are the leading cause of nonfatal injuries in this age group also.

Figure 9.

Figure 10.

GENDER

At most ages and for most causes of injury, males are at higher risk than females. Males are at higher risk than females for motor vehicle crashes, falls, drowning, homicide and suicide completion.

Although in general males are at an increased risk for injury, females are at an increased risk for specific injuries. These include hip fractures from fall-related injuries, intimate partner violence and sexual assault. Females are at much higher risk for fatal and nonfatal injury from intimate partner violence. In a national survey, one out of four women reported being raped or physically assaulted by an intimate partner at some time in their lives; only 8 percent of men reported such as experience. Women are more likely to attempt suicide than men.

Photo courtesy of the National SAFE KIDS Campaign

RACE AND ETHNICITY

Racial disparities in injury rates have been noted. African Americans have the highest overall injury rate of nearly all other racial and ethnic groups. However, many of these differences disappear when socioeconomic status is controlled. Racial disparities appear to relate more to living in impoverished neighborhoods as discussed above, than with race or ethnicity.

African Americans in Ohio are disproportionately more likely to be living in poverty, and thus are at an increased risk for injury. More than 25 percent of African Americans in Ohio are living in poverty, compared to 8 percent of whites.

For Ohio African Americans aged 15-24 and 25-34 years, homicide exceeded unintentional injuries as the leading cause of death in 1999-2000. Homicide was the fourth- and fifth- leading cause of death respectively, for whites in these age groups.

GEOGRAPHY

Individuals living in rural areas are at greater risk from unintentional injury-related death than those living in urban areas. Rural areas are less likely to have organized systems of trauma care, resulting in prolonged response and transport times. Nearly one-fourth of Ohio's population lives in rural areas as defined by the U.S. Census Bureau.

In contrast, living in an inner city places one at greater risk for nonfatal injuries than those living in rural and suburban areas. Proximity to quality medical care may affect injury survival rates in urban areas.

<http://photogallery.nrcs.usda.gov>*

COMMON THEMES

The consensus-based process used by the commission members to develop this report led to the identification of common, overarching themes. These themes provided the foundation for core recommendations in this report. A brief discussion of the manner in which these recurring themes affect injury will be discussed.

THE COST BENEFIT OF PREVENTION

Injuries are extremely costly to individuals and society. The good news is that prevention efforts confer benefits outweighing the costs.

If bicycle helmets, working smoke alarms and child vehicle restraints were considered as important for health as immunizations and other preventive medications (e.g. blood pressure medication), millions of dollars would be saved. A paradigm shift is indicated that views safety interventions as a part of routine health and wellness – a “vaccine” against injury. Those entities benefiting from the prevention of injuries include insurance companies, health care facilities, employers and government.

Following are a few examples of the cost benefit of preventing injuries:

- For every dollar spent on a bicycle helmet, \$30 is saved in direct medical care costs and other costs to society.
- For every dollar spent on a child safety seats, \$32 is saved in direct medical costs and other costs to society.
- For every dollar spent on a smoke alarm, \$69 can be saved in fire-related costs.
- For every dollar spent on poison control centers, \$7 is saved in medical costs.

If bicycle helmets, working smoke alarms and child vehicle restraints were considered as important for health as immunizations and other preventive medications (e.g. blood pressure medication), millions of dollars would be saved.

THE NEED FOR IMPROVED INJURY SURVEILLANCE

Strategies to prevent and reduce injury take a population-based approach similar to other public health strategies to prevent and control disease. Comprehensive, population-level injury data, which is lacking in Ohio, is important for a number of reasons. Decision makers and program administrators use injury data to assess needs and identify funding priorities. Program planners and coordinators use data for quality improvement and program evaluation. Health care institutions use data for quality improvement purposes. Data linkages provide a view of the entire spectrum of injury from risk factors to costs, outcomes and long-term impact on society.

The lack of statewide injury surveillance impedes our ability to adequately describe the injury problem in Ohio. Several injury databases recommended by the Centers for Disease Control and Prevention and the State and Territorial Injury Prevention Directors Association are either in their infancy stages of development, being contemplated or have not been explored in Ohio. Existing Ohio injury databases include death records, EMS incident reporting, a statewide trauma registry, child abuse/neglect reports, adult protective services, traffic crash reports, crime statistics, fire incident reporting, occupational-related injuries, child fatality review, hospital discharge and farm-related injuries. A table further describing the data available from each of these sources, restrictions to access the data and the years for which data are available, can be found in the Appendix.

Most of these databases exist in isolation at this time. They are housed and controlled by separate agencies and are not linked to other sources of data. Analysis and reporting of the data occurs often within this context and

Photo courtesy of the National SAFE KIDS Campaign

without a broader perspective of the data's use to other groups. These databases will be most useful if continuing discussions guide analysis of the data. A workgroup should be formed including representatives familiar with those databases. This group can identify opportunities for linkage and sharing of data as well as broader reporting and uses of the data

to improve administrative decision-making abilities. They can also make recommendations for the development of new surveillance systems.

A statewide injury surveillance system that tracks all injuries is a most pressing need. This system should include injuries treated at urgent care centers, emergency

departments and hospitals, and it should have the capability to link injury records from events preceding the injury to long-term outcomes. Injury data from schools, child care centers and long-term care facilities are useful sources that should be considered.

Ohio will have the opportunity to focus injury prevention activities on the needs of high risk populations in this state as data collection grows and data analysis matures. This is preferred to implementing programs based on the assumption that the Ohio population mirrors that of the nation.

A statewide injury surveillance system that tracks all injuries is a most pressing need. This system should include injuries treated at urgent care centers, emergency departments and hospitals, and it should have the capability to link injury records from events preceding the injury to long-term outcomes.

THE NEED FOR INCREASED STATEWIDE COORDINATION OF EFFORTS

Many statewide and local prevention efforts are underway, each targeting the injury problem from a unique perspective. Participation on the commission provided members with the opportunity to view injuries from a broader perspective than that of their parent organizations. For example, those regularly addressing intentional injuries to children learned about the problem of injuries occurring in the workplace. Those focusing on pediatric injury prevention had the opportunity to learn how elders are disproportionately affected by injury as well. Members learned about new resources and sources of data available to them. Due to the important knowledge and resources shared by commission members, it is apparent that improved statewide coordination of injury prevention efforts would benefit all involved.

Interagency collaboration and coordination between state agencies and organizations concerned with the prevention of injury should be enhanced. Key organizations include the Ohio departments of Health and Public Safety, including the EMS Board and Trauma Committee, the Bureau of Workers' Compensation, Ohio departments of Education, Mental Health, Aging, Job and Family Services, Transportation, and Natural Resources. In addition, representatives from other stakeholder organizations should be invited to collaborate at the state level. These groups include the Ohio Hospital Association, the Ohio Children's Hospital Association, elder advocacy groups, Commission on Minority Health, Ohio PTA Association, Ohio Public Health Association, Association of Ohio Health Commissioners, MADD, regional trauma groups, law enforcement organizations, etc.

State-level infrastructure and leadership requires continuing support to increase coordination of efforts. This support will enable the provision of technical assistance, training, and coordination to state and local injury prevention efforts.

One strategy to increase coordination involves the creation of a statewide, interdisciplinary injury prevention coalition. The coalition would increase sharing of resources and data, and eliminate duplication of efforts. Funding for a full-time coordinator should be provided. Key responsibilities of this position should include the following:

- Facilitate the translation of report recommendations into action.
- Seek ways to improve communication, such as through the creation of a state injury prevention Web site, listserve and newsletter.
- Reduce duplication of prevention efforts, such as through the creation of a single point of contact toll-free referral number.
- Improve access to injury data.
- Seek additional funding for statewide coalition efforts.
- Improve the dissemination of well-evaluated and evidence-based prevention strategies.
- Facilitate the coordination of new committees/work groups developed as a result of the report recommendations.
- Serve as a state-level advocate for injury prevention, particularly focusing on the needs of the young and the old, the impoverished and other high-risk groups.
- Cultivate and coordinate expertise in various risk areas, such as through the development of a speaker's bureau and media contact list.

THE ROLE OF ALCOHOL

Alcohol is a risk or contributing factor in almost every category of injury, both intentional and unintentional. One of the most dramatic examples is the effect that alcohol has had on motor vehicle crashes. In 2002, alcohol was a factor in 40 percent of the motor vehicle injury-related deaths in Ohio. Alcohol use has also been linked to a substantial number of the injuries and deaths resulting from falls, fires and drownings. It also contributes to the incidence of physical fighting, homicide, suicide, family violence and sexual assault. Alcohol has been found to play a role in more than half of homicides and sexual assaults, more than half of burns, almost half of hypothermia and frost bite cases, and 40 percent of falls.

There are multiple ways in which alcohol and other drug use increases the risk for injury.

Intoxication:

- Decreases the level of alertness.
- Impairs motor function, diminishing coordination and balance, and increasing reaction time.
- Impairs judgment and results in poor decision making.
- Diminishes perception and cognitive abilities.
- Increases risk taking behavior and feelings of invulnerability (especially among adolescents and young adults).
- Reduces inhibitions and intensifies feelings of anger and depression.
- Is associated with increased violent behavior.

Additionally, chronic use may render a person more medically fragile, resulting in more severe injuries and less resiliency.

Although alcohol and other drug treatment approaches are somewhat beyond the scope of this report, the commission advocates for continued support of successful initiatives that address prevention of alcohol and other drug-related injuries. For example, programs that limit youth access to alcohol, provide treatment for those who abuse alcohol and other drugs, counsel high-risk groups about the role of alcohol in injury and enforce relevant laws are likely to have a measurable effect on injury rates.

PREVENTION CONCEPTS & STRATEGIES

A science of injury prevention has emerged through the work of pioneers, such as William Haddon and Susan Baker, who have shown that injuries, like diseases, have predictable epidemiologic patterns and are largely preventable. Injury research and prevention efforts have gained the attention of the U.S. Congress, especially following the publication of *Injury in America: A Continuing Public Health Problem* by the National Research Council and the Institute of Medicine in 1985. In June 1992, a National Center for Injury Prevention was created at the Centers for Disease Control and Prevention (CDC) in Atlanta.

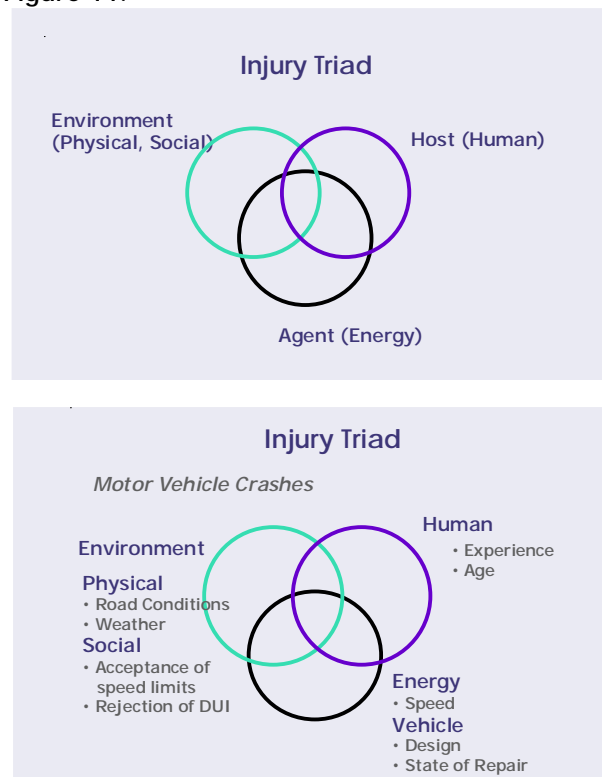

The Injury Triad

Contributing factors to injury are generally divided into three groups: host, environment (often subdivided into sociocultural and physical) and agent factors, frequently called the epidemiologic triad. The agent in the case of injury is the energy that is transferred or the cause of energy (e.g. fire/heat, car, gunshot, fall). The injury triad (Figure 11) presents examples of these factors for the case of motor vehicle crashes. Using prevention strategies that attack the injury triad from all directions will have the greatest likelihood of success. Therefore, a combination of strategies that address all of the factors, including host, environment and agent factors, should be used. Strategies should be prioritized based on the availability of resources and the highest probability of success.

The Injury Can be Prevented without Preventing the Event

A key concept in injury-prevention science is preventing the injury without preventing the event. For example, a child can be in a car crash but be protected by a properly fitting restraint system. The amount of energy transferred to the body does not exceed tissue tolerances and no injury occurs. However, given a similar crash where a child is improperly secured and is ejected from the vehicle, a serious injury is almost certain to occur due to the large amount of energy transfer. Injury-causing agents will be difficult to eliminate but we can modify many host and environment factors to mitigate energy transfer and reduce the risk of serious injury.

Figure 11.

Use Passive Strategies When Possible

The epidemiologic triad (host, agent, environment factors) has been used to understand medical illnesses for more than a century. Regarding medical illnesses, we know that vaccines (passive strategy) are more effective public health tools than attempting to change behavior in high-risk groups (active strategy). This concept can also be applied to the science of injury control. When educational or other active strategies are used, they should be coupled with passive strategies when possible. These strategies do not require action by an individual for protection to occur. Using playground injuries as an example, an individual does not need to know that the playground equipment was designed to prevent entrapment. Passive protective strategies are very much like vaccines. The protection is automatically present, and the protective strategy will go into action when needed. "Technological vaccines" such as energy-absorbing playground surfacing, stationary activity centers (as opposed to wheeled baby walkers), flame-retardant sleepwear, roll-over protective structures on tractors, child-resistant medication packaging and

the motor vehicle airbag have been successfully employed to prevent a variety of types of injury. In addition, other passive strategies such as sidewalks, window guards and pool fences are used to separate individuals from potential hazards.

Unitary Rubberized Playground Surfacing: A "technological vaccine" against playground injuries.

parents that they should use child restraints is simply not enough.

Enactment and enforcement of laws and policies also are recommended strategies for preventing injuries. For example, employers can develop workplace policies that protect employees from harm. State government can enact legislation requiring the use of bicycle helmets.

Supervision Alone Fails to Prevent Injury

Injury prevention theory dictates that strategies requiring frequent action or vigilance on the part of an individual are least likely to succeed. Adult supervision is the most common active strategy recommended to prevent injury to children. Although supervision is clearly desirable, when used alone it frequently fails to prevent injury. Many consumer product-related injuries to children occur with an adult immediately present at the moment of injury. Because injuries take only a moment to occur, and characteristically occur unexpectedly, and because even the best parent in the world cannot watch their child 100 percent of the time, supervision alone cannot be relied on to effectively prevent injury.

As discussed above in regard to the epidemiologic triad, multifaceted prevention programs that combine strategies are most likely to be effective. For example, a successful program to increase booster seat use among young children could involve the following strategies.

- Spreading awareness of the importance of booster seat use through a public awareness campaign in partnership with local media.
- Offering booster seat educational courses to parents of young children.
- Providing booster seat distribution programs in low-income, high-risk communities.
- Enacting legislation requiring children to be restrained in an appropriate restraint until the adult seat belt fits them properly.
- Working with law enforcement to raise awareness of new laws and available resources.
- Designing motor vehicles with built-in child restraint systems.

Effective Active Strategies

There are, however, injury-prevention strategies that inevitably rely on behavior change. Engineers can design a better bicycle helmet, but it will prevent head injury only if it is used consistently and properly. Therefore, active strategies need to be developed and evaluated to determine the most effective methods for changing behavior and therefore, reducing the risk of injury. We know from health education and behavior theories and the experiences of other public health issues that knowledge alone does not change behavior. Most people know that cigarette smoking is hazardous to one's health. This fact does not prevent millions of people from using tobacco products daily. Educational strategies must reduce real and perceived barriers to positive behavior change. In the case of child restraints, barriers to use may be inability to read installation instructions or not being able to afford the restraint. Although an important first step, informing

Injury Prevention Occurs in the Community

Unlike some diseases that can be effectively prevented without leaving the clinician's office, injury cannot be effectively fought without attacking it where it occurs in the community. Instead of providing vaccination against infectious diseases in the office or clinic, injury prevention programs use "technological vaccines" in the home and community (such as energy-absorbing surfaces under playground equipment or airbags in motor vehicles) to passively "immunize" against injury. Injury prevention strategies involving collaboration and community involvement are more likely to be successful. Coalition development is a strategy that has been effectively used to mobilize communities to address the injury problems that most affect them.

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

In addition to common themes and core recommendations, this section outlines injury-specific recommendations developed through consensus. Supporting information for injury-specific recommendations can be found in individual reports on the subjects. These documents are available electronically at www.state.oh.us/odps/division/ems/ems_local/trauma/trauma_commissions.htm.

Theme: Injuries are costly. Injury prevention saves lives and money.

A. Seek creative and collaborative solutions to funding.

1. Enhance communication and collaboration among key stakeholders.
2. Encourage insurance companies, employers and others to cover injury prevention programs and services to reduce healthcare costs.

B. Provide state funding that adequately addresses injury - a leading cause of morbidity and mortality in Ohio.

Theme: Improved injury surveillance efforts and program evaluation are needed.

C. Improve injury surveillance efforts.

1. Develop and maintain injury data infrastructures as discussed below. Collect cost and payer information when possible to allow cost/benefit analyses of injury prevention interventions.
2. Form an ongoing, interagency workgroup to review and make recommendations regarding data needs and opportunities. The workgroup should consider coordination, linking and quality improvement of data collection efforts. It should include representatives familiar with the relevant databases. This group should explore:
 - Funding opportunities to support data linkage.
 - Mechanisms to improve quality and access to data.
3. Continue to provide support for the:
 - Development and maintenance of the Ohio Emergency Medical Services Incident Reporting System (EMSIRS) and the Ohio Trauma Registry through the Ohio Department of Public Safety.
 - Implementation of the Ohio Youth Risk Behavior Survey (YRBS) and the Ohio Behavioral Risk Factor Surveillance Survey (BRFSS).
 - Collection of licensed child care center serious injury data through the Ohio Department of Job and Family Services.
4. Support new uses for injury data through:
 - The development of a Crash Outcomes Data Evaluation System (CODES) in Ohio. CODES links traffic crash reports, Emergency Medical Services Incident Reporting System (EMSIRS) data and hospital discharge data. Funding is available from the National Highway Traffic Safety Administration.
 - Ohio's participation in the Centers for Disease Control and Prevention's (CDC's) National Violent Death Reporting System (NVDRS).
 - External cause of injury coding (e-coding) of and increased access to the full set of Ohio hospital discharge data.
5. Create a permanent and stable funding mechanism for the development of:
 - A statewide emergency department surveillance system that uses the CDC's *Data Elements for Emergency Department Systems*. (www.cdc.gov/ncipc/pub-res/deedspage.htm)
 - A statewide coroners' database.
 - A statewide school injury surveillance system.
 - An occupational injury surveillance system based on the U.S. Bureau of Labor Statistics' system.
 - A statewide toxic exposure data collection system.
 - Incentives (e.g., related grant funding, etc.) to improve records completion for all statewide injury databases.

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

Injury-specific Data Surveillance Recommendations:

6. Create a standardized list of data elements or report form for child maltreatment reporting in health care facilities. Create a database to track maltreatment-related injuries.
7. Encourage the development and use of standardized elder abuse assessment tools, record keeping and referral tracking systems in health care facilities. Create a database to track injuries resulting from elder abuse.
8. Encourage the development and use of standardized intimate partner violence assessment tools, record keeping and referral tracking systems in health care facilities. Create a database to track injuries resulting from intimate partner violence.
9. Encourage the development of Domestic Violence Fatality Review in all 88 counties based on existing county programs and the Ohio Child Fatality Review Program.
10. Classify burn and fire injuries of greater than 5 percent body surface area as a reportable disease and develop a surveillance database.
11. Develop a poison exposure surveillance system to include deaths, hospitalizations, emergency department visits and all exposure incidents reported to Ohio poison control centers.
12. Create a statewide surveillance system to track suicide attempts and completions.
13. Create a statewide surveillance system to track firearm-related injuries.
14. Require law enforcement traffic crash reports to collect information on potential distractions.

D. Promote the use of injury prevention guidelines and evaluation measures that are based upon current evidence-based research and literature.

As part of the statewide coalition (described below), create a committee with responsibility for ongoing review of the effectiveness of prevention programs.

Theme: Improved statewide coordination of programs is needed.

E. Continue to develop leadership and infrastructure to identify, promote, and respond to injury prevention needs at the state and local level.

1. Implement recommendations from the State and Territorial Injury Prevention Directors' Association's (STIPDA) report, *An Assessment of the Ohio Injury Program, March 19-22, 2001*.
2. Strengthen the structure and funding of the Ohio Department of Health's Injury Prevention Section to provide technical assistance, training and coordination of activities, and support to state and local injury prevention efforts.
3. Create a statewide, interdisciplinary injury prevention coalition and provide a permanent funding mechanism to hire a full-time coordinator.

Injury-specific Recommendations

4. Create a permanent and stable funding mechanism for voluntary home visit programs of two years or greater duration per client in an effort to prevent child maltreatment. Target high-risk groups such as low-income families, families having children with disabilities and single parents without support.
5. Create a permanent and stable funding mechanism to maintain statewide suicide prevention and response initiatives.
6. Provide incentives for local government to construct "safe" communities for cyclists and pedestrians.
7. Create a permanent and stable funding mechanism to sustain the operation of the three existing regional poison control centers in Ohio.
8. Provide funding for a coordinated, annual, statewide smoke alarm awareness day to offer inspections, battery replacements and new installations as needed to low income families, families with young children and older adults.

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

9. Provide funding for a multifaceted statewide campaign to increase helmet use among bicycle and other non-powered vehicle users. The campaign should include education, helmet subsidies or giveaways, and legislation.
10. Provide funding for a statewide education and awareness program to prevent unintentional poisoning by elders and children younger than 5 years, and evaluate its effectiveness.
11. Implement a statewide outreach and education program to raise awareness among potential employers of the policies and regulations in existence to protect youthful workers from injury.
12. Implement a statewide awareness and education program targeting parents about firearm-related injuries.
13. Provide increased support of child restraint distribution, installation and education programs.
14. Establish and support driving alternatives to serve older drivers with a diminished ability to drive

F. Coordinate and link EMS, trauma care and public health agencies with other injury prevention programs at the national, state and local levels to increase collaboration.

1. Increase interagency collaboration and coordination between state agencies and organizations concerned with the prevention of injury, in particular the Ohio departments of Health and Public Safety, including the EMS Board and Trauma Committee, Bureau of Workers' Compensation, Ohio departments of Education, Mental Health, Aging, Transportation, Natural Resources and other relevant agencies.

Injury-specific Recommendations:

2. Encourage a collaborative response to intimate partner violence and child maltreatment in all counties.
3. Encourage a collaborative response to elder abuse in all counties.

G. Promote the use of community prevention programs - that are multifaceted, evidence-based and use effective evaluation by public health agencies, trauma centers, emergency medical services and other programs.

1. As part of the statewide coalition, create a committee with responsibility for injury prevention education.
2. Increase awareness through statewide public education programs that injury is a preventable public health problem and promote strategies for prevention through collaborative community programs.
 - Create an injury prevention Web site, listserve and toll free referral number.
 - Promote materials to health care, government and other groups working with at-risk populations.
3. Provide relevant training on injury surveillance and prevention strategies for professionals including: policy makers, law enforcement, nurses, physicians, EMS, teachers, child care professionals, extended care facility and senior care workers, employers, public health professionals and others.
4. Incorporate age-appropriate education on injury prevention, life skills, conflict resolution, parenting skills, bullying and other related issues into school curricula. Provide and promote standardized training materials for classroom use by teachers and other school professionals.

Injury-specific Recommendations:

5. Provide funding for and require the development of a standardized six-hour child maltreatment training curriculum for licensed child care centers. This responsibility should be given to the Ohio Department of Job and Family Services, Child Care Licensing Section. The training is currently required in the Ohio Administrative Code.
6. Support evidence-based programs for youth that provide instruction in life skills and anger management to encourage positive solutions and nonviolent responses to conflicts and problems.

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

Theme: *Injuries disproportionately affect those living in poverty and the young and the old.*

H. Promote injury prevention programs that focus on populations most at risk based on injury surveillance. Children and older adults living in poverty should be high priority.

Theme: *Alcohol use is an important risk factor for injury.*

I. Fund and support initiatives that address prevention of alcohol- and other drug-related injuries. These initiatives should include education, legislation, coalition building, and screening and intervention by health care professionals.

Theme: *Legislation can be an effective strategy for preventing injuries.*

J. Enact or strengthen state and local legislation and policies which lead to the prevention of injuries.

1. The statewide coalition should monitor and advocate for policies and legislation which enhance the safety of Ohioans.
2. Provide information and resources to relevant agencies to support injury prevention legislation.
3. Enact legislation and policies to prevent injuries.

Injury-specific Recommendations:

4. Enact state legislation based on the American Academy of Pediatrics' Residential Swimming Pool Safety Act:
 - Require four-sided fencing on all new residential swimming pool construction.
 - Require four sided fencing be added to all existing residential swimming pools at the time of sale of the house.
 - Provide a one-time tax credit of \$100 to add four-sided fencing to any existing residential swimming pool.

5. Expand existing state legislation to require that all persons riding in a boat shorter than 18 feet in length, regardless of age, wear a personal flotation device.
6. Mandate the installation of protective window guards on windows not designated as emergency exits in multiple-residence dwellings where young children may live.
7. Enact legislation requiring new public and school playgrounds to be constructed according to the U.S. Consumer Product Safety Commission's (CPSC) guidelines for playground surfacing and equipment. Encourage communities to renovate existing playgrounds accordingly.
8. Support federal legislation to reinstate flammability standards for children's sleepwear, particularly for children ages 0-7 years. Enact similar state legislation.
9. Support national standards mandating "fire-safe" cigarettes.
10. Enact legislation requiring helmet use by bicycle and other non-powered vehicle riders when riding on public roads.
11. Support legislation requiring energy-absorbing handlebars and other safety design improvements on new bicycles.
12. Enact a stronger motorcycle helmet law that applies to riders of all ages. (Current law applies only to riders younger than age 18.)
13. Support increased enforcement of Ohio's recently enacted .08 percent blood alcohol concentration (BAC) law for motor vehicle operators.
14. Increase penalties for driving under the influence of alcohol and other drugs.
15. Increase penalties for underage alcohol drinkers, their parents and those who provide alcohol to underage drinkers.
16. Enact legislation requiring children's products sold in Ohio to conform to the safety standards of the Consumer Product Safety Commission. Prohibit the sale of recalled products. (See Children's Product Safety Act at www.kidsindanger.org for model legislation).

Common Themes and Expanded, Injury-specific Recommendations to Prevent Injury in Ohio

17. Create a task force to review child maltreatment laws and recommend improvements. This group should consider:
 - Requiring standard terminology and objectivity in defining abuse.
 - Developing an objective, medical definition of abuse for health care professionals. The American Academy of Pediatrics has a definition of physical abuse.
 - Banning the use of corporal punishment in schools and other institutions where children receive care.
18. Create a task force to review other state laws and issue recommendations for improving Ohio's domestic violence law. This group should consider the following:
 - Include dating partners, male and female, who have never married or cohabited in Ohio domestic violence law.
 - Increase penalties for a violation of sections A and B of ORC 2919.25.
 - Require training of health care professionals as outlined in ORC 4723.25; ORC 4731.282; ORC 4732.141 to be mandatory.
19. Create a task force to review elder abuse laws and recommend improvements. This group should consider:
 - Requiring standard terminology and objectivity in defining elder abuse.
 - Developing an objective, medical definition of abuse for health care professionals.
20. Enact state legislation addressing the following firearm-related issues: Juvenile Possession Law, Child Access Prevention Law, and 'Safe Gun' standards.
21. Enact statewide primary restraint legislation for all motor vehicle occupants and support enforcement.
22. Improve the child restraint law to include:
 - Required booster seat use for children in the 4 to 8-year-old range.
 - Restriction of children 11 years of age and younger from being front seat passengers, unless there is no alternative seating.
23. Enact ATV (all-terrain vehicle) safety legislation to include the following:
 - Required helmet use for operators and riders.
 - Restricted sale to and use of ATVs by children aged 15 years and younger.
 - Required safety training and state certification for operators.

Appendix

ANATOMIC AND PHYSIOLOGIC FEATURES THAT INCREASE THE OCCURRENCE AND/OR SEVERITY OF INJURY IN CHILDREN

<u>General</u>	The surface-to-volume ratio of children is high. Dehydration can easily occur from overheating or sunburn. Also, rapid growth rates mean children's coordination and motor skills may be poorly developed in relation to their physical size.
<u>Airway</u>	Airway is smaller and more flexible. Airway is easier to obstruct with both food and nonfood objects. Tongue is larger.
<u>Breathing</u>	Normal ventilation requires minimal work. Respiratory rate decreases with age and varies with excitement, fear, anger, fever or pain. Stress may double respiratory rate. Most infants less than 6 months do not breathe through their mouth; they are nose breathers. Higher respiratory rates mean increased exposure to airborne toxins, for example smoke from house fires.
<u>Head</u>	Head is large relative to the child's body. The child's higher center of gravity makes falls more likely. Strangulation can occur in crib or high chair. Head is likely to impact in falls and car crashes.
<u>Neck</u>	Infant's short neck makes it difficult to palpate a carotid pulse and to intubate. Discrete movement of the infant's neck can block the airway. Fulcrum of neck movement is higher than in adult.
<u>Chest and Lungs</u>	Pediatric bony cage is less rigid, more compressible than the adult. Children have a decreased risk of rib fractures but an increased risk of pulmonary contusion.
<u>Abdomen And Pelvis</u>	Abdominal wall poorly developed. Abdominal organs less protected by rib cage organs are large in relation to the abdominal cavity.
<u>G.I.</u>	Increased intestinal absorption increases likelihood of poisoning from nitrates, lead, or medications.
<u>Mouth</u>	Chewing mechanism not fully developed. Risk of choking and aspiration from foods, for example popcorn, nuts or chips.
<u>Back, Spine And Bones</u>	Children grow at rapid rate; coordination not consistent with growth. Bones are porous, flexible and can splinter and bend with stress causing spiral fractures and splintering.
<u>Skin</u>	Skin is thin relative to adults. Full thickness burns occur at lower temperatures.

ANATOMIC AND PHYSIOLOGIC FEATURES THAT INCREASE THE OCCURRENCE AND/OR SEVERITY OF INJURY IN OLDER PERSONS

<u>General</u>	Decrease in physiologic reserves, slowing of central nervous system response, drug metabolism changes, decreases in body mass, muscular atrophy and high frequency of pre-existing medical conditions.
<u>Airway</u>	Loss of protective reflexes in swallowing increases likelihood of choking on food.
<u>Breathing</u>	Decreased protective mucous and deconditioning (lack of fitness) opens the lungs to toxic exposure.
<u>Head</u>	Changes in cognitive ability, concentration and memory can mask symptoms of traumatic brain injury.
<u>Neck</u>	Thinning of intervertebral discs and shortening of vertebral bodies increase the difficulty of intubation.
<u>Back, Spine and Bones</u>	Osteoporosis increases risk of fractures.
<u>Skin</u>	Loss of subcutaneous tissue and thinning skin increase likelihood of injury after a bump and chances of thermal burns.
<u>Mouth</u>	Poor dentition and false teeth may increase risk of choking.
<u>Visual and Auditory Acuity</u>	Loss of vision and hearing increase risk of motor vehicle crashes and falls.
<u>Balance, Strength, Coordination</u>	Decreases in balance strength and coordination increase risk of falling and damage from a fall.

BEHAVIORAL AND DEVELOPMENTAL FEATURES THAT INCREASE THE OCCURRENCE OF INJURY

Infants

- Completely dependent on care giver
- Require constant supervision
- Unable to verbally communicate and report events
- Explores by mouthing objects; spends a lot of time sucking
- Rapid changes in motor abilities and mobility
- Begins to turn over and grasp objects

Resulting injury risks:

- Falls when left unattended or from infant walkers
- Suffocation and aspiration of small items
- Child maltreatment
- Electrical cord mouth burns
- Burn deaths in house fires

Toddlers or Preschoolers

- Curious, exploratory and impulsive
- Requires constant supervision
- Imitative of adult behavior with lack of awareness regarding potential danger
- Increased motor abilities
- Higher center of gravity
- Oral exploration puts objects in mouth

Resulting injury risks:

- Falls from stairs and windows
- Scald burns
- Drowning
- Child maltreatment
- Poisonings

Elementary School Age

- More mature motor skills
- May recognize dangerous situations but lack experience or judgment to make appropriate and safe decisions
- Increased mobility
- Increased independence
- Unable to assess speed and time of oncoming traffic

Resulting injury risks:

- Pedestrian injuries
- Bicycle, skateboard, scooters, in-line roller blading injuries
- Playground injuries

Young Adolescent

- Dynamic period of change and transition
- Need for peer approval and influenced by peer pressure
- Curious, experimental, risk-taking behavior and feelings of immortality
- More agile, increased strength and abilities, however may lack experience in appropriate decision-making skills
- Increased involvement in sports and recreational activities
- Increased independence
- Imitate behavior of older adolescents and adults
- Increased incidence of depression, experimentation with drug/alcohol use
- Impulsive

Resulting injury risks:

- Car occupant and motorcycle injuries
- Sports injuries
- Bicycle, skateboard, scooters, in-line roller blading injuries
- Drug and alcohol abuse
- Violence related injuries
- Sexual assault and dating violence
- Suicide and suicide gestures

Older persons

- Social isolation
- Depression
- Cognitive impairment (memory/judgement)
- Increased leisure time
- Prescription drug effects/interactions
- Lack of public transportation

Resulting injury risks

- Slips, trips and falls
- Motor vehicle crashes
- Poisonings
- Elder abuse
- Suicide

Appendix D

Section 5 of Amended Substitute House Bill 138 as enacted by the 123rd General Assembly, November 2000

The Director of Health shall organize and coordinate a temporary commission to determine how to better prevent traumatic injuries in this state. The commission's study shall include, without limitation, consideration of how to improve public safety education and how to prevent pediatric and geriatric injuries.

The Department of Public Safety, Department of Natural Resources, Department of Agriculture, Department of Education, Commission on Minority Health and Bureau of Workers' Compensation shall participate in and assist with the commission's study.

Within 120 days after the effective date of this act, the director shall appoint to the commission appropriate public health authorities, entities that conduct safety research and education, and advocates for injured persons. Commission members shall have expertise in injury prevention, broadly represent relevant disciplines, and represent all regions of the state.

Within 120 days after the effective date of this act, the Speaker of the House of Representatives shall appoint to the commission one member of the majority party and one member of the minority party in the House of Representatives and the President of the Senate shall appoint to the commission one member of the majority party and one member of the minority party in the Senate.

In conducting its study and developing its recommendations, the commission shall consult and cooperate with the Trauma Committee of the State Board of Emergency Medical Services. The commission shall conclude its study and disband not later than three years after the effective date of this section, whereupon the director shall transmit the commission's findings and recommendations to the Governor, General Assembly, chief executive of each state agency specified in this section, and other appropriate persons.

EXECUTIVE SUMMARY

The Centers for Disease Control and Prevention (CDC) reported that, in 1999, 150,000 Americans died from injuries, and one in 10 survived an injury serious enough to require at least an emergency room visit (CDC Injury Research Agenda, 2002). Injuries are the leading cause of death for people ages 1 to 44. Of all hospital stays, 8 percent are due to injuries. Traumatic brain injury, spinal cord injury and burns tend to result in more serious and long-term consequences. It is estimated 5.3 million Americans have long-term disabilities from traumatic brain injury, with 80,000 new cases added each year. Another 200,000 Americans have disabilities due to traumatic spinal cord injury, with 11,000 new cases annually. Beyond limitations on movement and thinking, persons who survive traumatic injuries often experience post-traumatic stress disorder, depression, substance abuse, and problems at school, work or family.

According to data reported to the Ohio Trauma Registry, in the four-year period between Jan. 1, 1999, and Dec. 31, 2002, 78,200 Ohio citizens survived traumatic injuries severe enough to require at least two days of hospitalization or transfer to a trauma center. Falls and motor vehicle crashes accounted for two-thirds of these injuries. Traumatic brain injury and spinal cord injury resulted in the most severe injuries. Of these two types of injuries, 78 percent were due to falls and vehicular crashes.

Legislative authority and commission membership

Recognizing the importance of addressing this public health concern for the well-being of Ohio citizens, the Ohio General Assembly enacted House Bill (H.B.) 138 November 2000, creating the Post-critical Trauma Care Commission. H.B. 138 required the director of health organize and coordinate a temporary commission “to determine how to improve the accessibility, affordability, quality, and cost effectiveness of post-critical adult and pediatric trauma care.” The commission was required to complete its work by Nov. 3, 2003.

H.B. 138 also delineated a variety of participants for the commission and required the director of health appoint representation from those organizations and entities identified in the legislation. The enabling legislation established that “[C]ommission members shall have expertise in rehabilitation and retraining of injury victims, broadly represent relevant disciplines, and represent all regions of the state.” H.B. 138 required mandatory members, including representatives from the majority and minority parties of both houses of the Ohio General Assembly and certain specified state agencies as follows:

Ohio Bureau of Workers’ Compensation

Ohio Department of Aging

Ohio Department of Health

Ohio Department of Job and Family Services

Ohio Rehabilitation Services Commission

All five of these agencies have indicated their support for this final report. In fulfilling the charge for broad representation among many potential stakeholders, 28 organizations and associations were invited to nominate a primary and alternate representative to the commission. Agencies and organizations subsequently represented and supporting this report were:

Ohio Association of Health Plans	Ohio Farm Bureau Federation
Ohio Business Coalition on Health	Ohio Public Health Association
Ohio Department of Public Safety	Ohio Rehabilitation Association
Ohio Department of Alcohol and Drug Addiction Services	The Salvation Army
Ohio Department of Education	Ohio Legal Rights Service
Ohio Fire Chiefs’ Association	American Physical Therapy Association
Ohio Hospital Association	Association of Ohio Philanthropic Homes, Housing and Services for the Aging
Ohio Nurses Association	Ohio State Chiropractic Association
Ohio Psychological Association	Ohio Association of Professional Fire Fighters
Ohio State Medical Association	Ohio Society of Trauma Nurse Coordinators
Brain Injury Association of Ohio	Ohio Osteopathic Association
Ohio Association of Rehabilitation Facilities	State Trauma Committee
Ohio Children’s Hospitals Association	Central Ohio Trauma System

Findings

The state’s system of delivering trauma services, and its enabling legislation, adequately address first response, transport to a trauma center, and reporting to the Ohio Trauma Registry. The system does not address post-critical trauma care adequately, with little or no attention given to reverse transport, follow-up services, and the roles of non-trauma center hospitals and other post-acute care providers in an overall state system of trauma services. The lack of systematic resources for persons with traumatic injuries increases the occurrence of unmet needs resulting in additional medical complications, loss of productivity, recurring injury, and reduced life satisfaction.

Post-critical trauma care of individuals coping with the consequences of an injury for which they have no preparation presents its own unique and complex set of challenges to patients, caregivers, health-care professionals, educators, and society at large. While the aftermath of a traumatic injury is challenging for many reasons, difficulties this patient population has accessing appropriate services via the existing health and human service systems are paramount.

Transitioning from the hospital or other acute-care setting into work, home, school, and community should be as seamless as possible to meet adequately the individual needs of persons requiring post-critical trauma care. Patient, family and provider access to up-to-date and comprehensive information concerning the array of resources that may be available in a community is key to successful community reintegration. However, in the end, the foundation for successful reintegration of the post-critical trauma care patient consists of access to services of the patient’s choice, mutual respect for the strengths that patients and professionals bring to the reintegration process, early and ongoing consumer and family involvement, and promotion of self-direction and decision making.

Through deliberation, a series of recommendations evolved intended to address selected aspects of identified shortcomings in the current service delivery systems. The following recommendations are detailed in subsequent chapters of this report. Crucial to identifying topics and developing recommendation was the overarching goal of improving the accessibility, affordability, quality, and cost effectiveness of post-critical trauma care.

Recommendation 1: Providers and health-care facilities delivering post-critical care to trauma patients should adopt and comply with a patient bill of rights and responsibilities that recognizes the unique needs of those undergoing rehabilitation and recovery, and contributes to an effective and responsive patient-care program.

Recommendation 2: A rehabilitation service locator should be created and maintained to allow patients, their families, and acute-care providers to identify sources of needed follow-up rehabilitation services and compare salient characteristics of available providers.

Recommendation 3: To address the lifetime needs of Ohio citizens with disability due to injury, a system of resource facilitation should be established that provides access to information and services, increases the capacity for community support, and, as needed, coordinates services for individuals and their families.

Recommendation 4: To ensure the most appropriate educational experience for children who have had traumatic injuries, hospital and school personnel need additional training on issues for educational re-entry; classroom teachers need access to resources about reintegrating these students; and mechanisms are needed to ensure providers, internal and external to the school system, take a coordinated approach. More research is needed on educating students who have incurred traumatic injuries.

Recommendation 5: Organizations and agencies with an interest in minimizing the effects of substance use disorders on injury outcomes should be convened to identify opportunities for improving secondary substance abuse prevention and treatment for persons during and following trauma care.

Recommendation 6: A follow-up registry should be established to provide information about the long-term complications and outcomes for trauma-care patients. Data collection methodology should be an extension of the existing Ohio Trauma Registry and should provide information for local, regional and statewide prevention programming and health-care service planning.

Recommendation 7: Within the broader framework of responsibility for injury and trauma, leadership concerning longer-term issues and needs following traumatic injury should have a single, identifiable, and permanent location within Ohio’s state government.

“The findings and recommendations presented in the Commission’s comprehensive and thoroughly researched report are sobering, yet hopeful.”

Tom Hayes
Director,
Ohio Department of Job
& Family Services

INTRODUCTION AND BACKGROUND

The Centers for Disease Control and Prevention (CDC) reported that, in 1999, 150,000 Americans died from injuries, and one in 10 survived an injury serious enough to require at least an emergency room visit (CDC Injury Research Agenda, 2002. See Injury Fact Sheet in appendix A). Injuries are the leading cause of death from in people ages 1 to 44. Of all hospital stays, 8 percent are due to injuries. It is estimated that 5.3 million Americans have long-term disabilities from traumatic brain injury, with 80,000 new cases added each year. Another 200,000 Americans have disabilities due to traumatic spinal cord injury, with 11,000 new cases annually. Injuries to limbs, the back, and eyes, as well as burn injuries, also are causes of disability. Beyond limitations on movement and thinking, persons who survive traumatic injuries often experience post-traumatic stress disorder, depression, substance abuse, and problems in school, work or family.

Trauma or traumatic injury means severe damage to or destruction of tissue that creates a significant risk of loss of life; loss of a limb; significant, permanent disfigurement; significant, permanent disability; and is caused by blunt or penetrating injury; exposure to electromagnetic, chemical, or radioactive energy; drowning, suffocation, or strangulation; a deficit or excess of heat. (O.R.C. 4765.01(N))

Trauma care means the assessment, diagnosis, transportation, treatment, or rehabilitation of a trauma patient by emergency medical personnel or by appropriately credentialed health-care professionals within the prescribed scope of practice.

Trauma center is any hospital verified by the American College of Surgeons.

Pediatric patient is a patient younger than 16 years of age.

Adult or geriatric patient is a patient who is not a pediatric patient.

Post-critical trauma care refers to recognizing the needs of trauma patients requiring or undergoing rehabilitation and recovery care or services following release or transfer from a trauma center.

Over the past four years Ohio hospitals participating in the Ohio Trauma Registry reported that 78,205 patients survived traumatic injuries and were discharged from the hospital (see Figure 1). One in five patients had traumatic brain injury, spinal cord injury, or burns as their primary injury.

Injury patterns

N=78,205 (survivors)
January 1999 – December 2002

Injury Patterns based upon ICD-9-CM Diagnosis Code groups utilized in the Barell Matrix. Inj Prev 2002;8:91-6

This graph depicts trauma patients whose length of stay in the intensive care unit was three or more days. Although there are many factors that affect a patient’s length of stay in the intensive care unit, a higher severity of injury is one main reason. Thirty percent of these patients suffered traumatic brain injury, spinal cord injury or burns.

Injury patterns
Length of stay in the ICU ≥ 3 days

Injury patterns based upon ICD-9-CM Diagnosis Code groups utilized in the Barell Matrix. Inj Prev 2002;8:91-6

This graph shows the top five causes or mechanisms of injury that produced a primary injury to the spinal cord, severe enough to be reported to the Ohio Trauma Registry. Motor vehicle crashes, (including pedestrians and pedal cyclists) and falls account for more than 75 percent of all spinal cord injuries.

Top five causes of Spinal Cord Injury (SCI)

N=1,250 (survivors)
01/01/99 - 12/31/02

Cause of injury based upon ICD-9-CM External Cause of Injury Codes
MMWR 1997;46(RR-14)

This graph describes the top five causes or mechanisms of injury that produced a primary traumatic brain injury, severe enough to be reported to the Ohio Trauma Registry. Motor vehicle crashes, (including pedestrians and pedal cyclists) are the leading cause, followed closely by falls. Together they account for 78% of all traumatic brain injuries.

Top five causes of Traumatic Brain Injury (TBI)

Commission authority

Recognizing the importance of addressing this public health concern for the well-being of Ohio citizens, in November 2000 the Ohio General Assembly enacted H.B. 138, creating the Post-critical Trauma Care Commission. (The full text of section 6 of Amended Substitute H.B. 138 as enacted by the 123rd General Assembly is included in appendix B.) H.B. 138 required the director of health organize and coordinate a temporary commission “to determine how to improve the accessibility, affordability, quality, and cost effectiveness of post-critical adult and pediatric trauma care.” The commission was required to complete its work by Nov. 3, 2003.

Appointments to the commission began March 2001, and the inaugural meeting was held July 2001, at the Ohio Department of Health. John D. Corrigan, Ph.D., from the department of physical medicine and rehabilitation at The Ohio State University, was appointed as commission chair and Cynthia Iske, M.S. O.T.R./L., from Children’s Hospital of Columbus was appointed as commission vice chair.

Guiding principles

Although in some contexts, post-critical trauma care is considered one component of the broader concept of trauma care, this report distinguishes it as a discipline with standards of care, treatment, and follow-up tailored to specific medical, social, psychological, and educational needs resulting from a traumatic incident that occurs post-injury and has potential lifetime consequences.

Post-critical trauma care of individuals coping with the aftermath of an injury for which they have no preparation presents its own unique and complex set of challenges to patients, caregivers, health-care professionals, educators, and society at large.

Post-critical trauma care is challenging for many reasons, chief among them is that it is often difficult for this patient population with diverse needs to fit easily into existing service systems.

The foundation for successful reintegration of the post-critical trauma-care patient into the home and community consists of access to services of the patient’s choice, mutual respect for the strengths patients and professionals bring to the reintegration process, early and ongoing consumer and family involvement, and promotion of self-direction and decision making.

Patient and provider access to up-to-date and comprehensive information concerning the broad array of post-critical trauma care resources available in a community is key to successful rehabilitation.

Transitioning from the hospital or other acute care setting into work, home, school, and community living should be as seamless as possible to meet adequately the specialized needs of the post-critical trauma-care individual.

Commission recommendations

The state’s system of delivering trauma services, and its enabling legislation, adequately addresses traumatic injury from first response, transport to a trauma center, and reporting to the Ohio Trauma Registry. The system does not address post-critical trauma care adequately, with little or no attention given to reverse transport, follow-up services, and the roles of non-trauma center hospitals and other post-acute care providers in an overall state system of trauma services. The lack of systematic resources for persons with traumatic injuries increases the occurrence of unmet needs. This results in additional medical complications, loss of productivity, recurring injuries, and reduced life satisfaction. Addressing these recognized shortfalls guided the commission in its work.

Through deliberation, a series of recommendations evolved intended to address identified shortcomings. These recommendations are detailed in subsequent chapters of this report. Crucial to identifying topics and developing recommendations was the overarching goal of improving the accessibility, affordability, quality, and cost-effectiveness of post-critical trauma care. Chapters in this report describe the following recommendations:

Patient bill of rights and responsibilities

Providers and health-care facilities delivering post-critical care to trauma patients should adopt and comply with a Patient Bill of Rights and Responsibilities that recognizes the unique needs of those undergoing rehabilitation and recovery, and contributes to an effective and responsive patient care program.

Rehabilitation service locator

A rehabilitation service locator should be created and maintained to allow patients, their families, and acute care providers to identify sources of needed follow-up rehabilitation services and compare salient characteristics of available providers.

Statewide system of resource facilitation

To address the lifetime needs of Ohio citizens with disability due to injury, a system of resource facilitation should be established that provides access to information and services, increases the capacity for community support, and, as needed, coordinates services for individuals and their families.

Meeting educational needs of children who have had traumatic injuries

To ensure the most appropriate educational experience for children who have had traumatic injuries, hospital and school personnel need additional training on issues for educational re-entry; classroom teachers need access to resources about reintegrating these students; and mechanisms are needed to ensure all providers, internal and external to the school system, take a coordinated approach. More research is needed on educating students who have incurred traumatic injuries.

Substance use and traumatic injury

Organizations and agencies with an interest in minimizing the effects of substance use disorders on injury outcomes should be convened to identify opportunities for improving secondary prevention of substance abuse and treatment for persons during and following trauma care.

Ohio trauma follow-up registry

A follow-up registry should be established to provide information about the long-term complications and outcomes for trauma care patients. Data collection methodology should be an extension of the existing Ohio Trauma Registry and should provide information for local, regional and statewide prevention programming and health-care service planning.

On-going responsibility for post-critical trauma care issues

The commission made a final recommendation pertaining to the continued attention that will be required to pursue these recommendations. While many agencies and organizations should be involved in implementation of the above recommendations, there is a need for a single focus of oversight and leadership related to the issues the commission raised, as well as other challenges affecting individuals after their initial care. Specifically, the commission recommends that, in the process of identifying the locus of leadership and responsibilities in Ohio government for issues of injury and trauma, leadership for concerns about the needs and services following critical care should have a single, identifiable location within the resulting structure.

Commission process

Recommendations toward improvement of post-critical trauma care would have to first determine where post-critical care begins. It would require identification of appropriate stakeholders, the needs of the patient and the systems of care, as well as the processes by which accessibility, affordability, cost-effectiveness and quality of care and services can be ensured.

Five areas of study or concentration were set forth for the commission in the legislation:

- Transfer of trauma patients from regional trauma centers to other facilities;
- Physical, psychological, and vocational rehabilitation of trauma patients;
- Reemployment of trauma patients;
- Social support mechanisms for families of trauma patients;
- Mitigation of the effects of pediatric and geriatric trauma.

In its inaugural meeting, the commission determined that, before a comprehensive work plan could be developed, certain questions would need to be addressed and answered to the extent possible. These were initially identified as:

- Determining what quantitative data was available and accessible to the commission;
- Assessing where the current system in Ohio is in the delivery of post-critical trauma care;
- Identifying where the needs for improvement exist;
- Identifying where the current system is succeeding and in turn failing;
- Determining to the extent possible what direction the trauma system needs to take in the future to ensure improvement in the accessibility, affordability, cost-effectiveness, and quality of post-critical trauma care.

Data needs initially identified to address these questions included:

- The number of patients entering rehabilitation and other post-acute care as a result of traumatic injury. The existing state trauma registry was suggested as a source for some of this data;
- Review models from other states that have undertaken to quantify post-critical trauma care needs;
- Accounting of rehabilitation and post-acute care options currently available statewide;
- Data on traumatic injury recovery, rehabilitation, and costs to Medicaid and workers’ compensation.

While considerable effort was made to identify sources of this information, one of the commision’s first conclusions was objective data about the eventual consequences of trauma were not available in Ohio or nationally.

In January 2002, it was decided the most advantageous use of the level of expertise and experience on the commission, plus the means to ensure concentrated efforts would be to divide the commission into three committees:

- Medical rehabilitation – Priorities categorized into four basic issues: geographic availability; insurance and coverage; service matching; and patient tracking. By looking at these issues, this committee hoped to be able to recommend a methodology wherein referring hospitals and other initial treating facilities had a better means of matching patient acuity and service needs with service provision.
- Disability – Directed attention to the issues of re-entry into the workforce or education system; examined resources for social support; and inquiry into the impact of age and family on long-term rehabilitation.

- Data and follow-up registry – Provided objective information on which to base public and private policy decisions about post-critical trauma care. The committee recommended a system that allows research on the nature and scope of consequences of trauma, and provides an informed basis for meeting the needs of those injured.

After meeting in committees for 15 months, the commission systematically reviewed, evaluated and revised specific recommendations brought forth by the three committees. Five areas of recommendations emerged, and in the course of deliberations two additional focus areas were identified: substance abuse and on-going responsibility for post-critical trauma care issues. Committees and the commission as a whole engaged in monthly, iterative discussions of the recommendations, their rationale, and suggestions for implementation. This work concluded at the end of June 2003, when the commission reached consensus on the content of its final report.

From July 2003, through the conclusion of the commission’s work, efforts focused on disseminating the report and recommendations. Special emphasis was given to gaining support for the final report from sponsoring agencies and organizations, as well as the means by which the commission’s findings would be shared with the Governor and the Ohio General Assembly.

Benchmarks

November 2000	Substitute H.B. 138 effective date.
February 2001	Ohio Department of Health (ODH) staff directed to organize and provide administrative support to the Post-critical Trauma Care Commission.
March 2001	State agencies, organizations, and professional associations invited to nominate representatives to the commission.
April 2001	Letters of appointment sent to selected representatives.
July 2001	Ohio Commission on Dispute Resolution and Conflict Management Inaugural meeting held at ODH.
August 2001, to May 2002	Monthly commission meetings.
May 2002	Committees’ preliminary recommendations presented to full commission.
January 2003	First draft of final report presented to full commission.
February to June 2003	Bi-monthly commission meetings to review, evaluate and revise committee recommendations, rationale and suggestions for implementation.
June 2003	Commission approved revised final report for distribution to sponsoring organization and agencies.
September 2003	Letters supporting the final report were received from numerous agencies and organizations.
November 2003	Final report was presented to the Governor and the Ohio General Assembly.

Membership and collaboration

H.B. 138 delineated a variety of participants for the commission and required the director of health appoint representation from organizations and entities identified in the legislation. H.B. 138 established that “[C]ommission members shall have expertise in rehabilitation and retraining of injury victims, broadly represent relevant disciplines, and represent all regions of the state.” Throughout its deliberations and study, the commission relied on the expertise, experience, and affiliations of its membership not only for first-hand contributions to the process, but to provide external contributory sources as well. Therefore, the commission’s final work product, which follows in subsequent parts of this report, reflects a compilation of data and information from multiple sources provided through the good offices of commission representatives and their supporting organizations.

Mandatory members required by the legislation included representatives from the majority and minority parties of both houses of the General Assembly and certain specified state agencies as follows:

- Ohio Bureau of Workers’ Compensation
- Ohio Department of Aging
- Ohio Department of Health
- Ohio Department of Job & Family Services
- Ohio Rehabilitation Services Commission

In fulfilling the charge for non-state agency representation, department of health staff developed a listing of 54 possible sources for commission membership. From this original listing, 28 organizations and associations were invited to nominate a primary and alternate representative to the commission. Agencies and organizations represented by members and endorsing this report are:

- | | |
|--|---|
| Brain Injury Association of Ohio | Ohio Farm Bureau Federation |
| Ohio Association of Health Plans | Ohio Public Health Association |
| Ohio Business Coalition on Health | Ohio Rehabilitation Association |
| Ohio Children’s Hospitals Association | The Salvation Army |
| Ohio Department of Public Safety | Ohio Legal Rights Service |
| Ohio Department of Alcohol and Drug Addiction Services | American Physical Therapy Association |
| Ohio Department of Education | Association of Ohio Philanthropic Homes, Housing and Services for the Aging |
| Ohio Fire Chiefs Association | Ohio State Chiropractic Association |
| Ohio Hospital Association | Ohio Association of Professional Fire Fighters |
| Ohio Nurses Association | Ohio Society of Trauma Nurse Coordinators |
| Ohio Psychological Association | Ohio Osteopathic Association |
| Ohio State Medical Association | State Trauma Committee |
| Ohio Association of Rehabilitation Facilities | Central Ohio Trauma System |

Over the course of the commission’s work the original membership altered somewhat due to personal and agency/organizational commitments. The final membership roster by name is included in appendix C of this report.

Acknowledgements

The chair, vice chair and members of the Post-critical Trauma Care Commission wish to also acknowledge the support received from the following sources over the course of its deliberations:

- Roy Croy, Ohio Department of Health, Bureau of Community Health Care Facilities and Services for his steady hand and sage advice.
- Linda Vojtush, executive secretary, Ohio Department of Health, Bureau of Community Health Care Facilities and Services for her tireless administrative support in scheduling and setting up meetings, and in recording, preparing, and distributing commission meeting minutes in an always reliable and timely manner.
- Virginia Haller, M.D., Ohio Department of Health, for her keen interest in the commission’s work and valuable insights into injury prevention and Ohio’s activities in that field.
- Margaret Lewis, Fred Bartenstein, and Ed Krauss of the Ohio Commission on Dispute Resolution and Conflict Management for their facilitation in the early stages of commission meetings. The advice, assistance, and expertise provided by these professional facilitators contributed immeasurably to start up, organization, and work planning for the commission’s later endeavors.
- Judy Roush, commission member and her parent organization, the Ohio Farm Bureau, for providing excellent accommodations for the commission’s meetings.
- The Ohio Bureau of Workers’ Compensation for their invaluable assistance in preparing this final report.

"Many of the issues of the Commission studied are relevant to workplace traumas and the injured worker population served by the Ohio Bureau of Workers' Compensation."

James Conrad
Administrator/CEO,
Ohio Bureau of
Workers' Compensation

A MODEL PATIENT BILL OF RIGHTS AND RESPONSIBILITIES FOR TRAUMA PATIENTS RECEIVING POST-CRITICAL TRAUMA CARE IN OHIO

Recommendation: Providers and health-care facilities delivering post-critical care to trauma patients should adopt and comply with a patient bill of rights and responsibilities that recognizes the unique needs of those undergoing rehabilitation and recovery, and contributes to an effective and responsive patient care program.

Vision

Philosophies and guiding principles for treating trauma patients, and the treatments themselves, should reflect not only medically and technologically advanced practices, but also will reflect the highest regard for the uniqueness of the patient, the sanctity of the caregiver-patient relationship, and an awareness that the likelihood of successful rehabilitation increases when patients, families, and caregivers demonstrate respect, cooperation, dignity, and responsibility.

Description of the problem

Richard J. Mullins wrote in an article published in 1999, "Many authors have identified the publication of *Accidental Death and Disability: The Neglected Disease of Modern Society* in 1966...as the inaugural event in what was to become a sustained effort sponsored by government to control 'accidental injury' as a health problem...In this publication, strong government leadership was proposed as essential in the effort to solve the 'neglected epidemic' of death and disability from injury. The authors detailed the problem's enormous magnitude: the tragedy of early death among the young, the burden of disability, and costs of billions of dollars. The authors emphasized that the scope of the problem was all the more alarming when contrasted with the public's apathetic attitude toward trauma care." (1)

Recognizing the still significant relevance of that milestone white paper, as well as the evolution of medicine and public health in this arena, this chapter puts forth recommendations meant to inform public policy and public awareness, and most importantly, empower trauma patients as they move through the process of healing and regaining their independence.

The continuum of care required by trauma patients is a broad spectrum that will, in most cases, expose these individuals to medical care and social support systems that are, to varying degrees, coordinated, provided by qualified health professionals, and responsive to each patient's specialized needs. Across this continuum of care, from triage to rehabilitation, trauma patients encounter a host of often challenging and stressful experiences, as well as the need to make decisions for which they usually have no preparation or prior experience. As a result, the importance of the caregiver-patient relationship becomes a touchstone for trauma patients' successful rehabilitation.

In his article, “Gift From Within,” Frank M. Ochberg, M.D., refers to a principle of individuality that states, “Every individual has a unique pathway to recovery after traumatic stress.” (2) Although Dr. Ochberg refers to the emotional impact of traumatic stress (emotional disorder vs. physical injury) resulting from events such as violence, abuse, crime, or other environmental stress, his principle translates in its entirety to individuals coping with the aftermath of traumatic injury. While it is difficult to experience medical diagnosis and treatment in the acute care setting, the needs of trauma patients become even more unique as they attempt to rehabilitate and integrate themselves back into a society more equipped and comfortable in accommodating its most healthy and productive members. Learning to drive, coping with disfigurement, re-entering the work force, dealing with depression, and a host of other challenges that face the trauma patient require special attention and a commitment on the part of professionals and support persons to recognize that

their patient, family member, or friend has unique needs, personal preferences, and a pathway to recovery not exactly like any other. It is within this context that concern for patients’ rights needs to be considered and that caregivers assume responsibility for informing and explaining these rights to patients and their families.

In *American Independence and the Right to Emergency Care*, Robert Baker, Ph.D., observes that, “Asserting a right is a powerful statement in the American political rhetoric. In this country, medicine has recognized patients’ rights for over 150 years. As early as 1886 there was a proposal to ‘draw up...a Bill of Rights which shall secure patients from any injustice from the votaries of science.’” (3)

The American Hospital Association (AHA) first adopted a patient bill of rights in 1973. Subsequently, on Oct. 21, 1992, the AHA Board of Trustees approved a revised version of its original bill of rights. The AHA developed these rights with the expectations that hospitals and health-care institutions would support these rights in the interest of delivering effective patient care. A random review across an array of health-care providers and advocacy organizations reveals many such institutions and providers have developed patient bills of rights that incorporate the principles reflected in the AHA model, which is a practice the AHA promotes and supports. In its introduction, the AHA Patient’s Bill of Rights states that, “The American Hospital Association encourages health care institutions to tailor this bill of rights to their patient community by translating and/or simplifying the language of this bill of rights as may be necessary to ensure that patients and their families understand their rights and responsibilities.” (4)

Proposed strategies

Goal

Caregivers and the facilities within which they treat and minister to trauma patients undergoing rehabilitation and recovery will adopt, formally through written and visible public displays, as well as informally, through their personal norms and approaches to care, a code of rights and responsibilities that contributes to and creates a nurturing, respectful, and outcome-based environment.

Principles

- The Model Patient Bill of Rights and Responsibilities will augment, and not supplant, existing and similar bills of rights already in use in facilities that provide post-critical trauma care;
- The Model Patient Bill of Rights and Responsibilities incorporates rights and responsibilities specific to patients who are experiencing challenges unique to post-critical trauma care and are undergoing rehabilitation and recovery related to their trauma;
- The Model Patient Bill of Rights and Responsibilities recognizes that adults and children have unique sets of challenges and may require standards of care, treatments, and follow-up tailored not only to their specific medical and trauma-related circumstances, but also to their unique age and stage-of-life-based needs;
- The Model Patient Bill of Rights and Responsibilities is only one of many tools contributing to the creation and maintenance of a culture that reflects an ingrained and inherent respect for the uniqueness of the individual and an environment where caregivers and families feel safe interacting collegially to enhance the physical, emotional, and spiritual healing of the trauma patient.

Keeping in mind Dr. Ochberg’s “unique pathway to recovery,” the Post-critical Trauma Care Commission’s Medical Rehabilitation Committee reviewed a number of existing patient bills of rights used by a variety of health-care institutions and facilities. The committee particularly searched for patient bills of rights drafted for post-acute patients with complex and varied needs and more specifically, for those addressing post-critical trauma patient needs. Although the review did not employ formal research methodologies, it did reveal that the use of general patient bills of rights is widespread in the health-care profession, particularly in hospitals. Patient bills of rights specific to the needs of trauma patients were not found readily.

The commission decided developing a Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio would be a valuable contribution to ensuring this vulnerable population receives the highest quality care in settings that respect the rights and roles of patients, families, and caregivers. To that end, the commission recommends that the Model Bill of Rights and Responsibilities contained herein be adopted as a model for use by institutions and facilities that provide post acute and/or rehabilitative treatment or care, as well as those that provide social services that support such care, to trauma patients in Ohio.

The following is the *Post-critical Trauma Care Commission’s Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio*. The end of the chapter includes a list of patient bills of rights that were reviewed as part of the research and drafting process.

Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio

The Post-critical Trauma Care Commission, as authorized by H. B. 138 of the 123rd General Assembly, recommends providers and health-care facilities administering post-critical care to trauma patients in Ohio adopt and comply with a patient bill of rights and responsibilities that recognizes the unique needs of individuals undergoing rehabilitation and recovery, and contributes to an effective and responsive patient-care program. Further, the commission recommends facilities adopt the following model patient bill of rights and responsibilities or one that reflects its precepts and principles.

Patient rights

This facility's post-critical trauma care patients, including adults, children, and parents or guardians of children who are patients, have the following rights:

1. Patients have the right to receive appropriate, individualized care and treatment, and to:

- Up-to-date, comprehensive information about their condition, including appropriate care and treatment options, and to have that information explained in terms they are able to understand;
- Participate as an equal partner of the health team in all decisions concerning their care, including the right to accept, refuse, modify, or discontinue treatment;
- Be advised of the risks of any treatment, procedure, or therapy and the right to be informed of the possible medical consequences of accepting or refusing a course of action;
- Be informed of clinical trials, experimental treatments, or unproven research protocols that may be available for their treatment or rehabilitation, as well as the right to accept or refuse participation in such research;
- Expect the best possible care, including specialty care, from providers trained, credentialed, and experienced in managing their condition. Should a facility or provider not be able to provide appropriate care at any time during the course of treatment, patients have the right to expect timely referrals to providers able to provide such care;
- Receive appropriate care free from unlawful discrimination of any type.

Pediatric patients have the right to:

- Be treated in American College of Surgeons (ACS)-verified pediatric trauma centers. Adult centers that have not undertaken a pediatric review process parallel to the adult verification process are not interchangeable with pediatric trauma centers;
- Be treated in pediatric rehabilitation centers that focus on school re-entry, family-centered care, and community reintegration. Adult rehabilitation facilities with pediatric resources are not interchangeable with Commission for Accreditation of Rehabilitation Facilities (CARF)-accredited pediatric rehabilitation facilities.

2. Patients have the right to receive care that is coordinated and ongoing, as needed, across a broad spectrum of settings, including home, hospital, nursing home, school, workplace, therapeutic, and rehabilitative care settings. These include the right to:

- Expect continuity of care, as well as appropriate follow-up care, that focuses on helping them achieve the highest possible degree of functionality, greater independence, and a rapid return to productivity;
- Expect prompt and effective communication among the health-care professionals attending to their treatment, recovery, and rehabilitative needs, including timely sharing of information related to medical history, individualized plans of care, prognosis, treatment, and follow-up regimens when multidisciplinary provider teams are involved;
- Seek multiple opinions from professionals on their care team in any setting, or from sources of their own choosing, without fear of experiencing negative consequences as the result of seeking additional or alternate information;
- Know the names, credentials, experience, and professional status of their caregivers, as well as which caregiver has primary responsibility for coordinating and managing their care;
- Expect their family members are encouraged to participate as members of the care team so they can provide care continuity as the patient navigates the health-care system.

3. Patients have the right to be treated at all times with respect, dignity, and consideration and to expect health-care professionals to place high priority on safeguarding their privacy. These include the right to:

- Participate in decisions concerning their health care based on their religious beliefs, spiritual values, or cultural identity;
- Expect consideration of their personal privacy and comfort during physical examinations, therapeutic interventions, or rehabilitative interventions;
- Access their medical records and to expect that no other persons, other than those involved with their care or allowed by law, have access to their records without the patient's written permission;
- Expect confidentiality in communications with their caregivers and to have their health-care providers maintain their records and communications maintained confidentially, unless patients waive their confidentiality rights;
- Prepare advance directives to express end-of-life preferences.

4. Patients have the right to receive assistance and support to maintain, and whenever possible, enhance, the quality of their lives. These include the right to:

- Be informed of available resources throughout the course of their treatment (and especially as part of the discharge process), including appropriate support groups; pastoral/spiritual care; psychological counseling; employment counseling; local community social services; national referral sources, including associations and organizations; government sources for information and assistance; protective or advocacy services; translator services; patient education programs; and other services as appropriate and available;
- Expect that their health-care professionals will take the necessary measures to ensure that patients will, to the extent possible, be relieved of pain throughout the course of their treatment and as part of long-term follow-up;
- Be approached and treated at all times as a "whole" person and to expect that all aspects of treatment, follow-up, and support reflect their emotional, physical, spiritual, and psychological needs. Families of pediatric patients have the right to be viewed as extensions of the patient and provided with information and services that enable them to create an environment in which the pediatric patient can thrive.

5. Patients have the right to understand the policies and procedures of a facility or provider, including those concerning patient conduct, payment and billing, and complaint and appeal processes. These include the right to:

- Be advised of and understand any policies or rules that apply to their conduct in their role as a patient, including expectations regarding compliance with instructions from their health-care team, provision of accurate personal medical information to caregivers, notification of appointment cancellations, and other patient responsibilities, as specified by the provider;
- Obtain complete and detailed information concerning the costs of their care. Patients have the right to itemized listings, as well as total charges, for the services they have received. Patients have the right to an explanation of the charges for any and all items they do not understand;
- Understand what, if any, third-party payors have responsibility for any portion of their bills, as well as any co-payments, deductibles, or non-covered services for which the patient may be responsible;
- Obtain information on how to receive assistance in paying their bills, including referrals to programs for which the patient may be eligible;
- Be advised of any complaint, grievance, or appeal processes available to them related to their care or payment for services.

Patient responsibilities

Post-critical trauma care patients of this facility, including adults, children, and the parents or guardians of children who are patients, have the following responsibilities:

- 1. Patients have the responsibility to provide, to the best of their ability, full and complete information concerning matters related to their health, including the responsibility to:**

 - Inform providers and/or caregivers of their past medical history, current diagnoses and/or symptoms, treatment plans developed by other providers, current and past medications, past hospitalizations, and other information related to their care and treatment;
 - Tell their providers of any changes to their medical condition, adverse reactions to treatment or medications, and changes to contact information, including phone numbers and addresses.
- 2. Patients have the responsibility to follow through with agreed upon plans of treatment, including scheduled appointments and self-care, including the responsibility to:**

 - Follow the instructions and read or have read and explained to them educational materials, special instructions, or self-care plans provided by the health-care team to ensure the best possible treatment outcomes;
 - Inform their providers, and ask questions if they are uncertain or not clear, regarding any aspect of their health care, including planned treatment and/or follow-up regimens, medication dosages and schedules, or instructions from physicians, nurses, or other caregivers;
 - Attend follow-up medical appointments, inform provider offices in a timely manner if there is a need to cancel an appointment, and reschedule appointments promptly;
 - Understand that, if they refuse treatment or do not follow the agreed upon treatment plan, they assume responsibility for outcomes resulting from their choices;
 - Inform their caregivers or health-care team of non-medical concerns related to their diagnosis and treatment, including those of an emotional, psychological, spiritual, or family-related nature, so appropriate referrals can be made to address concerns promptly.
- 3. Patients have the responsibility to meet the financial obligations of their health-care treatment, including the responsibility to:**

 - Understand and/or ask questions concerning the costs of their care and to ask specific and detailed questions regarding their provider bills and any third party coverage;
 - Pay their providers promptly and to provide information to the provider or insurer/third party as required or requested to facilitate coordination and payment of benefits;
 - Advise providers and insurers/third parties of changes to employment, addresses, phone numbers, and other information used to identify or contact patients.
- 4. Patients have the responsibility to demonstrate respect and dignity to other patients and health-care staff in the environment where care is provided, including the responsibility to:**

 - Be considerate of others in the health-care setting, including being polite and respectful, ensuring appropriate behavior by their guests, assisting to control unnecessary noise, distractions, and prohibited activities, such as smoking, and honoring the rights of others in the health care setting;
 - Be respectful of the facility's property and the property of other patients.
- 5. Patients have the responsibility to follow the rules, regulations, and policies of their health-care setting, as well as for knowing their rights in the setting, including the responsibility to:**

 - Follow facility rules concerning patient conduct and to ask questions regarding policies that they do not understand. Additionally, patients have the responsibility to limit the number of their visitors, per the facility's policy, and, to the best of their ability, ensure their visitors adhere to facility rules and regulations;
 - Know and understand their rights concerning care and conduct in the facility and to follow the facility's administrative process for addressing concerns about their rights.

Implementation

Implementation of a strategy to adopt, endorse, and promote a Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio should take the following steps:

- 1. The Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio* should be endorsed and promoted through legislative action (e.g., joint House and Senate resolution).
2. The Ohio Association of Rehabilitation Facilities (OARF), the Ohio Hospital Association, the Ohio Department of Health, the Ohio Department of Public Safety, Emergency Medical Services, the Ohio Department of Job & Family Services, the Ohio Department of Aging, the Ohio Bureau of Workers' Compensation, the Ohio Chapter Committee on Trauma of the American College of Surgeons, and others as appropriate, should collaborate to promote and implement the following initiatives:

 - Encourage facilities that provide post-critical trauma care to review their existing patient bills of rights with an eye toward including rights that specifically reflect trauma care principles as expressed in the commission's report. The commission recommends its bill of rights be promoted as a model rather than a mandate, with a preference that existing structures be used to ensure patient-focused environments that foster quality outcomes. Further, the commission recommends the stakeholders identified above communicate to regulatory bodies, such as the Commission for Accreditation of Rehabilitation Facilities (CARF), that inclusion of trauma-related rights in a facility's patient bill of rights become part of the accreditation review process.
 - Develop and lead an awareness campaign that publicizes and promotes the *Model Patient Bill of Rights and Responsibilities* to educate facilities and their caregivers on the expectations, standards, and benefits associated with establishing an environment that encourages openness, teamwork, and mutual respect.
 - Develop and implement a best practices program to publicly recognize and reward facilities and caregivers who demonstrate exemplary effort in providing post-critical trauma care to trauma patients in Ohio, with particular emphasis on innovative initiatives that reflect productive and successful caregiver-family partnerships.

Legislative support

Representatives of the Post-critical Trauma Care Commission, including the chief executives of the state agencies named in H.B. 138, will impress upon the Ohio General Assembly members the importance of formalizing a *Model Patient Bill of Rights and Responsibilities for Trauma Patients Receiving Post-critical Trauma Care in Ohio*. The commission will stress its proposed model be promoted and supported through a joint resolution of the House and Senate or some other legislative vehicle that underscores the importance of the principles contained within the model. Should the leadership of the General Assembly be so inclined, they may also sponsor legislation that would require any facility providing care specific to this population include as part of their operating procedures the proposed model bill of rights and responsibilities or a similar credo that incorporates the same principles. Although the commission does not at this time recommend this specific model be mandated for use by facilities, an eventual developmental step may be introducing legislation that would require facilities providing care to this population to

adopt and incorporate into their operating procedures and existing bills of rights language that clearly delineates and specifically protects the rights of post-critical trauma care patients. The commission does not anticipate that this would require a significant amount of funding. However, establishing a specific source of funds for this purpose in the Ohio Department of Health would elevate its profile and signal to the public and their elected representatives the importance attached to it.

Accrediting body support

The commission recommends discussions ensue with representatives of the major accrediting bodies for facilities that serve trauma patients receiving post-critical trauma care regarding patient rights-related accreditation requirements. Information sharing with CARF, the Ohio chapter of the American College of Surgeons, the Ohio Hospital Association, the Ohio Health Care Association, and others as appropriate, could focus on incorporating these principles in the oversight and accrediting activities and standards maintained and enforced by these organizations. Additionally, specific strategies for regular review and feedback for facility practices related to patient and family involvement could be an ongoing topic of discussion. The commission believes open and visible discussion of these issues, as well as their elevation to a place of importance at least equal to those of a clinical or operational nature, would contribute to the potential for improved patient outcomes, as well as an enhanced quality of life for patients and providers.

Awareness campaign

Patients receive post-critical trauma care in a variety of settings throughout Ohio. Once a patient has received initial treatment at a designated trauma center, there are numerous options for the next phases of care. Patients may receive acute rehabilitation services through an inpatient facility (hospital, nursing or long-term care facility, stand-alone rehabilitation facility, etc.) or may be referred to an outpatient rehabilitation setting (vocational rehabilitation, sports medicine, etc.). It is the commission’s contention the concepts and principles of the Model Patient Bill of Rights and Responsibilities are equally applicable to any facility that provides care for this vulnerable population. Therefore, the commission recommends the previously identified stakeholders collaborate to undertake a public awareness campaign targeted toward the promotion of the model bill of rights and best practices related to the demonstration of patient and family-centered principles. Promotional activities could include direct mailings to providers that would include the commission’s vision and goals, as well as a copy of the model bill of rights; references to established Web sites, including the resource locator, the long-term care consumer guide, and others; and examples of best practices of facilities in Ohio that emphasize collaborative, team-oriented, and respectful treatment of individuals coping with the ongoing challenges of trauma rehabilitation.

Best practices

The commission recommends the previously identified stakeholders, in collaboration with interested organizations, agencies, and individuals, establish a formal mechanism to recognize and publicize best practices demonstrated by post-critical trauma care providers throughout Ohio. Incentives and possibilities for reward are as broad as the imagination. Public acknowledgment and praise for creative use of the model bill of rights, for example, is just one jumping-off point for a variety of strategies and initiatives that could be advertised and promoted throughout the industry and to the public. The commission believes bringing to the forefront of the public agenda positive and ongoing attention concerning challenges and opportunities facing trauma patients will contribute to meaningful forces of change and empowerment.

"...the recommendation to develop a service locator fits well with our No Wrong Door project..."

Joan W. Lawrence
Director, Ohio Department of Aging

REHABILITATION SERVICE LOCATOR

Recommendation: A rehabilitation service locator should be created and maintained to allow patients, their families, and acute-care providers to identify sources of needed follow-up rehabilitation services and compare salient characteristics of available providers.

Vision

The intent of the locator service is to assist trauma patients and their families to identify and select prescribed discharge services that meet their needs.

Description of the problem

Trauma patients, family members, and health-care professionals lack comprehensive information about health-care services (medical and therapeutic) available in Ohio to treat trauma patients after discharge from the critical/acute care hospital setting. Trauma patients' medical and therapy needs post discharge can be varied and complex depending on the severity of the injury. Often hospital discharge planning falls short of appropriately matching the trauma patient's needs with the most appropriate and best quality health-care provider. Health-care services frequently change, which poses a challenge to health-care professionals to know all the service options available (based on quality and location). There is no comprehensive listing of resources for professionals or consumers regarding service availability. A rehabilitation service locator provides a comprehensive service listing. The locator allows the user to conduct a self-directed search of the most appropriate service based on their post-acute needs. Services identified in the locator are intended to assist patients throughout the continuum from pediatrics through adulthood to geriatrics.

The service locator concept was developed to address the Post-critical Trauma Care Commission's mission. The service locator will help families and professionals identify services in a specific geographic location and match this to their service needs. Each facility listed in the service locator will identify the funding they accept. There is also the possibility to link to sites/contacts similar to MedAssist Inc., which is a free service for patients to qualify for various funding sources. Companies such as this will assist patients in obtaining Medicaid, Bureau of Children with Medical Handicaps (BCMh), charitable services or other types of services. They have a mission to assist uninsured patients through the often difficult and confusing process of applying for public assistance to satisfy their obligation to the medical provider. The locator database will gather various data points that address quality, such as accreditation, outcomes, and patient satisfaction. If each patient is matched appropriately with the right facility, we would anticipate the cost effectiveness and quality aspects of the mission are met.

The overriding principle of the service locator is to provide information regarding quality health-care service availability and enhancing consumer choice. The service locator will enhance and, in some cases, facilitate the transfer decision-making process from acute care to the next appropriate level of care. The locator can be Web-based and have a user-friendly look-up function or search capability. The user could input specific information about the patient together with the patient's needs and, through the

search function, could find compatible service providers that meet the patient’s specifications. Although the specific services categories maintained on the locator may change as the system matures, it is recommended the following services be included initially: location, demographics, years of operation, types of services offered, types of professionals available, funding accepted, patient characteristics, accreditations, admission/discharge criteria, outcomes, linkages to consumer guides (e.g., a guide to finding the right rehabilitation facility).

The purpose of the rehabilitation service locator is to provide a comprehensive tool of service availability. To bridge the gap between the trauma patient, family and caregivers with health-care professionals it is proposed that a Web-based rehabilitation service locator be created. Trauma patients and their families, as well as health-care providers, can use this locator service (e.g., discharge planners, social workers, physicians, case managers and insurers). Similar in principle to the Ohio Long-Term Care Consumer Guide at www.ltcoho.org, which assists consumers and professionals in identifying long-term nursing services, the rehabilitation service locator would be designed to meet the trauma patient’s specific needs.

Benefits of the rehabilitation service locator are:

- Trauma patients and their families will be able to access up-to-date information regarding the availability of post-acute health-care services that might otherwise be unknown;
- Health-care providers (discharge planners, social workers, physicians, case managers and insurers) will be able to access up-to-date information regarding the availability of post-critical/acute health-care services that might otherwise be unknown;
- The Web-based locator can be populated and updated easily as facility information changes.
- The Web-based locator can be accessed easily from the home or office;
- Standardization of facility services and detail will provide comparison opportunity;
- Trauma patients will be more likely to receive quality post-critical/acute services in their communities;
- Smaller facilities will be able to market their services appropriately to a larger audience;
- Funding for development and maintenance will be absorbed by contributing facilities;
- Facilities will be more likely to update their individual information;
- The opportunity for consumer and insurer funding comparisons will be improved.

Proposed strategies

Goal

The goal of the Rehabilitation Service Locator is to promote patient and caregiver choice for post-acute discharge services.

Principles

1. The Rehabilitation Service Locator Web site should be developed to house comprehensive information about Ohio’s inpatient and outpatient rehabilitation services.
2. The Rehabilitation Service Locator Web site should be designed to provide users with information regarding facilities and the services they offer (e.g., location, demographics, services offered, professionals available, funding accepted, patient characteristics, accreditation, admission criteria and outcomes).

3. The locator’s target population should be Ohio trauma patients and their families; however it should be available for use by other consumers and health-care professionals in their search for inpatient and outpatient rehabilitation services.
4. Locator information should be updated routinely to maintain its accuracy, and links should be provided to related Web sites (e.g., the Brain Injury Association of Ohio).

Implementation

1. Create Rehabilitation Service Locator Web site: It would be ideal to piggyback with the long-term care Web site locator; however, may need to consider the trauma system’s Web site location, if the cost of conformity to the existing long-term care locator is too significant.
 - a. Develop specific data points for the service locator.
 - b. Develop plan for submission: The locator information is supplied by facilities and providers voluntarily, using standardized definitions and data formats, and funded by a nominal fee paid by submitting facilities.
 - c. Initial mailing of a letter introducing the service locator to various inpatient and outpatient rehabilitation providers in Ohio. Enclosed will be the data collection form with the needed information.
 - d. Developing the plan for ongoing maintenance — possibly through annual subscription fees paid by health-care providers to be listed on the Web site.
 - e. Once created, a major initiative will involve marketing the locator to the potential users. A full-scale awareness campaign will be needed to reach health-care providers, agencies that serve this population, the trauma patients and their families.
2. Create a satisfaction measure: A final step of implementation is to create a measure of the locator’s effectiveness that can be used to justify its existence and secure ongoing funding but mostly to tweak its functionality for the user. A defined set of criteria should be developed that includes utilization (e.g., number of hits) and user satisfaction. Contract with an outside service/company to evaluate customer satisfaction results uniformly. The goal is to display results that can be compared evenly across facilities, similar to the insurance companies and LTC Web site.
3. Create a multidisciplinary group: Although the Rehabilitation Service Locator recommendations list a multitude of service types for inclusion on the locator, it is felt that a multidisciplinary group is needed to further analyze and develop standard definitions for service types using published national references (e.g., the *Brain Injury Association of America Provider Directory*). It will be important that facilities included in the locator abide by the standard definitions when describing their services so the user can make valid comparisons and decisions.

"The report does offer a sound roadmap for Ohio to follow as it constructs a comprehensive system of post-critical care for Ohioans who suffered traumatic injuries."

John M. Connelly
Executive director, State of Ohio
Rehabilitation Services Commission

A STATEWIDE SYSTEM OF RESOURCE FACILITATION

Recommendation: To address the lifetime needs of Ohio citizens with disability due to injury, a resource facilitation system should be established to provide access to information and services, increase the capacity for community support and, as needed, coordinate services for individuals and their families. The resource facilitation system should model the one the Brain Injury Association of Ohio is developing, but be expanded to include all causes of disability due to injury and extended to all regions of the state.

Vision

Ohio citizens with long-term needs due to traumatic injury, as well as professionals who work with them, should have easy access to the best available knowledge and resources about injury and its effects. A statewide system of resource facilitation (1) should be in place to provide a comprehensive yet economic approach to promoting informed choices. Knowledge of the resource facilitation system and its use should be widespread, allowing timely use of its services.

Description of the problem

Children and adults with long-term needs due to trauma require assistance from knowledgeable and trained individuals to help them identify, obtain and maintain the services and supports they require to maximize recovery and reintegration into home and community life. Assistance is particularly critical for those individuals who do not fit within eligibility criteria established for the major human service agencies. In fact, most of the state agencies that comprise today's human service system were established before large numbers of individuals began surviving significant and debilitating traumatic injuries.

Though the make-up of the disability population has changed over the last quarter of a century — with the proportion of individuals with long-term needs due to trauma on the rise — the service system has not responded to these population shifts. A conclusion from the 1995 report by the National Conference of State Legislators titled, What Legislators Need to Know About Traumatic Brain Injury, (2) applies to others with long-term needs due to traumatic injury:

These people have diverse needs that make it difficult for them to fit easily into existing service systems. State delivery systems tend to be based on diagnosis (developmental disabilities, mental illness, special health-care needs) or on financial need, such as Medicaid. These services are not always available or appropriate for people with brain injuries. Federal funding streams have shaped state services, making it difficult to restructure or expand existing services . . ." (2)

Unquestionably the fragmented, bureaucratic nature of the current human service system presents a significant obstacle to accessing needed assistance and supports for individuals with long-term needs due to trauma. For those with cognitive deficits following trauma, the very nature of their disability

compounds their difficulty in working through the bureaucratic maze to acquire assistance that may be available to them. Additionally, their need for information, resource coordination and problem-solving assistance may persist for years following their injury. For example, of those using the Brain Injury Association of Ohio's Helpline and Community Support Network programs during 2002, 16 percent were three months or less post injury, 20 percent were between four and 12 months post injury, 21 percent were between 13 and 36 months post injury, 27 percent were between 37 months and 10 years post injury and 16 percent were more than 11 years post injury. (6)

Without assistance, individuals with long-term needs associated with trauma experience significant barriers and delays in finding and accessing services available to them through the current service system. Failure to obtain needed services and supports in a timely and coordinated fashion, in turn, puts them at greater risks for common secondary complications, such as depression, substance abuse, and long-term unemployment, as well as other negative outcomes.

In the 1989 Interagency Head Injury Task Force Report (3) issued by the U.S. Department of Health and Human Services, "Encouraging the use of 'care manager' systems that operate throughout all stages of care, from acute care through community reentry" was listed as an implementation strategy to achieve a national agenda with six key recommendations. In 1990, Ohio enacted legislation (Amended Substitute H.B. 594) (4) to create the Head Injury Program and its Advisory Council in the Ohio Department of Health. (The program has since been transferred to the Ohio Rehabilitation Services Commission and is known as the Brain Injury Program and Advisory Committee.) Three of the program's eight legislated purposes pertain to facilitating access to information and services:

- Identify existing services in this state to assist survivors of head injury and their families;
- Promote service coordination for survivors of head injury and their families;
- Explore options for delivering case management services to residents of this state who are survivors of head injury.

The on-going need for assistance accessing resources was validated through the National Institutes of Health's Rehabilitation of Persons with Traumatic Brain Injury Consensus Statement (5) synthesized from testimony provided at an Oct. 26 through 28, 1998, Consensus Development Conference. It states, "Community-based, non-medical services should be components of the extended care and rehabilitation available to persons with traumatic brain injury. These include but are not necessarily limited to "...case manager programs to support practical life skill redevelopment and to help navigate through the public assistance and medical-rehabilitative care systems..." (5)

The need to assist individuals with spinal cord injuries is also apparent from statements and recommendations stemming from several meetings sponsored by the Centers for Disease Control and Prevention. The first, convened in November 1999, was titled, "Future Directions for Community-Based Spinal Cord Injury Program Research and Development." Held in Atlanta, approximately 20 spinal cord injury researchers and public health officials reviewed community-based methods for preventing secondary conditions of spinal cord injury. At a March 2001 follow-up meeting to further develop the national research agenda, interagency representatives *"discussed the progression of health needs following spinal cord injury and identified gaps in current service delivery for persons with spinal cord injury, developed an inventory of activities being conducted across federal agencies and explored a coordinated response to better serve this population."* (6) (Italics added.)

A system of resource facilitation

A resource facilitation system should be a comprehensive, coordinated program with three basic functions: 1) provide timely and up-to-date information to individuals, families, providers, and the public; 2) assist individuals who have been injured in obtaining available services and supports to maximize their health, independence, and integration into family, work, and community; and 3) build the local community's capacity to address their needs. Three program components offer graduated levels of assistance matching the degree of help required at a given point in time:

- A toll-free, statewide information and resource (I&R) telephone service;
- Regional offices addressing local needs and resources in all 88 Ohio counties;
- Individual service coordination, as needed, for more complex needs.

The I&R telephone service is designed to be the primary point of entry into the system, and represents the least intensive level of assistance in the program continuum. Those with greater resource facilitation needs are linked to regional offices, or if their needs are intensive and on-going, to programs offering the assistance of individualized service coordination. As the intensity of individuals' needs for resource facilitation services increase or decrease, they move up or down the program continuum to obtain the appropriate level of assistance. Individuals may drop out of the system entirely if their resource facilitation needs are met, and on-going assistance is no longer required, with the assurance they can return for help at a later time, should it become necessary. Core administrative, information management and communication services underpin these three programmatic components, promoting the development of an integrated, efficient and effective system.

The Brain Injury Association of Ohio (BIA-Ohio) has developed and operates two of the three program components of a resource facilitation system. BIA-Ohio operates the toll-free Helpline, and six of 15 proposed Community Support Network offices. BIA-Ohio also provides Infrastructure Support Functions. (See the schematic at the end of this chapter).

BIA-Ohio’s system has been developed incrementally over a period of almost 15 years as advocates have been able to acquire funding. Financial support has come primarily from grants awarded by the Brain Injury Advisory Committee at the Ohio Rehabilitation Services Commission, drawing upon state appropriations and federal match through the U.S. departments of Education, and Health and Human Services. BIA-Ohio has acquired supplemental support to help sustain and/or further develop the system through private foundation awards, as well as contributions from individuals and corporations. Donated office space and miscellaneous support services offered by the agencies that house the Community Support Network programs also contribute to their sustainability and promote cross-agency communication and collaboration. However, funding fluctuations associated with time-limited grant awards have made further development and stabilization of the system difficult.

The third programmatic component of resource facilitation — individual resource coordination — offers the most intensive assistance, but is also the least developed in Ohio. Only a few programs provide specialized individual service coordination for persons with brain injury. Though there is a demand for this type of specialized assistance, funding to sustain programs is lacking and, where it can be cobbled together, is unstable for any significant duration. Compounding the problem is the fact that, though some individuals with long-term needs due to trauma are eligible for case-management services provided through other systems, the personnel within those systems typically are unprepared to recognize or cope with their special needs. While training and certain accommodations could remedy this situation, no systematic approach has been developed to do so.

Proposed strategy

Goal

Extend the resource facilitation system developed for individuals with brain injury so information, services and supports are available to all Ohio citizens who experience disability as a result of traumatic injury.

Principles

The envisioned resource facilitation system should:

- Be integrated and comprehensive, not duplicative;
- Respect individual choice and promote self-direction;
- Encourage consumer and family involvement;
- Value home and community-based supports so individuals may take their places in the most integrated settings;
- Promote inclusiveness and cultural sensitivity in terms of outreach, program design and implementation.

Implementation

This proposal for development of a resource facilitation system for persons with a traumatic injury responds to the director of health’s charge and the Post-critical Trauma Care Commission’s purposes as identified in H.B. 138 by:

- Promoting accessibility to existing services and supports related to individuals’ physical, psychological, vocational rehabilitation, re-employment and social support needs;
- Capitalizing on an established, well-developed and nationally recognized conceptual framework for the system’s design and quality assurance mechanisms;
- Saving costs by building on a partially developed system that has been phased in over a 15-year period;
- Promoting efficiency and program cohesiveness through cross-system communication, collaboration and training;
- Encouraging self-direction and cost-efficiency through a three-tiered system that promotes choice and matches individuals’ level of need to the appropriate level of assistance.

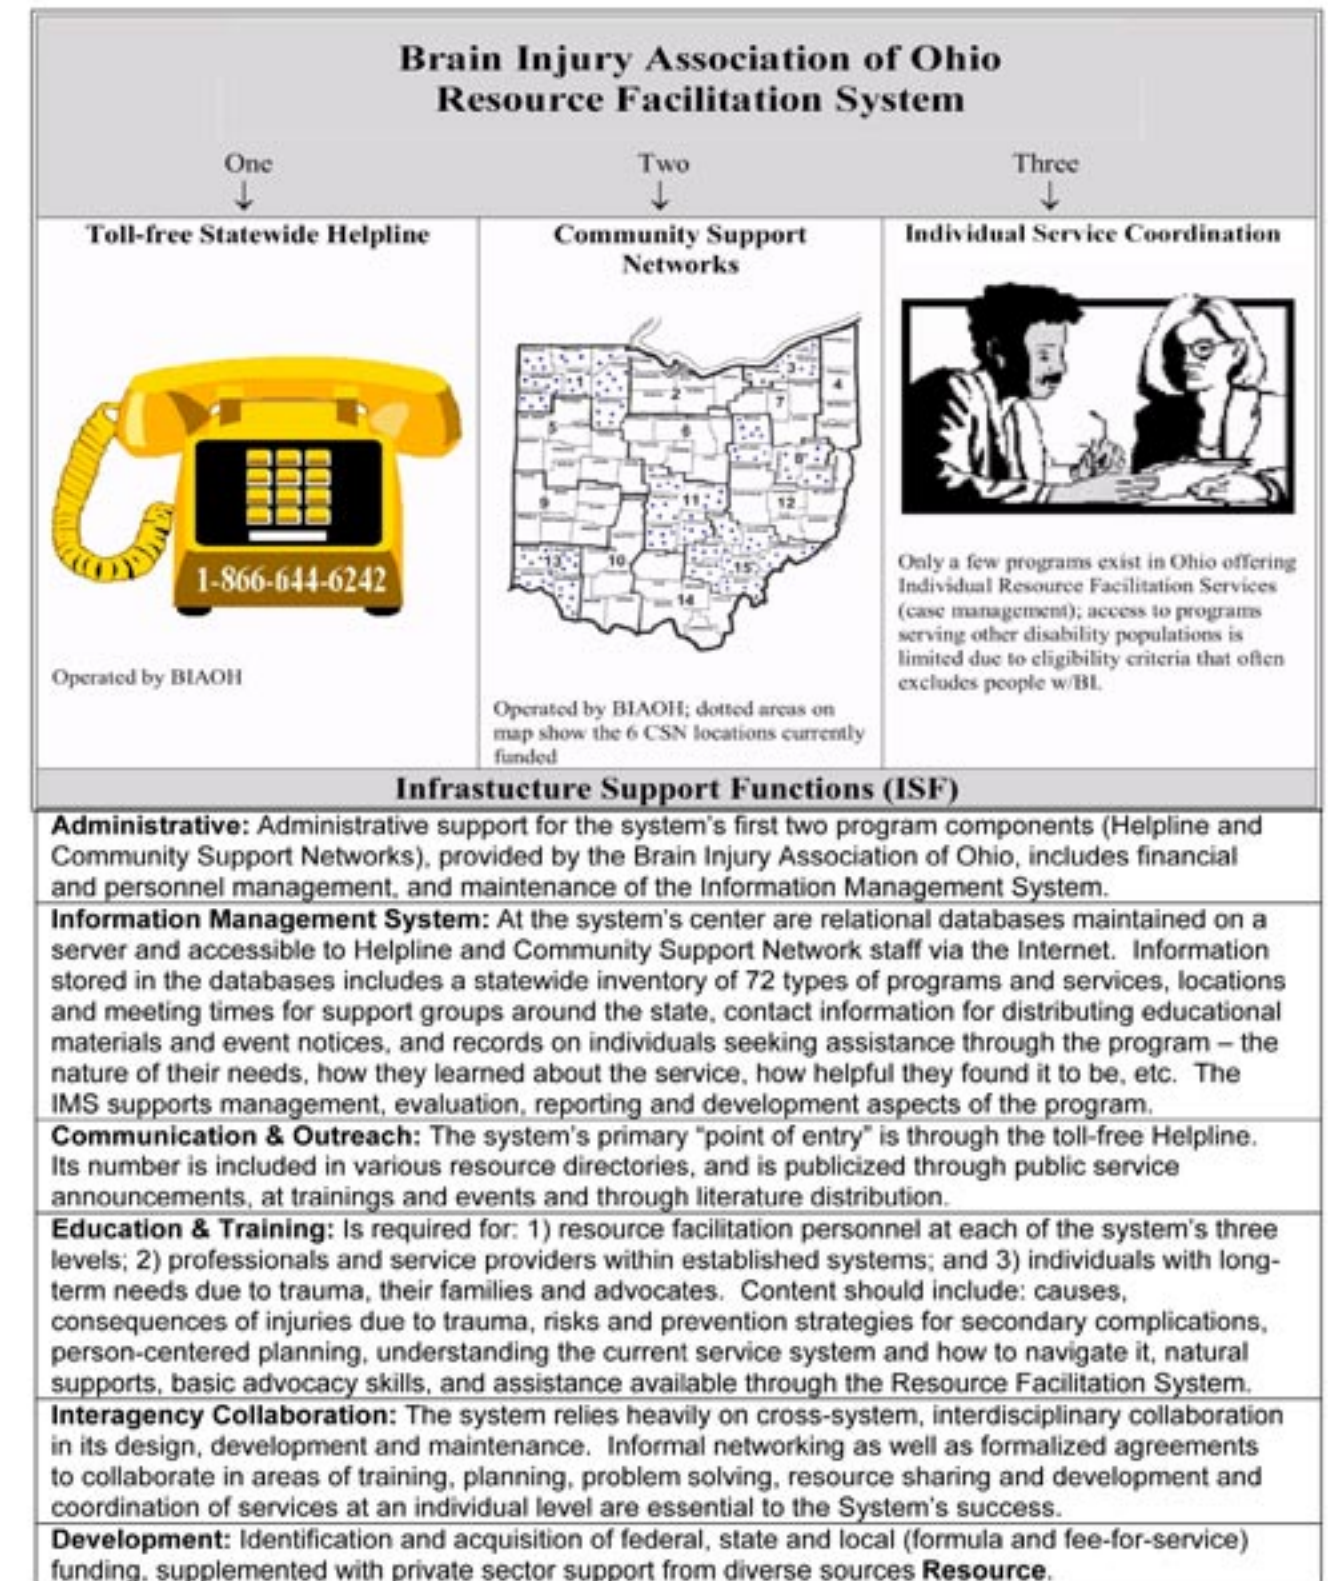

The following steps are suggested for implementation of a resource facilitation system for Ohio citizens who incurred traumatic injury.

- 1) Convene a stakeholder’s workgroup to expand the BIA-Ohio system’s design to accommodate the needs of all populations with long-term needs due to injury, and to promote cross-agency buy-in and consumer involvement.
- 2) Draw on expertise and leadership from the Ohio departments of Health, Aging, Jobs and Family Services, and Public Safety, along with the Centers for Disease Control and Prevention, the Health Resources and Services Administration, and The Ohio State University’s Traumatic Brain Injury Model System, (7) to guide the workgroup’s efforts and synchronize them with national trends and initiatives.
- 3) Establish incremental achievement benchmarks, along with corresponding outcome, quality assurance measures, and reporting protocols, to ensure forward progression leading to the system’s full implementation.
- 4) Develop memorandums of agreement outlining state-agency roles and actions to contribute to the system’s efficiency and effectiveness. Issues addressed in the memorandums may include, but not necessarily be limited to, activating the current system to better serve individuals with long-term needs due to trauma through personnel training, program modifications, outreach, joint initiatives, and resource identification and development.
- 5) Build on and fortify those components and infrastructure of the proposed resource facilitation system thus far developed, so they may serve as a starting point for the system’s full implementation.

- 6) Monitor and take necessary action to integrate the long-term needs of individuals with disability due to trauma into contemporaneous system change initiatives. Such opportunities may include: the New Freedom Initiative/Ohio Access and related systems change grants, Ticket to Work and Work Incentives Improvement Act of 1999, and Ohio's newly adopted rules for implementation of Individuals with Disabilities Education Act.
- 7) Develop awareness campaigns, targeting the general public and personnel within service providing agencies to promote knowledge and use of the resource facilitation system. Campaigns should address the growing number of individuals who experience disability due to traumatic injury and provide contact information to access the resource facilitation system.
- 8) Ensure individuals who staff Ohio's resource facilitation system are knowledgeable about challenges associated with disabilities due to trauma and assistance offered through the complex service delivery system.
- 9) Adhere to values promoting development of a culturally sensitive resource facilitation system that is holistic, person and family centered, and encourages choice, self direction, and availability of community-based supports.

The OVC Model Systems grant is administered through the Department of Physical Medicine at The Ohio State University; its principal investigator is John Corrigan, Ph.D. Model systems grants primarily focus on: 1) developing and demonstrating a model system of care for persons with traumatic brain injury, stressing continuity and comprehensiveness of care; and 2) maintaining a standardized national database for innovative analyses of traumatic brain injury treatment and outcomes.

"...Ohio must exercise leadership in addressing over time the continuing challenges facing post-critical trauma care patients. This is especially true for children, since they face obstacles in achieving educational success and in recovering from devastating injuries so early in life."

Andrew Carter
President,
Ohio Children's Hospitals Association

MEETING THE EDUCATIONAL NEEDS OF CHILDREN WHO HAVE HAD TRAUMATIC INJURIES

Recommendation: To ensure the most appropriate educational experience for children who have had traumatic injuries, hospital and school personnel need additional training on issues for educational re-entry. Classroom teachers need access to resources about reintegrating these students; and mechanisms are needed to ensure providers, internal and external to the school system, take a coordinated approach in providing care. More research is needed on educating students who have incurred traumatic injuries.

Vision

Educational services should be affordable and accessible, and should ensure high educational expectations and achievement for children, including those who have experienced traumatic injuries.

Description of the problem

Educating children with traumatic injury can be a complex task for the educational system when the child is discharged from the hospital or rehabilitation setting. The child brings a medical label of traumatic injury with them to the school system, and the local educational agency (LEA) is responsible for providing appropriate reentry and educational services for the child.

At this point, confusion and/or frustration may occur for the patient, the family, and the educational agency on how to provide appropriate educational services since post-critical trauma or traumatic injury is not a disability category listed under the *Individuals with Disabilities Education Act* (IDEA). Traumatic injury, as defined by H.B. 138, can include such injuries as nerve or spinal cord injury, burns, vascular injury, limb amputation, internal organ injury, bone fractures, or brain injury.

Ensuring a seamless system for children with traumatic injury transitioning from the hospital to home, school, work, and community living is one area of concern. Transition and educational intervention requires a multidimensional approach and the use of a variety of strategies and resource materials. Although educators are providing services to meet the needs of children with traumatic injury, programs have not been developed adequately to meet the educational needs of these children. The solution is to provide training and support for teachers, therapists, and staff in the schools.

Another area of concern is the lack of knowledge and understanding of what is available in the LEAs under IDEA to meet the needs of the child with traumatic injury. IDEA provides the avenue for the educational agencies to evaluate the children to determine the educational and related service needs. In addition, IDEA requires documentation of services to meet the child's needs with a free appropriate public

education (FAPE) in the least restrictive environment (LRE). Under IDEA, there is not a disability category of traumatic injury. However, LEAs can provide services to children with traumatic injury(ies) identified as:

- Other health impaired;
- Orthopedically impaired;
- Multiple disabled;
- Traumatic brain injury;
- Emotional disturbance;
- Cognitive disabled.

The solution for this concern is not only training but ensuring a variety of methods for disseminating information pertaining to FAPE.

Another area of concern is the lack of controlled empirical studies regarding educational reintegration. There are discrepancies between hospital numbers of children treated with post-critical trauma and the lower incidence and prevalence of children receiving FAPE, as identified under IDEA in the educational system.

In addition, few empirical studies have been conducted to validate specific special education intervention to ensure children with traumatic injury are successful in school. The solution would be to conduct the research with controlled studies over a period of time.

The fourth area of concern is to ensure children with traumatic injury who are receiving services from a number of different agencies (i.e., medical, educational, mental health, mental retardation, drug, alcohol, and social) do not slip through the cracks of the system. Many times, it is not clear who will accept management responsibility for the child. The solution will require a system change on the part of a variety of agencies.

Definition of terms

Cognitive disability (mental retardation) - [3301-51-01(F)(3)(b)] Means significantly subaverage general intellectual functioning, existing concurrently with deficits in adaptive behavior and manifested during the developmental period, which adversely affects a child’s educational performance. (i) Significantly subaverage general intellectual functioning refers to an intelligence quotient of 70 or below as determined through a measure of cognitive functioning administered by a school psychologist or a qualified psychologist using a test designed for individual administration. Based on a standard error of measurement and clinical judgment, a child may be determined to have significant subaverage general intellectual functioning with an intelligence quotient not to exceed 75. (ii) Deficits in adaptive behavior means deficits in two or more applicable skill areas occurring within the context of the child’s environments

and typical of the child’s chronological age peers. (iii) A child who was identified by an Ohio school district as having a developmental handicap as of the effective date of this rule shall be considered a child with a disability if the child continues to meet the definition for developmental handicap set forth under *Rules for the Education of Handicapped Children*, effective 1982, and shall be eligible to receive special education and related services in accordance with *Operating Standards for Ohio’s Schools Serving Children with Disabilities*, effective July 1, 2002.

Emotional disturbance - [3301-51-03(F)(3)(e)] Means a condition exhibiting one or more of the following characteristics over a long period of time and to a marked degree that adversely affects a child’s educational performance: (i) An inability to learn that cannot be explained by intellectual, sensory, or health factors; (ii) An inability to build or maintain satisfactory interpersonal relationships with peers and teachers; (iii) Inappropriate types of behavior or feelings under normal circumstances; (iv) A general pervasive mood of unhappiness or depression; (v) A tendency to develop physical symptoms or fears associated with personal or school problems. The term includes schizophrenia. The term does not apply to children who are socially maladjusted, unless it is determined they have an emotional disturbance.

Individuals with Disabilities Education Act (IDEA) - This is the federal law that supports special education and related service programming for children and youth with disabilities. Formerly know as the Education for the Handicapped Act (EHA), IDEA has its roots in Public Law 94-142 (the Education of All Handicapped Children Act), which originally was enacted in 1975 to establish grants to states for educating children with disabilities.

Amendments structure IDEA into four parts: part A addresses general provisions; part B covers the Assistance for Education of All Children with Disabilities; part C covers Infants and Toddlers with Disabilities; and part D addresses National Activities to Improve the Education of Children with Disabilities.

IDEA requires FAPE, which includes special education and related services, be available to children and youth with disabilities in mandated age ranges.

Orthopedic impairment - [3301-51-01(f)(3)(h)] Means a severe orthopedic impairment that adversely affects a child’s educational performance. The term includes impairments caused by congenital anomaly (e.g., clubfoot, absence of some member, etc.), impairments caused by disease (e.g., poliomyelitis, bone tuberculosis, etc.), and impairments from other causes (e.g., cerebral palsy, amputations, and fractures or burns that cause contractures).

Other health impairment - [3301-51-01(F)(3)(i)] Means having limited strength, vitality or alertness, including a heightened alertness to environmental stimuli, that results in limited alertness to the educational environment. This condition is due to chronic or acute health problems, such as asthma, attention deficit disorder or attention deficit hyperactivity disorder, diabetes, epilepsy, a heart condition, hemophilia, lead poisoning, leukemia, nephritis, rheumatic fever, and sickle cell anemia, and adversely affects a child’s educational performance.

Paraprofessional services - [3301-51-01(CC)] According to *Operating Standards for Ohio's Schools Serving Children with Disabilities*, paraprofessional services include services provided by school, county board of mental retardation and developmental disabilities, and other educational agency employees who are trained adequately to assist in the provision of special education and related services to children with disabilities. Paraprofessionals work under the supervision of teachers, intervention specialists, and/or related service providers. Other titles used to identify these service providers include teacher assistants, educational aides, and job coaches.

Traumatic brain injury - [3301-51-01(F)(3)(I)] According to *Operating Standards for Ohio's Schools Serving Children with Disabilities*, traumatic brain injury means an acquired injury to the brain caused by an external physical force or by other medical conditions, including but not limited to stroke, anoxia, infectious disease, aneurysm, brain tumors and neurological insults resulting from medical or surgical treatments. The injury results in total or partial functional disability or psychosocial impairment or both, which adversely affects a child's educational performance. The term applies to open or closed head injuries, as well as to other medical conditions that result in acquired brain injuries. Injuries result in impairments in one or more areas such as cognition, language, memory, attention, reasoning, abstract thinking, judgment, problem-solving, sensory, perceptual and motor abilities, psychosocial behavior, physical functions, information process and speech. The term does not apply to brain injuries that are congenital or degenerative, or to brain injuries induced by birth trauma.

Proposed strategies and implementation

Strategy 1: Training and support is needed for teachers, therapists, and staff in the LEAs

Hospital and school personnel should receive training to plan for school reintegration and transitions. Presently, there are not enough personnel who have an understanding of the unique behaviors and educational challenges of these children or who know what teaching strategies can be applied to assist learning.

Implementation:

- Mandate professional development
 - Pre-service: When working with universities, include information about post-critical trauma education (special education and regular education) courses and in allied health careers.
 - In-service: Require educational agency staff to receive quality training in the special needs of this population.
- Provide technical assistance programs for ongoing instructional assistance.
- Develop teacher-based competencies at the national and state levels.
- Ensure teachers have access to personnel with a specialization in post-critical trauma; investigate through cost-benefit analysis the potential benefit of such teacher support.
- Investigate the effectiveness of having trained teams available to consult in a particular area versus traditional teacher trainings.
- Ensure paraprofessionals are included in school-based training. Investigate the effectiveness of para-educator training on child outcomes.

- Parents should be informed of present and future consequences for learning and life-long living of such an injury.
- If a medical-care facility is involved, a correct diagnosis of a post-critical trauma must be noted. This information should be provided to educational agencies prior to discharging the child. One suggestion would be for hospitals to note this diagnosis in their discharge instructions.
- Agencies providing services must have a coordinated professional development effort.

Strategy 2: An organized and easily accessible system of disseminating information must be developed.

A variety of books, manuals, educational brochures, and magazine and journal articles contain information about reintegrating children with post-critical trauma into the community or students with post-critical trauma into schools, and what teaching strategies work. While these materials exist, they do not seem to be in the hands of educators who can best use them.

Implementation:

- Web sites that will assist individuals in accessing a variety of information and materials must be organized.
- Place credit-bearing courses from universities on the Internet for a broader access to training and information.
- Contact existing sources for materials/resources before placing additional research or development funds into creating training materials that presently exist and can be adapted.

Strategy 3: Conduct scientifically based research

While there are many anecdotal and well-devised application articles regarding educating this population, there are very few well-controlled empirical studies over time.

Implementation:

There are many areas of pediatric research that are pressing equally for funding. Regarding educational reintegration, two areas were determined to be critical for research:

- Incidence and prevalence: Discrepancies between hospital numbers of youth treated with post-critical trauma and special education numbers need to be clarified. Recommendations include:
 - Fund a comprehensive longitudinal study in which children with all degrees of traumatic injury are followed for many years using valid formal and informal assessment procedures to determine progress for educational need and qualitative methods to document post-injury educational experiences and quality of life.
 - Identify early predictors of long-term educational need through studies of outcome, especially in the case of children with mild to moderate injuries.
 - Include a question about head injuries and brain diseases in special education and kindergarten screenings with positive responses triggering attention to issues common in this population. In addition, follow-up research on how early identification impacts the students educational success.
- Teacher techniques: While a number of recommendations exist for strategies employed to educate children with post-critical trauma, few empirical investigations have been undertaken to validate specific special educational interventions or management practices. Research recommendations include:
 - Investigate effectiveness of educational interventions that draw from the existing body of relevant educational research.
 - Emphasize in teacher trainings and educational materials development the existing research-based teaching methodologies while highlighting the flexibility and experimental orientation often required when applying existing strategies to meet these children’s needs.
 - Educational research must meet the scientific research requirements of the no child left behind philosophy.

Strategy 4: To effectively meet the needs of children with traumatic injury, a systems change in health-care facilities and educational agencies need to occur

Transitions for children or students may require a number of agencies’ involvement (medical, educational, mental health, mental retardation, drug, alcohol, and social). Many slip through the cracks of these systems, and often it is not clear who will accept management responsibility for the case.

Implementation:

- Fund projects that will reward collaborative efforts for children or students with post-critical trauma or traumatic injury.
- Convene task force meetings of individuals who represent agencies who can make a change in policy and procedures.
- Educate policy makers about the special needs of this population and encourage them to require collaboration in agencies when providing funding for ongoing operation and special projects.

SUBSTANCE ABUSE AND TRAUMATIC INJURY

Recommendation: Organizations and agencies with an interest in minimizing the effects of substance use disorders on injury outcomes should convene to identify opportunities for improving secondary prevention of substance abuse and treatment for persons during and following trauma care.

Vision

Ohioans who have substance use disorders and incur a traumatic injury should be provided with accurate and timely information about how to reduce their dependence on alcohol and other drugs . Information on ways that have been proven effective for both reducing substance use and the risk of subsequent injury should be provided. For patients requiring formal substance abuse treatment to accomplish these ends, there should be ready access to service providers who are able to work with people with disability due to injury.

Description of the problem

Alcohol use frequently is a factor in all types of injury. Substance use has long been recognized as a major, independent risk factor in unintentional injuries, as well as intentional injuries such as assaults, homicides, and suicides. In 40 percent to 50 percent of fatal motor vehicle crashes and 25 percent to 35 percent of non-fatal crashes, at least one participant is legally intoxicated. Alcohol has been found to play a role in more than half of homicides, more than half of burns, almost half of hypothermia and frost bite cases, and 40 percent of falls. Intoxication is present in between one-quarter and one-third of individuals incurring traumatic brain or spinal cord injuries. Although the role of drugs other than alcohol in traumatic injuries has not been investigated as thoroughly, studies have shown cocaine, amphetamines, and marijuana, especially in combination with alcohol, play a significant role in traumatic injuries of all kinds.

Whether or not an individual is intoxicated at the time of injury, a significant proportion of individuals who incur injuries have histories of chronic substance use disorders. Waller (1988) conservatively estimated 20 percent to 25 percent of all patients hospitalized for injury are alcoholics or have a drinking problem. Studies of patients receiving rehabilitation for either traumatic spinal cord or brain injury have found more than half of adolescents and adults have diagnosable histories of substance use disorders (Heinemann, et al, 1988; Corrigan, 1995). Rivera, et al (1993a) found evidence of chronic alcoholism in up to three-fourths of adult trauma patients.

There are multiple ways in which alcohol and other drug use increases the risk for injury. Intoxication:

- Decreases the level of alertness;
- Impairs motor function, diminishing coordination and balance, and increasing reaction time;
- Impairs judgment, resulting in poor decision making;
- Diminishes perception and cognitive abilities;

- Increases risk taking behavior and especially including feelings of invulnerability (especially among adolescents and young adults);
- Reduces inhibitions and intensifies feelings of anger and depression;
- Is associated with increased violent behavior;

Additionally, chronic use may render a person more medically fragile, resulting in more severe injuries. Obtaining illicit drugs may place an individual in an unsafe environment. Beyond substance use being a risk factor for injury, injury is a risk factor for substance abuse. Contributing factors include:

- Self-medication for pain;
- Seeking relief of frustration resulting from changes in lifestyle due to disability;
- Feelings of entitlement due to lost abilities;
- Filling time to reduce boredom resulting from changed social roles and reduced daily structure;
- Seeking relief from loneliness or isolation frequently caused by disability.

Persons who experience one traumatic injury are at greatly increased risk for re-injury. For example, after one traumatic brain injury, a person is three times more likely to have a subsequent injury than someone in the general population. After a second injury, the relative risk for a third increases to eight times the norm (Annegers et al, 1980). Untreated alcohol and other drug use disorders play a significant role in re-injury. Rivera and colleagues (1993b) found the re-admission rate for more than 2,500 adult patients treated at a level I trauma center was 2.5 times more likely for patients who were intoxicated at their initial admission. Patients who showed physiological signs of chronic alcohol abuse were 3.5 times more likely to be re-admitted.

While alcohol and other drug use are associated highly with injury, it also has been found that an injury may provide an opportunity for intervention to change contributing behaviors. There is extensive evidence that traumatic injury creates a teachable moment that is a unique opportunity in the course of the addiction process (Gentilello et al, 1988; Reyna et al, 1985; Soderstrom and Cowley, 1987). When a patient makes a connection that the injury is a direct result of alcohol and other drug use, they become more open to accepting education or treatment, which can in turn reduce the alcohol or other drug consumption and improve the course of subsequent recovery. The impact of even brief interventions that take advantage of this opportunity can be quite dramatic (Gentilello et al, 1999). Thus, systematic screening and education have been recommended for acute treatment settings working with injured patients (Hungerford and Pollock, 2002).

Despite the potential benefits of screening and education, these activities are not carried out routinely in trauma centers. Limited resources during hospitalization, the singular focus on treating the immediate injury, and the perceived futility of making referrals for follow-up treatment all provided barriers to addressing substance abuse routinely. While there may be a greater opportunity during the course of rehabilitation to identify histories of substance use disorders, dramatically shorter lengths of stay and greater medical acuity of rehabilitation patients has reduced the attention given to issues viewed as psychosocial in nature.

Proposed strategies

Goal

Develop a structure in which the multiple agencies and organizations that serve persons with substance use disorders and traumatic injuries can meet, educate each other, identify specific opportunities and barriers, and develop a plan to address systematically the needs of this population. Given the scope of the problem, as well as the multiple issues and stakeholders involved, the structure developed should have sufficient resources to sustain a longer-term, systematic effort.

Principles

While there are many potential approaches to bringing together the stakeholders needed to achieve this goal, the chosen method should incorporate the following:

- Provide an opportunity for all involved to benefit from existing information about the scope of the problem of injury and substance use disorders, evidence-based methods for acute intervention, and the special needs and problems of accessing treatment for persons with disabilities arising from injury;
- Take advantage of the unique expertise and resources in each of the service-delivery systems working with these individuals;
- Find solutions that promote collaboration among stakeholders, including formal agreements for communication, consultation, and cooperative ventures;
- Allow adequate time and resources for evaluating impact and planning subsequent iterations to benefit from successes and failures.

Implementation

The Post-critical Care Trauma Commission believes the effects of alcohol and other drug use on injury outcomes, both human and economic, have been underestimated greatly. Substance abuse — current, previous, or resultant — complicates and often confounds trauma care and rehabilitation. Yet, it is equally evident to the commission that adequately addressing substance abuse will require an infusion of knowledge and funding resources not currently within the grasp of trauma care programs, rehabilitation providers, or the publicly funded substance abuse treatment system.

Therefore, the commission recommends further study of the barriers and opportunities for developing resources to address the following questions:

- **What is required to allow screening and intervention in acute medical settings to be implemented routinely?** Emergency departments, trauma programs, and rehabilitation units should be assisted in their capability for taking advantage of the “teachable moment” that can occur as the result of an injury.
- **What resources need to be made available to substance abuse treatment providers to improve the availability of services for individuals who have incurred disability as a result of injury?** The existing substance abuse treatment system should become an accessible and effective source of treatment for persons with disability due to injury.
- **How can projects be supported to identify and promote effective methods of integrated treatment for injured individuals who have co-occurring substance use disorders?** There appear to be significant gains, both human and economic, that could be achieved with greater attention to clinical programs to serve this population.

The commission also recommends consideration of potential stakeholders include, at a minimum, the following agencies and organizations: the state departments of Alcohol and Drug Addiction Services, Health, Public Safety; the Ohio Bureau of Workers’ Compensation; the Ohio Rehabilitation Services Commission; the American College of Surgeons Trauma Committee – Ohio Chapter; the Ohio Society of Trauma Nurse Coordinators; the Ohio Hospital Association; the Ohio Association of Emergency Medical Physicians; the Ohio Association of Rehabilitation Facilities; the Association of Ohio Childrens Hospitals; the Ohio Public Health Association; the Brain Injury Association of Ohio; the Ohio Association of County Behavioral Healthcare Authorities; and the Ohio Council of Behavioral Healthcare Providers.

THE OHIO TRAUMA FOLLOW-UP REGISTRY

Recommendation: A follow-up registry should be established to provide information about the long-term complications and outcomes for trauma-care patients. Data collection methodology should be an extension of the existing Ohio Trauma Registry and should provide information for local, regional and statewide prevention programming and health-care service planning.

Vision

Future examinations of issues and problems following critical trauma care should have the benefit of valid and reliable data from Ohio.

Description of the problem

In H.B. 138, the General Assembly created the Post-critical Trauma Care Commission and charged it “...to determine how to improve the accessibility, affordability, quality, and cost-effectiveness of post-critical adult and pediatric trauma care.” While there is considerable clinical experience and personal testimony to indicate needs persist and more systematic services are necessary, the commission determined there is little or no objective data to address questions such as:

- How many injury survivors experience long-term limitations in their day-to-day functioning?
- What kinds of injuries are more likely to result in long-term consequences?
- Do children have unique consequences of traumatic injuries? Do older adults?
- Are there services available to assist these individuals, and are they using them?
- How much do services cost, and are they effective?

Emergency medical services legislation enacted in 1992 established the authority for the Ohio Department of Public Safety to create the Ohio Trauma Registry. The registry, which became operational in 1999, is a database that contains information about all persons who have suffered an injury and are admitted to a hospital for at least 48 hours. The trauma registry provides information about the number of people in Ohio requiring trauma services, the cause and treatment of their injuries, and status at time of leaving the hospital. However, the registry does not provide information about longer-term consequences of injuries. Medical complications that persist after going home, problems that develop after hospital discharge, effects on independence in one’s home or community, difficulties in educational or vocational roles, or the impact on the individual’s family, all may be significant consequences of injury. These effects of trauma may also carry significant human and economic costs that should be considered when prioritizing prevention activities and planning service delivery systems.

BWC’s analysis of injuries that occurred in 1996 and resulted in workers’ compensation claims is included in Appendix D. The analysis allowed description of the types of services and costs, over the subsequent six years. Most remarkable was that 14 percents of the costs, and 21 percent of the services billed occurred after one year following the injury. These data support the presumption that important health-care issues occur over an extended period following injury.

Policy makers, service providers and the general public want reliable and valid data on which to base decisions regarding the effects of medical conditions, clinical interventions, and funding priorities. Lack of data about post-hospital consequences of traumatic injuries creates a significant gap in Ohio’s ability to address this major public health problem.

The target population of the proposed Ohio Trauma Follow-up Registry is defined in O.R.C. 4765 for trauma systems. The operational definition would parallel that used for the Ohio Trauma Registry. Patients in the trauma registry would be surveyed by phone at six-months post-injury, with further follow-ups at one and five years on sub-groups who have greater risk for disability. Survey respondents would be asked for information on persistent medical problems, health-care utilization since discharge, changes

in living situation, independence in daily activities, ability to engage in work or school, impact of injury on social and financial supports, and psychological functioning. Sampling would be constructed to allow conclusions about the state population and would include sufficient numbers of persons to allow detection of unique issues faced by any age group, gender, socioeconomic strata, type of insurance program, rural or urban community, and type of injury.

Data collection for the follow-up registry also should be an extension of the existing trauma registry. However, it is recommended respondent surveys be centralized and conducted under the auspices of the Trauma Committee convened by the Ohio Department of Public Safety to promote economies of scale and effectiveness of data collection methods. Legislative authority needed to establish and fund the registry should be congruent with Health Insurance Portability and Accountability Act (HIPAA) regulations, thus allowing Ohio trauma centers to provide contact information without patient consent. Beyond this contact information and data currently provided to the trauma registry, no other information or involvement would be required from participating hospitals.

The follow-up registry also would provide an opportunity to give additional information on resources for trauma patients who experience persistent problems due to their injury. All persons for whom contact information is available could be mailed informational brochures that would include statewide information and resource access points. Mailings could also be used to inform individuals about the follow-up registry and its purpose.

While the current Ohio Trauma Registry provides important information about the incidence of traumatic injuries, well-designed and selective follow-up of trauma patients will provide a complete picture of the impact of injury in Ohio. The Post-critical Trauma Care Commission is recommending creating the Ohio Trauma Follow-up Registry to provide much needed information on the consequences of traumatic injuries.

Proposed strategies

Goal

A trauma follow-up registry will provide objective information on which to base public and private policy decisions about the post-critical care and persistent needs of persons at risk of losing life or limb, or experiencing permanent disability or disfigurement. It will identify the nature and scope of the consequences of trauma, inform public policy that addresses the needs of persons who experience these injuries, provide information about access to services and supports, and guide clinical care research. The follow-up registry will allow reliable estimates of the human and economic costs of injuries — vital pieces of information for assessing the scope of this public health problem.

Principles

- The registry should serve all age, gender and socioeconomic groups, geographic regions, and types of injury.
- A public health model should be used to design and implement the registry.
- There should be public access to the data, while protecting the confidentiality of patient information.
- The registry should be flexible enough to adapt to changing needs while remaining consistent enough to be informative about low incidence conditions and outcomes.

Implementation

The Ohio Trauma Follow-up Registry is intended to provide reliable and valid information about the persistent needs of trauma patients. Prior to seeking on-going legislative support and authority for a comprehensive, statewide registry, a time-limited pilot of the methodology for data collection, database management and data analysis is considered essential to develop viable budget projections. Prior to conducting the pilot, support for pre-pilot research should be sought from the state EMS boards’ EMS/trauma grant program. The pilot phase will require new resources to allow for implementing and testing the recommended methodology. Costs for ongoing operation cannot be determined without piloting, and will require new resources as well.

There are three steps to implementing the Ohio Trauma Follow-up Registry:

- Conduct pre-pilot research projects;
- Gain legislative authority and funding to conduct a pilot project;
- Gain legislative authority and support for ongoing implementation.

Pre-pilot research

Specific research projects should be conducted to identify the best approaches to sampling, data collection, and providing linkage information. The existing mechanism for the state EMS boards’ EMS/trauma grant program should be sought for these projects. Projects addressing the following issues should be prioritized:

- Test methods of exchanging data with trauma centers, and using the information to contact patients;
- Test effectiveness of providing information and resource linkage to a toll-free telephone number and/or Web site;

- Analyze the trauma database to determine the sampling procedures for the levels of stratification proposed;
- Determine what issues should be addressed in the survey and the items that should be used.

The commission hopes grants addressing these issues can be funded beginning with the 2003 grant cycle. It may also be useful to allow submission of field-initiated ideas related to the conduct of a follow-up registry.

Pilot project

A large scale, pilot project is needed to determine the resources required for ongoing implementation of the follow-up registry. Based on the pre-pilot research results, a prospectus is recommended for describing the proposed methods and procedures of the follow-up registry, as well as products required to initiate a pilot. Funding will be needed from federal, state, and/or private resources for what will be a multi-year, but time-limited, project. The result of the pilot should be a thorough evaluation of the registry’s effectiveness and projection of costs for its ongoing implementation. Legislative authority as described in No. 4 and No. 8 below will be required to conduct the pilot.

The following conclusions, reached by the Post-critical Trauma Care Commission, should guide the pilot phase:

1. The Ohio Trauma Follow-up Registry should be designed and conducted to provide reliable and valid information about the consequences of traumatic injury, the needs of persons who experience these injuries, and the effective use of clinical-care resources.
2. The registry also should provide information to individuals and their families about services and supports available to assist them.
3. Target population for the registry should be defined in O.R.C. 4765 for trauma systems. The operational definition should parallel that used for the Ohio Trauma Registry.
4. Legislative authority should parallel the trauma registry, with oversight by the Trauma Registry Advisory Subcommittee. A subcommittee structure may be required for start-up or ongoing review. The current structure allows public members to participate, which allows inclusion of representatives of constituencies not currently involved in the Trauma Registry Advisory Subcommittee. An administrative structure parallel to the trauma registry should be authorized, giving implementation responsibility to the Ohio Department of Public Safety.
5. Data collection should be centralized and responsibility given to the Department of Public Safety. While responsibility will be co-located with that for the trauma registry, data collection and data-base management could be conducted directly or via contract.
6. Sampling of respondents for the follow-up registry should be constructed to allow generalization to the entire Ohio population and should include sufficient numbers of persons to allow detection of unique issues faced by any age group, gender, socioeconomic strata, type of insurance program, rural or urban community, and type of injury.

7. Telephone surveys should be conducted six months after the date of injury, with further follow-ups one and five years post-injury on trauma patients with greater risk for medical complications and disability.

8. Legislative authority should state the public health purpose of the registry so as to facilitate its congruence with the Health Insurance Portability and Accountability Act. Because patient contact information will need to be collected from trauma services, comprehensiveness will be enhanced greatly if hospitals are allowed to release personal identifying information without consent. Ascent for participation would be attained at the time of follow-up contact. Legislation should explicitly protect the confidentiality of Social Security Numbers, if it is decided that this information is required.

Legislative authority for ongoing operation

Eventual implementation of the actual operative registry will require statutory changes to the Ohio Revised Code. The following issues may need to be addressed:

- Purpose for collecting the data;
- Governance structure and its powers;
- Rulemaking authority;
- Authority to specify the data elements to be collected by rule;
- Confidentiality of data;
- Authority to collect Social Security Numbers;
- Funding;
- Authority to contract for the performance of functions and hire outside consultants;
- Mandate to ensure compliance and cooperation from hospitals or other organizations;
- Realistic time frame to have the pilot project and the registry in place and operating;
- Requirements for reporting to the General Assembly, EMS Board, or other entities;
- Immunity from liability for any potentially high-risk uses of the data (e.g., risk adjusting or outcome comparisons).

To promote using the data resulting from the follow-up registry, funds should be available for research projects on an ongoing basis. Expanding existing trauma commission research funds should be considered for this purpose.

Acute Care, Disability, and Rehabilitation

Public Health Issue

- Each year, Americans make between 30 and 40 million emergency department visits for injuries. While the majority of injured patients are treated and released, many are admitted to inpatient trauma units and later receive rehabilitative services.
- Trauma systems deliver coordinated care, from acute care through rehabilitation, but they are not fully operational or do not exist in many parts of the nation. Where trauma systems are lacking, as many as 30% to 40% of deaths among trauma patients are due to preventable problems in clinical care, including missed diagnoses and treatment delays. After trauma systems are introduced, follow-up studies have shown as much as a 50% reduction in preventable trauma deaths.
- Each year, an estimated 80,000 Americans sustain a traumatic brain injury (TBI) that results in long-term disability. An estimated 5.3 million Americans live with TBI-related disabilities, including cognitive problems that affect their ability to perform daily activities.
- Nearly 200,000 people in the United States are living with a disability related to a spinal cord injury (SCI). Every year, another 11,000 are hospitalized for SCI.

CDC’s Role and Expertise

- CDC is the only organization in the federal government responsible for addressing all phases of injury research — from defining the problem to testing the effectiveness and public acceptance of an intervention — for the major causes of injury among all age groups. Funding state and local injury programs allows CDC to rapidly share findings from research with groups that can put the information to immediate use.
- CDC’s multidisciplinary research fosters innovative approaches to clinical preventive services. For example, recognizing that alcohol is often a factor in injury, CDC convened federal agencies and experts in alcohol research, emergency medicine, and trauma care to set a research agenda to improve such services as screening for alcohol problems in emergency departments.
- CDC research and programs frequently become the underpinning for reducing the impact of traumatic brain and spinal cord injuries, or for preventing the development of secondary conditions and other adverse outcomes. CDC findings provide crucial information to help communities prevent these kinds of injuries and disabilities.

The Future of Injury Research — What’s Next?

With extensive input from its academic research centers, national nonprofit organizations, and other federal agencies with a stake in injury prevention, CDC identified the top research priorities for acute care, disability, and rehabilitation — those research issues that CDC must address to fulfill its public health responsibilities. These priorities, published in the *CDC Injury Research Agenda*, will receive CDC’s greatest attention and resources.

Public Health Threat	Injury Center’s Research Priority
<i>Injury prevention services for at-risk patients treated in emergency departments and trauma centers are lacking.</i>	Develop and evaluate protocols that provide interventions for at-risk patients in acute care settings. Study ways to implement multiple services simultaneously.
<i>Despite evidence that trauma care systems save lives, many Americans are not served by a trauma system.</i>	Measure the benefits and costs of trauma care. Assess outcomes such as medical complications, functional status, and quality of life.
<i>People with traumatic brain or spinal cord injury face a range of secondary conditions, from medical conditions such as pressure ulcers, to behavioral changes such as depression and substance abuse.</i>	Increase understanding of risk factors for secondary conditions, especially among persons without access to state-of-the-art information and care. Develop more effective methods to treat and manage these conditions.
<i>Many people with injury-related disabilities do not get the services they need.</i>	Identify methods and strategies to link people with traumatic brain or spinal cord injury with needed services.
<i>Data from electronic, point-of-care clinical information systems are not routinely used for injury surveillance.</i>	Develop and evaluate data standards and methods of linking disparate systems to capture and report data about injuries and other acute health problems.
<i>A limited understanding of the costs and consequences of disabling injuries hinders resource allocation and policy decisions.</i>	Develop and apply methods to calculate population-based estimates of the incidence, costs, and long-term consequences of spinal cord injury and nonhospitalized, “mild” traumatic brain injury.
<i>Many populations affected by traumatic brain injury have not been well studied to date.</i>	Conduct TBI research among children, youth, working adults, institutionalized individuals, victims of intimate partner violence, and people within school systems and the criminal and justice systems.
<i>Studies to date suggest that limb injuries result in substantial disability and affect the ability to return to work.</i>	Conduct population-based studies to accurately describe the public health burden of limb injuries and suggest appropriate interventions to prevent these injuries and resulting disabilities.

Injuries are the leading cause of death for Americans under 45 and the leading cause of potential life lost before age 65. In 1999, nearly 150,000 Americans died from injuries, and one in ten was injured badly enough to seek treatment in an emergency department. The CDC Injury Research Agenda, developed by CDC’s Injury Center and its many partners, will help drive the national initiative to lower the rate of both unintentional and violence-related injuries, which will result in reduced human suffering and loss of life.

Section 6 of amended substitute H.B. 138 as enacted by the 123rd general assembly

The Director of Health shall organize and coordinate a temporary commission to determine how to improve the accessibility, affordability, quality, and cost-effectiveness of post-critical adult and pediatric trauma care. The commission’s study shall include, without limitation, consideration of appropriate transfer of adult and pediatric trauma victims from regional trauma centers to other health care facilities; physical, psychological, and vocational rehabilitation of adult and pediatric trauma victims; re-employment of trauma victims; social support mechanisms for families of adult and pediatric trauma victims; and mitigation of the effects of pediatric and geriatric trauma.

The Rehabilitation Services Commission, Department of Aging, Bureau of Workers’ Compensation, and Bureau of Employment Services shall participate in and assist with the commission’s study.

Within 120 days after the effective date of this act, the director shall appoint to the commission appropriate public health authorities; entities that represent injury victims; certified safety professionals; employers; employment training and placement services; agricultural organizations; highway safety and motorists’ organizations; health insurers; providers of social services to injury victims; nursing and rehabilitation institutions; victims of violent crime; hospitals; and professionals active in physical, psychological, and vocational therapy. Commission members shall have expertise in rehabilitation and retraining of injury victims, broadly represent relevant disciplines, and represent all regions of the state.

Within 120 days after the effective date of this act, the Speaker of the House of Representatives shall appoint to the commission one member of the majority party and one member of the minority party in the House of Representatives and the President of the Senate shall appoint to the commission one member of the majority party and one member of the minority party in the Senate.

In conducting its study and developing its recommendations, the commission can consult with and cooperate with the Trauma Committee of the State Board of Emergency Medical Services. The commission shall conclude its study and disband not later than three years after the effective date of this section, whereupon the director shall transmit the commission’s findings and recommendations to the Governor, General Assembly, chief executive of each state agency specified in this section, and other appropriate persons.

MEMBERSHIP OF THE POST-CRITICAL TRAUMA CARE COMMISSION

Member Name	Represented Agency/Organization
Sen. Steve Austria	Ohio Senate, Republican Caucus
Robert Bates	Ohio State Fire Chiefs Association
Sally Betz	Ohio Nurses Association
Jerrold Blackmore	Association of Ohio Philanthropic Homes, Housing & Services for the Aging

A longitudinal investigation of medical cost and treatment volume for traumatic injuries: 1996-2002

Ohio Bureau of Workers’ Compensation (BWC) research projects unit for the Ohio Post-critical Trauma Care Commission

Summary

This investigation of the long-term needs of people who suffer traumatic injuries demonstrates the medical needs of these individuals persist long after the acute phase of their treatment ends. Thirty-six percent of the medical payments and 45 percent of the services for traumatic injuries occurred from two months to five years following the injury. In the first month following a traumatic injury, most of the necessary services are provided by physicians and hospitals. As time passes, services are more often provided by non-physician professionals and are likely to involve rehabilitation activities. The proposed Ohio Trauma Follow-up Registry would enable Ohio’s health-care providers to plan for the long-term needs of these individuals and provide the necessary services at the appropriate time.

Introduction

H.B. 138, enacted by the 123rd Ohio General Assembly created the Post-critical Trauma Care Commission. The commission was established to “...determine how to improve the accessibility, affordability, quality, and cost-effectiveness of post-critical adult and pediatric care.” The commission has been meeting since July 2001 to draft recommendations for the Governor, General Assembly and the sponsoring state agencies.

One proposed recommendation is that “a follow-up registry be established to provide data on the longer-term outcomes for trauma-care patients.” A follow-up registry would provide “objective information on which to base public and private policy decisions about the post-critical care and persistent needs of persons at risk of losing life or limb, or experiencing permanent disability or disfigurement. It would (a) identify the nature and scope of the consequences of trauma, (b) inform public policy addressing the needs of persons who experience these injuries, (c) provide information about access to services and supports, and (d) allow clinical research.”

The proposed follow-up registry is viewed as an extension of the Ohio Trauma Registry. The Ohio Department of Public Safety administers the Ohio Trauma Registry , which became operational in 1999, with oversight by the Trauma Registry Advisory Committee. It is a database of information on all people who suffer an injury and are admitted to a hospital for at least 48 hours. The database includes information about the number of people who require trauma services, the cause of the injuries, the treatment provided and the status at discharge from the hospital. One limitation of the Ohio Trauma Registry is that it does not provide information on the long-term consequences of injuries.

The claim records of the BWC provide a unique opportunity to conduct longitudinal investigations of injuries prior to establishing a follow-up registry. BWC claims data include injuries sustained by the worker, the type and timing of the treatment provided, and the treatment cost. By statute, the injured worker is eligible to receive medical treatment for consequences of an industrial injury for as long as necessary, allowing study of the injuries and their long-term effects.

The Ohio Trauma Registry collects information on injuries coded according to the International Classification of Diseases Revision 9 (ICD-9). The code groups are displayed in table 1.

Table 1. ICD-9 code groups included in the Ohio Trauma Registry.

Code group	Group description
800-805	Skull fracture
802-803	Facial fracture
805-807	Spinal fracture
807-808	Chest fracture (rib or sternum)
808-809	Pelvis fracture
810-812	Shoulder girdle fracture
812-820	Upper extremity fracture
820-830	Lower extremity fracture
830-840	Dislocation (includes jaw)
850-851	Concussion
851-852	Brain contusion
852-855	Intracranial hemorrhage
860-861	Hemo/pneumothorax
861.2-861.3	Lung injury
863-864	Gastrointestinal hollow organ injury
864-865	Liver injury
865-866	Spleen injury
870-874	Scalp or facial laceration
875-880	Torso laceration
880-887	Upper extremity laceration or minor amputation
887-888	Upper extremity amputation
890-896	Lower extremity laceration or minor amputation
900-905	Vascular injury
941-949	Burns
950-958	Nerve or spinal cord injury

It should be noted that BWC’s claims data differ from the Ohio Trauma Registry data in two important ways. First, BWC records include only persons who are injured in the course of their employment. Thus, the claims records don’t include data on pediatric or childhood injuries, very little data on teenagers and no data on injuries that befall persons who are not working or are retired. Second, the available records do not permit identification of injuries that require a 48-hour stay in a hospital, one of the Ohio Trauma Registry’s criteria. In light of these differences, BWC data can be expected to include a narrower demographic range of injured persons and a broader range of severity, i.e., from relatively minor to quite significant injuries within each code group. It is assumed that if it were possible to exclude the injuries that do not require admission to a hospital for at least 48 hours, the findings of this study would be amplified.

Methodology

All claims involving the 25 ICD-9 code groups listed above with dates of injury between Jan. 1, 1996, and Dec. 31, 1996, were retrieved from the BWC Data Warehouse. Treatment types and costs were identified by retrieving the first service date and the ICD-9 code for which the provider submitted the bill, bill category (hospital, non-physician, nursing service, other, physician, rehabilitation, vendor, and drug), line item units of service (UOS) provided, reimbursed amount (the amount paid to the provider). The first service date was used to create five treatment intervals that correspond to the anticipated follow-up intervals:

- Interval 1 included treatments provided within 30 days of the date of injury;
- Interval 2 included treatments provided two to six months following the date of injury;

- Interval 3 included treatments provided from six months to one year following the date of injury;
 - Interval 4 included treatments provided from one to five years following the date of injury;
 - Interval 5 included treatments provided more than five years following the date of injury.
- The reimbursed amount and units of service were summed for each ICD-9 group, each bill category and each treatment interval.

Results

The 25 ICD-9 groups included 106,590 claims. However, since any one injured worker might suffer injuries in more than one ICD-9 grouping, an additional analysis was performed to identify unique individuals. The study sample included 91,738 injured workers. Seventy-five percent were male and 25 percent were female. The mean age of the sample was 41 years and, mean age at injury was 35 years.

The totals and percentages of payments and units of service and percentages for each bill category are displayed in table 2. The table shows that \$74,275,624.38 was paid for medical services from the date of injury to 2002. Forty-five percent of these expenses were for physician services and 43 percent for hospital services. The total units of service for the same period was 2,546,672, with 31 percent (784,352) provided by physicians and 44 percent (1,116,526) in hospitals. The percentage of total medical payments for each bill category is shown in chart 1.

Table 2. Amount paid and units of service billed by bill category.				
Bill category	Amount paid	Amount paid %	Units of service billed	Units of service billed %
Grand total	\$ 74,275,624.38		2,546,672	
Physician	\$ 33,098,017.46	45%	784,352	31%
Hospital	\$ 31,906,549.08	43%	1,116,526	44%
Non-physician	\$ 4,938,977.03	7%	219,892	9%
Nursing service	\$ 1,668,703.53	2%	42,236	2%
Rehabilitation	\$ 1,349,017.97	2%	197,087	8%
Vendor	\$ 1,128,407.72	2%	111,042	4%
Drug	\$ 184,821.59	0%	59,274	2%
Other	\$ 1,130.00	0%	16,263	1%

Medical Payments for Traumatic Injuries
by Bill Category: 1996-2002

The proportions of medical payments during each treatment interval are displayed in chart 2. Sixty-four percent of the payments, totaling \$47,802,315.65, were for treatment services provided during the month following the date of injury. Fifty-five percent of the units of service, totaling 1,411,935, were provided during the same period. Fifteen percent of the payments (\$11,289,466.33) and 17 percent of the units of service (437,215) were provided from one to six months following the injury. From six months to one year following the date of injury, 6 percent of payments (\$4,769,215.50) and 7 percent of units of service (\$168,573) were provided. The first year following the date of injury accounted for 85 percent of the total medical costs and for 79 percent of the units of service provided to injured workers. Table 3 presents the distribution of medical costs and units of service for each treatment interval.

Table 3. Amount paid and units of service billed by treatment interval.				
Treatment Interval	Amount paid	Amount paid %	Units of service billed	Units of service billed %
Grand total	\$ 74,275,624.38		2,546,672	
1 (DOI + 30 days)	\$ 47,802,315.65	64%	1,411,935	55%
2 (DOI + 1-6 months)	\$ 11,289,466.33	15%	437,215	17%
3 (DOI + 6 months-1 year)	\$ 4,769,215.50	6%	168,573	7%
4 (DOI + 1-5 years)	\$ 9,401,275.57	13%	465,135	18%
5 (DOI + 5 years or more)	\$ 1,013,351.33	1%	63,814	3%

Tables 4 and 5 show the percentages of payments and units of service by bill category and treatment interval. It is not surprising the hospital service volume and payments to hospitals decrease over time following the injury. Physician payments and service volume also decrease over time, but at a lesser rate. Payments in the non-physician category (e.g., physical, occupational and other therapists) increase one to six months following the date of injury and continue for the duration of the period studied. It is also evident that services in the rehabilitation category become much more important later in the history of the injury. Payments in this category constitute only 2 percent of total payments and 8 percent of total units of service, but the volume of services is highest in the one to five years and five years or more treatment intervals.

Table 4. Percentage amount paid by bill category and treatment interval.						
Bill category	1 (DOI + 1 month)	2 (DOI + 1-6 months)	3 (DOI + 6 months to 1 year)	4 (DOI + 1-5 years)	5 (DOI + 5 years or more)	totals

Discussion

This brief investigation of the long-term needs of persons who suffer traumatic injuries demonstrates the medical needs of these individuals persist long after the acute phase of their treatment ends. Claims records of injured workers, retrieved from BWC’s Data Warehouse, show that 64 percent of payments and 55 percent of units of service provided for traumatic injuries occur in the first month following an injury. The months that follow, up to five years after the injury, account for 36 percent of the payments and 45 percent of the services provided to these individuals. Clearly, individuals who suffer traumatic injuries may continue to require treatment for up to five years following the injury.

The investigation also demonstrates how these needs change over time. It is hardly surprising that, in the first month following a traumatic injury, physicians and hospitals provide most of the necessary services. Physicians continue to provide a significant proportion of services for the duration of the study period. However, as time passes, services are more often provided by non-physician professionals and are likely to involve rehabilitation activities.

While the population served by BWC does not precisely correspond to the population the Ohio Trauma Registry monitors, this study suggests individuals who sustain an injury involving “risk of losing life or limb, or experiencing permanent disability or disfigurement” have continuing needs for treatment and care long after acute treatment ends. At the present time, the State of Ohio has no means of systematically identifying and responding to these needs. The proposed Ohio Trauma Follow-up Registry would provide timely and statistically sound data on the needs of trauma patients at several points in the recovery process. It would enable Ohio’s health-care providers to plan for these individuals’ long-term needs and provide the necessary services at the appropriate time.

Appendix E

Letters of support for the Post-critical Trauma Care Commission’s recommendations

The following organizations presented letters of support for the research and recommendations provided by the Post-critical Trauma Care Commission. Members of the commission wish to acknowledge and thank these organizations for their support.

- American Physical Therapy Association, Ohio Component, Jonathan Cooperman, P.T., J.D., M.S., president
- Association of Ohio Philanthropic Homes, Housing and Services for the Aging, John Alfano, president/CEO
- Brain Injury Association of Ohio, Philip E. Cole, president
- Central Ohio Trauma System, Jonathan I. Groner, M.D., F.A.C.S., president
- Ohio Association of Professional Fire Fighters, Kevin Watts, president
- Ohio Association of Rehabilitation Facilities, Julie A. Keil, M.P.A., executive director
- Ohio Bureau of Workers’ Compensation, James Conrad, administrator/CEO
- Ohio Children’s Hospital Association, Andrew Carter, president
- Ohio Department of Aging, Joan W. Lawrence, director
- Ohio Department of Alcohol and Drug Addiction Services, Gary Q. Tester, director
- Ohio Department of Education, Susan Tave Zelman, superintendent of public instruction
- Ohio Department of Public Safety, Gary F. Joseph, interim director
- Ohio Farm Bureau, John C. Fisher, executive vice president
- Ohio Fire Chiefs’ Association Inc., Chief Stan Crosley, president
- Ohio Hospital Association, Bridget Gargan, vice president, State Policy & Advocacy
- Ohio Job & Family Services, Tom Hayes, director
- Ohio Legal Rights Service, Carolyn S. Knight, executive director
- Ohio Nurses Association, Gingy Harshey-Mead, M.S.N., R.N., C.N.A.A., chief executive officer
- Ohio Osteopathic Association, Paul A. Martin, D.O., president
- Ohio Psychological Association, Michael O. Ranney, M.P.A., executive director
- Ohio Public Health Association Inc., Ruth Shrock, president
- Ohio Rehabilitation Association, Robin Markey, president
- Ohio Rehabilitation Services Commission, John M. Connelly, executive director
- Ohio Society of Trauma Nurse Coordinators, Vickie Graymire, R.N., M.S., C.E.N., president
- Ohio State Medical Association, William C. Sternfeld, M.D., president
- Ohio State Chiropractic Association, Peter D. Feldkamp, D.C., president
- The Salvation Army, Major Paul Cain, area coordinator
- State of Ohio Rehabilitation Services Commission, John M. Connelly, executive director

Regional Trauma System: Synopsis per Region

Central Ohio Trauma System (COTS)

History:

In 1998, the Central Ohio Trauma System (COTS) was officially established as a 501(c)(3) non-profit status and an affiliate organization of the Columbus Medical Association (CMA). This voluntary organization serves as the forum for addressing issues affecting the delivery of trauma / emergency healthcare services and injury prevention in central Ohio. Initially established within Franklin County, COTS quickly expanded to include contiguous counties' hospitals, Emergency Medical Services (EMS) providers, public health agencies and other stakeholders in the regional healthcare system.

Membership:

- 27 hospitals and over 30 EMS agencies in 20 central Ohio counties

Organization:

- Paid staff: 7.8 FTE
- The COTS Boards of Trustees is comprised of health care experts from each member hospital and EMS providers serving Franklin County and other central Ohio counties; physicians from the Columbus Medical Association (CMA); Franklin County Board of Health; Franklin County coroner; and the Medical Director for Columbus Fire
- The COTS Executive Committee consists of 10 elected members

Education:

Regional continuing education courses (ATLS, ENPC and TNCC) are provided through COTS for physicians, nurses and other medical professionals (> 2100 / annually).

Educational conferences sponsored by COTS include:

- COTS' Third Annual Trauma Research Symposium (2012)
- Trade Secrets: Meeting the Challenges of Trauma Data Management (2011)
- COTS Regional Trauma Research Symposium (2011)
- COTS Regional Trauma Research Symposium (2010)

Infrastructure:

Much of the COTS infrastructure exists through the committees. COTS maintains multiple committees and subcommittees which include the Executive, Clinical Trauma, Diversion, , Pre-Hospital, Registry, Regional Hospital Emergency Preparedness, Stroke, Bariatric, Sepsis, Pharmacy and Sudden Cardiac Arrest Committees. Each committee has a distinct focus with Board-delineated roles and responsibilities aimed at enhancing trauma and/or emergency healthcare services for central Ohioans. Ad hoc committees are established when necessary. Stakeholders serve as COTS committee members and chairpersons on a voluntary basis. Responsibilities of each committee listed below.

Clinical Trauma Committee:

- Oversees the COTS regional trauma care performance improvement (RTC-PI) to assess regional trauma care trends based on data from the COTS Regional Trauma Registry
- Delineates issues that may contribute to trauma morbidity and mortality
- Provides reports and or data to COTS' stakeholder institutions
- Conducts regional trauma care performance improvement initiatives

- Recommends clinical trauma protocols based on data analysis from COTS' Registry
- Coordinates professional continuing medical and nursing education related to trauma care
- Establishes regional baseline standards for Level I and Level II trauma alert criteria
- Assists regional hospitals in complying with the establishment of written protocols and transfer agreements as mandated by Ohio law
- Undertakes other clinically-related activities relevant to trauma care as directed by the COTS Board of Trustees

Metric Review Executive Committee (MREC):

- Provide a detailed review of scorecard metrics that fail to meet established thresholds; to recognize best practices; to understand issues related to structure, performance and outcome; determine loop closure when issues are resolved or the metric outlier is improved.
- Identify issues requiring follow-up and a need for a documented action plan for hospitals participating in the Performance Improvement Program.
- Provide assistance/education to trauma centers and acute care hospitals within the region.
- Provide Best Practice Guidelines.
- Identify standard of care outliers and offer recommendations.
- Serve as a forum for Trauma Medical Directors to discuss medical management issues

Registry Committee:

- Monitors trauma care from a regional perspective as consistent with mandates of Ohio legislation related to trauma victims; assesses regional trauma care trends
- Conducts regional trauma care performance improvement initiatives
- Recommends clinical trauma protocols based on data analysis from COTS' Registry
- Coordinates professional continuing medical and nursing education related to trauma care
- Establishes regional baseline standards for Level I and Level II trauma alert criteria
- Assists regional hospitals in complying with the establishment of written protocols and transfer agreements as mandated by Ohio law
- Undertakes other clinically-related activities relevant to trauma care as directed by the COTS Board of Trustees

Prehospital Committee:

- Monitors trauma care from a regional perspective as consistent with mandates of Ohio legislation related to trauma victims; assesses regional trauma care trends
- Conducts regional trauma care performance improvement initiatives
- Recommends clinical trauma protocols based on data analysis from COTS' Registry
- Coordinates professional continuing medical and nursing education related to trauma care
- Establishes regional baseline standards for Level I and Level II trauma alert criteria
- Assists regional hospitals in complying with the establishment of written protocols and transfer agreements as mandated by Ohio law
- Undertakes other clinically-related activities relevant to trauma care as directed by the COTS Board of Trustees

Prehospital Sepsis Subcommittee:

- Provides guidelines to promote consistency in approach for prehospital and receiving emergency department care in central Ohio supporting consistency across hospital systems and EMS agencies on the recognition and management of sepsis

- Provides education for EMS on the early recognition and prehospital management of patients with possible sepsis;
- Establishes criteria for EMS providers to use as a guide to identify potentially septic patients;
- Publishes a sepsis tool for prehospital personnel on the identification and management criteria for potential septic patients;
- Establishes educational objectives for sepsis training tailored for prehospital personnel

Prehospital Pharmacy Subcommittee:

- Establishes guiding principles for EMS to provide a clarity of understanding and consistency in approach regarding the acquisition, provision, storage, maintenance and documentation of medications used in the prehospital setting including day to day and periods medication supply shortages and emergent situations
- Provides recommendations for updates/changes in the Ohio State Board of Pharmacy Rules and/or modifications to the ORC to improve efficiency in the management of medications for prehospital providers

Pre-hospital Bariatric Subcommittee Charter

- To address the safety and dignity of the bariatric patient during transport; and,
- To provide education to emergency medical service (EMS), ambulance staff and hospital personnel on best practices to minimize injuries during transport.

Aeromedical Communication Committee:

- Monitors trauma care from a regional perspective as consistent with mandates of Ohio legislation related to trauma victims; assesses regional trauma care trends
- Conducts regional trauma care performance improvement initiatives
- Recommends clinical trauma protocols based on data analysis from COTS' Registry
- Coordinates professional continuing medical and nursing education related to trauma care
- Establishes regional baseline standards for Level I and Level II trauma alert criteria
- Assists regional hospitals in complying with the establishment of written protocols and transfer agreements as mandated by Ohio law
- Undertakes other clinically-related activities relevant to trauma care as directed by the COTS Board of Trustees

Diversion Committee:

- Monitors trauma care from a regional perspective as consistent with mandates of Ohio legislation related to trauma victims; assesses regional trauma care trends
- Conducts regional trauma care performance improvement initiatives
- Recommends clinical trauma protocols based on data analysis from COTS' Registry
- Coordinates professional continuing medical and nursing education related to trauma care
- Establishes regional baseline standards for Level I and Level II trauma alert criteria
- Assists regional hospitals in complying with the establishment of written protocols and transfer agreements as mandated by Ohio law
- Undertakes other clinically-related activities relevant to trauma care as directed by the COTS Board of Trustees

Regional Hospital Emergency Preparedness Committee:

- Monitors trauma care from a regional perspective as consistent with mandates of Ohio legislation related to trauma victims; assesses regional trauma care trends
- Conducts regional trauma care performance improvement initiatives
- Recommends clinical trauma protocols based on data analysis from COTS' Registry
- Coordinates professional continuing medical and nursing education related to trauma care
- Establishes regional baseline standards for Level I and Level II trauma alert criteria
- Assists regional hospitals in complying with the establishment of written protocols and transfer agreements as mandated by Ohio law
- Undertakes other clinically-related activities relevant to trauma care as directed by the COTS Board of Trustees

Stroke Committee:

- Monitors trauma care from a regional perspective as consistent with mandates of Ohio legislation related to trauma victims; assesses regional trauma care trends
- Conducts regional trauma care performance improvement initiatives
- Recommends clinical trauma protocols based on data analysis from COTS' Registry
- Coordinates professional continuing medical and nursing education related to trauma care
- Establishes regional baseline standards for Level I and Level II trauma alert criteria
- Assists regional hospitals in complying with the establishment of written protocols and transfer agreements as mandated by Ohio law
- Undertakes other clinically-related activities relevant to trauma care as directed by the COTS Board of Trustees

Sudden Cardiac Arrest Committee:

- Monitors trauma care from a regional perspective as consistent with mandates of Ohio legislation related to trauma victims; assesses regional trauma care trends
- Conducts regional trauma care performance improvement initiatives
- Recommends clinical trauma protocols based on data analysis from COTS' Registry
- Coordinates professional continuing medical and nursing education related to trauma care
- Establishes regional baseline standards for Level I and Level II trauma alert criteria
- Assists regional hospitals in complying with the establishment of written protocols and transfer agreements as mandated by Ohio law
- Undertakes other clinically-related activities relevant to trauma care as directed by the COTS Board of Trustees

Funding:

COTS funding base is varied. Twenty-seven hospitals, various EMS agencies, and numerous individuals contribute directly to COTS to support its basic operations. Outcome-specific grants and contracts provide additional funding, as do revenues generated through educational courses coordinated by COTS.

Outcomes:

Regional Guidelines, Protocols and Policies produced by COTS (N> 30):

- Aeromedical Communication Regional Guidelines
- Central Ohio Region Burn Surge Disaster Plan
- EMS Clinical Information for Pre-Hospital PI

- EMS Patient Destination Decisions at Multiple-Casualty & Mass-Casualty Trauma Scenes
- Exposure Guidelines for EMS
- Family Violence Screening Protocols – Hospitals
- Family Violence Screening Protocols – EMS
- Patient Calls to EMS to Transport Patients from One Hospital to Another
- Pre-Hospital Therapeutic Hypothermia
- Pre-Hospital Trauma Triage Guidelines
- Regional Emergency Care Access Plan
- Regional Level I and II Trauma Alert Criteria
- Regional Trauma Care Performance Improvement Plan
- SERT Regional Guidelines

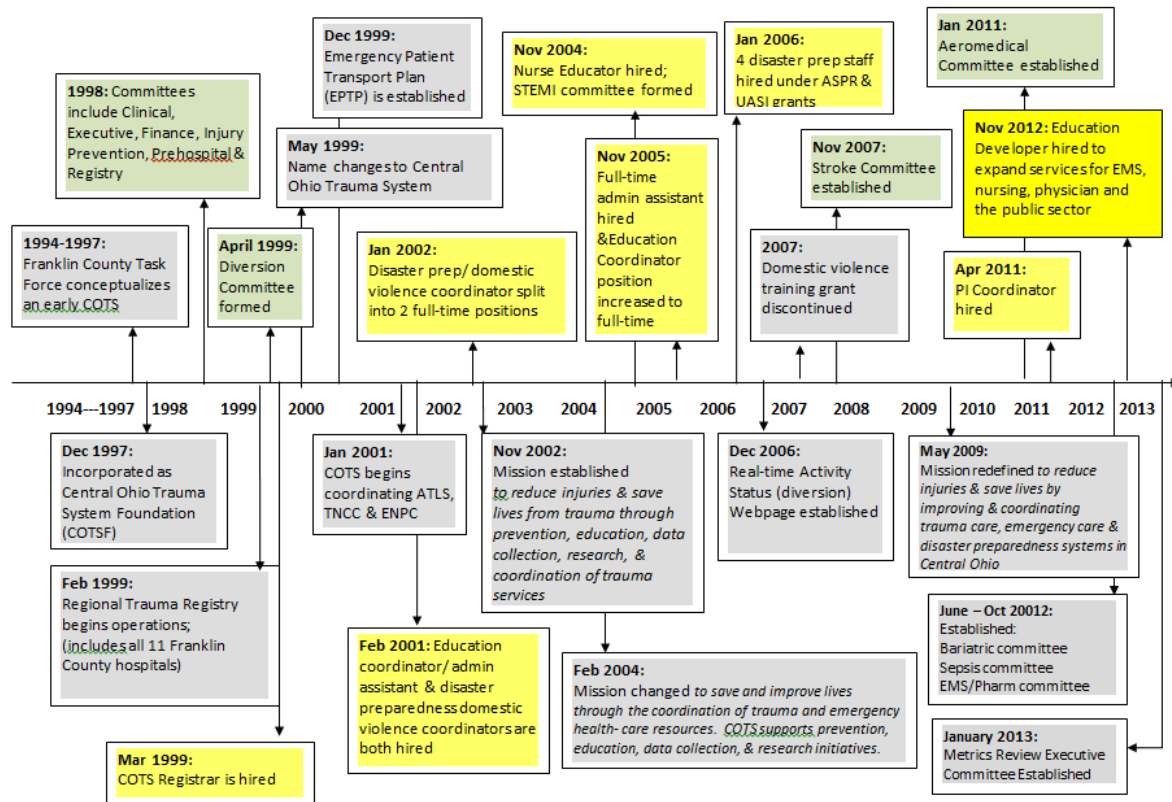

White Papers:

- Distracted Driving in Ohio
- Ethics and Medical Response in a Mass Casualty Event

Publications:

- Biennial Report (very in-depth analysis of the region); most recent 2011-2012
- Community Injury Report; most recent 2011
- Biannual Newsletter

Regional Trauma System: Synopsis per Region

Northeastern Ohio Regional Trauma Network (NORTN)

History:

The mission of the Northeastern Ohio Regional Trauma Network (NORTN) is to collaboratively develop and maintain a regional trauma system and improve trauma care for the communities we serve.

The Northeastern Ohio Regional Trauma Network was formed in 1988. NORTN was developed as an opportunity to benefit patient care and consisted of those hospitals who participated in the Northeastern Ohio University College of Medicine consortium. An early accomplishment included utilization of the same trauma registry; however, the primary function was vital networking that laid the groundwork for future development.

In January 2005 with the support of the Akron Regional Hospital Association (ARHA) and hospital administrations NORTN was re-established as a formalized trauma system within the State of Ohio. Key components included development of mission/vision statement, funding sources, a neutral meeting space in which verified trauma centers and acute care hospitals could voluntarily join to collaboratively build our regional trauma system, a unique identifiable logo, and submission of our regional data to the state trauma registry.

In order to support its mission statement to improve trauma care, regional trauma education was identified as an essential goal. The NORTN Education Series, a complimentary 2-hour educational program, continues to be held 4 times a year with rotating hospitals hosting the event.

In 2005 a subcommittee was formed to plan the first annual NORTN Trauma Conference that was held in 2006. Planning for this full day conference included, establishing a neutral location, format, topics, publicity, vendor support, speaker solicitation, CEU/CME accreditation and soliciting abstracts and posters. The variety of topics and a nationally known keynote speaker were deliberately chosen to promote attendance from all disciplines.

Membership:

The Northeastern Ohio Regional Trauma Network (NORTN) is a collaboration of 13 hospitals in Medina, Portage, Stark and Summit counties. NORTN Member Hospitals Include:

- Affinity Medical Center
- Akron Children's Hospital
- Akron General Medical Center
- Aultman Hospital
- Lodi Community Hospital
- Medina General Hospital
- Mercy Medical Center
- Robinson Memorial Hospital
- Summa Akron City Hospital
- Summa Barberton Hospital
- Summa St. Thomas Hospital
- Summa Western Reserve Hospital

Summa Wadsworth-Rittman Hospital
The NORTN bylaws permit other interested persons to attend Summa Rehab will be joining as a non-voting member in 2013.

Organization:

- See attached
- Membership is all voluntary and includes Emergency Department Physicians, Supervisors, Trauma Directors, Registrars or Coordinators from each of the member hospitals.
- The membership is supported by the paid staff of ARHA for clerical support and financial oversight.
- Elected officers include:
 - Chair
 - Immediate past chair
 - Chair elect
 - Secretary/Treasurer
 - Member-at-large
- The Executive Committee is comprised of the elected officers.

Registry:

- Up until December 2012 NORTN contracted with the Hospital Council of Northwest Ohio (HCNO) for the services of a trauma registry consultant who served as a repository and database administrator for NORTN's trauma data. NORTN's share of this consultant was approximately a 0.3 FTE.
- Beginning in January 2013, NORTN contracted with Biostats of Ohio, Inc. to oversee and maintain the regional trauma registry.
- Services provided by the trauma registry consultant include:
 - a. Maintain the NORTN trauma database
 - Maintain Data Dictionary
 - Verify and validate data received from the region's hospitals
 - Provide feedback to hospital Data Manager and Program Managers on the quality of data submitted to the regional registry
 - Serve as liaison between hospitals and Clinical Data Management (CDM)
 - Assist and advise on development and maintenance of policies and procedures for the NORTN Trauma Registry
 - Maintain network, application, and data security
 - b. Attend in person at least 75% of the following scheduled monthly NORTN meetings. For the other 25% of the meetings, must be available via conference calling.
 - c. Attend at least 75% of the State Trauma Registry meetings
 - d. Reporting requirements:
 - On a monthly basis:
 - Prepare written reports to fulfill data requests for performance improvement, benchmarking, and research as defined in the NORTN Rules and Regulations for specifics on data requests.
 - On a quarterly basis:
 - Timely submit regional data to the Ohio Trauma Registry (OTR)

- Perform validation checks including identification of possible missing or incomplete data and random auditing of select database entries to original source documents
- Assess the completeness of the files submitted to the regional registry by each hospital through identification of dual cases in the database for inter-hospital transfers within the region.
- Provide rolling 12-month Regional Reports 30-45 days after the OTR quarterly submission deadline and present the report at the monthly NORTN meeting.
- The following will be submitted during the Fourth Quarter:
 - Provide confidential individual member hospital Annual Reports showing each hospitals' data in the context of regional data

Education:

Sponsored education includes:

- Annual Trauma Conference, full day conference for physicians, nurses, EMS providers featuring a national keynote speaker and other regional speakers.
- NORTN Education Series, a complimentary 2-hour educational program held 4 times a year with rotating hospitals hosting the event

Performance Improvement:

- There is a collaborative effort with Northeast Ohio Medical University (NEOMED) which is in the early stages of development. An MPH student will be developing a strategic plan to identify key areas of research and develop a process for which the NORTN PI and Research sub-committee should proceed. The student will be utilizing data from our regional trauma registry, as well as working with the Trauma Program Manager at Akron City Hospital (Community Preceptor) and a Faculty Preceptor to help make recommendations to the committee. It is our hope that this initial capstone project will develop into further projects for other students, such as developing injury prevention programs, program evaluation and regional research.
- The PI Subcommittee has also done regional data validation and run some preliminary regional data based on the Ohio Trauma System scorecard metrics.

Disaster Preparedness

ARHA facilitates the Northeast Central Ohio Emergency Preparedness (NECO EP) program for its 13-county region. The purpose of the NECO EP program is to enhance emergency preparedness activities in health care by meeting the deliverables as described through a grant from Health and Human Services through the Ohio Department of Health. Over \$1.6 million is administered to the regional hospitals on an annual basis through this program. A NECO representative reports at the NORTN meetings.

Infrastructure:

Committees include:

- Education
- Data Managers
- Research/Regional Performance Improvement
- Trauma Awareness/Injury Prevention

Funding:

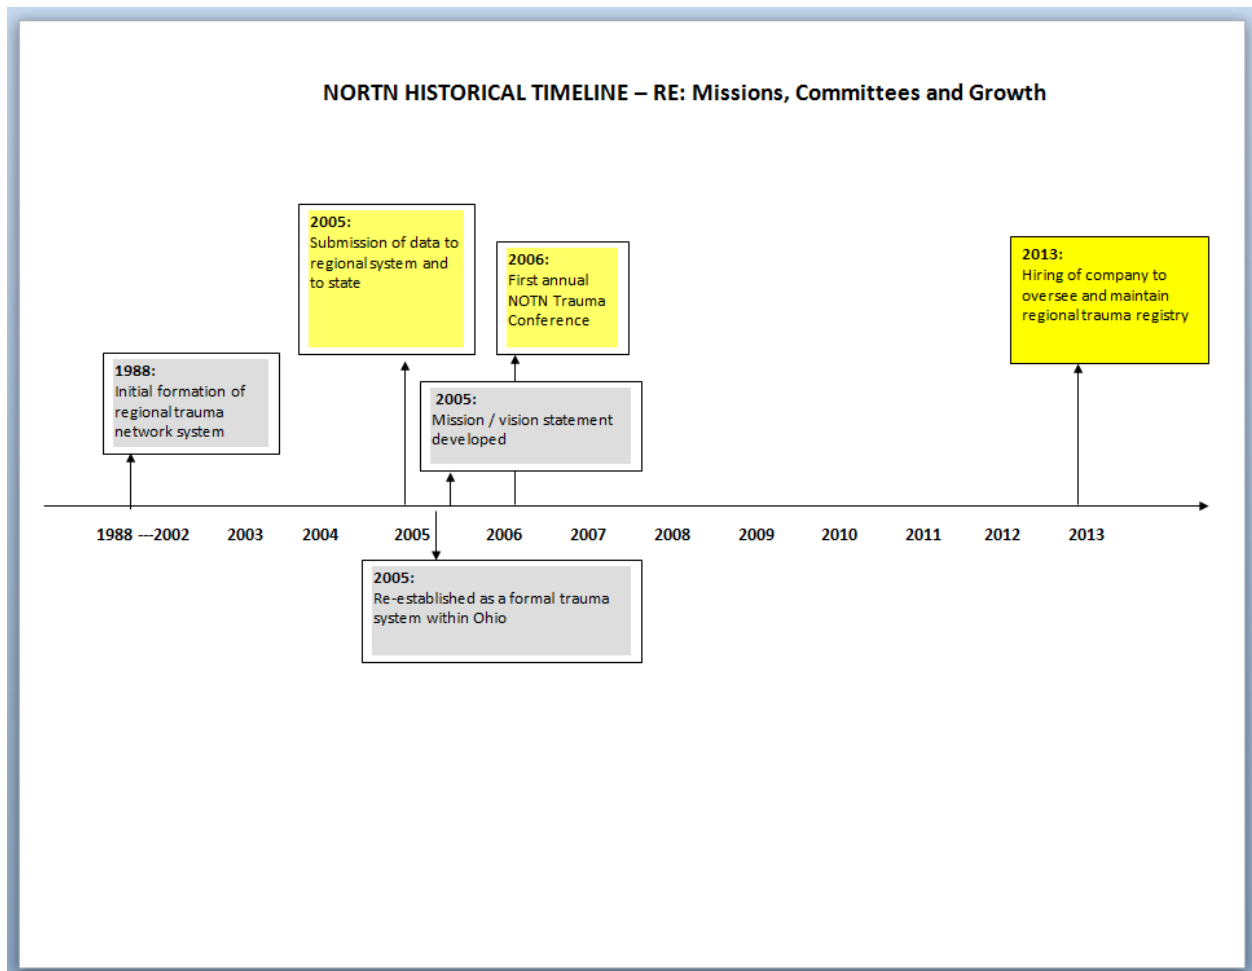

- Each hospital pays an annual membership fee based on their level of trauma center. This money is used to support the regional registry. Current fees are 45% of the annual registry expenses paid by Level 1 Trauma Centers. Level 2 Trauma Centers pay 40%. Level 3 Trauma Centers pay 15%. Non Trauma Centers pay a flat rate of \$ 1,725 .

Outcomes:

- Bylaws, Rules & Regulations, Data Request Form, NORTN Data Dictionary

Publications:

- None

Regional Trauma System: Synopsis per Region

Northwest Ohio Regional Trauma Registry (NORTR)

History:

The Hospital Council of Northwest Ohio (HCNO) Board of Trustees approved creation of the Northwest Ohio Regional Trauma Registry (NORTR) in 1999. The registry was created to serve as a repository for hospital trauma data, serve as an agent for submission of trauma data to the Ohio Department of Public Safety Trauma Data System, to provide peer review for the regional trauma system, and protect the data from outside discovery. The Registry contains pre-hospital, demographic, clinical, and outcome data on qualifying cases voluntarily submitted by NORTR members. The data provides a unique community-wide resource and is used by the NORTR Board to monitor and evaluate the delivery of trauma care within the region.

Membership:

- 22 hospitals participate

Organization:

- Organizational structure: Program of the Hospital Council of Northwest Ohio a 501(C) (3) nonprofit organization guided by a board approved by the Hospital Council Board of Trustees.
- (FTE – paid vs. volunteer): contracted trauma registrar about .45 FTE plus .25 Administrative Assistant and .03 of vice president of the Hospital Council of Northwest Ohio plus volunteer board.
- Paid staff: .73 FTE (includes contracted trauma registrar)
- Purpose of NORTR: To serve as a repository for hospital trauma data, serve as an agent for submission of trauma data to the Ohio Department of Public Safety Trauma Data System, to provide peer review for the regional trauma system, and protect the data from outside discovery.

NORTR Board Members: Hospital-based representatives must be from NORTR member hospitals. Voting members shall reflect the urban/rural geography and the institutional diversity of the region served and include: two trauma registrars from hospitals participating in NORTR (one from a trauma center, one from a non-trauma center); one coroner; one emergency department nurse manager from a hospital participating in NORTR; one member from a political entity; one trauma nurse manager from a hospital participating in NORTR; two emergency medicine physicians from a hospital participating in NORTR; three trauma surgeons from a hospital participating in NORTR; and, two EMS representatives

Registry:

- Maintenance of the list of current members.
- Receipt and processing of all source data.
- Submission of data to State of Ohio for member institutions in Northwest Ohio for the State Trauma Registry.
- Generation of all studies in response to approved data requests.
- Maintenance of data security.
- Facilitate meetings of NORTR.
- All data requests shall be submitted to Board.

Education:

- Led Data Validation Study 2011-2012 through a grant from ODPS
- Education provided at yearly trauma symposium
- Educational topics at quarterly registrars' meetings
- Technical assistance provided to Registrars' as needed from software vendor or NORTR Registrar

Performance Improvement:

- Reinstating in 2013 after a couple year hiatus due to a volunteer leadership change.

Disaster Preparedness

- Role: NORTR interacts with Northwest Ohio Disaster Preparedness which is also housed at the Hospital Council of Northwest Ohio. At the 2012 NORTR Symposium the Director of NW Ohio Disaster preparedness gave a presentation.

Infrastructure:

- Board meets quarterly and serves as symposium planning committee and medical advisory committee.
- PI Committee is being reinstituted in 2013. Registrar Committee is comprised of all participating registrars.

Funding:

The fiduciary function of the Board is managed by the Hospital Council of Northwest Ohio. Members of the Hospital Council fund the registry activities through their annual dues to the Hospital Council and nonmembers of the Hospital Council of Northwest Ohio that participate in the registry are assessed NORTR dues. NORTR actively seeks grant and contract funding for NORTR projects.

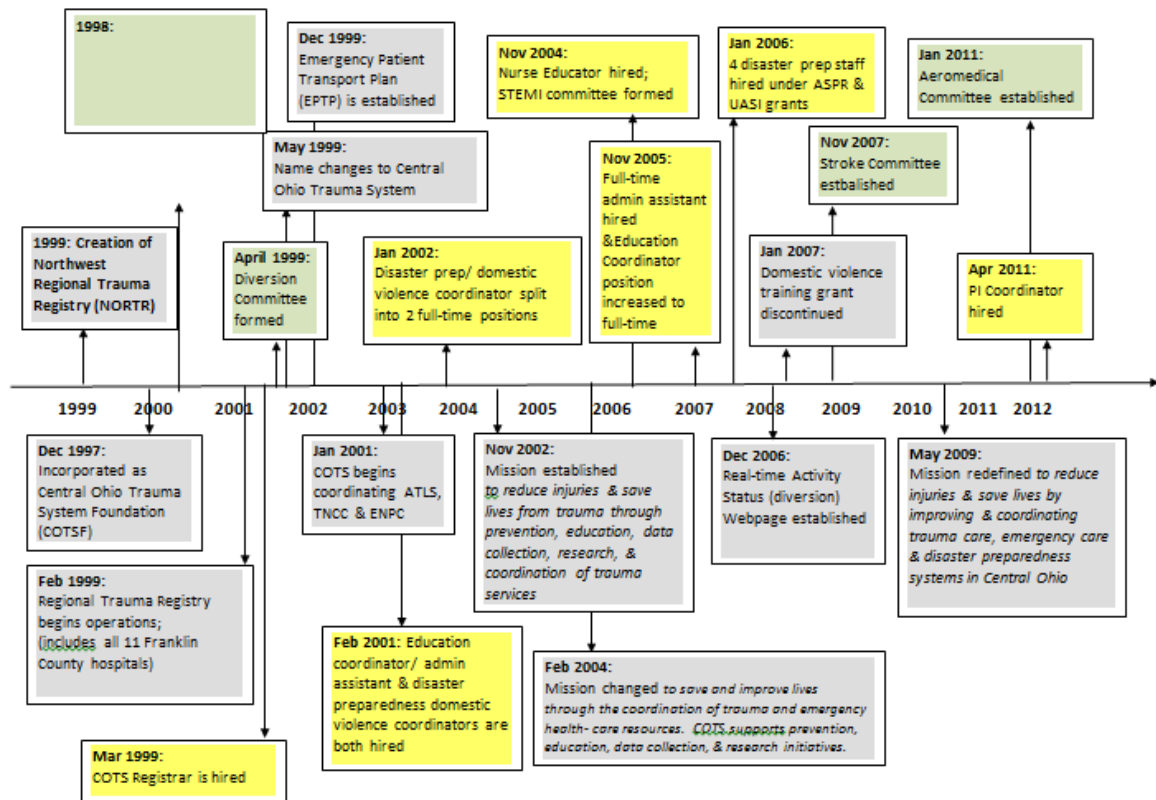

Outcomes:

- Guidelines, protocols and policies produced by regional system are related to the operations of the trauma registry such as data submission deadlines, late data, etc.
- The "regional system" is made up of smaller jurisdictions with the largest one being Lucas County.
- Lucas County implemented EMSsystem to create an emergency department capacity communication system through NORTR in 2001

Publications:

- Trauma Data Validation Project: Northwest Ohio Regional Trauma Registry (NORTR) 2012
- Annual Reports 2000-2011
- State of Ohio Trauma System Plan-Hospital Component 2005
- Ohio Patient Transfer Study 2008

Regional Trauma System: Synopsis per Region

Northern Ohio Trauma System (NOTS)

History:

NOTS was created as a joint collaboration between the MetroHealth System and the Cleveland Clinic. This organization officially started in January 2010 with the naming of the MetroHealth Trauma Director as the NOTS Medical Director. By the summer of 2010, three staff was added.

Membership:

- 11 hospitals of a MetroHealth and Cleveland Clinic collaboration

Organization:

- Paid staff: 2.75 FTE
- The NOTS Boards of Trustees is comprised of hospital administrators from Cleveland Clinic and Metrohealth, physicians, health commissioner, and two public trustees (Cleveland EMS and Public Safety and Justice)
- The NOTS Board members consists of 9 members

Infrastructure:

- In the summer of 2010, the following subcommittees were developed:
 - Quality / Performance Improvement
 - Protocol Development
 - EMS Advisory Committee
 - Education
 - Injury Prevention
 - Trauma Program Managers' Advisory Committee
 - Trauma Registry
 - Research

Education:

- Starting in 2011, NOTS has hosted an annual trauma conference
- ATLS is supported under NOTS
- Multiple continuing education hours provided to physicians, nurses and EMS personnel
 - Presentations are developed out of needs recognized in the Quality Committee
- AIS coding course provided for regional registrars

Protocol:

- Blunt spleen protocol shared among 3 trauma hospitals
- Non-trauma Center Inter-facility Transfer Protocol
- EMS Triage Protocol
- Initial Management of the Burn Patient
- Management of the Spine Injured Patient

Registry:

- Regional database with patient identified data
- Merge data from Cleveland EMS

- Merge data from Cuyahoga County Coroner
- Electronic copies of autopsy reports
- “Banding” of all trauma patients
 - Link electronically all patients as they move across the system

Funding:

- NOTS’ operations are funded through the contribution by each of the Initial Participants of 50% of the initial budget, and each annual budget approved by the Board thereafter

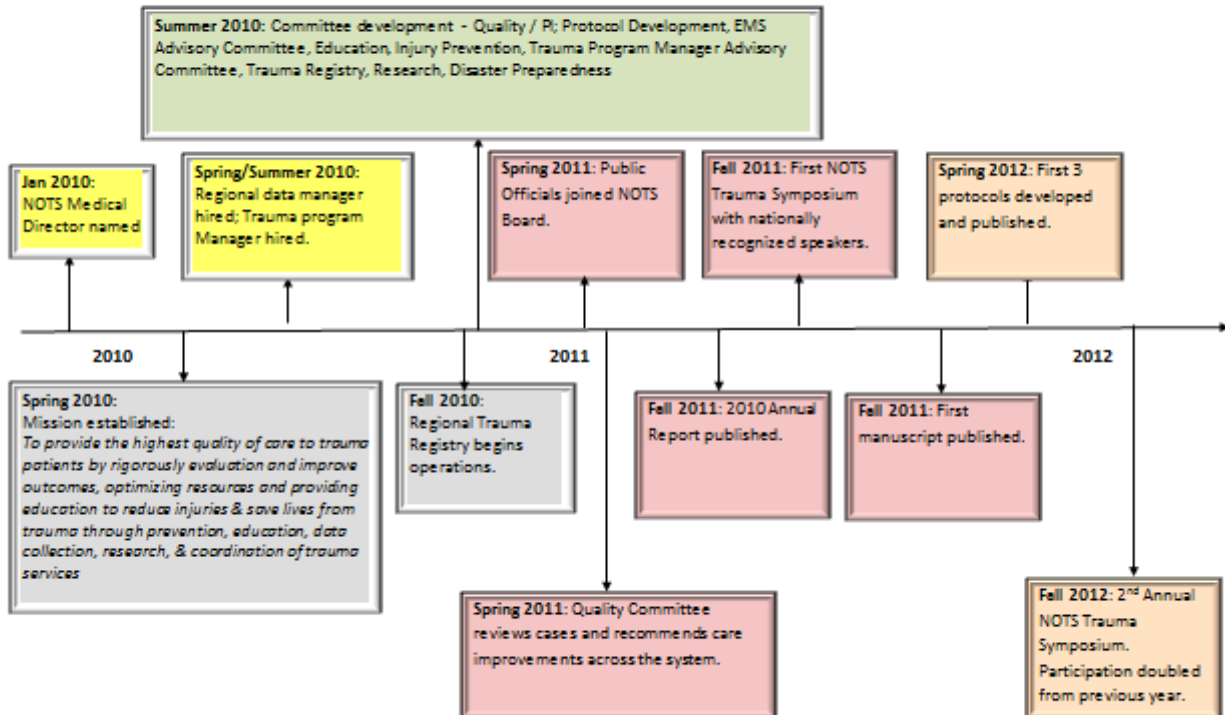

Outcomes:

- Regional spleen protocol for trauma centers
- Mortality
- Double Transfers
- Length of Stay at Referring Facilities
- Air vs. Ground Transport
- Triage Protocol – Non-trauma Center Transfers
- Implemented a Cloud Based Digital Imaging System

Publications:

- 2010 Northern Ohio Trauma System Annual Report
- 2011 Northern Ohio Trauma System Annual Report
- Presentations/Posters/Abstracts
 - Predicating Continued Neurologic Care and Follow-up with Radiographic Evidence of Traumatic Brain Injury
 - Changing Trends in Maxillofacial Fracture; a Repeat Study 20 Years Later
 - In conjunction with the Department of Maxillofacial – MetroHealth Medical Center
 - Merging of Trauma and Rehabilitation Registries, To Further Define Long-Term Outcomes for Traumatic SCI
 - Pre-hospital Transfusion and Serum lactate Levels in the Trauma Patient
 - Can we Predicate Adjacent Ligamentous Injury on MRI after Cervical Spine Fracture?
 - A Revised Pre-Hospital Trauma Triage Protocol: Saving Patients and Resources.

Regional Trauma System: Synopsis per Region

SORTS (Southwest Ohio Regional Trauma System)

History: SORTS began Oct 1999. The need was to develop a standardized data dictionary for all of SORTS hospitals to follow, as well as a consortium of representatives from each hospital. The hospitals were encouraged to participate with the goal of collaborating on trauma patient care in the region as well as working with EMS.

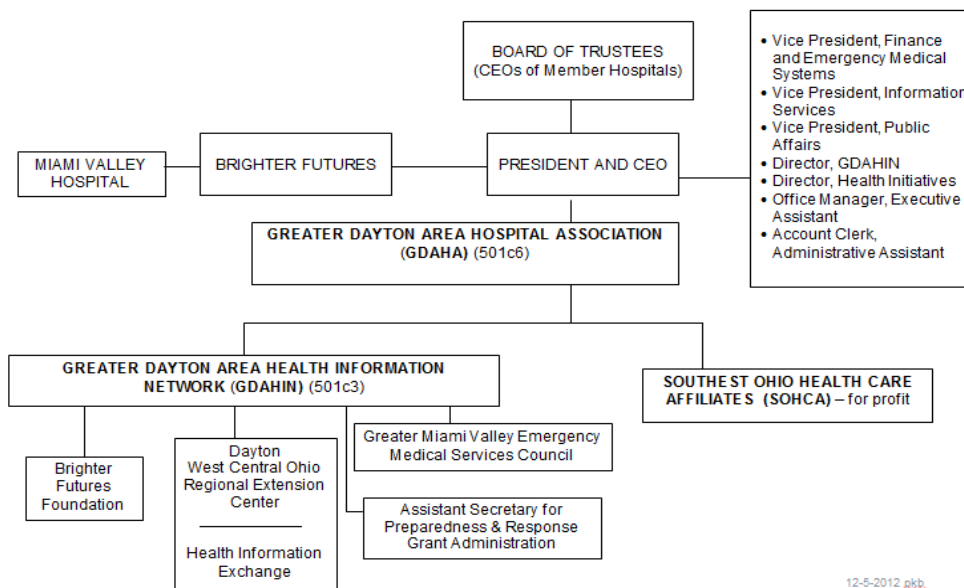

Membership:

- 14 hospitals currently participating

Organization:

- 0.5 FTE
- SORTS is located within the Greater Dayton Area Hospital Association (GDAHA). Chair and co-chair persons hold 2 year terms.
- Committees: Registrar, PI

GDAHA Organizational Structure 2012

Registry:

- Works with SORTS Registrar's committee and is a resource to all SORTS hospitals
- SORTS provides an 0.5 FTE for maintaining the database

Education:

- Past educational offerings have included AIS, ECoding, ICD9 Trauma Coding, and TraumaBase Webinars, as well as provided funding for registrars to attend Trauma Registrar Basic and Advanced Courses, AIS Training and to attend CDM TraumaBase Conferences.

Performance Improvement:

- The PI committee is now part of the Full SORTS committee and recently the PI process has moved from individual case reviews to process PI based on the TQIP process. Personnel include a TMD as the committee chair and a TPM as the co-chair. Participants include the region's TPM, Trauma Registrars, Physicians, EMS, PI and Outreach Coordinators (nurses).

Disaster Preparedness

- There is a regional coordinator of the Disaster Preparedness for SORTS, who works with EMS and all hospitals in the region. SORTS participate in regional disaster drills, 'table top' drills, and miscellaneous seminars on various disaster topics throughout the year.

Infrastructure:

- Integrated members sit on multiple regional and state committees bringing a multidisciplinary approach to trauma. The SORTS Committee involves members from each hospital who work in different roles within their hospital's trauma program, including TMD, TPM, Outreach Coordinators, PI Coordinators, and Trauma Registrars. GDAHA staff and EMS are also well represented. The EMS council also meets and reviews SORTS concerns and brings back findings to the SORTS Committee.

Funding:

- Funded by the SORTS region hospitals on a quarterly assessment.

Outcomes:

- Following guidelines are produced by SORTS:
 - Trauma Triage Guidelines
 - Trauma Data Submission
 - SORTS Data Dictionary

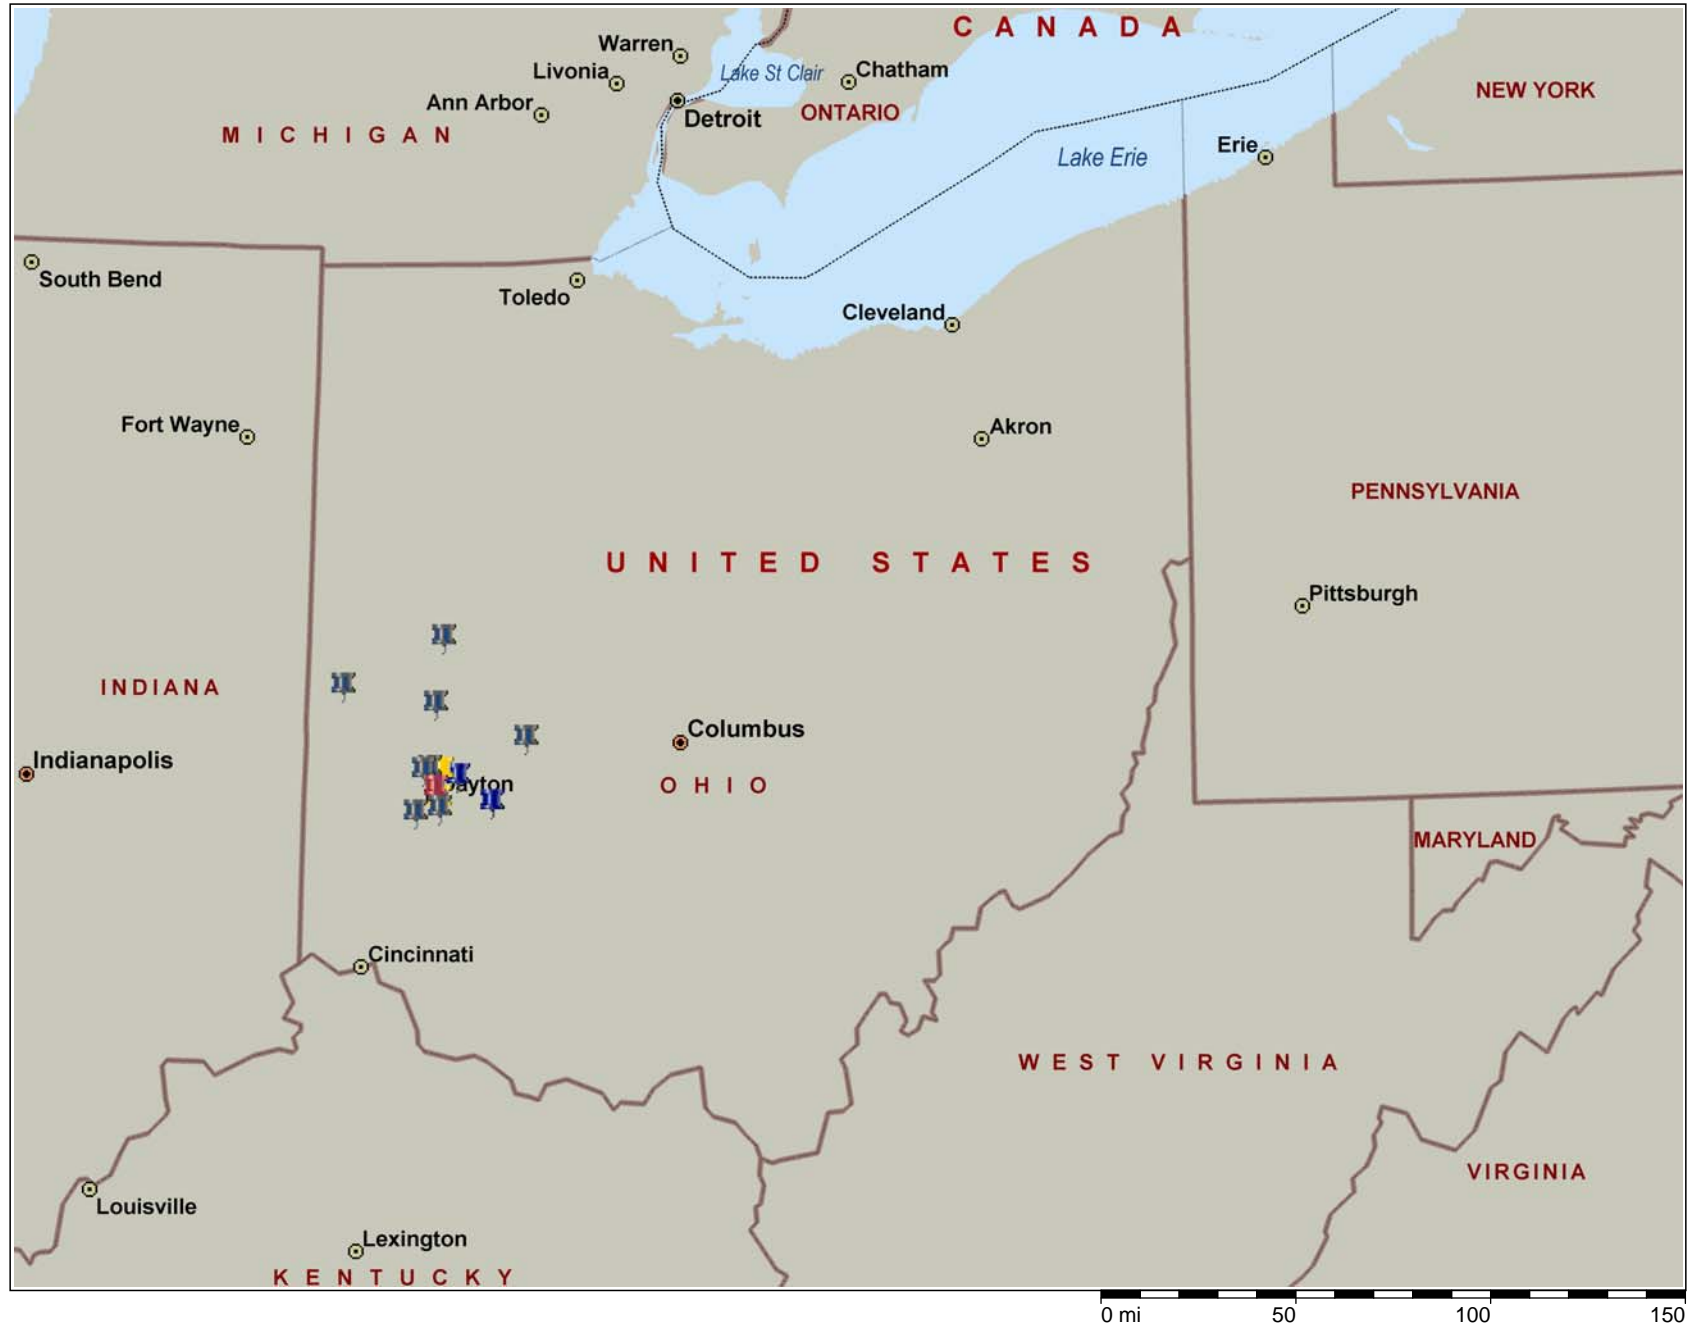

Publications:

- None

Regional Trauma System: Synopsis per Region

Tri-State Trauma System (TSTC)

History:

First unofficially regional meetings regarding trauma system development in the southwestern region began in 1999. Trauma center representatives met under the auspices of the Academy of Medicine of Cincinnati in order to assist with state trauma legislation development. The TSTC became official, declaring 501(c)(3) status, in 2001. For a variety of reasons, TSTC legally became a subsidiary of the Greater Cincinnati Health Council (GCHC) in 2004. Within this structure, TSTC ceased to exist as previously defined but instead is revised to the Department of Emergency Preparedness and Trauma, with oversight by the GCHC Board.

Membership:

- GCHC represents 14 counties within the 3 state (Ohio, Kentucky, Indiana) Greater Cincinnati region; 8 counties in southwestern Ohio
- Greater Cincinnati Region utilizes the EMS Region 1 on the Homeland Security Regions, which are the same for the Greater Cincinnati region

Organization:

- Paid staff: 2.8 FTE
- Purpose: to enhance trauma care and system performance in the Tri-state through collaboration, data-driven performance improvement and coordinated educational programs.
- Board of GCHC is comprised of representatives from a majority of Ohio hospitals in the southwest 8 counties, plus additional presentation from Northern Kentucky and Southwest Indiana, which has frequent referral patterns to Ohio hospitals.

Education:

Regional continuing education courses (ATLS, TNCC) are provided through TSTC for physicians, nurses and other medical professionals (approximately 80 participants in ATLS course with 35 auditors / annually and over 300 nursing participants in TNCC / annually).

Educational conferences sponsored by COTS include:

- AIS Coding Conference – for region (along with Dayton) (2012)

Infrastructure:

Within the Greater Cincinnati Health Council structure, Trauma Committee is designated as a “special committee”, which means the following: 1) committee reports directly to the GCHC board; each member hospital is eligible to have a representative; and representatives from the community may serve. According to the guiding principles of the Trauma Committee, members include at least one member from the following disciplines: trauma surgeon, ED physician, EMS, ED nursing manager / leader, Trauma Program Manager, Trauma Registrar, Trauma Performance Improvement nurse, and RPAB. However, representatives from all these disciplines do not routinely participate. Objectives of Trauma Committee: 1) Develop regional PI indicators; identify issues through data driven reviews, and committee review of issues.

Trauma Committee meets quarterly with the chair having a 2 year renewable term of leadership. Emphasis of the GCHC Trauma Committee is: registry, education and some regional PI. In 2007, a regional registry was started which included trauma centers and non-trauma centers.

Regional trauma registry began in 2007. Trauma centers utilize TraumaBase while the non-trauma hospitals use Trauma Lite (shorter version). In addition, Dayton region contracts with the Cincinnati region for participation in the southwest regional trauma registry. Quality checks are performed by staff within GCHC with appropriate data forwarded to the state trauma registry.

Funding:

TSTC funding base is through all the GCHC / hospital membership dues.

Outcomes:

Regional Guidelines, Protocols and Policies produced by TSTC:

- None

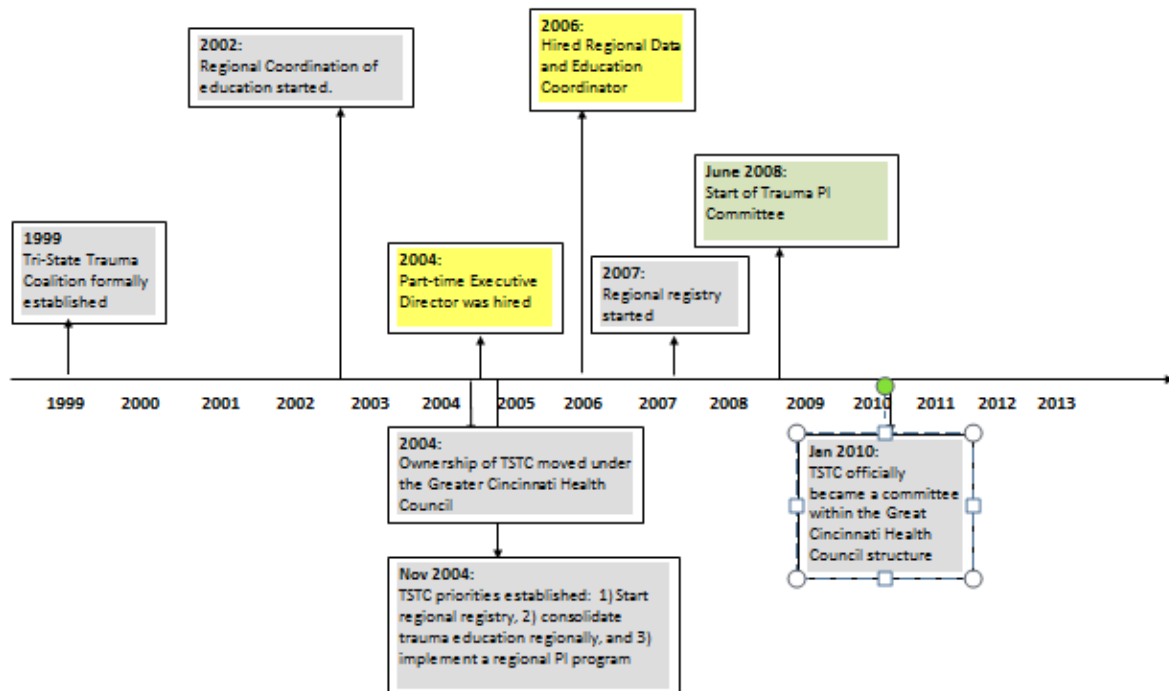

White Papers:

- None

Publications:

- Quarterly articles / collaboration with Hamilton County Public Health (epidemiology section); look at various Hamilton Country injuries / stats for prevention

OHIO SUNSHINE LAWS

An Open Government Resource Manual
2012

Mike DeWine
Attorney General

Dave Yost
Auditor of State

Ohio Sunshine Laws 2012

Dear Ohioans,

The offices of the Attorney General and Auditor of State foster the spirit of open government by promoting Ohio's Public Records Law and Open Meetings Law. Together, these laws are known as "Ohio Sunshine Laws" and are among the most comprehensive open government laws in the nation.

Along with this 2012 Ohio Sunshine Laws Manual, our offices provide Ohio Sunshine Laws training for elected officials throughout the state, as mandated by Ohio Revised Code Sections 109.43 and 149.43(E)(1). By providing elected officials and other public employees with information concerning public records and compliance, we help ensure accountability and transparency in the conduct of public business.

The Attorney General's Office and its Public Records Unit stand as one of the state's foremost authorities on public records and open meetings law. The office provides training, guidance, and online resources. Additionally, the Attorney General has created a model public records policy. Local governments and institutions can use this model as a guide for creating their own public records policies. This model policy and other online resources are available at www.OhioAttorneyGeneral.gov/Sunshine.

As the government agency responsible for auditing compliance, the Auditor of State's Open Government Unit also serves as a trusted resource for Ohio Sunshine Laws information and training. The Auditor of State website at www.auditor.state.oh.us features an Open Government page highlighting information concerning the Ohio Open Meetings Act, the Ohio Public Records Act, Records Retention and Ohio Certified Public Records Training.

This manual is intended as a guide, but because much of open government law comes from interpretation of the Ohio Sunshine Laws by the courts, we encourage local governments to seek guidance from their legal counsel when specific questions arise.

Thank you for your part in promoting open government in Ohio.

Very respectfully yours,

Mike DeWine
Attorney General

Dave Yost
Auditor of State

Ohio Sunshine Laws 2012

200 Years of Sunshine: Reflections on Open Government

Ohio Supreme Court Justice Charles Zimmerman:

“ The rule in Ohio is that public records are the people's records, and that the officials in whose custody they happen to be are merely trustees for the people; therefore anyone may inspect such records at any time, subject only to the limitation that such inspection does not endanger the safety of the record, or unreasonably interfere with the discharge of the duties of the officer having custody of the same. *Patterson v. Ayers*, 171 Ohio St. 369 (1960). ”

Thomas Jefferson:

“ Information is the currency of democracy. ”

Patrick Henry:

“ The liberties of a people never were, nor ever will be, secure, when the transactions of their rulers may be concealed from them . . . To cover with the veil of secrecy the common routine of business, is an abomination in the eyes of every intelligent man. ”

James Madison:

“ A popular government without popular information, or the means of acquiring it, is but a prologue to a farce or a tragedy, or perhaps both. Knowledge will forever govern ignorance, and a people who mean to be their own governors must arm themselves with the power which knowledge gives. ”

John Adams:

“ Liberty cannot be preserved without a general knowledge among the people, who have a right and a desire to know; but besides this, they have a right, an indisputable, divine right to that most dreaded and envied kind of knowledge, I mean of the characters and conduct of their rulers. ”

Ohio Sunshine Laws 2012

Glossary

When learning about the Ohio Sunshine Laws, you may confront some legal terms that are unfamiliar to you. Below are the more common terms used in this handbook.

Charter

A charter is an instrument established by the citizens of a municipality, which is roughly analogous to a state's constitution. A charter outlines certain rights, responsibilities, liberties, or powers that exist in the municipality.

Discovery

Discovery is a pre-trial practice by which parties to a lawsuit disclose to each other documents and other information in an effort to avoid any surprises at trial. The practice serves the dual purpose of permitting parties to be well-prepared for trial and enabling them to evaluate the strengths and weaknesses of their case.

In Camera

In camera means "in chambers." A judge will often review records that are at issue in a public records dispute *in camera* to evaluate whether they are subject to any exceptions or defenses that may prevent disclosure.

Injunction

An injunction is a court order commanding or preventing a person from acting in a certain way. For instance, a person who believes a public body has violated the Open Meetings Act will file a complaint seeking injunctive relief. The court may then issue an order enjoining the public body from further violations of the act and requiring it to correct any damage caused by past violations.

Litigation

The term "litigation" refers to the process of carrying on a lawsuit, *i.e.*, a legal action and all the proceedings associated with it.

Mandamus

The term means literally "we command." In this area of law, it refers to the legal action that a party files when they believe they have been wrongfully denied access to public records. The full name of the action is a petition for a writ of mandamus, if the party filing the action, or "relator," prevails, the court will issue a writ commanding the public office or person responsible for the public records, or "respondent," to release the records in dispute.

Pro se

The term means "for oneself," and is used to refer to people who represent themselves in court, acting as their own legal counsel.

The Ohio Public Records Act

Overview of the Ohio Public Records Act

Ohio law has long provided for public scrutiny of state and local government records.¹

Ohio's Public Records Act details how to request public records. The Act also excludes some records from disclosure and enforces production when an office denies a proper public records request. The pages that follow will explain the details of this process; below is an overview of the basic principles.

Any person may request to inspect or obtain copies of public records from a public office that keeps those records. A public office must organize and maintain its public records in a manner that meets its duty to respond to public records requests, and must keep a copy of its records retention schedule at a location readily available to the public. When it receives a proper public records request, and unless part or all of a record is exempt from release, a public office must provide inspection of the requested records promptly and at no cost, or provide copies at cost within a reasonable period of time.

Unless a specific law states otherwise, a requester does not have to provide a reason for wanting records, provide his or her name, or make the request in writing. However, the request does have to be clear and specific enough for the public office to reasonably identify what public records the requester seeks. A public office can refuse a request if the office no longer keeps the records (pursuant to their records retention schedule), if the request is for documents that are not records of the office, or if the requester does not revise an ambiguous or overly broad request.

The General Assembly has passed a number of laws that protect certain records by requiring or permitting a public office to withhold them from public release. Where a public office invokes one of these exceptions, the office may only withhold a record or part of a record clearly covered by the exception, and must tell the requester what legal authority it is relying on to withhold the record.

A person who believes that a public office has wrongly denied him or her a public record may file a lawsuit against the public office. In this lawsuit, the office will have the burden of showing the court that any record it withheld was clearly subject to one or more valid exceptions. If it cannot, the court will order the public office to provide the record, and the public office may be subject to a civil penalty and payment of attorney fees.

¹ Ohio's state and local government offices follow Ohio's Public Records Act, found at R.C. 149.43. The federal Freedom of Information Act, 5 U.S.C. § 552, does not apply to state and local offices. See *State ex rel. O'Shea & Assoc. v. Cuyahoga Metro. Housing Auth.*, Ohio Supreme Court Case No. 2010-1536, 2012-Ohio-115, ¶ 38.

The Ohio Public Records Act

Chapter One: Public Records Defined

I. Chapter One: Public Records Defined

The Ohio Public Records Act applies only to “public records,” which the Act defines as “records kept by a public office.”² When making or responding to a public records request, it is important to first establish whether the items sought are really “records,” and if so, whether they are currently being “kept by” an organization that meets the definition of a “public office.” This chapter will review the definitions of each of these key terms and how Ohio courts have applied them.

One of the ways that the Ohio General Assembly removes certain records from the operation of the Ohio Public Records Act is to simply remove them from the definition of “public record.” Chapter Three addresses how exceptions to the Act are created and applied.

A. What is a “Public Office”?

1. Statutory Definition - R.C. 149.011(A)

“Public office” includes any state agency, public institution, political subdivision, or other organized body, office, agency, institution, or entity established by the laws of this state for the exercise of any function of government.³ An organization that meets the statutory definition of a “public body” (see Open Meetings Act, *infra*) does not automatically meet the definition of a “public office.”⁴

This definition includes all state and local government offices, but also many agencies not directly operated by a political subdivision. Examples of entities that have been determined to be “public offices” (prior to the *Oriana House*⁵ decision) include:

- Some public hospitals;⁶
- Community action agencies;⁷
- Private non-profit water corporations supported by public money;⁸
- Private non-profit PASSPORT administrative agencies;⁹
- Private equity funds that receive public money;¹⁰
- Non-profit corporations that receive and solicit gifts for a public university and receive support from taxation;¹¹
- Private non-profit county ombudsman offices;¹² and
- County emergency medical services organizations.¹³

² R.C. 149.43(A)(1)

³ JobsOhio, the nonprofit corporation formed under R.C. 187.01, is not a public office for purposes of the Public Records Act, pursuant to R.C. 187.03(A).

⁴ *State ex rel. Am. Civ. Liberties Union of Ohio v. Cuyahoga Cty. Bd. Comm.*, 128 Ohio St. 256, 2011-Ohio-625, ¶¶ 35-38.

The Ohio Public Records Act

Chapter One: Public Records Defined

2. Private Entities Can Be “Public Offices”

If there is clear and convincing evidence that a private entity is the “functional equivalent” of a public office, that entity will be subject to the Ohio Public Records Act.¹⁴ Under the functional equivalency test, a court must analyze all pertinent factors, including: (1) whether the entity performs a governmental function, (2) the level of government funding, (3) the extent of government involvement or regulation, and (4) whether the entity was created by the government or to avoid the requirements of the Public Records Act.¹⁵ The functional equivalency test “is best suited to the overriding purpose of the Public Records Act, which is ‘to allow public scrutiny of public offices, not of all entities that receive funds that at one time were controlled by the government.’”¹⁶ In general, the more a private entity is funded, controlled, regulated and/or created by government, and the greater the extent that the entity is performing a governmental function, the more likely a court will determine that it is a “public institution” and therefore a “public office” subject to the Ohio Public Records Act.

3. Quasi-Agency - A Private Entity, Even if not a “Public Office,” Can Be “A Person Responsible for Public Records”

When a public office contracts with a private entity to perform government work, the resulting records may be public records, even if they are solely in the possession of the private entity.¹⁷ Resulting records are public records when three conditions are met: (1) the private entity prepared the records to perform responsibilities normally belonging to the public office, (2) the public office is able to monitor the private entity’s performance, *and* (3) the public office may access the records itself.¹⁸ Under these circumstances, the public office is subject to requests for these public records under its jurisdiction, and the private entity itself may have become a “person”¹⁹ responsible for public records²⁰ for purposes of the Ohio Public Records Act.²¹ For example, a public office’s obligation to turn over application materials and resumes extends to records of private search firms the public office used in the hiring process.²² Even where the public office does not have control over or access

¹⁴ *State ex rel. Oriana House, Inc. v. Montgomery*, 110 Ohio St.3d 456, 2006-Ohio-4854, paragraph one of the syllabus; *State ex rel. Am. Civ. Liberties Union of Ohio v. Cuyahoga Cty. Bd. Comm.*, 128 Ohio St. 256, 2011-Ohio-625, ¶ 267 (no clear and convincing evidence that private groups comprising unpaid, unguided county leaders and citizens, not created by governmental agency, submitting recommendations as coalitions of private citizens were functionally equivalent to public office).

¹⁵ *State ex rel. Oriana House, Inc. v. Montgomery*, 110 Ohio St.3d 456, 2006-Ohio-4854, paragraphs one and two of syllabus; *see also State ex rel. Repository v. Nova Behavioral Health, Inc.*, 112 Ohio St.3d 338, 2006-Ohio-6713.

¹⁶ *State ex rel. Repository v. Nova Behavioral Health, Inc.*, 112 Ohio St.3d 338, 2006-Ohio-6713, ¶24; *State ex rel. Oriana House, Inc. v. Montgomery*, 110 Ohio St.3d 456, 2006-Ohio-4854, ¶36 (“It ought to be difficult for someone to compel a private entity to adhere to the dictates of the Public Records Act, which was designed by the General Assembly to allow public scrutiny of public offices, not of all entities that receive funds that at one time were controlled by the government.”); *State ex rel. Bell v. Brooks*, 130 Ohio St. 3d 87, 2011-Ohio-4897, ¶¶ 15-29 (joint self-insurance pool for counties and county governments found not the functional equivalent of a public office); *see also State ex rel. Dayton Tea Party v. Ohio Mun. League*, 129 Ohio St.3d 1471, 2011-Ohio-4751 (granting a motion to dismiss in a mandamus case, published without opinion, where the Court rejected the argument that the Ohio Municipal League and Township Association were not the functional equivalents of public offices); *State ex rel. Dist. Eight Regional Org. Comm.*, 192 Ohio App. 3d, 2011-Ohio-312 (1st Dist.) (home weatherization program administered by private non-profit community-action agency found not to be functional equivalent of public office).

¹⁸ *State ex rel. Carr v. City of Akron*, 112 Ohio St.3d 351, 2006-Ohio-6714, ¶36 (finding that firefighter promotional examinations kept by testing contractor were still public record); *State ex rel. Cincinnati Enquirer v. Krings*, 93 Ohio St.3d 654, 657, 2001-Ohio-1895; *State ex rel. Mazzaro v. Ferguson*, 49 Ohio St.3d 37 (1990) (outcome overturned by subsequent amendment of R.C. 4701.19(B)); *but see State ex rel. Am. Civ. Liberties Union of Ohio v. Cuyahoga Cty. Bd. Comm.*, 128 Ohio St. 256, 2011-Ohio-625, ¶¶.52-54 (quasi-agency theory did not apply where private citizen group submitted recommendations but owed not duty to government office to do so).

¹⁹ “Person” includes an individual, corporation, business trust, estate, trust, partnership, and association. R.C. 1.59(C).

²⁰ *State ex rel. Toledo Blade Co. v. Ohio Bureau of Workers’ Comp.*, 106 Ohio St.3d 113, 2005-Ohio-3549, ¶20; R.C. 149.43(C) permits a mandamus action against either “a public office or the person responsible for the public record” to compel compliance with the Public Records Act. This provision manifests an intent to afford access to public records, even when a private entity is responsible for the records; *State ex rel. Cincinnati Enquirer v. Krings*, 93 Ohio St.3d 654, 658, 2001-Ohio-1895; *State ex rel. Dist. Eight Regional Org. Comm.*, 192 Ohio App. 3d, 2011-Ohio-312 (1st Dist.) (home weatherization program administered by private non-profit community-action agency found not to be person responsible for public records).

²¹ *E.g.*, R.C. 149.43(B)(1)-(9),(C)(1),(C)(2).

²² *State ex rel. Gannett Satellite Info. Network v. Shirey*, 78 Ohio St.3d 400, 1997-Ohio-206; for additional discussion, see Chapter Six: B. Application to Employment Records.

The Ohio Public Records Act

Chapter One: Public Records Defined

to such records, the records may still be public.²³ A public office cannot avoid its responsibility for public records by transferring custody of records or the record-making function to a private entity.²⁴ However, a public office may not be responsible for records of a private entity that performs related functions that are not activities of the public office.²⁵ A person who works in a governmental subdivision and discusses a request is not thereby a “person responsible” for records outside of their own public office within the governmental subdivision.²⁶

4. Public Office is Responsible for Its Own Records

Only a public office or person who is actually responsible for the record sought is responsible for providing inspection or copies.²⁷ When statutes impose a duty on a particular official to oversee records, that official is the “person responsible” within the meaning of the Public Records Act.²⁸ A requester may wish to avoid forwarding delays by initially asking a public office to whom in the office they should make the public records request, but the courts will construe the Public Records Act liberally in favor of broad access when, for example, the request is served on any member of a committee from which the requester seeks records.²⁹ The same document may be kept as a record by more than one public office.³⁰ One appellate court has held that one public office may provide responsive documents on behalf of several related public offices that receive the same request and are keeping identical documents as records.³¹

B. What are “Records”?

1. Statutory Definition - R.C. 149.011(G)

The term “records” includes any document, device, or item, regardless of physical form or characteristic, including an electronic record as defined in R.C. 1306.01, created or received by or coming under the jurisdiction of any public office of the state or its political subdivisions, which serves to document the organization, functions, policies, decisions, procedures, operations, or other activities of the office.

2. Records and Non-Records

If a document or other item does not meet all three parts of the definition of a “record,” then it is a non-record and is not subject to the Ohio Public Records Act or Ohio’s records retention requirements. The next paragraphs explain how items in a public office might meet or fail to meet the three parts of the definition of a record in R.C. 149.011(G).³²

²³ *State ex rel. Gannett Satellite Info. Network v. Shirey*, 78 Ohio St.3d 400, 402-03, 1997-Ohio-206 (despite a lack of proof of public office’s ability to access search firm’s records or monitor performance, requested resumes were still public records).

²⁴ *State ex rel. Cincinnati Enquirer v. Krings*, 93 Ohio St.3d 654, 659, 2001-Ohio-1895; *State ex rel. Gannett Satellite Info. Network v. Shirey*, 78 Ohio St.3d 400, 403, 1997-Ohio-206.

²⁵ *State ex rel. Rittner v. Foley*, No. L-08-1328, 2009-Ohio-520 (6th Dist.) (public school system not responsible for records kept by private alumni association).

³¹ *State ex rel. Cushion v. Massillon*, No. 2010CA00199, 2011-Ohio-4749 (5th Dist.), *appeal not allowed* 2012-Ohio-136, ¶¶ 81-86.

³² See *State ex rel. Data Trace Info. Svcs. v. Cuyahoga Cty. Fiscal Offcr.*, Ohio Supreme Court Case No. 2010-2029, 2012-Ohio-753, ¶¶ 28-41 for a detailed applications of the definition of “records” to the electronic records of one public office.

The Ohio Public Records Act

Chapter One: Public Records Defined

“Any document, device, or item, regardless of physical form or characteristic, including an electronic record as defined in section 1306.01 of the Revised Code . . .”

This first element of the definition of a record focuses on the existence of a recording medium; in other words, something that contains information in fixed form. The physical form of an item does not matter so long as it can record information. A paper or electronic document, e-mail,³³ video,³⁴ map, blueprint, photograph, voice mail message, or any other reproducible storage medium could be a record. This element is fairly broad. With the exception of one’s thoughts and unrecorded oral communication, most public office information is stored on a fixed medium of some sort. A request for unrecorded or not-currently-recorded information (a request for advice, interpretation, referral, or research)³⁵ made to a public office, rather than a request for a specific existing document, device, or item containing such information, would fail this part of the definition of a “record.”³⁶ A public office has discretion to determine the form in which it will keep its records.³⁷

“. . . created, received by, or coming under the jurisdiction of a public office . . .”

It is usually clear when items are created or received by a public office. However, even if an item is not in the public office’s physical possession, it may still be considered a “record” of that office.³⁸ If records are held or created by another entity that is performing a public function for a public office, those records may be “under the public office’s jurisdiction.”³⁹

“. . . which serves to document the organization, functions, policies, decisions, procedures, operations, or other activities of the office.”

In addition to obvious non-records such as junk mail and electronic “spam,” some items found in the possession of a public office do not meet the definition of a record because they do not “document the activities of a public office.”⁴⁰ It is the message or content, not the medium on which it exists, that makes a document a record of a public office.⁴¹ The Ohio Supreme Court has noted that “disclosure [of non-records] would not help to monitor the conduct of state government.”⁴² Some items that have been found not to “document the activities,” etc. of public offices include public employee home

³³ *State ex rel. Glasgow v. Jones*, 119 Ohio St.3d 391, 2008-Ohio-4788, ¶21 (e-mail messages constitute electronic records under R.C.1306.01(G)).

³⁴ *State ex rel. Harmon v. Bender*, 25 Ohio St.3d 15, 17 (1986).

³⁵ *State ex rel. Kerner v. State Teachers Retirement Bd.*, 82 Ohio St.3d 273, 1998-Ohio-242 (relator requested names and documents of a class of persons who were enrolled in the State Teachers Retirement System but the court determined that that information did not exist in record form); *State ex rel. Lanham v. Ohio Adult Parole Auth.*, 80 Ohio St.3d 425, 427, 1997-Ohio-104 (inmates requested “qualifications of APA members”).

³⁶ *State ex rel. White v. Goldsberry*, 85 Ohio St.3d 153, 154, 1999-Ohio-447 (a public office has “no duty under R.C. 149.43 to create new records by searching for and compiling information from existing records.” Requested records of peremptory strikes during relator’s trial did not exist, and the court had no obligation to create responsive records); *Capers v. White*, 8th Dist. No. 80713 (Apr. 17, 2002) (requests for information are not enforceable in a public records mandamus).

³⁷ *State ex rel. Recodat Co. v. Buchanan*, 46 Ohio St.3d 163, 164 (1989).

³⁸ *State ex rel. Cincinnati Enquirer v. Krings*, 93 Ohio St.3d 654, 660, 2001-Ohio-1895 (requested stadium cost-overrun records were within jurisdiction of county board and were public records regardless of whether they were in the possession of the county, or the construction companies).

³⁹ *State ex rel. Cincinnati Enquirer v. Krings*, 93 Ohio St.3d 654, 2001-Ohio-1895; *State ex rel. Mazzaro v. Ferguson*, 49 Ohio St.3d 37, 39 (1990) (“we hold that the records [of an independent certified public accountant] are within the auditor’s jurisdiction and that he is subject to a writ of mandamus ordering him to make them available for inspection.”).

⁴⁰ *State ex rel. Dispatch Printing Co. v. Johnson*, 106 Ohio St.3d 160, 2005-Ohio-4384, ¶25 (citations omitted); *State ex rel. Fant v. Enright*, 66 Ohio St.3d 186, 188 (1993) (“To the extent that any item . . . is not a ‘record,’ i.e., does not serve to document the organization, etc., of the public office, it is not a public record and need not be disclosed.”).

⁴¹ *State ex rel. Margolius v. Cleveland*, 62 Ohio St.3d 456, 461 (1992).

⁴² *State ex rel. Dispatch v. Johnson*, 106 Ohio St.3d 160, 2005-Ohio-4384, ¶27 (citing *State ex rel. McCleary v. Roberts*, 88 Ohio St.3d 365, 369, 2000-Ohio-345 (names, addresses, and other personal information kept by city recreation and parks department regarding children who used city’s recreational facilities are not public records)).

The Ohio Public Records Act

Chapter One: Public Records Defined

addresses kept by the employer solely for administrative (i.e. management) convenience,⁴³ retired municipal government employee home addresses kept by the municipal retirement system,⁴⁴ personal calendars and appointment books,⁴⁵ juror contact information and other juror questionnaire responses,⁴⁶ personal information about children who use public recreational facilities,⁴⁷ and non-record items and information contained in employee personnel files.⁴⁸ Similarly, proprietary software needed to access stored records on magnetic tapes or other similar format, which meets the first two parts of the definition, is a means to provide access, not a record, as it does not itself document the activities, etc. of a public office.⁴⁹ Personal correspondence that does not document any activity of the office is non-record. Finally, the Attorney General has opined that a piece of physical evidence in the hands of a prosecuting attorney (e.g., a cigarette butt) is not a record of that office.⁵⁰

3. The Effect of “Actual Use”

An item received by a public office is not a record simply because the public office *could* use the item to carry out its duties and responsibilities.⁵¹ However, if the public office *actually* uses the item, it may thereby document the office’s activities and become a record.⁵² For example, where a school board invited job applicants to send applications to a post office box, any applications received in that post office box did not become records of the office until the board retrieved and reviewed, or otherwise used and relied on them.⁵³ Personal, otherwise non-record correspondence that is actually used to document a decision to discipline a public employee qualifies as a “record.”⁵⁴

4. “Is This Item a Record?” - Some Common Applications

E-mail

A public office must analyze an e-mail message like any other item to determine if it meets the definition of a record. As electronic documents, all e-mails are items containing information stored on a fixed medium (the first part of the definition). If an e-mail is received by, created by, or comes under the jurisdiction of a public office (the second part of the definition), then its status as a record depends on the content of the message. If an e-mail created by, received by, or coming under the jurisdiction of a public office serves to document the organization, functions, etc. of the public office, then it meets the three parts of the definition of a record.⁵⁵ If an e-mail does not serve to document the activities of the office, then it does not meet the definition of a record.⁵⁶

⁴³ *Dispatch v. Johnson*, 106 Ohio St.3d 160, 2005-Ohio-4384 (home addresses of employees generally do not document activities of the office, but may in certain circumstances).

⁴⁴ *State ex rel. DeGroot v. Tilsley*, Ohio Supreme Court No. 2010-1285, 2011-Ohio-231.

⁴⁵ *International Union, United Auto., Aerospace & Agric. Implement Workers v. Voinovich*, 100 Ohio App.3d 372, 378 (10th Dist. 1995).

⁴⁷ *State ex rel. McCleary v. Roberts*, 88 Ohio St.3d 365, 369, 2000-Ohio-345.

⁴⁸ *Fant v. Enright*, 66 Ohio St.3d 186 (1993).

⁴⁹ *State ex rel. Recodot Co. v. Buchanan*, 46 Ohio St.3d 163, 165 (1989).

⁵⁰ 2007 Ohio Op. Att’y Gen. No. 034.

⁵¹ See, *State ex rel. Beacon Journal Publ’g Co. v. Whitmore*, 83 Ohio St.3d 61, 1998-Ohio-180.

⁵² *State ex rel. WBNS-TV, Inc. v. Dues*, 101 Ohio St.3d 406, 2004-Ohio-1497, ¶127 (judge used redacted information to decide whether to approve settlement); *State ex rel. Beacon Journal Publ’g Co. v. Whitmore*, 83 Ohio St.3d 61, 1998-Ohio-180 (judge read unsolicited letters but did not rely on them in sentencing defendant, therefore, letters did not serve to document any activity of the public office); *State ex rel. Sensel v. Leone*, 85 Ohio St.3d 152, 1999-Ohio-446 (unsolicited letters alleging inappropriate behavior of coach not “records”); *State ex rel. Carr v. Caltrider*, Franklin C.P. No. 00CVH07-6001, (May 17, 2001).

⁵³ *State ex rel. Cincinnati Enquirer v. Ronan*, 127 Ohio St.3d 236, 2010-Ohio-5680.

⁵⁴ *State ex rel. Bowman v. Jackson City School Dist.*, No. 10CA3, 2011-Ohio-2228 (4th Dist.).

⁵⁵ *State ex rel. Toledo Blade Co. v. Seneca County Bd. of Comm’rs*, 120 Ohio St.3d 372, 2008-Ohio-6253 (public office e-mail can constitute public records under R.C. 149.011(G) and 149.43 if it documents the organization, policies, decisions, procedures, operations, or other activities of the public office).

⁵⁶ *State ex rel. Wilson-Simmons v. Lake County Sheriff’s Dept.*, 82 Ohio St.3d 37 (1998) (When an e-mail message does not serve to document the organization, functions, policies, procedures, or other activities of the public office, it is not a “record,” even if it was created by public employees on a public office’s e-mail system).

The Ohio Public Records Act

Chapter One: Public Records Defined

Although the Ohio Supreme Court has not ruled directly on whether communications of public employees to or from private e-mail accounts that otherwise meet the definition of a record are subject to the Ohio Public Records Act,⁵⁷ the issue is analogous to mailing a record from one's home, versus mailing it from the office – the location from which the item is sent does not change its status as a record. Records transmitted via e-mail, like all other records, must be maintained in accordance with the office's relevant records retention schedules, based on content.⁵⁸

Notes

Not every piece of paper on which a public official or employee writes something meets the definition of a record.⁵⁹ Personal notes generally do not constitute records.⁶⁰ Employee notes have been found not to be public records if they are:

- kept as personal papers, not official records;
- kept for the employee's own convenience (for example, to help recall events); **and**
- other employees did not use or have access to the notes.⁶¹

Such personal notes do not meet the third part of the definition of a record because they do not document the organization, functions, etc. of the public office. The Ohio Supreme Court has held in several cases that, in the context of a public court hearing or administrative proceeding, personal notes that meet the above criteria need not be retained as records because no information will be lost to the public.⁶² However, if any one of these factors does not apply (for instance if the notes are circulated as a draft), then the notes are likely to be considered a record.

Drafts

If a draft document kept by a public office meets the defining criteria of a record, it is subject to both the Public Records Act and records retention law.⁶³ For example, the Ohio Supreme Court found that a written draft of an oral collective bargaining agreement submitted to city council for its approval documented the city's version of the oral agreement and therefore met the definition of a record.⁶⁴ A public office may address the length of time it must keep drafts through its records retention schedules.⁶⁵ The cases finding drafts to be records involve the sharing of the document with others,

⁵⁷ *State ex rel. Glasgow v. Jones*, 119 Ohio St.3d 391, 2008-Ohio-4788, ¶23 (relator conceded that that e-mail messages created or received by her in her capacity as state representative that document her work-related activities constitute records subject to disclosure under R.C. 149.43 regardless of whether it was her public or her private e-mail account that received or sent the e-mail messages).

⁵⁸ *State, ex rel. Glasgow v. Jones*, 119 Ohio St.3d 391, 2008-Ohio-4788, ¶21, fn. 1 ("Our decision in no way restricts a public office from disposing of items, including transient and other documents (e.g., e-mail messages) that are no longer of administrative value and are not otherwise required to be kept, in accordance with the office's properly adopted policy for records retention and disposal. See, R.C. 149.351. Nor does our decision suggest that the Public Records Act prohibits a public office from determining the period of time after which its e-mail messages can be routinely deleted as part of the duly adopted records-retention policy.").

⁵⁹ *International Union, United Auto., Aerospace & Agric. Implement Workers v. Voinovich*, 100 Ohio App.3d 372, 376 (10th Dist. 1995) (governor's logs, journals, calendars, and appointment books not "records").

⁶⁰ *State ex rel. Cranford v. Cleveland*, 103 Ohio St.3d 196, 2004-Ohio-4884, ¶22 (notes taken during public employee's pre-disciplinary conference not "records").

⁶¹ *State ex rel. Cranford v. Cleveland*, 103 Ohio St.3d 196, 2004-Ohio-4884, ¶¶9-23; *State ex rel. Steffen v. Kraft*, 67 Ohio St.3d 439, 440, 1993-Ohio-32; *Barnes v. Cols., Ohio Civil Serv. Comm.*, No. 10AP-637, 2011-Ohio-2808 (10th Dist.), *discretionary appeal not allowed*, 2011-Ohio-5605 (police promotional exam assessors' notes).

⁶² Personal notes, if not physically "kept by" the public office, would also not fit that defining requirement of a "public record." For additional discussion see, Chapter One: E. Public Record.

⁶³ *Kish v. City of Akron*, 109 Ohio St.3d 162, 2006-Ohio-1244, ¶20 ("document need not be in final form to meet the statutory definition of 'record'"); *State ex rel. Cincinnati Enquirer v. Dupuis*, 98 Ohio St.3d 126, 2002-Ohio-7041, ¶20 ("even if a record is not in final form, it may still constitute a 'record' for purposes of R.C. 149.43 if it documents the organization, policies, functions, decisions, procedures, operations, or other activities of a public office."); see also, *State ex rel. Wadd v. City of Cleveland*, 81 Ohio St.3d 50, 53, 1998-Ohio-444 (granting access to preliminary, unnumbered accident reports not yet processed into final form); *State ex rel. Cincinnati Post v. Schweikert*, 38 Ohio St.3d 170 (1988) (granting access to preliminary work product that had not reached its final stage or official destination).

⁶⁴ *State ex rel. Calvary v. City of Upper Arlington*, 89 Ohio St.3d 229, 2000-Ohio-142.

⁶⁵ For additional discussion, see Chapter Six: E. Records Retention - Practical Pointers.

The Ohio Public Records Act

Chapter One: Public Records Defined

implying that an unfinished draft document held solely by the individual creating it may constitute only personal notes that do not yet document the activities of the office.⁶⁶

Computerized Database Contents

A database is an organized collection of related data. The Public Records Act does not require a public office to search a database for information and compile or summarize it to create new records.⁶⁷ However, if the public office already uses a computer program that can perform the search and produce the compilation or summary described by the requester, the Ohio Supreme Court has determined that that output already “exists” as a record for the purposes of the Ohio Public Records Act.⁶⁸ In contrast, where the public office would have to reprogram its computer system to produce the requested output, the Court has determined that the public office does not have that output as an existing record of the office.⁶⁹

C. What is a “Public Record”

1. Statutory Definition - R.C. 149.43(A)(1): “Public record” means records kept by any public office⁷⁰

This short definition joins the previously detailed definitions of “records” and “public office,” with the words “kept by.”

2. What “Kept By” Means

A record is only a public record if it is “kept by”⁷¹ a public office.⁷² Records that do not yet exist – future minutes of a meeting that has not yet taken place – are not records, much less public records, until actually in existence and “kept” by the public office. A public office has no duty to furnish records that are not in its possession or control.⁷³ Similarly, if the office kept a record in the past, but has properly disposed of the record and no longer keeps it, then it is no longer a record of that office.⁷⁴ For example, where a school board first received and then returned superintendent candidates’ application materials to the applicants, those materials were no longer “public records” responsive to a newspaper’s request.⁷⁵ But “so long as a public record is kept by a government agency, it can never lose its status as a public record.”⁷⁶

⁶⁶ *State ex rel. Dist. 1199, Health Care & Social Serv. Union, SEIU v. Gulyassy*, 107 Ohio App.3d 729, 733 (10th Dist. 1995).

⁶⁷ *State ex rel. White v. Goldsberry*, 85 Ohio St. 3d 153, 154, 1999-Ohio-447 (citing *State ex rel. Kerner v. State Teachers Retirement Bd.*, 82 Ohio St.3d 273, 1998-Ohio-242. See also, *Margolius v. City of Cleveland*, 62 Ohio St.3d 456, 461 (1992).

⁶⁸ *State ex rel. Scanlon v. Deters*, 45 Ohio St.3d 376, 379 (1989) (overruled on different grounds).

⁶⁹ *State ex rel. Kerner v. State Teachers Retirement Bd.*, 82 Ohio St.3d 273, 275, 1998-Ohio-242 (relator requested names and addresses of a described class of members in the STRS - the court found the agency would have had to reprogram its computers to create the requested records).

⁷⁰ The definition goes on to expressly include specific entities, by title, as ‘public offices’, and specific records as ‘public records’, as follows: “. . . including, but not limited to, state, county, city, village, township, and school district units, and records pertaining to the delivery of educational services by an alternative school in this state kept by the nonprofit or for-profit entity operating the alternative school pursuant to section 3313.533 of the Revised Code.” R.C. 149.43(A)(1).

⁷¹ Prior to July, 1985, the statute read, “records required to be kept by any public office,” which was a very different requirement, and which no longer applies to the Ohio definition of “public record.” *State ex rel. Cincinnati Post v. Schweikert*, 38 Ohio St.3d 170, 173 (1988).

⁷² *State ex rel. Hubbard v. Fuerst*, No. 94799, 2010-Ohio-2489 (8th Dist.) (A writ of mandamus will not issue to compel a custodian of public records to furnish records which are not in his possession or control.).

The Ohio Public Records Act

Chapter One: Public Records Defined

D. Exceptions

Both within the Ohio Public Records Act and in separate statutes throughout the Ohio Revised Code, the General Assembly has identified items and information that are either removed from the definition of public record or are otherwise required or permitted to be withheld.⁷⁷ (See, Chapter Three: Exceptions to the Required Release of Public Records, for definitions, application, and examples of exceptions to the Public Records Act).

⁷⁷ R.C. 149.43(A)(1)(a-bb) (records, information, and other items that the General Assembly has determined are not public records or otherwise excepted).

The Ohio Public Records Act

Chapter Two: Requesting Public Records

II. Chapter Two: Requesting Public Records

The Ohio Public Records Act sets out procedures, limits, and requirements designed to maximize requester success in obtaining access to public records and minimize the burden on public offices where possible. When making or responding to a public records request, it is important to be familiar with these procedures, limits and requirements so it is a smooth and cooperative process.

A. Rights and Obligations of a Public Records Requester

Any person can make a request for public records by asking a public office or person responsible for public records for specific, existing records. The requester may make a request in any manner the requester chooses: by phone, in person, or in an e-mail or letter. A public office cannot require the requester to identify him- or herself, or indicate why he or she is requesting the records unless a specific law requires it. Often, however, a discussion about the requester's purposes or interest in seeking certain information can aid the public office in locating and producing the desired records more efficiently.

1. "Any Person" May Make a Request

The requester need not be an Ohio or United States resident.⁷⁸ In fact, in the absence of a law to the contrary, foreign individuals and individuals living in a foreign country are entitled to inspect and copy public records.⁷⁹ The requester need not be an individual, but may be a corporation, government agency, or other body.⁸⁰

2. Proper Request for Specific, Existing Records

A requester must identify the records he or she is seeking "with reasonable clarity."⁸¹ The request must not be overly broad, and must describe what the requester is seeking "specifically and particularly."⁸² A court will not compel a public office to produce public records when the underlying request is ambiguous or overly broad.⁸³ For example, a request for "any and all records containing any reference whatsoever" to a particular person is an inappropriate public records request because it fails to identify the particular records sought.⁸⁴ (See Chapter Two: B. Rights and Obligations of Public Offices - 6. Clarifying the Request)

A requester must also request a record that actually exists at the time of the request,⁸⁵ not merely information the requester seeks to obtain.⁸⁶ For example, if a person asks a public office for a list of

⁸⁴ *State ex rel. Dillery v. Icsman*, 92 Ohio St.3d 312, 314, 2001-Ohio-193.

⁸⁵ *State ex rel. Toledo Blade Co. v. Seneca County Bd. of Comm'rs*, 120 Ohio St.3d 372, 2008-Ohio-6253, ¶23 ("... in cases in which public records . . . are properly disposed of in accordance with a duly adopted records-retention policy, there is no entitlement to these records under the Public Records Act."); *State ex rel. Taxpayers Coalition v. Lakewood*, 86 Ohio St. 3d 385, 389-390, 1999-Ohio-114; *State ex rel. White v. Goldsberry*, 85 Ohio St.3d 153, 154, 1999-Ohio-447 (a public office has "no duty under R.C. 149.43 to create new records by searching for and compiling information from existing records."); *State ex rel. Cioffi v. Stuard*, No. 2009-T-0057, 2010-Ohio-829 (11th Dist.) (There was no violation of the Public Records Act when a Clerk of Courts failed to provide a hearing transcript that had never been created.).

⁸⁶ See, *Capers v. White*, 8th Dist No. 80713 (April 17, 2002) (requests for information are not enforceable in a public records mandamus); *State ex rel. Evans v. City of Parma*, 8th Dist No. 81236, 2003-Ohio-1159 (request for service calls from geographic area improper request); *State ex rel. Fant v. Tober*, 8th Dist No. 63737 (April 28, 1993) (office had no duty to seek out records which would contain information of interest to requester), affirmed by Ohio Sup. Ct. w/o opinion at 68 Ohio St.3d 117; see also, *State ex rel. Thomas v. Ohio State Univ.*, 71 Ohio St.3d 245, 1994-Ohio-261; *State ex rel. Rittner v. Fulton County*, No. F-10-020, 2010-Ohio-4055 (6th Dist.) (Improper request where requester sought only information on "how documents might be searched"); *Natl Fed'n of the Blind of Ohio v. Ohio Rehab. Serv. Comm'n*, No. 09AP-1177, 2010-Ohio-3384 (10th Dist.) (A request for

The Ohio Public Records Act

Chapter Two: Requesting Public Records

cases pending against it, but the office does not keep such a list, the public office is under no duty to create a list to respond to the request.⁸⁷ Additionally, there is no duty to provide records that were not in existence at the time of the request,⁸⁸ including those that later come into existence.⁸⁹

3. *Unless a Specific Law Provides Otherwise, Requests can be for any Purpose, and Need not Identify the Requestor or be Made in Writing*

A requester need not make a request for public records in writing, or identify him- or herself when making a request.⁹⁰ Requesters are not required to inspect or retrieve the records themselves; they may designate someone to inspect or receive copies of the requested records.⁹¹ In most circumstances, the requester need not specify the reason for the request,⁹² nor is there any requirement in the Ohio Public Records Act that a requester use particular wording to make a request.⁹³ Any requirement by the public office that the requester disclose his or her identity or the intended use of the requested public record constitutes a denial of the request.⁹⁴

However, the public office may ask requesters to provide their identity, or the intended use of the records, or make the request in writing, when the public office believes that any of these would help the public office identify, locate, or deliver the requested records. The public office must first let the requesters know that they may decline this option if they wish.⁹⁵ (See Chapter Two: B. Rights and Obligations of Public Offices - 6. Clarifying the Request)

4. *Requester Choices of Media on Which Copies are Made*

A requester must specify whether he or she would like to inspect the records or obtain copies.⁹⁶ If the requester asks for copies of the records, he or she has the right to choose the copy medium (paper, film, electronic file, etc.).⁹⁷ The requester can choose to have the record copied: (1) on paper, (2) in the same medium as the public office keeps them,⁹⁸ or (3) on any medium upon which the public office or person responsible for the public records determines the record can “reasonably be duplicated as an integral part of the normal operations of the public office...”⁹⁹ The public office may

information as to payments were made and received from state agencies was an improper request); *State ex rel. O’Shea & Assoc. Co., LPA v. Cuyahoga Metro. Hous. Auth.*, No. 93275, 2010-Ohio-3416 (8th Dist.) (A request for meetings that contained certain topics was an improper request for information and the public office was not required to seek out and retrieve those records which contain the information of interest to the requester).

⁸⁷ *Fant v. Flaherty*, 62 Ohio St.3d 426 (1992); *State ex rel. Fant v. Mengel*, 62 Ohio St.3d 197 (1991); *State ex rel. Welden v. Ohio St. Med. Bd.*, No. 11AP-139, 2011-Ohio-6560, ¶ 9 (10th Dist.) (because a list of addresses of every licensed physician did not exist, there was no clear legal duty to create such a record); *Pierce v. Dowler*, 12th Dist. No. CA93-08-024 (Nov. 1, 1993).

⁸⁸ *State ex rel. Striker v. Smith*, 129 Ohio St. 3d 168, 2011-Ohio-2878, ¶ 25; *State ex rel. Lanham v. Smith*, 112 Ohio St.3d 527, 2007-Ohio-609, ¶ 15; *State ex rel. Ohio Patrolmen’s Benevolent Assoc’n v. City of Mentor*, 89 Ohio St. 3d 440, 448, 2000-Ohio-214.

⁹⁸ *Gomez v. Ct. of Common Pleas*, No. 07-NO-341, 2007-Ohio-6433 (7th Dist.) (Although direct copies could not be made because the original recording device was no longer available, requester is still entitled to copies in available alternative format.).

⁹⁹ R.C. 149.43(B)(6).

The Ohio Public Records Act

Chapter Two: Requesting Public Records

charge the requester the actual cost of copies made, and may require payment of copying costs in advance.¹⁰⁰

5. Requester Choices of Delivery or Transmission of Copies

A requester may personally pick up requested copies of public records, or may send a designee.¹⁰¹ Upon request, a public office must transmit copies of public records via the U.S. mail “or by any other means of delivery or transmission,” at the choice of the requester.¹⁰² The public office may require prepayment of postage or other delivery cost, as well as the cost of supplies used in mailing, delivery, or transmission.¹⁰³

6. Other Rights and Obligations of Requesters

A requester is entitled to prompt inspection of public records at all reasonable times during the regular business hours of the public office, to receive copies of public records within a reasonable period of time, and to access the public office's records retention schedules.¹⁰⁴ A requester may be required to revise an ambiguous or overly broad request with the help of the public office, or be offered the choice of giving additional information necessary to identify, locate, or deliver the requested records. Also, remember that, through legislation, the General Assembly may alter almost any general rights, obligations, or procedure in public records law for specific types of requesters, records, offices, or situations.¹⁰⁵ (See the Rights and Obligations of a Public Office segment in the next section for further discussion.)

B. Rights and Obligations of a Public Office

A public office must organize and maintain its public records so that it may make the records available in response to public requests, and must provide the public access to its records retention schedule. Upon receiving a public records request for specific, existing records, the public office must provide prompt inspection at no cost during regular business hours, or provide copies at cost within a reasonable period of time. The public office may withhold or redact specific records that are covered by an exception to the Ohio Public Records Act, but is required to give the requester an explanation, including legal authority, for each denial. The Ohio Public Records Act provides for negotiation and clarification to help identify, locate, and deliver requested records if: (1) a requester makes an ambiguous or overly broad request, or (2) the public office believes that asking for (a) the request in writing, or (b) the requester's identity or the intended use of the requested information would enhance the ability of the public office to provide the records. In addition to denials justified by exceptions, a public office may deny a request in the extreme circumstance where compliance would unreasonably interfere with the discharge of the office's duties.

1. Organization and Maintenance of Public Records

The Ohio Public Records Act requires public offices to organize and maintain public records “in a manner that they can be made available for inspection or copying” in response to public records requests.¹⁰⁶ The General Assembly has imposed this requirement in order to “facilitate broader access to public records.”¹⁰⁷ The Ohio Public Records Act does not require a public office or person

¹⁰⁶ R.C. 149.43(B)(2). *State ex rel. Bardwell v. City of Cleveland*, 126 Ohio St.3d 195, 2010-Ohio-3267 (city police department did not fail to organize and maintain its public records in a manner available for inspection and copying when it kept pawnbroker reports on 3x5 notecards. While the Court noted that keeping these records on 8 1/2x11 paper could reduce delays in processing requests, there was no requirement to do so).

¹⁰⁷ R.C. 149.43(B)(2).

The Ohio Public Records Act

Chapter Two: Requesting Public Records

responsible for public records to post those records online on the office's website.¹⁰⁸ A public office is not required to create new records to respond to a public records request, even if it is only a matter of compiling information from existing records.¹⁰⁹

A public office must have a copy of its current records retention schedule at a location readily available to the public.¹¹⁰ The records retention schedule can be a valuable tool for the public office to use to show a requester how the records kept by the office are organized and maintained, enabling the requester to describe records sought specifically enough for the office to identify them.

2. Request Must be for Specific, Existing Records

A public office need not fulfill requests that do not specifically and particularly describe which records a requester is seeking.¹¹¹ (See the corresponding duty of requesters in subsection A.2. of this Chapter.)

3. Prompt Inspection, or Copies Within a Reasonable Period of Time

There is no set, required time period for responding to a public records request. Instead, the requirement to provide "prompt" production of records for inspection, and to make copies available in a "reasonable amount of time,"¹¹² have both been interpreted by the courts as being "without delay" and "with reasonable speed,"¹¹³ with the reasonableness of the time taken in each case depending on the facts and circumstances of the particular request.¹¹⁴ These terms do not mean "immediately," or "without a moment's delay,"¹¹⁵ but the courts will find a violation of this requirement when an office cannot show that the time taken was reasonable.¹¹⁶ The following factors may contribute to the calculation of what is "prompt" or "reasonable" in a given circumstance:

¹⁰⁸ *State ex rel. Patton v. Rhodes*, 129 Ohio St. 3d 182, 2011-Ohio-3093, ¶¶ 15-16.

Location & Retrieval:

- Locate records¹¹⁹ and retrieve from storage location, e.g., file cabinet, branch office, off-site storage facility.

Review, Analysis & Redaction:

- Examine all materials for possible release;¹²⁰
- Perform necessary legal review,¹²¹ or consult with knowledgeable parties;
- Redact exempt materials;¹²² and
- Provide explanation and legal authority for all redactions and/or denials.¹²³

Preparation:

- Obtain requester's choice of medium;¹²⁴ and
- Make copies.¹²⁵

Delivery:

- Wait for advance payment of costs;¹²⁶ and
- Deliver copies, or schedule inspection¹²⁷

The Ohio Supreme Court has held that no pleading of too much expense, or too much time involved, or too much interference with normal duties, can be used by the public office to evade the public's right to inspect and obtain a copy of public records within a reasonable time.¹²⁸

4. Inspection at No Cost During Regular Business Hours

A public office must make its public records available for inspection at all reasonable times during regular business hours.¹²⁹ "Regular business hours" means established business hours.¹³⁰ When a public office operates twenty-four hours a day, such as a police department, the office may adopt hours that approximate normal administrative hours during which inspection may be accomplished.¹³¹ Public offices may not charge requesters for inspection of public records.¹³²

The Ohio Public Records Act

Chapter Two: Requesting Public Records

5. Copies and Delivery or Transmission, “At Cost”¹³³

A public office may charge costs for copies and for delivery or transmission, and may require payment of both costs in advance.¹³⁴ “At cost” includes the actual cost of making copies,¹³⁵ packaging, postage, and any other costs of the method of delivery or transmission chosen by the requester.¹³⁶ The cost of employee time cannot be included in the cost of copies or delivery.¹³⁷ One appellate court has held that a public office may choose to employ the services, and charge the requester the costs of, a private contractor to copy public records so long as the decision to do so is reasonable.¹³⁸

When a statute sets the cost of certain records or for certain requesters, the specific takes precedence over the general,¹³⁹ and the requester must pay the cost set by the statute.¹⁴⁰ For example, because R.C. 2301.24 requires that parties to a common pleas court action must pay court reporters the compensation rate set by the judges for court transcripts, a requester who is a party to the action may not use R.C. 149.43(B)(1) to obtain copies of the transcript at the actual cost of duplication.¹⁴¹ However, where a statute sets a fee for certified copies of an otherwise public record, and the requester does not request that the copies be certified, the office may only charge actual cost.¹⁴² Similarly, where a statute sets a fee for “photocopies” and the request is for electronic copies rather than photocopies, the office may only charge actual cost.¹⁴³

There is no obligation to provide free copies to someone who indicates an inability or unwillingness to pay for requested records.¹⁴⁴ The Ohio Public Records Act does not require that a public office allow those seeking a copy of the public record to make copies with their own equipment,¹⁴⁵ nor does it prohibit the public office from allowing this.

6. Clarifying the Request

A public office must interpret the Ohio Public Records Act broadly in favor of disclosure. However, a requester must first describe the records he or she seeks with reasonable clarity so that the public office can identify responsive records based on the manner in which it ordinarily maintains and accesses the public records it keeps.¹⁴⁶ A public office is not required to produce records when the underlying request is ambiguous or overly broad.¹⁴⁷

When a request lacks the details the office needs to identify where to look for responsive materials, or seeks what amounts to a complete duplication of the office’s files, the Public Records Act promotes cooperation to produce a successful, revised request.

The Ohio Public Records Act

Chapter Two: Requesting Public Records

a. Mandatory Clarification in Response to Ambiguous or Overly Broad Request

The Ohio Public Records Act allows a public office to deny any overly broad or ambiguous records request. However, the public office is required to give the requester the opportunity to revise the request by explaining how it ordinarily maintains and accesses the records it keeps. The office's records retention schedules can be a helpful starting point, because they categorize records based on how they are used and the purpose they serve.

What is An Ambiguous or Overly Broad Request?

An ambiguous request is one that lacks the clarity a public office needs to ascertain what the requestor is seeking and where to look for records that might be responsive. The wording may be vague or subject to interpretation.

An overly broad request is one that is so inclusive that the public office is unable to identify the records sought based on the manner in which the office routinely organizes and accesses records. Public records requests that are worded like legal discovery requests - for example, a request for "any and all" records "pertaining in any way to" a particular activity of the office or of a particular employee - are often overly broad for purposes of the Public Records Act because they lack the specificity the office needs to identify and locate only responsive records. The courts have found requests overly broad when they seek what amounts to a complete duplication of a major category of a public office's records. Examples of overly broad requests include requests for:

- All records containing particular names or words;¹⁴⁸
- Duplication of all records having to do with a particular topic, or all records of a particular type;¹⁴⁹
- Every report filed with the public office for a particular time period (if the office does not organize records in that manner).¹⁵⁰

Although a public office has a duty to facilitate broader access to public records by organizing and maintaining them so they are available for inspection or copying,¹⁵¹ using an organizational system different from, and inconsistent with, a given request does not mean that the public office has violated this duty.¹⁵² At least one court has held that the primary concern of a retrieval system is to accommodate the mission of the office, and that providing reasonable access for citizens is secondary.¹⁵³ For instance, if a person requests copies of all police service calls for a particular

¹⁴⁸ *State ex rel. Dillery v. Icsman*, 92 Ohio St.3d 312, 2001-Ohio-193.

¹⁴⁹ *State ex rel. Dehler v. Spatny*, 127 Ohio St.3d 312, 2010-Ohio-5711, ¶¶ 1-3 (request for prison quartermaster's orders and receipts for clothing over seven years); *State ex rel. Glasgow v. Jones*, 119 Ohio St.3d 391, 2008-Ohio-2788, ¶19 (request for all work-related e-mails, texts, and correspondence of an elected official during six-months in office); *State ex rel. Zidonis v. Cols. State Comm. College*, No. 10AP-961, 2011-Ohio-6817 (10th Dist.), *appeal pending* (request for all litigation files and all grievance files for a period over six years, and for all e-mails between two employees during joint employment); *State ex rel. Daugherty v. Mohr*, No. 11AP-5, 2011-Ohio-6453, ¶¶ 32-35 (10th Dist.) (request for all policies, e-mails, or memos regarding whether prison officials are authorized to 'triple cell' inmates into segregation); *State ex rel. Davila v. City of Bellefontaine*, No. 8-11-01, 2011-Ohio-4890, ¶¶ 36-43 (3rd Dist.) (request to inspect 9-1-1 tapes covering 15 years); *State ex rel. Davila v. City of East Liverpool*, No. 10 CO 16, 2011-Ohio-1347, ¶¶ 22-28 (7th Dist.), *discretionary appeal not allowed*, 2011-Ohio-4217 (request to access tape recorded 9-1-1 calls and radio traffic over seven years); *State ex rel. Zauderer v. Joseph*, 62 Ohio App.3d 752 (10th Dist. 1989) (request for all accident reports filed on a given date with two law enforcement agencies).

¹⁵⁰ *State ex rel. Zauderer v. Joseph*, 62 Ohio App.3d 752 (10th Dist. 1989).

(the fact that requester made what it believed to be a specific request does not mandate that the public office keep its records in such a way that access to the records was possible); *State ex rel. Evans v. City of Parma*, No. 81236, 2003-Ohio-1159 (8th Dist.).

¹⁵³ *State ex rel. Zauderer v. Joseph*, 62 Ohio App.3d 752 (10th Dist. 1989).

The Ohio Public Records Act

Chapter Two: Requesting Public Records

geographical area identified by street names, but the computer program cannot identify calls based on street names, the request does not match the method of retrieval and is not one that the office has a duty to fulfill.¹⁵⁴

b. Optional Negotiation When Identity, Purpose, or Request in Writing Would Assist Identifying, Locating, or Delivering Requested Records

As noted elsewhere, a requester cannot be required to make a request in writing, or to reveal his or her identity and/or reasons for requesting records. In fact, requiring the requester to disclose identity or intended use constitutes a denial of the request.¹⁵⁵ However, in the event that a public office believes that either a written request, knowing the intended use of the information, or knowing the requester's identity would benefit the requester by enhancing the ability of the public office to identify, locate, or deliver the requested records, the public office may inform the requester that giving this information is not mandatory, and then ask if the requester is willing to provide that information to assist the public office in fulfilling the request.¹⁵⁶

7. Duty to Withhold Certain Records

A public office must withhold records subject to a mandatory, "must not release" exception to the Public Records Act in response to a public records request. (See Chapter Three, Section A. Categories of Exceptions - 1. "Must Not Release.")

8. Option to Withhold or Release Certain Records

Records subject to a discretionary exception give the public office the option to either withhold or release the record subject to that exception. (See Chapter Three, Section A. Categories of Exceptions – 2. "May Release, But May Choose to Withhold.")

9. No Duty to Release Non-Records

A public office need not disclose or create items that are "non-records," or compile new records from other existing records. As noted in Chapter One, there is no obligation that a public office produce non-records – items that do not document the organization, functions, policies, decisions, procedures, operations, or other activities of the office.¹⁵⁷ A record must document something that the office does.¹⁵⁸ The Ohio Supreme Court expressly rejected the notion that an item is a "record" simply because the public office could use the item to carry out its duties and responsibilities.¹⁵⁹ Instead, the public office must actually use the item; otherwise it is not a record.¹⁶⁰ The Public Records Act itself does not restrict a public office from releasing non-records, but other laws may prohibit a public officer from releasing certain information in non-records.¹⁶¹

¹⁶⁰ See, 2007 Ohio Op. Att'y Gen. No. 034 (an item of physical evidence in the possession of the Prosecuting Attorney that was not introduced as evidence was found not to be a "record"); *State ex rel. WBNS-TV, Inc. v. Dues*, 101 Ohio St.3d 406, 2004-Ohio-1497, ¶27 (judge used redacted information to decide whether to approve settlement); *State ex rel. Beacon Journal Publ'g Co. v. Whitmore*, 83 Ohio St.3d 61, 1998-Ohio-180 (judge read unsolicited letters but did not rely on them in sentencing a criminal defendant, therefore, letters did not serve to document any activity of the public office and were not "records"); *State ex rel. Sensel v. Leone*, 85 Ohio St.3d 152, 1999-Ohio-446 (letters alleging inappropriate behavior of coach not "records" and can be discarded) (citing to *Whitmore*, *supra*); *State ex rel. Carr v. Caltrider*, Franklin C.P. No. 00CVH07-6001 (May 16, 2001); *State ex rel. Wilson-Simmons v. Lake County Sheriff's Dept.*, 82 Ohio St.3d 37 (1998) (allegedly racist e-mail messages circulated between public employees were not "records").

¹⁶¹ E.g., R.C. 1347.01 et seq. (Ohio Personal Information Systems Act).

The Ohio Public Records Act

Chapter Two: Requesting Public Records

A public office is not required to create new records to respond to a public records request, even if it is only a matter of compiling information from existing records.¹⁶² For example, if a person asks a public office for a list of cases pending against it, but the office does not keep such a list, the public office is under no duty to create a list to respond to the request.¹⁶³ Nor must the office conduct a search for and retrieve records that contain described information that is of interest to the requester.¹⁶⁴

10. Denial of a Request, Redaction, and a Public Office's Duties of Notice

Both the withholding of an entire record and the redaction of any part of a record are considered a denial of the request to inspect or copy that particular item.¹⁶⁵ Any requirement by the public office that the requester disclose the requester's identity or the intended use of the requested public record also constitutes a denial of the request.¹⁶⁶

a. Redaction – Statutory Definition

“Redaction” means obscuring or deleting any information that is exempt from the duty to permit public inspection or copying from an item that otherwise meets the definition of a “record.”¹⁶⁷

For records on paper, redaction is the blacking or whiting out of non-public information in an otherwise public document. A public office may redact audio, video, and other electronic records by analogous technical processes that obscure or delete specific content. “If a public record contains information that is exempt from the duty to permit public inspection or to copy the public record, the public office or the person responsible for the public record shall make available all of the information within the public record that is not exempt.”¹⁶⁸ Therefore, a public office may redact only that part of a record subject to an exception or other valid basis for withholding. However, an office may withhold an entire record where excepted information is “inextricably intertwined” with the entire content of a particular record such that redaction cannot protect the excepted information.¹⁶⁹

The Public Records Act states that a redaction will be considered a denial of a request to inspect or copy the redacted information, except if a federal or state law authorizes or requires the public office to make the redaction.¹⁷⁰

b. Requirement to Notify of and Explain Redactions and Withholding of Records

Public offices must either “notify the requester of any redaction or make the redaction plainly visible.”¹⁷¹ In addition, if an office denies a request in part or in whole, the public office must “provide the requester with an explanation, including legal authority, setting forth why the request

¹⁷¹ R.C. 149.43(B)(1).

The Ohio Public Records Act

Chapter Two: Requesting Public Records

was denied.¹⁷² If the requester made the initial request in writing, then the office must also provide its explanation for the denial in writing.¹⁷³

c. No Obligation to Respond to Duplicate Request

Where a public office denies a request, and the requester sends a follow-up letter reiterating a request for essentially the same records, the public office is not required to provide an additional response.¹⁷⁴

d. No Waiver of Unasserted, Applicable Exceptions

If the requester later files a mandamus action against the public office, the public office is not limited to the explanation(s) previously given for denial, but may rely on additional reasons or legal authority in defending the mandamus action.¹⁷⁵

11. Burden or Expense of Compliance

A public office cannot deny or delay response to a public records request on the grounds that responding will interfere with the operation of the public office.¹⁷⁶ However, when a request unreasonably interferes with the discharge of the public office's duties, the office may not be obligated to comply.¹⁷⁷ For example, a requester does not have the right to the complete duplication of voluminous files of a public office.¹⁷⁸

12. Other Rights and Obligations of Public Offices

A public records request may be made by any person, not just a citizen of Ohio. The requester is not generally required to give his or her identity, intended use of the information, or make the request in writing. If the request is oral, it is recommended that the recipient write down the details of and confirm them with the requester. The public office must provide requested records in any of the following media specified by the requester: (a) paper, (b) the same medium on which the public office keeps the record, or (c) any other medium on which the record can reasonably be duplicated "as an integral part of the normal operations of the public office."¹⁷⁹ The public office must also transmit requested copies to a requester by any available requested means of delivery or transmission, but the public office may require the requester to pay the cost of the selected means in advance. (See Chapter Two, Section B. Rights and Obligations of a Public Office.)

The Ohio Public Records Act

Chapter Two: Requesting Public Records

C. Statutes That Modify General Rights and Duties

Through legislation, the General Assembly can change the preceding rights and duties for particular records, for particular public offices, for particular requesters, or in specific situations. Be aware that the general rules of public records law may be modified in a variety and combination of ways. Below are a few examples of modifications to the general rule.

1. Particular Records

- (a) Although most DNA records kept by the Ohio Bureau of Criminal Identification and Investigation (BCI&I) are protected from disclosure by exceptions,¹⁸⁰ Ohio law requires that the results of DNA testing of an inmate who obtains post-conviction testing must be disclosed to any requester,¹⁸¹ which would include results of testing conducted by BCI&I.
- (b) Certain Ohio sex offender records must be posted on a public website, without waiting for an individual public records request.¹⁸²
- (c) Ohio law specifies that a public office's release of an "infrastructure record" or "security record" to a private business for certain purposes does not waive these exceptions,¹⁸³ despite the usual rule that voluntary release to a member of the public waives any exception(s).¹⁸⁴
- (d) Journalists may inspect, but not copy, some of the records to which they have special access, despite the general right to choose either inspection or copies.¹⁸⁵
- (e) Contracts and financial records of moneys expended in relation to services provided under those contracts to federal, state or local government by another governmental entity or agency, or by most nonprofit corporations or associations, shall be deemed to be public records, except as provided by R.C. 149.431.¹⁸⁶

2. Particular Public Offices

- (a) The Ohio Bureau of Motor Vehicles is authorized to charge a non-refundable fee of four dollars for each highway patrol accident report for which it receives a request,¹⁸⁷ and a coroner's office may charge a record retrieval and copying fee of twenty-five cents per page, with a minimum charge of one dollar,¹⁸⁸ despite the general requirement that a public office may only charge the "actual cost" of copies.¹⁸⁹
- (b) Ohio's courts are not subject to the Ohio Public Records Act. Rather, courts apply the records access rules of the Ohio Supreme Court Rules of Superintendence.¹⁹⁰

¹⁸⁰ R.C. 109.573(D),(E),(G)(1); R.C. 149.43(A)(1)(j).

¹⁸¹ R.C. 2953.81(B).

¹⁸² R.C. 2950.08(A) (BCI&I sex offender registry and notification, or "SORN" information, not open to the public); *but compare*, R.C. 2950.13(A)(11) (certain SORN information must be posted as a database on the internet and is a public record under R.C. 149.43).

¹⁸³ R.C. 149.433(C).

¹⁸⁴ See, e.g., *State ex rel. Cincinnati Enquirer v. Dupuis*, 98 Ohio St.3d 126, 2002-Ohio-7041.

¹⁸⁵ R.C. 4123.88(D) (Industrial Commission or Workers Compensation Bureau shall disclose to journalist addresses and telephone numbers of claimants, and the dependents of those claimants); R.C. 313.10(D) ("A journalist may submit to the coroner a written request to view preliminary autopsy and investigative notes and findings, suicide notes, or photographs of the decedent made by the coroner").

¹⁸⁶ R.C. 149.431; *State ex rel. Bell v. Brooks*, 130 Ohio St. 3d 87, 2011-Ohio-4897, ¶¶ 30-40.

¹⁸⁷ R.C. 5502.12 (also provides that other agencies which submit such reports may charge requesters who claim an interest arising out of a motor vehicle accident a non-refundable fee not to exceed four dollars).

¹⁸⁸ R.C. 313.10(B).

¹⁸⁹ *State ex rel. Warren Newspapers, Inc. v. Hutson*, 70 Ohio St.3d 619, 1994-Ohio-5. See also, *State ex rel. Russell v. Thomas*, 85 Ohio St.3d 83, 1999-Ohio-435 (one dollar per page did not represent actual cost of copies); 2001 Ohio Op. Atty. Gen. No. 012.

The Ohio Public Records Act

Chapter Two: Requesting Public Records

3. Particular Requesters or Purposes

- (a) Directory information concerning public school students may not be released if the intended use is for a profit-making plan or activity.¹⁹¹
- (b) Journalists, commercial requesters, and incarcerated persons are subject to combinations of modified rights and obligations, discussed below.

4. Modified Records Access by Certain Requesters

The rights and obligations of the following requesters differ from those generally provided by the Ohio Public Records Act. The intended use of the records, or motive behind the request, may be relevant. Also, the requester may be required to provide more information or make his or her request in a specific fashion. Some requesters are given greater access to records than other persons, and some are more restricted. These are only examples. Changes to the law are constantly occurring, so be sure to check for any current law modifying access to the particular public records with which you are concerned.

a. Prison inmates

Prison inmates may request public records,¹⁹² but they are limited to a statutorily mandated process if requesting any public record concerning a criminal investigation or prosecution or a juvenile delinquency investigation that otherwise would be a criminal investigation or prosecution if the subject were an adult.¹⁹³ An inmate's designee may not make a public records request on behalf of the inmate that the inmate is prohibited from making directly.¹⁹⁴ The criminal investigation records that may be requested by an inmate using this process are broader than those defined under the Confidential Law Enforcement Investigatory Records (CLEIRs) exception, and include offense and incident reports.¹⁹⁵ A public office is not required to produce such records in response to an inmate request unless the inmate obtains a finding from the judge who sentenced or otherwise adjudicated the inmate's case that the information sought is necessary to support what appears to be a justiciable claim.¹⁹⁶ The inmate's request must be filed in the original criminal action against the inmate, not in a separate, subsequent forfeiture action involving the inmate.¹⁹⁷ Unless an inmate requesting public records concerning a criminal prosecution has first followed these requirements, any suit to enforce his or her request will be dismissed.¹⁹⁸ The appropriate remedy for an inmate to seek if he or she follows these requirements is an appeal of the sentencing judge's findings, not a mandamus action.¹⁹⁹ Any public records that were obtained by a litigant prior to the ruling in *Steckman v. Jackson* are not excluded for use in the litigant's post-conviction proceedings.²⁰⁰

¹⁹¹ R.C. 3319.321(A) (Further, the school "may require disclosure of the requester's identity or the intended use of the directory information . . . to ascertain whether the directory information is for use in a profit-making plan or activity.").

¹⁹² See *State ex rel. Dehler v. Collins*, No. 09AP-703, 2010-Ohio-5436 (10th Dist.) (correctional facilities may be able to limit the access to, and provision of, requested records due to personnel and safety considerations); see also, *State ex rel. Dehler v. Kelly*, No. 2009-T-0084, 2010-Ohio-3053 (11th Dist.) (Prison officials had to comply with various requests submitted by inmate.).

¹⁹³ R.C. 149.43(B)(8). NOTE: The language is not limited to requests for criminal investigations concerning the inmate who is making the request.

¹⁹⁴ *State ex rel. Barb v. Cuyahoga Cty. Jury Commr.*, 128 Ohio St. 3d 528, 2011-Ohio-1914.

¹⁹⁶ R.C. 149.43(B)(8); *State v. Wilson*, No. 23734, 2011-Ohio-4195 (2nd Dist.), *discretionary appeal not allowed* 2012-Ohio-136 (application for clemency is not a "justiciable claim"); *State v. Rodriguez*, No. WD-10-062, 2011-Ohio-1397 (6th Dist.) (relator identified no pending proceeding to which his claims of evidence tampering would be material).

¹⁹⁷ *State of Ohio v. Lather*, No. S-08-036, 2009-Ohio-3215 (6th Dist.); *State of Ohio v. Chatfield*, No. 10CA12, 2010-Ohio-4261 (5th Dist.) (inmate may file R.C. 149.43(B)(8) motion *pro se*, even if currently represented by criminal counsel in the original action).

¹⁹⁸ *State ex rel. Barb v. Cuyahoga Cty. Jury Commr.*, No. 93326, 2009-Ohio-3301 (8th Dist.); *Hall v. State*, No. 2008-T-0073, 2009-Ohio-404 (11th Dist.); *State ex rel. Russell v. Thornton*, 111 Ohio St.3d 409, 2006-Ohio-5858, ¶¶9-18; *State ex rel. Sevayega v. Reis*, 88 Ohio St.3d 458, 2000-Ohio-383.

¹⁹⁹ *State of Ohio v. Thornton*, No. 23291, 2009-Ohio-5049 (2nd Dist.).

²⁰⁰ *State v. Broom*, 123 Ohio St.3d 114, 2009-Ohio-4778.

The Ohio Public Records Act

Chapter Two: Requesting Public Records

b. Commercial Requesters

Unless a specific statute provides otherwise,²⁰¹ it is irrelevant whether the intended use of requested records is for commercial purposes.²⁰² However, if an individual or entity is making public records requests for commercial purposes, the public office receiving the requests can limit the number of records “that the office will transmit by United States mail to ten per month.”²⁰³

While the Revised Code does not specifically define “commercial purposes”²⁰⁴ it does require that the term be narrowly construed, and lists specific activities excluded from the definition:²⁰⁵

- Reporting or gathering news;
- Reporting or gathering information to assist citizen oversight or understanding of the operation or activities of government; or
- Nonprofit educational research.

c. Journalists

Several statutes grant “journalists”²⁰⁶ enhanced access to certain records that are not available to other requesters. This enhanced access is sometimes conditioned on the journalist providing information or representations not normally required of a requester.

For example, a journalist may obtain the actual residential address of a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the Bureau of Criminal Identification and Investigation. If the individual's spouse, former spouse, or child is employed by a public office, a journalist may obtain the name and address of that spouse or child's employer in this manner as well.²⁰⁷ A journalist may also request customer information maintained by a municipally owned or operated public utility, other than social security numbers and any private financial information such as credit reports, payment methods, credit card numbers, and bank account information.²⁰⁸ In order to obtain this information, however, the journalist must:

- Make the request in writing and sign the request;
- Identify himself or herself by name, title, and employer's name and address; and
- State that disclosure of the information sought would be in the public interest.²⁰⁹

(See Journalist Request Table on next page for more details.)

²⁰¹ E.g., R.C. 3319.321(A) (prohibits schools from releasing student directory information “to any person or group for use in a profit-making plan or activity.”).

²⁰² 1990 Ohio Op. Att’y Gen. No. 050; see also, R.C. 149.43(B)(4); but see, R.C. 149.43(B)(7) (public office may limit copies mailed to requester if purpose is commercial).

²⁰³ R.C. 149.43(B)(7) (“unless the person certifies to the office in writing that the person does not intend to use or forward the requested records, or the information contained in them, for commercial purposes”). NOTE: The limit only applies to requested transmission “by United States mail.”

²⁰⁴ The statute does not contain a general definition of “commercial purposes” but does define “commercial” in the context of requests to the Bureau of Motor Vehicles. There, “commercial” is defined as “profit-seeking production, buying, or selling of any good, service, or other product.” R.C. 149.43(F)(2)(c).

²⁰⁵ R.C. 149.43(B)(7).

²⁰⁶ R.C. 149.43(B)(9)(c) states: “As used in [division (B) of R.C. 149.43], “journalist” means a person engaged in, connected with, or employed by any news medium, including a newspaper, magazine, press association, news agency, or wire service, a radio or television station, or a similar medium, for the purpose of gathering, processing, transmitting, compiling, editing, or disseminating information for the general public.”

²⁰⁷ R.C. 149.43(B)(9)(a).

²⁰⁸ R.C. 149.43(B)(9)(b).

²⁰⁹ R.C. 149.43(B)(9)(a) and (b); see also, 2007 Ohio Op. Att’y Gen. No. 039 (“[R.C. 2923.129(B)(2)] prohibits a journalist from making a reproduction of information about the licensees of concealed carry licenses by any means, other than through his own mental processes.”).

Actual confidential personal residential address of a: <ul style="list-style-type: none">• Public children service agency employee• Private child placing agency employee• Juvenile court employee• Law enforcement agency employee Note: The journalist must adequately identify the person whose address is being sought, AND must make the request to the agency by which the individual is employed OR to the agency that has custody of the records.	2151.142 (D)	Inspect or copy the records(s)
--	--------------	--------------------------------

5. *Modified Access to Certain Public Offices' Records*

As with requesters, the rights and obligations of public offices can be modified by law. Some of these modifications include imposing conditions on obtaining records in volume and setting permissible charges for copying. The following provisions are only examples. The law is subject to change, so be sure to check for any current law modifying access to the particular public records with which you are concerned.

a. Bulk Commercial Requests from Ohio Bureau of Motor Vehicles

"The bureau of motor vehicles may adopt rules pursuant to Chapter 119 of the Revised Code to reasonably limit the number of bulk commercial special extraction requests made by a person for the same records or for updated records during a calendar year. The rules may include provisions for charges to be made for bulk commercial special extraction requests for the actual cost of the bureau, plus special extraction costs, plus ten percent. The bureau may charge for expenses for redacting information, the release of which is prohibited by law."²¹⁰ The statute sets out definitions of "actual cost," "bulk commercial extraction request," "commercial," "special extraction costs," and "surveys, marketing, solicitation, or resale for commercial purposes."²¹¹

b. Copies of Coroner's Records

Generally, all records of a coroner's office are public records subject to inspection by the public.²¹² A coroner's office may provide copies to a requester upon a written request and payment by the requester of a retrieval and copying fee, at the rate of twenty-five cents per page or a minimum fee of one dollar.²¹³ However, the following are not public records: preliminary autopsy and investigative notes and findings; photographs of a decedent made by the coroner's office; suicide notes; medical and psychological records of the decedent provided to the coroner; records of a deceased individual that are part of a confidential enforcement investigatory record; and laboratory reports generated from analysis of physical evidence by the coroner's laboratory that is discoverable under Criminal Rule 16.²¹⁴ The following three classes of requesters may request the full coroner's report, including the above materials that are otherwise excepted from disclosure, pursuant to the guidelines in R.C. § 313.10(C)-(E): (1) next of kin of the decedent or the representative of the decedent's estate; (2) journalists; and (3) insurers. Next of kin and insurers are able to request copies of the coroner's full and complete record of the decedent.²¹⁵ Journalists may only view the coroner's materials otherwise excluded from public records but may

²¹⁰ R.C. 149.43(F)(1).

²¹¹ These definitions are set forth at R.C. 149.43(F)(2) (a-d), and (F)(3).

²¹² R.C. § 313.10 (B).

²¹³ R.C. § 313.10 (B).

²¹⁴ R.C. § 313.10 (A)(2)(a)-(f).

²¹⁵ R.C. § 313.10 (C), (E).

The Ohio Public Records Act

not make copies of materials.²¹⁶ The coroner may notify the decedent's next of kin if a journalist or insurer has made a request pursuant to R.C. § 313.10(D) or (E).²¹⁷

²¹⁶ R.C. § 313.10 (D).
²¹⁷ R.C. § 313.10 (F).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

III. Chapter Three: Exceptions to the Required Release of Public Records²¹⁸

While the Ohio Public Records Act presumes and favors public access to government records, the General Assembly has created exceptions to protect certain records from mandatory release. The Ohio Public Records Act does not define categories of exceptions, but the following guide may be useful in handling public records requests.

A. Categories of Exceptions

There are two types of exceptions, and they are almost always created by state or federal statutes or codes.

1. “Must Not Release”

The first type of exception prohibits a public office from releasing specific records or information to the public. Such records are prohibited from release in response to a public records request, often under civil or criminal penalty, and the public office has no choice but to deny the request. These mandatory restrictions are expressly included as exceptions to the Ohio Public Records Act by what is referred to as the “catch-all” exception in R.C. 149.43(A)(1)(v): “records the release of which is prohibited by state or federal law.” These laws can include constitutional provisions,²¹⁹ statutes,²²⁰ common law,²²¹ or authorized state or federal administrative codes.²²² Local ordinances, however, cannot create public records exceptions.

A few “must not release” exceptions apply to public offices on behalf of, and subject to the decisions of, another person. For example, a public legal or medical office may be restricted by the attorney-client or physician-patient privileges from releasing certain records of their clients or patients.²²³ In such cases, if the client or patient chooses to waive the privilege, the public office would be released from the otherwise mandatory exception.²²⁴

2. “May Release, But May Choose to Withhold”

The other type of exception is discretionary and gives a public office the choice of either withholding or releasing specific records often by excluding certain records from the definition of public records.²²⁵ This means that the public office does not have to disclose these records in response to a public records request; however, it may do so if it chooses without fear of punishment under the law. Such provisions, usually state or federal statutes, are sometimes referred to as “discretionary exceptions.” Some laws contain ambiguous titles or text such as “confidential” or “private,” but the test for public records purposes is whether a particular law applied to a particular request actually prohibits release of a record or gives the public office the choice to withhold the record.

²¹⁸ For purposes of this section only the term “exception” will be used to describe laws authorizing the withholding of records from public records requests. The term “exemption” is often used in this field, apparently interchangeably.

²¹⁹ *State ex rel. Keller v. Cox*, 85 Ohio St.3d 279, 1999-Ohio-264.

²²⁰ See e.g., *State ex rel. Beacon Journal Publ'g Co. v. Akron*, 104 Ohio St.3d 399, 2004-Ohio-6557 (applying R.C. 2151.421).

²²¹ For example, common law attorney-client privilege. *State ex rel. Leslie v. Ohio Hous. Fin. Agency*, 105 Ohio St.3d 261, 2005-Ohio-1508, ¶27.

²²² *State ex rel. Lindsay v. Dwyer*, 108 Ohio App.3d 462, 467 (10th Dist. 1996) (STRS properly denied access to beneficiary form pursuant to Ohio Administrative Code); 2000 Ohio Op. Att'y Gen. No. 036 (federal regulation prohibits release of service member's discharge certificate without service member's written consent). But, compare, *State ex rel. Gallon & Takacs Co. v. Conrad*, 123 Ohio App.3d 554, 561 (10th Dist. 1997) (if regulation was promulgated outside of agency's statutory authority, the invalid rule will not constitute an exception to the public records act).

²²³ *State ex rel. Nix v. City of Cleveland*, 83 Ohio St.3d 379, 1998-Ohio-290.

²²⁴ See, *State ex rel. Dreamer v. Mason*, 115 Ohio St.3d 190, 2007-Ohio-4789 (illustrates the interplay of attorney-client privilege, waiver, public records law, and criminal discovery).

²²⁵ 2000 Ohio Op. Att'y Gen. No. 021 (“R.C. 149.43 does not expressly prohibit the disclosure of items that are excluded from the definition of public record, but merely provides that their disclosure is not mandated.”); see also, 2001 Ohio Op. Att'y Gen. No. 041.

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

B. Multiple and Mixed Exceptions

Many records are subject to more than one exception. Some may be subject to both a discretionary exception (giving the public office the option to withhold), as well as a mandatory exception (which prohibits release), so it is important for public offices to find all exceptions that apply to a particular record, rather than acting on the first one that is found to apply.

C. Waiver of an Exception

If a valid exception applies to a particular record, but the public office discloses it anyway, the office is deemed to have waived²²⁶ (abandoned) that exception for that particular record, especially if the disclosure was to a person whose interests are antagonistic to those of the public office.²²⁷ However, “waiver does not necessarily occur when the public office that possesses the information makes limited disclosures [to other public officials] to carry out its business.”²²⁸ Under such circumstances, the information has never been disclosed to the public.²²⁹

D. Applying Exceptions

In Ohio, the records of a public office belong to the people, not to the government officials holding them.²³⁰ Accordingly, the public records law must be liberally interpreted in favor of disclosure,²³¹ and any exceptions in the law that permit certain types of records to be withheld from disclosure must be narrowly construed.²³² The public office has the burden of establishing that an exception applies, and does not meet that burden if it has not proven that the requested records fall squarely within the exception.²³³ The Ohio Supreme Court has stated that “in enumerating very narrow, specific exceptions to the public records statute, the General Assembly has already weighed and balanced the competing public policy considerations between the public’s right to know how its state agencies make decisions and the potential harm, inconvenience or burden imposed on the agency by disclosure.”²³⁴

A “well-settled principle of statutory construction [is] that ‘when two statutes, one general and the other special, cover the same subject matter, the special provision is to be construed as an exception to the general statute which might otherwise apply.’”²³⁵ Accordingly, where a statute permits a court to designate a fee, parties to an action must pay the court reporter for copies of court transcripts even

²²⁶ *State ex rel. Wallace v. State Med. Bd.*, 89 Ohio St.3d 431, 435 (2000) (“Waiver” is defined as a voluntary relinquishment of a known right.).

²²⁷ See, e.g., *State ex rel. Cincinnati Enquirer v. Dupuis*, 98 Ohio St.3d 126, 2002-Ohio-7041; *State ex rel. Gannett Satellite Network, Inc. v. Petro*, 80 Ohio St.3d 261, 1997-Ohio-319; *State ex rel. Zuem v. Leis*, 56 Ohio St.3d 20 (1990); *Dept. of Liquor Control v. B.P.O.E. Lodge 0107*, 62 Ohio St. 3d 1452 (1991) (introduction of record at administrative hearing waives any bar to dissemination); *State ex rel. Coleman v. City of Norwood*, 1st Dist. No. C-890075 (Aug. 2, 1989) (“the visual disclosure of the documents to relator [the requester in this case] waives any contractual bar to dissemination of these documents”); *Covington v. Backner*, Franklin Cty. C.P. No. 98 CVH-07-5242, (June 1, 2000) (attorney-client privilege waived where staff attorney had reviewed, duplicated, and inadvertently produced documents to defendants during discovery).

²²⁸ *State ex rel. Musial v. N. Olmstead*, 106 Ohio St.3d 459, 2005-Ohio-5521, ¶15 (forwarding police investigation records to a city’s ethics commission did not constitute waiver); *State ex rel. Cincinnati Enquirer v. Sharp*, 151 Ohio App.3d 756, 761, 2003-Ohio-1186 (1st Dist.) (statutory confidentiality of documents submitted to municipal port authority not waived when port authority shares documents with county commissioners).

²²⁹ *State ex rel. Musial v. N. Olmstead*, 106 Ohio St.3d 459, 465, 2005-Ohio-5521, ¶35-39; *State ex rel. Cincinnati Enquirer v. Sharp*, 151 Ohio App.3d 756, 761, 2003-Ohio-1186 (1st Dist.).

²³⁰ *White v. Clinton Cty. Bd. Of Comm’rs.*, 76 Ohio St.3d 416, 420 (1996); *Dayton Newspapers, Inc. v. Dayton*, 45 Ohio St.2d 107, 109 (1976) (quoting *State ex rel. Patterson v. Ayers*, 171 Ohio St. 369, 371 (1960)).

²³¹ *State ex rel. Mahajan v. State Medical Bd.*, 127 Ohio St.3d 497, 2010-Ohio-5995, ¶21; *State ex rel. Toledo Blade Co. v. Seneca County Bd. of Comm’rs*, 120 Ohio St.3d 372, 2008-Ohio-6253, ¶17; *State ex rel. Carr v. City of Akron*, 112 Ohio St.3d 351, 2006-Ohio-6714, ¶29.

²³² *State ex rel. Cincinnati Enquirer v. Jones-Kelley*, 118 Ohio St.3d 81, 2008-Ohio-1770, ¶10 (“A custodian does not meet this burden if it has not proven that the requested records fall squarely within the exception.”); *State ex rel. Carr v. City of Akron*, 112 Ohio St.3d 351, 2006-Ohio-6714, ¶30 (“Insofar as Akron asserts that some of the requested records fall within certain exceptions to disclosure under R.C. 149.43, we strictly construe exceptions against the public records custodian, and the custodian has the burden to establish the applicability of an exception.”).

²³³ *State ex rel. Rocker v. Guernsey County Sheriff’s Office*, 126 Ohio St.3d 224, 2010-Ohio-3288, ¶7.

²³⁴ *State ex rel. James v. Ohio State Univ.*, 70 Ohio St.3d 168, 172, 1994-Ohio-246; NOTE: The Ohio Supreme Court has not authorized courts or other records custodians to create new exceptions to R.C. 149.43 based on a balancing of interests or generalized privacy concerns. *State ex rel. WBNS TV, Inc. v. Dues*, 101 Ohio St.3d 406, 2004-Ohio-1497, ¶31.

²³⁵ *State ex rel. Slagle v. Rogers*, 103 Ohio St.3d 89, 92, 2004-Ohio-4354, ¶14 (citing *State ex rel. Dublin Securities, Inc. v. Ohio Div. of Securities*, 68 Ohio St.3d 426, 429, 1994-Ohio-340 (1994)); see, R.C. 1.51.

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

though it may be in excess of the court's "actual cost" to duplicate that record.²³⁶ (See Chapter Two: C. Statutes That Modify General Rights and Duties)

Another rule of construction courts often apply when interpreting a statute is the maxim *expressio unius est exclusio alterius* - "the expression of one thing is the exclusion of another."²³⁷ Applying this maxim would mean that if a statute expressly states that particular records of a public office are public, the remaining records would not be public. However, Ohio's Supreme Court has clearly stated that just the opposite is true when applied to public records: if a statute expressly states that specific records of a public office are public, it does not mean that all other records of that office are not public, i.e., that the other records are exempt from disclosure.²³⁸

Simply put, if a record does not clearly fit into one of the exceptions listed by the General Assembly, and is not otherwise prohibited from disclosure by other state or federal law, it must be disclosed.

E. Exceptions Enumerated in the Public Records Act

The Ohio Public Records Act contains a list of records and types of information removed from the definition of "public records."²³⁹ The full text of those exceptions appears in R.C. 149.43(A)(1), a copy of which is included in Appendix A. Here, these exceptions (bb) are addressed in brief summaries. Note that although the language removing a record from the definition of "public records" gives the public office the choice of withholding or releasing the record, many of these records are further subject to other statutes that prohibit their release.²⁴⁰

(a) Medical records, which are defined as any document or combination of documents that:

1) pertain to a patient's medical history, diagnosis, prognosis, or medical condition,

and

2) were generated and maintained in the process of medical treatment.²⁴¹

Records meeting this definition need not be disclosed.²⁴² Birth, death, and hospital admission or discharge records are not considered medical records for purposes of Ohio's public records law.²⁴³ Reports generated for reasons other than medical diagnosis or treatment, such as for employment or litigation purposes, are not "medical records" exempt from disclosure under the Public Records Act.²⁴⁴ However, other statutes or federal constitutional rights may prohibit disclosure,²⁴⁵ in which case the records or information are not public records under the "catch-all exception," R.C. 149.43(A)(1)(v).

²³⁶ *State ex rel. Slagle v. Rogers*, 103 Ohio St.3d 89, 2004-Ohio-4354, ¶18 ("R.C. 2301.24 is a specific statute that requires a party to an action to pay the designated fee to the court reporter when seeking transcripts or copies of transcripts in the action.") For additional discussion of costs, see Chapter Two: B. Rights and Obligations of a Public Office.

Housing Auth.*, Ohio Supreme Court Case No. 2010-1536, 2012-Ohio-115, ¶¶ 41-43 (questionnaires and release authorizations generated to address lead exposure in city-owned housing not "medical records" despite touching on childrens' medical histories); *State ex rel. Multimedia, Inc. v. Snowden*, 72 Ohio St.3d 141, 144-45, 1995-Ohio-248 (a police psychologist report obtained to assist in the police hiring process is not a medical record); *State of Ohio v. Hall*, 141 Ohio App.3d 561, 2000-Ohio-4059 (4th Dist.) (psychiatric reports compiled solely to assist court with competency to stand trial determination are not medical records).

²⁴⁵ See, e.g., 42 U.S.C. §§ 12101 et seq. (1990) (Americans with Disabilities Act); 29 U.S.C. §§ 2601 et seq. (1993) (Family and Medical Leave Act).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

(b) Records pertaining to probation and parole proceedings or proceedings related to the imposition of community control sanctions²⁴⁶ and post-release control sanctions.²⁴⁷ Examples of records covered by this exception include:

- Pre-sentence investigation reports;²⁴⁸
- Records relied on to compile a pre-sentence investigation report;²⁴⁹
- Documents reviewed by the Parole Board in preparation for a parole hearing;²⁵⁰ and
- Records of parole proceedings.²⁵¹

(c) All records associated with the statutory process through which minors may obtain judicial approval for abortion procedures in lieu of parental consent. This exception includes records from both trial and appellate-level proceedings.²⁵²

(d), (e), and (f): These three exceptions all relate to the confidentiality of adoption proceedings.

Documents removed from the definition of “public record” include:

- Records pertaining to adoption proceedings;²⁵³
- Contents of an adoption file maintained by the Department of Health;²⁵⁴
- A putative father registry;²⁵⁵ and
- An original birth record after a new birth record has been issued²⁵⁶

In limited circumstances, release of adoption records and proceedings may be appropriate. For example:

- The Department of Job and Family Services may release a putative father’s registration form to the mother of the minor or to the agency or attorney who is attempting to arrange the minor’s adoption.²⁵⁷
- Non-identifying social and medical histories may be released to an adopted person who has reached majority or to the adoptive parents of a minor.²⁵⁸
- An adult adopted person may be entitled to the release of identifying information or access to his or her adoption file.²⁵⁹

(g) Trial preparation records: “trial preparation record,” for the purposes of the Ohio Public Records Act, is defined as “any record that contains information that is specifically compiled in reasonable anticipation of, or in defense of, a civil or criminal action or proceeding, including the independent thought processes and personal trial preparation of an attorney.”²⁶⁰

²⁶⁰ R.C. 149.43(A)(4).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

Documents that a public office obtains through discovery during litigation are considered trial preparation records.²⁶¹ In addition, material compiled for a public attorney's personal trial preparation constitutes a trial preparation record.²⁶² The trial preparation exception does not apply to settlement agreements or settlement proposals,²⁶³ or where there is insufficient evidence that litigation was reasonably anticipated at the time records were prepared.²⁶⁴

- (h) Confidential Law Enforcement Investigatory Records: CLEIRs are defined²⁶⁵ as records that (1) pertain to a law enforcement matter, and (2) have a high probability of disclosing any of the following:
- The identity of an uncharged suspect;
 - The identity of an information source or witness to whom confidentiality has been “reasonably promised;”
 - Information that would tend to reveal the identity of a source or witness, where the source or witness was “reasonably promised” confidentiality;
 - Specific confidential investigatory techniques or procedures or specific investigatory work product; or
 - Information that would endanger the life or physical safety of law enforcement personnel, a crime victim, a witness, or a confidential information source.
- (i) Records containing confidential “mediation communications” (R.C. 2710.03) or records relating to the Ohio Civil Rights Commission’s discrimination complaint, investigation, and conciliation process (R.C. 4112.05).²⁶⁶
- (j) DNA records stored in the state DNA database pursuant to R.C. 109.573.²⁶⁷
- (k) Inmate records released by the Department of Rehabilitation and Correction to the Department of Youth Services or a court of record pursuant to R.C. 5120.21(E).²⁶⁸
- (l) Records of the Department of Youth Services (DYS) regarding children in its custody that are released to the Department of Rehabilitation and Correction (DRC) for the limited purpose of carrying out the duties of the DRC.²⁶⁹
- (m) Intellectual property records; while this exception sounds broad on its face, it has a specific definition for the purposes of the Ohio Public Records Act, and is limited to those records that are produced or collected: (1) by or for state university faculty or staff; (2) in relation to studies or research on an educational, commercial, scientific, artistic, technical, or scholarly issue; and (3) which have not been publicly released, published, or patented.²⁷⁰

²⁶⁸ R.C. 5120.21(A).

²⁶⁹ R.C. 5139.05(D)(1); see, R.C. 5139.05(D) for all records maintained by DYS of children in its custody.

²⁷⁰ R.C. 149.43(A)(1)(m); R.C. 149.43(A)(5); see also, *State ex rel. Physicians Comm. for Responsible Medicine v. Bd. of Trs. of Ohio State Univ.*, 108 Ohio St.3d 288, 2006-Ohio-903 (In finding university’s records of spinal cord injury research to be exempt intellectual property records, Court ruled that limited sharing of the records with other researchers to further the advancement of spinal cord injury research did not mean that the records had been “publicly released”).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

- (n) Donor profile records. Similar to the intellectual property exception, the “donor profile records” exception is given a specific, limited definition for the purposes of the Public Records Act. First, it only applies to records about donors or potential donors to public colleges and universities.²⁷¹ Second, the names and reported addresses of all donors and the date, amount, and condition of their donation(s), are all public information.²⁷² The exception applies to all other donor or potential donor records.
- (o) Records maintained by the Ohio Department of Job and Family Services on statutory employer reports of new hires.²⁷³
- (p) Peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT or investigator of the Bureau of Criminal Identification and Investigation residential and familial information.²⁷⁴
- (q) Trade secrets of certain county and municipal hospitals: “Trade secrets” are defined at R.C. 1333.61(D), the definitional section of Ohio’s Uniform Trade Secrets Act.
- (r) Information pertaining to the recreational activities of a person under the age of eighteen. This includes any information that would reveal the person’s:
 - Address or telephone number, or that of person’s guardian, custodian, or emergency contact person;
 - Social Security Number, birth date, or photographic image;
 - Medical records, history, or information; or
 - Information sought or required for the purpose of allowing that person to participate in any recreational activity conducted or sponsored by a public office or obtain admission privileges to any recreational facility owned or operated by a public office.²⁷⁵
- (s) Listed records of a child fatality review board (except for the annual reports the boards are required by statute to submit to the Ohio Department of Health).²⁷⁶ The listed records are also prohibited from unauthorized release by R.C. 307.629(B).
- (t) Records and information provided to the executive director of a public children services agency or prosecutor regarding the death of a minor from possible abuse, neglect, or other criminal conduct. Some of these records are prohibited from release to the public. Others may become public depending on the circumstances.²⁷⁷
- (u) Nursing home administrator licensing test materials, examinations, or evaluation tools.²⁷⁸
- (v) Records the release of which is prohibited by state or federal law; this is often called the catch-all exception. Although state and federal statutes can create both mandatory and discretionary exceptions by themselves, this provision also incorporates as exceptions by reference any statutes or administrative code that prohibit the release of specific records. An agency rule designating particular records as confidential that is properly promulgated by a state or federal agency will constitute a valid catch-all exception²⁷⁹ because such rules have the effect of law.²⁸⁰

²⁷¹ R.C. 149.43(A)(6) (“‘Donor profile record’ means all records about donors or potential donors to a public institution of higher education . . .”).

Dwyer*, 108 Ohio App.3d 462 (10th Dist. 1996) (State Teachers Retirement System properly denied access to beneficiary form pursuant to Ohio Administrative Code); 2000 Ohio Op. Att’y Gen. No. 036 (service member’s discharge certificate prohibited from release by Governor’s Office of Veterans Affairs, per federal regulation, without service member’s written consent).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

But, if the rule was promulgated outside the authority statutorily granted to the agency, the rule is not valid and will not constitute an exception to disclosure.²⁸¹

- (w) Proprietary information of or relating to any person that is submitted to or compiled by the Ohio Venture Capital Authority.²⁸²
- (x) All information and evaluations regarding the preparedness and capacity of trauma centers “to respond to disasters, mass casualties, and bioterrorism.”²⁸³
- (y) Financial statements and data any person submits for any purpose to the Ohio Housing Finance Agency or the Controlling Board in connection with applying for, receiving, or accounting for financial assistance from the agency, and information that identifies any individual who benefits directly or indirectly from financial assistance from the agency.
- (z) Records and information relating to foster caregivers and children housed in foster care, as well as children enrolled in licensed, certified, or registered child care centers. This exception applies only to records held by county agencies or the Ohio Department of Job and Family Services.²⁸⁴
- (aa) Military discharges recorded with a county recorder.²⁸⁵
- (bb) Usage information including names and addresses of specific residential and commercial customers of a municipally owned or operated public utility.

F. Exceptions Affecting Personal Privacy

Ohio has no general privacy law comparable to the federal Privacy Act.²⁸⁶ Accordingly, there is no general “privacy exception” to the Ohio Public Records Act. However, a public office is obligated to protect certain non-public record personal information from unauthorized dissemination.²⁸⁷ Though many of the exceptions to the Public Records Act apply to information people would consider “private,” this section focuses specifically on records and information that are protected by: (1) the right to privacy found in the United States Constitution; and (2) R.C. 149.45 and R.C. 319.28(B), which Ohio laws designed to protect personal information on the internet; and (3) Ohio’s Personal Information Systems Act, Chapter 1347 of the Ohio Revised Code.

1. Constitutional Right to Privacy

The U.S. Supreme Court recognizes a constitutional right to informational privacy under the Fourteenth Amendment’s Due Process Clause. This right protects people’s “interest in avoiding divulgence of highly personal information,”²⁸⁸ but must be balanced against the public interest in the information.²⁸⁹ Such information cannot be disclosed unless disclosure “narrowly serves a compelling state interest.”²⁹⁰

²⁸⁹ *Kallstrom v. City of Columbus*, 136 F.3d 1055, 1061 (6th Cir. 1998) (citing *Whalen v. Roe*, 429 U.S. 589, 602-04 (1977)); *Nixon v. Administrator of Gen. Servs.* (1977), 433 U.S. 425; see also, *J. P. v. DeSanti*, 653 F.2d 1080, 1091 (6th Cir. 1981).

²⁹⁰ *Kallstrom v. City of Columbus*, 136 F.3d 1055, 1059 (6th Cir. 1998).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

In Ohio, the U.S Court of Appeals for the Sixth Circuit has limited this right to informational privacy to interests that “are of constitutional dimension,” that are considered “fundamental rights” or rights implicit in the concept of ordered liberty.”²⁹¹ That is, the consequence of disclosure must implicate some other right protected by the Constitution.

In the Sixth Circuit case of *Kallstrom v. City of Columbus*, several police officers sued the city for releasing their unredacted personnel files to an attorney for members of a criminal gang whom the officers had investigated and were testifying against in a major drug case. The personnel files contained the officers’ and their family members’ addresses and phone numbers, as well as banking information, Social Security Numbers, and photo IDs.²⁹² The Court held that, because release of the information could lead to the gang members causing the officers bodily harm, the officers’ fundamental constitutional rights to personal security and bodily integrity were at stake.²⁹³ The Court also described this constitutional right as a person’s “interest in preserving [one’s] life.”²⁹⁴ The Court then found that the Ohio Public Records Act did not require release of the files in this manner, because the disclosure did not “narrowly [serve] the state’s interest in ensuring accountable government.”²⁹⁵

Based on the Sixth Circuit’s holding in *Kallstrom*, the Ohio Supreme Court subsequently held that police officers have a constitutional right to privacy in the officers’ personal information that could be used by defendants in a criminal case to “achieve nefarious ends.”²⁹⁶ The Ohio Supreme Court has also suggested that the constitutional right to privacy would come into play where “release of personal information [would create] an unacceptable risk that a child could be victimized.”²⁹⁷

In another Sixth Circuit case, a county sheriff held a press conference “to release the confidential and highly personal details” of a rape.²⁹⁸ The Sixth Circuit held that a rape victim has a “fundamental right of privacy in preventing government officials from gratuitously and unnecessarily releasing the intimate details of the rape,” where release of the information served no penalogical purpose.²⁹⁹ The Court indicated that release of some of the details may have been justifiable if the disclosure would have served “any specific law enforcement purpose,” including apprehending the suspect, but no such justification was offered in this case.³⁰⁰

Neither the Ohio Supreme Court nor the Sixth Circuit have applied the constitutional right to privacy broadly. Public offices and individuals should thus be aware of this potential protection, but know that it is limited to circumstances involving fundamental rights, and that most personal information is not protected by it.

2. Personal Information Listed Online

R.C. 149.45 requires public offices to redact, and permits certain individuals to request redaction of, specific personal information³⁰¹ from any records made available to the general public on the

³⁰⁰ *Bloch v. Ribar*, 156 F.3d 673, 686 (6th Cir. 1998).

³⁰¹ “Personal information” is defined as an individual’s: social security number, federal tax identification number, driver’s license number or state identification number, checking account number, savings account number, or credit card number. R.C. 149.45(A)(1).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

internet.³⁰² A person must make this request in writing on a form developed by the Attorney General, specifying the information to be redacted and providing any information that identifies the location of that personal information.³⁰³ In addition to the right of all persons to request the redaction of personal information defined above, persons in certain covered professions can also request the redaction of their actual residential address from any records made available by public offices to the general public on the internet.³⁰⁴ When a public office receives a request for redaction, it must act in accordance with the request within five business days, if practicable.³⁰⁵ If the public office determines that redaction is not practicable, it must explain to the individual why the redaction is impracticable within five business days.³⁰⁶

R.C. 149.45 separately requires all public offices to redact, encrypt, or truncate the Social Security Numbers of individuals from any documents made available to the general public on the internet.³⁰⁷ If a public office becomes aware that an individual's Social Security Number was not redacted, the office must redact the Social Security Number within a reasonable period of time.³⁰⁸

The statute provides that a public office is not liable in a civil action for any alleged harm as a result of the failure to redact personal information or addresses on records made available on the internet to the general public, unless the office acted with a malicious purpose, in bad faith, or in a wanton or reckless manner.³⁰⁹

In addition to the protections listed above, R.C. 319.28 allows a covered professional³¹⁰ to submit a request, by affidavit, to remove his or her name from the general tax list of real and public utility property and insert initials instead.³¹¹ Upon receiving such a request, the county auditor shall act within five days in accordance with the request.³¹² If removal is not possible, the auditor's office must explain why the removal and insertion is impracticable.³¹³

*3. Ohio Personal Information Systems Act*³¹⁴

Ohio's Personal Information Systems Act (PISA) applies to those items to which the Ohio Public Records Act does not apply; that is, records that have been determined to be non-public, and items and information that are not "records" as defined by the Ohio Public Records Act.³¹⁵ The General Assembly has made clear that PISA is not designed to deprive the public of otherwise public information by incorporating the following provisions with respect to the Ohio Public Records and Open Meetings Acts:

- The provisions of this chapter shall not be construed to prohibit the release of public records, or the disclosure of personal information in public records, as defined in [the

³¹⁵ R.C. 149.011(G).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

Ohio Public Records Act], or to authorize a public body to hold an executive session for the discussion of personal information if the executive session is not authorized under division (G) of [the Ohio Open Meetings Act].³¹⁶

- The disclosure to members of the general public of personal information contained in a public record, as defined in section 149.43 of the Revised Code, is not an improper use of personal information under this chapter.³¹⁷
- As used in the Personal Information Systems Act, “confidential personal information” means personal information that is not a public record for purposes of [the Ohio Public Records Act].³¹⁸

The following definitions apply to the non-records and non-public records that are covered by PISA:

“Personal information” means:

1. Any information that describes anything about a person; **or**
2. that indicates actions done by or to a person; **or**
3. that indicates that a person possesses certain personal characteristics; **and**
4. that contains, and can be retrieved from a system by, a name, identifying number, symbol, or other identifier assigned to a person.³¹⁹

“Confidential personal information” means personal information that is not a public record for purposes of section 149.43 of the Revised Code.³²⁰

A personal information “system” is:

1. Any collection or group of related records that are kept in an organized manner and maintained by a state or local agency; **and**
2. from which personal information is retrieved by the name of the person or by some identifying number, symbol, or other identifier assigned to the person; **including**,
3. records that are stored manually and electronically.³²¹

The following are not “systems” for purposes of PISA:

- Collected archival records in the custody of or administered under the authority of the Ohio Historical Society;
- Published directories, reference materials or newsletters; or
- Routine information that is maintained for the purpose of internal office administration, the use of which would not adversely affect a person.³²²

PISA generally requires accurate maintenance and prompt deletion of unnecessary personal information from “personal information systems” maintained by public offices, and protects personal information from unauthorized dissemination.³²³ Based on provisions added to the law in 2009, state

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

agencies³²⁴ must adopt rules under Chapter 119 of the Revised Code regulating access to the confidential personal information the agency keeps, whether electronically or on paper.³²⁵ No person shall knowingly access “confidential personal information” in violation of these rules,³²⁶ and no person shall knowingly use or disclose “confidential personal information” in a manner prohibited by law.³²⁷ A state agency may not employ persons who have violated access, use, or disclosure laws regarding confidential personal information.³²⁸ In general, state and local agencies must “[t]ake reasonable precautions to protect personal information in the system from unauthorized modification, destruction, use, or disclosure.”³²⁹

Sanctions for violations of PISA

The enforcement provisions of PISA can include injunctive relief, civil damages, and/or criminal penalties, depending on the nature of the violation(s).³³⁰

Note: Because PISA concerns the treatment of non-records and non-public records, it is not set out in great detail in this Sunshine Law manual. Public offices can find more detailed guidance on implementing the provision of PISA concerning limitations on access to confidential personal information at <http://privacy.ohio.gov/government>, under the heading “ORC 1347.15 Guidance.” Public offices should also consult with their legal counsel.

G. Exceptions Created by Other Laws (by Topic)

1. Attorney-Client Privilege, Discovery, and Other Litigation Items

a. Attorney-Client Privilege

“The attorney-client privilege is one of the oldest recognized privileges for confidential communications.”³³¹ Attorney-client privileged records and information must not be revealed without the client’s waiver.³³² Such records are thus prohibited from release by both state and federal law for purposes of the catch-all exception to the Ohio Public Records Act.

The attorney-client privilege arises whenever legal advice of any kind is sought from a professional legal advisor in his or her capacity as such, and the communications relating to that purpose, made in confidence by the client, are at the client’s instance permanently protected from disclosure by the client or the legal advisor.³³³ Records or information within otherwise public records that meet those criteria must be withheld or redacted in order to preserve attorney-client privilege. For example, drafts of proposed bond documents prepared by an attorney are protected by attorney-client privilege, and are not subject to disclosure.³³⁴

³²⁴ R.C. 1347.15(A)(2); 2010 Ohio Ap. Att’y Gen. No. 016 (Ohio Bd. of Tax Appeals is a “judicial agency” for purposes of R.C. 1347.15).

³³⁴ *State ex rel. Benesch, Friedlander, Coplan & Aronoff, LLP v. City of Rossford*, 140 Ohio App.3d 149, 156 (6th Dist. 2000).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

The privilege applies to records of communications between public office clients and their attorneys in the same manner that it does for private clients and their counsel.³³⁵

Communications between a client and his or her attorney's agent may also be subject to the attorney-client privilege.³³⁶ The privilege also applies to "documents containing communications between members of ... a represented ... public entity ... about the legal advice given."³³⁷ For example, itemized attorney billing statements to a public office that contain descriptions of work performed may be protected by the attorney-client privilege.³³⁸

b. Criminal Discovery

The Ohio Supreme Court has determined that in a pending criminal proceeding, defendants may only seek records through discovery under the Rules of Criminal Procedure.³³⁹ However, this limitation does not extend to police initial incident reports, which must be made available immediately, even to the defendant.³⁴⁰

Before 1994, many criminal defendants were circumventing the discovery process by using the Ohio Public Records Act to obtain more records than they would otherwise have been entitled to receive.³⁴¹ This tactic was prohibited in the landmark case of *State ex rel. Steckman v. Jackson*. The Ohio Supreme Court found that allowing criminal defendants to use the Public Records Act in that manner, among other things, "uneveled" the playing field because prosecutors had no similar right to obtain additional discovery outside the criminal rules.³⁴² However, when the records requested by criminal defendants are not related to their ongoing criminal case, the discovery limitation does not apply.³⁴³ Such requests must be analyzed in the same manner as any other public records request.

Note that when the prosecutor discloses materials to the defendant pursuant to the rules of criminal procedure, that disclosure does not mean those records automatically become available for public disclosure.³⁴⁴ The prosecutor does not waive³⁴⁵ applicable public records exceptions, such as trial preparation records or confidential law enforcement records,³⁴⁶ simply by complying with discovery rules.³⁴⁷

c. Civil Discovery

Unlike in the criminal arena, in pending civil court proceedings the parties are not confined to the materials available under the civil rules of discovery.³⁴⁸ A civil litigant is permitted to use the Ohio Public Records Act in addition to the more restricted limits associated with civil discovery.³⁴⁹ The

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

nature of a request as either discovery or request for public records will determine available enforcement.³⁵⁰

As to the use of these public records as evidence in litigation, the Ohio Rules of Evidence govern.³⁵¹ Justice Stratton's concurring opinion in *Gilbert v. Summit County*, 104 Ohio St. 3d 660 (2004), noted that "trial courts have discretion to admit or exclude evidence."³⁵² She stated more directly, "trial courts have discretion to impose sanctions for discovery violations, one of which could be exclusion of that evidence," and concluded that, "even though a party may effectively circumvent a discovery deadline by acquiring a document through a public records request, it is the trial court that ultimately determines whether those records will be admitted in the pending litigation."³⁵³

d. Prosecutor and Government Attorney Files (Trial Preparation and Work Product)

R.C. 149.43(A)(1)(g) excepts from release any "trial preparation records," which are defined as "any record that contains information that is specifically compiled in reasonable anticipation of, or in defense of, a civil or criminal action or proceeding, including the independent thought processes and personal trial preparation of an attorney."³⁵⁴ Documents that a public office obtains as a litigant through discovery will ordinarily qualify as "trial preparation records,"³⁵⁵ as would the material compiled for a specific criminal proceeding by a prosecutor or the personal trial preparation by a public attorney.³⁵⁶ Attorney trial notes and legal research are "trial preparation records," which may be withheld from disclosure.³⁵⁷ Virtually everything in a prosecutor's file during an active prosecution is either material compiled in anticipation of a specific criminal proceeding or personal trial preparation of the prosecutor, and is therefore exempt from public disclosure as "trial preparation" material.³⁵⁸ However, unquestionably non-exempt materials do not transform into "trial preparation records" simply by virtue of being held in a prosecutor's file.³⁵⁹ For example, routine offense and incident reports are subject to release while a criminal case is active, including those in the files of the prosecutor.³⁶⁰

The common law attorney work product doctrine also protects a broader range of materials than attorney-client privilege.³⁶¹ The doctrine provides a qualified privilege,³⁶² and is incorporated into Rule 26 of the Ohio and Federal Rules of Civil Procedure. Ohio Civ.R. 26(B)(3) protects material "prepared in anticipation of litigation or for trial." The rule protects the "notes or documents containing the mental impressions, conclusions, opinions, or legal theories of its attorney or other representative concerning the litigation."³⁶³

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

e. Settlement Agreements and Other Contracts

Where a governmental entity is party to a settlement, the trial preparation records exception will not apply to the settlement agreement.³⁶⁴ But the parties are entitled to redact any information within the settlement agreement that is subject to the attorney-client privilege.³⁶⁵ Any provision within the agreement that specifies it shall be kept confidential is void and unenforceable because a contractual provision will not supersede Ohio public records law.³⁶⁶

2. Income Tax Returns³⁶⁷

Generally, any information gained as a result of municipal and State income tax returns, investigations, hearings, or verifications are confidential and may only be disclosed as permitted by law.³⁶⁸ Ohio's municipal tax code provides that information may only be disclosed (1) in accordance with a judicial order; (2) in connection with the performance of official duties; or (3) in connection with authorized official business of the municipal corporation.³⁶⁹ One Attorney General Opinion found that W-2 federal tax forms prepared and maintained by a township as an employer are public records, but that W-2 forms filed as part of a municipal income tax return are confidential.³⁷⁰ Release of municipal income tax information to the Auditor of State is permissible for purposes of facilitating an audit.³⁷¹

Federal tax returns and "return information" are also confidential.³⁷² W-4 forms are confidential as "return information," which includes data with respect to the determination of the existence of liability, or the amount thereof, of any person for any tax.³⁷³

3. Trade Secrets

Trade secrets are defined in R.C. 1333.61(D) and include "any information, including . . . any business information or plans, financial information, or listing of names" that:

1. Derives actual or potential independent economic value from not being generally known to, and not being readily ascertainable by proper means by, other persons who can obtain economic value from its disclosure or use;
and
2. Is the subject of efforts that are reasonable under the circumstances to maintain its secrecy.³⁷⁴

"An entity claiming trade secret status bears the burden to identify and demonstrate that the material is included in categories of protected information under the statute and additionally must take some active steps to maintain its secrecy."³⁷⁵ The Ohio Supreme Court has adopted the following factors in analyzing a trade secret claim: "(1) the extent to which the information is known outside the business; (2) the extent to which it is known to those inside the business, *i.e.*, by the employees; (3) the

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

precautions taken by the holder of the trade secret to guard the secrecy of the information; (4) the savings effected and the value to the holder in having the information as against competitors; (5) the amount of effort or money expended in obtaining and developing the information; and (6) the amount of time and expense it would take for others to acquire and duplicate the information.”³⁷⁶ The maintenance of secrecy is important, but does not require that the trade secret be completely unknown to the public in its entirety. If parts of the trade secret are in the public domain, but the value of the trade secret derives from the parts being taken together with other secret information, then the trade secret remains protected under Ohio law.³⁷⁷

Trade secret law is underpinned by “the protection of competitive advantage in private, not public, business.”³⁷⁸ However, the Ohio Supreme Court has held that certain governmental entities can have trade secrets in limited situations.³⁷⁹ Signed non-disclosure agreements do not create trade secret status for otherwise publicly disclosable documents.³⁸⁰

An in camera inspection may be necessary to determine if disputed records contain trade secrets.³⁸¹

4. Juvenile Records

Although it is a common misconception, there is no Ohio law that categorically excludes all juvenile records from public records disclosure.³⁸² While juvenile records maintained by the juvenile court typically are not available for public inspection and copying,³⁸³ juvenile records maintained by law enforcement agencies, in general, are treated no differently than adult records, including records identifying a juvenile suspect, victim, or witness.³⁸⁴ Thus, law enforcement agencies are not typically permitted by law to redact information about juveniles from their records based simply on the juvenile’s age. Further, most information held by local law enforcement offices may be shared with other law enforcement agencies and local schools.

When analyzing a public records request for juvenile records, a law enforcement agency must evaluate the applicability of the confidential law enforcement investigatory records exception.³⁸⁵ In other words, law enforcement agencies should treat the suspect, victim, witness, or source as it would an adult in the same role, e.g., redact a suspect’s identity only if the suspect is “uncharged.”³⁸⁶

Additionally, the office must assess whether any state or federal laws require redaction of some or all information. For instance, one important state law exception applies after a juvenile has been

³⁸⁶ R.C. 149.43(A)(2)(a).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

fingerprinted and photographed on the basis of a covered arrest or custody.³⁸⁷ Once that happens, the fingerprints, photographs, and other records relating to the arrest or custody must not be disclosed, except as provided in the governing statute.³⁸⁸ Another state law pertains to information related to alleged child abuse or neglect. The Ohio Supreme Court has held that the state law protecting the confidentiality of a child abuse report and the information contained therein applies to the records of law enforcement.³⁸⁹

Other examples of state law exceptions to public disclosure of juvenile records include: (1) records of social, mental and physical examinations conducted pursuant to a juvenile court order;³⁹⁰ (2) records held by the Department of Youth Services pertaining to juveniles in its custody;³⁹¹ (3) reports regarding allegations of child abuse;³⁹² (4) sealed or expunged juvenile records;³⁹³ (5) juvenile probation records;³⁹⁴ and (6) certain records of children's services agencies.³⁹⁵

Federal laws prohibit disclosure of records associated with federal juvenile delinquency proceedings.³⁹⁶ Additionally, these laws restrict the disclosure of fingerprints and photographs of a juvenile found guilty in federal delinquency proceedings of committing a crime that would have been a felony if the juvenile were prosecuted as an adult.³⁹⁷

5. Social Security Numbers³⁹⁸

Social Security Numbers (SSNs) should be redacted before the disclosure of public records, including court records.³⁹⁹ The Ohio Supreme Court has held that while the federal Privacy Act (5 U.S.C. § 552a) does not expressly prohibit release of one's SSN, the Act does create an expectation of privacy as to the use and disclosure of the SSN.⁴⁰⁰

³⁸⁷ R.C. 2151.313(A)(3) (stating that "[t]his section does not apply to a child to whom either of the following applies: (a) The child has been arrested or otherwise taken into custody for committing, or has been adjudicated a delinquent child for committing, an act that would be a felony if committed by an adult or has been convicted of or pleaded guilty to committing a felony. (b) There is probable cause to believe that the child may have committed an act that would be a felony if committed by an adult.").

³⁸⁸ R.C. 2151.313; *State ex rel. Carpenter v. Chief of Police*, 8th Dist. No. 62482 (Sep. 17, 1992) (noting that "other records" may include the juvenile's statement or an investigator's report if they would identify the juvenile).

³⁸⁹ *State ex rel. Beacon Journal Publ'g Co. v. Akron*, 104 Ohio St.3d 399, 2004-Ohio-6557, ¶¶44-45 (finding that information obtained in connection with allegations of child abuse or neglect may be redacted from police files, including the incident report, pursuant to a valid catch-all exception in R.C. 2151.421(H)).

Rudduck*, 103 Ohio St.3d 370, 2004-Ohio-4952, ¶25 (noting that SSNs should be removed before releasing court records); see also *State ex rel. Beacon Journal Publ'g Co. v. Bond*, 98 Ohio St.3d 146, 2002-Ohio-7117, ¶25 (finding that the personal information of jurors was used only to verify identification, not to determine competency to serve on the jury, and SSNs, telephone numbers, driver's license numbers, may be redacted); *State ex rel. Wadd v. Cleveland*, 81 Ohio St.3d 50, 53, 1998-Ohio-444 (stating that "there is nothing to suggest that Wadd would not be entitled to public access [...] following prompt redaction of exempt information such as Social Security Numbers"); *State ex rel. Beacon Journal Publ'g Co. v. Kent State*, 68 Ohio St.3d 40, 43, 1993-Ohio-146 (determining, on remand, that the Court of appeals may redact confidential information, such as SSNs); 2004 Ohio Op. Att'y Gen. No. 045 (opining that court files may be redacted to conceal SSNs and other information the release of which would violate constitutional right to privacy; *Lambert v. Hartman*, 517 F.3d 433, 445 (6th Cir. 2008) (determining that, as a policy matter, a clerk of court's decision to allow public internet access to people's SSNs was "unwise").

⁴⁰⁰ *State ex rel. Beacon Journal Publ'g v. City of Akron*, 70 Ohio St.3d 605, 607, 1994-Ohio-6 (determining that city employees had an expectation of privacy of their SSNs such that they must be redacted before release of public records to newspapers); compare *State ex rel. Cincinnati Enquirer v. Hamilton County*, 75 Ohio St.3d 374, 378, 1996-Ohio-214 (finding that SSNs contained in 911 tapes are public records subject to disclosure); but see R.C. 4931.49(E), 4931.99(E) (providing that information from a database that serves public safety answering point of 911 system may not be

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

Any federal, state, or local government agency that asks individuals to disclose their SSNs must advise the person: (1) whether that disclosure is mandatory or voluntary and, if mandatory, under what authority the SSN is solicited; and (2) what use will be made of it.⁴⁰¹ In short, a SSN can only be disclosed if an individual has been given prior notice that the SSN will be publicly available.

However, the Ohio Supreme Court has ruled that 911 tapes must be made immediately available for public disclosure⁴⁰² without redaction, even if the tapes contain SSNs.⁴⁰³ The Court explained that there is no expectation of privacy when a person makes a 911 call. Instead, there is an expectation that the information will be recorded and disclosed to the public.⁴⁰⁴ Similarly, the Ohio Attorney General has opined that there is no expectation of privacy in official documents containing SSNs.⁴⁰⁵

The Ohio Supreme Court's interpretation of Ohio law with respect to release and redaction of SSNs is binding on public offices within the state. However, a narrower view expressed by a 2008 federal appeals court decision⁴⁰⁶ is worth noting, as it may impact future Ohio Supreme Court opinions regarding the extent of a person's constitutional right to privacy in his or her SSN. In *Lambert v. Hartman*, the U.S. Sixth Circuit Court of Appeals looked to its own past decisions to find a constitutional privacy right in personal information in only two situations: (1) where release of personal information could lead to bodily harm,⁴⁰⁷ and (2) where the information released was of a sexual, personal, and humiliating nature.⁴⁰⁸ The Court explained that it would only balance an individual's right to control the nature and extent of information released about that individual against the government's interest in disseminating the information when a fundamental liberty interest is involved.⁴⁰⁹ The interest asserted in *Lambert* - protection from identity theft and the resulting financial harm - was found not to implicate a fundamental right, especially when compared to the fundamental interests found in earlier cases; i.e., preserving the lives of police officers and their family members from "a very real threat"⁴¹⁰ by a violent gang and withholding the "highly personal and extremely humiliating details"⁴¹¹ of a rape.

6. Student Records⁴¹²

The federal Family Education Rights and Privacy Act of 1974 (FERPA)⁴¹³ prohibits educational institutions from releasing a student's "education records"⁴¹⁴ without the written consent of the eligible

⁴¹⁴ The Ohio Supreme Court held that "university disciplinary records are not 'educational records.'" *State ex rel. The Miami Student v. Miami Univ.*, 79 Ohio St.3d 168, 172, 1997-Ohio-386. In contrast, the United States Court of Appeals for the Sixth Circuit has held that "[u]nder a plain language interpretation of FERPA, student disciplinary records are education records because they directly relate to a student and are kept by that student's university." *United States of America v. Miami Univ.*, 294 F.3d 797, 812 (6th Cir.

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

student⁴¹⁵ or his or her parents, except as permitted by the Act.⁴¹⁶ “Education records” are records directly related to a student that are maintained by an education agency or institution or by a party acting for the agency or institution.⁴¹⁷ The term encompasses records such as school transcripts, attendance records, and student disciplinary records.⁴¹⁸

A record is considered to be “directly related” to a student if it contains “personally identifiable information.” The latter term is defined broadly: it covers not only obvious identifiers such as student and family member names, addresses, and Social Security Numbers, but also personal characteristics or other information that would make the student’s identity easily linkable.⁴¹⁹ In evaluating records for release, an institution must consider what the records requester already knows about the student to determine if that knowledge, together with the information to be disclosed, would allow the requester to ascertain the student’s identity.

The federal FERPA law applies to all students, regardless of grade level. In addition, Ohio has adopted laws specifically applicable to public school students in grades K-12.⁴²⁰ Those laws provide that, unless otherwise authorized by law, no public school employee is permitted to release or permit access to personally identifiable information – other than directory information – concerning a public school student without written consent of the student’s parent, guardian, or custodian if the student is under 18, or of the student if the student is 18 or older.⁴²¹

“Directory information” is one of several exceptions to the requirement that an institution obtain written consent prior to disclosure. “Directory information” is “information...that would not generally be considered harmful or an invasion of privacy if disclosed.”⁴²² It includes a student’s name, address, telephone listing, date and place of birth, major field of study, participation in official recognized activities and sports, weight and height of members of athletic teams, dates of attendance, date of graduation, and awards achieved. Pursuant to federal law, post-secondary institutions designate what they will unilaterally release as directory information. For K-12 students, Ohio law leaves that designation to each school district board of education. Institutions at all levels must notify parents and eligible students and give them an opportunity to opt out of disclosure of their directory information.⁴²³

7. Infrastructure & Security Records

In 2002, the Ohio legislature enacted an anti-terrorism bill. Among other changes to Ohio law, the bill created two new categories of records that are exempt from mandatory public disclosure: “infrastructure records” and “security records.”⁴²⁴ Other state and federal⁴²⁵ laws may create exceptions for the same or similar records.

a. Infrastructure Records

An “infrastructure record” is any record that discloses the configuration of a public office’s “critical systems,” such as its communications, computer, electrical, mechanical, ventilation, water,

2002). For a discussion of the contrast between the two jurisdictions, see *State ex rel. Evans v. Montgomery County Cmty. Coll. Dist.*, Montgomery C.P. No. 2011 CV 01969, pp. 6-7 (Oct. 20, 2011).

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

plumbing, or security systems.⁴²⁶ Simple floor plans or records showing the spatial relationship of the public office are not infrastructure records.⁴²⁷

Infrastructure records may be disclosed for purposes of construction, renovation, or remodeling of a public office without waiving the exempt status of that record.⁴²⁸

b. Security Records

A “security record” is “any record that contains information directly used for protecting or maintaining the security of a public office against attack, interference, or sabotage or to prevent, mitigate, or respond to acts of terrorism.”⁴²⁹ Security records may be disclosed for purposes of construction, renovation, or remodeling of a public office without waiving the exempt status of that record.⁴³⁰

8. Contractual Confidentiality

Parties to a public contract, including settlement agreements⁴³¹ and collective bargaining agreements, cannot nullify the Ohio Public Records Act’s guarantee of public access to public records.⁴³² Nor can an employee handbook confidentiality provision alter the status of public records.⁴³³ In other words, a contract cannot nullify or restrict the public’s access to public records.⁴³⁴ Absent a statutory exception, a “public entity cannot enter into enforceable promises of confidentiality with respect to public records.”⁴³⁵

9. Protective Orders & Sealed/Expunged Court Records⁴³⁶

When the release of court records would prejudice the rights of the parties in an ongoing criminal or civil proceeding,⁴³⁷ court rules may permit a protective order prohibiting release of the records.⁴³⁸

Similarly, where court records have been properly expunged or sealed, they are not available for public disclosure.⁴³⁹ However, when a responsive record is sealed, the public office must provide the

⁴³⁸ *State ex rel. Cincinnati Enquirer v. Dinkelacker*, 144 Ohio App.3d 725, 730-33 (1st Dist. 2001) (finding that a trial judge was required to determine whether release of records would jeopardize defendant’s right to a fair trial).

⁴³⁹ *State ex rel. Cincinnati Enquirer v. Winkler*, 101 Ohio St.3d 382, 2004-Ohio-1581, ¶4 (“*Winkler III*”) (affirming trial court’s sealing order per R.C. 2953.52); *Dream Fields, LLC v. Bogart*, 175 Ohio App.3d 165, 2008-Ohio-152, ¶5 (1st Dist.) (stating that “[u]nless a court record contains information that is excluded from being a public record under R.C. 149.43, it shall not be sealed and shall be available for public inspection. And the party wishing to seal the record has the duty to show that a statutory exclusion applies [...] just because the parties have agreed that they want the records sealed is not enough to justify the sealing.”); see also Chapter Six D. “Court Records.”

The Ohio Public Records Act

Chapter Three: Exceptions to the Required Release of Public Records

explanation for withholding, including the legal authority under which the record was sealed.⁴⁴⁰ Even absent statutory authority, trial courts, “in unusual and exceptional circumstances,” have the inherent authority to seal court records.⁴⁴¹ When exercising this authority, however, courts should balance the individual’s privacy interest against the government’s legitimate need to provide public access to records of criminal proceedings.⁴⁴²

10. Grand Jury Records

Ohio Criminal Rule 6 provides that “(E) [d]eliberations of the grand jury and the vote of any grand juror shall not be disclosed,” and provides for withholding of other specific grand jury matters by certain persons under specific circumstances. Materials covered by Criminal Rule 6 include transcripts, voting records, subpoenas, and the witness book.⁴⁴³ In contrast to those items that document the deliberations and vote of a grand jury, evidentiary documents that would otherwise be public records remain public records, regardless of their having been submitted to the grand jury.⁴⁴⁴

11. Copyright Prohibitions to Disclosure

Public offices may be faced with the quandary of whether to release copyrighted materials in response to public records requests. Federal copyright law is designed to protect “original works of authorship,” which may exist in one of several specified categories.⁴⁴⁵ Specifically, works of authorship include the following categories of materials: (1) literary works; (2) musical works (including any accompanying words); (3) dramatic works (including any accompanying music); (4) pantomimes and choreographic works; (5) pictorial, graphic, and sculptural works; (6) motion pictures and other audiovisual works; (7) sound recordings; and (8) architectural works.⁴⁴⁶

Ohio’s Public Records Act does not contain any exceptions preventing a public office from responding to a valid public records request for copyrighted materials. However, federal copyright law provides certain copyright owners the exclusive right of reproduction,⁴⁴⁷ which means public offices could expose themselves to legal liability if they reproduce copyrighted public records in response to a public records request. If a public record sought by a requestor is copyrighted material that the public office does not possess the right to reproduce or copy via a copyright ownership or license, the public office is not typically authorized to make copies of this material under federal copyright law.⁴⁴⁸ However, there are some exceptions to this rule. For example, in certain situations, the copying of a portion of a copyrighted work may be permitted.⁴⁴⁹ One possible solution to responding to requests for copyrighted material is for a public office to make the copyrighted material available for inspection rather than reproducing it.

⁴⁴⁰ *State ex rel. Doe v. Smith*, 123 Ohio St. 3d 44, 2009-Ohio-4149, ¶¶ 6, 9, 38, 43 (response, “There is no information available,” was a violation of R.C. 149.43(B)(3) requirement to provide a sufficient explanation, with legal authority, for the denial).

⁴⁴¹ *Pepper Pike v. Doe*, 66 Ohio St.2d 374, 376 (1981); but compare *State ex rel. Highlander v. Rudduck*, 103 Ohio St.3d 370, 2004-Ohio-4952, ¶1 (determining that divorce records were not properly sealed when an order results from “unwritten and informal court policy”).

⁴⁴² *Pepper Pike v. Doe*, 66 Ohio St.2d 374, (1981), paragraph two of the syllabus.

⁴⁴³ *State ex rel. Beacon Journal v. Waters*, 67 Ohio St.3d 321 (1993); Fed Crim. R. 6.

The Ohio Public Records Act

Chapter Four: Enforcement and Liabilities

IV. Chapter Four: Enforcement and Liabilities

The Ohio Public Records Act is a “self-help” statute, in that a person who believes that the Act has been violated must independently pursue a remedy, rather than asking a public official such as the Ohio Attorney General to initiate legal action on his or her behalf. If a public office or person responsible for public records fails to produce requested records, or otherwise fails to comply with the requirements of division (B) of the Ohio Public Records Act, the requester can file a lawsuit to seek a writ of mandamus⁴⁵⁵ to enforce compliance, and may apply for various sanctions. This section discusses the basic aspects of a mandamus suit and the types of monetary awards available.

A. Public Records Act Statutory Remedies

1. Parties

A person allegedly “aggrieved by” a public office’s failure to comply with Division (B) of the Ohio Public Records Act may file an action in mandamus⁴⁵⁶ against the public office or any person responsible for the office’s public records.⁴⁵⁷ The person who files the suit is called the “relator,” and the named public office or person responsible for the records is called the “respondent.”

2. Where to File

The relator can file the mandamus action in any one of three courts: the common pleas court of the county where the alleged violation occurred, the court of appeals for the appellate district where the alleged violation occurred, or the Ohio Supreme Court.⁴⁵⁸ If a relator files in the Supreme Court, the Court may refer the case to mediation counsel for a settlement conference.⁴⁵⁹

When an official responsible for records has denied a public records request, no administrative appeal to the official's supervisor is necessary before filing a mandamus action in court.⁴⁶⁰

3. When to File

Due to the recent addition of the civil forfeiture provisions, the likely statute of limitations for filing a public records mandamus action is within ten years after the cause of action accrues.⁴⁶¹ However, if the respondent can show that unreasonable and inexcusable delay in asserting a known right cause material prejudice to the respondent, the defense of laches may apply.⁴⁶²

4. Requirements to Prevail

To be entitled to a writ of mandamus, the relator must prove a clear legal right to the requested relief and that the respondent had a clear legal duty to perform the requested act.⁴⁶³ In a public records

⁴⁵⁵ “Mandamus” here means a court command to a governmental office to correctly perform a mandatory function. Black’s Law Dictionary (7th ed. 1999) 973.

⁴⁵⁶ R.C. 149.43(C)(1); *State ex rel. Glasgow v. Jones*, 119 Ohio St.3d 391, 2008-Ohio-4788, ¶12 (providing that “[m]andamus is the appropriate remedy to compel compliance with R.C. 149.43, Ohio’s Public Records Act”).

⁴⁵⁷ *State ex rel. Cincinnati Post v. Schweikert*, 38 Ohio St.3d 170, 174 (1988) (finding that mandamus does not have to be brought against the person who actually withheld the records or committed the violation; it can be brought against any “person responsible” for public records in the public office); *State ex rel. Mothers Against Drunk Drivers v. Gosser*, 20 Ohio St.3d 30 (1985), paragraph two of the syllabus (stating that “[w]hen statutes impose a duty on a particular official to oversee records, that official is the ‘person responsible’ under” the Public Records Act); see also Chapter One: B. “Public Office –[A private Entity, Even if not a ‘Public Office,’ Can Be ‘A Person Responsible for Public Records’].”

The Ohio Public Records Act

Chapter Four: Enforcement and Liabilities

mandamus, this usually includes showing that, when the requester made the request, she specifically described the records being sought,⁴⁶⁴ and specified in the mandamus action the records withheld or other failure to comply.⁴⁶⁵ A person is not entitled to file a mandamus action to request public records unless a prior request for those records has already been made and was denied.⁴⁶⁶ Only those particular records that were requested from the public office can be litigated in the mandamus action.⁴⁶⁷ If these requirements are met, the respondent then has the burden of proving in court that any items withheld are exempt from disclosure,⁴⁶⁸ and of countering any other alleged violations of R.C. 149.43(B). The court, if necessary, will review in camera (in private) the materials that were withheld or redacted.⁴⁶⁹ To the extent any doubt or ambiguity exists as to the duty of the public office, the public records law will be liberally interpreted in favor of disclosure.⁴⁷⁰

Unlike most mandamus actions, a relator in a statutory public records mandamus action need not prove a lack of adequate remedy at law.⁴⁷¹ Also note that, if a respondent provides requested records to the relator after the filing of a public records mandamus action, all or part of the case may be rendered moot, or concluded.⁴⁷² However, even if the case is rendered moot,⁴⁷³ the relator may still be entitled to attorney fees.⁴⁷⁴

B. Liabilities of the Public Office under the Public Records Act⁴⁷⁵

In a properly filed mandamus action, if a court determines that the public office or the person responsible for public records failed to comply with an obligation contained in R.C. 149.43(B), the relator shall be entitled to an award of all court costs,⁴⁷⁶ and may receive an award of attorney fees and/or statutory damages, as detailed below.

1. Attorney Fees

If the court renders a judgment ordering the respondent to comply with R.C. 149.43(B), then the court may award reasonable attorney fees.⁴⁷⁷ An award of attorney fees upon finding a violation is not mandatory,⁴⁷⁸ and litigation expenses, other than court costs, are not recoverable at all.⁴⁷⁹ A court

⁴⁶⁴ *State ex rel. Glasgow v. Jones*, 119 Ohio St.3d 391, 2008-Ohio-4788, ¶17; *State ex rel. Morgan v. New Lexington*, 112 Ohio St.3d 33, 2006-Ohio-6365, ¶26 (stating that “it is the responsibility of the person who wishes to inspect and/or copy records to identify with reasonable clarity the records at issue.”); *State ex rel. Zauderer v. Joseph*, 62 Ohio App.3d 752 (10th Dist. 1989).

The Ohio Public Records Act

Chapter Four: Enforcement and Liabilities

shall award reasonable attorney fees if either: (1) the public office failed to respond to the public records request in accordance with the time allowed under R.C. 149.43(B);⁴⁸⁰ or (2) the public office promised to permit inspection or deliver copies within a specified period of time but failed to fulfill that promise.⁴⁸¹ If attorney fees are awarded under either of these provisions, they may be reduced or eliminated at the discretion of the court (see Section 5, below). Attorney fee awards are generally reviewed on appeal under an abuse of discretion standard.⁴⁸²

2. Amount of Fees

Only those attorney fees directly associated with the mandamus,⁴⁸³ and only fees paid or actually owed,⁴⁸⁴ may be awarded. The relator is entitled to fees only insofar as the requests had merit.⁴⁸⁵ Reasonable attorney fees also include reasonable fees incurred to produce proof of the reasonableness and amount of the fees and to otherwise litigate entitlement to the fees.⁴⁸⁶ The opportunity to collect attorney fees does not apply when the relator appears before the court *pro se* (without an attorney), even if the *pro se* relator is an attorney.⁴⁸⁷ A relator may waive a claim for attorney fees by not including any argument in support in their merit brief.⁴⁸⁸ Court costs and reasonable attorney's fees awarded in public records mandamus actions are considered remedial rather than punitive.⁴⁸⁹

3. Statutory Damages

A person who transmits a valid written request for public records by hand delivery or certified mail⁴⁹⁰ is entitled to receive statutory damages if a court finds that the public office failed to comply with its obligations under R.C. 149.43(B).⁴⁹¹ The award of statutory damages is not considered a penalty, but is intended to compensate the requestor for injury arising from lost use⁴⁹² of the requested information, and if lost use is proven, then injury is conclusively presumed. Statutory damages are fixed at \$100 for each business day during which the respondent fails to comply with division (B), beginning with the day on which the relator files a mandamus action to recover statutory damages, up to a maximum of \$1000. This means that a respondent may stop further accrual of statutory damages by fully complying with division (B) before the maximum is reached.

4. Recovery of Deleted E-mail Records

The Ohio Supreme Court has determined that if there is evidence showing that records in e-mail format have been deleted in violation of a public office's records retention and disposition schedule,

⁴⁸⁰ R.C. 149.43(C)(2)(b)(i); *State ex rel. Braxton v. Nichols*, Nos. 93653, 93654, and 93655, 2010-Ohio-3193 (8th Dist.).

⁴⁹¹ R.C. 149.43(C)(1).

⁴⁹² R.C. 149.43(C)(1); but see *State ex rel. Bardwell v. Rocky River Police Dep't*, No. 91022, 2009-Ohio-727, ¶63 (8th Dist.) (finding that a public official's improper request for requester's identity, absent proof that this resulted in actual "lost use" of the records requested, does not provide a basis for statutory damages).

The Ohio Public Records Act

Chapter Four: Enforcement and Liabilities

the public office has a duty to recover the contents of deleted e-mails and to provide access to them.⁴⁹³ The courts will consider the relief available to the requester based on the following factors:

- a. There must be a determination made as to whether deleted e-mails have been destroyed, as there is no duty to create or provide non-existent records.
- b. The requestor must make a *prima facie* showing that the e-mails were deleted in violation of applicable retention schedules, unrebutted by defendant(s).
- c. There must be some evidence that recovery of the e-mails may be successful.
- d. While the expense of the recovery services is not a consideration, the recovery efforts need only be “reasonable, not Herculean,” consistent with a public office’s general duties under the Public Records Act; and
- e. There must be a determination made as to who should bear the expense of forensic analysis.⁴⁹⁴

5. *Reduction of Attorney Fees and Civil Penalty*⁴⁹⁵

After any reasonable attorney’s fees and any civil penalty are calculated and awarded, the court may reduce or eliminate either or both such awards, if the court determines both of the following:⁴⁹⁶

- a. That, based on the law as it existed at the time, a well-informed person responsible for the requested public records reasonably would have believed that the conduct of the respondent did not constitute a failure to comply with an obligation in accordance with R.C. 149.43(B), and,
- b. That a well-informed person responsible for the requested public records reasonably would have believed that the conduct of the public office would serve the public policy that underlies the authority that it asserted as permitting that conduct.

C. *Liabilities Applicable To Either Party*

The following remedies may be available against a party under the circumstances set out by statute or rule. They are applicable regardless of whether the party represents him- or herself (“*pro se*”), or is represented by counsel.

1. *Frivolous Conduct*

Any party adversely affected by frivolous conduct of another party may move the court, not more than 30 days after the entry of final judgment, for an award of court costs, reasonable attorney’s fees, and other reasonable expenses incurred in connection with the civil action or appeal.⁴⁹⁷

Where the court determines that the accused party has engaged in frivolous conduct, a party

⁴⁹³ *State ex rel. Toledo Blade Co. v. Seneca County Bd. of Comm’rs*, 120 Ohio St.3d 372, 2008-Ohio-6253, ¶41 (note that board did not contest the status of the requested e-mails as public records).

⁴⁹⁴ *State ex rel. Toledo Blade Co. v. Seneca County Bd. of Comm’rs*, 120 Ohio St.3d 372, 2008-Ohio-6253, ¶51 (finding that, where newspaper sought to inspect improperly deleted e-mails, the public office had to bear the expense of forensic recovery).

⁴⁹⁵ *State ex rel. Toledo Blade Co. v. Seneca County Bd. of Comm’rs*, 120 Ohio St.3d 372, 2008-Ohio-6253, ¶48 (finding that the statutory standards for awarding attorney fees apply to records requests and cases filed after September 29, 2007, the effective date of the amendment creating the standard); *State ex rel. Cincinnati Enquirer v. Jones-Kelley*, 118 Ohio St.3d 81, 2008-Ohio-1770, ¶47, fn. 1.

⁴⁹⁶ R.C. 149.43(C)(1)(a)-(b) (providing for a reduction of civil penalty); R.C. 149.43(C)(2)(c)(i)-(ii) (providing for a reduction in attorney’s fees); *State ex rel. Cincinnati Enquirer v. Ronan*, 127 Ohio St.3d 236, 2010-Ohio-5680, ¶17 (even if court had found denial of request contrary to statute, requester would not have been entitled to attorney fees because the public office’s conduct was reasonable); *State ex rel. Rohm v. Fremont City Sch. Dist. Bd. of Educ.*, No. S-09-030, 2010-Ohio-2751 (6th Dist.) (respondent did not demonstrate reasonable belief that its actions did not constitute a failure to comply).

⁴⁹⁷ R.C. 2323.51.

The Ohio Public Records Act

Chapter Four: Enforcement and Liabilities

adversely affected by the conduct may recover the full amount of the reasonable attorney fees incurred, even fees paid or in the process of being paid by an insurance carrier.⁴⁹⁸

2. Civil Rule 11

Civ.R. 11 provides, in part:

“The signature of an attorney or *pro se* party constitutes a certificate by the attorney or party that the attorney or party has read the document; that to the best of the attorney's or party's knowledge, information, and *belief* there is *good ground* to support it; and that it is not interposed for delay. ... For a willful violation of this rule, an attorney or *pro se* party, upon motion of a party or upon the court's own motion, may be subjected to appropriate action, including an award to the opposing party of expenses and reasonable attorney fees incurred in bringing any motion under this rule.”

For an example of Rule 11 sanctions ordered in a public records mandamus action, see *State ex rel. Bardwell*, 127 Ohio St. 3d 202, 2010-Ohio-5073, 937 N.E.2d 1274.

⁴⁹⁸ *State ex rel. Striker v. Cline*, 130 Ohio St. 3d 214, 2011-Ohio-5350, ¶¶ 7, 23-25.

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

V. Chapter Five: Other Obligations of a Public Office

Public offices have other obligations with regard to the records that they keep. These include:

- Managing public records by organizing them such that they can be made available in response to public records requests,⁴⁹⁹ and ensuring that all records—public or not—are maintained and disposed of only in accordance with properly adopted, applicable records retention schedules.⁵⁰⁰
- Maintaining a copy of the office's current records retention schedules at a location readily available to the public.⁵⁰¹
- Adopting and posting an office public records policy;⁵⁰² and
- Ensuring that all elected officials associated with the public office, or their designees, obtain three hours of certified public records training through the Ohio Attorney General's office once during each term of office.⁵⁰³

Additionally, the Ohio Auditor of State's office recommends that public offices log and track the public records requests they receive to ensure compliance with the access provisions of the Ohio Public Records Act. Auditor of State Bulletin 2011-006 sets out and explains the office's recommended Best Practices for Complying with Public Records Requests.⁵⁰⁴

A. Records Management

Records are a crucial component of the governing process. They contain information that supports functions affecting every person in government and within its jurisdiction. Like other important government resources, records and the information they contain must be well managed to ensure accountability, efficiency, economy, and overall good government.

The term "records management" encompasses two distinct obligations of a public office, each of which furthers the goals of the Ohio Public Records Act. First, in order to facilitate broader access to public records, a public office must organize and maintain the public records it keeps in a manner such that they can be made available for inspection or copying in response to a public records request.⁵⁰⁵ Second, in order to facilitate transparency in government, and as one means of preventing the circumvention of Ohio Public Records Act, Ohio's records retention law, R.C. 149.351, prohibits unauthorized removal, destruction, mutilation, transfer, damage, or disposal of any record or part of a record, except as provided by law or under the rules adopted by the records commissions (i.e., pursuant to approved records retention schedules).⁵⁰⁶ Therefore, in the absence of a law or retention schedules permitting disposal of particular records, an office lacks the required authority to dispose of those records, and must maintain them until proper authority to dispose of them is obtained. In the meantime, the records remain subject to public records requests. Public offices at various levels of government, including state agencies, county boards and commission, and local political subdivisions, have different resources and processes for adopting records retention schedules. Those are described in this section.

A public office shall only create records that are "necessary for the adequate and proper documentation of the organization, functions, policies, decisions, procedures, and essential transactions of the agency and for the protection of the legal and financial rights of the state and persons directly affected by the

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

agency's activities.⁵⁰⁷ This standard only addresses the records required to be created by a public office, which may receive many records in addition to those it creates.

1. Records Management Programs

a. Local Government Records Commissions

Authorization for disposition of local government records is provided by applicable statutes, and by rules adopted by records commissions at the county,⁵⁰⁸ township⁵⁰⁹, and municipal⁵¹⁰ levels. Records commissions also exist for each library district,⁵¹¹ special taxing district,⁵¹² school district,⁵¹³ and educational service center.⁵¹⁴

Records commissions are responsible for reviewing applications for one-time disposal of obsolete records, as well as records retention schedules submitted by government offices within their jurisdiction.⁵¹⁵ Once a commission has approved an application or schedule, it is forwarded to the State Archives at the Ohio Historical Society for review and identification of records⁵¹⁶ that the State Archives deems to be of continuing historical value.⁵¹⁷ Upon completion of that process, the Ohio Historical Society will forward the application or schedule to the Auditor of State for approval or disapproval.⁵¹⁸

b. State Records Program

The Ohio Department of Administrative Services administers the records program for legislative and judicial branches of government⁵¹⁹ and for all state agencies, with the exception of state-supported institutions of higher education.⁵²⁰ Among its other duties, the state records program is responsible for establishing "general schedules" for the disposal of certain types of records common to most state agencies. State agencies must affirmatively adopt any existing general schedules they wish to utilize.⁵²¹ Once a general schedule has been officially adopted by a state agency, when the time specified in the general schedule has elapsed, the records identified should no longer have sufficient administrative, legal, fiscal, or other value to warrant further preservation by the state.⁵²²

If a state agency keeps a record series that does not fit into an existing state general schedule, or if it wishes to modify the language of a general schedule to better suit its needs, the state agency can submit its own proposed retention schedules to DAS via the Records and Information Management System (RIMS) for approval by DAS, the Auditor of State, and the State Archivist.

The state's records program works in a similar fashion to local records commissions, except that applications and schedules are forwarded to the Ohio Historical Society and the Auditor of State

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

for review simultaneously following the approval of DAS.⁵²³ Again, the Ohio Historical Society focuses on identifying records with enduring historical value. The State Auditor decides whether to approve, reject, or modify applications and schedules based on the continuing administrative and fiscal value of the state records to the state or to its citizens.⁵²⁴

c. Records Programs for State-supported Colleges and Universities

State-supported institutions of higher education are unique, in that their records programs are established and administered by their respective boards of trustees rather than a separate records commission or the State's records program.⁵²⁵ Through their records programs, these state offices are charged with applying efficient and economical management methods to the creation, utilization, maintenance, retention, preservation, and disposition of records.⁵²⁶

2. Records Retention and Disposition

a. Retention Schedules

Records of a public office may be destroyed, but only if they are destroyed in compliance with a properly approved records retention schedule.⁵²⁷ In a 2008 decision, the Ohio Supreme Court emphasized that, "in cases in which public records, including e-mails, are properly disposed of in accordance with a duly adopted records-retention policy, there is no entitlement to those records under the Ohio Public Records Act."⁵²⁸ However, if the retention schedule does not address the particular type of record in question, the record must be kept until the schedule is properly amended to address that category of records. Also, if a public record is retained beyond its properly approved destruction date, it keeps its public record status until it is destroyed and is thus subject to public records requests.⁵²⁹

In crafting proposed records retention schedules, a public office must evaluate the length of time each type of record warrants retention for administrative, legal, or fiscal purposes after it has been received or created by the office.⁵³⁰ Consideration should also be given to the enduring historical value of each type of record, which will be evaluated by the Ohio Historical Society when that office conducts its review. Local records commissions may consult with the Ohio Historical Society during this process;⁵³¹ the state records program offers consulting services for state offices.⁵³²

b. Transient Records

Adoption of a schedule for transient records — that is, records containing information of short term usefulness — allows a public office to dispose of these records once they are no longer of administrative value.⁵³³ Examples of transient records include voice mail messages, telephone message slips, post-it notes, and superseded drafts.

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

c. Records Disposition

It is important to document the disposition of records after they have satisfied their approved retention periods. Local governments should file a Certificate of Records Disposal (RC-3) with the Ohio Historical Society at least fifteen business days prior to the destruction in order to allow the Historical Society to select records of enduring historical value. State agencies can document their records disposals on the RIMS system or in-house. It is important to be able to show which schedule the records were disposed under, the record series title, inclusive dates of the records, and the date of disposal.

3. Liability for Unauthorized Destruction, Damage, or Disposal of Records

All records are considered to be the property of the public office, and must be delivered by outgoing officials and employees to their successors in office.⁵³⁴ Improper removal, destruction, damage or other disposition of a record is a violation of R.C. 149.351(A).

a. Injunction and Civil Forfeiture

Ohio law allows “any person . . . aggrieved by”⁵³⁵ the unauthorized “removal, destruction, mutilation, transfer, or other damage to or disposition of a record,” or by the threat of such action, to file either or both of the following types of lawsuits:

- A civil action for an injunction to force the public office to comply with R.C. 149.251(A), as well as any reasonable attorney’s fees associated with the suit.⁵³⁶
- A civil action to recover a forfeiture of \$1,000 for each violation of R.C. 149.351(A), not to exceed a cumulative total of \$10,000 (regardless of the number of violations), as well as reasonable attorney’s fees associated with the suit, not to exceed the forfeiture amount recovered.⁵³⁷

A person is not “aggrieved” by a violation of R.C. 149.351(A) if clear and convincing evidence shows that the request for a record was contrived as a pretext to create liability under the section.⁵³⁸ If pretext is so proven, the court may order the requester to pay reasonable attorney fees to the defendant(s).⁵³⁹

b. Limits on Filing Action for Unauthorized Destruction, Damage, or Disposal

A person has five years from the date of the alleged violation or threatened violation to file the above actions,⁵⁴⁰ and has the burden of providing evidence that records were destroyed in violation of R.C. 149.351.⁵⁴¹ When any person has recovered a forfeiture in a civil action under R.C. 149.351(B)(2), no other person may recover a forfeiture for that same record, regardless of the number of persons “aggrieved,” or the number of civil actions commenced.⁵⁴² Determining the

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

number of “violations” involved is an ad hoc determination which may depend on the nature of the records involved.⁵⁴³

c. Attorney Fees

The aggrieved person may seek an award of reasonable attorney fees for either the injunctive action or an action for civil forfeiture.⁵⁴⁴ An award of attorney fees under R.C. 149.351 is discretionary.⁵⁴⁵

4. Availability of Records Retention Schedules

All public offices must maintain a copy of all current records retention schedules at a location readily available to the public.⁵⁴⁶

B. Records Management - Practical Pointers

1. Fundamentals

Don't be a Pack Rat

Every record, public or not, that is kept by a public office must be covered by a records retention schedule. Without an applicable schedule dictating how long a record must be kept and when it can be destroyed, a public office must keep that record forever. Apart from the inherent long-term storage problems and associated cost this creates for a public office, the office is also responsible for continuing to maintain the record in such a way that it can be made available at any time if it is responsive to a public records request. Creating and following schedules for all of its records allows a public office to dispose of records once they are no longer necessary or valuable.

Content – Not Medium – Determines How Long to Keep a Record

Deciding how long a record should be kept is based on the content of the record, not on the medium on which it exists. Not all paper documents are “records” for purposes of the Public Records Act; similarly, not all documents transmitted via e-mail are “records” that must be maintained and destroyed pursuant to a records retention schedule. Accordingly, in order to fulfill both its records management and public records responsibilities, a public office should categorize all of the items it keeps that are deemed to be records – regardless of the *form* in which they exist – based on content, and store them based on those content categories, or “records series,” for as long as the records have legal, administrative, fiscal, or historic value. (Note that storing e-mail records unsorted on a server does not satisfy records retention requirements, because the server does not allow for the varying disposal schedules of different categories of records.)

Practical Application

Creating and implementing a records management system might sound daunting. For most public offices, though, it is a matter of simple housekeeping. Many offices already have the scaffolding of existing records retention schedules in place, which may be augmented in the manner outlined below.

2. Managing Records in Five Easy Steps:

a. Conduct a Records Inventory

The purpose of an inventory is to identify and describe the types of records an office keeps. Existing records retention schedules are a good starting point for determining the types of records

⁵⁴³ *Kish v. City of Akron*, 109 Ohio St.3d 162, 2006-Ohio-1244, at ¶¶25-44; see also *Cwynar v. Jackson Twp. Bd. of Trs.* (5th Dist.), 178 Ohio App.3d 345, 2008-Ohio-5011.

⁵⁴⁴ R.C. 149.351(B)(1)-(2).

⁵⁴⁵ *Cwynar v. Jackson Twp. Bd. of Trs.*, 178 Ohio App.3d 345, 2008-Ohio-5011, ¶56 (5th Dist.).

⁵⁴⁶ R.C. 149.43(B)(2).

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

an office keeps, as well as identifying records that are no longer kept or new types of records for which schedules need to be created.

For larger offices, it is helpful to designate a staff member from each functional area of the office who knows the kinds of records their department creates and why, what the records document, and how and where they are kept.

b. Categorize Records by Record Series

Records should be grouped according to record series. A record series is a group of similar records that are related because they are created, received, or used for or result from the same purpose or activity. Record series descriptions should be broad enough to encompass all records of a particular type ("Itemized Phone Bills" rather than "FY07-FY08 Phone Bills" for instance), but not so broad that it fails to be instructive (such as "Finance Department e-mails") or leaves the contents open to interpretation or "shoehorning."

c. Decide How Long to Keep Each Records Series

Retention periods are determined by assessing four values for each category of records: administrative, legal, fiscal, and historical.

Administrative Value: A record maintains its administrative value as long as it is useful and relevant to the execution of the activities that caused the record to be created. Administrative value is determined by how long the record is needed by the office to carry out – that is, to "administer" – its duties. Every record created by government entities should have administrative value, which can vary from being transient (a notice of change in meeting location), to long-term (a policies and procedures manual).

Legal Value: A record has legal value if it documents or protects the rights or obligations of citizens or the agency that created it, provides for defense in litigation, or demonstrates compliance with laws, statutes, and regulations. Examples include contracts, real estate records, retention schedules, and licenses.

Fiscal Value: A record has fiscal value if it pertains to the receipt, transfer, payment, adjustment, or encumbrance of funds, or if it is required for an audit. Examples include payroll records and travel vouchers.

Historical Value: A record has historical value if it contains significant information about people, places, or events. The State Archives suggests that historical documents be retained permanently. Examples include board or commission meeting minutes and annual reports.

d. Dispose of Records on Schedule

Records retention schedules indicate how long particular record series must be kept and when and how the office can dispose of them. Records kept past their retention schedule are still subject to public records requests, and can be unwieldy and expensive to store. As a practical matter, it is helpful to designate a records manager or records custodian to assist in crafting retention schedules, monitoring when records are due for disposal, and ensuring proper completion of disposal forms.

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

e. Review Schedules Regularly and Revise, Delete, or Create New Ones as the Law and the Office's Operations Change

Keep track of new records that are created as a result of statutory and policy changes. Ohio law requires all records to be scheduled within one year after the date that they are created or received.⁵⁴⁷

C. In Summary: Practical Pointers for Public Offices

Practical Pointer #1: If you neglect to dispose of your records when your retention schedules say you can, they are fair game for a public records request.

Practical Pointer #2: If you don't have a schedule that says how long you have to keep a particular kind of record, you can never throw that record away. There could be legal consequences if you cannot produce those unscheduled records.

Practical Pointer #3: Medium or format of an item is not determinative of whether that item is a "record." Rather, whether an item is a record is determined by its content. In fact, the use and retention period are factors in determining the best storage media.

Practical Pointer #4: Every record of your office must be covered by a retention schedule, not just the public records.

Practical Pointer #5: Taking inventory will help you identify records that haven't been scheduled, locate unnecessary copies, and purge records that are being kept past their retention period.

Practical Pointer #6: Make sure you have a schedule for transient records that permits destruction of records that are temporary in nature – such as telephone messages, drafts, voice mail, and post-it notes – as soon as they are no longer of administrative value.

Practical Pointer #7: Designate a records manager/records custodian.

Practical Pointer #8: Keep track of new records that are created as a result of statutory/policy changes, because new records must be scheduled within one year after the date they are created or received.

Practical Pointer #9: Document the disposition of records.

D. Helpful Resources for Local Government Offices

Ohio Historical Society/State Archives – Local Government Records Program

The Local Government Records Program of the State Archives provides records-related advice and assistance to local governments in order to facilitate the identification and preservation of local government records with enduring historical value. Please direct inquiries and send forms to:

The Ohio Historical Society/State Archives
Local Government Records Program
800 E. 17th Avenue
Columbus, OH 43211
(614) 297-2553 (phone)
(614) 297.2546 (fax)
localrecs@ohiohistory.org

⁵⁴⁷ R.C. 149.34(C).

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

E. Helpful Resources for State Government Offices

1. Ohio Department of Administrative Services Records Management Program

The Ohio Department of Administrative Services' State Records Administration can provide records management advice and assistance to state agencies, as well as provide training seminars on request. Information available on their website includes:

- Access to the Records Information Management System (RIMS) retention schedule database;
- RIMS User Manual;
- General Retention Schedules; and
- Records Inventory and Analysis template.

For more information, contact DAS at 614-466-1105 or visit www.das.ohio.gov.

2. The Ohio Historical Society, State Archives

The State Archives can assist state agencies with the identification and preservation of records with enduring historical value.

For more information or to schedule a records appraisal, contact State Archives at 614-297-2536.

F. Helpful Resources for All Government Offices

Ohio Electronic Records Committee

Electronic records present unique challenges for archivists and records managers. As society shifts from traditional methods of recordkeeping to electronic recordkeeping, the issues surrounding the management of electronic records become more significant. Although the nature of electronic records is constantly evolving, these records are being produced at an ever-increasing rate. As these records multiply, the need for leadership and policy becomes more urgent.

The goal of the Ohio Electronic Records Committee (OhioERC) is to draft guidelines for the creation, maintenance, long term preservation of and access to electronic records created by Ohio's state government. Helpful documents available on the OERC's website include:

- Hybrid Microfilm Guidelines;
- Digital Document Imaging Guidelines;
- Electronic Records Management Guidelines;
- Electronic Records Policy;
- General Schedules for Electronic Records;
- Managing Electronic Mail; and
- Trustworthy Information Systems Handbook.

For more information and to learn about ongoing projects, visit the Ohio Electronic Records Committee website at <http://ohsweb.ohiohistory.org/ohioerc>.

The Ohio Public Records Act

Chapter Five: Other Obligations of a Public Office

G. Public Records Policy

A public office must create and adopt a policy for responding to public records requests, and the Ohio Attorney General's office has developed a model public records policy, which may serve as a guide.⁵⁴⁸ The public records policy must be distributed to the records manager, records custodian, or the employee who otherwise has custody of the records of the office, and that employee must acknowledge receipt. In addition, a poster describing the policy must be posted in the public office in a conspicuous location, and in all branch offices.⁵⁴⁹ The public records policy must be included in the office's policies and procedures manual, if one exists, and may be posted on the office's website.⁵⁵⁰ Compliance with these requirements will be audited by the Auditor of State in the course of a regular financial audit.⁵⁵¹

A public records policy may . . .

limit the number of records that the office will transmit by United States mail to a particular requester to ten per month, unless the requester certifies in writing that the requested records and/or the information those records contain will not be used or forwarded for commercial purposes. For purposes of this division, "commercial" shall be narrowly construed and does not include reporting or gathering of news, reporting or gathering of information to assist citizen oversight or understanding of the operation or activities of government, or nonprofit educational research.⁵⁵²

A public records policy may not . . .

- limit the number of public records made available to a single person;
- limit the number of records the public office will make available during a fixed period of time; or
- establish a fixed period of time before the public office will respond to a request for inspection or copying of public records (unless that period is less than eight hours).⁵⁵³

H. Required Public Records Training for Elected Officials

All local and statewide elected government officials⁵⁵⁴ or their designees⁵⁵⁵ must attend a three-hour public records training program during each term of elective office⁵⁵⁶ during which the official serves.⁵⁵⁷ The training must be developed and certified by the Ohio Attorney General's Office, and presented either by the Ohio Attorney General's Office or an approved entity with which the Attorney General's Office contracts.⁵⁵⁸ The Attorney General shall ensure that the training programs and seminars are accredited by the Commission on Continuing Legal Education established by the Supreme Court.⁵⁵⁹ Compliance

⁵⁴⁸ R.C. 149.43(E)(1); Attorney General's Model Policy available at: www.OhioAttorneyGeneral.gov/Sunshine.

⁵⁴⁹ R.C. 149.43(E)(2).

⁵⁵⁰ R.C. 149.43(E)(2).

⁵⁵¹ R.C. 109.43(G).

⁵⁵² R.C. 149.43(B)(7). In addition, a public office may adopt policies and procedures it will follow in transmitting copies by U.S. mail or other means of delivery or transmission, but adopting these policies and procedures is deemed to create an enforceable duty on the office to comply with them.

⁵⁵³ R.C. 149.43(E)(1).

⁵⁵⁴ R.C. 109.43(A)(2) (definition of "elected official"); NOTE: the definition excludes justices, judges or clerks of the Supreme Court of Ohio, courts of appeals, courts of common pleas, municipal courts, and county courts.

⁵⁵⁵ R.C. 109.43(A)(1) (providing that training may be received by an "appropriate" designee, R.C. 109.43(B) (no definition of "appropriate" in the statute), and may be the designee of the sole elected official in a public office, or of all the elected officials if the public office includes more than one elected official).

⁵⁵⁶ R.C. 109.43(B) (providing that training shall be three hours for every term of office for which the elected official was appointed or elected to the public office involved).

⁵⁵⁷ R.C. 109.43(E)(1); R.C. 109.43(B) (providing that this training is intended to enhance an elected official's knowledge of his or her duty to provide access to public records, and to provide guidance in developing and updating his or her office's public records policies); R.C. 149.43(E)(1) (providing that another express purpose of the training is "[t]o ensure that all employees of public offices are appropriately educated about a public office's obligations under division (B) of [the Public Records Act].").

⁵⁵⁸ R.C. 109.43(B)-(D) (providing that the Attorney General's Office may not charge a fee to attend the training programs it conducts, but outside contractors that provide the certified training may charge a registration fee that is based on the "actual and necessary" expenses associated with the training, as determined by the Attorney General's Office).

⁵⁵⁹ R.C. 109.43(B).

The Ohio Public Records Act

with the training provision will be audited by the Auditor of State, in the course of a regular financial audit.⁵⁶⁰

⁵⁶⁰ R.C. 109.43(G).

The Ohio Public Records Act

Chapter Six: Special Topics

VI. Chapter Six: Special Topics

A. CLEIRs: Confidential Law Enforcement Investigatory Records Exception⁵⁶¹

This exception is often mistaken as one that applies only to police investigations. In fact, the Confidential Law Enforcement Investigatory Records exception, commonly known as “CLEIRs,” applies to investigations of alleged violations of criminal, quasi-criminal, civil, and administrative law. It does not apply to most investigations conducted for purposes of public office employment matters, such as internal disciplinary investigations,⁵⁶² pre-employment questionnaires and polygraph tests,⁵⁶³ or to public records that later become the subject of a law enforcement investigation.⁵⁶⁴

1. CLEIRs Defined:

Under CLEIRs, a public office may withhold any records that both:

- (1) Pertain to a law enforcement matter of a criminal, quasi-criminal, civil, or administrative nature;⁵⁶⁵

and

- (2) If released would create a high probability of disclosing any of the following five types of information:

- Identity of an uncharged suspect;
- Identity of a source or witness to whom confidentiality was reasonably promised;
- Specific confidential investigatory techniques or procedures;
- Specific investigatory work product; or
- Information that would endanger the life or physical safety of law enforcement personnel, a crime victim, a witness, or a confidential information source.⁵⁶⁶

2. Determining whether the CLEIRs exception applies

Remember that the CLEIRs exception is a strict two-step test, and a record must first qualify as pertaining to a “law enforcement matter” under Step One before any of the exception categories in Step Two will apply to the record.⁵⁶⁷

Step One: Pertains to “A Law Enforcement Matter”

An investigation is only considered a “law enforcement matter” if it meets each prong of the following 3-part test:

(a) Has an Investigation Been Initiated Upon Specific Suspicion of Wrongdoing?⁵⁶⁸

⁵⁶¹ R.C. 149.43(A)(1)(h),(A)(2).

⁵⁶² *Mehta v. Ohio Univ.*, Ct. of Cl. No. 2006-06752, 2009-Ohio-4699, ¶¶36-38 (determining that a public university’s internal report of investigation of plagiarism was not excepted from disclosure under the Public Records Act).

⁵⁶³ *State ex rel. Multimedia, Inc. v. Snowden*, 72 Ohio St.3d 141, 142, 1995-Ohio-248.

⁵⁶⁴ See, *State ex rel. Morgan v. City of New Lexington*, 112 Ohio St.3d 33, 42, 2006-Ohio-6365, ¶51 (records “made in the routine course of public employment” that related to but preceded a law enforcement investigation are not confidential law enforcement investigatory records); *State ex rel. Dillery v. Icsman*, 92 Ohio St.3d 312, 316, 2001-Ohio-193.

⁵⁶⁵ R.C. 149.43(A)(2).

⁵⁶⁶ R.C. 149.43(A)(2)(a)-(d).

⁵⁶⁷ *State ex rel. Cincinnati Enquirer v. Hamilton County*, 75 Ohio St.3d 374, 377, 1996-Ohio-214 (because 911 tapes are not part of an investigation, “it does not matter that release of the tapes might reveal the identity of an uncharged suspect or contain information which, if disclosed, would endanger the life or physical safety of a witness.”); *State ex rel. James v. Ohio State Univ.*, 70 Ohio St.3d 168, 170 (1994) (respondent attempted to apply CLEIRs Step Two “confidential informant” exception to evaluator’s notes in personnel records).

⁵⁶⁸ E.g., *State ex rel. Polovischak v. Mayfield*, 50 Ohio St.3d 51, 53 (1990).

The Ohio Public Records Act

Chapter Six: Special Topics

Investigation records must be generated in response to specific alleged misconduct, not as the incidental result of routine monitoring.⁵⁶⁹ However, “routine” investigations of the use of deadly force by officers, even if the initial facts indicate accident or self-defense, are sufficient to meet this requirement.⁵⁷⁰

(b) Does the Alleged Conduct Violate Criminal,⁵⁷¹ Quasi-criminal,⁵⁷² Civil, or Administrative Law?⁵⁷³

So long as the conduct is prohibited by statute or administrative rule, whether the punishment is criminal, quasi-criminal, civil, or administrative in nature is irrelevant.⁵⁷⁴ “Law enforcement matter of a criminal, quasi-criminal, civil, or administrative nature” refers directly to the enforcement of the law, and not to employment or personnel matters ancillary to law enforcement matters.⁵⁷⁵

Disciplinary investigations of alleged violations of internal office policies or procedures are not law enforcement matters,⁵⁷⁶ including disciplinary matters and personnel files of law enforcement officers.⁵⁷⁷

(c) Does the Public Office Have the Authority to Investigate or Enforce the Law Allegedly Violated?

If the office does not have legally mandated investigative⁵⁷⁸ or enforcement authority over the alleged violation of the law, then the records it holds are not a law enforcement matter for that office.⁵⁷⁹ For example, if an investigating law enforcement agency obtains a copy of an otherwise public record of another public office as part of an investigation, the original record kept by the other public office is not covered by the CLEIRs exception.⁵⁸⁰

⁵⁶⁹ *State ex rel. Polovischak v. Mayfield*, 50 Ohio St.3d 51, 53 (1990); *State ex rel. Ohio Patrolmen's Benevolent Ass'n v. City of Mentor*, 89 Ohio St.3d 440, 445, 2000-Ohio-214.

⁵⁷⁰ See *State ex rel. Nat'l Broadcasting Co. v. Cleveland*, 57 Ohio St.3d 77, 79-80 (1991); see also *State ex rel. Oriana House, Inc. v. Montgomery*, Nos. 04AP-492, 04AP-504, 2005-Ohio-3377, ¶77 (10th Dist.) (noting that the magistrate found that redacted portions of audit records were directed to specific misconduct and were not simply part of routine monitoring).

⁵⁷¹ *State ex rel. police Officers for Equal Rights v. Lashutka*, 72 Ohio St.3d 185, 187, 1995-Ohio-19.

⁵⁷² See *Goldberg v. Maloney*, 111 Ohio St.3d 211, 2006-Ohio-5485, ¶¶41-43 (providing bankruptcy as an example of a “quasi-criminal” matter); *State ex rel. Oriana House, Inc. v. Montgomery*, Nos. 04AP-492, 04AP-504, 2005-Ohio-3377, ¶ 76 (10th Dist.) (noting that the special audit by the Auditor of State clearly qualifies as both a “law enforcement matter of a [...] civil, or administrative nature” and a “law enforcement matter of a criminal [or] quasi-criminal” matter); *In re Fisher*, 39 Ohio St.2d 71, 75-76 (1974) (providing juvenile delinquency as an example of a “quasi-criminal” matter).

⁵⁷³ E.g., *State ex rel. Yant v. Conrad*, 74 Ohio St.3d 681, 684, 1996-Ohio-234; *State ex rel. Polovischak v. Mayfield*, 50 Ohio St.3d 51, 53 (1990) (noting that “[t]h issue is whether records compiled by the committee pertain to a criminal, quasi-criminal or administrative matter. Those categories encompass the kinds of anti-fraud and anti-corruption investigations undertaken by the committee. The records are compiled by the committee in order to investigate matter prohibited by state law and administrative rule.”); *State ex rel. McGee v. Ohio St. Bd. of Psychology*, 49 Ohio St.3d 59, 60 (1990) (noting that “[t]he reference in R.C. 149.43(A)(2) to four types of law enforcement matters – criminal, quasi-criminal, civil, and administrative – evidences a clear statutory intention to include investigative activities of state licensing boards.”); *State ex rel. Oriana House, Inc. v. Montgomery*, Nos. 04AP-492, 04AP-504, 2005-Ohio-3377, ¶76 (10th Dist.) (noting that the special audit by the Auditor of State clearly qualifies as both a “law enforcement matter of a [...] civil, or administrative nature” and a “law enforcement matter of a criminal [or] quasi-criminal” matter).

⁵⁷⁴ *State ex rel. Polovischak v. Mayfield*, 50 Ohio St.3d 31 (1990); *State ex rel. McGee v. Ohio State Bd. of Psychology*, 49 Ohio St.3d 59 (1990).

⁵⁷⁵ *State ex rel. Freedom Commc'n, Inc. v. Elida Cmty. Fire Co.*, 82 Ohio St.3d 578, 581, 1998-Ohio-411; *State ex rel. Multimedia, Inc. v. Snowden*, 72 Ohio St.3d 141, 142, 1995-Ohio-248 (finding that polygraph test results, questionnaires, and all similar materials gathered in the course of a police department's hiring process, are not “law enforcement matters” for purposes of CLEIRs. “Law enforcement matters” refers “directly to the enforcement of the law, and not to employment or personnel matters ancillary to law enforcement matters.”).

⁵⁷⁶ *State ex rel. Morgan v. City of New Lexington*, 112 Ohio St.3d 33, 2006-Ohio-6365, ¶49.

⁵⁷⁷ *State ex rel. McGowan v. Cuyahoga Metro. Hous. Auth.*, 78 Ohio St.3d 518, 519, 1997-Ohio-191; *State ex rel. Multimedia, Inc. v. Snowden*, 72 Ohio St.3d 141, 142, 1995-Ohio-248 (finding that the personal records of police officers reflecting the discipline of police officers are not confidential law enforcement investigatory records excepted from disclosure).

⁵⁷⁸ *State ex rel. Oriana House, Inc. v. Montgomery*, Nos. 04AP-492, 04AP-504, 2005-Ohio-3377, ¶76 (10th Dist.).

⁵⁷⁹ *State ex rel. Strothers v. Wertheim*, 80 Ohio St.3d 155, 158, 1997-Ohio-349 (determining that records of alleged child abuse do not pertain to a law enforcement matter in the hands of county ombudsman office that has no legally mandated enforcement or investigative authority).

⁵⁸⁰ *State ex rel. Morgan v. City of New Lexington*, 112 Ohio St.3d 33, 2006-Ohio-6365, ¶51 (finding that “records made in the routine course of public employment before” an investigation began were not confidential law enforcement records); *State ex rel. Dillery v. Icsman*, 92 Ohio St.3d 312, 316, 2001-Ohio-193 (finding that a records request of city's public works superintendent for specified street repair records were “unquestionably public records” and “[t]he mere fact that these records might have subsequently become relevant to Dillery's criminal cases did not transform them into records exempt from disclosure.”); *State ex rel. Cincinnati Enquirer v. Hamilton County*, 75 Ohio St.3d 374, 378, 1996-Ohio-214 (find that a public

The Ohio Public Records Act

Chapter Six: Special Topics

Step Two: High Probability of Disclosing Certain Information

If an investigative record does pertain to a “law enforcement matter”, the CLEIRs exception applies if and only to the extent that release of the record would create a high probability of disclosing at least one of the following five types of information.⁵⁸¹

(a) Identity of an Uncharged Suspect in Connection with the Investigated Conduct

An “uncharged suspect” is a person who at some point in the investigating agency’s investigation was believed to have committed a crime or offense,⁵⁸² but who has not been arrested⁵⁸³ or charged⁵⁸⁴ for the offense to which the investigative record pertains. The purposes of this exception include: (1) protecting the rights of individuals to be free from unwarranted adverse publicity; and (2) protecting law enforcement investigations from being compromised.⁵⁸⁵

Only the particular information that has a high probability of revealing the identity of an uncharged suspect can be redacted from otherwise non-exempt records prior to the records’ release.⁵⁸⁶

Where the contents of a particular record in an investigatory file are so “inextricably intertwined” with the suspect’s identity that redacting will fail to protect the person’s identity in connection with the investigated conduct, that entire record may be withheld.⁵⁸⁷ However, the application of this exception to some records in an investigative file does not automatically create a blanket exception covering all other records in an investigative file, and the public office must still release any investigative records that do not individually have a high probability of revealing the uncharged suspect’s identity.⁵⁸⁸ **Note:** use of any exception must be conformed to the requirement that an explanation, including legal authority, must be provided in any response that denies access to records.⁵⁸⁹

record that “subsequently came into the possession and/or control of a prosecutor, other law enforcement officials, or event he grand jury has no significance” because “[o]nce clothed with the public records cloak, the records cannot be defrocked of their status.”).

⁵⁸¹ R.C. 149(A)(2); *State ex rel. Multimedia v. Snowden*, 72 Ohio St.3d 141, 1995-Ohio-248.

⁵⁸² *State ex rel. Musial v. City of N. Olmsted*, 106 Ohio St.3d 459, 2005-Ohio-5521, ¶23 (providing that a “suspect” is a “person believed to have committed a crime or offense.”).

⁵⁸³ *State ex rel. Outlet Comm’n v. Lancaster Police Dep’t*, 38 Ohio St.3d 324, 328 (1998) (stating that “it is neither necessary nor controlling to engage in a query as to whether or not a person who has been arrested or issued a citation for minor criminal violations and traffic violations [...] has been formally charged. Arrest records and intoxilyzer records which contain the names of persons who have been formally charged with an offense, as well as those who have been arrested and/or issued citations but who have not been formally charged, are not confidential. Law enforcement investigatory records with the exception of R.C. 149.43(A)(2)(a).”) (overruled on other grounds).

⁵⁸⁴ *State ex rel. Musial v. City of N. Olmsted*, 106 Ohio St.3d 459, 2005-Ohio-5521, ¶¶23-24 (providing that a “charge” is a “formal accusation of an offense as a preliminary step to prosecution” and that a formal accusation of an offense requires a charging instrument, i.e., an indictment, information, or criminal complaint); see also *Crim. R. 7*; *Black’s Law Dictionary* 249 (8th ed. 2004); *State ex rel. Master v. City of Cleveland*, 75 Ohio St.3d 23, 30, 1996-Ohio-228 (“*Master I*”); *State ex rel. Moreland v. City of Dayton*, 67 Ohio St.3d 129, 130 (1993).

⁵⁸⁵ *State ex rel. Ohio Patrolmen’s Benevolent Ass’n v. City of Mentor*, 89 Ohio St.3d 440, 448, 2000-Ohio-214 (holding that the protected identities of uncharged suspects were not inextricably intertwined with all of the remaining records so as to exempt the totality of the investigative records); *State ex rel. Master v. City of Cleveland*, 75 Ohio St.3d 23, 30, 1996-Ohio-228 (“*Master I*”) (providing that “when a government body asserts that public records are excepted from disclosure and such assertion is challenged, the court must make an individualized scrutiny of the records in question” and “[i]f the ‘court finds that these records contain excepted information, this information must be redacted and any remaining information must be released.”) citing *State ex rel. Nat’l Broad. Co. v. City of Cleveland*, 38 Ohio St.3d 79, 85 (1998); *State ex rel. White v. Watson*, No. 86737, 2006-Ohio-5234, ¶14 (8th Dist.) (providing that “[t]he government has the duty to disclose public records, including the parts of a record which do not come within an exemption” and therefore, “if only part of a record is exempt, the government may redact the exempt part and release the rest.”).

⁵⁸⁶ *State ex rel. Master v. City of Cleveland*, 75 Ohio St.3d 23, 30, 1996-Ohio-228 (“*Master I*”) (providing that “when a government body asserts that public records are excepted from disclosure and such assertion is challenged, the court must make an individualized scrutiny of the records in question” and “[i]f the ‘court finds that these records contain excepted information, this information must be redacted and any remaining information must be released.”) citing *State ex rel. Nat’l Broad. Co. v. City of Cleveland*, 38 Ohio St.3d 79, 85 (1998); *State ex rel. White v. Watson*, No. 86737, 2006-Ohio-5234, ¶14 (8th Dist.) (providing that “[t]he government has the duty to disclose public records, including the parts of a record which do not come within an exemption” and therefore, “if only part of a record is exempt, the government may redact the exempt part and release the rest.”).

⁵⁸⁷ See *State ex rel. Ohio Patrolmen’s Benevolent Ass’n v. City of Mentor*, 89 Ohio St.3d 440, 448, 2000-Ohio-214 (holding that the protected identities of uncharged suspects were not inextricably intertwined with all of the remaining records so as to exempt the totality of the investigative records); *State ex rel. Master v. City of Cleveland*, 75 Ohio St.3d 23, 30, 1996-Ohio-228 (“*Master I*”) (providing that “when a government body asserts that public records are excepted from disclosure and such assertion is challenged, the court must make an individualized scrutiny of the records in question” and “[i]f the ‘court finds that these records contain excepted information, this information must be redacted and any remaining information must be released.”) citing *State ex rel. Nat’l Broad. Co. v. City of Cleveland*, 38 Ohio St.3d 79, 85 (1998); *State ex rel. White v. Watson*, No. 86737, 2006-Ohio-5234, ¶14 (8th Dist.) (providing that “[t]he government has the duty to disclose public records, including the parts of a record which do not come within an exemption” and therefore, “if only part of a record is exempt, the government may redact the exempt part and release the rest.”).

⁵⁸⁸ *State ex rel. Rocker v. Guemsey County Sheriff’s Office*, 126 Ohio St.3d 224, 2010-Ohio-3288, ¶11-15.

⁵⁸⁹ R.C. 149.43(B)(3); *State ex rel. Doe v. Smith*, 123 Ohio St. 3d 44, 2009-Ohio-4149, ¶¶ 6, 9, 38, 43 (Supreme Court found that an explanation including legal authority must be provided even where that explanation reveals the otherwise deniable existence of sealed records. The response, “no information available,” violated R.C. 149.43(B)(3)).

The Ohio Public Records Act

Chapter Six: Special Topics

The uncharged suspect exception applies even if:

- time has passed since the investigation was closed;⁵⁹⁰
- the suspect has been accurately identified in media coverage;⁵⁹¹ or
- the uncharged suspect is the person requesting the information.⁵⁹²

(b) Identity of a Confidential Source

For purposes of the CLEIRs exception, “confidential sources” are those who have been “reasonably promised confidentiality.”⁵⁹³ A promise of confidentiality is considered reasonable if it was made on the basis of the law enforcement investigator’s individualized determination that the promise is necessary to obtain the information.⁵⁹⁴ Where possible, it is advisable - though not required - that the investigator document the specific reasons why promising confidentiality was necessary to further the investigation.⁵⁹⁵ Promises of confidentiality contained in policy statements or given as a matter of course during routine administrative procedures are not “reasonable” promises of confidentiality for purposes of the CLEIRs exception.⁵⁹⁶

This exception exists only to protect the identity of the information source, not the information he or she provides.⁵⁹⁷ However, where the contents of a particular record in an investigatory file are so inextricably intertwined with the confidential source’s identity that redacting will fail to protect the person’s identity in connection with the investigated conduct, that entire record may be withheld.⁵⁹⁸

(c) Specific Confidential Investigatory Techniques or Procedures

Specific confidential investigatory techniques or procedures,⁵⁹⁹ including sophisticated scientific investigatory techniques or procedures such as forensic laboratory tests and their results, may be redacted pursuant to this exception.⁶⁰⁰ One purpose of the exception is to avoid compromising the effectiveness of confidential investigative techniques.⁶⁰¹ Routine investigative techniques are not covered under the exception.⁶⁰²

(d) Investigative Work Product

Statutory Definition: Information, including notes, working papers, memoranda, or similar materials, assembled by law enforcement officials in connection with a probable or pending

⁶⁰¹ *State ex rel. Broom v. Cleveland*, 8th Dist. No. 59571 (Aug. 27, 1992) (noting that where “the records mention confidential investigatory techniques, the effectiveness of which could be compromised by disclosure” and “[t]o insure the continued effectiveness of these techniques, this court orders references to the techniques redacted” because “the information obtained from these techniques, if not otherwise protected, is ordered disclosed when such may be done without compromising the confidential technique.”).

⁶⁰² *State ex rel. Beacon Journal v. Univ. of Akron*, 64 Ohio St.2d 392, 397 (1980).

The Ohio Public Records Act

Chapter Six: Special Topics

criminal proceeding is work product under R.C. 149.43(A)(2)(c).⁶⁰³ These materials may be protected even when they appear in a law enforcement office's files other than the investigative file.⁶⁰⁴ "It is difficult to conceive of anything in a prosecutor's file, in a pending criminal matter, that would not be either material compiled in anticipation of a specific criminal proceeding or the personal trial preparation of the prosecutor."⁶⁰⁵ However, there are some limits to the items in an investigative file covered by this exception.⁶⁰⁶

Time Limits on Investigatory Work Product Exception: Once a law enforcement matter has commenced, the investigative work product exception applies until the matter has concluded.⁶⁰⁷ A law enforcement matter is concluded only when all potential actions, trials, and post-trial proceedings in the matter have ended. Thus, the investigatory work product exception remains available as long as any opportunity exists for direct appeal or post-conviction relief,⁶⁰⁸ including habeas corpus proceedings.⁶⁰⁹ Even if no suspect has been identified, "once it is evident that a crime has occurred, investigative materials developed are necessarily compiled in anticipation of litigation and so fall squarely within the *Steckman* definition of work product."⁶¹⁰ However, the work product exception is not merely an "ongoing investigation" exception. The investigating agency must be able to show that work product is being assembled in connection with a pending or highly probable criminal proceeding, not merely the possibility of future criminal proceedings.⁶¹¹

Where a criminal defendant who is the subject of the records agrees not to pursue appeal or post-conviction relief, the case is considered concluded, even if the time period for appeal or post-conviction relief has not expired.⁶¹²

Not Waived by Criminal Discovery: The work product exception is not waived when a criminal defendant is provided discovery materials as required by law.⁶¹³

(e) Information that Would Endanger Life or Physical Safety if Released

Information that, if released, would endanger the life or physical safety of law enforcement personnel,⁶¹⁴ a crime victim, a witness, or a confidential informant may be redacted before public

⁶⁰³ *State ex rel. Beacon Journal Publ'g Co. v. Maurer*, 91 Ohio St.3d 54, 56-57, 2001-Ohio-282 citing *State ex rel. Steckman v. Jackson*, 70 Ohio St.3d 420 (1994).

⁶⁰⁴ *State ex rel. Mahajan v. State Medical Bd.*, 127 Ohio St.3d 497, 2010-Ohio-5995, ¶¶51-52 (investigative work product incidentally contained in chief enforcement attorney's general personnel file).

⁶⁰⁵ *State ex rel. Steckman v. Jackson*, 70 Ohio St.3d 420, 431-32 (1994) (expanding the previous definition of "investigative work product" expressly and dramatically, which had previously limited the term to only those materials that would reveal the investigator's "deliberative and subjective analysis" of a case).

⁶⁰⁶ *State ex rel. Ohio Patrolmen's Benevolent Ass'n v. City of Mentor*, 89 Ohio St.3d 440, 448, 2000-Ohio-214 (finding that certain records, e.g., copies of newspaper articles and statutes, are unquestionably nonexempt and do not become exempt simply because they are placed in an investigative or prosecutorial file); *State ex rel. WLWT-TV5 v. Leis*, 77 Ohio St.3d 357, 361, 1997-Ohio-273 (providing that "[a]n examination [...] reveals the following nonexempt records: The [...] indictment, copies of various Revised Code Provisions, newspaper articles, a blank charitable organization registration statement form, the Brotherhood's Yearbook and Buyer's Guide, the transcript of the [...] plea hearing, a videotape of television news reports, and a campaign committee finance report filed with the board of elections.").

⁶⁰⁷ *State ex rel. Steckman v. Jackson*, 70 Ohio St.3d 420 (1994).

⁶⁰⁹ *Perry v. Onunwor*, 8th App. No. 78398 (Dec. 7, 2000) (providing that "possibilities for further proceedings and trials [include] federal habeas corpus proceedings").

⁶¹⁰ *State ex rel. Leonard v. White*, 75 Ohio St.3d 516, 518, 1996-Ohio-204.

⁶¹¹ *State ex rel. Ohio Patrolmen's Benevolent Ass'n v. City of Mentor*, 89 Ohio St.3d 440, 446, 2000-Ohio-214.

⁶¹² *State ex rel. Cleveland Police Patrolmen's Ass'n v. City of Cleveland*, 84 Ohio St.3d 310, 311-12, 1999-Ohio-352 (providing that when a defendant signed an affidavit agreeing not to pursue appeal or post-conviction relief, trial preparation and investigatory work product exceptions were inapplicable).

⁶¹³ *State ex rel. WHIO-TV-7 v. Lowe*, 77 Ohio St.3d 350, 1997-Ohio-271.

⁶¹⁴ *State ex rel. Cleveland Police Patrolmen's Ass'n v. City of Cleveland*, 8th App. No. 71346, 122 Ohio App.3d 696, 699 (8th Dist. 1997) (finding that a "Strike Plan" and related records prepared in connection with the possible strike by teachers were not records because their release could endanger the lives of police personnel).

The Ohio Public Records Act

Chapter Six: Special Topics

release of a record.⁶¹⁵ The danger must be self-evident; bare allegations or assumed conclusions that a person's physical safety is threatened are not sufficient reasons to redact information.⁶¹⁶ Alleging that disclosing the information would infringe on a person's privacy does not justify a denial of release under this exception.⁶¹⁷

Note: Non-expiring Step Two exceptions: When a law enforcement matter has concluded, only the work product exception expires. The courts have expressly or impliedly found that investigatory records which fall under the uncharged suspect,⁶¹⁸ confidential source or witness,⁶¹⁹ confidential investigatory technique,⁶²⁰ and information threatening physical safety⁶²¹ exceptions apply despite the passage of time.

Note: Law Enforcement Records not Covered by the CLEIRs Exception: As noted above, personnel and other administrative records not pertaining to a law enforcement matter would not be covered by the CLEIRs exception. In addition, the courts have specifically ruled that the following records are not covered:

Offense and Incident Reports: Offense-and-incident reports are form reports in which the law enforcement officer completing the form enters information in the spaces provided.⁶²² Police offense or incident reports initiate investigations, but are not considered part of the investigation, and are therefore not a "law enforcement matter" covered by the CLEIRs exception.⁶²³ Therefore, none of the information explained in Step Two above can be redacted from an initial incident report.⁶²⁴ However, if an offense or incident report contains information that is otherwise exempt from disclosure under state or federal law, the exempt information may be redacted.⁶²⁵

911 Records: Audio records of 911 calls are not considered to pertain to a "law enforcement matter," or constitute part of an investigation, for the purposes of the CLEIRs exception.⁶²⁶ Further, the courts have determined that a caller has no reasonable expectation of privacy in matters communicated in a 911 call, and since there is no basis to find a constitutional right of privacy in such calls, even Social Security Numbers may not be redacted.⁶²⁷ As with other public records, a requester is entitled to access either the audio record, or a paper transcript.⁶²⁸ However, information concerning telephone numbers, addresses, or names obtained from a 911 database maintained

⁶¹⁵ R.C. 149.43(A)(2)(d); see *State ex rel. Martin v. City of Cleveland*, 67 Ohio St.3d 155, 156, 1993-Ohio-192 (finding that a document does not need to specify within the four corners the promise of confidentiality or threat to physical safety).

⁶¹⁶ See e.g., *State ex rel. Johnson v. City of Cleveland*, 65 Ohio St.3d 331, 333-34 (1992) (overruled on other grounds).

⁶¹⁷ See e.g., *State ex rel. Johnson v. City of Cleveland*, 65 Ohio St.3d 331, 333-334 (1992).

⁶¹⁸ R.C. 149.43(A)(2)(d); see *State ex rel. Martin v. City of Cleveland*, 67 Ohio St.3d 155, 156, 1993-Ohio-192 (finding that a document does not need to specify within the four corners the promise of confidentiality or threat to physical safety).

⁶¹⁹ *State ex rel. Polovischak v. Mayfield*, 50 Ohio St.3d 51, 54 (1990) (providing that "[o]ne purpose of the exemption in R.C. 149.43(A)(2) is to protect a confidential informant" and that "[t]his purpose would be subverted if a recorded (in which the informant's identity is disclosed) were deemed subject to disclosure simply because a period of time had elapsed with no enforcement action") (parentheses original).

⁶²⁰ *State ex rel. Broom v. Cleveland*, 8th Dist. No. 59571 (Aug. 27, 1992).

⁶²¹ *State ex rel. Martin v. City of Cleveland*, 67 Ohio St.3d 155, 1993-Ohio-192.

⁶²² *State ex rel. Lanham v. Smith*, 112 Ohio St.3d 527, 2007-Ohio-609, ¶13 ("See, e.g., *State ex rel. Beacon Journal Publishing Co. v. Maurer* (2001), 91 Ohio St.3d 54, 2001 Ohio 282, 741 N.E.2d 511 (referring to an "Ohio Uniform Incident Form").").

⁶²³ *State ex rel. Lanham v. Smith*, 112 Ohio St.3d 527, 2007-Ohio-609, ¶13; *State ex rel. Beacon Journal Publ'g Co. v. City of Akron*, 104 Ohio St.3d 339, 2004-Ohio-6557, ¶55; *State ex rel. Beacon Journal Publ'g Co. v. Maurer*, 91 Ohio St.3d 54, 57, 2001-Ohio-282 (explaining its ruling by noting that it ruled the way it did "despite the risk that the report may disclose the identity of an uncharged suspect.").

⁶²⁴ *State ex rel. Beacon Journal Publ'g Co. v. Maurer*, 91 Ohio St.3d 54, 57, 2001-Ohio-282.

City of Akron*, 104 Ohio St.3d 339, 2004-Ohio-6557, ¶55 (explaining that "in *Maurer*, we did not adopt a per se rule that all police offense and incident reports are subject to disclosure notwithstanding the applicability of any exemption.").

⁶²⁶ *State ex rel. Dispatch Printing Co. v. Morrow County Prosecutor's Office*, 10 Ohio St.3d 172, 2005-Ohio-685.

⁶²⁷ *State ex rel. Cincinnati Enquirer v. Hamilton County*, 75 Ohio St.3d 374, 377, 1996-Ohio-214 (holding that 911 tapes at issue had to be released immediately).

⁶²⁸ *State ex rel. Dispatch Printing Co. v. Morrow County Prosecutor's Office*, 10 Ohio St.3d 172, 2005-Ohio-685, ¶5.

The Ohio Public Records Act

Chapter Six: Special Topics

pursuant to R.C. 4931.40 through 4931.51 may not be disclosed or used for any purpose other than as permitted by those statutes.⁶²⁹

Note: Exceptions other than CLEIRs may apply to documents within a law enforcement investigative file, such as Social Security Numbers or LEADS computerized criminal history documents,⁶³⁰ and information, data, and statistics gathered or disseminated through the Ohio Law Enforcement Gateway (OHLEG).⁶³¹

B. *Employment Records*⁶³²

Public employee personnel records are generally regarded as public records.⁶³³ However, if any item contained in a personnel file or other employment records⁶³⁴ is not a “record” of the office, or is subject to an exception, it may be withheld. We recommend that Human Resource officers prepare a list of information and records in the office’s personnel files that are subject to withholding, including the explanation and legal authority related to each item. The office can then use this list for prompt and consistent responses to public records requests. A sample list can be found at the end of this chapter.

1. *Non-Records*

To the extent that any item contained in a personnel file is not a “record,” *i.e.*, does not serve to document the organization, operations, etc., of the public office, it is not a public record and need not be disclosed.⁶³⁵ Based on this reasoning, the Ohio Supreme Court has found that in most instances the home addresses of public employees kept by their employers solely for administrative convenience are not “records” of the office.⁶³⁶ Although Ohio case law is silent on other specific non-record personnel items, a public office may want to evaluate emergency telephone numbers, employee banking information, insurance beneficiary designations, and other items maintained as employment records which may not serve to document the activities of the office. Non-record items may be redacted from materials which are otherwise records.

2. *Names and Dates of Birth of Public Officials and Employees*

“Each public office or person responsible for public records shall maintain a database or a list that includes the name and date of birth of all public officials and employees elected to or employed by that public office. The database or list is a public record and shall be made available upon a request made pursuant to section 149.43 of the Revised Code.”⁶³⁷

⁶²⁹ R.C. 4931.49(F); R.C. 4931.99(E) (providing that information from a database that serves public safety answering point of 911 system may not be disclosed).

⁶³⁰ O.A.C. 4501.2-10-06(B).

⁶³¹ R.C. 149.57(D)(1)(b).

⁶³² The following categories may not include all exceptions (or inclusions) which could apply to every public office’s personnel records.

⁶³³ 2007 Ohio Op. Att’y Gen. No. 026; *State ex rel. Multimedia, Inc. v. Snowden*, 72 Ohio St.3d 141, 143, 1995-Ohio-248; *State ex rel. Ohio Patrolmen’s Benevolent Ass’n v. Mentor*, 89 Ohio St.3d 440, 444, 2000-Ohio-214 (addressing police personnel records).

⁶³⁴ The term “personnel file” has no single definition in public records law. See *State ex rel. Morgan v. City of New Lexington*, 112 Ohio St.3d 33, 2006-Ohio-6365, ¶57 (inferring that “records that are the functional equivalent of personnel files exist and are in the custody of the city” where a respondent claimed that no personnel files designated by the respondent existed); *Cwynar v. Jackson Twp. Bd. of Trs.*, 178 Ohio App.3d 345, 2008-Ohio-5011, ¶31 (5th Dist.) (finding that, where the appellant requested only the complete personnel file and not the records relating to an individual’s employment, that “[i]t is the responsibility of the person making the public records request to identify the records with reasonable clarity.”).

⁶³⁵ *State ex rel. McCleary v. Roberts*, 88 Ohio St.3d 365, 367, 2000-Ohio-345; *State ex rel. Fant v. Enright*, 66 Ohio St.3d 186, 188 (1993) (stating that “[t]o the extent that any item contained in a personnel file is not a ‘record,’ *i.e.*, does not serve to document the organization, etc., of the public office, it is not a public record and need not be disclosed.”).

⁶³⁶ *State ex rel. Dispatch Printing Co. v. Johnson*, 106 Ohio St.3d 160, 200-Ohio-4384, ¶39 (explaining that an employee’s home address may constitute a “record” when it documents an office policy or practice, as when the employee’s work address is also the employee’s home address).

⁶³⁷ R.C. 149.434.

The Ohio Public Records Act

Chapter Six: Special Topics

3. Resumes and Application Materials

There is no public records exception which generally protects resumes and application materials obtained by public offices in the hiring process.⁶³⁸ The Ohio Supreme Court has found that the public has “an unquestioned public interest in the qualifications of potential applicants for positions of authority in public employment.”⁶³⁹ For example, when a city board of education used a private search firm to help hire a new treasurer, it was required to disclose the names and resumes of the interviewees.⁶⁴⁰ The fact that a public office has promised confidentiality to applicants is irrelevant.⁶⁴¹ A public office’s obligation to turn over application materials and resumes extends to records in the sole possession of private search firms used in the hiring process.⁶⁴² As with any other category of record, if an exception for home address, Social Security Number, or other specific item applies, it may be used to redact only the protected information.

Application Materials Not “Kept By” a Public Office: Application materials may not be public records if they are not “kept by”⁶⁴³ the office at the time of the request. In *State ex rel. Cincinnati Enquirer v. Cincinnati Board of Education*, the school board engaged a private search firm to assist in its search for a new superintendent. During the interview process, the school board members reviewed and then returned all application materials and resumes submitted by the candidates. The Enquirer made a public records request for any resumes, documents, etc., related to the superintendent search. Because no copies of the materials had been provided to the board at any time outside the interview setting and had never been “kept”, the court denied the writ of mandamus.⁶⁴⁴ Keep in mind that this case is limited to a narrow set of facts, including compliance with records retention schedules, in returning such materials.

4. Background Investigations

Background investigations are not subject to any general public records exception,⁶⁴⁵ although specific statutes may except defined background investigation materials kept by specific public offices.⁶⁴⁶

However, criminal history “rap sheets” obtained from the federal National Crime Information Center system (NCIC) or through the state Law Enforcement Automated Data System (LEADS) are subject to a number of statutory exceptions.⁶⁴⁷

⁶³⁸ *State ex rel. Consumer News Servs. v. Worthington City Bd. of Educ.*, 97 Ohio St.3d 58, 2002-Ohio-5311, ¶41; *State ex rel. Gannett v. Shirey*, 78 Ohio St.3d 400, 403, 1997-Ohio-206.

⁶³⁹ *State ex rel. Consumer News Servs. v. Worthington City Bd. of Educ.*, 97 Ohio St.3d 58, 2002-Ohio-5311, ¶53 (including that opponents argued that disclosing these materials would prevent the best candidates from applying); *but see State ex rel. The Plain Dealer Publishing Co. v. Cleveland*, 75 Ohio St.3d 31, 36, 1996-Ohio-379 (providing that “it is not evident that disclosure of resumes of applicants for public offices like police chief necessarily prevents the best qualified candidates from applying.”).

⁶⁴⁰ *State ex rel. Consumer News Servs. v. Worthington City Bd. of Educ.*, 97 Ohio St.3d 58, 2002-Ohio-5311.

⁶⁴¹ *State ex rel. Consumer News Servs. v. Worthington City Bd. of Educ.*, 97 Ohio St.3d 58, 2002-Ohio-5311, ¶46; *State ex rel. Gannett Satellite Info. Network v. Shirey*, 78 Ohio St.3d 400, 403, 1997-Ohio-206.

⁶⁴² *State ex rel. Gannett Satellite Info. Network v. Shirey*, 78 Ohio St.3d 400, 403, 1997-Ohio-206.

⁶⁴³ For a discussion on “kept by” see Chapter One: D. “Public Record” – “What ‘Kept By’ Means.”

⁶⁴⁴ *State ex rel. Cincinnati Enquirer v. Cincinnati Bd. of Educ.*, 99 Ohio St.3d, 2003-Ohio-2260, ¶14.

(providing that there are three different analyses of the interplay between Juv. R. 37 (juvenile court records), OAC 4501:2-10-06(B) (LEADS records) and BMV statutes); *Patrolman X v. Toledo*, C.P. Lucas, 132 Ohio App.3d 381, 389 (Apr. 22, 1996); *State ex rel. Nat’l Broadcasting Co. v. Cleveland*, 82 Ohio App.3d 202, 206-7 (8th Dist. 1992); *Ingraham v. Ribar*, 80 Ohio App.3d 29, 33-34 (9th Dist. 1992); 1994 Ohio Op Att’y Gen. No. 046.

The Ohio Public Records Act

Chapter Six: Special Topics

5. Evaluations and Disciplinary Records

Employee evaluations are not subject to any general public records exception.⁶⁴⁸ Likewise, records of disciplinary actions involving an employee are not excepted.⁶⁴⁹ Specifically, the CLEIRs exception does not apply to routine office discipline or personnel matters,⁶⁵⁰ even when such matters are the subject of an internal investigation within a law enforcement agency.⁶⁵¹

6. Physical Fitness, Psychiatric, and Polygraph Examinations

As used in the Ohio Public Records Act, the term “medical records” is limited to records generated and maintained in the process of medical treatment (see “Medical Records” below). Accordingly, records of examinations performed for the purpose of determining fitness for hiring or for continued employment, including physical fitness,⁶⁵² psychiatric,⁶⁵³ and psychological⁶⁵⁴ examinations, are not excepted from disclosure as “medical records.” Similarly, polygraph, or “lie detector,” examinations are not “medical records,” nor do they fall under the CLEIRs exception when performed in connection with hiring.⁶⁵⁵ Note, though, that a separate exception does apply to “medical information” pertaining to those professionals covered under R.C. 149.43(A)(7)(c).

While fitness for employment records do not fit within the definition of “medical records,” they may nonetheless be excepted from disclosure under the so-called “catch all” provision of the Public Records Act as “records the release of which is prohibited by state or federal law.”⁶⁵⁶ Specifically, the federal Americans with Disabilities Act (ADA) and its implementing regulations⁶⁵⁷ permit employers to require employees and applicants to whom they have offered employment to undergo medical examination and/or inquiry into their ability to perform job-related functions.⁶⁵⁸ Information regarding medical condition or history must be collected and kept on separate forms and in separate medical files, and must be treated as confidential, except as otherwise provided by the ADA. As non-public records, the examinations may constitute “confidential personal information” under Ohio’s Personal Information Systems Act.⁶⁵⁹

7. Medical Records

“Medical records” are not public records,⁶⁶⁰ and a public office may withhold any medical records in a personnel file. As noted above, however, only those records that meet the definition of “medical records,” *i.e.*, that are generated and maintained in the process of medical treatment,⁶⁶¹ may be

⁶⁴⁸ *State ex rel. Medina County Gazette v. City of Brunswick*, 109 Ohio App.3d 661, 664 (9th Dist. 1996).

⁶⁴⁹ *State ex rel. Morgan v. City of New Lexington*, 112 Ohio St.3d 33, 2006-Ohio-6365, ¶49.

⁶⁵⁰ *State ex rel. Freedom Commc’n, Inc. v. Elida Cmty. Fire Co.*, 82 Ohio St.3d 578, 581-82, 1998-Ohio-411 (finding that an investigation of an alleged sexual assault conduct internally as a personnel matter is not a law enforcement matter).

⁶⁵¹ *State ex rel. Multimedia, Inc. v. Snowden*, 72 Ohio St.3d 141, 142, 1995-Ohio-248 (determining that personnel records of police officers reflecting the discipline of police officers are nonconfidential law enforcement investigatory records excepted from disclosure).

⁶⁵² *State ex rel. Ohio Patrolmen’s Benevolent Ass’n v. Lucas County Sheriff’s Office*, No. L-06-1108, 2007-Ohio-101, ¶16 (7th Dist.) (finding that a “fitness for duty evaluation” did not constitute “medical records”).

⁶⁵³ *State of Ohio v. Hall*, 141 Ohio App.3d 561, 568, 2001-Ohio-4059 (4th Dist.) (finding that psychiatric reports compiled solely to assist the court with “competency to stand trial determination” were not medical records).

⁶⁵⁴ *State ex rel. Multimedia, Inc. v. Snowden*, 72 Ohio St.3d 141, 143, 1995-Ohio-248 (finding that a police psychologist report obtained to assist the police hiring process is not a medical record).

⁶⁵⁵ *State ex rel. Multimedia, Inc. v. Snowden*, 72 Ohio St.3d 141, 143, 1995-Ohio-248 citing *State ex rel. Lorain Journal v. City of Lorain*, 87 Ohio App.3d 112 (9th Dist. 1993).

⁶⁵⁶ R.C. 149.43(A)(1)(v).

⁶⁵⁷ 42 U.S.C. § 12112; 29 C.F.R. §§ 1630.14(b)(1), (c)(1).

Bd. of Ohio*, 127 Ohio St.3d 497, 2010-Ohio-5995, ¶44, 47 (employer’s questioning of court reporter and opposing counsel was properly redacted as inquiry into whether employee was able to perform job-related functions, as pertinent ADA provision does not limit the confidential nature of such inquiries to questions directed to employees or medical personnel).

⁶⁵⁹ R.C. 1347.15(A)(1).

⁶⁶⁰ R.C. 149.43(A)(1)(a), (A)(3).

⁶⁶¹ R.C. 149.43(A)(3) (extends to “any document [...] that pertains to the medical history, diagnosis, prognosis, or medical condition of a patient and that is generated and maintained in the process of medical treatment.”); *State ex rel. Strothers v. Wertheim*, 80 Ohio St.3d 155, 158, 1997-Ohio-349

The Ohio Public Records Act

Chapter Six: Special Topics

withheld under this exception. Note that the federal Health Insurance Portability and Accountability Act (HIPAA),⁶⁶² does not apply to records in employer personnel files, but that the federal Family and Medical Leave Act (FMLA),⁶⁶³ or the Americans With Disabilities Act (ADA)⁶⁶⁴ may apply to medical-related information in personnel files.

8. School Records

Education records, which include but are not limited to school transcripts, attendance records, and discipline records, that are directly related to a student and maintained by the educational institution, as well as personally identifiable information from education records, are generally protected from disclosure by the school itself through the federal Family Educational Rights and Privacy Act (FERPA). However, when a student or former student directly provides such records to a public office they are not protected by FERPA⁶⁶⁵ and are considered public records.

9. Social Security Numbers and Taxpayer Records

Social Security Numbers (SSNs) should be redacted before the disclosure of public records.⁶⁶⁶ The Ohio Supreme Court has held that although the Federal Privacy Act (5 U.S.C. §552a) does not expressly prohibit release of one's SSN, the Act does create an expectation of privacy as to the use and disclosure of the SSN. Ohio statutes or administrative code may provide other exceptions for SSNs for specific employees⁶⁶⁷ or in particular locations,⁶⁶⁸ and/or upon request.⁶⁶⁹

Information obtained from municipal tax returns is confidential.⁶⁷⁰ One Attorney General Opinion found that W-2 federal tax forms prepared and maintained by a township as an employer are public records. However, W-2 forms filed as part of a municipal income tax return are confidential.⁶⁷¹ W-4 forms are confidential pursuant to 26 U.S.C. 6103(b)(2)(A) as "return information," which includes "data with respect to the determination of the existence of liability (or the amount thereof) of any person for any tax."

With respect to Ohio income tax records, any information gained as the result of returns, investigations, hearings, or verifications required or authorized by R.C. Chapter 5747 is confidential.

⁶⁷²

10. Residential and Familial Information of Listed Safety Officers

As detailed elsewhere in this book, the residential and familial information⁶⁷³ of certain listed public employees may be withheld from disclosure.⁶⁷⁴

(emphasizing that both parts of this conjunctive definition must be met in order to fall under the medical records exception: "a record must pertain to a medical diagnosis and be generated and maintained in the process of medical treatment.").

⁶⁶² See 45 C.F.R. §§ 160 *et seq.*; 45 C.F.R. §§ 164 *et seq.*

The Ohio Public Records Act

Chapter Six: Special Topics

11. Bargaining Agreement Provisions

Courts have held that collective bargaining agreements concerning the confidentiality of records cannot prevail over the Public Records Act. For example, a union may not legally bar the production of available public records through a provision in a collective bargaining agreement.⁶⁷⁵

12. Statutes Specific to a Particular Agency's Employees

Statutes protect particular information or records concerning specific public offices, or particular employees⁶⁷⁶ within one or more agencies.⁶⁷⁷

⁶⁷⁵ *State ex rel. Dispatch Printing Co. v. City of Columbus*, 90 Ohio St.3d 39, 40-43, 2000-Ohio-8 (determining that the FOP could not legally bar the production of available public records through a records disposition provision in a collective bargaining agreement); *State ex rel. Dispatch Printing Co. v. Wells*, 18 Ohio St.3d 382, 384 (1995).

⁶⁷⁶ E.g., R.C. 149.43(A)(7) (Covered Professionals' Residential and Familial Information); R.C. 149.43(A)(7)(g) (photograph of a peace officer who works undercover or plainclothes assignments).

⁶⁷⁷ E.g., R.C. 2151.142 (providing for confidentiality of residential address of public children services agency or private child placing agency personnel).

The Ohio Public Records Act

Chapter Six: Special Topics

Personnel Files

Items from personnel files that are subject to release with appropriate redaction

- Payroll records • Timesheets • Employment application forms • Resumes
- Training course certificates • Position descriptions • Performance evaluations
- Leave conversion forms • Letters of support or complaint
- Forms documenting receipt of office policies, directives, etc.
- Forms documenting hiring, promotions, job classification changes, separation, etc.
- Background checks, other than LEADS throughput, NCIC and CCH
- Disciplinary investigation/action records, unless exempt from disclosure by law

Items from personnel files that may or must be withheld

- Social Security Numbers (based on the federal Privacy Act: 5 USC §552a)
- Public employee home addresses, generally (as non-record)
- Residential and familial information of a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or BCI&I investigator, other than residence address of prosecutor (See O.R.C. 149.43 (A)(1)(p))
- Charitable deductions and employment benefit deductions such as health insurance (as non-records)
- Beneficiary information (as non-record)
- Federal tax returns and “return information” filed under the jurisdiction of the IRS (26 USC §6103)
- Personal history information of state retirement contributors (R.C. 145.27(A); R.C. 742.41(A); R.C. 3307.20(A); R.C. 3309.22; R.C. 5505.04(C))
- Taxpayer records maintained by Ohio Dept. of Taxation and by municipal corporations (RC 5703.21; RC 718.13)
- “Medical records” that are generated and maintained in the process of medical treatment (RC 149.43(A)(1)(a) and (A)(3))
- LEADS, NCIC or CCH criminal record information (42 USC §3789g; 28 CFR §20.21, §20.33(a)(3); ORC 109.57(D) & (E); OAC 109:05-1-01; OAC 4501:2-10-06)
- Records of open internal EEO investigations (discretionarily exempt as Confidential Law Enforcement Investigatory Records under RC 149.43(A)(1)(h) if conducted pursuant to OAC Rule 123:1-49)

The Ohio Public Records Act

Chapter Six: Special Topics

C. Residential and Familial Information of Covered Professions that are not Public Records⁶⁷⁸

Residential and Familial Information Defined:⁶⁷⁹ The “residential and familial information” of peace officers,⁶⁸⁰ parole officers, probation officers, bailiffs, prosecuting attorneys, assistant prosecuting attorneys,⁶⁸¹ correctional employees,⁶⁸² youth services employees,⁶⁸³ firefighters,⁶⁸⁴ or emergency medical technicians (EMTs),⁶⁸⁵ and investigators of the Bureau of Criminal Identification and Investigation is excepted from mandatory disclosure under the Ohio Public Records Act.⁶⁸⁶ “Residential and familial information” means any information that discloses any of the following about individuals in the listed employment categories (see following chart):

Information That Is Not Public Record

(*Peace Officer, Parole Officer, Probation Officer, Bailiff, Prosecuting Attorney, Assistant Prosecuting Attorney, Correctional Employee, Youth Services Employee, Firefighter, EMT or investigator of the Bureau of Criminal Identification and Investigation⁶⁸⁷)

Residential	<ul style="list-style-type: none">• Address of the covered employee’s actual personal residence, except for state or political subdivision; residential phone number, and emergency phone number⁶⁸⁸• Residential address, residential phone number, and emergency phone number of the spouse, former spouse, or child of a covered employee⁶⁸⁹
Medical	<ul style="list-style-type: none">• Any information of a covered employee that is compiled from referral to or participation in an employee assistance program⁶⁹⁰• Any medical information of a covered employee⁶⁹¹
Employment	<ul style="list-style-type: none">• The name of any beneficiary of employment benefits, of a covered employee, including, but not limited to, life insurance benefits⁶⁹²

⁶⁷⁸ Individuals in these covered professions can also request to have certain information redacted, or prohibit its disclosure. For additional discussion, see Chapter Three: F. “Exceptions Affecting Personal Privacy – 2. Personal Information Listed Online.”

⁶⁷⁹ For purposes of this section, “covered professions” is the term used to describe all of the persons covered under the residential and familial exception (i.e. peace officer, firefighter, etc.).

⁶⁸⁰ R.C. 149.43(A)(7); For purposes of this statute, “peace officer” has the same meaning as in R.C. 109.71 and also includes the superintendent and troopers of the state highway patrol; it does not include the sheriff of a county or a supervisory employee who, in the absence of the sheriff, is authorized to stand in for, exercise the authority of, and perform the duties of the sheriff, R.C. 149.43(A)(7)(g).

⁶⁸¹ *State ex rel. Bardwell v. Rocky River Police Dept.*, No. 91022, 2009-Ohio-727, ¶¶31-46 (8th Dist.) (providing that the home address of an elected law director who at times serves as a prosecutor is not a public record, pursuant to R.C. 149.43(A)(1)(p) in conjunction with (7)(a)).

⁶⁸² R.C. 149.43(A)(7)(g) (providing that “[a]s used in divisions (A)(7) and (B)(5) of this section, ‘correctional employee’ means any employee of the department of rehabilitation and correction who in the course of performing the employee’s job duties has or has had contact with inmates and persons under supervision.”).

⁶⁸³ R.C. 149.43(A)(7)(g) (providing that “[a]s used in divisions (A)(7) and (B)(5) of this section, ‘youth services employee’ means any employee of the department of youth services who in the course of performing the employee’s job duties has or has had contact with children committed to the custody of the department of youth services.”).

⁶⁸⁴ R.C. 149.43(A)(7)(g) (providing that “[a]s used in divisions (A)(7) and (B)(9) of this section, ‘firefighter’ means any regular, paid or volunteer, member of a lawfully constituted fire department of a municipal corporation, township, fire district, or village.”).

⁶⁸⁵ R.C. 149.43(A)(7)(g): “[a]s used in divisions (A)(7) and (B)(9) of this section, ‘EMT’ means EMTs-basic, EMTs-I, and paramedic that provide emergency medical services for a public emergency medical service organization. ‘Emergency medical service organization,’ ‘EMT-basic,’ ‘EMT-I,’ and ‘paramedic’ have the same meanings as in section 4765.01 of the Revised Code.”

⁶⁸⁶ R.C. 149.43(A)(1)(p), (A)(7).

⁶⁸⁷ R.C. 2151.142(B), (C) (providing that, in addition to the “covered professions” listed above, that certain residential addresses of employees of a public children services agency or private child placing agency and that employee’s family members are exempt from disclosure).

⁶⁸⁸ R.C. 149.43(A)(7)(a), and (c). Because prosecuting attorneys are elected officials, the actual personal residential address of elected prosecuting attorneys is not excepted from disclosure (some published versions of Chapter 149 incorrectly include prosecuting attorneys in R.C. 149.43(A)(7)(a)).

⁶⁸⁹ R.C. 149.43(A)(7)(f).

⁶⁹⁰ R.C. 149.43(A)(7)(b).

⁶⁹¹ R.C. 149.43(A)(7)(c).

The Ohio Public Records Act

Chapter Six: Special Topics

D. Court Records

Although records kept by the courts of Ohio meet the definition of public records under the Ohio Public Records Act), most court records are subject to additional rules concerning access.

1. Courts' Supervisory Power Over Their Own Records

Ohio courts⁶⁹⁸ are subject to the Rules of Superintendence for the Courts of Ohio,⁶⁹⁹ adopted by the Supreme Court of Ohio. The Rules of Superintendence establish rights and duties regarding court case documents and administrative documents, starting with the statement that “[c]ourt records are presumed open to public access.” Sup. R. 45(A). While similar to the Ohio Public Records Act, the Rules of Superintendence contain some additional or different provisions, including language:

- Allowing courts to adopt a policy limiting the number of records they will release per month unless the requestor certifies that there is no intended commercial use. Sup. R. 45(B)(3).
- For Internet records, allowing courts to announce that a large attachment or exhibit was not scanned but is available by direct access. Sup. R. 45(C)(1).
- Establishing definitions of “court record,” “case document,” “administrative document,” “case file,” and other terms. Sup. R. 44(A) through (M).
- A process for the sealing of part or all of any case document, including a process for any person to request access to a case document or information that has been granted limited public access. Sup. R. 45(F).
- Requiring that documents filed with the court omit or redact personal identifiers that might contribute to identity theft. The personal identifiers would instead be submitted on a separate standard form submitted only to the court, clerk of courts and parties. Sup. R. 45(D).⁷⁰⁰

(this is a partial list – see Sup. Rules 44-47 for all provisions.)

The provisions of Rules 44 through 47 of the Rules of Superintendence apply to all court administrative documents, but only apply to court case documents in actions commenced on or after the effective date of the rule.⁷⁰¹ The Rules of Superintendence for the Courts of Ohio are currently available online at:

<http://www.sconet.state.oh.us/LegalResources/Rules/superintendence/Superintendence.pdf>.

2. Rules of Court Procedure

Rules of Procedure, which are also adopted through the Ohio Supreme Court, can create exceptions to public record disclosure.⁷⁰² Examples include certain records related to grand jury proceedings,⁷⁰³ and most juvenile court records.⁷⁰⁴

3. Sealing Statutes

Where court records have been properly expunged or sealed, they are not available for public disclosure.⁷⁰⁵ However, when a responsive record is sealed, the public office must provide the

⁶⁹⁸ Sup. R. 1(B) (defining county courts, municipal courts, courts of common pleas, and courts of appeals).

⁶⁹⁹ Rules of Superintendence for the Courts of Ohio are cited as “Sup. R. n.”

⁷⁰⁰ Effective September 1, 2011, the Ohio Supreme Court adopted a new probate form to comply with Sup. R. 45(D).

Chapter Six: Special Topics

explanation for withholding, including the legal authority under which the record was sealed.⁷⁰⁶ Even absent statutory authority, trial courts have the inherent authority to seal court records in unusual and exceptional circumstances.⁷⁰⁷ When exercising this authority, however, courts should balance the individual's privacy interest against the government's legitimate need to provide public access to records of criminal proceedings.⁷⁰⁸

4. Non-Records

As with any public office, courts are not obligated to provide documents that are not "records" of the court. Examples include a judge's handwritten notes,⁷⁰⁹ completed juror questionnaires,⁷¹⁰ Social Security Numbers in certain court records,⁷¹¹ and unsolicited letters sent to a judge.⁷¹²

5. General Court Records Retention

See Sup. R. 26 governing Court Records Management and Retention, and the following Rules setting records retention schedules for each type of court, Sup. R. 26.01 through Sup. R. 26.05.

Other Case Law Prior to Rules of Superintendence

Constitutional Right of Access: Based on constitutional principles, and separate from the public records statute, Ohio common law grants the public a presumptive right to inspect and copy court records.⁷¹³ Both the United States and the Ohio Constitutions create a qualified right⁷¹⁴ of public access to court proceedings that have historically been open to the public and in which the public's access plays a significantly positive role.⁷¹⁵ This qualified right includes access to the live proceedings, as well as to the records of the proceedings.⁷¹⁶

Even where proceedings are not historically public, the Ohio Supreme Court has determined that "any restriction shielding court records from public scrutiny should be narrowly tailored to serve the competing interests of protecting the individual's privacy without unduly burdening the public's right of access."⁷¹⁷ This high standard exists because the purpose of this common-law right "is to promote understanding of the legal system and to assure public confidence in the courts."⁷¹⁸ But,

public record under R.C. 149.43, it shall not be sealed and shall be available for public inspection. And the party wishing to seal the record has the duty to show that a statutory exclusion applies [...] just because the parties have agreed that they want the records sealed is not enough to justify the sealing.").

⁷⁰⁶ *State ex rel. Doe v. Smith*, 123 Ohio St. 3d 44, 2009-Ohio-4149, ¶¶ 6, 9, 38, 43 (response, "There is no information available," was a violation of R.C. 149.43(B)(3) requirement to provide a sufficient explanation, with legal authority, for the denial).

⁷⁰⁷ *Pepper Pike v. Doe*, 66 Ohio St.2d 374 (1981); but see *State ex rel. Highlander v. Rudduck*, 103 Ohio St.3d 370, 2004-Ohio-4952, ¶1 (finding that divorce records are not properly sealed when the order results from "unwritten and informal court policy").

The Ohio Public Records Act

Chapter Six: Special Topics

the constitutional right of public access is not absolute, and courts have traditionally exercised “supervisory power over their own records and files.”⁷¹⁹

The Ohio Public Records Act applies to court records.⁷²⁰ Once an otherwise non-public document is filed with the court (such as pretrial discovery material), that document becomes a public record when it becomes part of the court record.⁷²¹

However, in circumstances where the release of the court records would prejudice the rights of the parties in an ongoing criminal or civil proceeding, a narrow exception to public access exists.⁷²² Under such circumstances, the court may impose a protective order prohibiting release of the records.⁷²³

Constitutional Access and Statutory Access Compared: The Ohio Supreme Court has distinguished between *public records* access and *constitutional* access to jurors’ names, home addresses and other personal information in their responses to written juror questionnaires.⁷²⁴ While such information is not a “public record,”⁷²⁵ it is presumed to be subject to public disclosure based on constitutional principles.⁷²⁶ The Court explained that the personal information of these private citizens is not “public record” because it does nothing to “shed light” on the operations of the court.⁷²⁷ However, there is a constitutional presumption that this information will be publicly accessible in criminal proceedings.⁷²⁸ As a result, the jurors’ personal information will be publicly accessible unless there is an “overriding interest based on findings that closure is essential to preserve higher values and is narrowly tailored to serve that interest.”⁷²⁹

Nevertheless, the Ohio Supreme Court also concluded, in a unanimous decision, that Social Security Numbers contained in criminal case files are appropriately redacted before public disclosure.⁷³⁰ According to the Court, permitting the court clerk to redact SSNs before disclosing court records “does not contravene the purpose of the Public Records Act, which is ‘to expose government activity to public scrutiny.’ Revealing individuals’ Social Security Numbers that are contained in criminal records does not shed light on any government activity.”⁷³¹

⁷¹⁹ *State ex rel. Cincinnati Enquirer v. Winkler*, 149 Ohio App.3d 350, 354-55, 2002-Ohio-4803 (1st Dist.) (“Winkler I”).

⁷²⁰ *State ex rel. Cincinnati Enquirer v. Winkler*, 101 Ohio St.3d 382, 2004-Ohio-1581, ¶5 (“Winkler III”) (providing that “it is apparent that court records fall within the broad definition of ‘public record.’”).

The Ohio Public Records Act

Chapter Six: Special Topics

E. HIPAA & HITECH

Regulations implementing the Health Insurance Portability and Accountability Act of 1996 (“HIPAA”) became fully effective in April 2003. Among the regulations written to implement HIPAA was the “Privacy Rule,” which is a collection of federal regulations seeking to maintain the confidentiality of individually identifiable health information.⁷³² For some public offices, the Privacy Rule and HITECH⁷³³ affect the manner in which they respond to public records requests.

1. HIPAA Definitions

The Privacy Rule protects all individually identifiable health information, which is called “protected health information” or “PHI.”⁷³⁴ PHI is information that could reasonably lead to the identification of an individual, either by itself or in combination with other reasonably available information.⁷³⁵ The HIPAA regulations apply to the three “covered entities”⁷³⁶ listed below:

- a. **Healthcare provider:** Generally, a “healthcare provider” is any entity providing mental or health services that electronically transmits individually identifiable health information for any financial or administrative purpose subject to HIPAA.
- b. **A health plan:** A “health plan” is an individual or group plan that provides or pays the cost of medical care, such as an HMO.
- c. **Healthcare clearinghouse:** A “healthcare clearinghouse” is any entity that processes health information from one format into another for particular purposes, such as a billing service.

Legal counsel should be consulted if there is uncertainty about whether or not a particular public office is a “covered entity” or “business associate” of a covered entity for purposes of HIPAA.

2. HIPAA Does Not Apply Where Ohio Public Records Act Requires Release

The Privacy Rule permits a covered entity to use and disclose protected health information as required by other law, including state law.⁷³⁷ Thus, where state public records law mandates that a covered entity disclose protected health information, the covered entity is permitted by the Privacy Rule to make the disclosure, provided the disclosure complies with and is limited to the relevant requirements of the public records law.⁷³⁸ For this purpose, note that the Ohio Public Records Act only mandates disclosure when no other exception applies.

So, where public records law only permits, and does not mandate, the disclosure of protected health information - where exceptions or other qualifications apply to exempt the protected health information from the state law's disclosure requirement - then such disclosures are not “required by law” and would not fall within the Privacy Rule. For example, if state public records law includes an exception that affords a state agency discretion not to disclose medical⁷³⁹ or other information, the disclosure of such records is not required by the public records law, and therefore the Privacy Rule would cover those records.⁷⁴⁰ In such cases, a covered entity only would be able to make the disclosure if permitted by another provision of the Privacy Rule. In a 2006 case where no other public records exception applied to the subject records, the Ohio Supreme Court held: “[a] review of HIPAA reveals a “required by law” exception to the prohibition against disclosure of protected health information. With respect to this position, Section 164.512(a)(1), Title 45, C.F.R., provides, “A

The Ohio Public Records Act

Chapter Six: Special Topics

covered entity may * * * disclose protected health information to the extent that such * * * disclosure is *required by law* * * *.” (Emphasis added). And the Ohio Public Records Act requires disclosure of records unless the disclosure or release is prohibited by federal law. R.C. 149.43(A (1)(v)).⁷⁴¹ The Court found the interaction of the federal and state law somewhat circular, but resolved it in favor of disclosure under the Ohio Public Records Act.⁷⁴²

Based on the “required by law” exception described above, the remaining applications of HIPAA, below, are either HIPAA’s own exceptions to its application, or are conditioned on the existence of another non-HIPAA exception before HIPAA will apply to the subject records.

3. PHI in Personnel Files

HIPAA privacy restrictions do not affect the release of PHI in employment records held by a covered entity in its sole role as an employer.⁷⁴³ When handling a public records request, a covered entity need not necessarily redact PHI from the personnel file or obtain the employee’s authorization before releasing the records. However, other state and/or federal catch-all exceptions requiring redaction of the same information may still apply.⁷⁴⁴

4. PHI in Law Enforcement Investigations

Basically, where the PHI is necessary to further a legitimate law enforcement purpose, a covered entity may release PHI to law enforcement officials without the patient’s prior authorization.⁷⁴⁵

Specifically, the situations in which such release is permissible are as follows: (1) where state or federal law requires the release, including a valid court order, warrant, or subpoena; (2) to identify or locate a suspect, fugitive, material witness, or missing person; (3) when a crime victim is unable to consent, the PHI is needed to determine whether a crime has been committed, the PHI will not be used against the victim, the investigation will be materially and adversely affected by waiting for the victim to consent, and the covered entity determines, in its professional judgment, that release will serve the victim’s best interests; (4) when a crime is suspected in a person’s death; (5) where the PHI constitutes evidence of a crime that occurred on the covered entity’s premises; (6) in an emergency if necessary to alert law enforcement to the commission of a crime, the location of the crime or the victims, and the identity, description, or location of the alleged perpetrator.⁷⁴⁶

5. PHI in Dispatch Calls

A covered entity, such as an EMS organization, may disclose PHI where disclosure is necessary to prevent or lessen a serious and imminent threat to the safety and health of an individual or the public and disclosure is made to persons reasonably able to prevent or lessen the threat, including the target of the threat if appropriate.⁷⁴⁷ For example, police and EMS calls that disclose a patient’s medical condition in order to dispatch appropriate medical or emergency assistance do not violate HIPAA’s Privacy Rule.⁷⁴⁸

The Ohio Public Records Act

Chapter Six: Special Topics

6. PHI Disclosure for Health Care Operations

A covered entity may disclose PHI for the purpose of performing its health care operations such as treatment of patients or collection of payments.⁷⁴⁹ But a covered entity must restrict the scope of any and all disclosures to the minimum necessary to accomplish the intended purpose.⁷⁵⁰

7. PHI in Directory Information

A covered entity may release directory information to members of the public who call and identify the patient by name, but the individual must be given the opportunity to restrict or opt out of such directory disclosures prior to the disclosure or use.⁷⁵¹ "Directory information" includes a medical patient's full name, location in the medical facility, and a description of the patient's general condition that does not communicate specific information.⁷⁵²

In an emergency situation, when patients are unable to object to disclosure of their directory information or it is not practicable to offer the patient the opportunity to do so, the covered entity may disclose directory information if it determines that disclosure is in the patient's best interest.⁷⁵³ Any such disclosure must be consistent with the patient's known preferences, and the patient must be given the opportunity to opt-out of the disclosure as soon as practicable.⁷⁵⁴

Additional Resources:

The HITECH Act of 2009, effective on February 17, 2010, materially affects privacy and security of PHI. A number of resources are available on the Internet about HITECH legislation. The Ohio Open Meetings Act

Overview of the Ohio Open Meetings Act

The Ohio Open Meetings Act requires public bodies in Ohio to take official action and conduct all deliberations upon official business only in open meetings where the public may attend and observe. Public bodies must provide advance notice to the public indicating when and where each meeting will take place, and in the case of special meetings, the specific topics that the public body will discuss. The public body must take full and accurate minutes of all meetings and make these meeting minutes available to the public, except in the case of permissible executive sessions.

Executive sessions are closed-door sessions convened by a public body, after a roll call vote, and attended by only the members of the public body and persons they invite. A public body may hold an executive session only for a few specific purposes, detailed below in Chapter III. Further, no vote or other decisions on the matter(s) discussed may take place during the executive session.

If any person believes that a public body has violated the Ohio Open Meetings Act, that person may file an injunctive action in the common pleas court to compel the public body to obey the Act. If an injunction is issued, the public body must correct its actions and pay court costs, a fine of \$500, and reasonable attorney fees that are subject to possible reduction by the court. If the court does not issue an injunction, and the court finds that the lawsuit was frivolous, it may order the person who filed the suit to pay the public body's court costs and reasonable attorney fees. Any action taken by a public body while that body is in violation of the Ohio Open Meetings Act is invalid. A member of a public body who violates an injunction imposed for a violation of the Ohio Open Meetings Act may be subject to removal from office.

Like the Ohio Public Records Act, the Ohio Open Meetings Act is intended to be read broadly in favor of openness. However, while they share an underlying intent and may both apply in a given set of circumstances, the terms and definitions of the two laws are not interchangeable: the Ohio Public Records Act applies to the records of public offices; the Ohio Open Meetings Act addresses meetings of public bodies.⁷⁵⁵

A Note about Case Law

When the Ohio Supreme Court issues a decision interpreting laws passed by the General Assembly, that decision becomes part of a body of case law that all lower Ohio courts must follow. Ohio Supreme Court decisions involving the Ohio Public Records Act are plentiful, because a person aggrieved by an alleged violation of that law may initiate a legal action at any level of the judicial system, and often will choose to file directly with the Ohio Supreme Court. By contrast, an aggrieved person in an action to enforce the Ohio Open Meetings Act must initiate that action in a county court of common pleas. While the losing party often appeals the common pleas court's decision, these cases rarely reach the Ohio Supreme Court. Consequently, the bulk of case law on this topic comes from courts of appeals, whose opinions are binding on lower courts within their district, and instructive to other courts in determining how to interpret the Ohio Open Meetings Act.

⁷⁵⁵ “[The Ohio Supreme Court has] never expressly held that once an entity qualifies as a public body for purposes of R.C. 121.22, it is also a public office for purposes of R.C. 149.011(A) and 149.43 so as to make all of its nonexempt records subject to disclosure. In fact, R.C. 121.22 suggests otherwise because it contains separate definitions for ‘public body,’ R.C. 121.22(B)(1), and ‘public office,’ R.C. 121.22(B)(4), which provides that ‘[p]ublic office’ has the same meaning as in section 149.011 of the Revised Code.’ Had the General Assembly intended that a ‘public body’ for purposes of R.C. 121.22 be considered a ‘public office’ for purposes of R.C. 149.011(A) and 149.43, it would have so provided.” *State ex rel. ACLU of Ohio v. Cuyahoga County Bd. of Comm’rs*, 128 Ohio St.3d 256, 264, 2011-Ohio-625, ¶38.

The Ohio Open Meetings Act

Chapter One: “Public Body” and “Meeting” Defined

I. Chapter One: “Public Body” and “Meeting” Defined

Only a “public body” is required to comply with the Ohio Open Meetings Act and conduct its business in open “meetings.” The Ohio Open Meetings Act defines a “meeting” as any prearranged gathering of a public body by a majority of its members to discuss public business.⁷⁵⁶

A. “Public Body”

1. Statutory Definition –R.C. 121.22 (B)(1)

The Ohio Open Meetings Act defines a “public body” as:

- a. Any board, commission, committee, council, or similar decision-making body of a state agency, institution, or authority, and any legislative authority or board, commission, committee, council, agency, authority, or similar decision-making body of any county, township, municipal corporation, school district, or other political subdivision or local public institution;⁷⁵⁷
- b. Any committee or subcommittee thereof;⁷⁵⁸ or
- c. A court of jurisdiction of a sanitary district organized wholly for the purpose of providing a water supply for domestic, municipal, and public use when meeting for the purpose of the appointment, removal, or reappointment of a member of the board of directors of such a district or for any other matter related to such a district other than litigation involving the district.⁷⁵⁹

2. Identifying Public Bodies

The term “public body” applies to many different decision-making bodies at the state and local level. Where it is unclear, Ohio courts have applied several factors in determining what constitutes a “public body” for purposes of the Ohio Open Meetings Act, including:

- a. The manner in which the entity was created;⁷⁶⁰
- b. The name or official title of the entity;⁷⁶¹
- c. The membership composition of the entity;⁷⁶²
- d. Whether the entity engages in decision-making;⁷⁶³ and

⁷⁵⁶ R.C. 121.22(B)(2).

⁷⁵⁷ R.C. 121.22(B)(1)(a).

⁷⁵⁸ R.C. 121.22(B)(1)(b); *State ex rel. Long v. Council for Cardington*, 92 Ohio St.3d 54, 58-59, 2001-Ohio-130 (providing that “R.C. 121.22(B)(1)(b) includes any committee or subcommittee of a legislative authority of a political subdivision, e.g., a village council, as a ‘public body’ for purposes of the Sunshine Law, so that the council’s personnel and finance committees constitute public bodies in that context.”).

⁷⁵⁹ R.C. 121.22(B)(1)(c). NOTE: R.C. 121.22(G) prohibits executive sessions for public bodies defined in R.C. 121.22(B)(1)(c).

⁷⁶⁰ *Beacon Journal Publ’g Co. v. Akron*, 3 Ohio St.2d 191 (1965) (boards and commissions created by law (e.g., ordinance or statute) are controlled by the provisions of that enactment in the conduct of their meetings; however, those created by executive order of individual officials are not.); *Wheeling Corp. v. Columbus & Ohio River R.R. Co.*, 147 Ohio App.3d 460, 472, 2001-Ohio-8751 (10th Dist.) (noting that the fact that the Selection Committee was established by the committee without formal action is immaterial and that the Open Meetings Act is not intended to allow a public body to informally establish committees that are not subject to the law). Compare *State ex rel. ACLU of Ohio v. Cuyahoga County Bd. of Comm’rs.*, 128 Ohio St.3d 256, 2011-Ohio-625 (groups formed by private entities to provide community input, to which no government duties or authority have been delegated, were found not to be “public bodies”).

⁷⁶¹ *Wheeling Corp. v. Columbus & Ohio River R.R. Co.*, 147 Ohio App.3d 460, 472, 2001-Ohio-8751 (10th Dist.) (determining that a Selection Committee was a “public body” and noting that it was relevant that the entity was called a “committee,” a term included in the definition of a “public body” in R.C. 121.22); *Stegall v. Joint Twp. Dist. Mem’l Hosp.* 20 Ohio App.3d 100, 103 (3d Dist. 1985) (considering it pertinent whether an entity is one of those listed in R.C. 121.22(B)(1)).

⁷⁶² *Wheeling Corp. v. Columbus & Ohio River R.R. Co.*, 147 Ohio App.3d 460, 472, 2001-Ohio-8751 (10th Dist.) (finding it relevant that a majority of the Selection Committee’s members were commissioners of the commission itself).

⁷⁶³ *Thomas v. White*, 85 Ohio App.3d 410, 412 (9th Dist. 1992) (determining that tasks such as making recommendations and advising involve decision-making); *Cincinnati Enquirer v. Cincinnati*, 145 Ohio App.3d 335, 339 (1st Dist. 2001) (determining whether an urban design review board, a group of architectural consultants for the city, had ultimate authority to decide matters was not controlling; as the board actually made decisions in the

The Ohio Open Meetings Act

Chapter One: “Public Body” and “Meeting” Defined

- e. Whom the entity advises or to whom it reports.⁷⁶⁴

3. Close-up - Applying the Definition of “Public Body”

While there is limited Ohio Supreme Court case law interpreting the Ohio Open Meetings Act, decisions from Ohio courts of appeals are instructive in determining how to apply the Act's provisions. Using the above factors, the following types of entities have been found to be public bodies:

- A selection committee established on a temporary basis by a state agency for the purpose of evaluating responses to a request for proposals and making a recommendation to a commission.⁷⁶⁵
- An urban design review board that provided advice and recommendations to a city manager and city council about land development.⁷⁶⁶
- A board of hospital governors of a joint township district hospital.⁷⁶⁷
- A citizens' advisory committee of a county children services board.⁷⁶⁸
- A board of directors of a county agricultural society.⁷⁶⁹

Courts have found that the Ohio Open Meetings Act does not apply to individual public officials (as opposed to public bodies) or to meetings held by individual officials.⁷⁷⁰ Moreover, if an individual public official creates a group solely pursuant to his or her executive authority or as a delegation of that authority, the Ohio Open Meetings Act probably does not apply to the group's gatherings.⁷⁷¹

However, at least one court has determined that a selection committee whose members were appointed by the chair of a public body, not by formal action of the body, is nevertheless itself a public body and subject to the Open Meetings Act.⁷⁷²

process of formulating its advice); *Wheeling Corp. v. Columbus & Ohio River R.R. Co.*, 147 Ohio App.3d 460, 472, 2001-Ohio-8751 (10th Dist.) (determining that, in its role of reviewing and evaluating proposals and making a recommendation to the Ohio Rail Development Commission, the Selection Committee made decisions).

⁷⁶⁴ *Cincinnati Enquirer v. Cincinnati*, 145 Ohio App.3d 335, 339 (1st Dist. 2001) (finding that an urban design review board advised not only the city manager, but also the city council, a public body).

⁷⁶⁵ *Wheeling Corp. v. Columbus & Ohio River R.R. Co.*, 147 Ohio App.3d 460, 472, 2001-Ohio-8751 (10th Dist.) (finding it relevant that the group was called a “committee,” a term included in the definition of a “public body” in R.C. 121.22, and that a majority of the Selection Committee's members were commissioners of the commission itself; in its role of reviewing and evaluating proposals and making a recommendation to the Ohio Rail Development Commission (a public body), the Selection Committee made decisions; the fact that the Selection Committee was established by the committee without formal action is immaterial).

⁷⁶⁶ *Cincinnati Enquirer v. Cincinnati*, 145 Ohio App.3d 335, 339 (1st Dist. 2001) (determining that whether an urban design review board, a group of architectural consultants for the city, had ultimate authority to decide matters was not controlling, as the board actually made decisions in the process of formulating its advice; the board advised not only the city manager, but also the city council, a public body).

⁷⁶⁷ *Stegall v. Joint Twp. Dist. Mem'l Hosp.*, 20 Ohio App.3d 100, 102-103 (3d Dist. 1985) (finding that the Board of Governors of a joint township hospital fell within the definition of “public body” because definition includes “boards”; further, the board made decisions essential to the construction and equipping of a general hospital and the board was of a “township” or of a “local public institution” because it existed by virtue of authority granted by the legislature for the creation of joint township hospital facilities).

⁷⁶⁸ *Thomas v. White*, 85 Ohio App.3d 410, 412 (9th Dist. 1992); The subject matter of the committee's operations is the public business, and each of its duties involves decisions as to what will be done. Moreover, the committee by law elects a chairman who serves as an ex officio voting member of the children services board, which involves decision-making.

⁷⁶⁹ 1992 Ohio Op. Att'y Gen. No. 078 (opining that the board of directors of a county agricultural society is a public body subject to the open meetings requirements of R.C. 121.22); see also *Greene County Agric. Soc'y v. Liming*, 89 Ohio St.3d 551, 2000-Ohio-486 (2000), at syllabus (deeming a county agricultural society to be a political subdivision pursuant to R.C. 2744.01(F)).

⁷⁷⁰ *Smith v. City of Cleveland*, 94 Ohio App.3d 780, 784-85 (8th Dist. 1994) (finding that a city safety director is not a public body, and may conduct disciplinary hearings without complying with the Open Meeting Act).

⁷⁷¹ *Beacon Journal Publ'g Co. v. Akron*, 3 Ohio St.2d 191 (1965) (finding that boards, commissions, committees, etc., created by executive order of the mayor and chief administrator without the advice and consent of city council were not subject to the Open Meetings Act); *eFunds v. Ohio Dept. of Job & Family Serv.*, Franklin C.P. No. 05CVH09-10276 (Mar. 6, 2006) (finding that an “evaluation committee” of government employees created under the authority of a state agency administrator is not a public body); 1994 Ohio Op. Att'y Gen. No. 096 (opining that when a committee of private citizens and various public officers or employees is established solely pursuant to the executive authority of a general health district for the purpose of providing advice pertaining to the administration of a grant, and establishment of the committee is not required or authorized by the grant or board action, such a committee is not a public body for purposes of R.C. 121.22(B)(1) and is not subject to the requirements of the open meetings law).

⁷⁷² *Wheeling Corp. v. Columbus & Ohio River R.R. Co.*, 147 Ohio App.3d 460, 472, 2001-Ohio-8741 (10th Dist.) (noting that the Chairman of the Rail Commission appointed members to the Selection Committee).

The Ohio Open Meetings Act

Chapter One: “Public Body” and “Meeting” Defined

4. When the Open Meetings Act Applies to Private Bodies

Some otherwise private bodies are considered “public bodies” for purposes of the Open Meetings Act when they are organized pursuant to state statute and are statutorily authorized to receive and expend government funds for a governmental purpose.⁷⁷³ For example, an Equal Opportunity Planning Association was found to be a public body within the meaning of the Act based on: (1) its designation by the Ohio Department of Development as a community action organization pursuant to statute;⁷⁷⁴ (2) its responsibility for spending substantial sums of public funds in the operation of programs for the state welfare; and (3) its obligation to comply with state statutory provisions in order to keep its status as a community action organization.⁷⁷⁵

B. Entities to Which the Open Meetings Act Does Not Apply

1. Public Bodies/ Officials that are NEVER Subject to the Open Meetings Act:⁷⁷⁶

- The Ohio General Assembly;⁷⁷⁷
- Grand juries;⁷⁷⁸
- An audit conference conducted by the State Auditor or independent certified public accountants with officials of the public office that is the subject of the audit;⁷⁷⁹
- The Organized Crime Investigations Commission;⁷⁸⁰
- Child fatality review boards;⁷⁸¹
- The board of directors of JobsOhio Corp., or any committee thereof, and the board of directors of any subsidiary of JobsOhio Corp., or any committee thereof;⁷⁸² and
- An audit conference conducted by the audit staff of the Department of Job and Family Services with officials of the public office that is the subject of that audit under Section 5101.37 of the Revised Code.⁷⁸³

2. Public Bodies that are SOMETIMES Subject to the Open Meetings Act:

a. Public Bodies Meeting for Particular Purposes

Some otherwise public bodies are not subject to the Ohio Open Meetings Act when they meet for particular purposes. Those are:

⁷⁷³ *State ex rel. Toledo Blade Co. v. Econ. Opportunity Planning Ass'n*, 61 Ohio Misc.2d 63 (C.P. Lucas 1990); see also *Stegall v. Joint Twp. Dist. Mem'l Hosp.*, 20 Ohio App.3d 100 (3d Dist. 1985).

⁷⁷⁴ R.C. 122.69.

⁷⁷⁵ *State ex rel. Toledo Blade Co. v. Econ. Opportunity Planning Ass'n*, 61 Ohio Misc.2d 631, 640-41 (C.P. Lucas 1990) (finding that the association is a public body subject to the Open Meetings Act, and noting that “[t]he language of the statute and its role in the organization of public affairs in Ohio make clear that this language is to be given a broad interpretation to ensure that the official business of the state is conducted openly” and that “[c]onsistent with that critical objective, a governmental decision-making body cannot assign its decisions to a nominally private body in order to shield those decisions from public scrutiny.”).

⁷⁷⁶ R.C. 121.22(D).

⁷⁷⁷ While the General Assembly as a whole is not governed by the Open Meetings Act, legislative committees are required to follow the guidelines set forth in the General Assembly’s own open meetings law (R.C. 101.15), which requires committee meetings to be open to the public and that minutes of those meetings be made available for public inspection. Like the Open Meetings Act, the legislature’s open meetings law includes some exceptions. For example, the law does not apply to meetings of the Joint Legislative Ethics Committee other than those meetings specified in the law (R.C. 101.15(F)(1)) or to meetings of a political party caucus (R.C. 101.15(F)(2)).

⁷⁷⁸ R.C. 121.22(D)(1).

⁷⁷⁹ R.C. 121.22(D)(2).

⁷⁸⁰ R.C. 121.22(D)(4).

⁷⁸¹ R.C. 121.22(D)(5).

⁷⁸² R.C. 121.22(D)(11).

⁷⁸³ R.C. 121.22(D)(12).

The Ohio Open Meetings Act

Chapter One: “Public Body” and “Meeting” Defined

- The Adult Parole Authority, when its hearings are conducted at a correctional institution for the sole purpose of interviewing inmates to determine pardon or parole;⁷⁸⁴
- The State Medical Board,⁷⁸⁵ the State Board of Nursing,⁷⁸⁶ the State Board of Pharmacy,⁷⁸⁷ and the State Chiropractic Board,⁷⁸⁸ when determining whether to suspend a certificate without a prior hearing;⁷⁸⁹ and
- Emergency Response Commission’s executive committee, when meeting to determine whether to issue an enforcement order or to decide whether to litigate.⁷⁹⁰

b. Public Bodies Handling Particular Business

Other public bodies otherwise subject to the Ohio Open Meetings Act may close their meetings by unanimous vote of the members present in order to handle particular business.⁷⁹¹ Those public bodies are:

- The Controlling Board;
- Development Financing Advisory Council;
- Industrial Technology and Enterprise Advisory Council;
- Tax Credit Authority;
- Community improvement corporations;⁷⁹² and
- Minority Development Financing Advisory Board.⁷⁹³

These public bodies may vote to close their meetings in order to protect the interest of applicants or the possible investment of public funds⁷⁹⁴ when considering “whether to grant assistance for purposes of community or economic development,” in order to evaluate:

- Marketing plans;
- Specific business strategies;
- Production techniques and trade secrets;
- Financial projections; and
- Personal financial statements, including tax records or other similar information not open to public inspection.⁷⁹⁵

C. “Meeting”

1. Definition

The Ohio Open Meetings Act applies to members of a public body when they are taking official action, conducting deliberations, or discussing the public’s business, which they must do in the

⁷⁸⁴ R.C. 121.22(D)(3).

⁷⁹¹ R.C. 121.22(E).

⁷⁹² R.C. 1724.11(B)(1) (community improvement corporation board or any committee or subcommittee when meeting to consider information that is not a public record may, by unanimous vote of all members present, close the meeting and discuss only that information).

⁷⁹³ R.C. 121.22(E).

⁷⁹⁴ R.C. 121.22(E).

⁷⁹⁵ R.C. 121.22(E)(1)-(5).

The Ohio Open Meetings Act

Chapter One: “Public Body” and “Meeting” Defined

context of an open meeting.⁷⁹⁶ The Act defines a “meeting” as: (1) a prearranged gathering of (2) a majority of the members of a public body (3) for the purpose of discussing public business.⁷⁹⁷

a. Prearranged

The Open Meetings Act addresses prearranged discussions,⁷⁹⁸ but does not prohibit impromptu encounters between members of public bodies, such as hallway discussions. One court has found that an unsolicited and unexpected e-mail sent from one board member to other board members is clearly not a prearranged meeting,⁷⁹⁹ nor is a spontaneous one-on-one telephone conversation between two board members.⁸⁰⁰

b. Majority of Members

For there to be a “meeting” as defined under the Open Meetings Act, “a majority of a public body’s members must come together.”⁸⁰¹ The term “majority” applies not only to the whole body, but also to a committee or subcommittee of that body.⁸⁰² For instance, if a council is comprised of seven members, four would constitute a majority for purposes of this requirement. However, if the council appoints a three-member finance committee, two of those members would constitute a majority of the finance committee. In other words, the finance committee is a “public body” in and of itself, and must also comply with the Ohio Open Meetings Act in all respects.⁸⁰³

1) Attending in Person

A member of a public body must be present in person at a meeting in order to be considered present, vote, or be counted as part of a quorum,⁸⁰⁴ unless a specific law permits otherwise.⁸⁰⁵ In the absence of statutory authority, public bodies may not meet via electronic or telephonic conferencing.⁸⁰⁶

2) “Round-robin” or “Serial” Meetings

Some courts have concluded that one-on-one conversations between individual members of a public body, either in person or by telephone, do not violate the Ohio Open Meetings Act.⁸⁰⁷ However, conducting back-to-back discussions of the same public business with less than a majority of members participating in each discussion is viewed

⁷⁹⁶ R.C. 121.22(A), (C).

⁷⁹⁷ R.C. 121.22(B)(2).

⁷⁹⁸ *State ex rel. Cincinnati Post v. City of Cincinnati*, 76 Ohio St.3d 540, 544, 1996-Ohio-372 (holding that the back-to-back, prearranged discussions of city council members constitutes a “majority,” but clarifying that the statute does not prohibit impromptu meetings between council members or prearranged member-to-member discussion, but concerns itself only with situations where a majority meets).

⁷⁹⁹ *Haverkos v. Nw. Local Sch. Dist. Bd. of Educ.*, 1st Dist. NOS. C-040578, C-040589, 2005-Ohio-3489, at ¶7 (July 8, 2005).

⁸⁰⁰ *Haverkos v. Nw. Local Sch. Dist. Bd. of Educ.*, 1st Dist. NOS. C-040578, C-040589, 2005-Ohio-3489, at ¶7 (July 8, 2005).

⁸⁰¹ *Berner v. Woods*, No. 07CA009132, 2007-Ohio-6207, ¶17 (9th Dist.); *Tyler v. Vill. of Batavia*, No. CA2010-01-002, 2010-Ohio-4078, ¶18 (12th Dist.) (No “meeting” occurred when only two of five Commission members attended a previously scheduled session.)

⁸⁰² *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 2001-Ohio-130.

⁸⁰³ *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 2001-Ohio-130.

⁸⁰⁴ 121.22(C)

⁸⁰⁵ For example, the General Assembly has specifically authorized the Ohio Board of Regents to meet via videoconferencing. R.C. 3333.02.

⁸⁰⁶ See *Haverkos v. Nw. Local Sch. Dist. Bd. of Educ.*, 1st Dist. NOS. C-040578, C-040589, 2005-Ohio-3489, ¶9 (July 8, 2005) (noting that during a 2002 revision of the open meetings law, the legislature did not amend the statute to include “electronic communication” in the definition of a “meeting.” According to the court, this omission indicates the legislature’s intent not to include email exchanges as potential “meetings”).

⁸⁰⁷ *Haverkos v. Nw. Local Sch. Dist. Bd. of Educ.*, 1st Dist. NOS. C-040578, C-040589, 2005-Ohio-3489, at ¶9 (July 8, 2005) (finding that a spontaneous telephone call from one board member to another to discuss election politics, not school board business, did not violate the Open Meetings Act); *Maser v. City of Canton*, 62 Ohio App.2d 174, 178 (5th Dist. 1978) (agreeing that a legislature did not intend to prohibit one committee member from calling another to discuss public business). However, see *State ex rel. Consumer News Servs. v. Worthington City Bd. of Educ.*, 97 Ohio St.3d 58, 2002-Ohio-5311, ¶43, citing to *Floyd v. Rock Hill Local School Bd of Edn.*, 4th Dist. No. 1862 (Feb. 10, 1988) (“The sunshine law does not permit deliberations concerning the employment of a public employee to be conducted during one-on-one conversations. Such deliberations, if not held in public, must be held during an executive session at a regular or special meeting”).

The Ohio Open Meetings Act

Chapter One: “Public Body” and “Meeting” Defined

as a single meeting attended by a majority of the members. Such “round-robin” or “serial” meetings violate the Ohio Open Meetings Act.⁸⁰⁸

c. *Discussing Public Business*

With narrow exceptions, the Ohio Open Meetings Act requires the members of a public body to discuss and deliberate on official business only in open meetings.⁸⁰⁹ In this context, “discussion” is the exchange of words, comments, or ideas by the members of a public body;⁸¹⁰ “deliberation” means the act of weighing and examining reasons for and against a choice.⁸¹¹ One court has described “deliberation” as a thorough discussion of all factors involved, a careful weighing of positive and negative factors, and a cautious consideration of the ramifications of the proposal, while gradually arriving at decision.⁸¹² Another court described the term as involving “a decisional analysis, i.e., an exchange of views on the facts in an attempt to reach a decision.”⁸¹³

In evaluating whether particular gatherings of public officials constituted “meetings,” several courts of appeals have opined that the Open Meetings Act “is intended to apply to situations where there has been actual formal action taken; to wit, formal *deliberation* concerning the public business.”⁸¹⁴ Under this analysis, those courts have determined that gatherings strictly of an investigative and information-seeking nature that do not involve actual discussion or deliberation of public business are not “meetings” for purposes of the Ohio Open Meetings Act.⁸¹⁵ More importantly, the Ohio Supreme Court has not ruled as to whether “investigative and informational” gatherings are or are not “meetings.” Consequently, a public body should seek guidance from its legal counsel before undertaking this kind of private gathering as other than a regular or special meeting.

Gatherings Deemed Not to be Discussions or Deliberations

Not all of Ohio’s courts of appeals draw a distinction between “discussions” or “deliberations” that must take place in public meetings, and other exchanges between a majority of members at a prearranged gathering that do not constitute “meetings” subject to the Open Meetings Act. Those courts that do recognize such non-meeting gatherings have found that the Open Meetings Act does not apply to the following situations:

- Question-and-answer sessions between board members and others who were not public officials, unless a majority of the board members also entertain a discussion of public business with one another;⁸¹⁶
- Conversations between employees of a public body;⁸¹⁷

⁸⁰⁸ See generally, *State ex rel. Cincinnati Post v. City of Cincinnati*, 76 Ohio St.3d 540, 542, 1996-Ohio-372 (determining that back-to-back meetings of members of a public body, in which less than a majority attend each meeting but the same item of public business is discussed, cannot be used to circumvent the clear intent of the law).

⁸⁰⁹ R.C. 121.22(A); R.C. 121.22(B)(2).

⁸¹⁰ *Devere v. Miami Univ. Bd. of Trs.*, 12th Dist. No. CA85-05-065, (June 10, 1986).

⁸¹¹ *Springfield Local Sch. Dist. Bd. of Educ. v. Ohio Ass’n of Pub. Sch. Employees*, 106 Ohio App.3d 855, 864 (9th Dist. 1998).

⁸¹² *Theile v. Harris*, 1st Dist. No. C-860103, (June 11, 1986).

⁸¹³ *Piekutowski v. South Cent. Ohio Educ. Serv. Ctr. Governing Bd.*, 161 Ohio App.3d 372, 379, 2005-Ohio-2868 (4th Dist.).

⁸¹⁴ *Holeski v. Lawrence*, 85 Ohio App.3d 824 (11th Dist. 1993).

⁸¹⁵ *Holeski v. Lawrence*, 85 Ohio App.3d 824, 829 (11th Dist. 1993) (finding that where the majority of members of a public body meet at a prearranged gathering in a “ministerial, fact-gathering capacity,” the third characteristic of a meeting is not satisfied – i.e., there are no discussions or deliberations occurring in which case, no open meeting is required); *Theile v. Harris*, 1st Dist. No. C-860103 (June 11, 1986) (finding that a prearranged discussion between prosecutor and majority of board was not violation where conducted for investigative and information-seeking purposes); *Piekutowski v. S. Cent. Ohio Educ. Serv. Ctr. Governing Bd.*, 161 Ohio App.3d 372, 379, 2005-Ohio-2868, ¶¶14-18 (4th Dist.) (finding that it is permissible for a board to gather information on proposed school district in private, but it cannot deliberate privately in the absence of specifically authorized purposes).

⁸¹⁶ *Cincinnati Enquirer v. Cincinnati Bd. of Educ.*, 192 Ohio App.3d 566 (1st Dist. 2011) (in the absence of deliberations or discussions by board members during a nonpublic information-gathering and investigative session with legal counsel, the session was not a “meeting” as defined by the Open Meetings Act, and thus was not required to be held in public); *Holeski v. Lawrence*, 85 Ohio App.3d 824, 830 (11th Dist. 1993) (noting that “[t]he Sunshine Law is instead intended to prohibit the majority of a board from meeting and discussing public business with one another.”).

The Ohio Open Meetings Act

Chapter One: “Public Body” and “Meeting” Defined

- A presentation to a public body by its legal counsel when the public body receives legal advice;⁸¹⁸ or
- A press conference.⁸¹⁹

2. *Close-up: Applying the Definition of “Meeting”*

If a gathering meets all three elements of this definition, a court will consider it a “meeting” for the purposes of the Ohio Open Meetings Act, regardless of whether the public body initiated the gathering itself, or whether it was initiated by another entity. Further, if majorities of multiple public bodies attend one large meeting, a court may construe that gathering of each public body’s majority of members to be separate “meetings” of each public body.⁸²⁰

a. *Work Sessions*

A “meeting” by any other name is still a meeting. “Work sessions” or “workshops” are “meetings” when a public body discusses public business among a majority of the members of a public body at a prearranged time.⁸²¹ Just as with any other meeting, the public body must open these work sessions to the public, properly notify the public, and maintain meeting minutes.⁸²²

b. *Quasi-judicial Proceedings*

Public bodies whose responsibilities include adjudicative duties, such as boards of tax appeals and state professional licensing boards, are considered “quasi-judicial.”⁸²³ The Ohio Supreme Court has determined that public bodies conducting quasi-judicial hearings, “like all judicial bodies, [require] privacy to deliberate, i.e., to evaluate and resolve the disputes.”⁸²⁴ Quasi-judicial proceedings and the deliberations of public bodies when acting in their quasi-judicial capacities are not “meetings,” and are not subject to the Open Meetings Act.⁸²⁵ Accordingly, when a public body is acting in its quasi-judicial capacity, the public body does not have to vote publicly to adjourn for deliberations or to take action following those deliberations.⁸²⁶

c. *County Political Party Central Committees*

The convening of a county political party central committee for the purpose of conducting purely internal party affairs, unrelated to the committee’s duties of making appointments to vacated public offices, is not a “meeting” as defined by R.C. 121.22(B)(2). Thus, R.C. 121.22 does not apply to such a gathering.⁸²⁷

⁸¹⁷ *Kandell v. City Council of Kent*, 11th Dist. No. 90-P-2255 (Aug. 2, 1991); *State ex rel. Bd. of Educ. for Fairview Park Sch. Dist. v. Bd. of Educ. for Rocky River Sch. Dist.*, 40 Ohio St.3d 136, 140 (1988) (determining that an employee’s discussions with a superintendent did not amount to secret deliberations within the meaning of R.C. 121.22(H)).

⁸¹⁸ *Cincinnati Enquirer v. Cincinnati Bd. of Educ.*, 192 Ohio App.3d 566 (1st Dist. 2011); *Theile v. Harris*, 1st Dist. No. C-860103, (June 11, 1986).

The Ohio Open Meetings Act

Chapter One: “Public Body” and “Meeting” Defined

d. Collective Bargaining

Collective bargaining meetings between public employers and employee organizations are private, and are not subject to the Ohio Open Meetings Act.⁸²⁸

⁸²⁸ R.C. 4117.21; see also *Springfield Local Sch. Dist. Bd. of Educ. v. Ohio Ass’n of Pub. Sch. Employees*, 106 Ohio App.3d 855, 869 (9th Dist. 1995) (R.C. 4117.21 manifests a legislative interest in protecting the privacy of the collective bargaining process); *Back v. Madison Local Sch. Dist. Bd. of Educ.* 12th Dist., No. CA 2007-03-066, 2007-Ohio-4218, ¶¶6-10 (School board’s consideration of a proposed collective bargaining agreement with the school district’s teachers was properly held in a closed session because the meeting was not an executive session but was a “collective bargaining meeting,” which, under R.C. 4117.21, was exempt from the open meeting requirements of R.C. 121.22).

The Ohio Open Meetings Act

Chapter Two: Duties of a Public Body

II. Chapter Two: Duties of a Public Body

The Ohio Open Meetings Act requires public bodies to provide: (A) openness; (B) notice; and (C) minutes.

A. Openness

The Open Meetings Act declares that all meetings of a public body be public meetings open to the public at all times.⁸²⁹ The General Assembly mandates that the Act be liberally construed to require that public officials take official action and “conduct all deliberations upon official business only in open meetings unless the subject matter is specifically excepted by law.”⁸³⁰

1. Where Meetings May be Held

A public body must conduct its meetings in a venue that is open to the public.⁸³¹ Although the Ohio Open Meetings Act does not specifically address where a public body must hold meetings, some authority suggests that a public body must hold meetings in a public meeting place⁸³² that is within the geographical jurisdiction of the public body.⁸³³ Clearly, a meeting is not “open” where the public body has locked the doors to the meeting facility.⁸³⁴

Where space in the facility is too limited to accommodate all interested members of the public, closed circuit television may be an acceptable alternative.⁸³⁵ Federal law requires that a meeting place be accessible to individuals with disabilities; however, violation of this requirement has no ramifications under the Ohio Open Meetings Act.⁸³⁶

2. Method of Voting

Unless a particular statute requires a specified method of voting, the public cannot insist on a particular form of voting. The body may use its own discretion in determining the method it will use, such as voice vote, show of hands, or roll call.⁸³⁷ The Open Meetings Act only defines a method of voting and requires a vote by roll call when a public body is adjourning into executive session.⁸³⁸ The Act does not specifically address the use of secret ballots; however, the Ohio Attorney General has opined that a public body may not vote in an open meeting by secret ballot.⁸³⁹ The Open Meetings Act declares that its provisions shall be liberally construed to require public officials to take official action and conduct all deliberations only in open meetings unless the subject matter is officially excepted by law. Voting by secret ballot contradicts the openness requirement by hiding the decision-making process from public view.

3. Right to Hear, but Not to be Heard or to Disrupt

Implicit in the concept of openness is the ability of the public to attend and observe the business the public body discusses at a meeting. A court found that members of a public body who whispered

⁸³⁷ But see *State ex rel. Roberts v. Snyder*, 149 Ohio St. 333, 335 (1948) (finding that council was without authority to adopt a conflicting rule where enabling law limited council president’s vote to solely in the event of a tie).

⁸³⁸ R.C. 121.22(G).

⁸³⁹ 2011 Ohio Op. Att’y Gen. No. 038 (opining that secret ballot voting by a public body is antagonistic to the ability of the citizenry to observe the workings of their government and to hold their government representatives accountable)..

The Ohio Open Meetings Act

Chapter Two: Duties of a Public Body

audibly and passed documents among themselves constructively closed their meeting by intentionally preventing the audience from hearing or knowing the business the body discussed.⁸⁴⁰ Openness requires that a person be permitted to attend and observe a public meeting. However, the Open Meetings Act does not bestow upon attendees the right to be heard at that meeting.⁸⁴¹ Further, a disruptive person waives his or her right to attend and the body may remove that person from the meeting.⁸⁴²

4. Audio and Video Recording

A public body cannot prohibit the public from audio or video recording of a public meeting,⁸⁴³ but a public body may establish reasonable rules regulating the use of recording equipment, such as requiring equipment to be silent, unobtrusive, self-contained, and self-powered to limit interference with the ability of others to hear, see, and participate in the meeting.⁸⁴⁴

5. Executive Sessions

Executive sessions (discussed below in Chapter III), are an exception to the openness requirement; however, public bodies may not vote or take official action in an executive session.⁸⁴⁵

B. Notice

Every public body must establish, by rule, a reasonable method for notifying the public in advance of its meetings.⁸⁴⁶ The requirements for proper notice vary depending upon the type of meeting a public body is conducting.

1. Types of Meetings and Notice Requirements

a. Regular Meetings

“Regular meetings” are those held at prescheduled intervals,⁸⁴⁷ such as monthly or annual meetings. A public body must establish, by rule, a reasonable method that allows the public to determine the time and place of regular meetings.⁸⁴⁸

⁸⁴⁰ *Manogg v. Stickle*, 5th Dist. No. 98CA00102 (Apr. 8, 1998).

⁸⁴¹ *Wyse v. Rupp*, 6th Dist. No. F-94-19, (Sept. 15, 1995); *Cnty. Concerned Citizens v. Union Twp. Bd. of Zoning Appeals*, 12th App. No. CA91-01-009, (Dec. 2, 1991), *aff'd*, 66 Ohio St.3d 452 (1993); *Black v. Mecca Twp. Bd. of Trs.*, 91 Ohio App.3d 351, 356 (11th Dist. 1993) (finding that R.C. 121.22 does not require that a public body provide the public with an opportunity to comment at its meetings, but if public participation is permitted, it is subject to the protections of the First and Fourteenth Amendments); *Forman v. Blaser*, 3rd Dist. No. 13-87-12 (Aug. 8, 1988) (determining that R.C. 121.22 guarantees the right to observe a meeting, but not necessarily the right to be heard); 1992 Ohio Op. Att’y Gen. No. 032; *see also* 2007 Ohio Op. Att’y Gen. No. 019.

⁸⁴² *Forman v. Blaser*, 3rd Dist. No. 13-87-12 (Aug. 8, 1988) (stating that “[w]hen an audience becomes so uncontrollable that the public body cannot deliberate, it would seem that the audience waives its right to, or is estopped from claiming a right under the Sunshine Law to continue to observe the proceedings.”); *see also Jones v. Heyman*, 888 F.2d 1328, 1333 (11th Cir. 1989) (finding no violation of 1st and 14th Amendments where disruptive person was removed from a public meeting).

⁸⁴³ *McVey v. Carthage Twp. Trs.*, 4th Dist., No. 04CA44, 2005-Ohio-2869, ¶¶14-15 (determining that trustees violated R.C. 121.22 by banning videotaping).

⁸⁴⁴ *Kline v. Davis*, 4th Dist. Nos. 00CA32, 00CA39, 01CA13, 2001-Ohio-2625 (blanket prohibition on recording a public meeting not justified); 1988 Ohio Op. Att’y Gen. No. 087 (opining that trustees have authority to adopt reasonable rules for use of recording equipment at their meetings). *See also Mahajan v. State Med. Bd. of Ohio*, No. 11AP-421, 11AP-422, 2011-Ohio-6728 (10th Dist.) (where rule allowed board to designate reasonable location for placement of recording equipment, requiring appellant’s court reporter to move to the back of the room was reasonable, given the need to transact board business.)

⁸⁴⁵ R.C. 121.22(A); *Mansfield City Council v. Richland City Council AFL-CIO*, 5th Dist. No. 03CA55 (Dec. 24, 2003) (finding that reaching a consensus to take no action on a pending matter, as reflected by members’ comments, is impermissible during an executive session).

⁸⁴⁶ R.C. 121.22(F).

⁸⁴⁷ *State ex rel. Fairfield Leader v. Ricketts*, 56 Ohio St.3d 97 (1990); 1988 Ohio Op. Att’y Gen. No. 029.

⁸⁴⁸ R.C. 121.22(F). *See also Wyse v. Rupp*, 6th Dist. No. F-94-19 (Sept. 15, 1995) (finding that a public body must specifically identify the time at which a public meeting will commence).

The Ohio Open Meetings Act

Chapter Two: Duties of a Public Body

b. Special Meetings

A “special meeting” is any meeting other than a regular meeting.⁸⁴⁹ A public body must establish, by rule, a reasonable method that allows the public to determine the time, place, and purpose of special meetings.⁸⁵⁰

- Public bodies must provide at least 24 hours advance notification of special meetings to all media outlets that have requested such notification.⁸⁵¹
- When a public body holds a special meeting to discuss particular issues, the statement of the meeting’s purpose must specifically indicate those issues, and the public body may only discuss those issues at that meeting.⁸⁵² When a special meeting is simply a rescheduled “regular” meeting occurring at a different time, the statement of the meeting’s purpose may be for “general purposes.”⁸⁵³ Discussing matters not disclosed in the purpose statement of a special meeting, either in open session or executive session of the special meeting is a violation of the Open Meetings Act.⁸⁵⁴

c. Emergency Meetings

An emergency meeting is a special meeting that a public body convenes when a situation requires immediate official action.⁸⁵⁵ When a public body schedules an emergency meeting, the public body must immediately notify all media outlets that have specifically requested such notice of the time, place, and purpose of the emergency meeting.⁸⁵⁶ The purpose statement must comport with the specificity requirements discussed above.

2. Rules Requirement

The Ohio Open Meetings Act specifically requires public bodies to adopt rules establishing methods for notification.⁸⁵⁷ Those rules must include a provision for any person, upon request and payment of a reasonable fee, to obtain reasonable advance notification of all meetings at which any specific type of public business is to be discussed. The statute suggests that provisions for advance notification may include mailing the agenda of meetings to all subscribers on a mailing list or mailing notices in self-addressed, stamped envelopes provided by the person requesting notice.⁸⁵⁸

⁸⁴⁹ *State ex rel. Fairfield Leader v. Ricketts*, 56 Ohio St.3d 97, 100 (1990) (stating that “[t]he council either meets in a regular session or it does not, and any session that is not regular is special.”); 1988 Ohio Op. Att’y Gen. No. 029 (opining that “[w]hile the term ‘special meeting’ is not defined in R.C. 121.22, its use in context indicates that reference to all meetings other than ‘regular’ meetings was intended.”).

⁸⁵⁰ R.C. 121.22(F). See also *Doran v. Northmont Bd. of Educ.*, 147 Ohio App.3d 268, 272-73, 2002-Ohio-386 (2nd Dist.) (“*Doran I*”) (finding that a board violated R.C. 121.22(F) by failing to establish, by rule, method to provide reasonable notice to the public of time, place, and purpose of special meetings); *Stiller v. Columbiana Exempt Vill. Sch. Dist. Bd. of Educ.*, 74 Ohio St.3d 113, 119-120 (1995) (policy adopted pursuant to R.C. 121.22(F) that required notice of “specific or general purposes” of special meeting was not violated when general notice was given that nonrenewal of contract would be discussed, even though ancillary matters were also discussed).

⁸⁵¹ R.C. 121.22(F); 1988 Ohio Op. Att’y Gen. No. 029.

⁸⁵² *Jones v. Brookfield Twp. Trs.*, 11th Dist. No. 92-T-4692 (June 30, 1995).

⁸⁵³ *Jones v. Brookfield Twp. Trs.*, 11th Dist. No. 92-T-4692 (June 30, 1995); see also *Satterfield v. Adams County Ohio Valley Sch. Dist.*, 4th Dist. No. 95CA611 (Nov. 6, 1996) (finding that although specific agenda items may be listed, use of agenda term “personnel” is sufficient for notice of special meeting).

⁸⁵⁴ *Hoops v. Jerusalem Twp. Bd. of Trs.*, 6th Dist. No. L-97-1240 (Apr. 10, 1998) (determining that business transacted at special meetings exceeded scope of published purpose and thus violated R.C. 121.22(F)).

⁸⁵⁵ Compare *Neuvirth v. Bds. of Trs. of Bainbridge Twp.*, 11th Dist. No. 919 (June 29, 1981) (determining that the subject matter of “emergency meeting” was not an emergency just because the Trustees postponed discussion until the last minute).

⁸⁵⁶ R.C. 121.22(F).

⁸⁵⁷ R.C. 121.22(F).

⁸⁵⁸ These requirements notwithstanding, many courts have found that actions taken by a public body are not invalid simply because the body failed to adopt notice rules. These courts reason that the purpose of the law’s invalidation section (R.C. 121.22(H)) is to invalidate actions taken where insufficient notice of the meeting was provided. See *Doran v. Northmont Bd. of Educ.*, 147 Ohio App.3d 268, 271, 2002-Ohio-386 (2nd Dist.) (“*Doran I*”); *Hoops v. Jerusalem Twp. Bd. of Trs.*, 6th Dist. No. L-97-1240 (Apr. 10, 1998); *Barber v. Twinsburg Twp.*, 73 Ohio App.3d 587 (9th Dist. 1992).

The Ohio Open Meetings Act

Chapter Two: Duties of a Public Body

3. Notice by Publication

Many public bodies routinely notify their local media of all regular, special, and emergency meetings, whether by rule or simply by practice. If the media misprints the meeting information, a court will not likely hold the public body responsible for violating the notice requirement so long as it transmitted accurate information to the media as required by its rule.⁸⁵⁹ Notice must be consistent and “actually reach the public” to satisfy the statute.⁸⁶⁰

C. Minutes

1. Content of Minutes

A public body must keep full and accurate minutes of its meetings.⁸⁶¹ Those minutes are not required to be a verbatim transcript of the proceedings, but must include enough facts and information to permit the public to understand and appreciate the rationale behind the public body’s decisions.⁸⁶² Because executive sessions are not open to the public, the meeting minutes need to reflect only the general subject matter of the executive session via the motion to convene the session for a permissible purpose or purposes.⁸⁶³ Including details of members’ pre-vote discussion following an executive session may prove helpful, though. At least one court has found that the lack of pre-vote comments reflected by the minutes supported the trial court’s conclusion that the body’s discussion of the pros and cons of the matter at issue must have improperly occurred during executive session.⁸⁶⁴

2. Making Minutes Available

A public body must promptly prepare, file, and make available its minutes for public inspection.⁸⁶⁵ The final version of the official minutes approved by members of the public body is a public record. Note that a draft version of the meeting minutes that the public body circulates for approval is also a public record under the Ohio Public Records Act.⁸⁶⁶

3. Medium on Which Minutes are Kept

Because neither the Ohio Open Meetings Act nor the Ohio Public Records Act addresses the medium on which a public body must keep the official meeting minutes, a public body may make this determination itself. Some public bodies document that choice by adopting a formal rule or by passing a resolution or motion at a meeting.⁸⁶⁷ Many public bodies make a contemporaneous audio recording of the meeting to use as back-up in preparing written official minutes. The Ohio Attorney

⁸⁵⁹ *Black v. Mecca Twp. Bd. of Trs.*, 91 Ohio App.3d 351 (11th Dist. 1993).

⁸⁶⁰ *Doran v. Northmont Bd. of Educ.*, 147 Ohio App.3d 268, 272, 2002-Ohio-386 (2nd Dist.) (“*Doran I*”) (concluding that where publication of the notice is at the newspaper’s discretion, such notice is not “reasonable notice” to the public).

⁸⁶¹ *White v. Clinton County Bd. of Comm’rs*, 76 Ohio St.3d 416, 420 (1996) (stating that “[k]eeping full minutes allows members of the public who are unable to attend the meetings in person to obtain complete and accurate information about the decision-making process of their government [...] Accurate minutes can reflect the difficult decision-making process involved, and hopefully bring the public to a better understanding of why unpopular decisions are sometimes necessary”).

⁸⁶² See generally *State ex rel. Citizens for Open, Responsive & Accountable Gov’t v. Register*, 116 Ohio St.3d 88, 2007-Ohio-5542 (2007) (construing R.C. 121.22, 149.43, and 507.04 together, a township fiscal officer has a duty to maintain full and accurate minutes and records of the proceedings as well as the accounts and transactions of the board of township trustees); *White v. Clinton County Bd. of Comm’rs*, 76 Ohio St.3d 416, 423 (1996) (determining that the minutes of board of county commissioners meetings are required to include more than a record of roll call votes); *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 2001-Ohio-130.

⁸⁶³ R.C. 121.22(C).

⁸⁶⁴ *Piekutowski v. South Cent. Ohio Educ. Serv. Ctr. Governing Bd.*, 161 Ohio App.3d 372, 380, 2005-Ohio-2868 (4th Dist.).

⁸⁶⁵ R.C. 121.22(C); see also *White v. Clinton County Bd. of Comm’rs*, 76 Ohio St.3d 416 (1996); *State ex rel. Fairfield Leader v. Ricketts*, 56 Ohio St.3d 97 (1990) (finding that because the members of a public body had met as a majority group, R.C. 121.22 applied, and minutes of the meeting were therefore necessary); *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 57, 2001-Ohio-130 (finding that audiotapes that are later erased do not meet requirement to maintain).

⁸⁶⁶ *State ex rel. Doe v. Register*, 12th Dist. No. CA2008-08-081, 2009-Ohio-2448, ¶28.

⁸⁶⁷ In *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 57, 2001-Ohio-130, the Ohio Supreme Court found council’s contention that audiotapes complied with Open Meetings Act requirements to be meritless because they were not treated as official minutes, e.g. council approved written minutes, did not tape all meetings, and voted to erase tapes after written minutes had been approved.

The Ohio Open Meetings Act

Chapter Two: Duties of a Public Body

General has opined that such a recording constitutes a public record that the public body must make available for inspection upon request.⁸⁶⁸

D. Modified Duties of Public Bodies Under Special Circumstances

1. Declared Emergency

During a declared emergency, R.C. 5502.24(B) provides a limited exception to fulfilling the requirements of the open meetings law. If, due to a declared emergency, it becomes “imprudent, inexpedient, or impossible to conduct the affairs of local government” at the regular or usual place, the governing body may meet at an alternate site previously designated (by ordinance, resolution, or other manner) as the emergency location of government.⁸⁶⁹ Further, the public body may exercise its powers and functions in the light of the exigencies of the emergency without regard to or compliance with time-consuming procedures and formalities of the Ohio Open Meetings Act. Even in an emergency, however, there is no exception to the “in person” meeting requirement of R.C. 121.22(C) and does not permit the public body to meet by teleconference.⁸⁷⁰

2. Municipal Charters

The Ohio Open Meetings Act applies to public bodies at both the state and local government level. However, because the Ohio Constitution permits “home rule” (self-government), municipalities may adopt a charter under which their local governments operate.⁸⁷¹ A charter municipality has the right to determine by charter the manner in which their meetings will be held.⁸⁷² Charter provisions take precedence over the Ohio Open Meetings Act where the two conflict.⁸⁷³ If a municipal charter includes specific guidelines regarding the conduct of meetings, the municipality must abide by those guidelines.⁸⁷⁴ In addition, if a charter expressly requires that all meetings of the public bodies must be open, the municipality may not adopt ordinances that permit executive session.⁸⁷⁵

⁸⁶⁸ 2008 Ohio Op. Att’y Gen. No. 019 (opining that an audio tape recording of a meeting that is created for the purpose of taking notes to create an accurate record of the meeting is a public record for purposes of R.C. 149.43. The audio tape recording must be made available for public inspection and copying, and retained in accordance with the terms of the records retention schedule for such a record).

⁸⁶⁹ R.C. 5502.24(B).

⁸⁷² *State ex rel. Plain Dealer Publ’g Co. v. Barnes*, 38 Ohio St.3d 165, 168 (1988) (finding it unnecessary to decide the applicability of the Ohio Open Meetings Act because the charter language expressly provided for open meetings and encompassed the meeting at issue); *Hills & Dales, Inc. v. Wooster*, 4 Ohio App.3d 240, 242-43 (9th Dist. 1982) (find that a charter municipality, in the exercise of its sovereign powers of local self-government as established by the Ohio Constitution need not adhere to the strictures of R.C. 121.22, and noting that “[w]e find nothing in the Wooster Charter which mandates that all meetings of the city council and/or the city planning commission must be open to the public”).

⁸⁷³ *State ex rel. Lightfield v. Indian Hill*, 69 Ohio St.3d 441, 442 (1994) (determining that “[i]n matters of local self-government, if a portion of a municipal charter expressly conflicts with parallel state law, the charter provisions will prevail”).

⁸⁷⁴ *State ex rel. Bond v. Montgomery*, 63 Ohio App.3d 728 (1st Dist. 1989); *Johnson v. Kindig*, 9th Dist. No. 00CA0095 (Aug. 15, 2001) (finding that where charter explicitly states all council meetings shall be public and the council must also explicitly state exception for executive session).

⁸⁷⁵ *State ex rel. Inskeep v. Staten*, 74 Ohio St.3d 676, 1996-Ohio-236; *State ex rel. Plain Dealer Publ’g Co. v. Barnes*, 38 Ohio St.3d 165 (1988); *State ex rel. Gannett Satellite Info. Network v. Cincinnati City Council*, 137 Ohio App.3d 589, 592 (1st Dist. 2001) (determining that when a city charter mandates all meetings be open, rules of council cannot supersede this mandate).

The Ohio Open Meetings Act

Chapter Three: Executive Session

III. Chapter Three: Executive Session

A. General Principles

An “executive session” is a conference between members of a public body from which the public is excluded.⁸⁷⁶ The public body, however, may invite anyone it chooses to attend an executive session.⁸⁷⁷ The Ohio Open Meetings Act strictly limits the use of executive sessions and places several limitations on their use. First, the Ohio Open Meetings Act limits the matters that a public body may discuss in executive session.⁸⁷⁸ Second, the Ohio Open Meetings Act requires that a public body follow a specific procedure to adjourn into an executive session.⁸⁷⁹ Finally, a public body may not take any formal action in an executive session;⁸⁸⁰ any formal action taken in an executive session is invalid.⁸⁸¹

A public body may only discuss matters specifically identified in R.C. 121.22(G) in executive session, and may only hold executive sessions at regular and special meetings.⁸⁸² One court has held that a public body may discuss other, related issues if they have a direct bearing on the permitted matter(s).⁸⁸³ If a public body is challenged in court over the nature of discussions or deliberations held in executive session, the burden of proof lies with the public body to establish that one of the statutory exceptions permitted the executive session.⁸⁸⁴

The Ohio Open Meetings Act does not prohibit the public body or one of its members from disclosing the information discussed in executive session.⁸⁸⁵ However, other provisions of law may prohibit such disclosure.⁸⁸⁶

Note: The privacy afforded by the Ohio Open Meetings Act to executive session discussions does not impart confidentiality on any documents that a public body may discuss in executive session. If a document is a “public record” and is not otherwise exempt under one of the exceptions to the Ohio Public Records Act, the record will still be subject to public disclosure notwithstanding the appropriateness of confidential discussions about it in executive session. For instance, if a public body

⁸⁷⁷ *Chudner v. Cleveland City Sch. Dist.*, 8th Dist., No. 68572 (Aug. 10, 1995) (finding that inviting select individuals to attend an executive session is not a violation as long as no formal action of the public body will occur); *Weisel v. Palmyra Twp. Bd. of Zoning Appeals*, 11th Dist., No. 90-P-2193 (July 19, 1991); *Davidson v. Sheffield-Sheffield Lake Bd. of Educ.*, 9th Dist. No. 89-CA004624 (May 23, 1990).

⁸⁷⁸ R.C. 121.22(G)(1)-(7), (J).

⁸⁷⁹ R.C. 121.22(G)(1), (7) (requiring roll call vote and specificity in motion); see also *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 59, 2001-Ohio-130 (finding that respondents violated R.C. 121.22(G)(1) by using general terms like “personnel” and “personnel and finances” instead of one or more of the specified statutory purposes listed in division (G)(1)); *Wheeling Corp. v. Columbus & Ohio River R.R. Co.*, 147 Ohio App.3d 460, 473, 2001-Ohio-8751 (10th Dist.) (determining that a majority of a quorum of the public body must determine, by roll call vote, to hold executive session); *Wright v. Mt. Vernon City Council*, 5th Dist. No. 97-CA-7 (Oct. 23, 1997) (determining that a public body must strictly comply with both the substantive and procedural limitations of R.C. 121.22(G)); *Jones v. Brookfield Twp. Trs.*, 11th Dist. No. 92-T-4692 (June 30, 1995) (stating that “[p]olice personnel matters” does not constitute substantial compliance because it does not refer to any of the specific purposes listed in R.C. 149.43(G)(1)); *Vermillion Teachers’ Ass’n. v. Vermillion Local Sch. Dist. Bd. of Educ.*, 98 Ohio App.3d 524, 531-32 (6th Dist. 1994) (determining that a board violated 121.22(G) when it went into executive session to discuss a stated permissible topic but proceeded to discuss another, non-permissible topic); 1988 Ohio Op. Att’y Gen. No. 029.

⁸⁸⁰ R.C. 121.22(H).

⁸⁸¹ R.C. 121.22(H); *Mathews v. E. Local Sch. Dist.*, 4th Dist. No. 00CA647, 2001-Ohio-2372 (finding that a board was permitted to discuss employee grievance in executive session, but was required to take formal action by voting in an open meeting); *State ex rel. Kinsley v. Berea Bd. of Educ.*, 64 Ohio App. 3d 659, 664 (8th Dist. 1990) (determining that once a conclusion is reached regarding pending or imminent litigation, the conclusion is to be made public, even though the deliberations leading to the conclusion were private).

⁸⁸² R.C. 121.22(G).

⁸⁸³ *Chudner v. Cleveland City Sch. Dist.*, 8th Dist., No. 68572 (Aug. 10, 1995) (determining that issues discussed in executive session each had a direct bearing on topic that was permissible subject of executive session discussion).

⁸⁸⁴ *State ex rel. Bond v. City of Montgomery*, 63 Ohio App.3d 728 (1st Dist. 1989).

⁸⁸⁵ But compare R.C. 121.22(G)(2) (providing that “no member of a public body shall use [executive session under property exception] as a subterfuge for providing covert information to prospective buyers or sellers.”).

⁸⁸⁶ See e.g., R.C. 102.03(B) (providing that a public official must not disclose or use any information acquired in course of official duties that is confidential because of statutory provisions, or that has been clearly designated as confidential).

The Ohio Open Meetings Act

Chapter Three: Executive Session

properly discusses pending litigation in executive session, a settlement agreement negotiated during that executive session and reduced to writing may be subject to public disclosure.⁸⁸⁷

B. Permissible Discussion Topics

There are very limited topics that the members of a public body may consider in executive session:

1. Certain Personnel Matters⁸⁸⁸

A public body may adjourn into executive session:

- To consider the appointment, employment, dismissal, discipline, promotion, demotion, or compensation of a public employee or official; and
 - To consider the investigation of charges or complaints against a public employee, official, licensee, or regulated individual,⁸⁸⁹ unless the employee, official, licensee, or regulated individual requests a public hearing;⁸⁹⁰
- but**
- A public body may not hold an executive session to consider the discipline of an elected official for conduct related to the performance of the official's duties or to consider that person's removal from office.

A motion to adjourn into executive session must specify which of the particular personnel matter(s) listed in the statute the movant proposes to discuss. A motion "to discuss personnel matters" is not sufficiently specific and does not comply with the statute.⁸⁹¹

Appellate courts disagree on whether a public body must limit its discussion of personnel in an executive session to a specific individual, or may include broader discussion of employee matters. At least two appellate courts have held that the language of the Ohio Open Meetings Act clearly limits discussion in executive session to consideration of a specific employee's employment, dismissal, etc.⁸⁹² These decisions are based on the premise that the plain language in the Act requires that "all meetings of any public body are declared to be open to the public at all times,"⁸⁹³ thus, any exceptions to openness are to be drawn narrowly. A separate appellate court, however, looked to a different

⁸⁸⁷ *State ex rel. Findlay Publ'g Co. v. Hancock County Bd. of Comm'rs*, 80 Ohio St.3d 134, 138 (1997) (quoting *State ex rel. Kinsley v. Berea Bd. of Educ.*, 64 Ohio App.3d 659, 664 (8th Dist. 1990) (stating that "[s]ince a settlement agreement contains the result of the bargaining process rather than revealing the details of the negotiations which led to the result, R.C. 121.22(G)(3), which exempts from public view only the conferences themselves, would not exempt a settlement agreement from disclosure.").

⁸⁸⁸ R.C. 121.22(G)(1).

⁸⁸⁹ R.C. 121.22(B)(3) (defining "regulated individual" as (a) a student in a state or local public educational institution or (b) a person who is, voluntarily or involuntarily, an inmate, patient, or resident of a state or local institution because of criminal behavior, mental illness or retardation, disease, disability, age, or other condition requiring custodial care).

⁸⁹⁰ See *Brownfield v. Bd. of Educ.*, 4th Dist. No. 89 CA 26 (Aug. 28, 1990) (providing that upon request, a teacher was entitled to have deliberations regarding his dismissal in open meetings). NOTE: This exception does not grant a substantive right to a public hearing. Such a right must exist elsewhere in Ohio or federal law before a person may demand a public hearing under this exception. See *Davidson v. Sheffield-Sheffield Lake Bd. of Educ.*, 9th Dist. No. 89-CA004624 (May 23, 1990) (citing *Matheny v. Bd. of Educ.*, 62 Ohio St.2d 362, 368 (1980) (providing that "the term 'public hearing' in subdivision (G)(1) of this statute refers only to the hearings elsewhere provided by law"); *State ex rel. Harris v. Indus. Comm'n of Ohio*, 10th Dist. No. 95APE07-891 (Dec. 14, 1995).

⁸⁹¹ R.C. 121.22(G)(1),(7) (requiring roll call vote and specificity in motion); *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 59, 2001-Ohio-130 (finding that respondents violated R.C. 121.22(G)(1) by using general terms like "personnel" and "personnel and finances" instead of one of more of the specified statutory purposes listed in division (G)(1)); *Jones v. Brookfield Twp. Trs.*, 11th Dist. No. 92-T-4692 (June 30, 1995) (stating that "[p]olice personnel matters" does not constitute substantial compliance because it does not refer to any of the specific purposes listed in R.C. 149.43(G)(1)), 1988 Ohio Atty. Gen. Ops. No. 88-029, 2-120 to 2-121, fn. 1.

⁸⁹² *Gannett Satellite Info. Network v. Chillicothe City Sch. Dist.*, 41 Ohio App.3d 218 (4th Dist. 1988); *Davidson v. Sheffield-Sheffield Lake Bd. of Educ.*, 9th Dist. No. 89-CA004624 (May 23, 1990) (rejecting the argument that an executive session was illegally held for a dual, unauthorized purpose when it was held to discuss termination of a specific employee's employment due to budgetary considerations).

⁸⁹³ RC 121.22(C).

The Ohio Open Meetings Act

Chapter Three: Executive Session

provision in the same statute that permits the public body to exclude the name of any person to be considered during the executive session as allowing general personnel discussions.⁸⁹⁴

2. Purchase or Sale of Property

A public body may adjourn into executive session to consider the purchase of property of any sort--real, personal, tangible, or intangible.⁸⁹⁵ A public body may also adjourn into executive session to consider the sale of real or personal property by competitive bid if disclosure of the information would result in a competitive advantage to the person whose personal, private interest is adverse to the general public interest.⁸⁹⁶ No member of a public body may use this exception as subterfuge to provide covert information to prospective buyers or sellers.⁸⁹⁷

3. Pending or Imminent Court Action

A public body may adjourn into executive session with the public body's attorney to discuss a pending or imminent court action.⁸⁹⁸ Court action is "pending" if a lawsuit has been commenced or is "imminent" if it is on the point of happening.⁸⁹⁹ A public body may not use this exception to adjourn into executive session for discussions with a board member who also happens to be an attorney. The attorney should be the duly appointed counsel for the public body.⁹⁰⁰ Nor is a general discussion of legal matters sufficient basis for invoking this provision.⁹⁰¹

4. Collective Bargaining Matters

A public body may adjourn into executive session to prepare for, conduct, or review a collective bargaining strategy.⁹⁰²

5. Matters Required to be Kept Confidential

A public body may adjourn into executive session to discuss matters that federal law, federal rules, or state statutes require the public body to keep confidential.⁹⁰³

⁸⁹⁴ *Wright v. Mt. Vernon City Council*, 5th Dist. No. 97-CA-7 (Oct. 23, 1997) (finding that it was permissible for public body to discuss merit raises for exempt city employees in executive session without referring to individuals in particular positions).

⁸⁹⁷ R.C. 121.22(G)(2).

⁸⁹⁸ R.C. 121.22(G)(3).

⁸⁹⁹ *State ex rel. Cincinnati Enquirer v. Hamilton County Comm'r's*, No. C-010605, 2002-Ohio-2038 (1st Dist.) (determining that "imminent" is satisfied when a public body has moved beyond mere investigation and assumed an aggressive litigative posture manifested by the decision to commit government resources to the prospective litigation); *State ex rel. Bond v. City of Montgomery*, 63 Ohio App.3d 728 (1st Dist. 1989); but see *Greene County Guidance Ctr., Inc. v. Greene-Clinton Cmty. Mental Health Bd.*, 19 Ohio App.3d 1, 5 (2nd Dist. 1984) (determining that a discussion with legal counsel in executive session under 121.22(G)(3) is permitted where litigation is a "reasonable prospect").

⁹⁰⁰ *Awadalla v. Robinson Mem'l Hosp.*, 11th Dist. No. 91-P-2385 (June 5, 1992) (finding that a board's "attorney" was identified as "senior vice president" in meeting minutes); see also *Bd. of Trs. of the Tobacco Use Prevention and Control Found. v. Boyce*, 185 Ohio App.3d 707, 2009-Ohio-6993, ¶¶66-69 (10th Dist.), *aff'd*, 127 Ohio St.3d 511, 2010-Ohio-6207 (four board members who are also attorneys are not the attorneys for the public body).

⁹⁰¹ *Bd. of Trs. of the Tobacco Use Prevention and Control Found. v. Boyce*, 185 Ohio App.3d 707, 2009-Ohio-6993, ¶¶66-69 (10th Dist.) (Executive Director, a licensed attorney, cannot act as "attorney for the public body" for purposes of this provision, because R.C. 109.02 declares Attorney General to be legal counsel for all state agencies.).

⁹⁰² R.C. 121.22(G)(4); see also *Back v. Madison Local Sch. Dist. Bd. of Educ.*, No. CA-2007-03-066, 2007-Ohio-4218, ¶8 (12th Dist.) (determining that a school board's meeting with a labor organization to renegotiate teachers' salaries was proper because the meeting was not an executive session but was a "collective bargaining meeting," which, under R.C. 4117.21, was exempt from the open meeting requirements of R.C. 121.22).

⁹⁰³ R.C. 121.22(G)(5); see also *State ex rel. Cincinnati Enquirer v. Hamilton County Comm'r's*, No. C010605, 2002-Ohio-2038 (1st Dist.) (determining that R.C. 121.22(G)(5) is intended to allow a public body to convene an executive session to discuss matters that they are legally bound to keep from the public); *J.C. Penney Prop., Inc. v. Bd. of Revision of Franklin County*, Ohio Bd. Tax Appeals Nos. 81-D-509, 81-D-510 (Jan. 19, 1982) (determining that common law may not be available under R.C. 121.22(G)(5) given the presence of R.C. 121.22(G)(3)); but see *Theile v. Harris*, 1st App. No. C-860103 (June 11, 1986) (finding that public officials have right and duty to seek legal advice from their duly constituted legal advisor).

The Ohio Open Meetings Act

Chapter Three: Executive Session

6. Security Matters

A public body may adjourn into executive session to discuss details of security arrangements and emergency response protocols for a public body or public office, if disclosure of the matters discussed could reasonably be expected to jeopardize the security of the public body or public office.⁹⁰⁴

7. Hospital Trade Secrets

A public body may adjourn into executive session to discuss trade secrets of a county hospital, a joint township hospital, or a municipal hospital.⁹⁰⁵

8. Veterans Service Commission Applications

A Veterans Service Commission must hold an executive session when considering an applicant's request for financial assistance, unless the applicant requests a public hearing.⁹⁰⁶ Note that, unlike the previous seven discussion topics, discussion of Veterans Service Commission applications in executive session is mandatory.

C. Proper Procedures for Executive Session

A public body may only hold an executive session at a regular or special meeting, and a meeting that includes an executive session must always begin and end in an open session.⁹⁰⁷ In order to begin an executive session, there must be both a roll call vote, and a proper motion approved by a majority of a quorum of the public body.⁹⁰⁸

1. The Motion

A motion for executive session must specifically identify "which one or more of the approved matters listed . . . are to be considered at the executive session."⁹⁰⁹ Thus, if the public body intends to discuss one of the matters included in the personnel exception in executive session, the motion must specify which of those specific matters it will discuss (e.g., "I move to go into executive session to consider the promotion or compensation of a public employee.").⁹¹⁰ It is not sufficient to simply state "personnel" as a reason for executive session,⁹¹¹ though the motion does not need to specify by name the person whom the public body intends to discuss.⁹¹² Similarly, "reiterated the laundry list of possible matters from R.C. 121.22(G)(1) without specifying which of those purposes [will] be discussed in executive session" is improper.⁹¹³

2. The Roll Call Vote

Members of a public body may adjourn into executive session only after a majority of a quorum of the public body approves the motion by a roll call vote.⁹¹⁴ The vote may not be by acclamation or by show of hands, and the public body must record the vote in its minutes.⁹¹⁵

⁹¹⁴ R.C. 121.22(G).

The Ohio Open Meetings Act

Chapter Three: Executive Session

Although a proper motion is required before entering executive session, a motion to end the executive session and return to public session is not necessary because the closed-door discussion is “off the record.” Similarly, a public body does not take minutes during executive session. The minutes of the meeting need only document a motion to go into executive session that properly identifies the permissible topic or topics that the public body will discuss, as well as the return to open session (e.g., “We are now back on the record.”)

⁹¹⁵ R.C. 121.22(G); 1988 Ohio Op. Att’y Gen. No. 029; see *Shaffer v. Vill. of W. Farmington*, 82 Ohio App.3d 579, 584 (11th Dist. 1992) (finding that minutes may not be conclusive evidence as to whether roll call vote was taken).

The Ohio Open Meetings Act

Chapter Four: Enforcement & Remedies

IV. Chapter Four: Enforcement & Remedies

In Ohio, no state or local government official has the authority to enforce the Ohio Open Meetings Act. Rather, if any person believes a public body has violated or intends to violate the Ohio Open Meetings Act, that person may file suit in common pleas court to enforce the law's provisions.⁹¹⁶

Courts reviewing alleged violations will strictly construe the Ohio Open Meetings Act in favor of openness.⁹¹⁷ In practice, this has included the courts looking beyond the express reason stated by a public body for an executive session to find an implied or circumstantial violation of the Act.⁹¹⁸

A. Enforcement

1. Injunction

The type of court action that any person may file for an alleged violation of the Ohio Open Meetings Act is called an injunction.⁹¹⁹ This action must be “brought within two years after the date of the alleged violation or threatened violation.”⁹²⁰ If granted by a court, an injunction compels the members of the public body to comply with the law by either refraining from the prohibited behavior or by conducting their meetings in accordance with law where they previously failed to do so.

a. Who May File

“Any person” may have standing to file for an injunction to enforce the Ohio Open Meetings Act.⁹²¹ The person need not demonstrate a personal stake in the outcome of the lawsuit.⁹²²

b. Where to File

Unlike the Ohio Public Records Act, which permits an aggrieved person to initiate a legal action directly with a common pleas court, a district court of appeals, or the Ohio Supreme Court, the Ohio Open Meetings Act requires that an action for injunction be filed only in the court of common pleas in the county where the alleged Act violation took place.⁹²³

c. Finding a Violation

Upon proof of a violation or threatened violation of the Ohio Open Meetings Act, the court will conclusively and irrebuttably presume harm and prejudice to the person who brought the suit⁹²⁴ and will issue an injunction.⁹²⁵ Once the court issues an injunction, members of the public body

⁹¹⁷ *Gannett Satellite Info. Network v. Chillicothe City Sch. Dist.*, 41 Ohio App.3d 218 (4th Dist. 1988).

⁹¹⁸ *Sea Lakes, Inc. v. Lipstreu*, 11th Dist. No. 90-P-2254 (Sept. 30, 1991) (finding a violation where board was to discuss administrative appeal merits privately, appellant's attorney objected, board immediately held executive session “to discuss pending litigation,” then emerged to announce decision on appeal); *In the Matter of Removal of Smith*, 5th Dist. No. CA-90-11 (May 15, 1991) (finding a violation where county commission emerged from executive session held “to discuss legal matters” and announced decision to remove Smith from Board of Mental Health, where there was no county attorney present in executive session and a request for public hearing on removal decision was pending).

⁹¹⁹ R.C. 121.22(l)(1). See *Fahl v. Athens*, No. 06CA23, 2007-Ohio-4925 (4th Dist.) and *Stainfield v. Jefferson Emergency Rescue Dist.*, No. 2009-A-0044, 2010-Ohio-2282, ¶40 (11th Dist.) (appellate courts declined to consider arguments alleging Open Meetings Act violations as part of administrative appeals because appellants failed to bring original actions and request appropriate relief in courts of common pleas.).

⁹²⁰ R.C. 121.22(l)(1); see also *Mollette v. Portsmouth City Council*, 179 Ohio App.3d 455, 2008-Ohio-6342 (4th Dist.).

⁹²¹ R.C. 121.22(l)(1); *McVey v. Carthage Twp. Trs.*, No. 04CA44, 2005-Ohio-2869 (4th Dist.).

⁹²² *Doran v. Northmont Bd. of Educ.*, 153 Ohio App.3d 499, 2003-Ohio-4084, ¶20 (“*Doran II*”) (2nd Dist.); *State ex rel. Mason v. State Employment Relations Bd.*, 10th Dist. No. 98AP-780 (Apr. 20, 1999); *Thompson v. Joint Twp.*, 3rd Dist. No. 2-82-8 (June 23, 1983); *Foreman v. Blaser*, 3rd Dist. No. 13-87-12 (Aug. 8, 1988); but see *Korchnak v. Civil Serv. Comm’n of Canton*, 5th Dist. No. CA-8133 (Jan. 7, 1991) (determining that a party had no standing to challenge notice of a violation without a formal request and payment of a fee established by a public body).

⁹²³ R.C. 121.22(l)(1).

⁹²⁴ R.C. 121.22(l)(3); *Ream v. Civil Serv. Comm’n of Canton*, 5th Dist. No. CA-8033 (Nov. 26, 1990).

⁹²⁵ R.C. 121.22(l)(1); see also *Doran v. Northmont Bd. of Educ.*, 153 Ohio App.3d 499, 2003-Ohio-4084, ¶21 (2nd Dist.) (“*Doran II*”) (determining that an injunction is mandatory upon finding violation of statute); *Fayette Volunteer Fire Dept. No. 2, Inc. v. Fayette Twp. Bd. of Trs.*, 87 Ohio App. 3d 51, 54 (4th Dist. 1993).

The Ohio Open Meetings Act

Chapter Four: Enforcement & Remedies

who later commit a “knowing” violation of the injunction may be removed from office through a court action that may only be brought by the county prosecutor or the Ohio Attorney General.⁹²⁶

d. *Curing a Violation*

Once a violation is proven, the court must grant the injunction, regardless of the public body’s intervening or subsequent attempts to cure the violation.⁹²⁷ Indeed, Ohio courts have differing views as to whether a public body can ever cure an invalid action with new, compliant discussions followed by official action taken in an open session.⁹²⁸ However, if the action at issue is removal of a public official that the public body decided during a meeting allegedly not open to the public, the proper vehicle to challenge that action is a *quo warranto* action.⁹²⁹

2. *Mandamus*

Where a person seeks access to the public body’s minutes, that person may also file a mandamus action under the Ohio Public Records Act to compel the creation of or access to meeting minutes.⁹³⁰ Mandamus is also an appropriate action to order a public body to give notice of meetings to the person filing the action.⁹³¹

B. *Remedies*

1. *Invalidity*

A resolution, rule, or formal action of any kind is invalid unless adopted in an open meeting of the public body.⁹³² However, courts have refused to allow public bodies to benefit from their own violations of the Ohio Open Meetings Act.⁹³³ For instance, a public body may not attempt to avoid a contractual obligation by arguing that approval of the contract is invalid due to a violation of the Act.⁹³⁴

a. *Formal Action*

Even without taking a vote or a poll, members of a public body may inadvertently take “formal action” in an executive session when they indicate how they intend to vote about a matter pending before them.⁹³⁵ For instance, while council members properly deliberated in executive

The Ohio Open Meetings Act

Chapter Four: Enforcement & Remedies

session about whether to take action on a union request, they improperly took formal action during the executive session when they decided not to take action on the request and to announce as much via a press release. Those decisions were deemed invalid and of no effect.⁹³⁶ In addition, even if the formal action is taken in an open meeting, it is still invalid if it results from deliberations that improperly occurred outside of an open meeting, e.g., at an informal, private meeting or in an executive session that was held for other than an authorized purpose.⁹³⁷

b. Improper Notice

A formal action taken by a public body in a meeting for which it did not properly give notice is invalid.⁹³⁸

c. Minutes

At least one court has found that minutes are merely the record of actions; they are not actions in and of themselves. Thus, failure to properly approve minutes does not invalidate the actions taken during the meeting.⁹³⁹

2. Mandatory Civil Forfeiture

If the court issues an injunction, the court will order the public body to pay a civil forfeiture of \$500 to the person who filed the action.⁹⁴⁰ Courts which find that a public body has violated the law on repeated occasions have awarded a \$500 civil forfeiture for each violation.⁹⁴¹

3. Court Costs and Attorney Fees

If the court issues an injunction, it will order the public body to pay all court costs⁹⁴² and the reasonable attorney's fees of the person who filed the action.⁹⁴³ Courts have discretion to reduce or completely eliminate attorney's fees, however, if they find that: (1) based on the state of the law when the violation occurred, a well-informed public body could have reasonably believed it was not violating the law; and (2) it was reasonable for the public body to believe its actions served public policy.⁹⁴⁴

opinions and indicated how they would vote on a proposal to create new school district; resolution to adopt proposal deemed invalid, though it was also later adopted in open session).

⁹³⁶ *Mansfield City Council v. Richland County Council AFL-CIO*, 5th Dist. No. 03 CA 55 (Dec. 24, 2003).

⁹³⁷ R.C. 121.22(H); *Mansfield City Council v. Richland County Council AFL-CIO*, 5th Dist. No. 03 CA 55 (Dec. 24, 2003) (determining that council reached its conclusion based on comments in executive session and acted according to that conclusion); *State ex rel. Holliday v. Marion Twp. Bd. of Trs.* (3rd Dist.), 2000-Ohio-1877; see also *State ex rel. Delph v. Barr*, 44 Ohio St.3d 77 (1989).

⁹³⁸ R.C. 121.22(H); see also *State ex rel. Stiller v. Columbiana Exempted Vill. Sch. Dist. Bd. of Educ.*, 74 Ohio St.3d 113, 118 (1995); but see *Hoops v. Jerusalem Twp. Bd. of Trs.*, 6th Dist. No. L-97-1240 (Apr. 10, 1998) (illustrating that actions are not invalid merely because a reasonable method of notice had not been enacted by "rule"); *Barber v. Twinsburg Twp.*, 73 Ohio App.3d 587 (9th Dist. 1992).

⁹³⁹ *Davidson v. Hanging Rock*, 97 Ohio App.3d 723, 733 (4th Dist. 1994).

⁹⁴⁰ R.C. 121.22(I)(2)(a); *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 2001-Ohio-130; *Cincinnati Enquirer v. Cincinnati*, 145 Ohio App.3d 335 (1st Dist. 2001).

⁹⁴¹ *Specht v. Finnegan*, No. L-02-1012, 2002-Ohio-4660 (6th Dist.); *Manogg v. Stickle*, 5th Dist. No. 98CA00102 (Apr. 8, 1998) distinguished by *Doran v. Northmont Bd. of Educ.*, No. 19956, 2003-Ohio-7097, ¶18 (2nd Dist.) ("Doran III") (determining that the failure to adopt rule is one violation with one \$500 fine—fine not assessed for each meeting conducted in absence of rule where meetings were, in fact, properly noticed and held in an open forum); *Weisbarth v. Geauga*, No. 2007-G-2780, 2007-Ohio-6728, ¶30 (11th Dist.) (finding that the only violation alleged was Board's failure to state a precise statutory reason for going into executive session; this "technical violation entitled appellant to only one statutory injunction and one civil forfeiture.");

⁹⁴² R.C. 121.22(I)(2)(a).

⁹⁴³ R.C. 121.22(I)(2)(a); *State ex rel. Long v. Cardington Vill. Council*, 92 Ohio St.3d 54, 60, 2001-Ohio-130 (awarding a citizen over \$17,000 in attorney's fees); *Cincinnati Enquirer v. Cincinnati*, 145 Ohio App.3d 335, 339 (1st Dist. 2001).

⁹⁴⁴ R.C. 121.22(I)(2)(a)(i), (ii); *Mansfield City Council v. Richland County Council AFL-CIO*, 5th Dist. No. 03 CA 55 (Dec. 24, 2003); but see *Mathews v. E. Local Sch. Dist.*, No. 00CA647, 2001-Ohio-2372 (4th Dist.) (determining that where two board members knew not to take formal action during executive session, the board was not entitled to reduction).

The Ohio Open Meetings Act

Chapter Four: Enforcement & Remedies

If the court does not issue an injunction and deems the lawsuit to have been frivolous, the court will order the person who filed the suit to pay all of the public body's court costs and reasonable attorney's fees as determined by the court.⁹⁴⁵

⁹⁴⁵ R.C. 121.22(l)(2)(b); *McIntyre v. Westerville City Sch. Dist. Bd of Educ.*, 10th Dist. Nos. 90AP-1024, 90AP-1063 (June 6, 1991) (determining that a plaintiff engaged in frivolous conduct because her actions subjected the board to a baseless suit and the incurring of needless expense).

Appendix A – Statutes

Ohio Revised Code § 9.01 – Methods for making records, copies, and reproductions

When any officer, office, court, commission, board, institution, department, agent, or employee of the state, of a county, or of any other political subdivision who is charged with the duty or authorized or required by law to record, preserve, keep, maintain, or file any record, document, plat, court file, paper, or instrument in writing, or to make or furnish copies of any of them, deems it necessary or advisable, when recording or making a copy or reproduction of any of them or of any such record, for the purpose of recording or copying, preserving, and protecting them, reducing space required for storage, or any similar purpose, to do so by means of any photostatic, photographic, miniature photographic, film, microfilm, or microphotographic process, or perforated tape, magnetic tape, other magnetic means, electronic data processing, machine readable means, or graphic or video display, or any combination of those processes, means, or displays, which correctly and accurately copies, records, or reproduces, or provides a medium of copying, recording, or reproducing, the original record, document, plat, court file, paper, or instrument in writing, such use of any of those processes, means, or displays for any such purpose is hereby authorized. Any such records, copies, or reproductions may be made in duplicate, and the duplicates shall be stored in different buildings. The film or paper used for a process shall comply with the minimum standards of quality approved for permanent photographic records by the national bureau of standards. All such records, copies, or reproductions shall carry a certificate of authenticity and completeness, on a form specified by the director of administrative services through the state records program.

Any such officer, office, court, commission, board, institution, department, agent, or employee of the state, of a county, or of any other political subdivision may purchase or rent required equipment for any such photographic process and may enter into contracts with private concerns or other governmental agencies for the development of film and the making of reproductions of film as a part of any such photographic process. When so recorded, or copied or reproduced to reduce space required for storage or filing of such records, such photographs, microphotographs, microfilms, perforated tape, magnetic tape, other magnetic means, electronic data processing, machine readable means, graphic or video display, or combination of these processes, means, or displays, or films, or prints made therefrom, when properly identified by the officer by whom or under whose supervision they were made, or who has their custody, have the same effect at law as the original record or of a record made by any other legally authorized means, and may be offered in like manner and shall be received in evidence in any court where the original record, or record made by other legally authorized means, could have been so introduced and received. Certified or authenticated copies or prints of such photographs, microphotographs, films, microfilms, perforated tape, magnetic tape, other magnetic means, electronic data processing, machine readable means, graphic or video display, or combination of these processes, means, or displays, shall be admitted in evidence equally with the original.

Such photographs, microphotographs, microfilms, or films shall be placed and kept in conveniently accessible, fireproof, and insulated files, cabinets, or containers, and provisions shall be made for preserving, safekeeping, using, examining, exhibiting, projecting, and enlarging them whenever requested, during office hours.

All persons utilizing the methods described in this section for keeping records and information shall keep and make readily available to the public the machines and equipment necessary to reproduce the records and information in a readable form.

Most Recent Effective Date: 09-26-2003

Ohio Revised Code § 109.43 – Training for elected officials or appropriate designees regarding public records law and sunshine laws

(A) As used in this section:

(1) "Designee" means a designee of the elected official in the public office if that elected official is the only elected official in the public office involved or a designee of all of the elected officials in the public office if the public office involved includes more than one elected official.

(2) "Elected official" means an official elected to a local or statewide office. "Elected official" does not include the chief justice or a justice of the supreme court, a judge of a court of appeals, court of common pleas, municipal court, or county court, or a clerk of any of those courts.

(3) "Public office" has the same meaning as in section 149.011 [149.01.1] of the Revised Code.

(4) "Public record" has the same meaning as in section 149.43 of the Revised Code.

(B) The attorney general shall develop, provide, and certify training programs and seminars for all elected officials or their appropriate designees in order to enhance the officials' knowledge of the duty to provide access to public records as required by section 149.43 of the Revised Code. The training shall be three hours for every term of office for which the elected official was appointed or elected to the public office involved. The training shall provide elected officials or their appropriate designees with guidance in developing and updating their offices' policies as required under section 149.43 of the Revised Code. The successful completion by an elected official or by an elected official's appropriate designee of the training requirements established by the attorney general under this section shall satisfy the education requirements imposed on elected officials or their appropriate designees under division (E) of section 149.43 of the Revised Code. Prior to providing the training programs and seminars under this section to satisfy the education requirements imposed on elected officials or their appropriate designees under division (E) of section 149.43 of the Revised Code, the attorney general shall ensure that the training programs and seminars are accredited by the commission on continuing legal education established by the supreme court.

(C) The attorney general shall not charge any elected official or the appropriate designee of any elected official any fee for attending the training programs and seminars that the attorney general conducts under this section. The attorney general may allow the attendance of any other interested persons at any of the training programs or seminars that the attorney general conducts under this section and shall not charge the person any fee for attending the training program or seminar.

(D) In addition to developing, providing, and certifying training programs and seminars as required under division (B) of this section, the attorney general may contract with one or more other state agencies, political subdivisions, or other public or private entities to conduct the training programs and seminars for elected officials or their appropriate designees under this section. The contract may provide for the attendance of any other interested persons at any of the training programs or seminars conducted by the contracting state agency, political subdivision, or other public or private entity. The contracting state agency, political subdivision, or other public or private entity may charge an elected official, an elected official's appropriate designee, or an interested person a registration fee for attending the training program or seminar conducted by that contracting agency, political subdivision, or entity pursuant to a contract entered into under this division. The attorney general shall determine a reasonable amount for the registration fee based on the actual and necessary expenses associated with the training programs and seminars. If the contracting state agency, political subdivision, or other public or private entity charges an elected official or an elected official's appropriate designee a registration fee for attending the training program or seminar conducted pursuant to a contract entered into under this division by that contracting agency, political subdivision, or entity, the public

Appendix A – Statutes

office for which the elected official was appointed or elected to represent may use the public office's own funds to pay for the cost of the registration fee.

(E) The attorney general shall develop and provide to all public offices a model public records policy for responding to public records requests in compliance with section 149.43 of the Revised Code in order to provide guidance to public offices in developing their own public record policies for responding to public records requests in compliance with that section.

(F) The attorney general may provide any other appropriate training or educational programs about Ohio's "Sunshine Laws," sections 121.22, 149.38, 149.381 and 149.43 of the Revised Code, as may be developed and offered by the attorney general or by the attorney general in collaboration with one or more other state agencies, political subdivisions, or other public or private entities.

(G) The auditor of state, in the course of an annual or biennial audit of a public office pursuant to Chapter 117. of the Revised Code, shall audit the public office for compliance with this section and division (E) of section 149.43 of the Revised Code.

Most Recent Effective Date: 09-29-2011

Ohio Revised Code § 121.211 – Retention periods for records

Records in the custody of each agency shall be retained for time periods in accordance with law establishing specific retention periods, and in accordance with retention periods or disposition instructions established by the state records administration.

Most Recent Effective Date: 07-01-1985

Ohio Revised Code § 149.011 – Definitions

As used in this chapter, except as otherwise provided:

(A) "Public office" includes any state agency, public institution, political subdivision, or other organized body, office, agency, institution, or entity established by the laws of this state for the exercise of any function of government. "Public office" does not include the nonprofit corporation formed under section 187.01 of the Revised Code.

(B) "State agency" includes every department, bureau, board, commission, office, or other organized body established by the constitution and laws of this state for the exercise of any function of state government, including any state-supported institution of higher education, the general assembly, any legislative agency, any court or judicial agency, or any political subdivision or agency of a political subdivision. "State agency" does not include the nonprofit corporation formed under section 187.01 of the Revised Code.

(C) "Public money" includes all money received or collected by or due a public official, whether in accordance with or under authority of any law, ordinance, resolution, or order, under color of office, or otherwise. It also includes any money collected by any individual on behalf of a public office or as a purported representative or agent of the public office.

(D) "Public official" includes all officers, employees, or duly authorized representatives or agents of a public office.

Appendix A – Statutes

(E) "Color of office" includes any act purported or alleged to be done under any law, ordinance, resolution, order, or other pretension to official right, power, or authority.

(F) "Archive" includes any public record that is transferred to the state archives or other designated archival institutions because of the historical information contained on it.

(G) "Records" includes any document, device, or item, regardless of physical form or characteristic, including an electronic record as defined in section 1306.01 of the Revised Code, created or received by or coming under the jurisdiction of any public office of the state or its political subdivisions, which serves to document the organization, functions, policies, decisions, procedures, operations, or other activities of the office.

Ohio Revised Code § 149.31 – Archives administration

(A) The Ohio historical society, in addition to its other functions, shall function as the state archives administration for the state and its political subdivisions.

It shall be the function of the state archives administration to preserve government archives, documents, and records of historical value that may come into its possession from public or private sources.

The archives administration shall evaluate, preserve, arrange, service repair, or make other disposition of, including transfer to public libraries, county historical societies, state universities, or other public or quasi-public institutions, agencies, or corporations, those public records of the state and its political subdivisions that may come into its possession under this section. Those public records shall be transferred by written agreement only, and only to public or quasi-public institutions, agencies, or corporations capable of meeting accepted archival standards for housing and use.

The archives administration shall be headed by a trained archivist designated by the Ohio historical society and shall make its services available to county, municipal, township, school district, library, and special taxing district records commissions upon request. The archivist shall be designated as the "state archivist."

(B) The archives administration may purchase or procure for itself, or authorize the board of trustees of an archival institution to purchase or procure, from an insurance company licensed to do business in this state policies of insurance insuring the administration or the members of the board and their officers, employees, and agents against liability on account of damage or injury to persons and property resulting from any act or omission of the board members, officers, employees, and agents in their official capacity.

(C) Notwithstanding any other provision of the Revised Code to the contrary, the archives administration may establish a fee schedule, which may include the cost of labor, for researching, retrieving, copying, and mailing copies of public records

Most Recent Effective Date: 09-29-2007

Ohio Revised Code § 149.33 – State records program

(A) The department of administrative services shall have responsibility for establishing and administering a state records program for all state agencies, except for state-supported institutions of higher education. The department shall apply efficient and economical management methods to the creation, utilization, maintenance, retention, preservation, and disposition of state records.

Appendix A – Statutes

There is hereby established within the department of administrative services a state records program, which shall be under the control and supervision of the director of administrative services or the director's appointed deputy.

(B) The boards of trustees of state-supported institutions of higher education shall have full responsibility for establishing and administering a records program for their respective institutions. The boards shall apply efficient and economical management methods to the creation, utilization, maintenance, retention, preservation, and disposition of the records of their respective institutions.

Most Recent Effective Date: 09-26-2003

Ohio Revised Code § 149.331 – Functions of state records program

The state records program of the department of administrative services shall do all of the following:

(A) Establish and promulgate in consultation with the state archivist standards, procedures, and techniques for the effective management of state records;

(B) Review applications for one-time records disposal and schedules of records retention and destruction submitted by state agencies in accordance with section 149.333 [149.33.3] of the Revised Code;

(C) Establish "general schedules" proposing the disposal, after the lapse of specified periods of time, of records of specified form or character common to several or all agencies that either have accumulated or may accumulate in such agencies and that apparently will not, after the lapse of the periods specified, have sufficient administrative, legal, fiscal, or other value to warrant their further preservation by the state;

(D) Establish and maintain a records management training program, and provide a basic consulting service, for personnel involved in record-making and record-keeping functions of departments, offices, and institutions;

(E) Provide for the disposition of any remaining records of any state agency, board, or commission, whether in the executive, judicial, or legislative branch of government, that has terminated its operations. After the closing of the Ohio veterans' children's home, the resident records of the home and the resident records of the home when it was known as the soldiers' and sailors' orphans' home required to be maintained by approved records retention schedules shall be administered by the state department of education pursuant to this chapter, the administrative records of the home required to be maintained by approved records retention schedules shall be administered by the department of administrative services pursuant to this chapter, and historical records of the home shall be transferred to an appropriate archival institution in this state prescribed by the state records program.

(F) Establish a centralized program coordinating micrographics standards, training, and services for the benefit of all state agencies;

(G) Establish and publish in accordance with the applicable law necessary procedures and rules for the retention and disposal of state records.

This section does not apply to the records of state-supported institutions of higher education, which shall keep their own records.

Most Recent Effective Date: 09-26-2003

Appendix A – Statutes

Ohio Revised Code § 149.332 – Records management programs in the legislative and judicial branches

Upon request the director of administrative services and the state archivist shall assist and advise in the establishment of records management programs in the legislative and judicial branches of state government and shall, as required by them, provide program services similar to those available to the executive branch under section 149.33 of the Revised Code. Prior to the disposal of any records, the state archivist shall be allowed sixty days to select for preservation in the state archives those records the state archivist determines to have continuing historical value.

Most Recent Effective Date: 09-26-2003

Ohio Revised Code § 149.333 – Applications for records disposal or transfer; schedules of retention and destruction

No state agency shall retain, destroy, or otherwise transfer its state records in violation of this section. This section does not apply to state-supported institutions of higher education.

Each state agency shall submit to the state records program under the director of administrative services all applications for records disposal or transfer and all schedules of records retention and destruction. The state records program shall review the applications and schedules and provide written approval, rejection, or modification of an application or schedule. The state records program shall then forward the application for records disposal or transfer or the schedule for retention or destruction, with the program's recommendation attached, to the auditor of state for review and approval. The decision of the auditor of state to approve, reject, or modify the application or schedule shall be based upon the continuing administrative and fiscal value of the state records to the state or to its citizens. If the auditor of state disapproves the action by the state agency, the auditor of state shall so inform the state agency through the state records program within sixty days, and the records shall not be destroyed.

At the same time, the state records program shall forward the application for records disposal or transfer or the schedule for retention or destruction to the state archivist for review and approval. The state archivist shall have sixty days to select for custody the state records that the state archivist determines to be of continuing historical value. Records not selected shall be disposed of in accordance with this section.

Most Recent Effective Date: 09-26-2003

Ohio Revised Code § 149.34 – Records management procedures for all state agencies

The head of each state agency, office, institution, board, or commission shall do the following:

(A) Establish, maintain, and direct an active continuing program for the effective management of the records of the state agency;

(B) Submit to the state records program, in accordance with applicable standards and procedures, schedules proposing the length of time each record series warrants retention for administrative, legal, or fiscal purposes after it has been received or created by the agency. The head also shall submit to the state records program applications for disposal of records in the head's custody that are not needed in the transaction of current

Appendix A – Statutes

business and are not otherwise scheduled for retention or destruction.

(C) Within one year after their date of creation or receipt, schedule all records for disposition or retention in the manner prescribed by applicable law and procedures.

This section does not apply to state-supported institutions of higher education.

Most Recent Effective Date: 09-26-2003

Ohio Revised Code § 149.35 – Laws prohibiting the destruction of records

If any law prohibits the destruction of records, the director of administrative services, the director's designee, or the boards of trustees of state-supported institutions of higher education shall not order their destruction or other disposition. If any law provides that records shall be kept for a specified period of time, the director of administrative services, the director's designee, or the boards shall not order their destruction or other disposition prior to the expiration of that period.

Most Recent Effective Date: 09-26-2003

Ohio Revised Code § 149.351 – Prohibition against destruction or damage of records

(A) All records are the property of the public office concerned and shall not be removed, destroyed, mutilated, transferred, or otherwise damaged or disposed of, in whole or in part, except as provided by law or under the rules adopted by the records commissions provided for under sections 149.38 to 149.42 of the Revised Code or under the records programs established by the boards of trustees of state-supported institutions of higher education under section 149.33 of the Revised Code. Such records shall be delivered by outgoing officials and employees to their successors and shall not be otherwise removed, destroyed, mutilated, or transferred unlawfully.

(B) Any person who is aggrieved by the removal, destruction, mutilation, or transfer of, or by other damage to or disposition of a record in violation of division (A) of this section, or by threat of such removal, destruction, mutilation, transfer, or other damage to or disposition of such a record, may commence either or both of the following in the court of common pleas of the county in which division (A) of this section allegedly was violated or is threatened to be violated:

(1) A civil action for injunctive relief to compel compliance with division (A) of this section, and to obtain an award of the reasonable attorney's fees incurred by the person in the civil action;

(2) A civil action to recover a forfeiture in the amount of one thousand dollars for each violation, but not to exceed a cumulative total of ten thousand dollars, regardless of the number of violations, and to obtain an award of the reasonable attorney's fees incurred by the person in the civil action not to exceed the forfeiture amount recovered.

(C) (1) A person is not aggrieved by a violation of division (A) of this section if clear and convincing evidence shows that the request for a record was contrived as a pretext to create potential liability under this section. The commencement of a civil action under division (B) of this section waives any right under this

Appendix A – Statutes

chapter to decline to divulge the purpose for requesting the record, but only to the extent needed to evaluate whether the request was contrived as a pretext to create potential liability under this section.

(2) In a civil action under division (B) of this section, if clear and convincing evidence shows that the request for a record was a pretext to create potential liability under this section, the court may award reasonable attorney's fees to any defendant or defendants in the action.

(D) Once a person recovers a forfeiture in a civil action commenced under division (B)(2) of this section, no other person may recover a forfeiture under that division for a violation of division (A) of this section involving the same record, regardless of the number of persons aggrieved by a violation of division (A) of this section or the number of civil actions commenced under this section.

(E) A civil action for injunctive relief under division (B)(1) of this section or a civil action to recover a forfeiture under division (B)(2) of this section shall be commenced within five years after the day in which division (A) of this section was allegedly violated or was threatened to be violated.

Most Recent Effective Date: 09-29-2011

Ohio Revised Code § 149.352 – Replevin of public records unlawfully removed

Upon request of the department of administrative services, the attorney general may replevin any public records which have been unlawfully transferred or removed in violation of sections 149.31 to 149.44 of the Revised Code or otherwise transferred or removed unlawfully. Such records shall be returned to the office of origin and safeguards shall be established to prevent further recurrence of unlawful transfer or removal.

Most Recent Effective Date: 07-01-1985

Ohio Revised Code § 149.36 – Authority not restricted

The provisions of sections 149.31 to 149.42, inclusive, of the Revised Code shall not impair or restrict the authority given by other statutes over the creation of records, systems, forms, procedures, or the control over purchases of equipment by public offices.

Most Recent Effective Date: 10-19-1959

Ohio Revised Code § 149.38 – County records commission

(A) Except as otherwise provided in section 307.847 of the Revised Code, there is hereby created in each county a county records commission, composed of a member of the board of county commissioners as chairperson, the prosecuting attorney, the auditor, the recorder, and the clerk of the court of common pleas. The commission shall appoint a secretary, who may or may not be a member of the commission and who shall serve at the pleasure of the commission. The commission may employ an archivist or records manager to serve under its direction. The commission shall meet at least once every six months and upon call of the chairperson.

(B) The functions of the county records commission shall be to provide rules for retention and disposal of records of the county and to review applications for one-time disposal of obsolete records and schedules of

Appendix A – Statutes

records retention and disposition submitted by county offices. The commission may dispose of records pursuant to the procedure outlined in this section. The commission, at any time, may review any schedule it has previously approved and, for good cause shown, may revise that schedule, subject to division (D) of this section.

(C) (1) When the county records commission has approved any county application for one-time disposal of obsolete records or any schedule of records retention and disposition, the commission shall send that application or schedule to the Ohio historical society for its review. The Ohio historical society shall review the application or schedule within a period of not more than sixty days after its receipt of it. During the sixty-day review period, the Ohio historical society may select for its custody from the application for one-time disposal of obsolete records any records it considers to be of continuing historical value, and shall denote upon any schedule of records retention and disposition any records for which the Ohio historical society will require a certificate of records disposal prior to their disposal.

(2) Upon completion of its review, the Ohio historical society shall forward the application for one-time disposal of obsolete records or the schedule of records retention and disposition to the auditor of state for the auditor's approval or disapproval. The auditor of state shall approve or disapprove the application or schedule within a period of not more than sixty days after receipt of it.

(3) Before public records are to be disposed of pursuant to an approved schedule of records retention and disposition, the county records commission shall inform the Ohio historical society of the disposal through the submission of a certificate of records disposal for only the records required by the schedule to be disposed of and shall give the society the opportunity for a period of fifteen business days to select for its custody those records, from the certificate submitted, that it considers to be of continuing historical value. Upon the expiration of the fifteen-business-day period, the county records commission also shall notify the public libraries, county historical society, state universities, and other public or quasi-public institutions, agencies, or corporations in the county that have provided the commission with their name and address for these notification purposes, that the commission has informed the Ohio historical society of the records disposal and that the notified entities, upon written agreement with the Ohio historical society pursuant to section 149.31 of the Revised Code, may select records of continuing historical value, including records that may be distributed to any of the notified entities under section 149.31 of the Revised Code. Any notified entity that notifies the county records commission of its intent to review and select records of continuing historical value from certificates of records disposal is responsible for the cost of any notice given and for the transportation of those records.

(D) The rules of the county records commission shall include a rule that requires any receipts, checks, vouchers, or other similar records pertaining to expenditures from the delinquent tax and assessment collection fund created in section 321.261 [321.26.1] of the Revised Code, from the real estate assessment fund created in section 325.31 of the Revised Code, or from amounts allocated for the furtherance of justice to the county sheriff under section 325.071 [325.07.1] of the Revised Code or to the prosecuting attorney under section 325.12 of the Revised Code to be retained for at least four years.

(E) No person shall knowingly violate the rule adopted under division (D) of this section. Whoever violates that rule is guilty of a misdemeanor of the first degree.

Ohio Revised Code § 149.39 – Municipal records commission

There is hereby created in each municipal corporation a records commission composed of the chief executive or the chief executive's appointed representative, as chairperson, and the chief fiscal officer, the chief legal officer, and a citizen appointed by the chief executive. The commission shall appoint a secretary, who may or

Appendix A – Statutes

may not be a member of the commission and who shall serve at the pleasure of the commission. The commission may employ an archivist or records manager to serve under its direction. The commission shall meet at least once every six months and upon the call of the chairperson.

The functions of the commission shall be to provide rules for retention and disposal of records of the municipal corporation, and to review applications for one-time disposal of obsolete records and schedules of records retention and disposition submitted by municipal offices. The commission may dispose of records pursuant to the procedure outlined in section 149.381 of the Revised Code. The commission, at any time, may review any schedule it has previously approved and, for good cause shown, may revise that schedule under the procedure outlined in that section.

Ohio Revised Code § 149.41 – School district and educational service center records commissions

There is hereby created in each city, local, joint vocational, and exempted village school district a school district records commission, and in each educational service center an educational service center records commission. Each records commission shall be composed of the president, the treasurer of the board of education or governing board of the educational service center, and the superintendent of schools in each such district or educational service center. The commission shall meet at least once every twelve months.

The function of the commission shall be to review applications for one-time disposal of obsolete records and schedules of records retention and disposition submitted by any employee of the school district or educational service center. The commission may dispose of records pursuant to the procedure outlined in section 149.381 of the Revised Code. The commission, at any time, may review any schedule it has previously approved and, for good cause shown, may revise that schedule under the procedure outlined in that section.

Ohio Revised Code § 149.411 – Library records commission in each public library

There is hereby created in each county free public library, municipal free public library, township free public library, school district free public library as described in section 3375.15 of the Revised Code, county library district, and regional library district a library records commission composed of the members and the fiscal officer of the board of library trustees of the appropriate public library or library district. The commission shall meet at least once every twelve months.

Appendix A – Statutes

The functions of the commission shall be to review applications for one-time disposal of obsolete records and schedules of records retention and disposition submitted by any employee of the library. The commission may dispose of records pursuant to the procedure outlined in section 149.381 of the Revised Code. The commission, at any time, may review any schedule it has previously approved and, for good cause shown, may revise that schedule under the procedure outlined in that section.

Most Recent Effective Date: 09-29-2011

Ohio Revised Code § 149.412 – Special taxing district records commission

There is hereby created in each special taxing district that is a public office as defined in section 149.011 of the Revised Code and that is not specifically designated in section 149.38, 149.39, 149.41, 149.411, or 149.42 of the Revised Code a special taxing district records commission composed of, at a minimum, the chairperson, a fiscal representative, and a legal representative of the governing board of the special taxing district. The commission shall meet at least once every twelve months and upon the call of the chairperson.

The functions of the commission shall be to review applications for one-time disposal of obsolete records and schedules of records retention and disposition submitted by any employee of the special taxing district. The commission may dispose of records pursuant to the procedure outlined in section 149.381 of the Revised Code. The commission, at any time, may review any schedule it has previously approved and, for good cause shown, may revise that schedule under the procedure outlined in that section.

Most Recent Effective Date: 09-29-2011

Ohio Revised Code § 149.42 – Township records commission

There is hereby created in each township a township records commission, composed of the chairperson of the board of township trustees and the fiscal officer of the township. The commission shall meet at least once every twelve months and upon the call of the chairperson.

The function of the commission shall be to review applications for one-time disposal of obsolete records and schedules of records retention and disposition submitted by township offices. The commission may dispose of records pursuant to the procedure outlined in section 149.381 of the Revised Code. The commission, at any time, may review any schedule it has previously approved and, for good cause shown, may revise that schedule under the procedure outlined in that section.

Ohio Revised Code § 149.43 – Availability of public records

(A) As used in this section:

(1) "Public record" means records kept by any public office, including, but not limited to, state, county, city, village, township, and school district units, and records pertaining to the delivery of educational services by an alternative school in this state kept by the nonprofit or for profit entity operating the alternative school pursuant to section 3313.533 [3313.53.3] of the Revised Code. "Public record" does not mean any of the following:

Appendix A – Statutes

- (a) Medical records;
- (b) Records pertaining to probation and parole proceedings or to proceedings related to the imposition of community control sanctions and post-release control sanctions;
- (c) Records pertaining to actions under section 2151.85 and division (C) of section 2919.121 [2919.12.1] of the Revised Code and to appeals of actions arising under those sections;
- (d) Records pertaining to adoption proceedings, including the contents of an adoption file maintained by the department of health under section 3705.12 of the Revised Code;
- (e) Information in a record contained in the putative father registry established by section 3107.062 [3107.06.2] of the Revised Code, regardless of whether the information is held by the department of job and family services or, pursuant to section 3111.69 of the Revised Code, the office of child support in the department or a child support enforcement agency;
- (f) Records listed in division (A) of section 3107.42 of the Revised Code or specified in division (A) of section 3107.52 of the Revised Code;
- (g) Trial preparation records;
- (h) Confidential law enforcement investigatory records;
- (i) Records containing information that is confidential under section 2710.03 or 4112.05 of the Revised Code;
- (j) DNA records stored in the DNA database pursuant to section 109.573 [109.57.3] of the Revised Code;
- (k) Inmate records released by the department of rehabilitation and correction to the department of youth services or a court of record pursuant to division (E) of section 5120.21 of the Revised Code;
- (l) Records maintained by the department of youth services pertaining to children in its custody released by the department of youth services to the department of rehabilitation and correction pursuant to section 5139.05 of the Revised Code;
- (m) Intellectual property records;
- (n) Donor profile records;
- (o) Records maintained by the department of job and family services pursuant to section 3121.894 [3121.89.4] of the Revised Code;
- (p) Peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation residential and familial information;
- (q) In the case of a county hospital operated pursuant to Chapter 339. of the Revised Code or a municipal hospital operated pursuant to Chapter 749. of the Revised Code, information that constitutes a trade secret, as defined in section 1333.61 of the Revised Code;
- (r) Information pertaining to the recreational activities of a person under the age of eighteen;

Appendix A – Statutes

(s) Records provided to, statements made by review board members during meetings of, and all work products of a child fatality review board acting under sections 307.621 [307.62.1] to 307.629 [307.62.9] of the Revised Code, and child fatality review data submitted by the child fatality review board to the department of health or a national child death review database, other than the report prepared pursuant to division (A) of section 307.626 [307.62.6] of the Revised Code;

(t) Records provided to and statements made by the executive director of a public children services agency or a prosecuting attorney acting pursuant to section 5153.171 [5153.17.1] of the Revised Code other than the information released under that section;

(u) Test materials, examinations, or evaluation tools used in an examination for licensure as a nursing home administrator that the board of examiners of nursing home administrators administers under section 4751.04 of the Revised Code or contracts under that section with a private or government entity to administer;

(v) Records the release of which is prohibited by state or federal law;

(w) Proprietary information of or relating to any person that is submitted to or compiled by the Ohio venture capital authority created under section 150.01 of the Revised Code;

(x) Information reported and evaluations conducted pursuant to section 3701.072 [3701.07.2] of the Revised Code.

(y) Financial statements and data any person submits for any purpose to the Ohio housing finance agency or the controlling board in connection with applying for, receiving, or accounting for financial assistance from the agency, and information that identifies any individual who benefits directly or indirectly from financial assistance from the agency;

(z) Records listed in section 5101.29 of the Revised Code.

(aa) Discharges recorded with a county recorder under section 317.24 of the Revised Code, as specified in division (B)(2) of that section.

(bb) Usage information including names and addresses of specific residential and commercial customers of a municipally owned or operated public utility.

(2) "Confidential law enforcement investigatory record" means any record that pertains to a law enforcement matter of a criminal, quasi-criminal, civil, or administrative nature, but only to the extent that the release of the record would create a high probability of disclosure of any of the following:

(a) The identity of a suspect who has not been charged with the offense to which the record pertains, or of an information source or witness to whom confidentiality has been reasonably promised;

(b) Information provided by an information source or witness to whom confidentiality has been reasonably promised, which information would reasonably tend to disclose the source's or witness's identity;

(c) Specific confidential investigatory techniques or procedures or specific investigatory work product;

(d) Information that would endanger the life or physical safety of law enforcement personnel, a crime victim, a witness, or a confidential information source.

Appendix A – Statutes

(3) "Medical record" means any document or combination of documents, except births, deaths, and the fact of admission to or discharge from a hospital, that pertains to the medical history, diagnosis, prognosis, or medical condition of a patient and that is generated and maintained in the process of medical treatment.

(4) "Trial preparation record" means any record that contains information that is specifically compiled in reasonable anticipation of, or in defense of, a civil or criminal action or proceeding, including the independent thought processes and personal trial preparation of an attorney.

(5) "Intellectual property record" means a record, other than a financial or administrative record, that is produced or collected by or for faculty or staff of a state institution of higher learning in the conduct of or as a result of study or research on an educational, commercial, scientific, artistic, technical, or scholarly issue, regardless of whether the study or research was sponsored by the institution alone or in conjunction with a governmental body or private concern, and that has not been publicly released, published, or patented.

(6) "Donor profile record" means all records about donors or potential donors to a public institution of higher education except the names and reported addresses of the actual donors and the date, amount, and conditions of the actual donation.

(7) "Peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation residential and familial information" means any information that discloses any of the following about a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation:

(a) The address of the actual personal residence of a peace officer, parole officer, probation officer, bailiff, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation, except for the state or political subdivision in which the peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation resides;

(b) Information compiled from referral to or participation in an employee assistance program;

(c) The social security number, the residential telephone number, any bank account, debit card, charge card, or credit card number, or the emergency telephone number of, or any medical information pertaining to, a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation;

(d) The name of any beneficiary of employment benefits, including, but not limited to, life insurance benefits, provided to a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation by the peace officer's, parole officer's, probation officer's, bailiff's, prosecuting attorney's, assistant prosecuting attorney's, correctional employee's, youth services employee's, firefighter's, EMT's, or investigator of the bureau of criminal identification and investigation's employer;

(e) The identity and amount of any charitable or employment benefit deduction made by the peace officer's, parole officer's, probation officer's, bailiff's, prosecuting attorney's, assistant prosecuting attorney's, correctional employee's, youth services employee's, firefighter's, EMT's, or investigator of the bureau of criminal identification and investigation's employer from the peace officer's, parole officer's, probation officer's, bailiff's, prosecuting attorney's, assistant prosecuting attorney's, correctional

Appendix A – Statutes

employee's, youth services employee's, firefighter's, EMT's, or investigator of the bureau of criminal identification and investigation's compensation unless the amount of the deduction is required by state or federal law;

(f) The name, the residential address, the name of the employer, the address of the employer, the social security number, the residential telephone number, any bank account, debit card, charge card, or credit card number, or the emergency telephone number of the spouse, a former spouse, or any child of a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation;

(g) A photograph of a peace officer who holds a position or has an assignment that may include undercover or plain clothes positions or assignments as determined by the peace officer's appointing authority.

As used in divisions (A)(7) and (B)(9) of this section, "peace officer" has the same meaning as in section 109.71 of the Revised Code and also includes the superintendent and troopers of the state highway patrol; it does not include the sheriff of a county or a supervisory employee who, in the absence of the sheriff, is authorized to stand in for, exercise the authority of, and perform the duties of the sheriff.

As used in divisions (A)(7) and (B)(5) of this section, "correctional employee" means any employee of the department of rehabilitation and correction who in the course of performing the employee's job duties has or has had contact with inmates and persons under supervision.

As used in divisions (A)(7) and (B)(5) of this section, "youth services employee" means any employee of the department of youth services who in the course of performing the employee's job duties has or has had contact with children committed to the custody of the department of youth services.

As used in divisions (A)(7) and (B)(9) of this section, "firefighter" means any regular, paid or volunteer, member of a lawfully constituted fire department of a municipal corporation, township, fire district, or village.

As used in divisions (A)(7) and (B)(9) of this section, "EMT" means EMTs-basic, EMTs-I, and paramedics that provide emergency medical services for a public emergency medical service organization. "Emergency medical service organization," "EMT-basic," "EMT-I," and "paramedic" have the same meanings as in section 4765.01 of the Revised Code.

As used in divisions (A)(7) and (B)(9) of this section, "investigator of the bureau of criminal identification and investigation" has the meaning defined in section 2903.11 of the Revised Code.

(8) "Information pertaining to the recreational activities of a person under the age of eighteen" means information that is kept in the ordinary course of business by a public office, that pertains to the recreational activities of a person under the age of eighteen years, and that discloses any of the following:

(a) The address or telephone number of a person under the age of eighteen or the address or telephone number of that person's parent, guardian, custodian, or emergency contact person;

(b) The social security number, birth date, or photographic image of a person under the age of eighteen;

(c) Any medical record, history, or information pertaining to a person under the age of eighteen;

(d) Any additional information sought or required about a person under the age of eighteen for the purpose of allowing that person to participate in any recreational activity conducted or sponsored by a

Appendix A – Statutes

public office or to use or obtain admission privileges to any recreational facility owned or operated by a public office.

(9) "Community control sanction" has the same meaning as in section 2929.01 of the Revised Code.

(10) "Post-release control sanction" has the same meaning as in section 2967.01 of the Revised Code.

(11) "Redaction" means obscuring or deleting any information that is exempt from the duty to permit public inspection or copying from an item that otherwise meets the definition of a "record" in section 149.011 [149.01.1] of the Revised Code.

(12) "Designee" and "elected official" have the same meanings as in section 109.43 of the Revised Code.

(B) (1) Upon request and subject to division (B)(8) of this section, all public records responsive to the request shall be promptly prepared and made available for inspection to any person at all reasonable times during regular business hours. Subject to division (B)(8) of this section, upon request, a public office or person responsible for public records shall make copies of the requested public record available at cost and within a reasonable period of time. If a public record contains information that is exempt from the duty to permit public inspection or to copy the public record, the public office or the person responsible for the public record shall make available all of the information within the public record that is not exempt. When making that public record available for public inspection or copying that public record, the public office or the person responsible for the public record shall notify the requester of any redaction or make the redaction plainly visible. A redaction shall be deemed a denial of a request to inspect or copy the redacted information, except if federal or state law authorizes or requires a public office to make the redaction.

(2) To facilitate broader access to public records, a public office or the person responsible for public records shall organize and maintain public records in a manner that they can be made available for inspection or copying in accordance with division (B) of this section. A public office also shall have available a copy of its current records retention schedule at a location readily available to the public. If a requester makes an ambiguous or overly broad request or has difficulty in making a request for copies or inspection of public records under this section such that the public office or the person responsible for the requested public record cannot reasonably identify what public records are being requested, the public office or the person responsible for the requested public record may deny the request but shall provide the requester with an opportunity to revise the request by informing the requester of the manner in which records are maintained by the public office and accessed in the ordinary course of the public office's or person's duties.

(3) If a request is ultimately denied, in part or in whole, the public office or the person responsible for the requested public record shall provide the requester with an explanation, including legal authority, setting forth why the request was denied. If the initial request was provided in writing, the explanation also shall be provided to the requester in writing. The explanation shall not preclude the public office or the person responsible for the requested public record from relying upon additional reasons or legal authority in defending an action commenced under division (C) of this section.

(4) Unless specifically required or authorized by state or federal law or in accordance with division (B) of this section, no public office or person responsible for public records may limit or condition the availability of public records by requiring disclosure of the requester's identity or the intended use of the requested public record. Any requirement that the requester disclose the requester's identity or the intended use of the requested public record constitutes a denial of the request.

(5) A public office or person responsible for public records may ask a requester to make the request in writing, may ask for the requester's identity, and may inquire about the intended use of the information requested, but may do so only after disclosing to the requester that a written request is not mandatory and that the requester may decline to reveal the requester's identity or the intended use and when a written

Appendix A – Statutes

request or disclosure of the identity or intended use would benefit the requester by enhancing the ability of the public office or person responsible for public records to identify, locate, or deliver the public records sought by the requester.

(6) If any person chooses to obtain a copy of a public record in accordance with division (B) of this section, the public office or person responsible for the public record may require that person to pay in advance the cost involved in providing the copy of the public record in accordance with the choice made by the person seeking the copy under this division. The public office or the person responsible for the public record shall permit that person to choose to have the public record duplicated upon paper, upon the same medium upon which the public office or person responsible for the public record keeps it, or upon any other medium upon which the public office or person responsible for the public record determines that it reasonably can be duplicated as an integral part of the normal operations of the public office or person responsible for the public record. When the person seeking the copy makes a choice under this division, the public office or person responsible for the public record shall provide a copy of it in accordance with the choice made by the person seeking the copy. Nothing in this section requires a public office or person responsible for the public record to allow the person seeking a copy of the public record to make the copies of the public record.

(7) Upon a request made in accordance with division (B) of this section and subject to division (B)(6) of this section, a public office or person responsible for public records shall transmit a copy of a public record to any person by United States mail or by any other means of delivery or transmission within a reasonable period of time after receiving the request for the copy. The public office or person responsible for the public record may require the person making the request to pay in advance the cost of postage if the copy is transmitted by United States mail or the cost of delivery if the copy is transmitted other than by United States mail, and to pay in advance the costs incurred for other supplies used in the mailing, delivery, or transmission.

Any public office may adopt a policy and procedures that it will follow in transmitting, within a reasonable period of time after receiving a request, copies of public records by United States mail or by any other means of delivery or transmission pursuant to this division. A public office that adopts a policy and procedures under this division shall comply with them in performing its duties under this division.

In any policy and procedures adopted under this division, a public office may limit the number of records requested by a person that the office will transmit by United States mail to ten per month, unless the person certifies to the office in writing that the person does not intend to use or forward the requested records, or the information contained in them, for commercial purposes. For purposes of this division, "commercial" shall be narrowly construed and does not include reporting or gathering news, reporting or gathering information to assist citizen oversight or understanding of the operation or activities of government, or nonprofit educational research.

(8) A public office or person responsible for public records is not required to permit a person who is incarcerated pursuant to a criminal conviction or a juvenile adjudication to inspect or to obtain a copy of any public record concerning a criminal investigation or prosecution or concerning what would be a criminal investigation or prosecution if the subject of the investigation or prosecution were an adult, unless the request to inspect or to obtain a copy of the record is for the purpose of acquiring information that is subject to release as a public record under this section and the judge who imposed the sentence or made the adjudication with respect to the person, or the judge's successor in office, finds that the information sought in the public record is necessary to support what appears to be a justiciable claim of the person.

(9) (a) Upon written request made and signed by a journalist on or after December 16, 1999, a public office, or person responsible for public records, having custody of the records of the agency employing a specified peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of

Appendix A – Statutes

the bureau of criminal identification and investigation shall disclose to the journalist the address of the actual personal residence of the peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation and, if the peace officer's, parole officer's, probation officer's, bailiff's, prosecuting attorney's, assistant prosecuting attorney's, correctional employee's, youth services employee's, firefighter's, EMT's, or investigator of the bureau of criminal identification and investigation's spouse, former spouse, or child is employed by a public office, the name and address of the employer of the peace officer's, parole officer's, probation officer's, bailiff's, prosecuting attorney's, assistant prosecuting attorney's, correctional employee's, youth services employee's, firefighter's, EMT's, or investigator of the bureau of criminal identification and investigation's spouse, former spouse, or child. The request shall include the journalist's name and title and the name and address of the journalist's employer and shall state that disclosure of the information sought would be in the public interest.

(b) Division (B)(9)(a) of this section also applies to journalist requests for customer information maintained by a municipally owned or operated public utility, other than social security numbers and any private financial information such as credit reports, payment methods, credit card numbers, and bank account information.

(c) As used in division (B)(9) of this section, "journalist" means a person engaged in, connected with, or employed by any news medium, including a newspaper, magazine, press association, news agency, or wire service, a radio or television station, or a similar medium, for the purpose of gathering, processing, transmitting, compiling, editing, or disseminating information for the general public.

- (C) (1) If a person allegedly is aggrieved by the failure of a public office or the person responsible for public records to promptly prepare a public record and to make it available to the person for inspection in accordance with division (B) of this section or by any other failure of a public office or the person responsible for public records to comply with an obligation in accordance with division (B) of this section, the person allegedly aggrieved may commence a mandamus action to obtain a judgment that orders the public office or the person responsible for the public record to comply with division (B) of this section, that awards court costs and reasonable attorney's fees to the person that instituted the mandamus action, and, if applicable, that includes an order fixing statutory damages under division (C)(1) of this section. The mandamus action may be commenced in the court of common pleas of the county in which division (B) of this section allegedly was not complied with, in the supreme court pursuant to its original jurisdiction under Section 2 of Article IV, Ohio Constitution, or in the court of appeals for the appellate district in which division (B) of this section allegedly was not complied with pursuant to its original jurisdiction under Section 3 of Article IV, Ohio Constitution.

If a requestor transmits a written request by hand delivery or certified mail to inspect or receive copies of any public record in a manner that fairly describes the public record or class of public records to the public office or person responsible for the requested public records, except as otherwise provided in this section, the requestor shall be entitled to recover the amount of statutory damages set forth in this division if a court determines that the public office or the person responsible for public records failed to comply with an obligation in accordance with division (B) of this section.

The amount of statutory damages shall be fixed at one hundred dollars for each business day during which the public office or person responsible for the requested public records failed to comply with an obligation in accordance with division (B) of this section, beginning with the day on which the requester files a mandamus action to recover statutory damages, up to a maximum of one thousand dollars. The award of statutory damages shall not be construed as a penalty, but as compensation for injury arising from lost use of the requested information. The existence of this injury shall be conclusively presumed. The award of statutory damages shall be in addition to all other remedies authorized by this section.

Appendix A – Statutes

The court may reduce an award of statutory damages or not award statutory damages if the court determines both of the following:

(a) That, based on the ordinary application of statutory law and case law as it existed at the time of the conduct or threatened conduct of the public office or person responsible for the requested public records that allegedly constitutes a failure to comply with an obligation in accordance with division (B) of this section and that was the basis of the mandamus action, a well-informed public office or person responsible for the requested public records reasonably would believe that the conduct or threatened conduct of the public office or person responsible for the requested public records did not constitute a failure to comply with an obligation in accordance with division (B) of this section;

(b) That a well-informed public office or person responsible for the requested public records reasonably would believe that the conduct or threatened conduct of the public office or person responsible for the requested public records would serve the public policy that underlies the authority that is asserted as permitting that conduct or threatened conduct.

(2) (a) If the court issues a writ of mandamus that orders the public office or the person responsible for the public record to comply with division (B) of this section and determines that the circumstances described in division (C)(1) of this section exist, the court shall determine and award to the relator all court costs.

(b) If the court renders a judgment that orders the public office or the person responsible for the public record to comply with division (B) of this section, the court may award reasonable attorney's fees subject to reduction as described in division (C)(2)(c) of this section. The court shall award reasonable attorney's fees, subject to reduction as described in division (C)(2)(c) of this section when either of the following applies:

(i) The public office or the person responsible for the public records failed to respond affirmatively or negatively to the public records request in accordance with the time allowed under division (B) of this section.

(ii) The public office or the person responsible for the public records promised to permit the relator to inspect or receive copies of the public records requested within a specified period of time but failed to fulfill that promise within that specified period of time.

(c) Court costs and reasonable attorney's fees awarded under this section shall be construed as remedial and not punitive. Reasonable attorney's fees shall include reasonable fees incurred to produce proof of the reasonableness and amount of the fees and to otherwise litigate entitlement to the fees. The court may reduce an award of attorney's fees to the relator or not award attorney's fees to the relator if the court determines both of the following:

(i) That, based on the ordinary application of statutory law and case law as it existed at the time of the conduct or threatened conduct of the public office or person responsible for the requested public records that allegedly constitutes a failure to comply with an obligation in accordance with division (B) of this section and that was the basis of the mandamus action, a well-informed public office or person responsible for the requested public records reasonably would believe that the conduct or threatened conduct of the public office or person responsible for the requested public records did not constitute a failure to comply with an obligation in accordance with division (B) of this section;

(ii) That a well-informed public office or person responsible for the requested public records reasonably would believe that the conduct or threatened conduct of the public office or person responsible for the requested public records as described in division (C)(2)(c)(i) of this section would serve the public policy that underlies the authority that is asserted as permitting that conduct or threatened conduct.

Appendix A – Statutes

(D) Chapter 1347. of the Revised Code does not limit the provisions of this section.

(E)(1) To ensure that all employees of public offices are appropriately educated about a public office's obligations under division (B) of this section, all elected officials or their appropriate designees shall attend training approved by the attorney general as provided in section 109.43 of the Revised Code. In addition, all public offices shall adopt a public records policy in compliance with this section for responding to public records requests. In adopting a public records policy under this division, a public office may obtain guidance from the model public records policy developed and provided to the public office by the attorney general under section 109.43 of the Revised Code. Except as otherwise provided in this section, the policy may not limit the number of public records that the public office will make available to a single person, may not limit the number of public records that it will make available during a fixed period of time, and may not establish a fixed period of time before it will respond to a request for inspection or copying of public records, unless that period is less than eight hours.

(2) The public office shall distribute the public records policy adopted by the public office under division (E)(1) of this section to the employee of the public office who is the records custodian or records manager or otherwise has custody of the records of that office. The public office shall require that employee to acknowledge receipt of the copy of the public records policy. The public office shall create a poster that describes its public records policy and shall post the poster in a conspicuous place in the public office and in all locations where the public office has branch offices. The public office may post its public records policy on the internet web site of the public office if the public office maintains an internet web site. A public office that has established a manual or handbook of its general policies and procedures for all employees of the public office shall include the public records policy of the public office in the manual or handbook.

(F)(1) The bureau of motor vehicles may adopt rules pursuant to Chapter 119. of the Revised Code to reasonably limit the number of bulk commercial special extraction requests made by a person for the same records or for updated records during a calendar year. The rules may include provisions for charges to be made for bulk commercial special extraction requests for the actual cost of the bureau, plus special extraction costs, plus ten per cent. The bureau may charge for expenses for redacting information, the release of which is prohibited by law.

(2) As used in division (F)(1) of this section:

(a) "Actual cost" means the cost of depleted supplies, records storage media costs, actual mailing and alternative delivery costs, or other transmitting costs, and any direct equipment operating and maintenance costs, including actual costs paid to private contractors for copying services.

(b) "Bulk commercial special extraction request" means a request for copies of a record for information in a format other than the format already available, or information that cannot be extracted without examination of all items in a records series, class of records, or database by a person who intends to use or forward the copies for surveys, marketing, solicitation, or resale for commercial purposes. "Bulk commercial special extraction request" does not include a request by a person who gives assurance to the bureau that the person making the request does not intend to use or forward the requested copies for surveys, marketing, solicitation, or resale for commercial purposes.

(c) "Commercial" means profit-seeking production, buying, or selling of any good, service, or other product.

(d) "Special extraction costs" means the cost of the time spent by the lowest paid employee competent to perform the task, the actual amount paid to outside private contractors employed by the bureau, or the actual cost incurred to create computer programs to make the special extraction. "Special extraction costs" include any charges paid to a public agency for computer or records services.

Appendix A – Statutes

(3) For purposes of divisions (F)(1) and (2) of this section, "surveys, marketing, solicitation, or resale for commercial purposes" shall be narrowly construed and does not include reporting or gathering news, reporting or gathering information to assist citizen oversight or understanding of the operation or activities of government, or nonprofit educational research.

Most Recent Effective Date: 10-17-2011

Ohio Revised Code § 149.431 – Financial records of nonprofit organizations receiving governmental funds; confidentiality of patient and client records

(A) Any governmental entity or agency and any nonprofit corporation or association, except a corporation organized pursuant to Chapter 1719. of the Revised Code prior to January 1, 1980 or organized pursuant to Chapter 3941. of the Revised Code, that enters into a contract or other agreement with the federal government, a unit of state government, or a political subdivision or taxing unit of this state for the provision of services shall keep accurate and complete financial records of any moneys expended in relation to the performance of the services pursuant to such contract or agreement according to generally accepted accounting principles. Such contract or agreement and such financial records shall be deemed to be public records as defined in division (A)(1) of section 149.43 of the Revised Code and are subject to the requirements of division (B) of that section, except that:

(1) Any information directly or indirectly identifying a present or former individual patient or client or his diagnosis, prognosis, or medical treatment, treatment for a mental or emotional disorder, treatment for mental retardation or a developmental disability, treatment for drug abuse or alcoholism, or counseling for personal or social problems is not a public record;

(2) If disclosure of the contract or agreement or financial records is requested at a time when confidential professional services are being provided to a patient or client whose confidentiality might be violated if disclosure were made at that time, disclosure may be deferred if reasonable times are established when the contractor agreement or financial records will be disclosed;

(3) Any nonprofit corporation or association that receives both public and private funds in fulfillment of any such contract or other agreement is not required to keep as public records the financial records of any private funds expended in relation to the performance of services pursuant to the contract or agreement.

(B) Any nonprofit corporation or association that receives more than fifty per cent of its gross receipts excluding moneys received pursuant to Title XVIII of the "Social Security Act," 49 Stat. 620 (1935), 42 U.S.C. 301, as amended, in a calendar year in fulfillment of a contract or other agreement for services with a governmental entity shall maintain information setting forth the compensation of any individual serving the nonprofit corporation or association in an executive or administrative capacity. Such information shall be deemed to be public records as defined in division (A)(1) of section 149.43 of the Revised Code and is subject to the requirements of division (B) of that section.

Nothing in this section shall be construed to otherwise limit the provisions of section 149.43 of the Revised Code.

Appendix A – Statutes

Ohio Revised Code § 149.432 – Release of library record or patron information

(A) As used in this section:

(1) “Library” means a library that is open to the public, including any of the following:

- (a) A library that is maintained and regulated under section 715.13 of the Revised Code;
- (b) A library that is created, maintained, and regulated under Chapter 3375. of the Revised Code;
- (c) A library that is created and maintained by a public or private school, college, university, or other educational institution;
- (d) A library that is created and maintained by a historical or charitable organization, institution, association, or society.

“Library” includes the members of the governing body and the employees of a library.

(2) “Library record” means a record in any form that is maintained by a library and that contains any of the following types of information:

- (a) Information that the library requires an individual to provide in order to be eligible to use library services or borrow materials;
- (b) Information that identifies an individual as having requested or obtained specific materials or materials on a particular subject;
- (c) Information that is provided by an individual to assist a library staff member to answer a specific question or provide information on a particular subject.

“Library record” does not include information that does not identify any individual and that is retained for the purpose of studying or evaluating the use of a library and its materials and services.

(3) Subject to division (B)(5) of this section, “patron information” means personally identifiable information about an individual who has used any library service or borrowed any library materials.

(B) A library shall not release any library record or disclose any patron information except in the following situations:

- (1) If a library record or patron information pertaining to a minor child is requested from a library by the minor child’s parent, guardian, or custodian, the library shall make that record or information available to the parent, guardian, or custodian in accordance with division (B) of section 149.43 of the Revised Code.
- (2) Library records or patron information shall be released in the following situations:
 - (a) In accordance with a subpoena, search warrant, or other court order;
 - (b) To a law enforcement officer who is acting in the scope of the officer’s law enforcement duties and who is investigating a matter involving public safety in exigent circumstances.
- (3) A library record or patron information shall be released upon the request or with the consent of the individual who is the subject of the record or information.

Appendix A – Statutes

(4) Library records may be released for administrative library purposes, including establishment or maintenance of a system to manage the library records or to assist in the transfer of library records from one records management system to another, compilation of statistical data on library use, and collection of fines and penalties.

(5) A library may release under division (B) of section 149.43 of the Revised Code records that document improper use of the internet at the library so long as any patron information is removed from those records. As used in division (B)(5) of this section, “patron information” does not include information about the age or gender of an individual.

Ohio Revised Code § 149.433 – Exemption of security and infrastructure records

(A) As used in this section:

(1) “Act of terrorism” has the same meaning as in section 2909.21 of the Revised Code.

(2) “Infrastructure record” means any record that discloses the configuration of a public office’s or chartered nonpublic school’s critical systems including, but not limited to, communication, computer, electrical, mechanical, ventilation, water, and plumbing systems, security codes, or the infrastructure or structural configuration of the building in which a public office or chartered nonpublic school is located. “Infrastructure record” does not mean a simple floor plan that discloses only the spatial relationship of components of a public office or chartered nonpublic school or the building in which a public office or chartered nonpublic school is located.

(3) “Security record” means any of the following:

(a) Any record that contains information directly used for protecting or maintaining the security of a public office against attack, interference, or sabotage;

(b) Any record assembled, prepared, or maintained by a public office or public body to prevent, mitigate, or respond to acts of terrorism, including any of the following:

(i) Those portions of records containing specific and unique vulnerability assessments or specific and unique response plans either of which is intended to prevent or mitigate acts of terrorism, and communication codes or deployment plans of law enforcement or emergency response personnel;

(ii) Specific intelligence information and specific investigative records shared by federal and international law enforcement agencies with state and local law enforcement and public safety agencies;

(iii) National security records classified under federal executive order and not subject to public disclosure under federal law that are shared by federal agencies, and other records related to national security briefings to assist state and local government with domestic preparedness for acts of terrorism.

(c) A school safety plan adopted pursuant to section 3313.536 of the Revised Code.

(B) A record kept by a public office that is a security record or an infrastructure record is not a public record under section 149.43 of the Revised Code and is not subject to mandatory release or disclosure under that section.

Appendix A – Statutes

(C) Notwithstanding any other section of the Revised Code, disclosure by a public office, public employee, chartered nonpublic school, or chartered nonpublic school employee of a security record or infrastructure record that is necessary for construction, renovation, or remodeling work on any public building or project or chartered nonpublic school does not constitute public disclosure for purposes of waiving division (B) of this section and does not result in that record becoming a public record for purposes of section 149.43 of the Revised Code.

Most Recent Effective Date: 09-28-2006

Ohio Revised Code § 149.434 – Database or list of names and birth dates of persons elected to or employed by that public office

(A) Each public office or person responsible for public records shall maintain a database or a list that includes the name and date of birth of all public officials and employees elected to or employed by that public office. The database or list is a public record and shall be made available upon a request made pursuant to section 149.43 of the Revised Code.

(B) As used in this section:

- (1) “Employee” has the same meaning as in section 9.40 of the Revised Code.
- (2) “Public official” has the same meaning as in section 117.01 of the Revised Code.
- (3) “Public record” has the same meaning as in section 149.43 of the Revised Code.

Most Recent Effective Date: 09-01-2008

Ohio Revised Code § 149.44 – Availability of records in centers and archival institutions

Any state records center or archival institution established pursuant to sections 149.31 and 149.331 of the Revised Code is an extension of the departments, offices, and institutions of the state and all state and local records transferred to records centers and archival institutions shall be available for use under section 149.43 of the Revised Code. The state records administration, assisted by the state archivist, shall establish rules and procedures for the operation of state records centers and archival institutions holding public records, respectively.

Most Recent Effective Date: 07-01-1985

Ohio Revised Code § 121.22 – Meetings of public bodies to be public; exceptions

(A) This section shall be liberally construed to require public officials to take official action and to conduct all deliberations upon official business only in open meetings unless the subject matter is specifically excepted by law.

Appendix A – Statutes

(B) As used in this section:

(1) "Public body" means any of the following:

(a) Any board, commission, committee, council, or similar decision-making body of a state agency, institution, or authority, and any legislative authority or board, commission, committee, council, agency, authority, or similar decision-making body of any county, township, municipal corporation, school district, or other political subdivision or local public institution;

(b) Any committee or subcommittee of a body described in division (B)(1)(a) of this section;

(c) A court of jurisdiction of a sanitary district organized wholly for the purpose of providing a water supply for domestic, municipal, and public use when meeting for the purpose of the appointment, removal, or reappointment of a member of the board of directors of such a district pursuant to section 6115.10 of the Revised Code, if applicable, or for any other matter related to such a district other than litigation involving the district. As used in division (B)(1)(c) of this section, "court of jurisdiction" has the same meaning as "court" in section 6115.01 of the Revised Code.

(2) "Meeting" means any prearranged discussion of the public business of the public body by a majority of its members.

(3) "Regulated individual" means either of the following:

(a) A student in a state or local public educational institution;

(b) A person who is, voluntarily or involuntarily, an inmate, patient, or resident of a state or local institution because of criminal behavior, mental illness or retardation, disease, disability, age, or other condition requiring custodial care.

(4) "Public office" has the same meaning as in section 149.011 [149.01.1] of the Revised Code.

(C) All meetings of any public body are declared to be public meetings open to the public at all times. A member of a public body shall be present in person at a meeting open to the public to be considered present or to vote at the meeting and for purposes of determining whether a quorum is present at the meeting.

The minutes of a regular or special meeting of any public body shall be promptly prepared, filed, and maintained and shall be open to public inspection. The minutes need only reflect the general subject matter of discussions in executive sessions authorized under division (G) or (J) of this section.

(D) This section does not apply to any of the following:

(1) A grand jury;

(2) An audit conference conducted by the auditor of state or independent certified public accountants with officials of the public office that is the subject of the audit;

(3) The adult parole authority when its hearings are conducted at a correctional institution for the sole purpose of interviewing inmates to determine parole or pardon;

(4) The organized crime investigations commission established under section 177.01 of the Revised Code;

Appendix A – Statutes

(5) Meetings of a child fatality review board established under section 307.621 [307.62.1] of the Revised Code and meetings conducted pursuant to sections 5153.171 [5153.17.1] to 5153.173 [5153.17.3] of the Revised Code;

(6) The state medical board when determining whether to suspend a certificate without a prior hearing pursuant to division (G) of either section 4730.25 or 4731.22 of the Revised Code;

(7) The board of nursing when determining whether to suspend a license or certificate without a prior hearing pursuant to division (B) of section 4723.281 [4723.28.1] of the Revised Code;

(8) The state board of pharmacy when determining whether to suspend a license without a prior hearing pursuant to division (D) of section 4729.16 of the Revised Code;

(9) The state chiropractic board when determining whether to suspend a license without a hearing pursuant to section 4734.37 of the Revised Code;

(10) The executive committee of the emergency response commission when determining whether to issue an enforcement order or request that a civil action, civil penalty action, or criminal action be brought to enforce Chapter 3750. of the Revised Code;

(11) The board of directors of the nonprofit corporation formed under section 187.01 of the Revised Code or any committee thereof, and the board of directors of any subsidiary of that corporation or a committee thereof;

(12) An audit conference conducted by the audit staff of the department of job and family services with officials of the public office that is the subject of that audit under section 5101.37 of the Revised Code.

(E) The controlling board, the development financing advisory council, the industrial technology and enterprise advisory council, the tax credit authority, or the minority development financing advisory board, when meeting to consider granting assistance pursuant to Chapter 122. or 166. of the Revised Code, in order to protect the interest of the applicant or the possible investment of public funds, by unanimous vote of all board, council, or authority members present, may close the meeting during consideration of the following information confidentially received by the authority, council, or board from the applicant:

(1) Marketing plans;

(2) Specific business strategy;

(3) Production techniques and trade secrets;

(4) Financial projections;

(5) Personal financial statements of the applicant or members of the applicant's immediate family, including, but not limited to, tax records or other similar information not open to public inspection.

The vote by the authority, council, or board to accept or reject the application, as well as all proceedings of the authority, council, or board not subject to this division, shall be open to the public and governed by this section.

(F) Every public body, by rule, shall establish a reasonable method whereby any person may determine the time and place of all regularly scheduled meetings and the time, place, and purpose of all special meetings. A public body shall not hold a special meeting unless it gives at least twenty-four hours' advance notice to the news media that have requested notification, except in the event of an emergency requiring immediate official

Appendix A – Statutes

action. In the event of an emergency, the member or members calling the meeting shall notify the news media that have requested notification immediately of the time, place, and purpose of the meeting.

The rule shall provide that any person, upon request and payment of a reasonable fee, may obtain reasonable advance notification of all meetings at which any specific type of public business is to be discussed. Provisions for advance notification may include, but are not limited to, mailing the agenda of meetings to all subscribers on a mailing list or mailing notices in self-addressed, stamped envelopes provided by the person.

(G) Except as provided in division (J) of this section, the members of a public body may hold an executive session only after a majority of a quorum of the public body determines, by a roll call vote, to hold an executive session and only at a regular or special meeting for the sole purpose of the consideration of any of the following matters:

(1) To consider the appointment, employment, dismissal, discipline, promotion, demotion, or compensation of a public employee or official, or the investigation of charges or complaints against a public employee, official, licensee, or regulated individual, unless the public employee, official, licensee, or regulated individual requests a public hearing. Except as otherwise provided by law, no public body shall hold an executive session for the discipline of an elected official for conduct related to the performance of the elected official's official duties or for the elected official's removal from office. If a public body holds an executive session pursuant to division (G)(1) of this section, the motion and vote to hold that executive session shall state which one or more of the approved purposes listed in division (G)(1) of this section are the purposes for which the executive session is to be held, but need not include the name of any person to be considered at the meeting.

(2) To consider the purchase of property for public purposes, or for the sale of property at competitive bidding, if premature disclosure of information would give an unfair competitive or bargaining advantage to a person whose personal, private interest is adverse to the general public interest. No member of a public body shall use division (G)(2) of this section as a subterfuge for providing covert information to prospective buyers or sellers. A purchase or sale of public property is void if the seller or buyer of the public property has received covert information from a member of a public body that has not been disclosed to the general public in sufficient time for other prospective buyers and sellers to prepare and submit offers.

If the minutes of the public body show that all meetings and deliberations of the public body have been conducted in compliance with this section, any instrument executed by the public body purporting to convey, lease, or otherwise dispose of any right, title, or interest in any public property shall be conclusively presumed to have been executed in compliance with this section insofar as title or other interest of any bona fide purchasers, lessees, or transferees of the property is concerned.

(3) Conferences with an attorney for the public body concerning disputes involving the public body that are the subject of pending or imminent court action;

(4) Preparing for, conducting, or reviewing negotiations or bargaining sessions with public employees concerning their compensation or other terms and conditions of their employment;

(5) Matters required to be kept confidential by federal law or regulations or state statutes;

(6) Details relative to the security arrangements and emergency response protocols for a public body or a public office, if disclosure of the matters discussed could reasonably be expected to jeopardize the security of the public body or public office;

(7) In the case of a county hospital operated pursuant to Chapter 339. of the Revised Code, a joint township hospital operated pursuant to Chapter 513. of the Revised Code, or a municipal hospital operated pursuant

Appendix A – Statutes

to Chapter 749. of the Revised Code, to consider trade secrets, as defined in section 1333.61 of the Revised Code.

If a public body holds an executive session to consider any of the matters listed in divisions (G)(2) to (7) of this section, the motion and vote to hold that executive session shall state which one or more of the approved matters listed in those divisions are to be considered at the executive session.

A public body specified in division (B)(1)(c) of this section shall not hold an executive session when meeting for the purposes specified in that division.

(H) A resolution, rule, or formal action of any kind is invalid unless adopted in an open meeting of the public body. A resolution, rule, or formal action adopted in an open meeting that results from deliberations in a meeting not open to the public is invalid unless the deliberations were for a purpose specifically authorized in division (G) or (J) of this section and conducted at an executive session held in compliance with this section. A resolution, rule, or formal action adopted in an open meeting is invalid if the public body that adopted the resolution, rule, or formal action violated division (F) of this section.

(I) (1) Any person may bring an action to enforce this section. An action under division (I)(1) of this section shall be brought within two years after the date of the alleged violation or threatened violation. Upon proof of a violation or threatened violation of this section in an action brought by any person, the court of common pleas shall issue an injunction to compel the members of the public body to comply with its provisions.

(2) (a) If the court of common pleas issues an injunction pursuant to division (I)(1) of this section, the court shall order the public body that it enjoins to pay a civil forfeiture of five hundred dollars to the party that sought the injunction and shall award to that party all court costs and, subject to reduction as described in division (I)(2) of this section, reasonable attorney's fees. The court, in its discretion, may reduce an award of attorney's fees to the party that sought the injunction or not award attorney's fees to that party if the court determines both of the following:

(i) That, based on the ordinary application of statutory law and case law as it existed at the time of violation or threatened violation that was the basis of the injunction, a well-informed public body reasonably would believe that the public body was not violating or threatening to violate this section;

(ii) That a well-informed public body reasonably would believe that the conduct or threatened conduct that was the basis of the injunction would serve the public policy that underlies the authority that is asserted as permitting that conduct or threatened conduct.

(b) If the court of common pleas does not issue an injunction pursuant to division (I)(1) of this section and the court determines at that time that the bringing of the action was frivolous conduct, as defined in division (A) of section 2323.51 of the Revised Code, the court shall award to the public body all court costs and reasonable attorney's fees, as determined by the court.

(3) Irreparable harm and prejudice to the party that sought the injunction shall be conclusively and irrebuttably presumed upon proof of a violation or threatened violation of this section.

(4) A member of a public body who knowingly violates an injunction issued pursuant to division (I)(1) of this section may be removed from office by an action brought in the court of common pleas for that purpose by the prosecuting attorney or the attorney general.

(J) (1) Pursuant to division (C) of section 5901.09 of the Revised Code, a veterans service commission shall hold an executive session for one or more of the following purposes unless an applicant requests a public hearing:

Appendix A – Statutes

- (a) Interviewing an applicant for financial assistance under sections 5901.01 to 5901.15 of the Revised Code;
 - (b) Discussing applications, statements, and other documents described in division (B) of section 5901.09 of the Revised Code;
 - (c) Reviewing matters relating to an applicant's request for financial assistance under sections 5901.01 to 5901.15 of the Revised Code.
- (2) A veterans service commission shall not exclude an applicant for, recipient of, or former recipient of financial assistance under sections 5901.01 to 5901.15 of the Revised Code, and shall not exclude representatives selected by the applicant, recipient, or former recipient, from a meeting that the commission conducts as an executive session that pertains to the applicant's, recipient's, or former recipient's application for financial assistance.
- (3) A veterans service commission shall vote on the grant or denial of financial assistance under sections 5901.01 to 5901.15 of the Revised Code only in an open meeting of the commission. The minutes of the meeting shall indicate the name, address, and occupation of the applicant, whether the assistance was granted or denied, the amount of the assistance if assistance is granted, and the votes for and against the granting of assistance.

Most Recent Effective Date: 09-29-2011

Ohio Revised Code § 149.45 – Redacting, encrypting, or truncating personal information; request by protected individual

A) As used in this section:

- (1) "Personal information" means any of the following:
 - (a) An individual's social security number;
 - (b) An individual's federal tax identification number;
 - (c) An individual's driver's license number or state identification number;
 - (d) An individual's checking account number, savings account number, or credit card number.
- (2) "Public record" and "peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation residential and familial information" have the same meanings as in section 149.43 of the Revised Code.
- (3) "Truncate" means to redact all but the last four digits of an individual's social security number.

(B) (1) No public office or person responsible for a public office's public records shall make available to the general public on the internet any document that contains an individual's social security number without otherwise redacting, encrypting, or truncating the social security number.

Appendix A – Statutes

(2) A public office or person responsible for a public office's public records that prior to the effective date of this section made available to the general public on the internet any document that contains an individual's social security number shall redact, encrypt, or truncate the social security number from that document.

(3) Divisions (B)(1) and (2) of this section do not apply to documents that are only accessible through the internet with a password.

(C) (1) An individual may request that a public office or a person responsible for a public office's public records redact personal information of that individual from any record made available to the general public on the internet. An individual who makes a request for redaction pursuant to this division shall make the request in writing on a form developed by the attorney general and shall specify the personal information to be redacted and provide any information that identifies the location of that personal information within a document that contains that personal information.

(2) Upon receiving a request for a redaction pursuant to division (C)(1) of this section, a public office or a person responsible for a public office's public records shall act within five business days in accordance with the request to redact the personal information of the individual from any record made available to the general public on the internet, if practicable. If a redaction is not practicable, the public office or person responsible for the public office's public records shall verbally or in writing within five business days after receiving the written request explain to the individual why the redaction is impracticable.

(3) The attorney general shall develop a form to be used by an individual to request a redaction pursuant to division (C)(1) of this section. The form shall include a place to provide any information that identifies the location of the personal information to be redacted.

(D) (1) A peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation may request that a public office other than a county auditor or a person responsible for the public records of a public office other than a county auditor redact the address of the person making the request from any record made available to the general public on the internet that includes peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation residential and familial information of the person making the request. A person who makes a request for a redaction pursuant to this division shall make the request in writing and on a form developed by the attorney general.

(2) Upon receiving a written request for a redaction pursuant to division (D)(1) of this section, a public office other than a county auditor or a person responsible for the public records of a public office other than a county auditor shall act within five business days in accordance with the request to redact the address of the peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation making the request from any record made available to the general public on the internet that includes peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation residential and familial information of the person making the request, if practicable. If a redaction is not practicable, the public office or person responsible for the public office's public records shall verbally or in writing within five business days after receiving the written request explain to the peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation why the redaction is impracticable.

(3) Except as provided in this section and section 319.28 of the Revised Code, a public office other than an employer of a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant

Appendix A – Statutes

prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation or a person responsible for the public records of the employer is not required to redact the residential and familial information of the peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation from other records maintained by the public office.

(4) The attorney general shall develop a form to be used by a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation to request a redaction pursuant to division (D)(1) of this section. The form shall include a place to provide any information that identifies the location of the address of a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation to be redacted.

(E) (1) If a public office or a person responsible for a public office's public records becomes aware that an electronic record of that public office that is made available to the general public on the internet contains an individual's social security number that was mistakenly not redacted, encrypted, or truncated as required by division (B)(1) or (2) of this section, the public office or person responsible for the public office's public records shall redact, encrypt, or truncate the individual's social security number within a reasonable period of time.

(2) A public office or a person responsible for a public office's public records is not liable in damages in a civil action for any harm an individual allegedly sustains as a result of the inclusion of that individual's personal information on any record made available to the general public on the internet or any harm a peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation sustains as a result of the inclusion of the address of the peace officer, parole officer, probation officer, bailiff, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation on any record made available to the general public on the internet in violation of this section unless the public office or person responsible for the public office's public records acted with malicious purpose, in bad faith, or in a wanton or reckless manner or division (A)(6)(a) or (c) of section 2744.03 of the Revised Code applies.

Ohio Revised Code § 319.28 – General tax list and general duplicate of real and public utility property; numbering system; request by protected individual for use of initials

(A) Except as otherwise provided in division (B) of this section, on or before the first Monday of August, annually, the county auditor shall compile and make up a general tax list of real and public utility property in the county, either in tabular form and alphabetical order, or, with the consent of the county treasurer, by listing all parcels in a permanent parcel number sequence to which a separate alphabetical index is keyed, containing the names of the several persons, companies, firms, partnerships, associations, and corporations in whose names real property has been listed in each township, municipal corporation, special district, or separate school district, or part of either in the auditor's county, placing separately, in appropriate columns opposite each name, the description of each tract, lot, or parcel of real estate, the value of each tract, lot, or parcel, the value of the improvements thereon, and of the names of the several public utilities whose property,

Appendix A – Statutes

subject to taxation on the general tax list and duplicate, has been apportioned by the department of taxation to the county, and the amount so apportioned to each township, municipal corporation, special district, or separate school district or part of either in the auditor's county, as shown by the certificates of apportionment of public utility property. If the name of the owner of any tract, lot, or parcel of real estate is unknown to the auditor, "unknown" shall be entered in the column of names opposite said tract, lot, or parcel. Such lists shall be prepared in duplicate. On or before the first Monday of September in each year, the auditor shall correct such lists in accordance with the additions and deductions ordered by the tax commissioner and by the county board of revision, and shall certify and on the first day of October deliver one copy thereof to the county treasurer. The copies prepared by the auditor shall constitute the auditor's general tax list and treasurer's general duplicate of real and public utility property for the current year.

Once a permanent parcel numbering system has been established in any county as provided by the preceding paragraph, such system shall remain in effect until otherwise agreed upon by the county auditor and county treasurer.

(B) (1) A peace officer, parole officer, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation may submit a written request by affidavit to the county auditor requesting the county auditor to remove the name of the peace officer, parole officer, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation from any record made available to the general public on the internet or a publicly accessible database and the general tax list of real and public utility property and the general duplicate of real and public utility property and insert the initials of the peace officer, parole officer, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation on any record made available to the general public on the internet or a publicly accessible database and the general tax list of real and public utility property and the general duplicate of real and public utility property as the name of the peace officer, parole officer, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation that appears on the deed.

(2) Upon receiving a written request by affidavit described in division (B)(1) of this section, the county auditor shall act within five business days in accordance with the request to remove the name of the peace officer, parole officer, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation from any record made available to the general public on the internet or a publicly accessible database and the general tax list of real and public utility property and the general duplicate of real and public utility property and insert initials of the peace officer, parole officer, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation on any record made available to the general public on the internet or a publicly accessible database and the general tax list of real and public utility property and the general duplicate of real and public utility property, if practicable. If the removal and insertion is not practicable, the county auditor shall verbally or in writing within five business days after receiving the written request explain to the peace officer, parole officer, prosecuting attorney, assistant prosecuting attorney, correctional employee, youth services employee, firefighter, EMT, or investigator of the bureau of criminal identification and investigation why the removal and insertion is impracticable.

Ohio Revised Code § 1347.01 – Personal Information Systems Act: Definitions

As used in this chapter, except as otherwise provided:

(A) "State agency" means the office of any elected state officer and any agency, board, commission, department, division, or educational institution of the state.

(B) "Local agency" means any municipal corporation, school district, special purpose district, or township of the state or any elected officer or board, bureau, commission, department, division, institution, or instrumentality of a county.

(C) "Special purpose district" means any geographic or political jurisdiction that is created by statute to perform a limited and specific function, and includes, but is not limited to, library districts, conservancy districts, metropolitan housing authorities, park districts, port authorities, regional airport authorities, regional transit authorities, regional water and sewer districts, sanitary districts, soil and water conservation districts, and regional planning agencies.

(D) "Maintains" means state or local agency ownership of, control over, responsibility for, or accountability for systems and includes, but is not limited to, state or local agency depositing or information with a data processing center for storage, processing, or dissemination. An agency "maintains" all systems of records that are required by law to be kept by the agency.

(E) "Personal information" means any information that describes anything about a person, or that indicates actions done by or to a person, or that indicates that a person possesses certain personal characteristics, and that contains, and can be retrieved from a system by, a name, identifying number, symbol, or other identifier assigned to a person.

(F) "System" means any collection or group of related records that are kept in an organized manner and that are maintained by a state or local agency, and from which personal information is retrieved by the name of the person or by some identifying number, symbol, or other identifier assigned to the person. "System" includes both records that are manually stored and records that are stored using electronic data processing equipment. "System" does not include collected archival records in the custody of or administered under the authority of the Ohio historical society, published directories, reference materials or newsletters, or routine information that is maintained for the purpose of internal office administration, the use of which would not adversely affect a person.

(G) "Interconnection of systems" means a linking of systems that belong to more than one agency or to an agency and other organizations, which linking of systems results in a system that permits each agency or organization involved in the linking to have unrestricted access to the systems of the other agencies and organizations.

(H) "Combination of systems" means a unification of systems that belong to more than one agency, or to an agency and another organization, into a single system in which the records that belong to each agency or organization may or may not be obtainable by the others.

Ohio Revised Code § 1347.04 – Exemptions

(A) (1) Except as provided in division (A)(2) of this section or division (C)(2) of section 1347.08 of the Revised Code, the following are exempt from the provisions of this chapter:

(a) Any state or local agency, or part of a state or local agency, that performs as its principal function any activity relating to the enforcement of the criminal laws, including police efforts to prevent, control, or reduce crime or to apprehend criminals;

(b) The criminal courts;

(c) Prosecutors;

(d) Any state or local agency or part of any state or local agency that is a correction, probation, pardon, or parole authority;

(e) Personal information systems that are comprised of investigatory material compiled for law enforcement purposes by agencies that are not described in divisions (A)(1)(a) and (d) of this section.

(2) A part of a state or local agency that does not perform, as its principal function, an activity relating to the enforcement of the criminal laws is not exempt under this section.

(B) The provisions of this chapter shall not be construed to prohibit the release of public records, or the disclosure of personal information in public records, as defined in section 149.43 of the Revised Code, or to authorize a public body to hold an executive session for the discussion of personal information if the executive session is not authorized under division (G) of section 121.22 of the Revised Code.

The disclosure to members of the general public of personal information contained in a public record, as defined in section 149.43 of the Revised Code, is not an improper use of personal information under this chapter.

(C) The provisions of this chapter shall not be construed to prohibit, and do not prohibit, compliance with any order issued pursuant to division (D)(1) of section 2151.14 of the Revised Code, any request for records that is properly made pursuant to division (D)(3)(a) of section 2151.14 or division (A) of section 2151.141 [2151.14.1] of the Revised Code, or any determination that is made by a court pursuant to division (D)(3)(b) of section 2151.14 or division (B)(1) of section 2151.141 [2151.14.1] of the Revised Code.

Ohio Revised Code § 1347.05 – Duties of state and local agencies

Every state or local agency that maintains a personal information system shall:

(A) Appoint one individual to be directly responsible for the system;

(B) Adopt and implement rules that provide for the operation of the system in accordance with the provisions of this chapter that, in the case of state agencies, apply to state agencies or, in the case of local agencies, apply to local agencies;

Appendix A – Statutes

(C) Inform each of its employees who has any responsibility for the operation or maintenance of the system, or for the use of personal information maintained in the system, of the applicable provisions of this chapter and of all rules adopted in accordance with this section;

(D) Specify disciplinary measures to be applied to any employee who initiates or otherwise contributes to any disciplinary or other punitive action against any individual who brings to the attention of appropriate authorities, the press, or any member of the public, evidence of unauthorized use of information contained in the system;

(E) Inform a person who is asked to supply personal information for a system whether the person is legally required to, or may refuse to, supply the information;

(F) Develop procedures for purposes of monitoring the accuracy, relevance, timeliness, and completeness of the personal information in this system, and, in accordance with the procedures, maintain the personal information in the system with the accuracy, relevance, timeliness, and completeness that is necessary to assure fairness in any determination made with respect to a person on the basis of the information;

(G) Take reasonable precautions to protect personal information in the system from unauthorized modification, destruction, use, or disclosure;

(H) Collect, maintain, and use only personal information that is necessary and relevant to the functions that the agency is required or authorized to perform by statute, ordinance, code, or rule, and eliminate personal information from the system when it is no longer necessary and relevant to those functions.

Most Recent Effective Date: 01-23-1981

Ohio Revised Code § 1347.06 – Rules

The director of administrative services shall adopt, amend, and rescind rules pursuant to Chapter 119. of the Revised Code for the purposes of administering and enforcing the provisions of this chapter that pertain to state agencies.

A state or local agency that, or an officer or employee of a state or local agency who, complies in good faith with a rule applicable to the agency is not subject to criminal prosecution or civil liability under this chapter.

Most Recent Effective Date: 01-23-1981

Ohio Revised Code § 1347.07 – Use of personal information

A state or local agency shall only use the personal information in a personal information system in a manner that is consistent with the purposes of the system.

Most Recent Effective Date: 01-23-1981

Appendix A – Statutes

Ohio Revised Code § 1347.071 – Interconnected or combined systems

(A) No state or local agency shall place personal information in an interconnected or combined system, or use personal information that is placed in an interconnected or combined system by another state or local agency or another organization, unless the interconnected or combined system will contribute to the efficiency of the involved agencies in implementing programs that are authorized by law.

(B) No state or local agency shall use personal information that is placed in an interconnected or combined system by another state or local agency or another organization, unless the personal information is necessary and relevant to the performance of a lawful function of the agency.

(C) When a state or local agency requests a person to supply personal information that will be placed in an interconnected or combined system, the agency shall provide the person with information relevant to the system, including the identity of the other agencies or organizations that have access to the information in the system.

Most Recent Effective Date: 01-23-1981

Ohio Revised Code § 1347.08 – Rights of subject of personal information

(A) Every state or local agency that maintains a personal information system, upon the request and the proper identification of any person who is the subject of personal information in the system, shall:

(1) Inform the person of the existence of any personal information in the system of which the person is the subject;

(2) Except as provided in divisions (C) and (E)(2) of this section, permit the person, the person's legal guardian, or an attorney who presents a signed written authorization made by the person, to inspect all personal information in the system of which the person is the subject;

(3) Inform the person about the types of uses made of the personal information, including the identity of any users usually granted access to the system.

(B) Any person who wishes to exercise a right provided by this section may be accompanied by another individual of the person's choice.

(C) (1) A state or local agency, upon request, shall disclose medical, psychiatric, or psychological information to a person who is the subject of the information or to the person's legal guardian, unless a physician, psychiatrist, or psychologist determines for the agency that the disclosure of the information is likely to have an adverse effect on the person, in which case the information shall be released to a physician, psychiatrist, or psychologist who is designated by the person or by the person's legal guardian.

(2) Upon the signed written request of either a licensed attorney at law or a licensed physician designated by the inmate, together with the signed written request of an inmate of a correctional institution under the administration of the department of rehabilitation and correction, the department shall disclose medical information to the designated attorney or physician as provided in division (C) of section 5120.21 of the Revised Code.

Appendix A – Statutes

(D) If an individual who is authorized to inspect personal information that is maintained in a personal information system requests the state or local agency that maintains the system to provide a copy of any personal information that the individual is authorized to inspect, the agency shall provide a copy of the personal information to the individual. Each state and local agency may establish reasonable fees for the service of copying, upon request, personal information that is maintained by the agency.

(E) (1) This section regulates access to personal information that is maintained in a personal information system by persons who are the subject of the information, but does not limit the authority of any person, including a person who is the subject of personal information maintained in a personal information system, to inspect or have copied, pursuant to section 149.43 of the Revised Code, a public record as defined in that section.

(2) This section does not provide a person who is the subject of personal information maintained in a personal information system, the person's legal guardian, or an attorney authorized by the person, with a right to inspect or have copied, or require an agency that maintains a personal information system to permit the inspection of or to copy, a confidential law enforcement investigatory record or trial preparation record, as defined in divisions (A)(2) and (4) of section 149.43 of the Revised Code.

(F) This section does not apply to any of the following:

(1) The contents of an adoption file maintained by the department of health under section 3705.12 of the Revised Code;

(2) Information contained in the putative father registry established by section 3107.062 [3107.06.2] of the Revised Code, regardless of whether the information is held by the department of job and family services or, pursuant to section 3111.69 of the Revised Code, the office of child support in the department or a child support enforcement agency;

(3) Papers, records, and books that pertain to an adoption and that are subject to inspection in accordance with section 3107.17 of the Revised Code;

(4) Records listed in division (A) of section 3107.42 of the Revised Code or specified in division (A) of section 3107.52 of the Revised Code;

(5) Records that identify an individual described in division (A)(1) of section 3721.031 [3721.03.1] of the Revised Code, or that would tend to identify such an individual;

(6) Files and records that have been expunged under division (D)(1) or (2) of section 3721.23 of the Revised Code;

(7) Records that identify an individual described in division (A)(1) of section 3721.25 of the Revised Code, or that would tend to identify such an individual;

(8) Records that identify an individual described in division (A)(1) of section 5111.61 of the Revised Code, or that would tend to identify such an individual;

(9) Test materials, examinations, or evaluation tools used in an examination for licensure as a nursing home administrator that the board of examiners of nursing home administrators administers under section 4751.04 of the Revised Code or contracts under that section with a private government entity to administer;

(10) Information contained in a database established and maintained pursuant to section 5101.13 of the Revised Code.

Most Recent Effective Date: 10-16-2009

Appendix A – Statutes

Ohio Revised Code § 1347.09 – Disputed information; duties of agency

- (A) (1) If any person disputes the accuracy, relevance, timeliness, or completeness of personal information that pertains to him and that is maintained by any state or local agency in a personal information system, he may request the agency to investigate the current status of the information. The agency shall, within a reasonable time after, but not later than ninety days after, receiving the request from the disputant, make a reasonable investigation to determine whether the disputed information is accurate, relevant, timely, and complete, and shall notify the disputant of the results of the investigation and of the action that the agency plans to take with respect to the disputed information. The agency shall delete any information that it cannot verify or that it finds to be inaccurate.
- (2) If after an agency's determination, the disputant is not satisfied, the agency shall do either of the following:
- (a) Permit the disputant to include within the system a brief statement of his position on the disputed information. The agency may limit the statement to not more than one hundred words if the agency assists the disputant to write a clear summary of the dispute.
 - (b) Permit the disputant to include within the system a notation that the disputant protests that the information is inaccurate, irrelevant, outdated, or incomplete. The agency shall maintain a copy of the disputant's statement of the dispute. The agency may limit the statement to not more than one hundred words if the agency assists the disputant to write a clear summary of the dispute.
- (3) The agency shall include the statement or notation in any subsequent transfer, report, or dissemination of the disputed information and may include with the statement or notation of the disputant a statement by the agency that it has reasonable grounds to believe that the dispute is frivolous or irrelevant, and of the reasons for its belief.
- (B) The presence of contradictory information in the disputant's file does not alone constitute reasonable grounds to believe that the dispute is frivolous or irrelevant.
- (C) Following any deletion of information that is found to be inaccurate or the accuracy of which can no longer be verified, or if a statement of dispute was filed by the disputant, the agency shall, at the written request of the disputant, furnish notification that the information has been deleted, or furnish a copy of the disputant's statement of the dispute, to any person specifically designated by the person. The agency shall clearly and conspicuously disclose to the disputant that he has the right to make such a request to the agency.

Most Recent Effective Date: 01-23-1981

Ohio Revised Code § 1347.10 – Liability for wrongful disclosure; limitation of action

- (A) A person who is harmed by the use of personal information that relates to him and that is maintained in a personal information system may recover damages in civil action from any person who directly and proximately caused the harm by doing any of the following:
- (1) Intentionally maintaining personal information that he knows, or has reason to know, is inaccurate, irrelevant, no longer timely, or incomplete and may result in such harm;

Appendix A – Statutes

- (2) Intentionally using or disclosing the personal information in a manner prohibited by law;
- (3) Intentionally supplying personal information for storage in, or using or disclosing personal information maintained in, a personal information system, that he knows, or has reason to know, is false;
- (4) Intentionally denying to the person the right to inspect and dispute the personal information at a time when inspection or correction might have prevented the harm.

An action under this division shall be brought within two years after the cause of action accrued or within six months after the wrongdoing is discovered, whichever is later; provided that no action shall be brought later than six years after the cause of action accrued. The cause of action accrues at the time that the wrongdoing occurs.

(B) Any person who, or any state or local agency that, violates or proposes to violate any provision of this chapter may be enjoined by any court of competent jurisdiction. The court may issue an order or enter a judgment that is necessary to ensure compliance with the applicable provisions of this chapter or to prevent the use of any practice that violates this chapter. An action for an injunction may be prosecuted by the person who is the subject of the violation, by the attorney general, or by any prosecuting attorney.

Most Recent Effective Date: 01-23-1981

Ohio Revised Code § 1347.12 – Disclosure or notification by state or local agency of breach of security of personal information system

(A) As used in this section:

- (1) "Agency of a political subdivision" means each organized body, office, or agency established by a political subdivision for the exercise of any function of the political subdivision, except that "agency of a political subdivision" does not include an agency that is a covered entity as defined in 45 C.F.R. 160.103, as amended.
- (2) (a) "Breach of the security of the system" means unauthorized access to and acquisition of computerized data that compromises the security or confidentiality of personal information owned or licensed by a state agency or an agency of a political subdivision and that causes, reasonably is believed to have caused, or reasonably is believed will cause a material risk of identity theft or other fraud to the person or property of a resident of this state.
 - (b) For purposes of division (A)(2)(a) of this section:
 - (i) Good faith acquisition of personal information by an employee or agent of the state agency or agency of the political subdivision for the purposes of the agency is not a breach of the security of the system, provided that the personal information is not used for an unlawful purpose or subject to further unauthorized disclosure.
 - (ii) Acquisition of personal information pursuant to a search warrant, subpoena, or other court order, or pursuant to a subpoena, order, or duty of a regulatory state agency, is not a breach of the security of the system.
- (3) "Consumer reporting agency that compiles and maintains files on consumers on a nationwide basis" means a consumer reporting agency that regularly engages in the practice of assembling or evaluating, and maintaining, for the purpose of furnishing consumer reports to third parties bearing on a consumer's

Appendix A – Statutes

creditworthiness, credit standing, or credit capacity, each of the following regarding consumers residing nationwide:

- (a) Public record information;
 - (b) Credit account information from persons who furnish that information regularly and in the ordinary course of business.
- (4) "Encryption" means the use of an algorithmic process to transform data into a form in which there is a low probability of assigning meaning without use of a confidential process or key.
- (5) "Individual" means a natural person.
- (6) (a) "Personal information" means, notwithstanding section 1347.01 of the Revised Code, an individual's name, consisting of the individual's first name or first initial and last name, in combination with and linked to any one or more of the following data elements, when the data elements are not encrypted, redacted, or altered by any method or technology in such a manner that the data elements are unreadable:
- (i) Social security number;
 - (ii) Driver's license number or state identification card number;
 - (iii) Account number or credit or debit card number, in combination with and linked to any required security code, access code, or password that would permit access to an individual's financial account.
- (b) "Personal information" does not include publicly available information that is lawfully made available to the general public from federal, state, or local government records or any of the following media that are widely distributed:
- (i) Any news, editorial, or advertising statement published in any bona fide newspaper, journal, or magazine, or broadcast over radio or television;
 - (ii) Any gathering or furnishing of information or news by any bona fide reporter, correspondent, or news bureau to news media described in division (A)(6)(b)(i) of this section;
 - (iii) Any publication designed for and distributed to members of any bona fide association or charitable or fraternal nonprofit corporation;
 - (iv) Any type of media similar in nature to any item, entity, or activity identified in division (A)(6)(b)(i), (ii), or (iii) of this section.
- (7) "Political subdivision" has the same meaning as in section 2744.01 of the Revised Code.
- (8) "Record" means any information that is stored in an electronic medium and is retrievable in perceivable form. "Record" does not include any publicly available directory containing information an individual voluntarily has consented to have publicly disseminated or listed, such as name, address, or telephone number.
- (9) "Redacted" means altered or truncated so that no more than the last four digits of a social security number, driver's license number, state identification card number, account number, or credit or debit card number is accessible as part of the data.

Appendix A – Statutes

(10) "State agency" has the same meaning as in section 1.60 of the Revised Code, except that "state agency" does not include an agency that is a covered entity as defined in 45 C.F.R. 160.103, as amended.

(11) "System" means, notwithstanding section 1347.01 of the Revised Code, any collection or group of related records that are kept in an organized manner, that are maintained by a state agency or an agency of a political subdivision, and from which personal information is retrieved by the name of the individual or by some identifying number, symbol, or other identifier assigned to the individual. "System" does not include any collected archival records in the custody of or administered under the authority of the Ohio historical society, any published directory, any reference material or newsletter, or any routine information that is maintained for the purpose of internal office administration of the agency, if the use of the directory, material, newsletter, or information would not adversely affect an individual and if there has been no unauthorized external breach of the directory, material, newsletter, or information.

(B) (1) Any state agency or agency of a political subdivision that owns or licenses computerized data that includes personal information shall disclose any breach of the security of the system, following its discovery or notification of the breach of the security of the system, to any resident of this state whose personal information was, or reasonably is believed to have been, accessed and acquired by an unauthorized person if the access and acquisition by the unauthorized person causes or reasonably is believed will cause a material risk of identity theft or other fraud to the resident. The disclosure described in this division may be made pursuant to any provision of a contract entered into by the state agency or agency of a political subdivision with any person or another state agency or agency of a political subdivision prior to the date the breach of the security of the system occurred if that contract does not conflict with any provision of this section. For purposes of this section, a resident of this state is an individual whose principal mailing address as reflected in the records of the state agency or agency of a political subdivision is in this state.

(2) The state agency or agency of a political subdivision shall make the disclosure described in division (B)(1) of this section in the most expedient time possible but not later than forty-five days following its discovery or notification of the breach in the security of the system, subject to the legitimate needs of law enforcement activities described in division (D) of this section and consistent with any measures necessary to determine the scope of the breach, including which residents' personal information was accessed and acquired, and to restore the reasonable integrity of the data system.

(C) Any state agency or agency of a political subdivision that, on behalf of or at the direction of another state agency or agency of a political subdivision, is the custodian of or stores computerized data that includes personal information shall notify that other state agency or agency of a political subdivision of any breach of the security of the system in an expeditious manner, if the personal information was, or reasonably is believed to have been, accessed and acquired by an unauthorized person and if the access and acquisition by the unauthorized person causes or reasonably is believed will cause a material risk of identity theft or other fraud to a resident of this state.

(D) The state agency or agency of a political subdivision may delay the disclosure or notification required by division (B), (C), or (F) of this section if a law enforcement agency determines that the disclosure or notification will impede a criminal investigation or jeopardize homeland or national security, in which case, the state agency or agency of a political subdivision shall make the disclosure or notification after the law enforcement agency determines that disclosure or notification will not compromise the investigation or jeopardize homeland or national security.

(E) For purposes of this section, a state agency or agency of a political subdivision may disclose or make a notification by any of the following methods:

(1) Written notice;

Appendix A – Statutes

(2) Electronic notice, if the state agency's or agency of a political subdivision's primary method of communication with the resident to whom the disclosure must be made is by electronic means;

(3) Telephone notice;

(4) Substitute notice in accordance with this division, if the state agency or agency of a political subdivision required to disclose demonstrates that the agency does not have sufficient contact information to provide notice in a manner described in division (E)(1), (2), or (3) of this section, or that the cost of providing disclosure or notice to residents to whom disclosure or notification is required would exceed two hundred fifty thousand dollars, or that the affected class of subject residents to whom disclosure or notification is required exceeds five hundred thousand persons. Substitute notice under this division shall consist of all of the following:

(a) Electronic mail notice if the state agency or agency of a political subdivision has an electronic mail address for the resident to whom the disclosure must be made;

(b) Conspicuous posting of the disclosure or notice on the state agency's or agency of a political subdivision's web site, if the agency maintains one;

(c) Notification to major media outlets, to the extent that the cumulative total of the readership, viewing audience, or listening audience of all of the outlets so notified equals or exceeds seventy-five per cent of the population of this state.

(5) Substitute notice in accordance with this division, if the state agency or agency of a political subdivision required to disclose demonstrates that the agency has ten employees or fewer and that the cost of providing the disclosures or notices to residents to whom disclosure or notification is required will exceed ten thousand dollars. Substitute notice under this division shall consist of all of the following:

(a) Notification by a paid advertisement in a local newspaper that is distributed in the geographic area in which the state agency or agency of a political subdivision is located, which advertisement shall be of sufficient size that it covers at least one-quarter of a page in the newspaper and shall be published in the newspaper at least once a week for three consecutive weeks;

(b) Conspicuous posting of the disclosure or notice on the state agency's or agency of a political subdivision's web site, if the agency maintains one;

(c) Notification to major media outlets in the geographic area in which the state agency or agency of a political subdivision is located.

(F) If a state agency or agency of a political subdivision discovers circumstances that require disclosure under this section to more than one thousand residents of this state involved in a single occurrence of a breach of the security of the system, the state agency or agency of a political subdivision shall notify, without unreasonable delay, all consumer reporting agencies that compile and maintain files on consumers on a nationwide basis of the timing, distribution, and content of the disclosure given by the state agency or agency of a political subdivision to the residents of this state. In no case shall a state agency or agency of a political subdivision that is required to make a notification required by this division delay any disclosure or notification required by division (B) or (C) of this section in order to make the notification required by this division.

(G) The attorney general, pursuant to sections 1349.191 [1349.19.1] and 1349.192 [1349.19.2] of the Revised Code, may conduct an investigation and bring a civil action upon an alleged failure by a state agency or agency of a political subdivision to comply with the requirements of this section.

Appendix A – Statutes

Ohio Revised Code § 1347.15 – State agencies to adopt rules regulating access to confidential personal information; privacy impact assessment form; civil action for harm resulting from violation

(A) As used in this section:

(1) "Confidential personal information" means personal information that is not a public record for purposes of section 149.43 of the Revised Code.

(2) "State agency" does not include the courts or any judicial agency, any state-assisted institution of higher education, or any local agency.

(B) Each state agency shall adopt rules under Chapter 119. of the Revised Code regulating access to the confidential personal information the agency keeps, whether electronically or on paper. The rules shall include all the following:

(1) Criteria for determining which employees of the state agency may access, and which supervisory employees of the state agency may authorize those employees to access, confidential personal information;

(2) A list of the valid reasons, directly related to the state agency's exercise of its powers or duties, for which only employees of the state agency may access confidential personal information;

(3) References to the applicable federal or state statutes or administrative rules that make the confidential personal information confidential;

(4) A procedure that requires the state agency to do all of the following:

(a) Provide that any upgrades to an existing computer system, or the acquisition of any new computer system, that stores, manages, or contains confidential personal information include a mechanism for recording specific access by employees of the state agency to confidential personal information;

(b) Until an upgrade or new acquisition of the type described in division (B)(4)(a) of this section occurs, except as otherwise provided in division (C)(1) of this section, keep a log that records specific access by employees of the state agency to confidential personal information;

(5) A procedure that requires the state agency to comply with a written request from an individual for a list of confidential personal information about the individual that the state agency keeps, unless the confidential personal information relates to an investigation about the individual based upon specific statutory authority by the state agency;

(6) A procedure that requires the state agency to notify each person whose confidential personal information has been accessed for an invalid reason by employees of the state agency of that specific access;

(7) A requirement that the director of the state agency designate an employee of the state agency to serve as the data privacy point of contact within the state agency to work with the chief privacy officer within the office of information technology to ensure that confidential personal information is properly protected and that the state agency complies with this section and rules adopted thereunder;

(8) A requirement that the data privacy point of contact for the state agency complete a privacy impact assessment form; and

Appendix A – Statutes

(9) A requirement that a password or other authentication measure be used to access confidential personal information that is kept electronically.

(C) (1) A procedure adopted pursuant to division (B)(4) of this section shall not require a state agency to record in the log it keeps under division (B)(4)(b) of this section any specific access by any employee of the agency to confidential personal information in any of the following circumstances:

(a) The access occurs as a result of research performed for official agency purposes, routine office procedures, or incidental contact with the information, unless the conduct resulting in the access is specifically directed toward a specifically named individual or a group of specifically named individuals.

(b) The access is to confidential personal information about an individual, and the access occurs as a result of a request by that individual for confidential personal information about that individual.

(2) Each state agency shall establish a training program for all employees of the state agency described in division (B)(1) of this section so that these employees are made aware of all applicable statutes, rules, and policies governing their access to confidential personal information.

The office of information technology shall develop the privacy impact assessment form and post the form on its internet web site by the first day of December each year. The form shall assist each state agency in complying with the rules it adopted under this section, in assessing the risks and effects of collecting, maintaining, and disseminating confidential personal information, and in adopting privacy protection processes designed to mitigate potential risks to privacy.

(D) Each state agency shall distribute the policies included in the rules adopted under division (B) of this section to each employee of the agency described in division (B)(1) of this section and shall require that the employee acknowledge receipt of the copy of the policies. The state agency shall create a poster that describes these policies and post it in a conspicuous place in the main office of the state agency and in all locations where the state agency has branch offices. The state agency shall post the policies on the internet web site of the agency if it maintains such an internet web site. A state agency that has established a manual or handbook of its general policies and procedures shall include these policies in the manual or handbook.

(E) No collective bargaining agreement entered into under Chapter 4117. of the Revised Code on or after the effective date of this section shall prohibit disciplinary action against or termination of an employee of a state agency who is found to have accessed, disclosed, or used personal confidential information in violation of a rule adopted under division (B) of this section or as otherwise prohibited by law.

(F) The auditor of state shall obtain evidence that state agencies adopted the required procedures and policies in a rule under division (B) of this section, shall obtain evidence supporting whether the state agency is complying with those policies and procedures, and may include citations or recommendations relating to this section in any audit report issued under section 117.11 of the Revised Code.

(G) A person who is harmed by a violation of a rule of a state agency described in division (B) of this section may bring an action in the court of claims, as described in division (F) of section 2743.02 of the Revised Code, against any person who directly and proximately caused the harm.

(H) (1) No person shall knowingly access confidential personal information in violation of a rule of a state agency described in division (B) of this section.

(2) No person shall knowingly use or disclose confidential personal information in a manner prohibited by law.

Appendix A – Statutes

(3) No state agency shall employ a person who has been convicted of or pleaded guilty to a violation of division (H)(1) or (2) of this section.

(4) A violation of division (H)(1) or (2) of this section is a violation of a state statute for purposes of division (A) of section 124.341 [124.34.1] of the Revised Code.

Ohio Revised Code § 1347.99 – Penalties

(A) No public official, public employee, or other person who maintains, or is employed by a person who maintains, a personal information system for a state or local agency shall purposely refuse to comply with division (E), (F), (G), or (H) of section 1347.05, section 1347.071 [1347.07.1], division (A), (B), or (C) of section 1347.08, or division (A) or (C) of section 1347.09 of the Revised Code. Whoever violates this section is guilty of a minor misdemeanor.

(B) Whoever violates division (H)(1) or (2) of section 1347.15 of the Revised Code is guilty of a misdemeanor of the first degree.

Most Recent Effective Date: 04-07-2009

*Statutory Provisions Excepting Records from the Ohio Public Records Act or Declaring Records Confidential***

*This chart is based on one previously created by the Ohio Legislative Service Commission, which was current through October 23, 2008. The editors of this publication searched for amendments to the existing list and any new statutes, but do not represent this to be an exhaustive list. Independent legal research to determine whether there are additional applicable exceptions elsewhere in Ohio or Federal law that may apply to records being requested is still recommended.

**The exceptions listed in this Appendix include those addressed in R.C. 149.43 itself. If an exception is contained in both R.C. 149.43 and a specific area of law, the specific area of law is cited first, with the R.C. 149.43 citation following. Some of the listed exceptions are qualified exceptions. The statutes enumerated in the first column should be examined to determine whether there are qualifications that operate to remove or qualify any confidentiality provision or other exception from the topical description in the second column.

<u>Citation</u>	<u>Topic</u>
R.C. 3.16(C)(2)	Records of a special commission formed by the Chief Justice of the Ohio Supreme Court to determine whether a public official should be suspended as a result of being charged with a felony, until the special commission issues its written report.
R.C. 9.235(C)(1)	Records of the receipt or expenditure of nonpublic money by the recipient of a contract with a governmental entity.
R.C. 9.312(A)	Additional financial information requested by a state agency or political subdivision from an apparent low bidder on a public contract.
R.C. 9.92(E) and 2981.12(F)	Records maintained relative to a citizens' reward program.
R.C. 9.96(C)	Records of ownership, registration, transfer, and exchange of securities.
R.C. 101.30(B)	Legislative documents arising out of confidential General Assembly member/staff and legislative staff relationship.
R.C. 101.34(F)(1)	Certain files of former House and Senate ethics committees.
R.C. 102.02(B) and 102.07	Certain disclosure statements filed with the Ohio Ethics Commission.
R.C. 102.06(B), (C)(2), and (F)	Information and records concerning investigations of complaints and charges by appropriate ethics commission.
R.C. 102.07	Information and records presented to the Ohio Ethics Commission, Joint Legislative Ethics Committee (JLEC), or Board of Commissioners on Grievances and Discipline of the Supreme Court.
R.C. 102.08(D)	Privately sought written opinions and associated records of JLEC.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 109.28	Any investigation of a charitable trust by the Attorney General.
R.C. 109.365	Information obtained by the Attorney General in an investigation to determine whether to defend a state officer or employee.
R.C. 109.57(D) and (H)	Information and materials furnished to the Superintendent of the Bureau of Criminal Identification and Investigation (BCII) and information obtained by a board, administrator, or other person under a criminal records check.
R.C. 109.5721(C), (E) and (F)	Information in the Retained Applicant Fingerprint Database maintained by BCII and information regarding the arrest, conviction, or guilty plea of a person whose information is in the Database and of which the Superintendent of BCII is required to notify a participating public office.
R.C. 109.573(E) and 149.43(A)(1)(j)	Certain DNA-related records, fingerprints, photographs, and personal information BCII receives.
R.C. 109.75(L)	Ohio Peace Officer Training Commission certification examinations, either before or after completion.
R.C. 109.94(C)(1)	An application, and any supporting documentation, made with the Attorney General for an identity fraud passport.
R.C. 113.041(E)	The report of a BCII criminal records check of an individual who applies for employment with, or is employed by, the Treasurer of State's office.
R.C. 117.14	Annual audit report of the Auditor of State's office until specified filing.
R.C. 117.15	Annual audit report of the Treasurer of State's office until specified submission.
R.C. 117.26	Certified copies of completed audit reports until specified filing.
R.C. 120.38(A) and (B)	Information obtained by a public defender when determining if a person is indigent and communications between a defendant and public defender.
R.C. 121.22(E)	Specified information provided regarding an applicant or members of the applicant's immediate family to the Controlling Board, the Development Financing Advisory Council, the Industrial Technology and Enterprise Advisory Council, the Tax Credit Authority, or the Minority Development Financing Advisory Board in relation to an application for economic development assistance or assistance from the Department of Development.
R.C. 121.37(A)(2)(c) and (C)(6)	Records of meetings of the Ohio Family and Children First Cabinet Council that identify individual children and personal family information disclosed during county service coordination meetings or in service coordination plans.
R.C. 121.404(D)(2) and (3)	Information related to a registered emergency volunteer's specific and unique responsibilities, assignments, or deployment plans, including training, preparedness, readiness, or organizational assignment, and information related to a registered volunteer's personal information, including contact information, medical information, or information related to family members or dependents.
R.C. 121.44(A), 121.45, 121.47, and 121.48	Reports of an investigation conducted and designated confidential by the Inspector General or a deputy inspector general and confidential information acquired in the course of such an investigation.
R.C. 121.481(B)	Information that would risk impairing an investigation conducted by the Inspector General, when the Inspector General is requesting a transfer of money to the Special Investigations Fund.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 121.51	The random review program of the processing of contracts associated with building and maintaining the state's infrastructure that is conducted by the Deputy Inspector General for the Department of Transportation, and any confidential information the Deputy Inspector General accesses in the course of an investigation.
R.C. 121.52	Any confidential information the Deputy Inspector General for the Bureau of Workers' Compensation and Industrial Commission accesses in the course of an investigation.
R.C. 122.07(B)	Records concerning tourism market research of the Department of Development (DOD)--Division of Travel and Tourism.
R.C. 122.075(D)	A report to the Director of Development from the recipient of an Alternative Fuel Transportation Grant that identifies the gallon amounts of blended gasoline and blended biodiesel the applicant sells at retail in Ohio.
R.C. 122.17(G) and 122.171(G)	Certain financial statements and information submitted to DOD or the Tax Credit Authority.
R.C. 122.36	Trade secrets or commercial or financial information received by the DOD Director, the Industrial Technology and Enterprise Advisory Council, or the Controlling Board.
R.C. 122.42(D)	Financial statements and data submitted to the DOD Director in connection with certain loan applications.
R.C. 122.561	Financial statements and data submitted to the DOD Director, the Development Financing Advisory Council, or the Controlling Board in connection with applications for mortgage payments insurance.
R.C. 122.74(C)(2)	Financial statements and other data submitted to the DOD Director in connection with specified financial assistance.
R.C. 123.152(C)	Business and personal financial information and trade secrets submitted by Encouraging Diversity, Growth, and Equity Program applicants to the Director of Administrative Services.
R.C. 125.071(C)	Proposals and related documents submitted in response to requests for competitive sealed proposals, until specified time.
R.C. 125.30(B)	Information that has been designated as confidential by any state agency on the business reply form established by the Department of Administrative Services.
R.C. 126.48	A preliminary or final report of an internal audit's findings and recommendations produced by the Office of Internal Auditing in the Office of Budget and Management and all work papers of the internal audit, until submission of the final report.
R.C. 131.02(F)(4) and 131.022(I)	Information contained in an uncollectible claim owed to the state that is sold, conveyed, or transferred to a private entity and that is confidential under federal or state law.
R.C. 145.27(A), (B), and (D)(4), 3305.20, 3307.20(A)(1), (B), (C), and (E)(4), and 3309.22(A), (B), and (D)(4)	Certain information and records of the Public Employees Retirement Board, State Teachers Retirement Board, School Employees Retirement Board, or an entity providing an alternative retirement plan.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 149.431(A)(1) through (3)	Certain contracts, agreements and financial records of governmental entities, agencies and nonprofit organizations receiving governmental funds that identify a present or former patient or client or his diagnosis, prognosis, or medical treatment, treatment for a mental or emotional disorder, mental retardation or developmental disability, drug abuse or alcoholism, or counseling for personal or social problems, or certain financial records that pertain to any private funds expended in relation to the performance of services pursuant to the contract or agreement made between entities or organizations and the federal government.
R.C. 149.432(B)	Library records and patron information.
R.C. 149.433(B) and (C)	Public office's security records and infrastructure records: "security record" being (1) any record that contains information directly used for protecting or maintaining the security of a public office against attack, interference, or sabotage, or (2) any record assembled, prepared, or maintained by a public office or public body to prevent, mitigate, or respond to acts of terrorism; and "infrastructure record" being any record that discloses the configuration of a public office's critical systems, including communication, computer, electrical, mechanical, ventilation, water, and plumbing systems, security codes, or the infrastructure or structural configuration of the building in which a public office is located, but not including a simple floor plan that discloses only the spatial relationship of components of a public office or the building in which a public office is located.
R.C. 149.45	If a public office makes a document available on the Internet, an individual's Social Security Number and any personal information that the individual has asked to have redacted from that document.
R.C. 166.05(E)	Financial statements and other data submitted to the DOD Director, the Development Financing Advisory Council, or the Controlling Board by a private sector person in connection with specified financial assistance, and information taken from same.
R.C. 166.14(D)	Financial statements and other data submitted to the DOD Director, the Development Financing Advisory Council, or the Controlling Board by a private sector person in connection with the Innovation Financial Assistance Program, and information taken from same.
R.C. 166.19(D)	Financial statements and other data submitted to the DOD Director, the Development Financing Advisory Council, or the Controlling Board by a private sector person in connection with the Research and Development Financial Assistance Program, and information taken from same.
R.C. 169.03(F)(4)	Audited records of holders of unclaimed funds.
R.C. 173.061	Records identifying recipients of Golden Buckeye Cards, subject to Director of Aging discretion but never a recipient's medical history.
R.C. 173.22	Certain investigative and other files and information contained in the State Long-Term Care Ombudsperson Program's or regional program's office.
R.C. 173.27(E)	The report of a criminal records check of a person who is under final consideration for employment with the Office of the State Long-Term Care Ombudsperson Program in a position that involves providing ombudsperson services to long-term care residents and recipients.
R.C. 173.393(B)	A part of a record of an evaluation of a community-based long-term care agency, if the release of the record would violate a federal or state statute, regulation, or rule.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 173.394(E)	The report of a criminal records check of a person who is under final consideration for employment with a community-based long-term care agency in a position that involves providing direct care to an individual.
R.C. 175.12(B) and 149.43(A)(1)(y)	Financial statements and data submitted for any purpose to the Ohio Housing Finance Agency or the Controlling Board in connection with applying for, receiving, or accounting for financial assistance the Agency provides and information that identifies any individual who benefits directly or indirectly from financial assistance the Agency provides.
R.C. 177.02(F)	Information concerning the filing of a complaint and the investigation of organized criminal activity, for a specified time.
R.C. 177.03(D)(4) and (5)	Task force information concerning the investigation and potential prosecution of organized criminal activity.
R.C. 307.627, 307.629, 3701.045(A)(4), and 149.43(A)(1)(s)	Certain information, documents, and reports presented to the child fatality review board; statements made by board members at meetings; work product of a child fatality review board; and child fatality review data submitted by board to department of health or national child fatality review database.
R.C. 307.862(C)	Proposals and any documents or other records related to a subsequent negotiation for a final contract by a county contracting authority that uses competitive sealed proposals, until after the award of the contract.
R.C. 307.987	Information received by a private or government entity pursuant to a contract to provide workforce development activities or family service duties, a plan of cooperation, a regional plan of cooperation, or a transportation work plan that was confidential in the hands of the entity that provided the information.
R.C. 313.091	Medical or psychiatric record provided to a coroner.
R.C. 313.10(A)(2), (D), and (E)	The following records in a coroner's office, except in specified circumstances: preliminary autopsy and investigative notes and findings made by the coroner or by anyone acting under the coroner's direction or supervision, photographs of a decedent made by the coroner or by anyone acting under the coroner's direction or supervision, suicide notes, and medical and psychiatric records provided to the coroner.
R.C. 317.24(B)(2)(a), (b) and 149.43(A)(1)(aa)	Records of a discharged armed forces member recorded with a county recorder.
R.C. 319.34	County auditor's classified tax list and county treasurer's classified tax duplicate of taxable property.
R.C. 339.81	Information, data, and reports of a tuberculosis case furnished to, or procured by, a county or district tuberculosis control unit or the Department of Health.
R.C. 340.15(B)	Certain information obtained or maintained by a public children services agency or alcohol or drug addiction program.
R.C. 351.24	Records or proprietary information relating to lessees or other users obtained by a convention facilities authority or other persons acting under the Convention Facilities Authority Law.
R.C. 718.11	Records of transactions of a municipal corporation board of appeals relative to income taxation obligations.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 718.13	Information from tax returns, investigations, hearings, or verifications concerning municipal corporation income taxes.
R.C. 742.41(A)(2), (B), (C), and (E)(4)	Certain personal information in records of the Board of Trustees of the Ohio Police and Fire Pension Fund.
R.C. 901.13(E)	Any business plan submitted to the Ethanol Incentive Board as part of an ethanol production plant construction and operation application.
R.C. 901.27	Information acquired by a Department of Agriculture agent in an investigation.
R.C. 905.57	Information in an annual tonnage report (agricultural liming material sold or distributed) and certain other information maintained by the Department of Agriculture.
R.C. 917.17	Information furnished to or procured by the Director of Agriculture under the Dairies Law.
R.C. 921.02(E)	Trade secret or confidential business information on a pesticide registration application.
R.C. 921.04(B)	Information on a pesticide registration or permit application designated as a trade secret or confidential commercial or financial information.
R.C. 924.05(B)	Information contained in the individual reports filed with the Director of Agriculture by producers, handlers, or processors of any Ohio agricultural commodity for which a marketing program is proposed.
R.C. 926.06(D)	Financial information in the Department of Agriculture's records identifying commodity handler license applicants.
R.C. 1121.18(A)	Information related to an examination of a bank or other financial institution by the Superintendent of Financial Institutions.
R.C. 1121.25(A) and (E)	Commercial or financial information in an application or notice declared confidential by the Superintendent of Financial Institutions.
R.C. 1121.43(B)	Any written agreement or other writing for which a violation may be enforced by the Superintendent of Financial Institutions, if the Superintendent determines that publishing it and making it available to the public would be contrary to the public interest; a final order issued by the Superintendent of Financial Institutions, if the Superintendent determines that publishing it and making it available to the public would seriously threaten the safety and soundness of a bank or trust company, until a reasonable time.
R.C. 1121.45(C)	Certain records and information presented at a meeting with regulated persons called by the Superintendent of Financial Institutions.
R.C. 1155.16(A)	Reports or information regarding savings and loan associations obtained by the Superintendent of Financial Institutions or other persons.
R.C. 1163.20(A)	Reports or information regarding savings banks obtained by the Superintendent of Financial Institutions or other persons.
R.C. 1306.23	Records that would jeopardize the state's use or security of computer or telecommunications devices or services associated with electronic signatures, records, or transactions.
R.C. 1315.03(C) and 1315.10(C)	Information in or related to an application for a money transmitter license or an application to acquire control of a money transmitter license to which the Superintendent of Financial Institutions decides to grant confidential treatment.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 1315.122(A)	Information leading to, arising from, or obtained in the course of the examination of a licensee or other person conducted under the money transmitter laws.
R.C. 1315.53(H)	A report, record, information, analysis, or request obtained by the Attorney General or an agency pursuant to the Currency and Foreign Transactions Reporting Act, 84 Stat. 1118 (1970).
R.C. 1315.54(C)	A record, other document, or information obtained by the Attorney General pursuant to an investigation of a money transmitter.
R.C. 1321.09(A)	Reports filed with the Superintendent of Financial Institutions by small loans licensees.
R.C. 1321.422(B)	Individual reports required to be filed with the Superintendent of Financial Institutions by licensees under the short-term loan laws regarding the business and operation for the preceding calendar year.
R.C. 1321.46(C)(4)	The database of short-term loan borrowers that the Superintendent of Financial Institutions may develop to permit licensees to determine whether a borrower is eligible for a loan.
R.C. 1321.48(B), (C), (D), and (F)	Examination and investigation information, and any information leading to or arising from an examination or an investigation that is maintained by the Superintendent of Financial Institutions or released to the Attorney General under the short-term loan laws.
R.C. 1321.55(B)(2)	Annual individual reports filed by second mortgage security loans registrants with the Superintendent of Financial Institutions.
R.C. 1321.76(C)	Information obtained by the Superintendent of Financial Institutions regarding insurance premium finance company licensees.
R.C. 1322.061(A), (B), 1349.43(E), and 1349.44(B)	Examination, investigation, and certain application information (i.e. SSN's, employer identification numbers, particular banking and financial information, etc.) obtained by the Superintendent of Financial Institutions regarding mortgage broker registrants.
R.C. 1331.16(L)	Certain records and information provided to the Attorney General pursuant to an investigative demand under the Monopoly Law.
R.C. 1332.25(G)	Information in an application made to the Director of Commerce for a video service authorization that the applicant identifies, and the Director affirms, as trade secret information.
R.C. 1332.30(E)(2)(b)	Quarterly reports to a municipal corporation or township identifying the total number of video service subscribers served within the municipal corporation or the unincorporated area of the township.
R.C. 1345.05(A)(7)	Identity of suppliers investigated or facts developed in investigations of Consumer Sales Practices Act violations.
R.C. 1346.03	Certain tax information about a tobacco product manufacturer acquired by the Department of Taxation and provided to the Attorney General.
R.C. 1501.012(B), 1501.091, and 1501.10	Questionnaires and financial statements submitted to the Director of Natural Resources by a public service facility construction contract bidder, by a bidder for a contract for the operation of public service facilities, or by a bidder for a lease of public service facilities in a state park.
R.C. 1505.03	Geological records accepted and retained on a confidential basis by the Chief of the Division of Geological Survey of the Department of Natural Resources (DNR).

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 1506.32(J)	Revelation by the Director of Natural Resources of abandoned property's location during certain time periods.
R.C. 1513.07(B)(2), (C)(12), and (D)	Information pertaining to the analysis of the chemical and physical properties of coal and certain other information by the Chief of DNR's Division of Mineral Resources Management.
R.C. 1513.072(B)	Trade secrets or certain privileged commercial or financial information submitted to the Chief of DNR's Division of Mineral Resources Management (coal exploration operations).
R.C. 1514.02(A)(9)	Information relating to test boring results submitted to the Chief of DNR's Division of Mineral Resources Management.
R.C. 1531.04 (E)	Information regarding sensitive site locations of endangered plant species and of unique natural features that are included in the Ohio Natural Heritage Database, if the Chief of Natural Areas and Preserves determines that the release of the information could be detrimental to the conservation of a species or unique natural feature.
R.C. 1531.06(M)	Information regarding sensitive site locations of endangered wildlife species and of features that are included in the Wildlife Diversity Database, if the Chief of the Division of Wildlife determines that the release of the information could be detrimental to the conservation of a species or feature.
R.C. 1547.80(C)	A copy of the registration, security plan, and emergency locator map provided by certain port facilities to the Department of Public Safety, the Department of Natural Resources, the sheriff of the county in which the port is located, and the chief of police of each municipal corporation in which the port is located.
R.C. 1551.11(B)	Trade secrets or other proprietary information submitted to the Director of Development regarding utilization of present, new, or alternative energy sources, the conservation of energy, energy resource development facilities, the attraction of funding in emerging and established national or state priority areas, or the enhancement of the state's economic development.
R.C. 1551.35(C) and 1555.17	Trade secrets or proprietary information in materials or data submitted to the Ohio Air Quality Development Authority or the Director of the Ohio Coal Development Office in connection with agreements for financial assistance relative to coal research and development projects.
R.C. 1707.12(B) and (C)	Investigation information, confidential law enforcement investigatory records, trial preparation records, and certain exempt transaction information of the Department of Commerce's Division of Securities.
R.C. 1710.02(C)	Records of organizations contracting with a special improvement district.
R.C. 1716.05(B)(5)(a)	Attorney General cannot disclose, as reflected in a fund-raising counsel's solicitation campaign records, a contributor's name and address and the date and amount of each contribution to the fund-raising counsel.
R.C. 1716.07(G)(1)(a)	Attorney General cannot disclose, as reflected in a professional solicitor's solicitation campaign records, a contributor's name, address, and telephone number and the date and amount of each contribution to the professional solicitor.
R.C. 1724.11(A)(1) and (2)	Certain financial, proprietary, and other information submitted by an entity to a community improvement corporation acting as a political subdivision's agent.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 1733.32(H)	Information obtained by the Superintendent of Financial Institutions under an examination or independent audit of a credit union.
R.C. 1733.327(A)	Certain conferences and administrative proceedings, and associated documents, regarding a credit union.
R.C. 1739.16(E)	Written agreement between a multiple employer welfare arrangement operating a group self-insurance program and a third party administrator.
R.C. 1751.19(C)	Any document or information pertaining to a complaint or response that contains a medical record, that is provided to the Superintendent of Insurance for inspection by a health insuring corporation.
R.C. 1751.52(B)	Data or information concerning an enrollee's or applicant's diagnosis, treatment, or health obtained by a health insuring corporation from specified sources.
R.C. 1751.80(A)	Health insuring corporation's clinical review rationale when made available to government agency.
R.C. 1753.38(A) and (C)(1) and 3903.88	The risk-based capital plans, reports, information, and orders maintained by the Superintendent of Insurance.
R.C. 1761.08(A)(3)	Certain financial statements and analyses furnished to a credit union share guaranty corporation.
R.C. 1761.21(A)	Conferences and administrative proceedings, and associated documents, regarding a credit union share guaranty corporation.
R.C. 2111.021	A file, record, petition, motion, account, or paper pertaining to a conservatorship upon probate court order.
R.C. 2151.14(B)	Reports and records of a juvenile court's probation department.
R.C. 2151.141(B)(2)	Under specified circumstances, certain records of a law enforcement agency or prosecuting attorney regarding abused, neglected, or dependent child complaints (protective orders).
R.C. 2151.142(B) and (C)	Under specified circumstances, residential address of an officer or employee, or person related by blood or marriage to an officer or employee, of a public children services agency or private child placing agency (the agency, the juvenile court, and any law enforcement agency cannot disclose).
R.C. 2151.313(C)	Originals and copies of fingerprints and photographs of a child and the child's related records of arrest or custody.
R.C. 2151.356 and 2151.357	Juvenile court records that have been sealed by court order.
R.C. 2151.421(H)(1) and (K)(2)	Reports by specified individuals regarding their knowledge or suspicion of a suffered, or of a threat of a, physical or mental wound, injury, disability, or condition reasonably indicating abuse or neglect of a minor or of a mentally retarded, developmentally disabled, or physically impaired child under age 21.
R.C. 2151.422(D)	Information in the possession of a homeless shelter that identifies the last known residential address and county of residence of a homeless person.
R.C. 2151.423	Information discovered during an investigation of the neglect or abuse of a child that is disclosed to any federal, state, or local government entity that needs the information to carry out its responsibilities to protect children from abuse or neglect.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 2151.85(F), 2505.073(B), 2919.121(C)(7), and 149.43(A)(1)(c)	The complaint and all other papers and records that pertain to an action brought by a pregnant, unmarried, and unemancipated minor woman who wishes to have an abortion without the notification of her parents, guardian, or custodian and all papers and records that pertain to an appeal of such an action.
R.C. 2151.86(E)	BCII criminal records check information relative to a person under final consideration for employment as a child caregiver in out-of-home care, a prospective adoptive parent, or a prospective recipient of a foster home certificate from the Department of Job and Family Services (DJFS).
R.C. 2152.19(D)(3), 2930.13(D), and 2947.051(C)	A victim impact statement associated with a felony that was committed by an adjudicated delinquent child or adult offender and that involved a specified “physical harm” aspect.
R.C. 2305.24	Information, data, reports, or records furnished to a quality assurance or utilization committee of a hospital, long-term care facility, not-for-profit health care corporation, state or local medical society, or to a quality assurance committee of the bureau of workers’ compensation or the industrial commission.
R.C. 2305.252	Proceedings and records of a peer review committee of a health care entity.
R.C. 2305.253	An incident report or risk management report and the contents of an incident report or risk management report, in a tort action.
R.C. 2307.46(A)	Upon court order in a civil action, except for limited purposes, the identity of a woman upon whom an abortion was allegedly performed, induced, or attempted.
R.C. 2317.02, 2317.021, and 4732.19	Certain privileged communications between an attorney, physician, dentist, psychologist, school psychologist, school guidance counselor, professional clinical counselor, professional counselor, social worker, independent social worker, social work assistant, mediator, communications assistant, member of the clergy, spouse, or chiropractor and a client, patient, person being religiously counseled, other spouse, or parent.
R.C. 2710.03(A), 2710.07, and 149.43(A)(1)(i)	Mediation communications.
R.C. 2743.62(A)(2)(a)	A record or report that the Court of Claims or Attorney General obtains under the Crime Victims Reparations Awards Law that is confidential or exempt from public disclosure when in its creator’s possession.
R.C. 2921.22(G)	Information about the commission of a felony that would otherwise have to be reported, under specified circumstances, such as an attorney-client relationship, doctor-patient relationship, etc.
R.C. 2921.24(A)	Home address of any peace officer who is a witness or arresting officer in a pending criminal case (law enforcement agency, court, or court clerk’s office cannot disclose in absence of court order).
R.C. 2921.25	The home address of a peace officer, parole officer, prosecuting attorney, assistant prosecuting attorney, correctional employee, or youth services employee, during examination in a court case or mayor’s court case.
R.C. 2923.129(B)(1) and (D)	Sheriff records concerning the issuance, renewal, suspension, or revocation of a concealed handgun license or temporary emergency concealed handgun license, subject to a specified journalist exception and information regarding concealed handgun licenses a sheriff makes available through the Law Enforcement Automated Data System.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 2925.42(D)(4)	Until property is seized, the recording and transcript of certain proceedings in relation to “felony drug abuse offense” forfeitures.
R.C. 2930.07	The victim’s or victim’s representative’s address, place of employment, or similar identifying fact, if the prosecutor in a case determines that there are reasonable grounds for the victim in a case to be apprehensive regarding acts or threats of violence or intimidation by the defendant or alleged juvenile offender and the court issues an order that the information should be confidential.
R.C. 2930.13(D), 2947.06, 2951.03, and 2953.08(F)(1)	Certain or all information in presentence investigation reports (contents and summaries) and those reports, psychiatric reports, and other investigative reports in an appellate court record to be reviewed.
R.C. 2930.14(A)	Written statement before sentencing of a victim, defendant, or alleged juvenile offender.
R.C. 2933.231(E)	Until search warrant is returned, the recording and transcript of proceeding concerning a request for a waiver of the statutory precondition for nonconsensual entry.
R.C. 2933.63	The contents, or evidence derived from the contents, of a wire, oral, or electronic communication that was unlawfully intercepted or improperly intercepted pursuant to an interception warrant or an oral order for an interception or that is of a privileged character and a special need for its interception is not shown.
R.C. 2939.18	Information that an indictment has been found against a person not in custody or under bail, before the indictment is filed and the case docketed.
R.C. 2950.08	Certain statements, information, photographs, fingerprints, and other material required under the Sex Offender Registration Law.
R.C. 2950.10(A)(4)	Information a sheriff obtains regarding the victim of a sexually oriented offense or a child-victim oriented offense who wishes to be notified of the offender’s or delinquent child’s registration status.
R.C. 2950.13(A)(1) and (13)	BCII’s Internet database of the State Registry of Sex Offenders and Child-Victim Offenders and information obtained by local law enforcement representatives through use of the database.
R.C. 2953.32(C) and (D) and 2953.321	Official records and related investigatory work product in a first offender’s case sealed by court order.
R.C. 2953.52(B), 2953.53(D), and 2953.54	Official records and related investigatory work product pertaining to a case sealed by court order (person found not guilty; complaint, indictment, or information against person dismissed; or no bill entered by grand jury) whether in the possession of court or another public office or agency.
R.C. 2981.03(B)(4)	Until property is seized under the Forfeiture Law, the recording and transcript of certain hearings or proceedings in relation to the forfeiture of that property.
R.C. 3101.05(A) and 3101.051	In connection with marriage license applications, under specified circumstances, a record containing applicant Social Security numbers.
R.C. 3107.17(B)(1) and (D)	Certain placement or adoption records and information; forms concerning the social or medical histories of the biological parents of an adopted person (only specified individuals may access).

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 3107.42(A) and 149.43(A)(1)(f)	The following records regarding persons available or potentially available for adoption prior to September 18, 1996: the file of releases; the indices to the file of releases; releases and withdrawals of releases in the file of releases, and information contained in them; and probate court and agency records pertaining to adoption proceedings.
R.C. 3107.52(A) and 149.43(A)(1)(f)	The Department of Health's records pertaining to adoption proceedings regarding a person available or potentially available for adoption on or after September 18, 1996.
R.C. 3111.94(A)	A physician's files concerning non-spousal artificial inseminations.
R.C. 3113.31(E)(8)(b)	The address of a person who petitions for a civil protection order or a consent agreement, if the person requests that the person's address be confidential.
R.C. 3113.36	Any information that would identify individuals served by a domestic violence shelter.
R.C. 3113.40	Information in the possession of a domestic violence shelter that identifies the residential address and county of residence information for a person admitted to the shelter.
R.C. 3121.76	Information obtained from a financial institution pursuant to an account information access agreement.
R.C. 3121.894 and 149.43(A)(1)(o)	Records maintained by the Department of Job and Family Services (DJFS) to locate individuals for the purposes of establishing paternity, or establishing, modifying, and enforcing support orders being administered by child support enforcement agencies, or to detect fraud in any DJFS administered program.
R.C. 3121.899(A)	New hire reports filed by employers with DJFS.
R.C. 3301.0711(I) and (N) and 3319.151(A)	Individual assessment scores and proposed assessment questions, anchor questions, questions that are needed for reuse on a future assessment, and assessment administered in the fall or summer.
R.C. 3301.0714(I)	Data collected or maintained in the Statewide Education Management Information System that identifies a pupil.
R.C. 3301.12(A)(3)	Individual student data used in studies and research projects for the improvement of public school education that are conducted under the authority of the Superintendent of Public Instruction.
R.C. 3301.32(D), 3301.541(D), 3301.88(E), and 3319.39(D)	BCII criminal records check information relative to a Head Start employment applicant, a preschool employment applicant, an applicant to participate in a program established under the Classroom Reading Improvement Grants Program in a specified manner, or a school district, educational service center, or chartered nonpublic school employment applicant.
R.C. 3302.021(A)(2)	Individual student test scores and reports used in the Value-Added Progress Dimension.
R.C. 3302.10(G)	Financial disclosure statements filed with the Ohio Ethics Commission by members of an academic distress commission.
R.C. 3304.21	Lists of names or information in the Rehabilitation Services Commission's records pertaining to applicants for or recipients of Commission services.
R.C. 3310.11(D)	Any document relative to the Educational Choice Scholarship Pilot Program that the Department of Education holds in its files and that contains both a student's name or other personally identifiable information and the student's data verification code.
R.C. 3313.173	Certain identifying information provided pursuant to a school district or educational service center reward offer relative to crimes committed against school employees or pupils or on school property.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 3313.533(H)(6)	Under certain circumstances, confidential or proprietary information or trade secrets contained in alternative school proposals submitted to a school district board of education.
R.C. 3313.536(C)	Copies of the safety plan and building blueprint adopted by a board of education or governing authority of a chartered nonpublic school, and copies of a school building floor plan filed with the Attorney General.
R.C. 3313.71	Certain records regarding the examination of pupils, teachers, or other school employees for tuberculosis.
R.C. 3313.714(C)	Information received by a board of education in relation to a Healthcheck program.
R.C. 3319.088(E)	Personal information concerning a pupil in the school district that was obtained or obtainable by an educational assistant.
R.C. 3319.292	Any questions the State Board of Education and the Department of Education ask an applicant for issuance or renewal of a teaching license regarding a record of a conviction, plea of guilty, bail forfeiture, or other disposition of a criminal offense committed or alleged to have been committed by the applicant that has been sealed or expunged and the responses of the applicant to such questions.
R.C. 3319.311(A) and (B)	Information obtained during a State Board of Education or Superintendent of Public Instruction investigation that may be the basis for suspending, revoking, or limiting an educator's license.
R.C. 3319.321(A), (B), and (C)	Personally identifiable information, and in some cases directory information, concerning students attending a public school, and other public school records.
R.C. 3323.05(F)(6) and (7) and (G)(2)	Discussions that occur during a mediation process or resolution session between parents of children with disabilities and a school district.
R.C. 3323.06(A)	Personally identifiable data, information, and records collected under a State Board of Education plan concerning the education of handicapped children.
R.C. 3334.11(J)	Certain records of the Ohio Tuition Trust Authority concerning tuition credits or college savings bonds.
R.C. 3334.19(H)	Records of the Ohio Tuition Trust Authority indicating the identity of purchasers, contributors, and beneficiaries under the Variable College Savings Program and amounts contributed to, earned by, or distributed from Program accounts.
R.C. 3503.10(E)(4)	The identity of the agency through which a person registered to vote, and information relating to a declination to register to vote at a designated agency.
R.C. 3503.11	Information relating to an applicant's decision to decline to register to vote or update the applicant's voter registration at the office of the Registrar of Motor Vehicles or deputy registrar.
R.C. 3505.181(B)(4)(b)	Information identifying whether a specific provisional ballot was counted, and, if the ballot was not counted, the reason the ballot was not counted.
R.C. 3506.18(D)	Any information on a voter verified paper audit trail that identifies the particular direct recording electronic voting machine that produced it.
R.C. 3509.06(E)	The count or any portion of the count of absent voter's ballots prior to the close of the polls.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 3599.161(B)	Records relating to the declination of a person to register to vote and the identity of the voter registration agency through which a particular person registered to vote maintained by directors and deputy directors of elections and board of elections employees.
R.C. 3701.028(A)	Specified records of the program for medically handicapped children and of programs funded by the federal Maternal and Child Health Block Grant.
R.C. 3701.041(B)	Records of a person's identity, diagnosis, prognosis, or treatment under the Employee Assistance Program.
R.C. 3701.044 and 3721.31(F)	Test materials, examinations, or evaluation tools used in any Department of Health examination or evaluation, specifically including competency evaluation programs and training and competency evaluation programs relative to long-term care facilities.
R.C. 3701.072(B) and (D) and 149.43(A)(1)(x)	Information reported to the Director of Health by a trauma center that describes the trauma center's preparedness and capacity to respond to disasters, mass casualties, and bioterrorism, and any evaluation the Director of Health conducts to verify that preparedness and capacity.
R.C. 3701.14(B) and (D)	Information obtained during an ongoing investigation or inquiry by the Director of Health (cause of disease or illness related) that is not in summary, statistical, or aggregate form and that identifies a person.
R.C. 3701.17(A) and (B)	Information that is reported to or obtained by the Director of Health, the Department of Health, or a board of health of a city or general health district that describes an individual's past, present, or future physical or mental health status or condition, receipt of treatment or care, or purchase of health products, and that reveals the identity of the individual or could be used to reveal the identity of the individual.
R.C. 3701.20(E)	Information of a poison prevention and treatment center about individuals to whom treatment or services are provided.
R.C. 3701.24(D), 3701.241(A), 3701.243(A), and 3701.247(A) and (C)	Information concerning AIDS cases, AIDS-related conditions, or confirmed positive HIV tests reported to the Department of Health that identifies an individual; information obtained or maintained under the associated partner notification system; certain information concerning an individual's HIV test and the identity of an individual diagnosed as having AIDS or an AIDS-related condition; and the identity of an individual against whom a probate court action has been brought to compel HIV testing.
R.C. 3701.248(B)(3) and (D)	Healthcare facilities and coroners must keep confidential certain information concerning possible exposure of emergency medical services workers and funeral services workers to a contagious or infectious disease.
R.C. 3701.263(A) and (B)	Certain information concerning a case of malignant disease furnished to a cancer registry or the Department of Health and information concerning individual cancer patients obtained by the Department for the Ohio Cancer Incidence Surveillance System.
R.C. 3701.509(E)	Patient-identifying information contained in newborn hearing screening reports submitted by hospitals and freestanding birthing centers to the Department of Health.
R.C. 3701.62	Any document regarding the Help Me Grow Program and a child's eligibility for special education services that the Director of Health holds in the Director's files that contains both a child's name or other personally identifiable information and the child's data verification code.
R.C. 3701.79(C) and (H)	Individual abortion reports and post abortion complication reports completed by a physician and submitted to the Department of Health.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 3701.881(E), 3712.09(E), 3721.121(E), and 3722.151(E)	BCII criminal records check information relative to a home health agency, a hospice care program, an adult day-care program, or an adult care facility employment applicant.
R.C. 3701.91	Information provided to the Department of Health through the toll-free patient safety telephone line.
R.C. 3702.18	Quality-of-care data, or records copied in an investigation of a violation of the Department of Health's rules, that identify specific patients; or safety reports concerning specific adverse events, bodily injuries, or complaints that are reported to the Department.
R.C. 3702.531	Identifying information about any patient in certain Director of Health investigations under the Certificates of Need Law.
R.C. 3704.08(A) and (B), 3704.18(A)(7), and 3706.19(C)(6)	Trade secrets obtained by the Director of Environmental Protection under the Air Pollution Control Law; records, reports, and information obtained by public officials under the Small Business Stationary Source Technical and Environmental Compliance Assistance Program; communications and information from small businesses seeking assistance under the Program; and information on problems and grievances assistance given to a small business by the Program's ombudsman.
R.C. 3705.09(G)	An original birth record and documentary evidence supporting a new registration of birth following fatherhood presumption, finding, declaration, or acknowledgement.
R.C. 3705.11	Under certain circumstances, a foundling report for a child of unknown parentage.
R.C. 3705.12, 3705.29(D), and 149.43(A)(1)(d)	Original birth records, adoption files, and certain other documents after a new record has been issued or obtained after an adoption.
R.C. 3705.15(D)(1)	Original birth records and index references after a new record is issued due to a correction of the original birth record.
R.C. 3705.23(A)(4)(b)	Information contained in the "Information for Medical and Health Use Only" section of a birth record (Department of Health's Office of Vital Statistics and local registrars).
R.C. 3705.32(A)	Records received and information assembled by the Birth Defects Information System.
R.C. 3706.20	Information or records relating to secret processes or methods of manufacture or production that are obtained by the Ohio Air Quality Development Authority.
R.C. 3713.09(C) and (D)	Records of any importer, manufacturer, or wholesaler of stuffed toys or articles of bedding, mobile home and recreational vehicle dealer, conversion van dealer, secondhand dealer, or auction house that are audited by the Superintendent of Industrial Compliance to determine compliance with the bedding and stuffed toy laws are confidential, except when required by the Public Records Law or as the Superintendent finds necessary for the proper administration of those laws.
R.C. 3717.28 and 3717.48	Trade secrets and other information required to be furnished to or procured by a licensor of retail food establishments or of food service operations.
R.C. 3719.13	Prescriptions, orders, and records required by the Controlled Substances Law.
R.C. 3721.026(B)	Technical assistance reports of the Department of Health's technical assistance unit for nursing facilities.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 3721.031	Information that identifies a patient or resident of a nursing home, a residential care facility, a home for the aging, or an Ohio Veterans' Home, or an individual who files a complaint or provides confidential information about a home or facility.
R.C. 3721.13(A)(10), 5119.12(B)(19)	Personal and/or medical records of the residents or patients of nursing homes, residential care facilities, homes for the aging, an Ohio Veterans' Home, adult care facilities, community alternative homes, and certain other homes.
R.C. 3721.25(A), (B), and (C)	Certain records and information concerning reports of long-term care facility or residential care facility resident abuse or neglect or misappropriation of resident property.
R.C. 5119.87(A)	Certain identifying information relative to reports alleging a violation of the Adult Care Facility Law (Director of Health).
R.C. 3723.09(H) and 3723.10	Information that the Public Health Council requires radon testers and mitigation specialists to report to the Director of Health, and the name of a complainant to the Director concerning a radon tester, mitigation specialist or contractor, or operator of a radon laboratory or a training course.
R.C. 3723.12(A)	Radon-related information collected by the Department of Health concerning a private residence or the real property upon which it is located, under certain circumstances.
R.C. 3727.081(F)	Information reported to or collected by the Department of Health regarding an application for a hospital to be designated a level II pediatric trauma center that identifies or would tend to identify specific patients.
R.C. 3727.101(E)(2)	Copies of the American College of Surgeons' report of a consultative or reverification visit and the plan and timetable for obtaining verification or reverification that are provided to the Director of Health by an adult or pediatric trauma center operating under provisional status.
R.C. 3727.36	Names and Social Security Numbers of patients, physicians, and dentists not to be included in data required to be reported by hospitals to the Department of Health.
R.C. 3733.471(D)	Information that the Migrant Agricultural Ombudsman's Office receives as a result of reports of certain violations of law filed with it.
R.C. 3734.42(A)(3) and 3734.43(L) and (N)	Certain documents associated with an Attorney General investigative report or investigative demand under the Solid and Hazardous Wastes Law.
R.C. 3737.16(E)	Information the Fire Marshal and certain other officials receive from an insurance company that has investigated or is investigating a fire loss of real or personal property, until a specified time.
R.C. 3737.23	Testimony given in an investigation into a fire is not a matter of public record in the Fire Marshal's record of Ohio fires determined by investigations.
R.C. 3742.03(E)(3)	Information that is a medical record and that is required to be reported under Public Health Council lead abatement project and lead poisoning record-keeping and reporting rules.
R.C. 3742.15	The name of a person who files a complaint with the Director of Health concerning a lead inspector, lead abatement contractor, lead risk assessor, lead abatement project designer, lead abatement worker, clearance technician, clinical laboratory, environmental lead analytical laboratory, or training course.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 3745.71	The contents of an environmental audit report, and the contents of communications between the owner or operator of a facility or property who conducts an environmental audit and employees or contractors of the owner or operator, or among employees or contractors of the owner or operator, that are necessary to the audit and are made in good faith as part of the audit after the employee or contractor is notified that the communication is part of the audit (applies to audits initiated after March 13, 1997, and completed prior to January 1, 2009).
R.C. 3750.02	Certain information obtained by the Emergency Response Commission and local emergency planning committees, such as trade secrets, confidential business information, and the name and address of a person who seeks access to information in the Commission's files.
R.C. 3750.09 and 3751.04	For purposes of the Emergency Planning Law and the Hazardous Substances Law, trade secrets or confidential business information obtained under the Emergency Planning and Community Right-To-Know Act of 1986.
R.C. 3750.10(B)(5)	Under certain circumstances, the storage location of a hazardous chemical at a facility provided on an emergency and hazardous chemical inventory form to the Emergency Response Commission or a local emergency planning committee.
R.C. 3750.22(B)(1)	Any vulnerability assessment or other security-sensitive information a public office receives from an owner or operator of a facility where chemicals are produced, or the owner or operator of any other facility or business of any type.
R.C. 3770.02(B)	State Lottery Commission meeting records, unless prior notification of the Director and a showing of good cause.
R.C. 3770.07(A)(1) and (4)	The name, address, and Social Security Number of each beneficial owner of a trust that is making a claim for a lottery prize award, unless the beneficial owner consents to the inspection or copying in writing.
R.C. 3793.07(C)(8) and (E)	Investigatory records of the Department of Alcohol and Drug Addiction Services (DADAS) regarding the certification or credentialing of chemical dependency counselors and alcohol and other drug prevention specialists for the purpose of qualifying their services for reimbursement under the Medicare or Medicaid program.
R.C. 3793.12(C)	Communications by a person seeking aid in good faith for alcoholism or drug dependence and information revealing the person's identity not to be collected or disclosed by DADAS.
R.C. 3793.13(A)	Records or information pertaining to the identity, diagnosis, or treatment of any DADAS-licensed or certified drug treatment program patient.
R.C. 3793.14	Health and medical records of a person treated for alcoholism or drug addiction.
R.C. 3793.15(D)	A record or information DADAS obtains or maintains for the Addicted Pregnant Women Program that could identify a specific woman or her child.
R.C. 3901.045	Documents and information the Superintendent of Insurance receives from local, state, federal, and international regulatory and law enforcement agencies, from local, state, and federal prosecutors, from the National Association of Insurance Commissioners and its affiliates and subsidiaries, from the Chief Deputy Rehabilitator, from the Chief Deputy Liquidator, from other deputy rehabilitators and liquidators, and from any other person employed by, or acting on behalf of, the Superintendent, if the documents or information were confidential or privileged when held by the provider.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 3901.36	Information and documents obtained by the Superintendent of Insurance in an examination or investigation of an insurer's financial condition or legality of conduct.
R.C. 3901.44(B) and (D)	Documents, reports, and evidence in the possession of the Superintendent of Insurance pertaining to an insurance fraud investigation.
R.C. 3901.48(A), (B), and (C)	Certain records concerning an audit of an insurance company or health insuring company; and the work papers of the Superintendent of Insurance resulting from specified insurer examinations, financial analyses, and performance regulation examinations.
R.C. 3901.70(A)	Reports obtained by or disclosed to Superintendent of Insurance relative to insurer material transactions.
R.C. 3901.83	Record containing the medical history, diagnosis, prognosis, or medical condition of an enrollee of a health insuring corporation, insured of an insurer, or plan member of a public employee benefit plan, which is provided to Superintendent of Insurance under law.
R.C. 3903.11	Certain records pertaining to delinquency proceedings against an insurer and judicial reviews of those proceedings.
R.C. 3903.72(B)(3)(g)	A memorandum received by the Superintendent of Insurance in support of a qualified actuary's opinion on the valuation of an insurance company's reserves for policies and annuities and other related information.
R.C. 3905.24	Under certain circumstances, records and other information obtained by the Superintendent of Insurance in an investigation of an insurance agent license applicant, or of an agent, solicitor, broker, or other person licensed or appointed under the Insurance Producers Licensing Law, the Public Insurance Adjusters Law, the Home Warranty Companies Law, or the Third-Party Administrators Law.
R.C. 3905.50(H)	Information or documentation provided to an agent or to the Superintendent of Insurance by an insurer regarding termination of an independent insurance agency contract.
R.C. 3911.021	Reports maintained by the Superintendent of Insurance regarding measures taken by a life insurance company to detect and prevent stranger-originated life insurance.
R.C. 3916.11(D), 3916.12(E), and 3916.18(E)(1) and (G)(2)	Certain viator-related and other information, documents, reports, etc. produced or acquired by the Superintendent of Insurance in the course of an examination under the Viatical Settlements Law; documents and evidence obtained by the Superintendent in an investigation of a suspected or actual fraudulent viatical settlement act; antifraud plans submitted to the Superintendent under that law; proprietary information of viatical settlement licensees; individual transaction data; and data that could compromise the privacy of the viator's or insured's personal, financial, and health information.
R.C. 3929.302(G) and (I)	Information reported to the Department of Insurance by insurers and related entities or by attorneys or law firms regarding any medical, dental, optometric, or chiropractic claim asserted against a risk located in Ohio, if the claim resulted in a final judgment in any amount, a settlement in any amount, or a final disposition of the claim resulting in no indemnity payment on behalf of the insured.
R.C. 3929.68	Reports and communications made in connection with certain actions of the Medical Liability Underwriting Association, the Stabilization Reserve Fund, the Superintendent of Insurance, and others.
R.C. 3930.10	Reports and communications concerning the performance of powers and duties by the Ohio Commercial Insurance Joint Underwriting Association, the Superintendent of Insurance, and others under the Commercial Market Assistance Plan Law.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 3935.06	Information submitted for an examination of policies, etc. by an insurance rating bureau.
R.C. 3937.42(F)	Information a law enforcement or prosecuting agency receives from an insurance company investigating a claim involving motor vehicle or vessel insurance, until a specified time.
R.C. 3953.231(E)	Statements and reports submitted by a financial institution regarding trust account (IOTA) interest used to fund legal aid programs.
R.C. 3955.14(A)(2)	Ohio Insurance Guaranty Association's recommendations regarding the status of certain member insurers.
R.C. 3956.12(A)(4), (C), and (E)	Certain records concerning the detection and prevention of life and health insurance company insolvencies (Superintendent of Insurance and the Board of Directors of the Ohio Life and Health Insurance Guaranty Association).
R.C. 3961.07(C) and (G)	All records and other information concerning a discount medical plan organization obtained by the Superintendent of Insurance in an examination or investigation of the business and affairs of such an organization.
R.C. 3999.36(C)	Written notice of impairment sent by an insurer to the Superintendent of Insurance.
R.C. 4104.19(E)(1)	The examination for a license to operate as a steam engineer, high pressure boiler operator, or low pressure boiler operator.
R.C. 4111.14(H) and (I)	The name of a person who makes a complaint, and all records and information related to investigations by the state, regarding an employer's compliance with the constitutional minimum wage requirements.
R.C. 4112.05(B)(2) and (3)(c) and 149.43(A)(1)(i)	All information that was obtained as a result of or that otherwise pertains to a Civil Rights Commission preliminary investigation into allegedly unlawful discriminatory practices, prior to certain Commission actions.
R.C. 4121.44(D)(1) and (H)(3)	Certain vendor and other information associated with the Bureau of Workers' Compensation qualified health plan system, health partnership program, and health care data program.
R.C. 4121.45	Information in a claim file that an Industrial Commission ombudsperson accesses that that would tend to prejudice the case of either party to a claim or that would tend to compromise a privileged attorney-client or doctor-patient relationship.
R.C. 4123.27	Information contained in employer annual statements filed with the Bureau of Workers' Compensation (BWC) and information regarding recipients of public assistance provided to BWC by DJFS.
R.C. 4123.88	Claim files and other information concerning a claim or appeal filed with the Bureau of Workers' Compensation or the Industrial Commission and information directly or indirectly identifying the address or phone number of a claimant.
R.C. 4125.05(E) and (F)	All records, reports, client lists, and other information obtained by BWC from a professional employer organization, including the list of client employers included on the registration form.
R.C. 4141.162(E), 4141.21, and 4141.22	Certain information maintained by the Director of Job and Family Services under the Unemployment Compensation Law; and redisclosure of information declared confidential by the Unemployment Compensation Law.
R.C. 4163.07(C)	Information pertaining to any shipment of special nuclear material or by-product material, until specified time (Executive Director of Emergency Management Agency).

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 4167.10(B)(1) and 4167.12	Names of individuals who request inspections for a violation of an Ohio Employment Risk Reduction Standard (OERRS); and trade secret information reported in an OERRS investigation, inspection, or proceeding (BWC).
R.C. 4301.441	Any information provided to a state agency by the Department of Taxation necessary to verify a permit holder's gallonage or noncompliance with taxes levied under the Liquor Control Law or the Motor Vehicle Law.
R.C. 4303.17(A)(1)	Information acquired by the Department of Commerce's Division of Liquor Control concerning a D-4 liquor permit holder's membership roster.
R.C. 4501.15	Social Security Numbers from the driver's license and vehicle registration records maintained by the Department of Public Safety and credit card account numbers or any other information obtained when a person uses a credit card to pay motor vehicle registration taxes or fees, license fees, or other similar taxes, fees, penalties, or charges imposed or levied by the state and collected by the Department.
R.C. 4501.27	An individual's driver's license identification number, name, telephone number, address, photograph or digital image, Social Security number, and medical or disability information obtained by the Bureau of Motor Vehicles in connection with a motor vehicle record, subject to certain exceptions ("personal information" and "sensitive personal information").
R.C. 4501.271(B)	Under certain circumstances, a peace officer's, correctional employee's, or youth services employee's residential address obtained by the Bureau of Motor Vehicles in connection with a motor vehicle record.
R.C. 4501.34(B)	Any information on driver's license applications other than lists of names and addresses (Registrar of Motor Vehicles).
R.C. 4501.81(A)	Information in the Next of Kin Database established by the Bureau of Motor Vehicles.
R.C. 4507.20	Any report submitted to the Registrar of Motor Vehicles by a physician stating that, in the physician's professional opinion, the holder of a driver's or commercial driver's license may be incompetent or otherwise not qualified to operate safely a motor vehicle due to medical reasons.
R.C. 4509.10	Motor vehicle accident reports submitted to the Registrar of Motor Vehicles under the Financial Responsibility Law.
R.C. 4517.43(A)	Applications for licenses and copies of contracts provided under the Motor Vehicle Dealers Law to the Registrar of Motor Vehicles.
R.C. 4519.46	Snowmobile, off-highway motorcycle, or all-purpose vehicle accident reports received by the Registrar of Motor Vehicles.
R.C. 4563.30(D)	Copies of airport registrations, emergency locator maps, and security plans that are required to be provided to, and that are in the possession of, the Department of Public Safety, the Office of Aviation, a sheriff, or a chief of police.
R.C. 4582.091(A) and 4582.58(B)	Certain trade secret and other financial and proprietary information submitted by an employer to a port authority or specified nonprofit corporation; other information so submitted until specified time.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 4701.04(K)(1), 4701.19(B), and 4701.29(D)	In certain legal proceedings, the proceedings, records, and work papers of a public accounting firm peer reviewer; the statements, records, schedules, working papers, and memoranda made by a public accountant or CPA with respect to an audit of a public office or private entity (other than client's copy of report), including the same in Auditor of State's possession; and the investigative proceedings of the Accountancy Board.
R.C. 4705.10(B)	Statements and reports of individual depositor information relative to attorney interest-bearing trust accounts.
R.C. 4715.03(D)	State Dental Board proceedings concerning an investigation of a complaint and the determination in them whether reasonable grounds exist to believe a violation of the Dentists and Dental Hygienists Law has occurred.
R.C. 4719.02(E)	Social Security Number, bank account, and other specified information submitted in an application for a certificate of registration or registration renewal as a telephone solicitor.
R.C. 4723.09(C)	BCII criminal records check results and associated report relative to a registered nurse or licensed practical nurse license applicant.
R.C. 4723.28(I), 4723.282(D), and 4723.35(E)	Information received by the Board of Nursing in an investigation of an alleged violation of the Nurses Law; records of the Board for the purpose of the practice intervention and improvement program; and all records of a participant in the Board's chemical dependency monitoring program.
R.C. 4723.65(B)(3)	A criminal records check provided to the Board of Nursing by an applicant for a medication aide certificate or by BCII regarding such an applicant.
R.C. 4723.75(C)	BCII criminal records check results and associated report relative to a dialysis technician certificate applicant.
R.C. 4723.83(B)	BCII criminal records check results and associated report relative to a community health worker certificate applicant.
R.C. 4725.22(C) and 4725.23(C)	Information the State Board of Optometry receives regarding the final disposition of a claim or malpractice action against an optometrist; and information the Board receives in an investigation of an alleged violation of the Optometrists Law, including identifying information about patients or complainants.
R.C. 4727.18	Information arising from, obtained by, or contained in the Superintendent of Financial Institutions' investigation of a pawnbroker or of another person the Superintendent reasonably suspects has violated or is violating the Pawnbroker Law.
R.C. 4729.80(C)	Information contained in, and any information obtained from, the drug database established and maintained by the State Board of Pharmacy and information contained in the records of requests for information from the database.
R.C. 4730.26(F), 4730.32(F), 4731.22(F)(5), 4731.224(F), 4760.14(E), 4760.16(F), 4762.14(E), 4762.16(F), 4774.14(E), and 4774.16(F)	Information the State Medical Board receives in an investigation of an alleged violation of the Physician Assistants Law, the Physicians Law, the Anesthesiologist Assistants Law, the Acupuncturists Law, or the Radiologist Assistants Law; and summaries, reports, and records the Board receives and maintains regarding formal disciplinary actions taken with respect to physician assistants, physicians, anesthesiologist assistants, acupuncturists, or radiologist assistants by a health care facility, their alleged violations of the applicable law, their professional membership revocation or suspension for certain reasons, or their professional liability insurance claim final dispositions.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 4734.32(F), 4734.41(C), and 4734.45(B)	Summaries, reports, and records the State Chiropractic Board receives and maintains regarding formal disciplinary actions taken with respect to chiropractors by a health care facility, their alleged violations of the Chiropractors Law, their professional membership revocation or suspension for certain reasons, or their professional liability insurance claim final dispositions; records of a chiropractor's participation in the Board's chemical dependency and mental illness monitoring program; and information the Board receives in an investigation of an alleged violation of the Chiropractors Law.
R.C. 4735.05(D)	Information obtained in investigations and audits concerning alleged violations of the Real Estate Brokers and Salespersons Law, and associated reports, documents, and work products prepared or maintained by the Department of Commerce, Superintendent of Real Estate and Professional Licensing, and investigators, auditors, or other personnel of the Department.
R.C. 4738.14	Applications for licenses as a motor vehicle salvage dealer.
R.C. 4740.04(B)(1)	Contractor examinations that the administrative section of the Ohio Construction Industry Licensing Board is responsible for administering.
R.C. 4751.041 and 149.43(A)(1)(u)	Test materials, examinations, or evaluation tools used in an examination for licensure as a nursing home administrator that the Board of Examiners of Nursing Home Administrators administers or contracts with another entity to administer.
R.C. 4752.08, 4761.03(E), and 4761.031	Confidential information obtained by, and the identity of complainants to, the Ohio Respiratory Care Board during investigations of alleged violations of the Respiratory Care Law.
R.C. 4755.02 and 4755.61(A)(7)	Information and records received or generated in investigations under the Occupational Therapist, Physical Therapist, and Athletic Trainers Law; and other information obtained by the Athletic Trainers Section of the Ohio Occupational Therapy, Physical Therapy, and Athletic Trainers Board regarding applicable violations of the Law.
R.C. 4757.38	Records of the Counselor, Social Worker, and Marriage and Family Therapist Board's investigations of alleged violations of the Counselor, Social Worker, and Marriage and Family Therapist Law.
R.C. 4758.31	Records of the Chemical Dependency Professionals Board concerning an ongoing investigation.
R.C. 4763.03(D) and (E)	Information obtained in investigations of alleged violations of the Real Estate Appraisers Law.
R.C. 4763.05(A)(1)(a)	The current residence address of an applicant for an initial state-certified general real estate appraiser certificate, an initial state-certified residential real estate appraiser certificate, an initial state-licensed residential real estate appraiser license, or an initial state-registered real estate appraiser assistant registration that is retained by the Superintendent of Real Estate.
R.C. 4765.06(C) and (E), 4765.102, and 4765.12(B)	Deliberations of persons performing risk adjustment functions under the emergency medical services incidence reporting system of the State Board of Emergency Medical Services; information the Board or the Department of Public Safety collects or receives that would identify a specific patient or recipient of emergency medical services or trauma care; information the Board receives pursuant to an investigation; and information generated solely for use in a peer review or quality assurance program conducted for an emergency medical service organization.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 4767.06(A)(7)	Proceedings and records maintained as confidential by the Ohio Cemetery Dispute Resolution Commission because the nature of a complaint merits the action.
R.C. 4769.07	Patient identifying information the Department of Health obtains in a Health Care Practitioner Balance Billing Law alleged violation investigation.
R.C. 4776.04	The results of a BCII criminal records check conducted for certain occupational licenses.
R.C. 4901.16	Certain information acquired by a Public Utilities Commission (PUCO) employee or agent concerning a public utility.
R.C. 4905.82(B) and (C)	Information concerning corporate structure and personnel on a uniform permit application, or for a background investigation for an application for a uniform permit as a carrier of hazardous wastes, submitted to the PUCO.
R.C. 4928.06(F)	Confidential information provided to the PUCO regarding competitive retail electric service.
R.C. 4928.62(D)	Financial statements, financial data, and trade secrets the Director of Development receives under the Energy Efficiency Revolving Loan Program and any information taken from those statements, data, or trade secrets.
R.C. 4929.23(A)	Information concerning competitive retail natural gas service provided by retail natural gas suppliers or governmental aggregators to the PUCO.
R.C. 4931.06(B)	Any communication made by or to a person with a communicative impairment with the assistance of a communications assistant at a telecommunications relay service.
R.C. 4931.49(F)	Information concerning telephone numbers, addresses, or names obtained from the 9-1-1 database.
R.C. 4931.66(B)	Any information provided to the Ohio 9-1-1 Coordinator by a wireless service provider, the State Highway Patrol, and each subdivision operating one or more public safety answering points for a countywide system providing wireless 9-1-1 that is provided for the purpose of carrying out the wireless 9-1-1 program if the information consists of trade secrets or of information regarding the customers, revenues, expenses, or network information of a telephone company.
R.C. 4981.03(D) and 4981.29(A)(7)	Confidential data or information obtained from a railroad by the Ohio Rail Development Commission, and trade secrets and proprietary information the Commission receives.
R.C. 5101.131 and 5101.133	Information contained in or obtained from the Uniform Statewide Automated Child Welfare Information System.
R.C. 5101.181(B) and (D) and 5101.27	Information regarding recipients of public assistance (procedure for determination of overpayments and other purposes).
R.C. 5101.182	Information furnished by the Tax Commissioner to certain officials as part of the procedure to determine overpayment of public assistance.
R.C. 5101.29 and 149.43(A)(1)(z)	Names and other identifying information regarding children enrolled in or attending, and individuals who make a complaint about, a child day-care center or home or an institution or association that receives, desires to receive and care for, or places children in homes, and names, documentation, and other information regarding a foster caregiver or prospective foster caregiver.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 5101.31	Any record, data, pricing information, or other information regarding a drug rebate or supplemental drug rebate agreement for the Medicaid Program that DJFS receives from a pharmaceutical manufacturer or creates pursuant to negotiation of the agreement.
R.C. 5101.572	Information provided by a third party to DJFS to identify individuals for the purpose of establishing third party liability pursuant to Title XIX of the Social Security Act.
R.C. 5101.61(F)	Reports made to DJFS concerning adult abuse, neglect, or exploitation and related investigatory reports.
R.C. 5104.011(C)(2)	Enrollment, health, and attendance records for children attending a day-care center and health and employment records for center employees.
R.C. 5104.012(D), 5104.013(F), 5119.072(C), 5123.081(H), 5126.28(H), and 5153.111(D)	BCII criminal records check information relative to a day-care center, type A family day-care home, or certified type B family day-care home employment applicant; a day-care center or type A family day-care home owner, licensee, or administrator; a Department of Mental Health employment applicant; a Department of Developmental Disabilities (DODD) employment applicant; a county board of DD employment applicant; or a public children services agency employment applicant.
R.C. 5107.71 and 5107.715	Information about a member of an assistance group applying for and participating in Ohio Works First who has been subjected to domestic violence.
R.C. 5111.032(B)(1) and (I)	BCII criminal records check information relative to any provider, applicant to be a provider, employee or prospective employee of a provider, owner or prospective owner of a provider, officer or prospective officer of a provider, or board member or prospective board member of a provider of Medical Assistance Programs under the Social Security Act.
R.C. 5111.033(E)	BCII criminal records check information relative to an applicant under final consideration for employment, or an existing employee, with a waiver agency in a position involving home and community-based waiver services to persons with disabilities.
R.C. 5111.034(F)	BCII criminal records check information relative to an independent provider in a DJFS administered home and community-based services program providing home and community-based waiver services to consumers with disabilities.
R.C. 5111.61(A) and (B)	Any record that identifies or would tend to identify a nursing facility resident, an individual who submits a complaint about a nursing facility, or an individual who provides information about a nursing facility (DJFS).
R.C. 5112.21	Information filed under the Hospital Care Assurance Program that includes patient-identifying material (repealed, effective 10-16-2011)
R.C. 5119.22(I)	The source of a complaint of a Residential Facilities Law violation when disclosure could be detrimental to the Department of Mental Health's purposes or could jeopardize the investigation.
R.C. 5120.17(K), 5120.21, 5120.211(B)(1) and (F), and 149.43(A)(1)(k)	Certain records that identify an inmate under the law concerning transfer of mentally ill or mentally retarded inmates from a Department of Rehabilitation and Correction (DRC) state correctional institution to a psychiatric hospital; certain records maintained by DRC; and DRC quality assurance records.
R.C. 5120.60(G)	Information provided to the Office of Victim Services in DRC's Division of Parole and Community Services by victims of crime or victim representatives for certain purposes.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 5122.31, 5122.311(B), and 5122.32(B)(1)	Certificates, applications, records, and reports identifying patients, former patients, or persons whose hospitalization was sought under the Hospitalization of the Mentally Ill Law; notices (including their information) BCII receives from courts or others in order to conduct incompetency records checks (the notices pertain to individuals found by a court to be a mentally ill person subject to hospitalization by court order and individuals who become involuntary patients other than only for purposes of observation); and quality assurance records associated with mental health and medical services at certain locations.
R.C. 5122.47	Records or information used by the Department of Mental Health to create compilations relating to patients buried on hospital grounds that must be deposited with the Ohio Historical Society and the State Library.
R.C. 5123.05, 5123.19(L), 5123.31, 5123.51(G), and 5123.57	Records created or received pursuant to a Department of Developmental Disabilities (DODD) audit; the source of certain complaints made to DODD; certain records maintained by DODD relative to residents in its institutions or persons committed to or discharged or transferred from them; files and records of certain DODD investigations pertaining to abuse or neglect of an individual with mental retardation or a developmental disability or misappropriation of such an individual's property; and information in DODD records pertaining to a mentally retarded or developmentally disabled person for whom a guardian, trustee, or protector has been appointed.
R.C. 5123.60(G), ¹ 5123.601(D) ² , 5123.602 ³ , and 5123.603(B) ⁴	All records received or maintained by the Legal Rights Service (LRS) in connection with any investigation, representation, or other activity; communications between personnel and agents of LRS and its clients; the identities of certain individuals who provide information to the LRS's Ombudsman Section; certain communications with the Ombudsman Section; and the Ombudsman Section's records and files.
R.C. 5123.61(M) and 5123.611(C)	Reports of wounds, injuries, disabilities, and conditions reasonably indicating abuse or neglect or of another major unusual incident made to the Department of Developmental Disabilities (DODD) relative to developmentally disabled persons, and DODD's associated report on a review committee's recommendations.
R.C. 5123.62(T)	Information in the personal and medical records of mentally retarded and developmentally disabled persons.
R.C. 5123.89(A)	Certificates, applications, records, and reports identifying residents, former residents, or persons whose institutionalization was sought under the Mental Retardation and Developmental Disabilities (MRDD) Law.
R.C. 5126.044	The identity of an individual who requests programs or services of a county Developmental Disabilities (DD) board, and the record of a person eligible for the programs or services.
R.C. 5126.31(E)	Reports by a county \ Developmental Disabilities (DD) board of reviews of abuse and neglect allegations.
R.C. 5139.05(D), 5139.56(C), and 149.43(A)(1)(l)	Records maintained by the Department of Youth Services (DYS) pertaining to the children in its custody, records DYS provides to a school district in which a child released from the Department's custody is entitled to attend school, and certain victim-related statements pertaining to a child who is committed to DYS's legal custody and who is the subject of a release hearing.

¹ R.C. 5123.60 will be repealed by 2011 SB 171, effective October 1, 2012.

² R.C. 5123.601 will be repealed by 2011 SB 153, effective October 1, 2012.

³ R.C. 5123.602 will be repealed by 2011 SB 153, effective October 1, 2012.

⁴ R.C. 5123.603 will be repealed by 2011 SB 153, effective October 1, 2012.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 5153.17 and 5153.173	Records kept by a public children services agency concerning certain investigations; and information an agency possesses concerning a deceased child if a court determines disclosing the information would not be in the best interest of the deceased child's sibling or another specified child.
R.C. 5153.171 and 149.43(A)(1)(t)	Records provided to and statements made by the executive director of a public children services agency or a prosecuting attorney under certain circumstances involving deceased children whose deaths may have been caused by abuse, neglect, or other criminal conduct.
R.C. 5153.175(C)	Information provided to DJFS or a county department of job and family services by a public children services agency regarding child abuse or neglect that involves a person who has applied for licensure or renewal of licensure as a type A family day-care home or certification or renewal of certification as a type B family day-care home.
R.C. 5153.176(D)	Information provided to the Superintendent of Public Instruction by a public children services agency regarding the agency's investigation of a report of child abuse or neglect involving a person who holds a license issued by the State Board of Education if the agency has determined that child abuse or neglect occurred and that abuse or neglect is related to the person's duties and responsibilities under the license.
R.C. 5501.55(D)(1) and 5501.56(B)	Reports of an investigation the Department of Transportation (ODOT) or an ODOT contractor conducts relative to the safety practices of rail fixed guideway systems; and any part of a transit agency's system safety program plan that concerns security for the system.
R.C. 5502.03(B)(2)	Information collected, analyzed, maintained, and disseminated by the Division of Homeland Security to support local, state, and federal law enforcement agencies, other government agencies, and private organizations in detecting, deterring, preventing, preparing for, responding to, and recovering from threatened or actual terrorist events.
R.C. 5502.12	State Highway Patrol (SHP) reports, statements, and photographs relative to accidents it investigates, in the Director of Public Safety's discretion and until a specified time.
R.C. 5505.04(C) and (D)(4)	State Highway Patrol Retirement Board records containing a personal history record or monthly allowance or benefit information; the identity of recipients of public assistance.
R.C. 5525.04 and 5525.15	Information the Director of Transportation receives from transportation construction project contract bidders, and the estimate of cost of any project to be constructed by ODOT by competitive bidding, in the Director's discretion until the occurrence of specified events.
R.C. 5537.07(A)	The cost estimate for the construction, demolition, alteration, repair, improvement, renovation, or reconstruction of roadways and bridges for which the Ohio Turnpike Commission is required to receive bids, in the Commission's discretion and until a specified time.
R.C. 5703.21(A) and (C)(9) and 5703.53(I)	Information acquired by a Department of Taxation agent as to any person's transactions, property, or business; notices or documents provided to a county auditor concerning the taxable value of property in the county; certain opinions the Tax Commissioner prepares for a taxpayer; and identifying information in an opinion.
R.C. 5709.081(D)	Certain records of a corporation that owns tax-exempt "public recreational facility" property used by a major league professional team.

Appendix B*

<u>Citation</u>	<u>Topic</u>
R.C. 5711.10, 5711.101, 5711.11, 5711.18, 5711.25, and 5711.26	An investments-related document filed with returns of taxable property under certain circumstances; a document filed with returns of taxable property when the Tax Commissioner requires a business to file a financial statement or balance sheet; tax returns listing personal property used in business or credits and other returns; information about a taxpayer's business, property, or transactions the Tax Commissioner obtains for the purpose of adopting or modifying the method of determining true value; and preliminary, amended, and final assessment certificates concerning certain taxpayers.
R.C. 5715.49 and 5715.50	Taxpayer transactions, property, or business information acquired by a county auditor; county board of revision member; expert, clerk, or employee of a county auditor, a county board of revision, or the Tax Commissioner; or Tax Commissioner deputy, assistant, or agent, in the course of employment.
R.C. 5727.11(I)	Information about the business, property, or transactions of any public utility obtained by the Tax Commissioner in adopting or modifying the utility's composite annual allowance.
R.C. 5731.90(A)(1)	For purposes of the Ohio Estate Tax Law, certain tax returns and information the probate court, Department of Taxation, county auditor or treasurer, municipal or township fiscal officer, Attorney General, or other authorized person possesses.
R.C. 5733.03, 5733.056(B)(4), and 5733.42(E)	For purposes of the Corporation Franchise Tax Law, information gained from returns, investigations, hearings, or verifications; a financial institution's balance sheet made available upon the Tax Commissioner's request; and financial statements and other information submitted to the Director of Job and Family Services for an employee "eligible training program" tax credit.
R.C. 5735.33	For purposes of the Motor Vehicle Fuel Tax Law, information the Tax Commissioner acquires by examination of records, books, and papers, and information acquired by Department of Taxation employees in an investigation.
R.C. 5739.35, 5741.24, 5743.45, and 5747.60	Information acquired by Department of Taxation employees in an investigation under the Sales Tax Law, the Use Tax Law, the Cigarette Tax Law, or the Personal Income Tax Law.
R.C. 5747.18	Information from a return, investigation, hearing, or verification associated with the Personal Income Tax Law.
R.C. 5751.12	Any information required by the Tax Commissioner under the Gross Receipts Tax Law.
R.C. 5901.09(A), (B), and (C) and 5902.04(B) and (C)	Certain documents and information relative to applications for financial assistance to a county veterans service commission and, generally, commission documents that the Director of Veterans Services obtains that identify applicants for or recipients of financial assistance.
R.C. 6111.05	Records, reports, or information accessible under the Water Pollution Control Law by the Director of Environmental Protection that constitute trade secrets.
R.C. 6121.21 and 6123.20	Records or information relating to secret processes or secret methods of manufacture or production the Ohio Water Development Authority obtains.

Ohio Attorney General Opinions Interpreting Ohio's Public Records Act

The following are summaries of the Opinions of the Ohio Attorney General that have addressed or interpreted the Ohio Public Records Act. Be aware that the validity of any one opinion may have been affected by a subsequent court opinion or statutory change. The full text of these opinions can be found at <http://www.ohioattorneygeneral.gov>.¹

2011-012

A provisional ballot envelope is subject to state elections laws mandating the seal and preservation of ballots until any possible recount or election contest is completed; state law, within the meaning of R.C. 149.43(A)(1)(v) and R.C. 3501.13(C), prohibits the release of provisional ballot envelopes during the time a board of elections is required to preserve ballots under seal. A provisional ballot envelope is a "public record" subject to release once the time has passed during which a board of elections is required to preserve ballots under seal. R.C. 3505.181(B)(5)(b) does not prohibit the release of provisional ballot envelopes. Rather, R.C. 3505.181(B)(5)(b) prohibits the release of particular voter information through the free access system to anyone other than the voter to whom that information pertains. The free access system established pursuant to R.C. 3505.181(B)(5)(b) may be used only by a voter to gain access to information about his individual provisional ballot.

2010-029

The Ohio Department of Job and Family Services, in support of civil or criminal prosecutions arising out of investigations by the Bureau of Workers' Compensation, may provide certified copies of employer payroll records to the Bureau or the appropriate prosecuting authority and may allow a Department representative to testify regarding those records at trial.

2010-016

Ohio Revised Code § 1347.15 requires every state agency to adopt rules regulating access to its confidential personal information systems, but excepts any judicial agency from such requirements. A judicial agency is part of the judicial branch of government or renders judgments in quasi-judicial proceedings. The Board of Tax Appeals renders judgments to resolve justiciable disputes arising under Ohio's tax laws and its proceedings are quasi-judicial in nature. The BTA is therefore not subject to the requirements of R.C. 1347.15.

¹ Only opinions after 1994 are available electronically. When searching the full text of these opinions on the AG website use the numbers found in bold above each body of text. If using another search method (such as LexisNexis or Westlaw) the citation format needed will be different. For example, if trying to locate the first opinion listed on this page, the format used would be: 2008 Ohio Op. Att'y Gen. No. 019.

2008-019

An audio tape recording of a meeting of a board of township trustees that is created by the township fiscal officer for the purpose of taking notes to create an accurate record of the meeting, as required by R.C. 507.04(A), is a public record for purposes of R.C. 149.43. The audio tape recording must be made available for public inspection and copying, and retained in accordance with the terms of the township records retention schedule for such a record.

2008-003

Depending on the manner in which it is formed and operated, a nonprofit corporation formed under R.C. 183.061 might be subject to the public records law in R.C. 149.43, the open meetings law in R.C. 121.22, or particular contracting controls governing state agencies.

2007-042

A county coroner who performs an autopsy and forensic examination, pursuant to contract with the coroner who has jurisdiction over the case, is not required by R.C. 313.09 to keep the autopsy and examination reports he prepares, but he must keep copies of the reports in conformance with his office's records retention schedule, as filed and approved in accordance with R.C. 149.38.

A county coroner who performs an autopsy and forensic examination, pursuant to contract with the coroner who has jurisdiction over the case, is required by R.C. 149.43 to make available to any person for inspection and copying the copies of the autopsy and forensic examination reports that he prepared for the jurisdictional coroner, unless a report is not a public record under a statutorily defined or constitutionally mandated exception.

A county coroner who performs an autopsy and forensic examination, pursuant to contract with the coroner who has jurisdiction over the case, has no duty under R.C. 313.10(D) or (E), or R.C. 149.43, to make available to journalists or insurers copies of any records that his office has retained in connection with performance of the contract if the records are not public records.

2007-039

In the context of R.C. 2923.129, which concerns the powers and duties of a county sheriff with respect to information kept pertaining to licenses to carry concealed handguns, a journalist is prohibited from making a reproduction by any means, other than through his own mental processes, of the information the journalist is permitted to view under that statute. A sheriff may exercise his discretion in determining a reasonable manner by which a journalist may view, but not copy, that information so long as the confidentiality of other information relative to licenses to carry concealed handguns is maintained. Subject to the journalist exception, revealing, disclosing, or otherwise making known any of the information made confidential by the statute is prohibited except as required by a court order, or unless a statute specifically authorizes or requires other uses of such information. R.C. 2923.129(B) (1) does not prohibit a newspaper from publishing information that a journalist has viewed in accordance with the statute.

2007-034

A piece of physical evidence collected by law enforcement in connection with a criminal investigation and held by a county prosecuting attorney following conclusion of the trial, appeals, and post-conviction proceedings to which the evidence pertains is not a public record for purposes of R.C. 149.43.

2007-026

Article II, Section 34a of the Ohio Constitution and Am. Sub HB690, 126th Gen. A. (2006) (eff. April 4, 2007) do not render confidential information about a public employee's rate of pay, the number of hours worked by the employee, or the amount of compensation paid to the employee, nor do they otherwise exempt this information from inspection and copying under R.C. 149.43. Therefore, any person, including any co-worker of the public employee, has the right under R.C. 149.43 to inspect and copy information about a public employee's pay rate, hours worked and amounts paid.

2007-025

The "good cause" standard described in 1991 Op. Att'y Gen. No. 91-003, under which the executive director of a public children services agency (PCSA) determines whether to grant access to child abuse or neglect investigation records included as confidential records under R.C. 5153.17, is applicable to all PCSA records described in R.C. 5153.17, including records pertaining to matters other than child abuse or neglect investigations. (1991 Op. Att'y Gen. No. 91-003, approved and clarified.)

A PCSA is responsible for keeping records described in R.C. 5153.17 confidential and may disclose them only as authorized by statute, in accordance with the "good cause" standard described in 1991 Op. Att'y Gen. No. 91-003. If, in conjunction with a criminal proceeding or investigation or a civil proceeding, a PCSA received a subpoena requesting the disclosure of information that is confidential under R.C. 5153.17, the PCSA, in order to preserve the confidentiality prescribed by statute, may file a motion to quash the subpoena, thereby seeking from the court an in camera review of the PCSA's records and a determination as to whether and to what extent the information may be disclosed.

2006-038

In the absence of a statute to the contrary, foreign individuals and entities domiciled in a foreign country are "persons" who are entitled to inspect and copy public records pursuant to R.C. 149.43.

2006-037

Except as provided in R.C. 149.43(A)(1)(a)-(y) and R.C. 1724.11, information kept in the records of a community improvement corporation designated as an agency of a county under R.C. 1724.10 is a public record for purposes of R.C. 149.43.

2005-047

Because individuals possess a constitutionally protected privacy right in their social security numbers, such numbers when contained in a court's civil case files are not public records for purposes of R.C. 149.43.

Prior to releasing information from a court's civil case files, the clerk of court has a duty to redact social security numbers included in those files. An individual's personal financial information contained in a court's civil case files is a public record for purposes of R.C. 149.43 unless the information is not a "record" of the court or the information falls within one of the exceptions to the definition of the term "public record" set forth in R.C. 149.43(A)(1).

2004-050

Under Ohio law, a board of elections has a duty to preserve ballots in sealed containers until any possible recount or election contest is completed. Ballots are therefore not "public records" for purposes of R.C. 149.43 while they remain under seal or where they are subject to a court order prohibiting their release. In addition, they are not subject to inspection under R.C. 3501.13 during such time.

However, once the time within which a possible recount or election contest may occur has passed, pursuant to R.C. 3501.13, such ballots are subject to public inspection "under such reasonable regulations as shall be established by the board." Nonetheless, the board of elections remains under a duty to "carefully preserve" ballots used in an election for the remainder of the preservation period prescribed by R.C. 3505.31.

In addition, following the completion of the canvass of election returns under R.C. 3505.32, poll books used in an election are public records of a board of elections and are subject to public inspection in accordance with any reasonable regulations the custodian board of elections has established under R.C. 3501.1.

2004-045

Information within a criminal case file is subject both to Ohio's public records law and a constitutional right of access. Therefore, whether information within a criminal case file may be withheld depends on whether the information meets or is exempt from the definition of a "public record" under the Public Records Act, R.C. 149.43(A) (1), and whether the qualified constitutional right has been overridden.

2004-033

A county recorder who makes available in her office a photocopying machine for use by the public may not charge the two-dollar per page fee set forth in R.C. 317.32(I) where the public without the assistance of the recorder or her staff operates the photocopier. The recorder is, instead, subject to R.C. 149.43(B), which requires a public office to provide copies of public records "at cost."

2004-011

A county recorder may not impose a fee upon a requester to inspect records or make copies using their own equipment. However, the county recorder may impose reasonable rules governing the use and operation of such equipment.

2003-030

R.C. 2303.26 requires the clerk of courts to carry out her duties “under the direction of [her] court.” Once the judges of a court of common pleas have delegated to the judges of a division of that court authority to determine whether to make that division’s records available to the public through the Internet, and the judges of that division have ordered that its records are not to be accessible to the public through the Internet, the clerk of courts must obey that order, unless a court of competent jurisdiction reverses that order or prohibits its enforcement.

2002-040

Except as provided in R.C. 149.43(A)(1) and R.C. 2950.081(B), sex offender registration information submitted to a county sheriff by a sex offender who is required to register with the sheriff under R.C. Chapter 2950 may be made available to the general public on the Internet through the sheriff’s web site, provided such access to the public records does not endanger the safety and integrity of the records or interfere with the discharge of the sheriff’s duties.

A county sheriff that provides sex offender registration information to the general public on the Internet through a web site must provide a written notice containing the information set forth in R.C. 2950.11(B) to all the persons listed in R.C. 2950.11(A).

Except for the persons listed in R.C. 2950.11(A)(1) and Ohio Admin. Code 109:5-2-03(A)(1)(c), a county sheriff may use e-mail to electronically transmit the written notice required by R.C. 2950.11(A). The persons listed in R.C. 2950.11(A)(1) and Rule 109:5-2-03(A)(1)(c) must receive the written notice required by R.C. 2950.11(A) by regular mail or by personal delivery to their residences.

2002-030

In the absence of facts indicating that the names and addresses of a county sewer district’s customers fall within one of the exceptions to the definition of “[p]ublic record” contained in R.C. 149.43(A)(1), such names and addresses are public records that are subject to disclosure by the sewer district in accordance with R.C. 149.43.

2002-014

Transcripts prepared pursuant to R.C. 2301.23 by a court reporter of the court of common pleas are public records under R.C. 149.43, unless the transcripts include or comprise a record that is excepted from the definition of “public record” in R.C. 149.43(A)(1). (1989 Op. Att’y Gen. No. 89-073, syllabus,

Appendix C

paragraph two, approved and followed.) A party in a trial of a civil or criminal action in the court of common pleas that requests a photocopy of a transcript previously prepared pursuant to R.C. 2301.23 in the action is required to pay the compensation fixed by the judges of the court of common pleas under R.C. 2301.24 in order to obtain the photocopy of the transcript from the court.

Each party in a trial of a civil or criminal action in the court of common pleas that requests a transcript pursuant to R.C. 2301.23 is required to pay the court reporter of the court of common pleas who prepares the transcript the compensation fixed by the judges of the court of common pleas in accordance with R.C.2301.24.

Each time that a party in a trial of a civil or criminal action in the court of common pleas requests a transcript pursuant to R.C. 2301.23, the court reporter of the court of common pleas who prepares the transcript is entitled to the entire compensation fixed by the judges of the court of common pleas in accordance with R.C. 2301.24, unless the party requests at the same time more than one transcript of the same testimony or proceeding. In such a situation, pursuant to R.C. 2301.25, the court reporter is entitled to the entire compensation fixed by the judges of the court of common pleas in accordance with R.C. 2301.24 for the first copy and to one-half the compensation allowed for the first copy for each additional copy.

A prosecuting attorney in a trial of a civil or criminal action in the court of common pleas or the court of appeals may not obtain a photocopy of a transcript previously prepared in the action from the court's file without paying the court reporter of the court of common pleas or the court of appeals, respectively, the compensation fixed by the judges of the court of common pleas in accordance with R.C. 2301.24 or the judges of the court of appeals in accordance with R.C.2501.17, R.C. 9.92(E) and 2933.41(G) respectively.

2001-041

Information on a run sheet created and maintained by a county emergency medical services (EMS) organization that documents medication or other treatment administered to a patient by an EMS unit, diagnostic procedures performed by an EMS unit, or the vital signs and other indicia of the patient's condition or diagnosis satisfies the "medical records" exception of R.C. 149.43(A)(1)(a), and thus is not a "public record" that must be released to the public pursuant to R.C. 149.43(B). (1999 Op. Att'y Gen. No. 99-006, approved and followed.)

Information on a run sheet created and maintained by a county emergency medical services organization that documents medication or other treatment administered to a patient by an EMS unit, diagnostic procedures performed by an EMS unit, or the vital signs and other indicia of the patient's condition or diagnosis, and is relied upon by a physician for diagnostic or treatment purposes, is a communication covered by the physician-patient testimonial privilege of R.C. 2317.02(B), and thus is confidential information, the release of which is prohibited by law for purposes of R.C. 149.43(A)(1)(v). (1996 Op. Att'y Gen. No. 96-005 and 1999 Op. Att'y Gen. No. 99-006, approved and followed.) If a physician authorizes an emergency medical technician (EMT) to administer a drug or perform other emergency medical services, documentation of the physician's authorization and administration of the treatment or procedure by the EMS unit may also fall within the physician-patient testimonial privilege.

A written protocol, developed pursuant to R.C. 4765.41, without reference to a particular patient, for use by emergency squad personnel in cases where communication with a physician is not possible and the patient's life is in danger, does not establish, for purposes of R.C. 149.43(A)(1)(v), a physician-patient testimonial privilege between the physician who prepared the protocol and a patient who is treated by an

Appendix C

EMS unit pursuant to that protocol, where there is no further communication by the EMS unit with the physician about the condition or treatment of the patient.

If an EMS unit administers a controlled substance to a patient, the patient's name and address documented on the run sheet will, pursuant to 11 Ohio Admin. Code 4729-9-14(A)(3) (Supp. 2000-2001), be deemed to meet a portion of the record keeping requirements of R.C. 3719.07, and thus will be confidential under the terms of R.C. 3719.13, if the run sheet becomes a permanent part of the patient's medical record. However, information on the run sheet that pertains to the administration of a drug that is not a controlled substance is not required by R.C. 3719.07 or other provision of R.C. Chapter 3719, and thus does not fall within the confidentiality requirements of R.C. 3719.13.

2001-012

Data, photographs, maps, and other information created, collected, prepared, maintained, and published pursuant to R.C. 1504.02(A)(6) by the Department of Natural Resources' Division of Real Estate and Land Management are public records for purposes of R.C. 149.43.

If the Department of Natural Resources stores, produces, organizes, or compiles public records in such a manner that enhances the value of data or information included therein, it may charge for copies an amount that includes the additional costs of copying the information in such enhanced or "value-added" format.

R.C. 1501.01, which authorizes the director of the Department of Natural Resources to "publish and sell" data, reports, and information, does not authorize the director to charge an amount in excess of its actual cost for providing copies of the records created and maintained pursuant to R.C. 1504.02(A)(6).

2000-046

A county recorder may make indexed public records available through the Internet, provided this does not endanger the records or interfere with the recorder's duties; a fee cannot be charged or collected to inspect or copy records from the Internet when a person does not use equipment maintained by the recorder; Internet access cannot be limited to real estate title companies.

2000-036

Governor's Office of Veterans Affairs is prohibited by 32 C.F.R. § 45.3(e)(4) from releasing a copy of a Certificate of Release or Discharge from Active Duty (DD Form 214) without the written consent of the service member who is the subject of the DD Form 214.

2000-021

R.C. 149.43, as amended by Am. Sub. S.B. 78, 123rd Gen. A. (1999) (eff. Dec. 16, 1999), imposes no duty upon any particular individual or office to notify public offices of a peace officer's residential and familial information or to update the database. For purposes of R.C. 149.43, a child of a peace officer includes a natural or adopted child, a stepchild, and a minor or adult child.

Appendix C

Under the definition in R.C. 149.43(A)(7), peace officer residential and familial information encompasses only records that both contain the information listed in the statute and disclose the relationship of the information to a peace officer or a spouse, former spouse, or child of the peace officer, and those are the only records that come within the statutory exception to mandatory disclosure provided by R.C.

149.43(A)(1)(p). The exception for peace officer residential and familial information applies only to information contained in a record that presents a reasonable expectation of privacy, and does not extend to records kept by a county recorder or other public official for general public access. The general provisions of R.C. 149.43 excluding peace officer residential and familial information from mandatory disclosure do not operate to impose requirements or limitations on systems of public records that have been designed and established for general public access, where there is no reasonable basis for asserting a privacy interest and no expectation that the information will be identifiable as peace officer residential and familial information.

R.C.149.43 provides no liability for disclosing information that comes within an exception to the definition of “public record.” Liability may result, however, from disclosing a record that is made confidential by a provision of law other than R.C.149.43.

1999-012

When county office chooses to create customized document from existing public record it may only charge its actual cost, which does not include employee time or computer programming fees.

1999-006

Information on a county EMS run sheet that does not satisfy either the medical records exception or the “catch-all” exception is a public record and must be disclosed pursuant to R.C. 149.43(B). HIV testing information contained in run sheets must not be disclosed.

1997-038

Information submitted to county sheriff pursuant to R.C. Chapter 2950 by an individual who has been convicted of or pleaded guilty to a sexually oriented offense is a public record that must be made available for inspection to any person, except to the extent that such information comprises “records the release of which is prohibited by state or federal law.”

1997-001

Information in workers’ compensation claim file that indicates that an individual has been diagnosed as having AIDS or an AIDS-related condition is not a public record that the Bureau of Workers’ Compensation must disclose to the public.

1996-034

County recorder not required removing or obliterating Social Security Numbers from documents before recording those instruments.

1996-005

Records collected for trauma system registry or emergency medical services incidence reporting system that constitute medical records or physician/patient privilege do not constitute public records; the State Board of Emergency Medical Services is not required to disclose such records; and the Board is required to maintain confidentiality of any patient identifying information contained therein.

1995-001

PASSPORT administrative agency operated by a private non-profit agency is a public office for purposes of Ohio Public Records Act and public body for purposes of Ohio Open Meetings Act.

1994-089

Clerk of court cannot remove from a court file a pleading that is stricken from the record or an original pleading when a substitute pleading is filed in place of the original unless permitted by law or appropriate records commission.

1994-084

A county human services department may release the address of a current recipient of aid to dependent children, general assistance, or disability assistance to a law enforcement agency that has authority to apprehend an individual under an outstanding felony warrant.

1994-058

A township clerk is authorized to have access to estate tax returns or other records or information made confidential by R.C. 5731.90 in connection with the duties and responsibilities of the clerk; county treasurer who reports collection of estate tax to a township clerk is permitted to reveal the identity of taxpayer to the township clerk in the course of making the report.

1994-046

All information pertaining to LEADS is not public record subject to disclosure.

1994-006

If a person requesting copies of public records stored by the county recorder on microfiche or film presents a legitimate reason why paper copies are insufficient or impracticable and assumes the expense of making the copies in that medium, the county recorder is required to make available in the same medium a copy of the portions of the microfiche or film containing the public records.

1994-038

When a court orders official records of a case sealed and such order does not require sealing of the pertinent official records of an administrative licensing agency, the agency is not required to seal its records; the agency may seal its records containing information prohibited from disclosure pursuant to R.C. 2953.35(A).

1993-010

Blueprints submitted to a county building inspection department for approval under 3791.04 are public records while in possession of the department.

1992-076

Estate tax returns and other tax returns filed pursuant to R.C. 5731 are confidential and may be inspected or copied only as provided in R.C. 5731.90; a township clerk has no authority to inspect or copy estate tax materials that are made confidential by R.C. 5731.90 except pursuant to court order for good cause shown.

1992-071

A county board of mental retardation and developmental disabilities may not disclose to a parent organization the names of the board's clients or the names, addresses and phone numbers if the parents of the board's clients unless proper consent is obtained.

1992-046

Reports and investigations pursuant to R.C. 2151.421 are confidential and dissemination of such information to an agency or organization is permitted only if the agency or organization has rules or policies governing the dissemination of confidential information consistent with O.A.C. 5101:2-34-38; O.A.C. 5101:2-34-38(F) permits disclosure of child abuse and neglect investigation information when the dissemination of information is believed to be in the best interest of an alleged child victim, his family, or caretaker, a child residing or participating in an activity at an out-of-home care setting where alleged abuse or neglect has been reported, or a child who is an alleged perpetrator.

1992-005

A copy of a federal income tax Form W-2 prepared and maintained by a township as an employer is subject to inspection as a public record.

1991-053

Federal tax return information filed by an individual pursuant to R.C. 3113.215(B) (5) and a local rule of court is a public record; confidentiality of federal income tax returns is inapplicable to income tax returns submitted to a court of common pleas by a litigant in connection with a child support determination or modification proceeding in that court.

1991-003

County prosecuting attorney may release children services agency's child abuse or neglect investigation file only with written permission of agency executive secretary; executive secretary may only grant permission for good cause; child abuse or neglect investigation records are not public records.

1990-103

Absent statutory authority, a county recorder is without authority to delete documents from the records of the county recorder.

1990-102

Ohio Public Records Act does not make confidential all records filed with Ohio taxation authorities; specific revised code sections make particular information confidential.

1990-101

Records of juvenile offenders are not public records to the extent they are law enforcement investigator records; sealed or expunged juvenile records are not public records.

1990-099

Public school officials may not release information concerning illegal drug or alcohol use by students to law enforcement agencies where such information is personally identifiable information, other than directory information concerning any student attending a public school.

1990-057

Subject to the provisions of R.C. 149.351(A), a county official may, pursuant to a valid contract, temporarily transfer physical custody of the records of his office to a private contractor to microfilm such records at the facilities of the contractor; a contract must incorporate sufficient safeguards to prevent loss, damage, mutilation, or destruction of the records.

1990-050

Names, addresses, and telephone numbers of employees of a public school district are public records open to inspection by any person; motive is irrelevant even if for commercial purposes.

1990-007

Unless state or federal law prohibits disclosure to person who is subject of information kept by an Ohio public office, R.C. Chapter 1347 permits person to inspect and copy such information. Chapter 1347 is not a provision of state law prohibiting the release of information under R.C. 149.43.

1989-084

Records that do not constitute personal information systems as used in R.C. Chapter 1347 are not subject to disclosure provision of Chapter 1347; child abuse and neglect investigatory records maintained by public children services agency constitute investigatory material compiled for law enforcement purposes within the meaning of R.C. 1347(A)(1)(e).

1989-073

Shorthand notes taken pursuant to R.C. 2301.20 and transcripts prepared pursuant to 2301.23 are public records unless they include or comprise a record excepted from the definition of public record.

1989-055

A judicial determination that a particular entity is a public office under R.C. 149.011(A) is not determinative of the question whether that entity is a public office under R.C. 117.01(D) for purposes of audit and regulation by the Auditor of State.

1989-042

Providing that properly approved record retention schedules under R.C. 149.333 permit disposal of paper or other original documents after recording by optical disk process, original documents may be destroyed and the recorded information stored on optical disks becomes the original of the public record.

1988-103

Application to the County Veterans Service Commission for assistance under R.C. chapter 5901 is a public record (now exempt, R.C. 121.22 and 149.43).

1987-024

A community improvement corporation organized pursuant to R.C. chapter 724 is not a political subdivision as that term is defined in R.C. 2744.01(F).

1987-010

A public school may not forward personal information regarding the first-time use of drugs or alcohol by a student on school property to local law enforcement agencies without the consent of the student's parent or guardian, or the student, where appropriate.

1986-096

Disclosure of the number of persons employed by an applicant at the time of application for a loan is prohibited where such information is submitted to the Director of Development, the Controlling Board, or the Minority Development Financing Commission in connection with a loan application.

1986-089

A personnel file maintained by an exempted village school district is a public record except to the extent such file may include records that are excepted from the definition of the term public record.

1986-069

A letter requesting an advisory opinion from the Ohio Ethics Commission under R.C. 102.08 and the documents held by the Commission concerning such advisory opinion are public records.

1986-033

The Unemployment Compensation Board of Review may, in accordance with the specific terms of the schedule of retention pertaining thereto and approved by the State Records Commission, destroy or dispose of its hearing records six months after a decision by the Board of Review becomes final; the hearing records shall be destroyed or disposed of within 60 days after the expiration of the six-month retention period, unless, in the opinion of the Board of Review, they pertain to any pending case, claim or action.

1985-087

Appraisal cards that are kept by the office of the county auditor and that contain information used in the evaluation and assessment of real property for purposes of taxation are subject to public inspection and disclosure of such documents does not violate either R.C. 5715.49 or R.C. 5715.50.

1984-084

Client records held by the Rehabilitation Services Commission in connection with the state vocational rehabilitation services program are not public records and cannot be disclosed without the consent of the person to whom the records relate.

1984-079

Grand jury subpoenas while in possession of the clerk of courts prior to issuance in accordance with R.C.2939.12 are not public records.

1984-077

Under R.C. 1347.08, a juvenile court must permit a juvenile or a duly-authorized attorney who represents the juvenile to inspect court records pertaining to the juvenile unless the records are exempted under R.C. 1347.04(A)(1)(e), 1347.08(C) or (E)(2). Under Juv. R. 37(B), the records may not be put to any public use except in the course of an appeal or as authorized by order of the court.

1984-015

The director of the Ohio Department of Mental Retardation and Developmental Disabilities may make available to persons approved by the director the medical, psychological, social, and educational records of persons who have been nominated for protective services pursuant to R.C. 5123.58.

1983-100

The Ohio State Board of Psychology does not have the authority to expunge or actually destroy its official records except as provided by law; it is not required to seal any of its official records unless an order sealing the same specifically directs the Board to do so by the court; and the Board may seal information or data contained in its official records which are not public records within meaning of 149.43(A)(1).

1983-099

Since the examinations administered by the State Board of Examiners of Architects are records under R.C. 149.40 and there is no law prohibiting the destruction of such examinations or requiring the retention of such examinations for a specified period of time, such examinations may be disposed of in accordance with a schedule of records retention or an application for records disposal approved by the State Records Commission pursuant to R.C. 149.32.

1983-071

A county department of welfare is prohibited from disclosing to law enforcement personnel personal information about applicants for or recipients of aid to Families with Dependent Children or poor relief unless such law enforcement personnel are prosecuting fraud or seeking child support and are directly connected with the enforcement of the Food Stamp Act or regulations, other federal assistance programs or general relief programs or the applicant or recipient has consented in writing.

1983-003

Materials of all varieties (including but not limited to, correspondence, memorandums, notes, reports, audio and video recordings, motion picture films, and photographs) which are received by public officials and employees, or created and maintained by them at public expense, are considered records if they serve to document the organization, functions, policies, decisions, procedures, operations, or other activities of the public office.

1982-104

Birth and death records kept by a probate court pursuant to R.C. 2101.12 are public records which must be made available to any member of the general public as required by R.C. 149.43, regardless of the motive which such member of the public has for inspecting such records.

1981-051

Neither federal law nor R.C. 149.43 exempts from disclosure records concerning amounts paid to individual providers by the state of Ohio in connection with the Medicaid program.

1981-043

A news-hook maintained by a city police department is not a public record under the terms of R.C. 149.43, and need not, therefore, be disclosed to all members of the public for any reason whatsoever.

1981-038

With the exception of confidential law enforcement investigatory records, trial preparation records, and adoption records, the Ohio Civil Rights Commission must disclose to an employee personnel information that is subject to the provisions of R.C. Chapter 1347, including medical records and records the release of which is prohibited by state or federal law, unless state or federal law expressly prohibits disclosure of such information even to the person who is the subject of the information. Unless it is determined that the disclosure of medical records to the employee may have an adverse effect upon the employee, the Commission must disclose the medical records to a physician, psychiatrist, or psychologist designated by the employee, rather than to the employee himself.

1981-019

The faculty inventory and the report on faculty services maintained by the Ohio Board of Regents on computer tapes are not public records as 20 U.S.C. 1232(b)(1) restricts the public release of such.

1981-014

Complaints filed with the Division of Real Estate concerning violations of R.C. Chapter 4735 except those that qualify as confidential law enforcement investigatory records are public records.

1981-006

Employee address and payroll records maintained by a board of township trustees are public records.

1980-103

Trial preparation records include only those records specifically compiled by a governmental unit after the unit's attention has focused upon a particular person or claim, in reasonable anticipation of a civil or criminal proceeding and does not include those records routinely compiled by a governmental unit as a matter of common practice.

1980-096

Unless made confidential by law, all records maintained by a governmental agency that are necessary to the agency's execution of its duties and responsibilities are public records; public records must be disclosed upon request to any member of the public for any reason; records made confidential by law and subject to Ohio's Privacy Act may not be disclosed to the public at large, but must be disclosed to the person who is the subject of the records; records pertaining to confidential law enforcement investigations, trial preparations, and adoptions may not be disclosed to either the public at large nor to the person who is the subject of the records, except adoption records may be disclosed with consent of the court.

1979-023

As used in R.C. 149.99, "each offense" means each transaction that results in the removal, destruction, mutilation, transfer or other disposal of records or other damage to records in violation of R.C. 149.351.

1977-075

Pursuant to R.C. 4112.05(B), the Ohio Civil Rights Commission may not reveal the final terms of conciliation, written or unwritten, to members of the general public who are not parties to the matters conciliated.

1977-043

It is not a violation of R.C. 5122.31 to permit unrestricted access to the general and separate indices of mental illness matters filed in the probate court by the public, as they are public records.

Ohio Attorney General Opinions Interpreting Ohio's Open Meetings Act

The following are summaries of the Opinions of the Ohio Attorney General that have addressed or interpreted the Ohio Open Meetings Act. Be aware that the validity of any one opinion may have been affected by a subsequent court opinion or statutory change. The full text of these opinions can be found at <http://www.ohioattorneygeneral.gov>.¹

2011-038

A public body that is subject to the requirements of the Ohio open meetings law may not vote in an open meeting by secret ballot. R.C. 121.22 is intended to ensure openness and accountability in government. Voting by secret ballot is inconsistent with the purpose of the open meetings law and denies the people their right to view and evaluate the workings of their government. A meeting is not "open" to the public where members of a public body vote by way of secret ballot. (1980 Op. Att'y Gen. No. 80-083 (syllabus, paragraph 4), overruled.)

2009-034

During a declared emergency, R.C. 5502.24(B) provides a limited exception to fulfilling the requirements of the Ohio Open Meetings Law. A public body may meet at an alternate location, and exercise their powers and functions "in the light of the exigencies of the emergency without regard to or compliance with time-consuming procedures and formalities prescribed by law pertaining thereto." However, this is not an exception to the "in person" meeting requirement of R.C. 121.22(C) and does not permit the public body to meet by teleconference.

2008-003

Depending on the manner in which it is formed and operated, a nonprofit corporation formed under R.C. 183.061 might be subject to the public records law in R.C. 149.43, the open meetings law in R.C. 121.22, or particular contracting controls governing state agencies.

2007-019

A board of township trustees has authority to maintain order at, approve the minutes of, and provide and distribute a written agenda for its regular meetings.

¹ Only opinions after 1994 are available electronically. When searching the full text of these opinions on the AG website use the numbers found in bold above each body of text. If using another search method (such as LexisNexis or Westlaw) the citation format needed will be different. For example if trying to locate the first opinion listed on this page, the format used would be - 2008 Ohio Op. Att'y Gen. No. 019.

2005-035

Public hearings conducted by a township board of zoning appeals to consider the matters described in R.C. 519.14(A)-(C) are not “meetings” for purposes of R.C. 121.22, but, rather, are quasi-judicial proceedings. (1985 Op. Atty. Gen. No. 85-044 (syllabus, paragraph two), overruled.); followed by *Groeff-Knight v. Brd. of Appeals of Liberty Twnshp*, (June 14, 2004) Fifth Dist. No. 03CAH08042.

1996-010

Absent adoption of a rule by a county board of mental retardation and developmental disabilities specifying the day on which its annual organizational meeting is to be held, the board’s annual organizational meeting is not one of the regularly scheduled meetings for purposes of the removal provision of R.C. 5126.04.

1995-030

A district advisory council, established pursuant to R.C. 3709.03 has inherent authority to call special meetings of the council by acting through the concurrence of a majority of its members with respect to a particular meeting or by promulgating a procedural rule authorizing specified officers or members of the council to call special meetings; the board of health of a general health district and the state director of health, as expressly provided in R.C. 3709.03, are the only other public authorities with power to call a special meeting of the district advisory council.

1995-001

A PASSPORT administrative agency that is operated by a private not-for-profit agency pursuant to Ohio Admin. Code 5101:3-31-03(A)(1) is a public office as defined at R.C. 149.011(A) for purposes of the public records law and a public body as defined at R.C. 121.22 for purposes of the open meetings law.

1994-096

A committee of private citizens and various public officers or employees that is established by the board of health of a general health district for the purpose of advising the board on matters pertaining to the administration of a state or federal grant program is a public body; where the establishment of the committee is not required or authorized by the terms of the grant or any action of the general health district board, such committee is not a public body.

1994-014

The panel created by the Erie County Court of Common Pleas in Local Rule 17.08(F) is not subject to the open meeting requirements.

1993-012

The Industrial Commission is a public body as defined in R.C. 121.22(B)(1) and is therefore subject to the open meeting requirements of R.C. 121.22; R.C. 4121.36 provides that orders, rules, memoranda, and decisions of the Industrial Commission with respect to hearings conducted under R.C. 4121.36 may be adopted either in a meeting of the commission or by circulation to individual commissioners and thereby establishes an exception to the requirement of R.C. 121.22 that the Industrial Commission adopt all resolutions, rules, or formal actions in an open meeting.

1992-078

The board of directors of a county agricultural society is a public body subject to the open meeting requirements of R.C. 121.22.

1992-077

An advisory committee legislatively created by a board of county commissioners to make recommendations to the board on matters relating to a proposed county jail is a public body subject to the provisions of R.C. 121.22.

1992-065

A housing advisory board created by a county under R.C. 176.01 is a public body for purposes of R.C.121.22.

1992-032

A board of township trustees must conduct its open meetings in a public meeting place, as determined in its fair and impartial discretion; board of township trustees may not conduct an executive session from which the public is excluded in order to deliberate about a proposed zoning change, even if the board ultimately votes on that matter in an open meeting, unless the deliberations were solely for the purpose of discussing one or more of the six subject areas listed in R.C. 121.22(G).

1992-028

Unless a statutory or constitutional provision expressly grants a specific officer of a public body the power to make the decision to call a meeting of such body, the power to make the decision is vested in the body itself and not in an individual officer; the decision that a meeting is necessary requires a concurrence of a majority of the body; pursuant to R.C. 5715.09, the secretary of the board of revision has the power to call a meeting of the board as necessary.

1988-087

A board of township trustees has authority to adopt reasonable rules for the conduct of its meetings; such rules may not prohibit audio and video recording of township proceedings, but may regulate such recording to promote the orderly transaction of business without unreasonably interfering with the rights of those present.

1988-029

The Public Utilities Commission Nominating Council is a public body as defined in R.C. 121.22.

1988-003

The word “property” as used in R.C. 121.22(G)(2) means real and personal property, which includes both tangible and intangible property; the PERS may discuss in executive session the purchase or sale of tangible or intangible property authorized under R.C. 145.11, including but not limited to such items as bonds, notes, stocks, shares, securities commercial paper, and debt or equity interests.

1986-091

The Ohio Legal Rights Service Commission is a public body for purposes of R.C. 121.22.

1985-048

The open meeting requirements of R.C. 121.22 and R.C. 305.09 are satisfied where a board of county commissioners convenes a public meeting at which only two of the three members are present and the third member of the board, who is not physically present, participates in such board proceedings by means of communications equipment (prior to enactment of R.C. 121.22(C)).

1985-046

In its development of amendments to the state health plan, the Statewide Health Coordinating Council (SHCC) must, pursuant to R.C. 3702.56(C), follow the procedures set forth in R.C. 119.03(A), (B), (C), and (H), with the exception of requirements imposed pursuant to R.C. 119.03(D), (E), (F), (G), and (I); in particular, the SHCC must follow the public notice and hearing procedures of R.C. 119.03(A) and (C) and must file proposals with the Secretary of State, the Director of the Legislative Service Commission, and the Joint Committee on Agency Rule Review under R.C. 119.03(B) and (H); but proposed amendments to the state health plan are not subject to invalidation by the General Assembly pursuant to R.C. 119.03(I).

1985-044

A township board of zoning appeals is a public body for purposes of R.C. 121.22; a township board of zoning appeals may not conduct, in an executive session, deliberations concerning zoning appeal heard pursuant to R.C. 519.14(A) or (B). (Syllabus, paragraph two, overruled by 2000 Op. Att'y Gen. No. 00-035.)

1982-081

A soldiers' relief commission established pursuant to R.C. 5901.02 is a public body for the purposes of R.C. 121.22.

1981-005

Because the superintendent's offices are, pursuant to R.C. 3319.19, to be used by the county board of education when it is in session, and because the board's meetings are required by R.C. 121.22 to be open to the public, the duty of the board of county commissioners to provide and equip offices includes the duty to provide some type of conference facility.

1980-083

A county central committee of a political party is a public body and its members are public officials for purposes of R.C. 121.22; convening the committee pursuant to R.C. 305.02 is a meeting as defined by R.C. 121.22(B)(2), even when the number of members present is fewer than the majority of the total membership; the committee may discuss appointment of a person pursuant to its duties under R.C. 305.02 in executive session under R.C. 121.22(G), however, final voting on such appointment must be held in a public meeting; convening the committee for conducting purely internal party affairs unrelated to the committee's duties of making appointments to vacant public offices is not a meeting as defined by R.C. 121.22(B)(2). **(Syllabus, paragraph 4, overruled by 2011 Op. Att'y Gen. No. 11-038).**

1979-110

The Safety Codes Committee, created by resolution of the Industrial Commission for the purpose of reviewing safety code requirements and drafting revisions for consideration by the Industrial Commission, is not a public body for the purposes of R.C. 121.22.

1979-061

The governing board of a community improvement corporation, organized in the manner provided in R.C. 1702.04 and R.C. 1724.01 to R.C. 1724.09, inclusive, does not constitute a public body for the purposes of R.C. 121.22 unless designated an agency of a county, municipal corporation, or any combination thereof pursuant to R.C. 1724.10.

1978-059

The Internal Security Committee, established by the Industrial Commission and the Bureau of Workers' Compensation pursuant to R.C. 4121.22(D), is a public body for purposes of R.C. 121.22.

1977-075

Pursuant to R.C. 4112.05(B), the Ohio Civil Rights Commission may not reveal the final terms of conciliation, written or unwritten, to members of the general public who are not parties to the matters conciliated.

MEMORANDUM

TO: State of Ohio Trauma Committee Members and EMS Board Members

FROM: Nancie Bechtel, Vice-Chair, State Trauma Registry Advisory Subcommittee (TRAS)

DATE: August 17, 2010

Copy: Barry Knotts, MD, TRAS Chairperson; Richard Rucker, Executive Director Ohio Department of Public Safety, Division of Emergency Medical Services

RE: Staff Support for the Ohio Trauma Registry

This memo is to document a need for additional full-time equivalent (FTE) personnel at the Ohio Department of Public Safety (ODPS) in order to support the Ohio Trauma Registry.

BACKGROUND ON OHIO'S THREE TRAUMA-RELATED DATABASES. Ohio has three databases encompassing cases of traumatic injury, collectively referred to as the Ohio Trauma Registry or OTR. These databases collectively hold a wealth of information that when properly analyzed would benefit Ohioans.

- The Trauma Acute Care Registry (TACR) currently captures approximately **38,000 patient records** annually. This number is anticipated to increase as isolated hip fractures and trauma patient hospital admissions of less than 48 hours are added to the database beginning in 2011. TACR data is abstracted from individual patient records by hospitals from across Ohio and submitted quarterly to ODPS. Each submitted record encompasses **77 distinct data elements**. Hospitals must commit ongoing resources in order to submit this data to the State. The TACR has accumulated nearly **400,000 records** from hospitals since 1999.
- Similarly, the EMS Incident Reporting System (EMSIRS) database captures nearly **one million** EMS run reports annually, and has over **seven million** stored records. **Eighty data elements** comprise the EMSIRS report submitted by EMS providers to ODPS. Fire and EMS agencies also must commit precious resources in order to submit EMSIRS data to ODPS.
- The Trauma Rehabilitation Database (TRD) is the smallest of the three databases, capturing about **1,000 records** on average per year, with a total database of approximately **5,000 records** since inception.

PATTERNS OF UNDERSTAFFING. OTR understaffing is evident in comparison to other states with trauma registries, as well as when compared to similar health databases in Ohio.

- Of sixteen other U.S. states that have trauma registries based on hospital data, the average ratio of trauma registry cases to FTEs is **11,400:1**. Comparatively for just the TACR in Ohio, the ratio of

registry cases to FTEs is **38,000:1**. Given that the EMSIRS and TRD are included in the same FTE, the ratio expands to more than **1,000,000:1**.

- Other Ohio registries have significantly higher ratios of FTEs than those managed under ODPS:
 - The Ohio Cancer Registry has a staff of 14 that oversees an annual registry submission of 90,000 records. This ratio is 90,000:14 or **6,428:1**.
 - The Ohio Violent Data Reporting System (OVRs) managed by ODH includes all “violent” trauma deaths---those that result from homicide, legal intervention, suicide, unintentional firearm discharge, terrorism, and deaths of “undetermined intent.” This database collected 2007 records for the calendar year 2007, and is managed by a staff of four. This ratio is 2007:4 or **502:1**. Staff for this registry includes a program manager, a data manager, an abstractor/ registrar, and an epidemiologist.

The intent of sharing these ratios is not to disparage other programs, but rather to highlight disparities. *Tables 1 and 2* help depict the inequality in FTEs for the OTR databases.

Table 1:
U.S. States’ FTE Comparison to TACR Comparison @38,000:1

State	Number of FTEs	Number of Annual Cases	Cases per FTE
AZ	3	25,000	8,333
DE	1	6,000	6,000
FL	1	50,000	50,000
ID	3	6,000	2,000
IN	1	12,000	12,000
MD	0.5	20,000	40,000
ND	0.5	4,500	9,000
NE	2	9,000	4,500
NM	1	3,000	3,000
NY	2.5	27,000	10,800
OR	1.5	11,000	7,333
PA	2	31,000	15,500
TN	1	20,000	20,000
UT	1.25	7,500	6,000
WA	2.4	25,000	10,417
WV	1	24,000	24,000
TOTALS	24.65	281,000	11,400

Table 2:
Ohio Trauma Database FTE Comparison

State of Ohio Trauma Database	Cases per FTE
OTR (TACR, EMSIRS & TRD)	1,000,000:1
TACR <i>Only</i>	38,000:1
Ohio Cancer Registry	6,428:1
OVRs	502:1

ISSUE #1. An inadequate number of OTR staff prevents compliance with statutory requirements.

- ORC Sec. 4765.06 mandates that the OTR shall collect “information regarding the care of adult and pediatric trauma victims” in Ohio. “The registry shall provide for the reporting of adult and pediatric trauma-related deaths, identification of adult and pediatric trauma patients, monitoring

of adult and pediatric trauma patient care data, determination of the total amount of uncompensated adult and pediatric trauma care provided annually by each facility that provides care to trauma victims, and collection of any other information specified by the Board.” More generally, ORC Sec 4765.06 mandates that EMSIRS collect “information regarding the delivery of emergency medical services in this state and the frequency at which the services are provided.” Despite that the TACR has been collecting data since 2000 and EMSIRS since 2002, minimal state registry reports have come from OTR staff that describe the status of trauma care in Ohio as delineated in the mandates of ORC 4765.06.

ISSUE #2. An inadequate number of OTR staff results in serious data gaps in Ohio.

- A 2008 EMSIRS database update (*EMSIRS-1 to EMSIRS-2*) was interrupted while in progress because of cited OTR staffing shortages. The update had been widely publicized by ODPS to local EMS agencies. Some agencies had simultaneously undertaken the update in an effort to be fully compliant with OTR reporting. Many of these agencies completed their own updates (done at their own expense). When ODPS failed to complete their update, the updated EMS agencies could not contribute their EMSIRS-2 data to the OTR’s still-existing EMSIRS-1 database. This has resulted in nearly **188,000 missing EMS records** from the EMSIRS database in the 2 ½ years that ODPS has failed to complete their EMSIRS update. This void in data makes the EMSIRS database significantly unreliable since 2008.
- In 2009, it was discovered by a local hospital that their data had not been submitted for two years to the TACR by a regionally contracted registrar. Upon investigation, it was realized that this regional registrar had failed to submit data for **over 30 hospitals** in the same time period. OTR personnel shortages impeded the discovery of this lapse. Data requests had come from independent researchers from across the state in this time period and data provided for studies as inclusive of Ohio’s population data was immediately invalid.

ISSUE #3. An inadequate number of OTR staff impedes the reliability and validity of Ohio’s trauma registry data.

- Trauma registrars and regional registry programs from around Ohio have from time to time notified OTR staff about discrepancies found in local data submission patterns, which affect the reliability and validity of OTR data. These discrepancies have been communicated in writing to OTR staff. OTR staff has on multiple occasions failed to respond to these issues.
- OTR staff has not been able to effectively assess submitted data for gaps in select fields. They have not had time to conduct random queries to identify inconsistencies, nor to work with data submitters from around the state to ameliorate these inconsistencies.

ISSUE #4. The current OTR staff has a skill-set gap. This missing skill set involves statistical analysis of data that will drive practice changes from an evidence-base, ultimately saving lives.

- Since 1999, OTR staff has only published two basic registry data reports describing demographics and injury patterns seen across the state, despite the richness of OTR data available. Neither of

these reports was comprehensive. No reports have been published using EMSIRS or TRD data. No reports have been published that describe statistically significant trends in Ohio's trauma system.

- In 2004, OTR staff hired private consultants to conduct a validity assessment of the TACR. One-thousand records were abstracted at a cost to the state of \$24,000. But the project was never finished due to a lack of funds to continue with the consultants. OTR staff did not have the time and/or expertise to document abstracted findings and areas of needed improvement. No recommendations have been cited or implemented as a result of this work.
- In day-to-day operations, OTR staff has admittedly not been able to process complex data requests from the public. OTR staff has only been able to meet simple data requests from stakeholders.

Recommendation/Request. Given the staffing patterns documented above, the State Trauma Registry Advisory Subcommittee (TRAS) strongly encourages ODPS to hire additional OTR staff when the State budget allows it. FTEs should increase to a number which provides adequate oversight to the state trauma databases, and should include personnel with the statistical knowledge to evaluate and publish the data to stakeholders. *At minimum*, we suggest mirroring the staffing patterns of the OVRs for the OTR, to include a program manager, a data manager, an abstractor/registrar, and an epidemiologist/statistician. TRAS offers its support in writing job descriptions for these positions as needed.

Summary. An appropriate increase in FTEs and skill set in the OTR will help to improve the quality of care and outcomes for Ohioans who sustain serious injuries. Adequate oversight of the OTR is necessary to provide valid and reliable information to state leaders to make good decisions regarding trauma service and prevention initiatives in Ohio. These prevention initiatives ultimately save the state money by preventing trauma cases and by decreasing the utilization of intensive trauma resources. The cost-benefit supporting better OTR management and data reporting cannot be understated. In Franklin County alone, the annual cost of trauma injuries and fatalities is over \$750,000,000. Much of this expense is borne by the State through Medicaid; by local municipalities for EMS and law enforcement services (needed to manage "accident" scenes); and by Ohio's hospitals for uncompensated care to trauma victims.

Please feel free to contact Dr. Barry Knotts or me with questions. Thank you.

JOB DESCRIPTION AND WORKER CHARACTERISTICS

JOB TITLE

%	Job Duties in Order of Importance	Knowledge, Skills & Abilities
50%	Independently designs and conducts research activities pertaining to emergency medical services, trauma care and the statewide trauma system: Reviews and analyzes issues to be researched; Develops appropriate research tools and research methodology; Tabulates and analyzes data using standard and complex statistical measures and determines appropriate statistical methods for specific data sets (e.g., calculations of rates; generation of projections and estimates; logistic regression and other multivariate regression); Operates personal computer to apply appropriate statistical analysis and methods using statistical computer software packages (e.g., STATA, SAS, SPSS); Participates in other research projects as assigned by supervisor; Serves as a resource person and technical advisor in areas of research and evaluation and replies to requests for information within the EMS Division, elsewhere in ODPS, and from outside the Department; Directs and/or participates in completion of scientific reports (e.g., evaluation of validity and significance of findings) and assists in preparation of reports for publication in peer-reviewed journals.	Knowledge of: natural sciences (epidemiology); social sciences (research, sampling & survey methods for human studies); agency policy & procedures (EMS & trauma reporting, data management, data release, confidentiality); interpretation of data from medical records. Skills in: software for statistical analysis (SAS, SPSS, STATA), database (Access, Crystal Reports), spreadsheet (Excel), and graphics (PowerPoint). Ability to: define problems, collect data establish facts and draw conclusions; use statistical analysis; use proper research methods in gathering data; prepare concise & meaningful reports.
30%	Assists supervisor in investigation and analysis of data pertaining to emergency medical services, trauma care and the statewide trauma system in Ohio: Collects, receives and reviews electronic data submitted to the EMS Incident Reporting System (EMSIRS) and Ohio Trauma Registry (OTR); Retrieves data for research purposes; Prepares descriptive data and informational reports for stakeholders; Participates in the cleaning, organization, and re-coding of EMSIRS and OTR data as needed to assist in the data linkage process; Works in consultation with other data center staff to develop the matching/linking routines needed to associate all collected information.	Knowledge of: agency policy & procedures (EMS & trauma reporting, data management, data release, confidentiality); interpretation of data from medical records; Skills in: database linkage programs (LinkSolv, Link Plus), database (Access, Crystal Reports), spreadsheet (Excel), and graphics (PowerPoint). Ability to: use proper research methods in gathering data; prepare concise & meaningful reports; cooperate with coworkers on group projects.

Thomas P. Charles, Director

4765.03 Executive director duties.

(A) The director of public safety shall appoint a full-time executive director for the state board of emergency medical services. The executive director shall be knowledgeable in emergency medical services and trauma care and shall serve at the pleasure of the director of public safety. The director of public safety shall appoint the executive director from among three persons nominated by the board. The director of public safety may refuse, for cause, to appoint any of the board's nominees. If the director fails to appoint any of the board's nominees, the board shall continue to nominate groups of three persons until the director does appoint one of the board's nominees. The executive director shall serve as the chief executive officer of the board and as the executive director of the division of emergency medical services. The executive director shall attend each meeting of the board, except the board may exclude the executive director from discussions concerning the employment or performance of the executive director or medical director of the board. The executive director shall give a surety bond to the state in such sum as the board determines, conditioned on the faithful performance of the duties of the executive director's office. The executive director shall receive a salary from the board and shall be reimbursed for actual and necessary expenses incurred in carrying out duties as executive director. The executive director shall submit a report to the director of public safety at least every three months regarding the status of emergency medical services in this state. The executive director shall meet with the director of public safety at the director's request.

(B) The board shall appoint a medical director, who shall serve at the pleasure of the board. The medical director shall be a physician certified by the American board of emergency medicine or the American osteopathic board of emergency medicine who is active in the practice of emergency medicine and has been actively involved with an emergency medical service organization for at least five years prior to being appointed. The board shall consider any recommendations for this appointment from the Ohio chapter of the American college of emergency physicians, the Ohio chapter of the American college of surgeons, the Ohio chapter of the American academy of pediatrics, the Ohio osteopathic association, and the Ohio state medical association. The medical director shall direct the executive director and advise the board with regard to adult and pediatric trauma and emergency medical services issues. The medical director shall attend each meeting of the board, except the board may exclude the medical director from discussions concerning the appointment or performance of the medical director or executive director of the board. The medical director shall be employed and paid by the board and shall be reimbursed for actual and necessary expenses incurred in carrying out duties as medical director.

(C) The board may appoint employees as it determines necessary. The board shall prescribe the duties and titles of its employees.

Effective Date: 11-03-2000

STATE OF OHIO

EMS BOARD

Emergency Medical Services Pediatric Guidelines and Procedures Manual

INTRODUCTION

On behalf of the State Board of Emergency Medical Services, the Ohio Emergency Medical Services for Children Program was charged with drafting proposed pediatric guidelines that EMS agencies could use in setting a standard for emergency medical services to the children of Ohio.

Please note that the proposed guidelines are not mandatory for Ohio EMS agencies. The guidelines and procedures manual is meant to assist in the development of local protocols. It is the Board's hope that individual regions or agencies will review these guidelines with their medical directors and legal counsel when drafting their own individualized protocols.

February 6, 2012

USING THE PEDIATRIC GUIDELINES

The pediatric guidelines are color coded for quick and easy reference, and represent the scope of practice as recommended by the Ohio EMSC Committee. In some cases, this differs from Ohio's scope of practice. Consult your medical director should questions arise regarding scope of practice.

Please see the color coded key below to determine how to use the guidelines.

PARAMEDICS may perform all instructions coded:

ADVANCED EMERGENCY MEDICAL TECHNICIANS (AEMT) may perform all instructions coded:

EMERGENCY MEDICAL TECHNICIANS (EMT) may perform all instructions coded:

EMERGENCY MEDICAL RESPONDERS (EMR) may perform all instructions coded:

MEDICAL CONTROL RECOMMENDATION

Pediatric Coma Scoring	57
Pediatric Prehospital Medications	58

PEDIATRIC ALTERED LEVEL OF CONSCIOUSNESS

EMR

- A. Assess ABCs. Manually stabilize cervical spine as per Multiple Trauma Protocol if cause of unconsciousness is unknown.
- B. If not breathing, assist ventilation with bag-valve-mask while administering 100% oxygen or provide mouth to mouth ventilation using barrier device.
- C. If breathing, administer 100% oxygen by NRB mask.
- D. Evaluate patient's general appearance, relevant history of condition and determine:
 - Allergies
 - Medication
 - Past Medical History - especially, diabetic, seizures, stroke, head injury, drug abuse
 - Last Meal
 - Events leading to present illness
- E. Obtain and document a pulse oximetry and/or capnography measurement.

EMT

- A. Determine blood sugar level by available means.
 - 1. If blood sugar is less than 70 mg/dl, administer oral glucose if alert. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl.

PATIENT MUST HAVE A GAG REFLEX.
 - 2. If blood sugar is greater than 400 mg/dl, TRANSPORT.
- B. If unable to check blood sugar or blood sugar is between 70 mg/dl and 400 mg/dl, establish communications with Medical Control and advise of patient condition.
- C. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.

AEMT

- A. Assist EMS professionals; obtain patient condition and circumstances.
- B. Check heart rhythm.
- C. Start IV saline, TKO.
- D. If any of the following are present: unresponsiveness, dehydrated or dry appearance, tachycardia, low BP, poor capillary refill and/or blood sugar is above 400 mg/dl, IV fluid bolus 20 ml/kg of normal saline.

PEDIATRIC ALTERED LEVEL OF CONSCIOUSNESS (cont'd)

- E. Determine blood sugar level by available means. Treat accordingly:
1. Blood sugar less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose (D25)
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl
 2. Blood sugar greater than 400 mg/dl and signs of hypoperfusion are present, administer an IV fluid bolus:
 - a. 20 ml/kg of saline
 - b. May be repeated if no response in 10 minutes.
- F. If blood sugar is normal, respirations are impaired, or patient does not respond to dextrose or fluid bolus, administer Narcan® 0.1 mg/kg IV, IO, ET. Refer to most current version of length based drug treatment guide (e.g. BROSELOW® PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage.
- If patient improves somewhat with Narcan® but is not fully awake, contact medical control for repeat dose.
- G. Re-evaluate patient condition, contact medical control, and transport to the hospital.
- H. In some cases, patient may require restraint, and should not be transported until appropriately restrained.

DO NOT DELAY TRANSPORT

PARAMEDIC

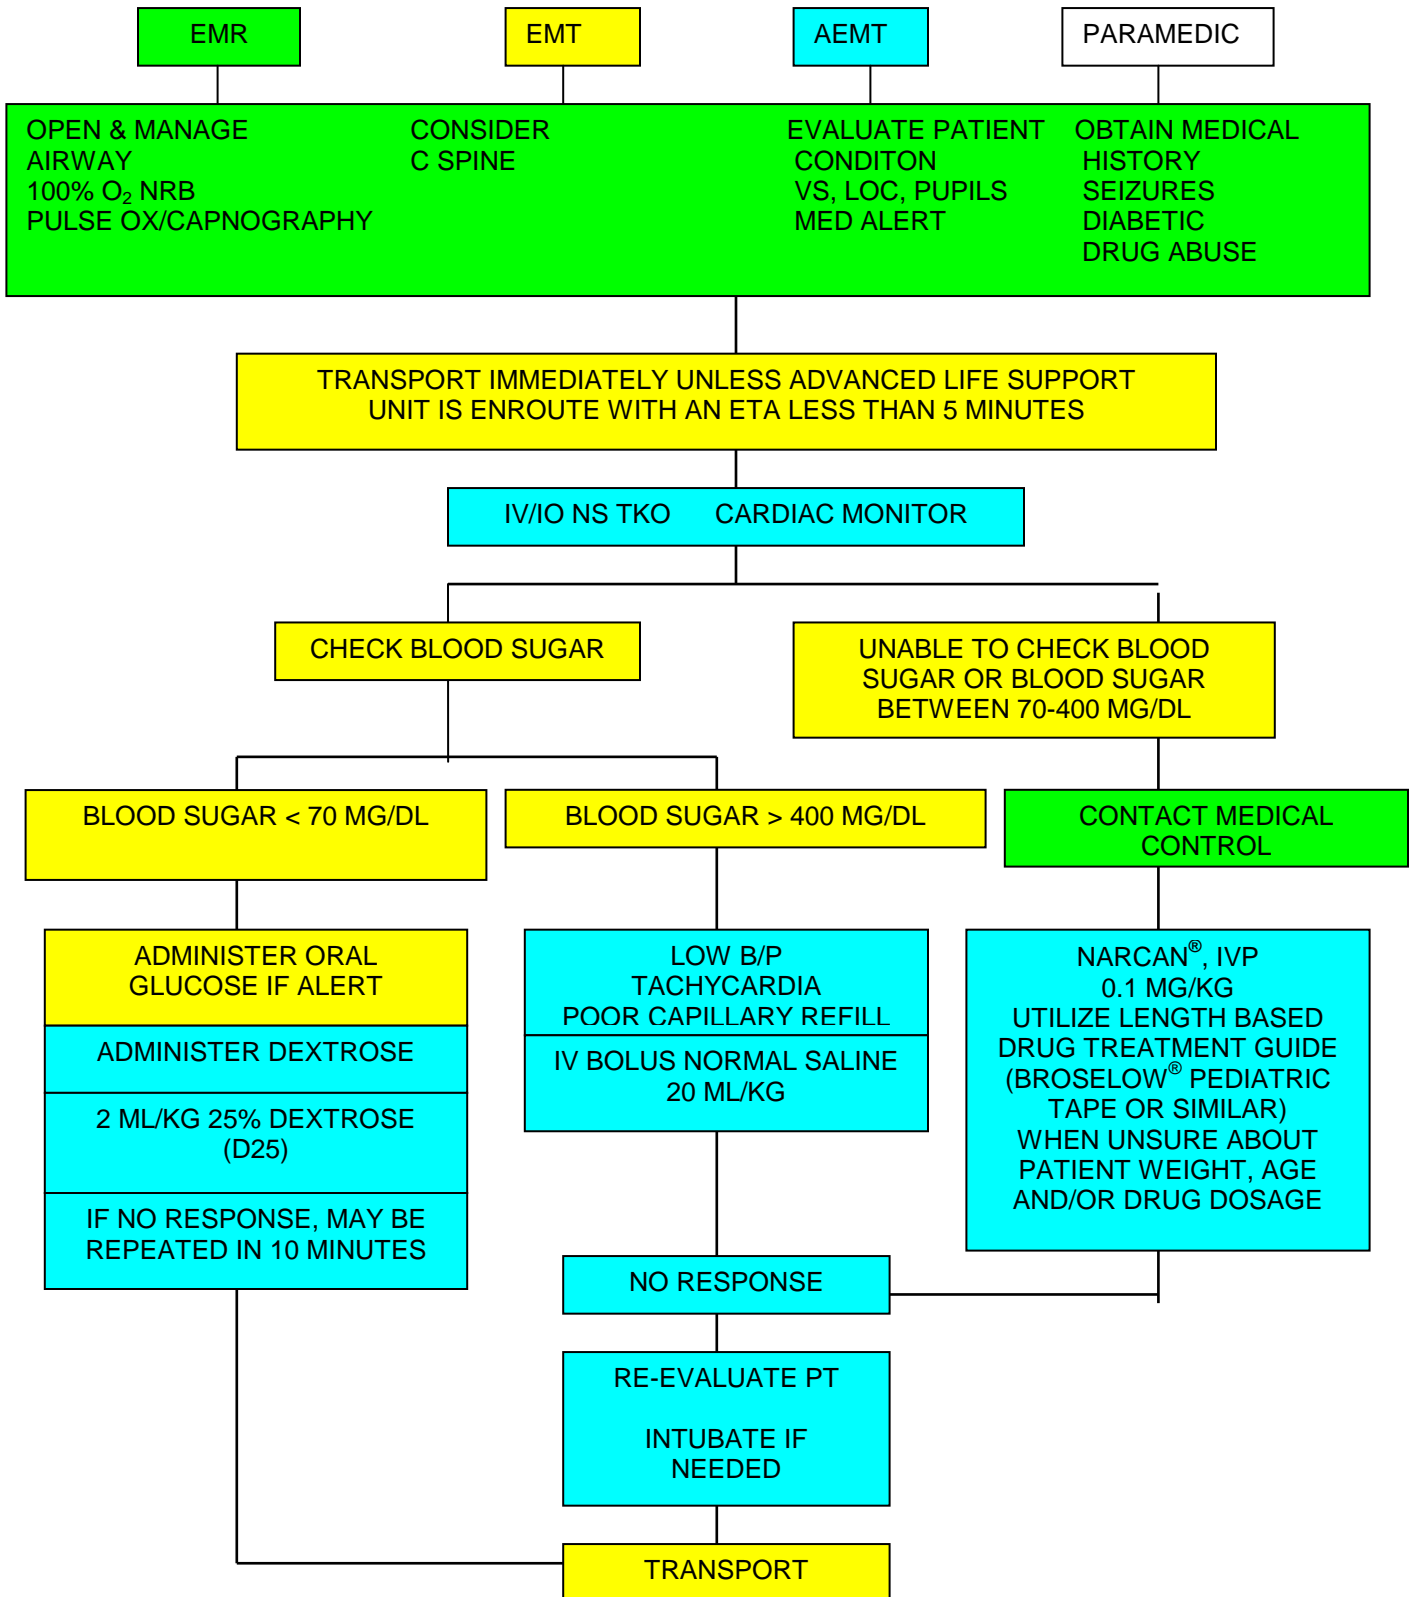

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Assess airway adequacy and assist ventilation with bag-valve-mask while administering 100% oxygen. May consider intubation.
- C. Check heart rhythm.
- D. Start IV/IO of normal saline. If any of the following are present: unresponsiveness, dehydrated or dry appearance, tachycardia, low BP, or poor capillary refill, administer a fluid bolus of 20 ml/kg normal saline IV/IO push.
- E. Determine blood sugar level by available means. Treat accordingly:
1. Blood sugar less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose (D25)
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl
 2. Blood sugar greater than 400 mg/dl and signs of hypoperfusion are present, administer an IV fluid bolus:

PEDIATRIC ALTERED LEVEL OF CONSCIOUSNESS (cont'd)

- a. 20 ml/kg of normal saline
 - b. May be repeated if no response in 10 minutes.
- F. If blood sugar is normal, respirations are impaired, or patient does not respond to dextrose or fluid bolus, administer Narcan® 0.1 mg/kg IV, IO, ET. Refer to most current version of length based drug treatment guide (e.g. BROSELOW® PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage.

If patient improves somewhat with Narcan® but is not fully awake, contact medical control for repeat dose.
- G. Re-evaluate patient condition, contact medical control, and transport to the hospital.
- H. In some cases, patient may require restraint, and should not be transported until appropriately restrained.

PEDIATRIC ALTERED LEVEL OF CONSCIOUSNESS

PEDIATRIC ARRHYTHMIAS

GENERAL CONSIDERATIONS

- A. In the treatment of cardiac arrhythmia, current American Heart Association guidelines were referred to for protocol development.
- B. Life-threatening cardiac rhythm disturbances in children are more frequently the result rather than the cause of acute cardiovascular emergencies with hypoxia being the primary cause.
- C. In infants and children, an arrhythmia should be treated if:
 - 1. the arrhythmia compromises cardiac output (poor perfusion), or
 - 2. the arrhythmia has the potential for degenerating into a rhythm that compromises cardiac output
- D. Initial therapy in children will consist of proper ventilation and oxygenation, along with the assessment of cardiac output
- E. Quality CPR consists of pushing hard with compression of the chest to $\geq 1/3$ of the anteroposterior diameter of the chest, compressions of at least 100 per minute, and allowing complete chest recoil.
- F. For two-person CPR, the rate of chest compressions without the presence of an advanced airway is 3:1 in newborns with a suspected primary etiology of respiratory compromise, and 15:2 in children and newborns in arrest with a suspected cardiac etiology. If an advanced airway is in place, 8-10 breaths per minute should be administered with continuous chest compressions.
- G. Transport is essential when advanced cardiac life support is not available within ten minutes of receipt of the call
- H. Refer to length based drug treatment guide (e.g. BROSELOW[®] PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage.

EMR

- A. Per current American Heart Association Pediatric Basic Life Support guidelines, establish unresponsiveness, activate the emergency response system, get the AED/defibrillator, and check for a pulse.
- B. If the patient has a pulse and is not breathing or only gasping, give one breath every three minutes and recheck the pulse every 2 minutes. Assist ventilation with bag-valve-mask while administering 100% oxygen or provide mouth to mouth ventilation using barrier device.
- C. If the patient does not have a pulse, immediately provide quality CPR for two minutes, apply the AED, analyze the rhythm, and deliver a shock if indicated. If the patient remains unresponsive, resume quality CPR for two minutes and analyze the rhythm after each two minute cycle of CPR until the patient starts to Move or ALS providers assume care
- D. Immobilize the patient's cervical spine only if clinically indicated.

EMT

- A. Open and manage the airway and provide 100% oxygen by NRB mask
 - 1. Assist ventilations if rate is below or above normal limits and signs of hypoxia are present
 - 2. Apply pulse oximeter and obtain reading
- B. If patient show signs of decreased cardiac output (decreased LOC, poor capillary refill, low blood pressure,) and a heart rate less than 60 bpm that is unimproved with oxygenation, start quality CPR.

PEDIATRIC ARRHYTHMIAS (cont'd)

- C. Evaluate patient's general appearance and determine:
 - 1. Vital signs
 - 2. Level of consciousness
 - 3. Cardiac output
 - 4. Lung sounds
- D. Obtain relevant history of current condition.
- E. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.
- F. If cardiac monitor is available, and patient has an unusual and/or irregular heart rate or pulse, may assist the AEMT or Paramedic with the application of a cardiac monitor and the acquisition of a strip for interpretation by ED physician, during transport only.

AEMT

- A. Start IV normal saline (NS), TKO.
- B. Assess airway adequacy and assist ventilation with bag-valve-mask while administering 100% oxygen. May consider intubation.
- C. Apply monitor and determine arrhythmia.
- D. Treat arrhythmias as follows:
 - 1. Bradycardia. Treat only if:
 - a. Infant or child's heart rate < 60 bpm and the patient has poor perfusion.
 - b. Airway management and 100% oxygenation does not improve patient condition.
 - i. Begin quality CPR
 - ii. Transport immediately

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Assess airway adequacy and assist ventilation with bag-valve-mask while administering 100% oxygen. Perform appropriate airway management (airway adjuncts or intubation).
- C. Apply monitor and determine arrhythmia.
- D. Treat arrhythmias as follows:
 - 1. Bradycardia. Treat if:
 - a. Infant or child's heart rate < 60 bpm and patient has poor perfusion.
 - c. Airway management and 100% oxygenation does not improve patient condition.
 - i. Begin quality CPR

- ii. Administer epinephrine IV, IO, or ET every three to five minutes or until perfusion improves
 - (a) When IV or IO routes are available, administer 0.01 mg/kg (0.1 mL/kg) of 1:10,000
 - (b) When administering through ET tube, use 0.1 mg/kg (0.1 mL/kg) of epinephrine 1:1,000 ET that must be diluted with 3-5 ml of NS.
 - iii. If no response, administer atropine
 - (a) When IV or IO routes are available, 0.02 mg/kg. (minimum dose 0.1 mg, maximum single dose 0.5 mg)
 - (b) When administering through ET tube, administer 0.04 mg/kg
 - (c) Atropine may be repeated once if the patient is not improved in 3-5 minutes
 - (d) Refer to length based drug treatment guide (e.g. BROSELOW® PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage.
 - iv. Transport and contact medical control for possible cardiac pacing
2. Narrow Complex Tachycardia:
- a. If patient is asymptomatic, transport immediately.
 - b. Consider normal pulse for age of patient
 - d. Consider hypovolemia and follow Hypovolemic Shock Protocol.
 - d. Inquire about a history of Wolfe Parkinson White syndrome or other arrhythmias.
 - e. Consider vagal maneuver. Success of vagal maneuvers are variable and depend upon the presence of underlying conditions, the patient's level of cooperation, and age. Regardless of what type of vagal maneuver is attempted, obtain a cardiac monitor tracing before and during the attempt. The following vagal maneuvers may be attempted in pediatric patients:
 - Ice water applied to the face
 - Crushed ice in a plastic bag/glove applied to the face without obstructing ventilation
 - Have child blow through a straw
 - f. If patient is symptomatic (poor perfusion, shock, hypotension, respiratory difficulty, SOB, signs of CHF, altered LOC) and heart rate is ≥ 220 /minute in an infant or ≥ 180 /minute in a child:
 - i. Administer adenosine, 0.1 mg/kg (maximum 6mg) RAPID IV bolus over 1 to 3 seconds followed IMMEDIATELY with a 5-10 ml NS bolus IV.

- ii. If the first dose is ineffective, repeat adenosine in 1-2 minutes, 0.2 mg/kg (maximum 12 mg) RAPID IV bolus followed IMMEDIATELY with a 5-10 ml NS bolus IV.
- iii. Contact medical control
- iv. Consider sedation Valium®/Versed® 0.2 mg/kg IV
- v. Synchronous cardioversion at
 - (a) : 0.5-1 joules (monophasic or biphasic)
 - (b) : 2 joules/kg (monophasic or biphasic)
 - (c) If the second synchronized cardioversion is unsuccessful, consider contacting medical control for an antiarrhythmic (amiodarone or procainamide)

3. Wide Complex Tachycardia (With a pulse)

Assess patient's perfusion. Signs/symptoms of poor perfusion include

- Hypotension
- Acutely altered mental status
- Signs of shock

a. Good perfusion

i. If the rhythm is regular and the QRS complex is monomorphic, consider the administration of adenosine 0.1 mg/kg (maximum 6 mg) RAPID IV bolus over 1 to 3 seconds followed IMMEDIATELY with a 5-10 ml NS bolus IV. If the first dose is ineffective, repeat adenosine in 1-2 minutes, 0.2 mg/kg (maximum 12 mg) RAPID IV bolus followed IMMEDIATELY with a 5-10 ml NS bolus IV.

Antiarrhythmics that are indicated for a wide complex tachycardia are amiodarone or procainamide. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization. Do not routinely administer amiodarone and procainamide together. If the patient is stable or has a history of congenital heart disease, please discuss with the medical control physician at the receiving facility prior to administration of an antiarrhythmic. Otherwise, follow these guidelines for administration:

ii. If the rhythm is not regular and/or the QRS complex is not monomorphic or the EMT is unsure about the rhythm, contact medical direction for potential orders for an antiarrhythmic.

- Amiodarone 5 mg/kg IV over 20-60 minutes
- Procainamide IV infusion of 15 mg/kg over 30-60 minutes
 - Max dose is 15 mg/kg
 - Discontinue infusion if hypotension develops, development of a prolonged QRS complex greater than 50%, the arrhythmia resolves, or the maximum dose of 15 mg/kg has been administered.

****NOTE: If at anytime the patient becomes unstable with poor perfusion, go directly to synchronous cardioversion.**

****NOTE: Do not administer more than one antiarrhythmic to a patient. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization.**

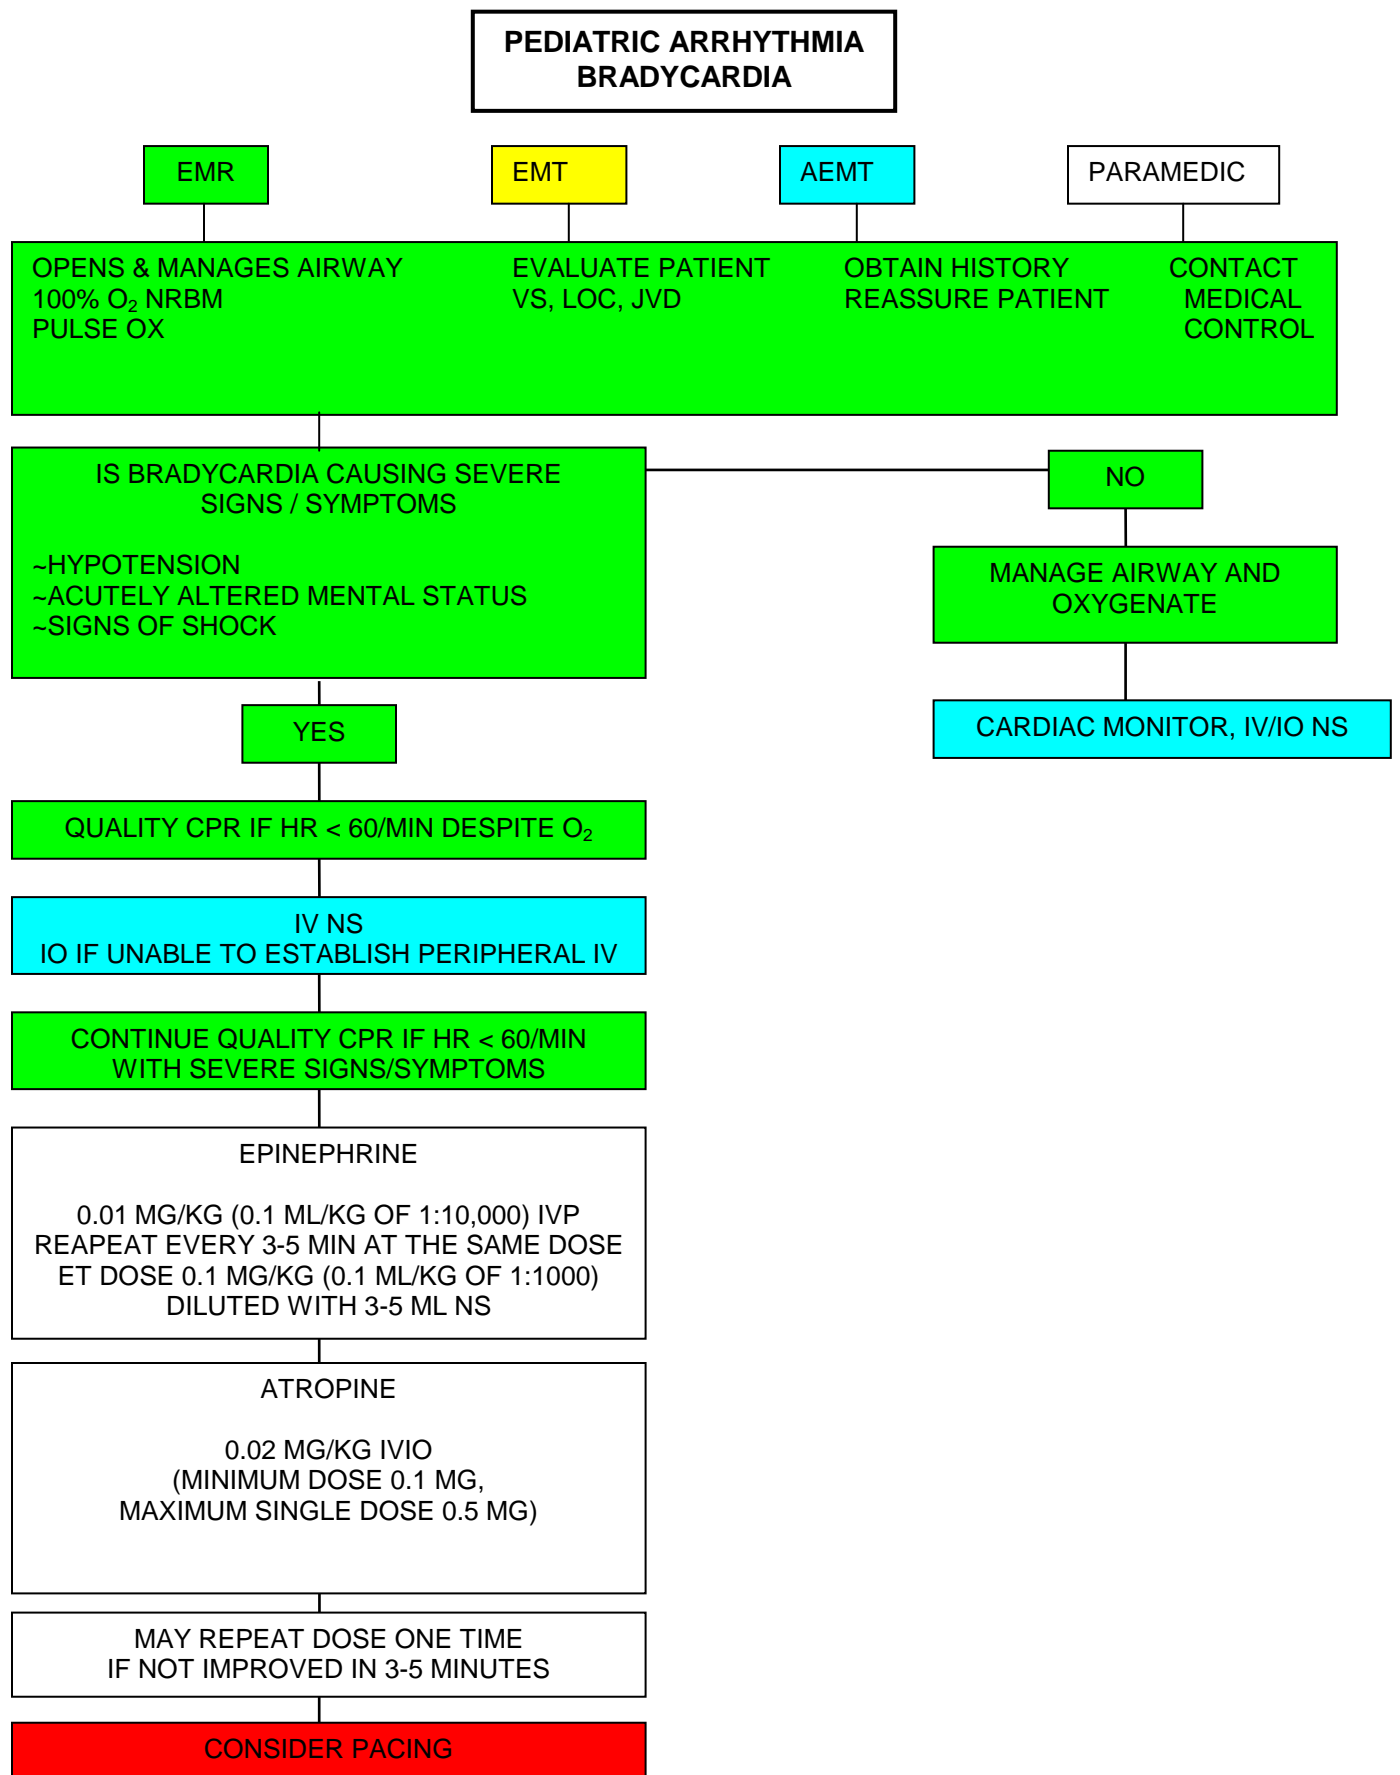

- ii. Consider sedation Valium®/Versed® 0.2 mg/kg IV

- iii. Synchronous cardioversion at:
 - (a) : 0.5-1 joules/kg (monophasic or biphasic)
 - (b) : 2 joules/kg (monophasic or biphasic)
- b. Poor perfusion (with a pulse):
 - i. Prepare for immediate cardioversion
 - ii. Consider sedation Valium®/Versed® 0.2 mg/kg IV
 - iii. Synchronous cardioversion at:
 - (a) : 0.5 joules/kg (monophasic or biphasic)
 - (b) : 2 joules/kg (monophasic or biphasic)
 - iv. Administer an antiarrhythmic

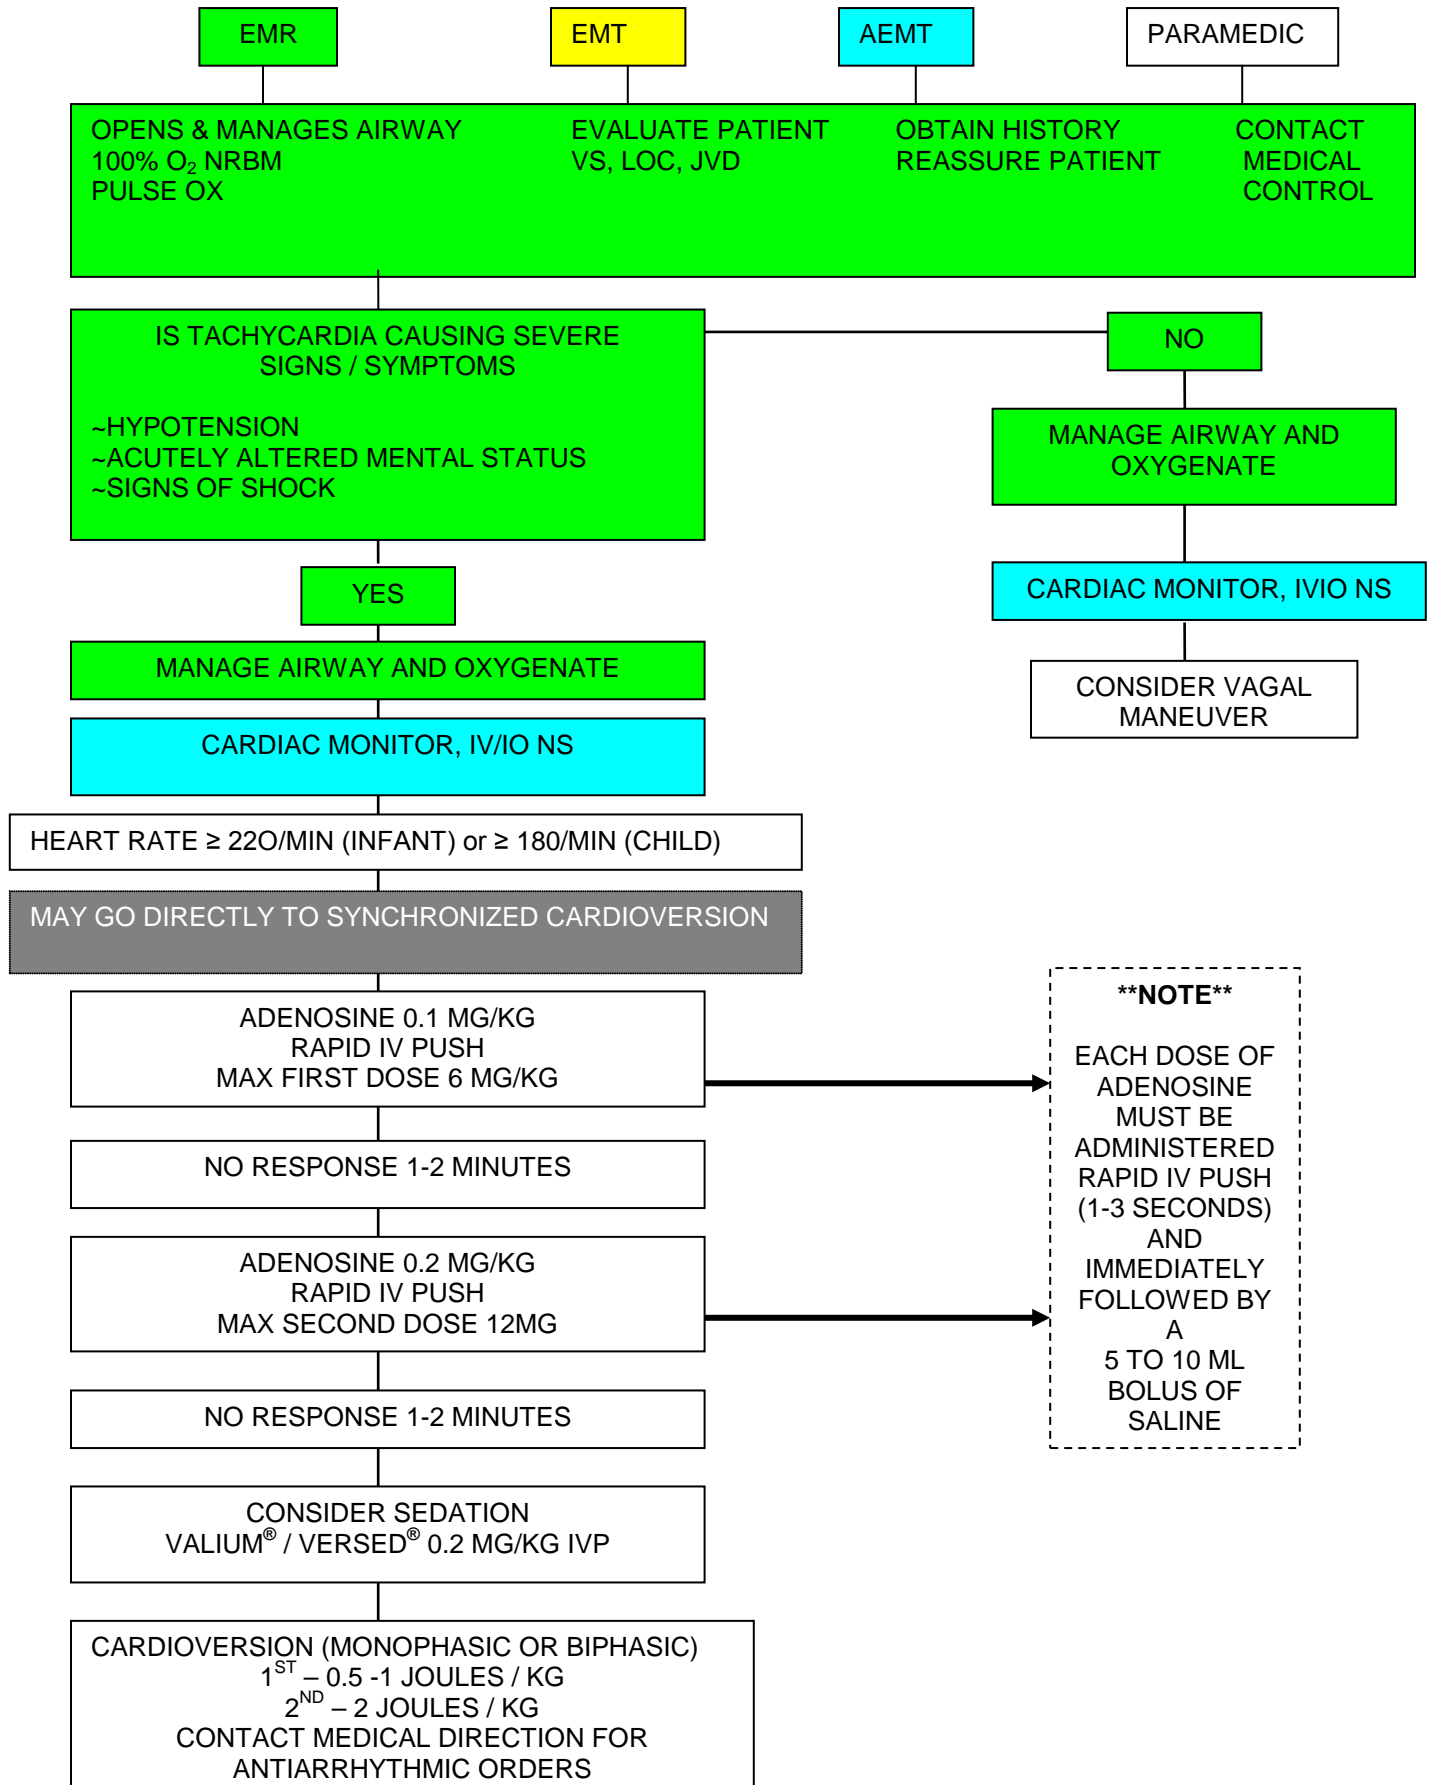

Antiarrhythmics that are indicated for a wide complex tachycardia are amiodarone or procainamide. The choice of the antiarrhythmic to be administered should be predetermined by the medical director for your organization. Do not routinely administer amiodarone and procainamide together. If the patient is stable or has a history of congenital heart disease, please discuss with the medical control physician at the receiving facility prior to administration of an antiarrhythmic. Otherwise, follow these guidelines for administration:

- Amiodarone 5 mg/kg IV over 20-60 minutes
- Procainamide IV infusion of 15 mg/kg over 30-60 minutes
 - Maximum dose is 15 mg/kg
 - Discontinue infusion if hypotension develops, development of a prolonged QRS complex greater than 50%, if the arrhythmia resolves, or the maximum dose of 15 mg/kg has been administered.

****NOTE: Do not administer more than one antiarrhythmic to a patient. The choice of the antiarrhythmic should be predetermined by the Medical Director for your organization.**

PEDIATRIC ARRHYTHMIA NARROW COMPLEX TACHYCARDIA

**PEDIATRIC ARRHYTHMIAS
STABLE WIDE COMPLEX TACHYCARDIA**

PATIENTS WITH A GOOD PULSE, FOOD PERFUSION, WHO ARE ALERT AND ORIENTED ARE CONSIDERED STABLE

DO NOT ADMINISTER MORE THAN ONE ANTIARRHYTHMIC TO A PATIENT

**PEDIATRIC ARRHYTHMIAS
UNSTABLE WIDE COMPLEX TACHYCARDIAS**

PATIENTS WITH POOR PERFUSION / SHOCK / HYPOTENSION, RESPIRATORY DIFFICULTY, PULMONARY CONGESTION, AND/OR ALTERED LOC ARE CONSIDERED UNSTABLE

DO NOT ADMINISTER MORE THAN ONE ANTIARRHYTHMIC TO A PATIENT

PEDIATRIC CARDIAC ARREST

GENERAL CONSIDERATIONS

- A. Cardiac arrest in children is primarily due to lack of an adequate airway, resulting in hypoxia
- B. All EMS professionals must concentrate on opening and maintaining the airway and providing 100% oxygen
- C. Quality CPR consists of pushing hard with compression of the chest to $\geq 1/3$ of the anteroposterior diameter of the chest, compressions of at least 100 per minute, and allowing complete chest recoil.
- D. For two-person CPR, the rate of chest compressions without the presence of an advanced airway is 3:1 in newborns with a suspected primary etiology of respiratory compromise, and 15:2 in children and newborns in arrest with a suspected cardiac etiology. If an advanced airway is in place, 8-10 breaths per minute should be administered with continuous chest compressions.
- E. During BVM ventilation or endotracheal intubation, routine cricoid pressure to prevent aspiration is no longer recommended.
- F. Transport IMMEDIATELY when excessive hemorrhage or hypothermia is present. ALS measures should be carried out during transport
- G. If peripheral IVs cannot be established, venous access should be obtained by the intraosseous route
- H. If IV or IO access cannot be established, administer appropriate medications through the ET tube
- I. **NOTE:** AEDs should not be used on patients under one year of age. Pediatric AED pads are preferred for patients between the ages of 1 and 8 years of age. Adult AED pads should be used for patients greater than 8 years of age, but they may be used in patients between the ages of 1 and 8 years of age if pediatric AED pads are unavailable.
- J. If Sudden Infant Death Syndrome (SIDS) is suspected:
 - 1. Initiate basic and advanced life support, unless apparent rigor mortis or signs of lividity are present
 - 2. Communicate with and reassure the parents
 - 3. Encourage family to have friends or neighbors accompany them to the hospital
 - 4. If infant is not resuscitated, refer parents to social services at the nearest appropriate emergency department to initiate counseling
- K. Refer to BROSELOW[®] PEDIATRIC EMERGENCY TAPE when unsure about patient weight, age and/or drug dosage

EMT

- A. Open and maintain airway in sniffing position
- B. Ventilate with 100% oxygen via BVM with oxygen reservoir
- C. Initiate quality CPR in accordance with American Heart Association guidelines
- D. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY unless ALS unit is en route and has an ETA of less than 5 minutes

CARDIAC ARREST (cont'd)

- E. If an Automated External Defibrillator (AED) is available:
1. Assess patient for respirations and cardiac arrest
 2. Apply AED and activate the device.
 3. Start documentation that must include:
 - EMS unit delivering care and ID of EMS professionals
 - Initial call information (i.e. accidental ingestion, drowning, etc.)
 - Initial patient assessment, findings, and impression
 - Care given to this point
 - Ongoing outcomes of care delivered to patient
 - a. "No Shock Advised"
 - i. Continue quality CPR for two minutes
 - ii. Continue ventilation with 100% oxygen via BVM with oxygen reservoir
 - iii. Contact medical control and transport IMMEDIATELY
 - b. "Shock Advised"
 - i. Deliver a single shock
 - ii. Resume quality CPR for two minutes
 - iii. Contact medical control, advise of cardiac arrest, and transport IMMEDIATELY
 - iv. After each two minute cycle of quality CPR, activate AED to assess rhythm and deliver a single shock if indicated
 - v. Resume quality CPR

"TURN AED OFF DURING MOVEMENT OF PATIENT"

AEMT

- A. Assume charge and confer with EMS professionals to patient condition and circumstances
- B. Apply cardiac monitor
- C. If monitor shows ventricular fibrillation or pulseless ventricular tachycardia:
 1. Defibrillate at 2 joules/kg
 2. If no response, Five cycles of quality CPR
 3. Defibrillate at 4 joules/kg
 4. If no response, resume quality CPR and TRANSPORT
- D. Start IV or IO of saline and give 20 ml/kg NS IV bolus. IV access should be accomplished en route to hospital.

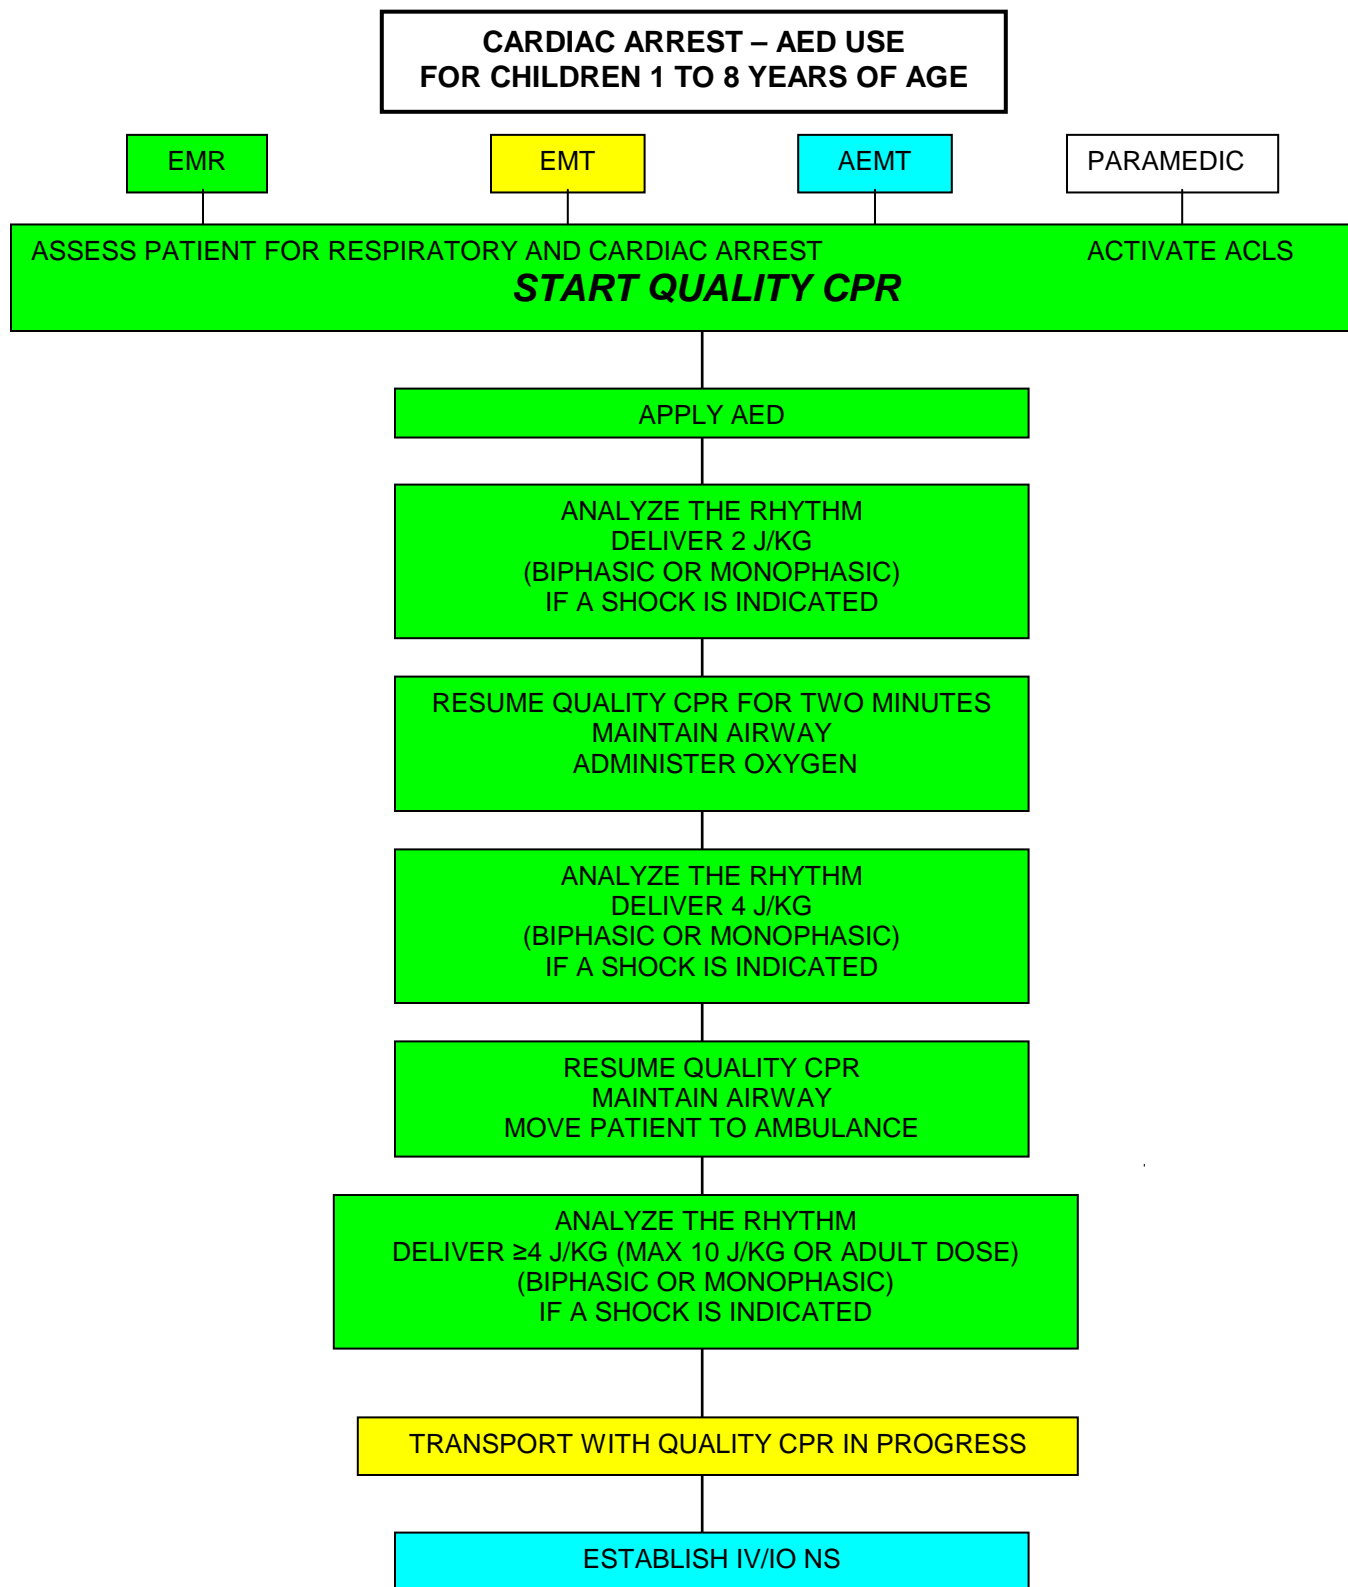

DO NOT DELAY TRANSPORT

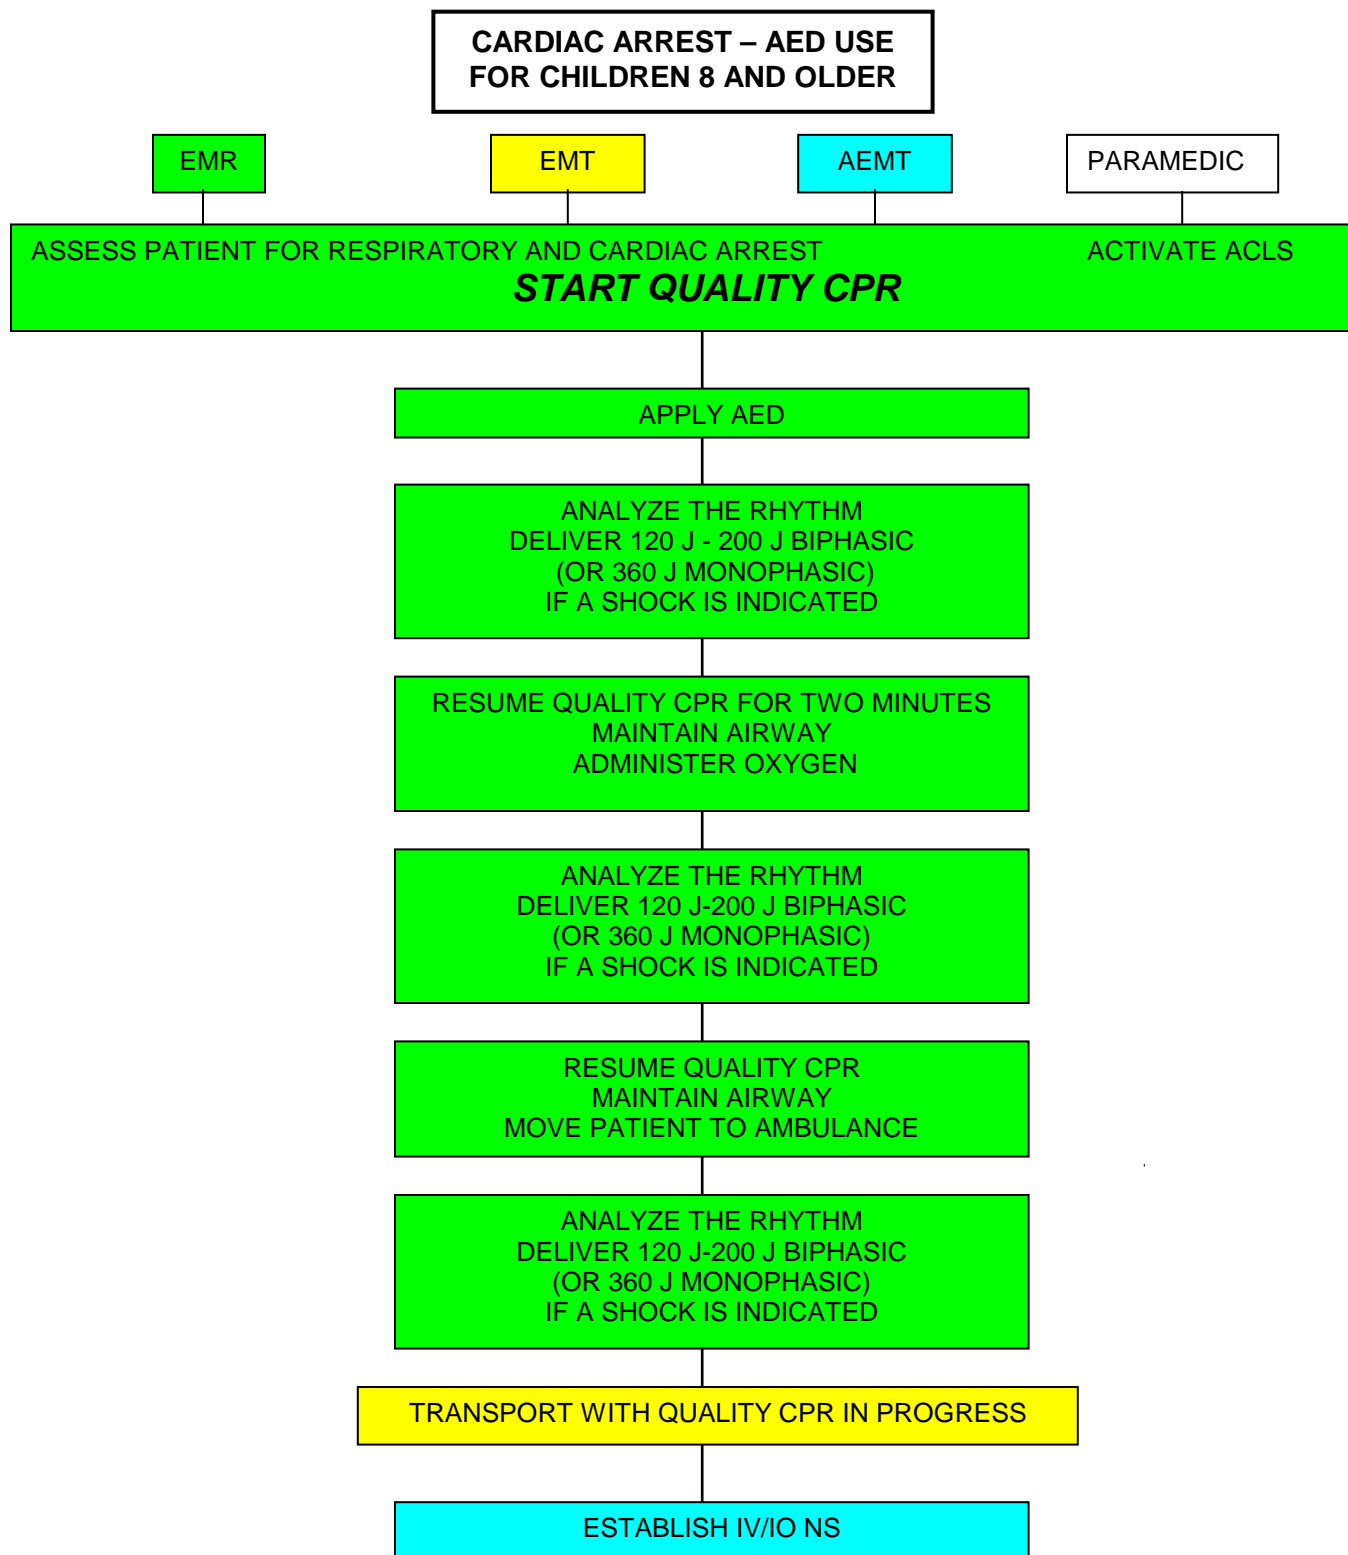

EMT-P

- A. Assume charge and confer with EMS professionals as to patient condition and circumstances
- B. If an AEMT is in a cycle of defibrillation, allow to complete cycle
- C. Assess airway and intubate if needed
- D. Establish IV or IO, whichever is quickest
- E. Apply monitor. If one of the following conditions exists, treat as follows:
 1. Ventricular fibrillation or pulseless ventricular tachycardia
 - a. Defibrillate at 2 joules/kg
 - b. If no response, quality CPR for two minutes
 - c. Defibrillate at 4 joules/kg
 - d. If no response, continue quality CPR for two minutes
 - e. Administer epinephrine IV, IO or ET every 3-5 minutes
 - IV / IO doses – 0.01 mg/kg of 1:10,000 (0.1 ml/kg)
 - ET tube doses – 0.1 mg/kg of 1:1,000 (0.1 ml/kg) diluted with 1-2 ml of saline
 - f. If no response, defibrillate at ≥ 4 joules/kg to a maximum of 10 joules/kg or the adult dose
 - g. If no response, continue quality CPR for two minutes
 - h. Administer one antiarrhythmic
 - Amiodarone 5 mg/kg IV/IO, may repeat dose up to 2 times for refractory ventricular fibrillation or pulseless ventricular tachycardia
 - i. If no response, continue quality CPR and TRANSPORT
 - j. Consider the treatment of reversible causes
 - Hypovolemia: administer 20 ml/kg NS IV fluid boluses
 - Hypoxia
 - Hydrogen ion (acidosis)
 - Hypoglycemia: administer 2 ml/kg of D25 IV/IO for children under 20 kg or 1 ml/kg of D50 IV/IO for children over 20 kg if the blood glucose is less than 80
 - Hypokalemia/hyperkalemia
 - Hypothermia
 - Tension pneumothorax
 - Tamponade, cardiac
 - Toxins
 - Thrombosis, pulmonary
 - Thrombosis, coronary
 2. Asystole / Pulseless Electrical Activity (PEA)
 - a. Begin quality CPR immediately
 - b. Obtain IV/IO access

CARDIAC ARREST (cont'd)

- c. Continue quality CPR for two minutes and administer epinephrine IV, IO or ET every 3-5 minutes
 - i. IV/IO doses – 0.01 mg/kg of 1:10,000 (0.1 ml/kg)
 - ii. ET tube doses – 0.1 mg/kg of 1:1,000 (0.1 ml/kg) diluted with 1-2 ml of saline
- c. Confirm asystole in two different leads
- d. If rhythm is unclear and possibly ventricular fibrillation, follow ventricular fibrillation/pulseless ventricular tachycardia guideline
- e. Consider treatable causes:
 - Hypovolemia: administer 20 ml/kg NS IV boluses
 - Hypoxia
 - Hydrogen ion (acidosis)
 - Hypoglycemia: administer 2 ml/kg of D25 IV/IO for children under 20 kg or 1 ml/kg of D50 IV/IO for children over 20 kg if the blood glucose is less than 80
 - Hypokalemia/hyperkalemia
 - Hypothermia
 - Tension Pneumothorax
 - Tamponade, cardiac
 - Toxins
 - Thrombosis, pulmonary
 - Thrombosis, coronary
- f. If no response, continue quality CPR and TRANSPORT

AFTER AN ADVANCED AIRWAY IS PLACED
 RESCUERS NO LONGER DELIVER "CYCLES"
 OF CPR. GIVE CONTINUOUS CHEST
 COMPRESSIONS WITHOUT PAUSES FOR
 BREATHS. GIVE 8 TO 10 BREATHS/MINUTE.
 CHECK RHYTHM EVERY TWO MINUTES.

CHILD ABUSE / NEGLECT

GENERAL CONSIDERATIONS

- A. Child abuse or neglect are widespread enough that nearly all EMS professionals will see these problems at some time. The first step in recognizing abuse or neglect is to accept that they exist and to learn the signs and symptoms.
- B. Initiate treatment as necessary for situation using established protocols.
- C. If possible remove child from scene, transporting to hospital even if there is no medical reason for transport.
- D. If parents refuse permission to transport, notify law enforcement for appropriate disposition. If patient is in immediate danger, let law enforcement handle scene.
- E. Advise parents to go to hospital. **AVOID ACCUSATIONS** as this may delay transport. Adult with child may not be the abuser.
- F. Carefully document findings and report to physicians at the hospital. An EMS professional must also report or assure that actual or suspected child abuse/neglect is reported to the local law enforcement agency or the Children's Services Board.

DOCUMENT THIS NOTIFICATION

DO NOT JEOPARDIZE YOUR SAFETY

SIGNS AND SYMPTOMS

The incidence of child abuse and neglect has no socioeconomic, racial, cultural, or religious boundaries. Child abuse and neglect occurs in all segments of our population. Prehospital personnel are in a unique position in their ability to make the initial identification of these victims. EMS professionals should always believe what the child says, document the exact statements on the prehospital care report, and communicate them clearly to the healthcare providers upon arriving to the receiving facility.

The signs and symptoms of child abuse and neglect may include the following:

Physical Abuse

- A. Bruises
 - i. Infants rarely bruise accidentally
 - ii. Active children normally sustain bruises on the front of the body (knees, shins, elbows, foreheads)
 - iii. Bruises in recognizable shape of an object are suspicious
 - iv. Multiple bruises in different stages of healing are suspicious
- B. Skin injuries-cuts, scrapes, bruises, burns, bites, redness, swelling

C. Burns

- i. Scald burns are common
- ii. Immersion burns characterized by clear lines of demarcation (accidental burns are more likely to have a splash pattern due to the child's withdrawal from the heat source)
- iii. Inflicted contact burn (recognizable by a shape of the object used to produce it)
- iv. Burns in less exposed or unexposed areas, deeper or larger burns

D. Bites

- i. Adult human bite marks
- ii. Multiple, random, or well-defined bite marks
- v. Multiple defined tooth marks (differ from animal bites)

E. Fractures

- i. Suspected fractures discovered "accidentally" by the guardian
- ii. Skeletal injury inconsistent with history
- iii. Multiple fractures in different stages of healing
- iv. Suspected fractures accompanied by other injuries

F. Reported or alleged falls

- i. Falls from a standing position or low object (less than child's height) rarely result in serious injuries
- ii. Falls from greater than child's height are usually required to sustain serious injury

G. Injuries to face and head

- i. Unintentional injuries usually involve the front of body
- ii. Injuries to the side of the face, the cheeks, or the ears are suspicious for abuse
- iii. Direct blows to the mouth usually results in lip injuries, possibly with fractures to the jaw or teeth
- iv. Considerable force is required to cause severe head trauma

H. Hair loss

- i. Can be sign of child abuse from dragging by the hair
- ii. May simply be the result of excessive force during hair brushing or from certain types of hair braiding
- iii. May be self-inflicted to relieve stress
- iv. Blood may be seen at the surface or beneath the scalp

I. Shaken baby syndrome

- i. Most common in children less than 2 years old
- ii. There may be no external evidence of trauma
- iii. Possible signs include decreased consciousness, seizures, vomiting,
- iv. other signs of head injury, unusual cry
- v. Altered mental status may be the only sign
- vi. Recognition of the possibility of this syndrome should trigger suspicion of abuse

Sexual Abuse

- A. Signs of recent abuse may include pain, bleeding, or discharge from urethra, vagina, or rectum
- B. Signs of chronic or concealed abuse occurring over weeks or months may include nonspecific abdominal pain, vaginal inflammation, or painful urination
- C. The physical examination is normal in most cases

Emotional Abuse

- A. A component of all forms of child abuse
- B. Most cases are mild, but early recognition is important
- C. Signs
 - i. Encouragement of destructive or antisocial behaviors
 - ii. Verbal assault of the child or verbal attacks on the child's development of self and social competence
 - iii. Humiliation of the child
 - iv. Ignoring the child

CHILD ABUSE/NEGLECT (cont'd)

- v. Isolation of the child
- vi. Rejection of the child's needs and requests

Neglect

- A. Most common form of child abuse, yet it is the most under-recognized and under-reported form of child abuse
- B. Signs
 - i. Inadequate care, including inadequate provision of food, clothing, or shelter
 - ii. Inadequate medical attention, including delay in seeking care for known illness
 - iii. Poor personal hygiene
 - iv. Unsanitary conditions
 - v. Inadequate sleeping arrangements
 - vi. Lack of supervision
 - vii. Evidence of substance abuse
 - viii. Structural, fire, environmental hazards

FEVER

GENERAL CONSIDERATIONS

- A. If febrile, remove excess clothing, but take great care to avoid shivering. Consider environment and temperature of vehicle.
- B. DO NOT sponge child unless treating for heat exposure. (This includes use of moist towels to “cool” the child)
- C. Transport all infants < 8 weeks of age with a reported temperature > 100.4° F (38° C) or < 96° F (35.5° C)

PEDIATRIC FLUID AND DRUG ADMINISTRATION

AEMT

- A. Peripheral venous access, in the form of an IV or an IO, will be the first route for fluid and drug administration for any life or limb threatening emergency situation.
- B. Unless there are compelling factors, no more than two attempts at peripheral access should be made in the pediatric patient.
- C. In a **life-threatening situation** where venous access appears futile, immediately establish intraosseous access.
- D. Intraosseous Infusion
 - 1. The following are guidelines for the UNSTABLE child requiring alternative vascular access AFTER insuring that the airway and ventilations are established:
 - a. **Indications:** Intraosseous access should be established if you cannot rapidly achieve venous access in a patient in decompensated shock or cardiopulmonary arrest.
 - c. **Contraindications:** Recently fractured bone, known bone disorder, previous unsuccessful attempt of IO placement at site.
 - d. **Relative contraindications:** cellulitis or infected burn at site.
 - c. **Equipment:** Bone marrow aspiration needle, iodine and alcohol preps, 5 ml syringe.
- E. Fluid of choice is normal saline or Lactated Ringers, utilizing a macrodrip administration set. If child is less than 2 years old a microdrip set should be used if available.

PARAMEDIC

- A. When peripheral or IO access is not available for administering medications:
 - 1. If an ET tube is in place, the ET tube should be the route of administration for
 - Lidocaine
 - Atropine
 - Narcan[®]
 - Epinephrine
 - 2. Intramuscular (IM) route may be used for Versed[®] or morphine.
 - 3. Rectal route may be used for Valium[®] (diazepam).

MULTIPLE TRAUMA

GENERAL CONSIDERATIONS

- A. The basics of trauma care apply to pediatric patients and should primarily follow the general adult trauma protocol.
- B. Drowning is classified as trauma in Ohio. Victims of drowning or near drowning that could require admission to a hospital should be transferred to the appropriate trauma center.
- C. Areas where special focus should occur:
 - 1. May involve both respiratory failure and shock.
 - 2. Assessment and support of cardiopulmonary function is fundamental.
- D. Common errors of pediatric trauma resuscitation are:
 - 1. Failure to open and maintain the airway.
 - 2. Failure to provide appropriate fluid resuscitation to children with head injury.
 - 3. Failure to recognize and treat internal hemorrhage.
- E. An IO infusion is indicated in the trauma setting when shock needs to be treated and rapid venous access is unobtainable.
- F. The proper size equipment is very important to resuscitation care. Refer to length based drug treatment guide (e.g. BROSELOW® PEDIATRIC EMERGENCY TAPE OR SIMILAR GUIDE) when unsure about patient weight, age and/or drug dosage and when choosing equipment size.

****NOTE: FOLLOW APPLICABLE REGIONAL
PEDIATRIC TRAUMA TRIAGE PROTOCOL**

NEWBORN RESUSCITATION

GENERAL CONSIDERATIONS

A. The five initial questions to assess in every newborn are as follows:

- Is the baby full term and how many babies are expected?
- Is there THICK meconium present?
- Is the baby breathing or crying?
- Does the baby have good muscle tone?
- Is the baby's color pink?

These questions will help determine the amount of intervention needed. Most term healthy infants do not require ALS intervention. This initial assessment should be completed within 30 seconds.

- B. Body heat must always be maintained. As soon as the baby is born, wipe the baby dry and place in a warm environment. Cover the infant's head, place against mother's skin, and cover both. Use indirect heated, humidified oxygen, if available. Avoid direct application of cold oxygen to infant's face as this may cause respiratory depression. Avoid inducing hyperthermia (elevated body temperature) in babies who may have had a hypoxic-ischemic event.
- C. Position infant in sniffing position (with a 1 inch towel under the shoulders). This will provide an optimally opened airway and adequate drainage of secretions.
- D. Suction secretions with a bulb syringe from the mouth and then nose for newborns who have obvious obstruction to spontaneous breathing or who require positive pressure ventilation.
- E. Open and manage airway
- F. Meconium aspiration is a major cause of death and morbidity among infants. If thick meconium is present and not removed, 60% of these infants will aspirate the meconium. If meconium staining of the amniotic fluid is present, *routine intrapartum oropharyngeal and nasopharyngeal suctioning for infants is not advised*. Endotracheal suctioning for the presence of meconium or meconium staining should be reserved for infants who are not vigorous and should be performed immediately after birth. If thick meconium is present, it may be necessary to visualize the trachea and suction the lower airway. Lower airway suction is achieved by intubating the infant and suctioning directly through the ET tube. Each time this suctioning is done, the infant will have to be re-intubated with a new tube if available. If a new ETT of the appropriate size is not available, the ETT should be flushed with normal saline or sterile water and reused. Watery or thin meconium does not require suctioning of the lower airway. Prolonged and/or unsuccessful attempts at intubation may result in bradycardia. Ventilation with BVM should be considered, particularly if there is persistent bradycardia.
- G. If drying and suctioning has not provided enough stimulation, try rubbing the infant's back or flicking their feet. If the infant still has poor respiratory effort, poor tone or central cyanosis, consider them to be distressed. Most distressed infants will respond quickly to 100% oxygen via BVM or T-piece. Continuous positive airway pressure (CPAP) should be considered for persistent labored breathing, cyanosis, or low pulse oximetry.
- H. The APGAR score should be used in the initial assessment of normal newborns and is a measure of the effectiveness of interventions for the distressed newborn. Scoring must not delay intervention in the distressed newborn. The score is completed at 1 and 5 minutes after delivery. If the 5-minute score is less than 7, repeat every 5 minutes for the next 20 minutes.

APGAR SCORE

Sign	0	1	2
Color	Blue / Pale	Pink Body, Blue Extremities	Completely Pink
Heart Rate	Absent	Below 100	Above 100
Irritability (response to stimulation)	No Response	Grimace	Cries
Muscle Tone	Limp	Flexion of Extremities	Active Motion
Respiratory Effort	Absent	Slow and Regular	Strong Cry

- I. Refer to length-based drug treatment guide (e.g. Broselow[®] Pediatric emergency tape or similar device) when unsure about patient weight or drug dosage.

EMR

- A. The EMR may assist in the management of emergency childbirth.
- B. After delivery of the infant, assess airway and breathing while drying and positioning head down. If thick meconium is present or the infant is not vigorous, suction the oropharynx and nasopharynx with a bulb syringe prior to ventilation and stimulation. Keep infant warm. Wrap in dry blankets.
- C. If infant not breathing, assist ventilations via mouth to mouth using barrier device or a bag valve mask.
- D. If no pulse or pulse < 60 bpm, begin quality CPR.
- E. Keep infant warm. Wrap in dry blankets.

EMT

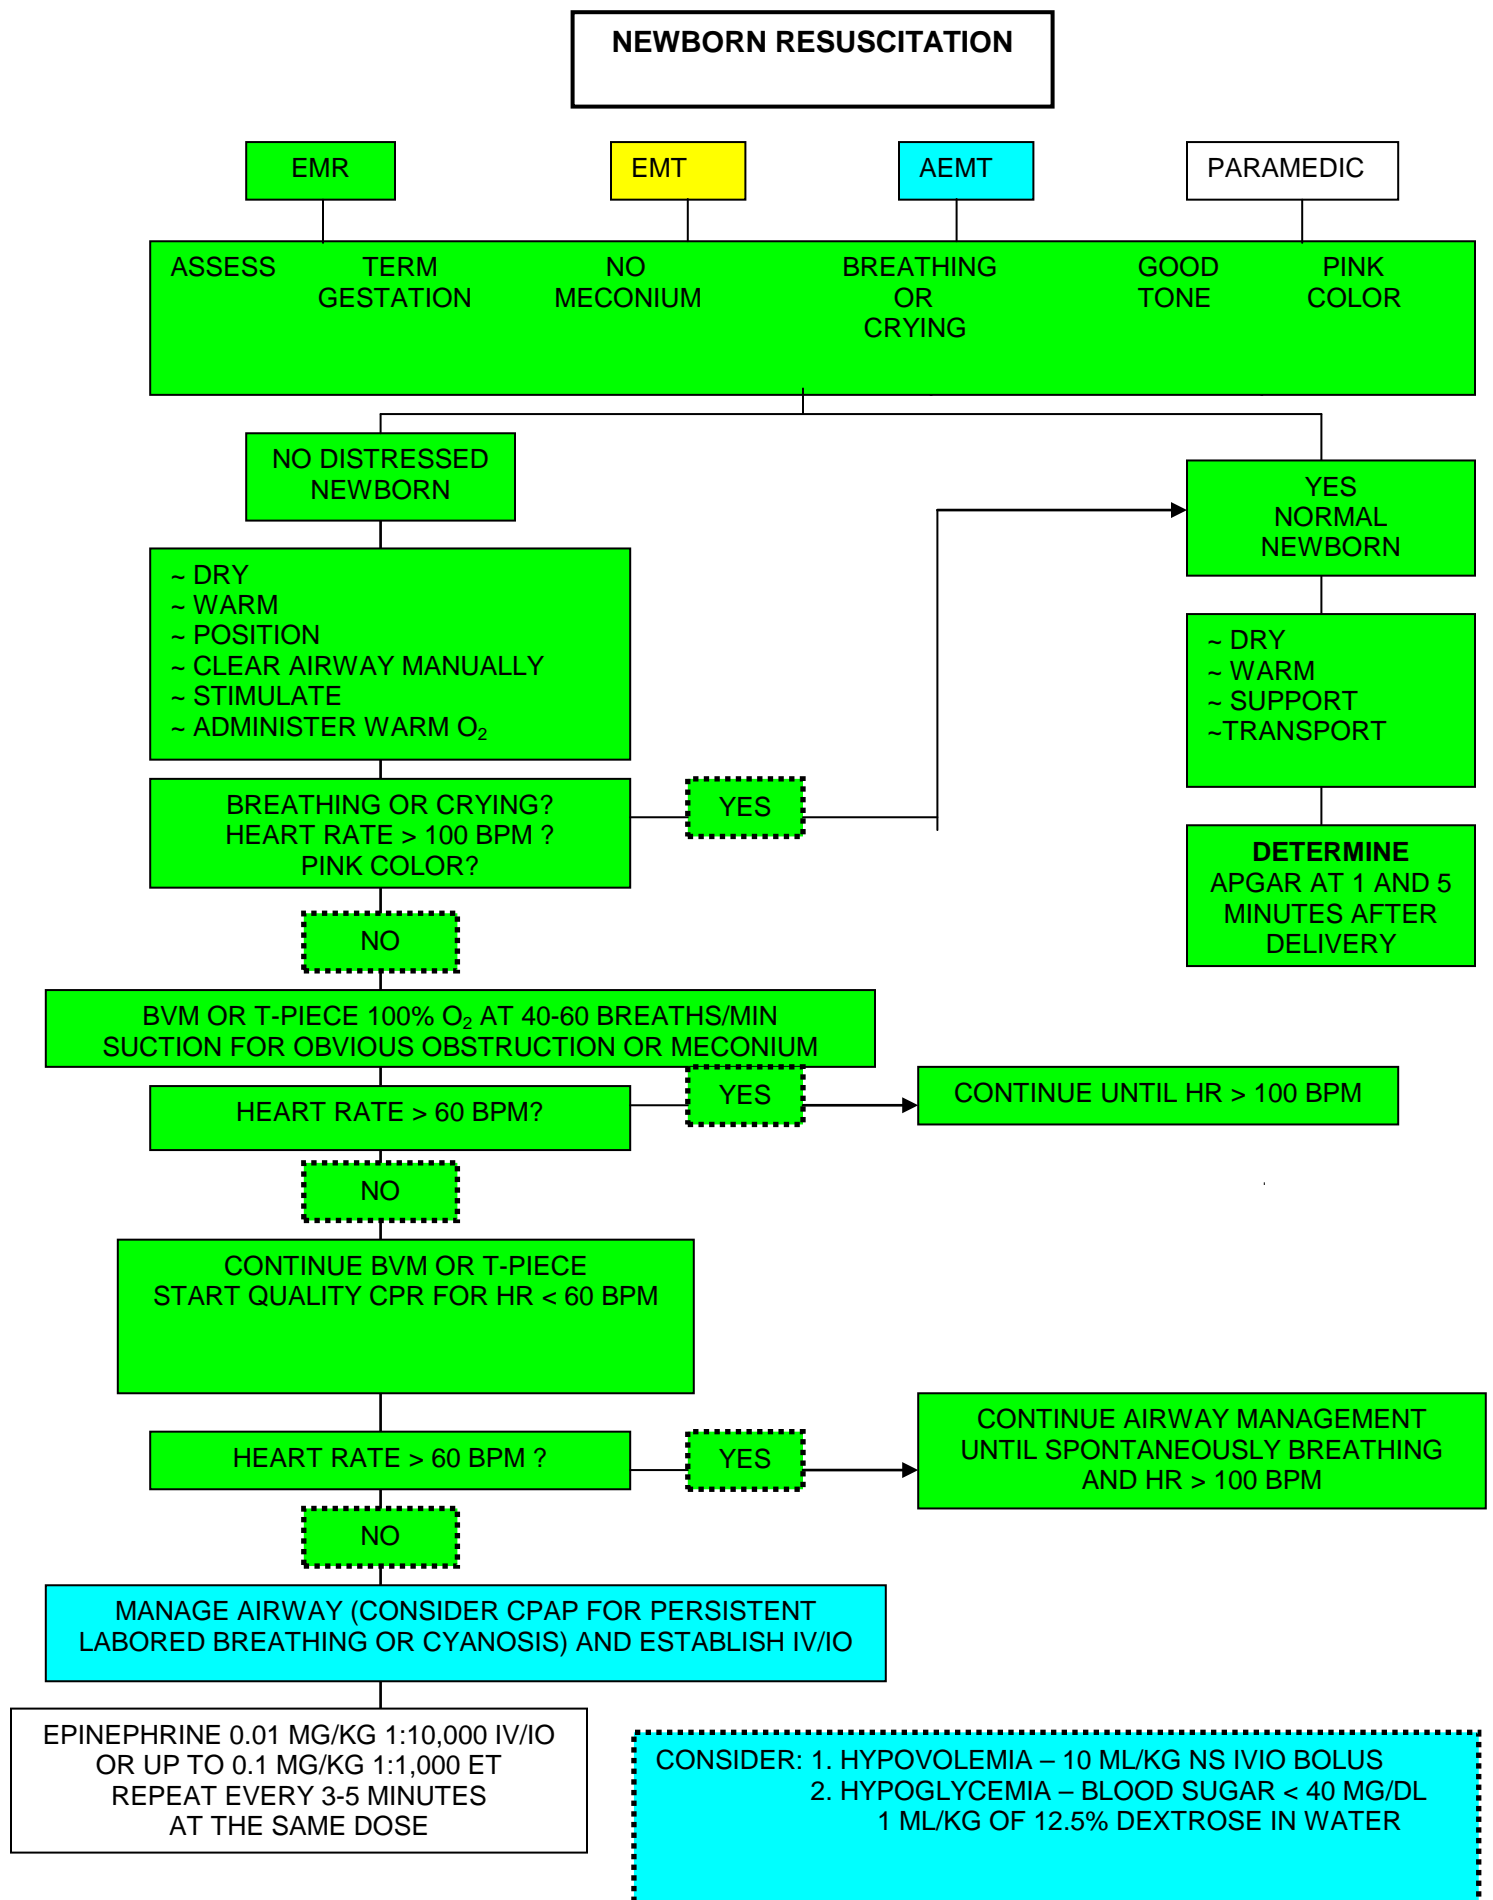

- A. If heart rate is < 100 bpm, BVM or T-piece ventilation is necessary to increase heart rate.
- B. If heart rate is < 60 bpm despite adequate ventilation, quality CPR should be initiated.
- C. BVM or T-piece ventilation is also indicated for apnea and persistent central cyanosis.
- D. BVM or T-piece ventilation rate should be between 40 and 60 breaths per minute. Cardiac compression rate should be at a rate of 120 times per minute with a compression to breath ratio of 3:1.
- E. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.

AEMT

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Intubate patient if thick meconium is present in lower airway; suction through ET tube using a meconium aspirator and re-intubate with new tube.
- C. Apply monitor and check rhythm.
- D. Establish IV or IO.
- E. If infant shows signs of hypovolemia, administer normal saline 10 ml/kg IV/IO over 5 minutes
- F. Narcan[®] administration should not be administered during the initial resuscitation and should be avoided in babies whose mothers are suspected of having had long-term exposure to opiates. Heart rate and oxygenation should be resorted by supporting ventilation.
- G. Check blood sugar level and administer 1 ml/kg of 12.5% dextrose the blood sugar is < 40.
- H. Transport to hospital.

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Intubate patient if thick meconium is present in lower airway; suction through ET tube using a meconium aspirator and re-intubate with new tube.
- C. Apply monitor and check rhythm.
- D. Establish IV or IO.
- E. If asystole or spontaneous heart rate is < 60 bpm despite adequate ventilation:
 - 1. Administer epinephrine 0.01-0.03 mg/kg (0.1-0.3 ml/kg) of 1:10,000 via IV/IO or up to 0.1 mg/kg (0.1 mg/kg) of 1:1,000 ET.
 - 2. If no response, repeat epinephrine administration every 3-5 minutes.
- F. If infant shows signs of hypovolemia, administer normal saline 10 ml/kg IV/IO over 5 minutes
- G. Narcan[®] administration should not be administered during the initial resuscitation and should be avoided in babies whose mothers are suspected of having had long-term exposure to opiates. Heart rate and oxygenation should be resorted by supporting ventilation.
- H. Check blood sugar level and administer 1 ml/kg of 12.5% dextrose if level is < 40.
- I. Transport to hospital.

PEDIATRIC RESPIRATORY DISTRESS

GENERAL CONSIDERATIONS

- A. In children, open airway by using the sniffing position.
- B. In suspected cases of upper airway obstructions, DO NOT attempt to visualize the airway; unless a foreign body is suspected. Keep patient calm and transport upright.
- C. If BVM ventilation is necessary, cricoid pressure can be applied to minimize gastric distention until airway is secured.
- D. Refer to length based drug treatment guide (e.g. BROSELOW® PEDIATRIC EMERGENCY TAPE) when unsure about patient weight, age and/or drug dosage.
- E. Evaluate patient's general appearance, relevant history of condition and determine:

Allergies

Medication

Past Medical History – especially RESPIRATORY

Last Meal

Events leading to present illness

UPPER AIRWAY OBSTRUCTION

Stridor, gagging or choking in the breathing patient with respiratory distress may indicate upper airway obstruction.

EMR

- A. Quickly obtain history and non-invasive respiratory assessment.
 - 1. Total Airway Obstruction/History of foreign body airway.
 - a. Manual clearing only if foreign body is visible - NO BLIND FINGER SWEEP
 - b. Backblows and chest thrust in children less than 1 year of age.
 - c. Abdominal and/or chest thrusts in children over 1 year of age.
 - d. If airway cannot be cleared in 60 seconds:
 - i) Activate the emergency response system for immediate transport immediately to the nearest hospital.
 - ii) Do not take history.
 - iii) Do not make further physical assessment.
 - 2. Partial Airway Obstruction
 - a. DO NOT AGITATE CHILD, DO NOT EXAMINE THROAT.
 - b. Administer oxygen by NRB if tolerated or by “blow-by”.

PEDIATRIC AIRWAY OBSTRUCTION (cont'd)

- B. Allow the child to assume a position of comfort. The child may assume the tripod position. Encourage parent to hold the child in a secure position. Keep child and parent (or caregiver) CALM. Do not agitate child.

EMT

- A. Transport the child in a secure upright position immediately to the nearest appropriate hospital.

AEMT

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Reassess breath sounds and treat as follows:
1. Do not establish IV access unless child is in arrest. DO NOT agitate child.
 2. If foreign body in airway is suspected in unconscious patient with complete obstruction and basic procedures are unsuccessful, try to visualize obstruction with laryngoscope.
 3. Do not attempt invasive airway unless child has respiratory arrest. Bag-valve mask ventilation is acceptable.
 4. If foreign body in airway is suspected in unconscious patient with complete obstruction, and basic procedures are unsuccessful, try to visualize obstruction with laryngoscope and remove with Magill forceps.

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation
- B. Reassess breath sounds and treat as follows:
1. If cause of upper airway obstruction is unknown and child is calm, a normal saline aerosol may be administered. DO NOT further agitate child.
 2. Do not attempt invasive airway unless child has respiratory arrest. Bag-valve mask ventilation is acceptable.
 3. If foreign body in airway is suspected in unconscious patient with complete obstruction, and basic procedures are unsuccessful, try to visualize obstruction with laryngoscope and remove with Magill forceps.
 4. If airway is completely obstructed, a needle, or surgical cricothyrotomy may be life saving. Contact medical control. If patient has a tracheostomy tube, see page 40.

LOWER AIRWAY OBSTRUCTION

Wheezing in the breathing patient with respiratory distress indicates lower airway disease, which may come from a variety of causes. The patient with severe lower airway disease may have altered LOC, be unable to talk, may have absent or markedly decreased breath sounds and severe retractions with accessory muscle use.

EMR

- A. Place child in position of comfort, encourage parent to hold child secure position. Keep child and parent CALM.
- B. Quickly obtain history and non-invasive respiratory assessment.
- C. Administer 100% oxygen in the least threatening manner.
- D. If respiratory effort is insufficient or patient is becoming unconscious, assist ventilations with bag-valve-mask.
 - 1. If allergic reaction is suspected:
 - a. Secure airway and support with oxygen.
 - b. If the patient has been prescribed an epinephrine auto-injector for these situations and requests assistance, assist with the administration of the epinephrine auto-injector or verbally contact on-line medical direction for orders to administer EMS-provided epinephrine.
 - c. Activate the emergency response system immediately.

EMT

- A. IF MEDICATION IS NOT AVAILABLE- Transport immediately, unless ALS unit is enroute and has an ETA of less than 5 minutes
- B. Ask patient or bystanders if a bronchial dilator by inhaler has been prescribed for these situations. If they have the medication with them, assist with the administration of medication per protocol, then transport patient.

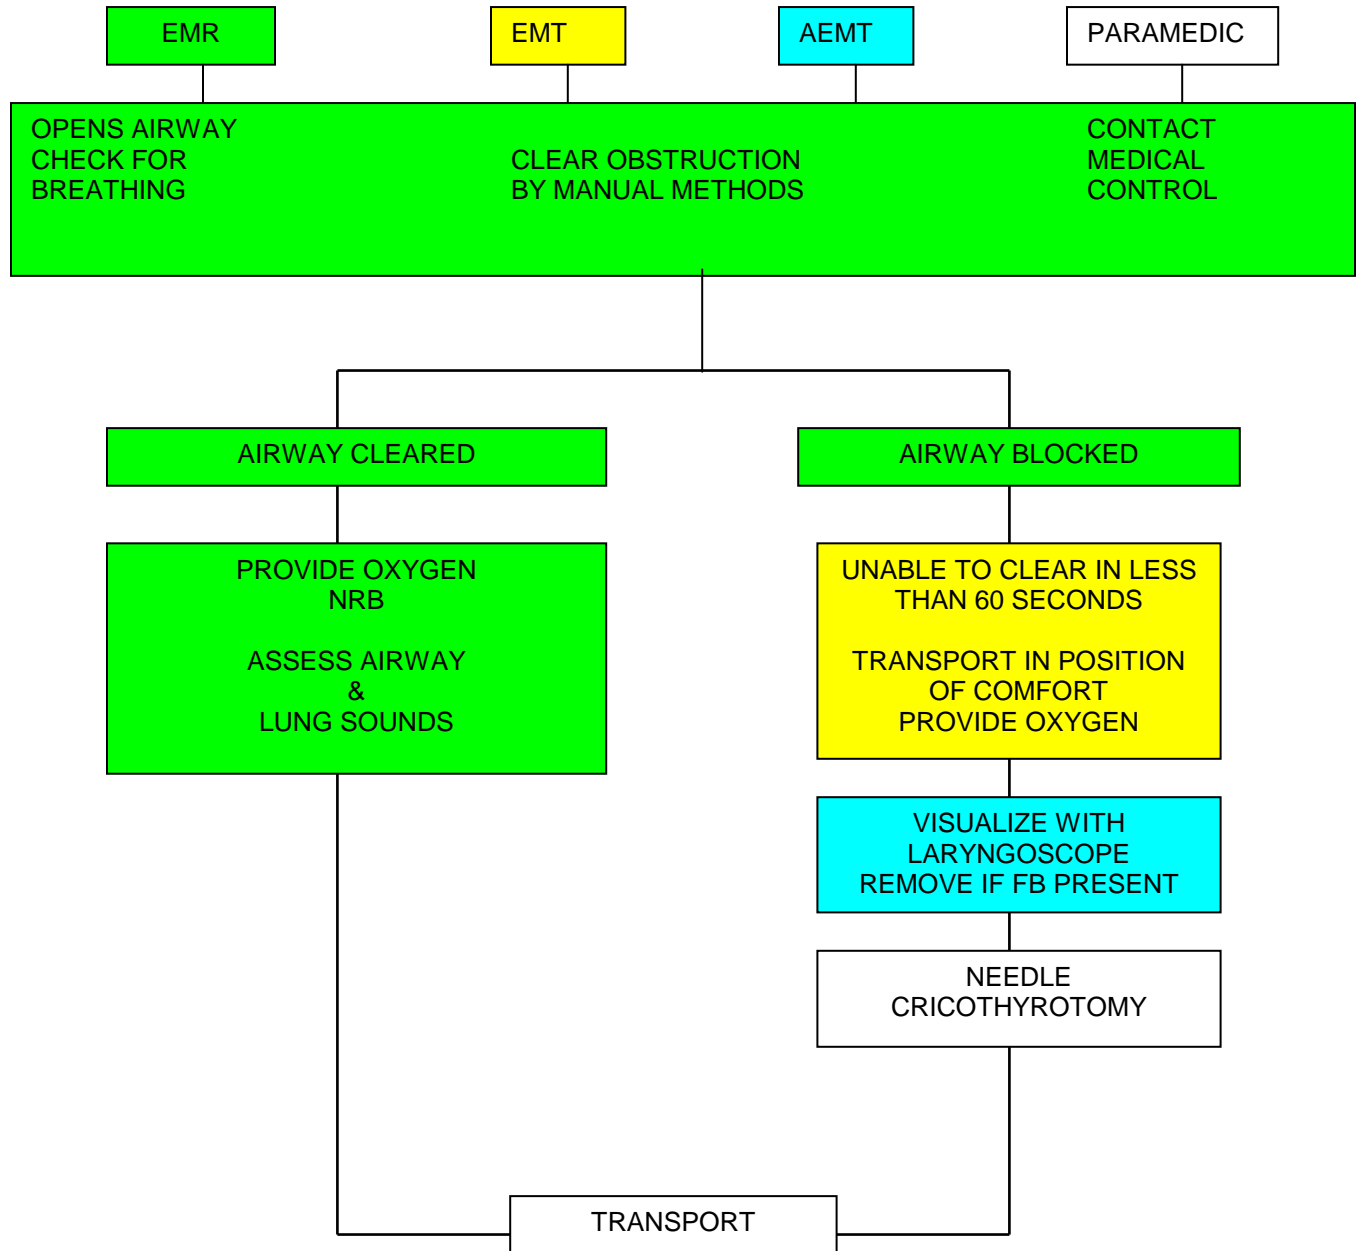

AEMT

- A. Assume charge of situation.
- B. Reassess breath sounds.
- C. DO NOT establish IV access unless child is in arrest. Do not agitate child.
 - 1. If allergic reaction is suspected.
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml))
 - 2. For other causes of wheezing:
 - a. Administer 2.5 mg albuterol aerosol with 6 l/min oxygen over 10-15 minutes. Observe and document child's response. If no improvement, notify receiving facility or Medical Control.
 - b. DO NOT attempt invasive airway unless child has respiratory arrest.

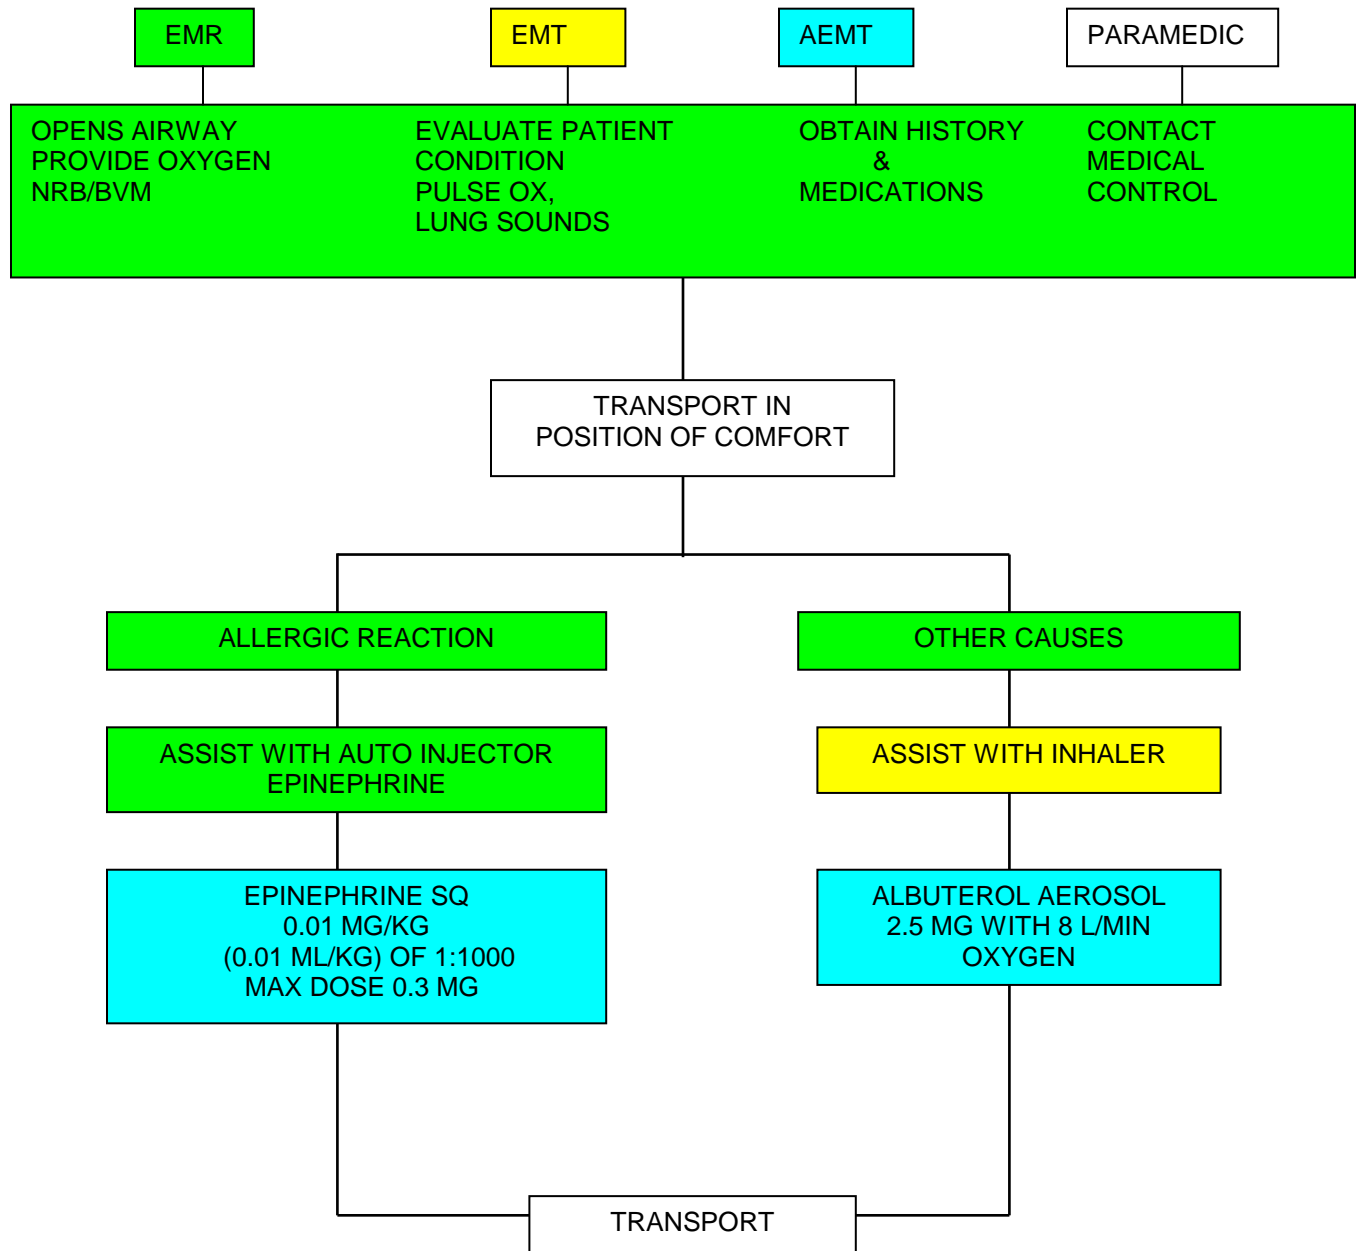

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situations.
- B. Reassess breath sounds and treat as follows
 - 1. If allergic reaction is suspected:
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose 0.3 mg (0.3 ml)) as the primary treatment of symptoms of anaphylaxis or as the secondary treatment following Benadryl[®] administration for worsening symptoms of an allergic reaction
 - b. Administer Benadryl[®] (diphenhydramine) 1 mg/kg IM or IV (maximum dose 50 mg)
NOTE: This is especially indicated when drug reactions are suspected.
 - 2. For other causes of wheezing:
 - a. Administer 2.5 mg albuterol aerosol with 6 l/min oxygen over 10-15 minutes. Observe and document child's response. If no improvement, notify receiving facility or Medical Control.
 - b. DO NOT attempt invasive airway unless child has respiratory arrest.

**PEDIATRIC RESPIRATORY DISTRESS
UPPER AIRWAY OBSTRUCTION**

**PEDIATRIC RESPIRATORY DISTRESS
LOWER AIRWAY DISEASE**

PEDIATRIC SEIZURE

GENERAL CONSIDERATIONS

- A. The seizure may be stopped by the time the EMS professionals arrive. The patient will normally be in the postictal state.
- B. The basic rule with seizures is to "protect and support" the patient.
- C. Aspiration precautions should include:
 - 1. Coma position: a left side-lying position with the head lowered 15 to 30 degrees.
 - 2. Suction readily available.
 - 3. Clear mouth of foreign bodies (food, gum, etc.)
- D. Febrile Seizures (seizures with fever) are common in children and should be treated like other seizures.

EMR

- A. Place patient away from objects on which they might injure themselves; protect but do not restrain them.
- B. Clear and maintain airway; consider cervical spine injury.
- C. Administer 100% oxygen with NRB as needed for ventilation.
- D. Obtain history from family and/or bystanders:
 - 1. Seizure history
 - 2. Description of onset of seizure
 - 3. Medication
 - 4. Other known medical history, especially fever, head trauma, diabetes, drugs
- E. Evaluate any evidence of injury, especially head trauma.

EMT

- A. Bring any medications with child to the hospital.
- B. Establish communications with medical control and advise of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.
- C. Check blood sugar level.

AEMT

- A. Assist EMS professionals, obtain patient condition and circumstances.
- B. Apply cardiac monitor and check rhythm.
- C. If seizure activity persists:
 - 1. Establish airway
 - 2. Start IV

PEDIATRIC SEIZURE (cont'd)

D. Check blood sugar level.

1. If the blood sugar less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose for children
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl
2. Administer Valium[®], 0.2 mg/kg, slow IV push over three minutes, to a maximum dosage of 5 mg.
 - a. If no IV is available, administer Valium[®] rectally, 0.5 mg/kg, to a maximum dose of 10 mg.

PARAMEDIC

- A. Assume charge of the situation and confer with EMS professionals about patient and situation
- B. Make sure patient has good airway. In some cases intubation may be necessary.
- C. If seizure activity persists, determine blood sugar level and treat accordingly
 1. Blood sugar less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose for children
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl
 2. Administer midazolam (Versed[®]) 0.1 mg/kg IM **OR**, administer Valium[®], 0.2 mg/kg, slow IV push over three minutes, to a maximum dosage of 5 mg.
 - a. If no IV is available, administer Valium[®] rectally, 0.5 mg/kg, to a maximum dose of 10 mg.

PEDIATRIC SHOCK

GENERAL CONSIDERATIONS

- A. Shock is not only caused by blood loss. The EMS professional must evaluate for fluid loss from other causes such as excessive vomiting and/or diarrhea, heat exposure, severe infection, severe allergic reaction (anaphylaxis), spinal trauma, and heart failure.
- B. Do not use only the patient's blood pressure in evaluating shock; also look for lower body temperature, poor capillary refill, decreased level of consciousness, increased heart rate, and/or poor skin color or turgor. **Tachycardia is often the first sign of shock.**

NOTE: Do NOT depend on blood pressure.

- C. Transport should not be delayed. The airway must be secured and then transport immediately. It is preferable IVs and/or IOs be done during transportation.

EMR

- A. Open and maintain the airway with sniffing position and the use of an oral airway if needed.
- B. Control all external bleeding and evaluate for internal hemorrhage and/or dehydration.
- C. Provide 100% oxygen through NRB mask, and if needed assist ventilations with a BVM.
- D. Obtain vital signs: pulse and respirations.
- E. For anaphylactic shock, the EMR may assist the patient with the administration of an epinephrine auto-injector prescribed for the patient with a written protocol upon request of the patient or the patient's legal guardian. The EMR may assist with the administration of an EMS-provided epinephrine auto-injector with verbal medical direction.

EMT

- A. Establish communications with Medical Control and advise of patient condition. Transport IMMEDIATELY unless an advanced life support unit is enroute and has an ETA of less than 5 minutes to the scene.

AEMT

- A. Assist EMS professionals, obtain patient condition and circumstance.
- B. Hypovolemic, neurogenic or septic shock:
 - 1. Start IV of normal saline and apply cardiac monitor during transport to the hospital.

DO NOT DELAY TRANSPORT FOR IV

- 2. Administer IV fluid bolus of 20 ml/kg of NS if signs of hypoperfusion or dehydration are present

PEDIATRIC SHOCK (cont'd)

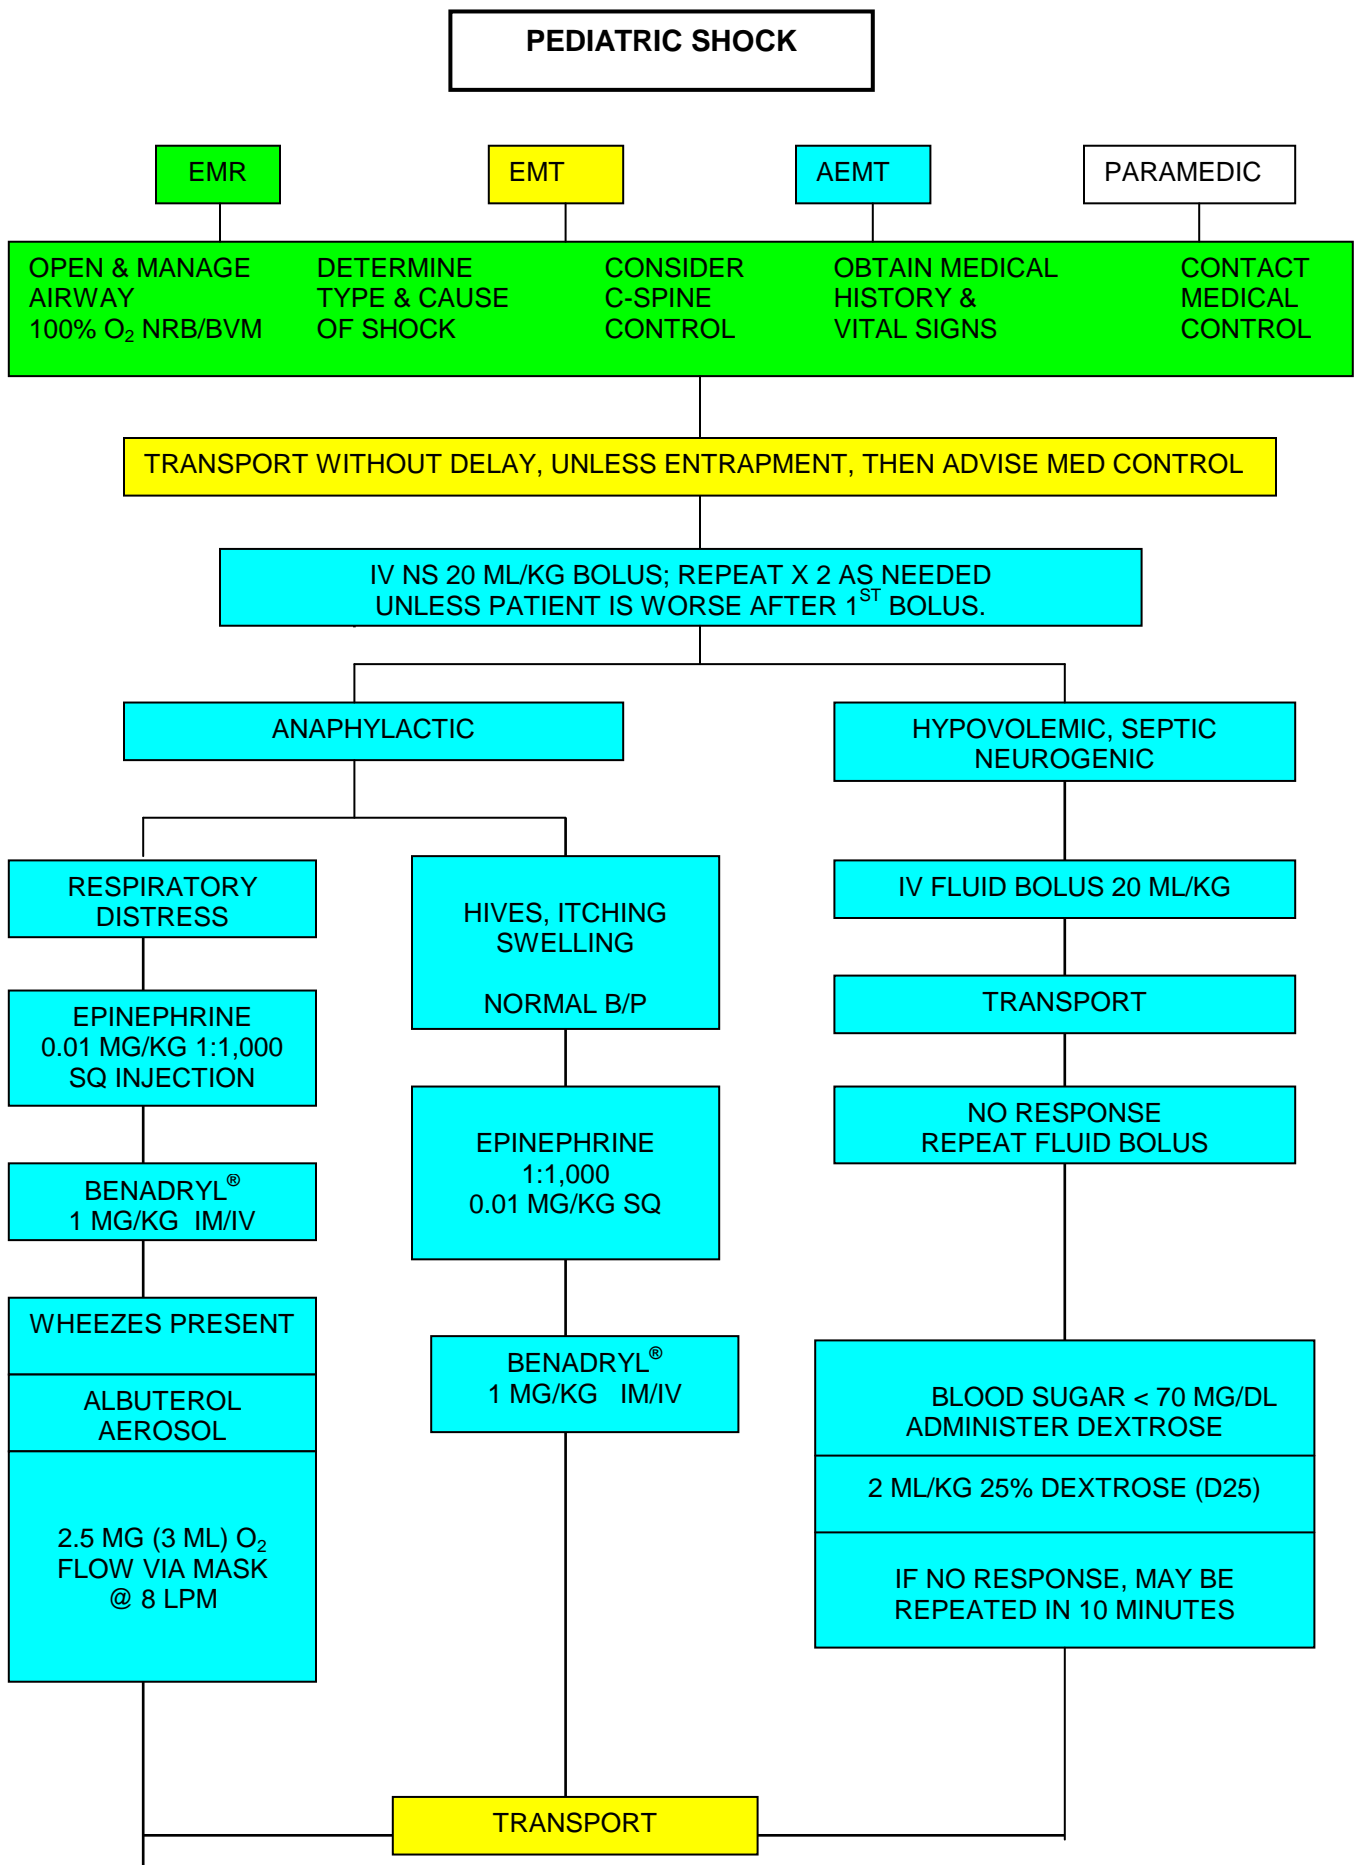

3. Transport. Repeat bolus during transport if patient does not respond to first bolus.
 4. Check blood sugar; if less than 70 mg/dl, administer IV bolus:
 - a. 2 ml/kg of 25% dextrose (D25).
 - b. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl.
- C. Anaphylactic shock:
1. Respiratory distress
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
 - b. Administer Benadryl® (diphenhydramine) to be administered 1 mg/kg IM or IV (maximum dose 50 mg). NOTE: This is especially indicated when drug reactions are suspected.
 - c. When wheezes are present and not cleared by epinephrine, provide albuterol breathing treatment: 1 unit dose, 2.5 mg (3 ml), by child aerosol mask over 10-15 minutes.
 2. Hives, itching, and/or swelling with normal blood pressure:
 - a. Administer epinephrine 1:1,000 0.01 ml/kg (0.01 mg/kg) SQ (maximum dose 0.3 mg (0.3 ml)).
 - b. Administer Benadryl® (diphenhydramine) to be administered 1 mg/kg IM or IV (maximum dose 50 mg). NOTE: This is especially indicated when drug reactions are suspected.
 3. If breathing difficulty with low blood pressure establish IV saline during transport.
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
 4. Hives, itching, and/or swelling:
 - a. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
- D. Apply monitor and check rhythm.

PARAMEDIC

- A. Assume charge of situation and confer with EMS professionals about condition of patient and situation.
- B. Apply monitor and follow protocol for arrhythmias.
- C. Identify type of shock and treat as follows:
 1. Hypovolemic, neurogenic, septic:
 - a. Start IV or IO and administer NS fluid bolus of 20 ml/kg if sign of hypoperfusion or dehydration are present (low BP, tachycardia, poor capillary refill, poor skin turgor)
 - b. Repeat bolus during transport

PEDIATRIC SHOCK (cont'd)

- c. Check blood sugar; if less than 70 mg/dl , administer IV bolus:
 - i. 2 ml/kg of 25% dextrose (D25).
 - ii. May be repeated in 10 minutes if blood sugar remains below 70 mg/dl.
- 2. Anaphylactic:
 - a. Respiratory distress
 - i. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
 - ii. Administer Benadryl® (diphenhydramine) to be administered 1 mg/kg IM or IV (maximum dose 50 mg). NOTE: This is especially indicated when drug reactions are suspected.
 - iii. When wheezes are present and not cleared by epinephrine, provide albuterol breathing treatment: 1 unit dose, 2.5 mg (3 ml), by child aerosol mask over 10-15 minutes.
 - b. Hives, itching, and/or swelling with normal blood pressure:
 - i. Administer epinephrine 1:1,000 0.01 mg/kg (0.01 ml/kg) SQ (maximum dose of 0.3 mg (0.3 ml)).
 - ii. Administer Benadryl® (diphenhydramine) to be administered 1 mg/kg IM or IV (maximum dose 50 mg). NOTE: This is especially indicated when drug reactions are suspected.

EMS and Children with Special Health Care Needs: The TEAM APPROACH

The medically fragile child is one who depends on some form of technology assistance. This can be anything from a nasal cannula to a child who requires total ventilatory support. While such a child may not meet one's definition of "normal", he/she is loved and valued by parents and family. Even though the days are filled with uncertainties and the ride on the emotional roller coaster is unending, we count every day as a gift to enjoy the blessing of these special children.

Caring for a medically fragile child requires a full **TEAM** = **T**rust **E**very **A**vailable **M**ember. Do not be concerned about removing the family from the crisis situation but *inform* them about what you are doing and *include* them in your plan of care. In most cases, the parents and/or home care providers can be of great assistance to the EMS providers. It is vitally important that their knowledge and experience is utilized when treating the child. Parents/caregivers can supply valuable and time saving information. When given direction, they can provide an often needed extra pair of hands (e.g. hold the IV bag, bag ventilate, etc.). Most importantly, they can console, comfort and calm their child.

If at all possible, arrange to meet with families of medically fragile children before an emergency arises. This will allow you to become familiar with the child's needs, baseline condition and the parents' capabilities to provide care prior to your arrival. You will know what to expect and will feel more prepared and confident to treat the child in a crisis situation. This will enhance the **TEAM** approach.

This **TEAM** approach produces an outcome that will always be positive for everyone – the EMS providers, the parents, and most importantly, the child.

Thank you for the privilege of being a part of the EMSC team by serving as the parent advocate for the State of Ohio.

*Linda Eckfeld
Ohio EMSC Parent Advocate*

CHILDREN WITH SPECIAL NEEDS (CSHCN)

SPECIAL CONSIDERATIONS

- A. Treat the ABCs first. Treat the child, not the equipment. If the emergency is due to an equipment malfunction, manage the child appropriately using your own equipment.
- B. Children formerly cared for in hospitals or chronic care facilities are often cared for in homes by parents or other caretakers. These children may have self limiting or chronic diseases. There are a multitude of underlying medical conditions that may categorize children as having special needs. Many are often unstable and may frequently involve the EMS system for evaluation, stabilization, and transport. Special needs children include technology-assisted children such as those with tracheostomy tubes with or without assisted ventilation, children with gastrostomy tubes, and children with indwelling central lines. The most serious complications are related to tracheostomy problems due to the high risk of airway compromise and resultant hypoxia.
- C. CSHCN have many allergies. Children with spina bifida are often allergic to latex. Before treating a patient, ask the caregivers if the children are allergic to latex or have any other allergies. If possible, keep latex-free equipment. (Some regularly used equipment that contains latex includes gloves, oxygen masks, IV tubing BVM, blood pressure cuff, IV catheters, etc.)
- D. Knowing which children in a given area have special needs and keeping a log book is encouraged.
- E. Parents and caretakers are usually trained in emergency management and can be of assistance to EMS personnel. Listen carefully to the caregiver and follow his/her guidance regarding the child's treatment.
- F. Children with chronic illnesses often have different physical development from well children. Therefore, their baseline vital signs may differ from normal standards. The size and developmental level may be different from age-based norms and length based tapes used to calculate drug dosages. Ask the caregiver if the child normally has abnormal vital signs. (i.e. a fast heart rate or a low pulse oxymeter reading)
- G. Some CSHCN may have sensory deficits (i.e. they may be hearing impaired or blind) yet may have age-appropriate cognitive abilities. Follow the caregivers' lead in talking to and comforting a child during treatment and transport. Do not assume that a CSHCN is developmentally delayed.
- H. When moving a special needs child, a slow careful transfer with two or more people is preferable. Do not try to straighten or unnecessarily manipulate contracted extremities as it may cause injury or pain to the child. Certain medical conditions will require special care. Again, consult the child's caregiver.
- I. Caregivers of CSHCN often carry "go bags" or diaper bags that contain supplies to use with the child's medical technologies and additional equipment such as extra tracheostomy tubes, adapters for feeding tubes, suction catheters, etc. Before leaving the scene, ask the caregivers if they have a "go bag" and carry it with you.
- J. Caregivers may also carry a brief medical information form or card. The child may be enrolled in a medical alert program whereby emergency personnel can get quick access to the child's medical history. Ask the caregivers if they have an emergency information form or some other form of medical information for their child.
- K. Caregivers of CSHCN often prefer that their child be transported to the hospital where the child is regularly followed or the "home" hospital. When making the decision as to where to transport a CSHCN, take into account: local protocols, the child's condition, capabilities of the local hospital, caregivers' request, ability to transport to certain locations and the ability to request helicopter transport for distant home hospitals.

EMERGENCIES IN CHILDREN WITH TRACHEOSTOMIES

GENERAL CONSIDERATIONS

- A. The child should be examined for other possible problems. Do not assume the problem is with the tracheostomy tube.

EMR

- A. Examine the child quickly for possible causes of distress which may be easily correctable, such as a detached oxygen source.
- B. Try to establish the child's baseline: the child may never look normal.
- C. If on a ventilator, remove the child from the ventilator and bag the child with a secure oxygen source; there may be a problem with the ventilator or oxygen source.

EMT

- A. If still no improvement immediately transport to the nearest medical facility; initiate appropriate resuscitation as needed. Suction the child through the previously established endotracheal airway device or stoma as accumulation of debris is a common cause of obstruction.

AEMT

- A. If suctioning does not relieve the obstruction and the tracheostomy tube has a cannula, remove it. If it is the cause of obstruction, there should be immediate improvement. A tracheostomy tube that has been previously removed may be replaced after ensuring that the lumen has been cleaned and all obstructive debris has been cleared from the lumen.

PARAMEDIC

- A. If there is no improvement after suctioning and/or removal of the inner cannula and the child is in severe respiratory distress, an occluded tracheostomy tube should be removed and ventilation via bag valve mask and should be attempted. The removal of endotracheal devices following recent surgical placement should be avoided due to increased potential of airway collapse and resultant respiratory compromise. If an endotracheal or tracheostomy tube is available, insert it into the stoma and resume ventilation (a previously used tracheostomy tube following cleansing and removal of any obstructive debris from the lumen can be inserted.)
- B. If there is still no improvement see the respiratory distress protocol.

EMERGENCIES IN CHILDREN WITH IN-DWELLING CENTRAL LINES

GENERAL CONSIDERATIONS

- A. Children may have central lines in several locations and some complications are due to location; some central lines are located under the skin and can be felt but not seen.
- B. The most common emergencies with central lines include, blockage of the line, complete or partial accidental removal, complete or partial laceration of the line, or possible infection in the central line which may lead to sepsis.

EMR

- A. Always evaluate child for cardiovascular stability as some complications may be life threatening.
- B. Children may be experiencing complications from their underlying medical condition; ask caretakers about the child's condition.

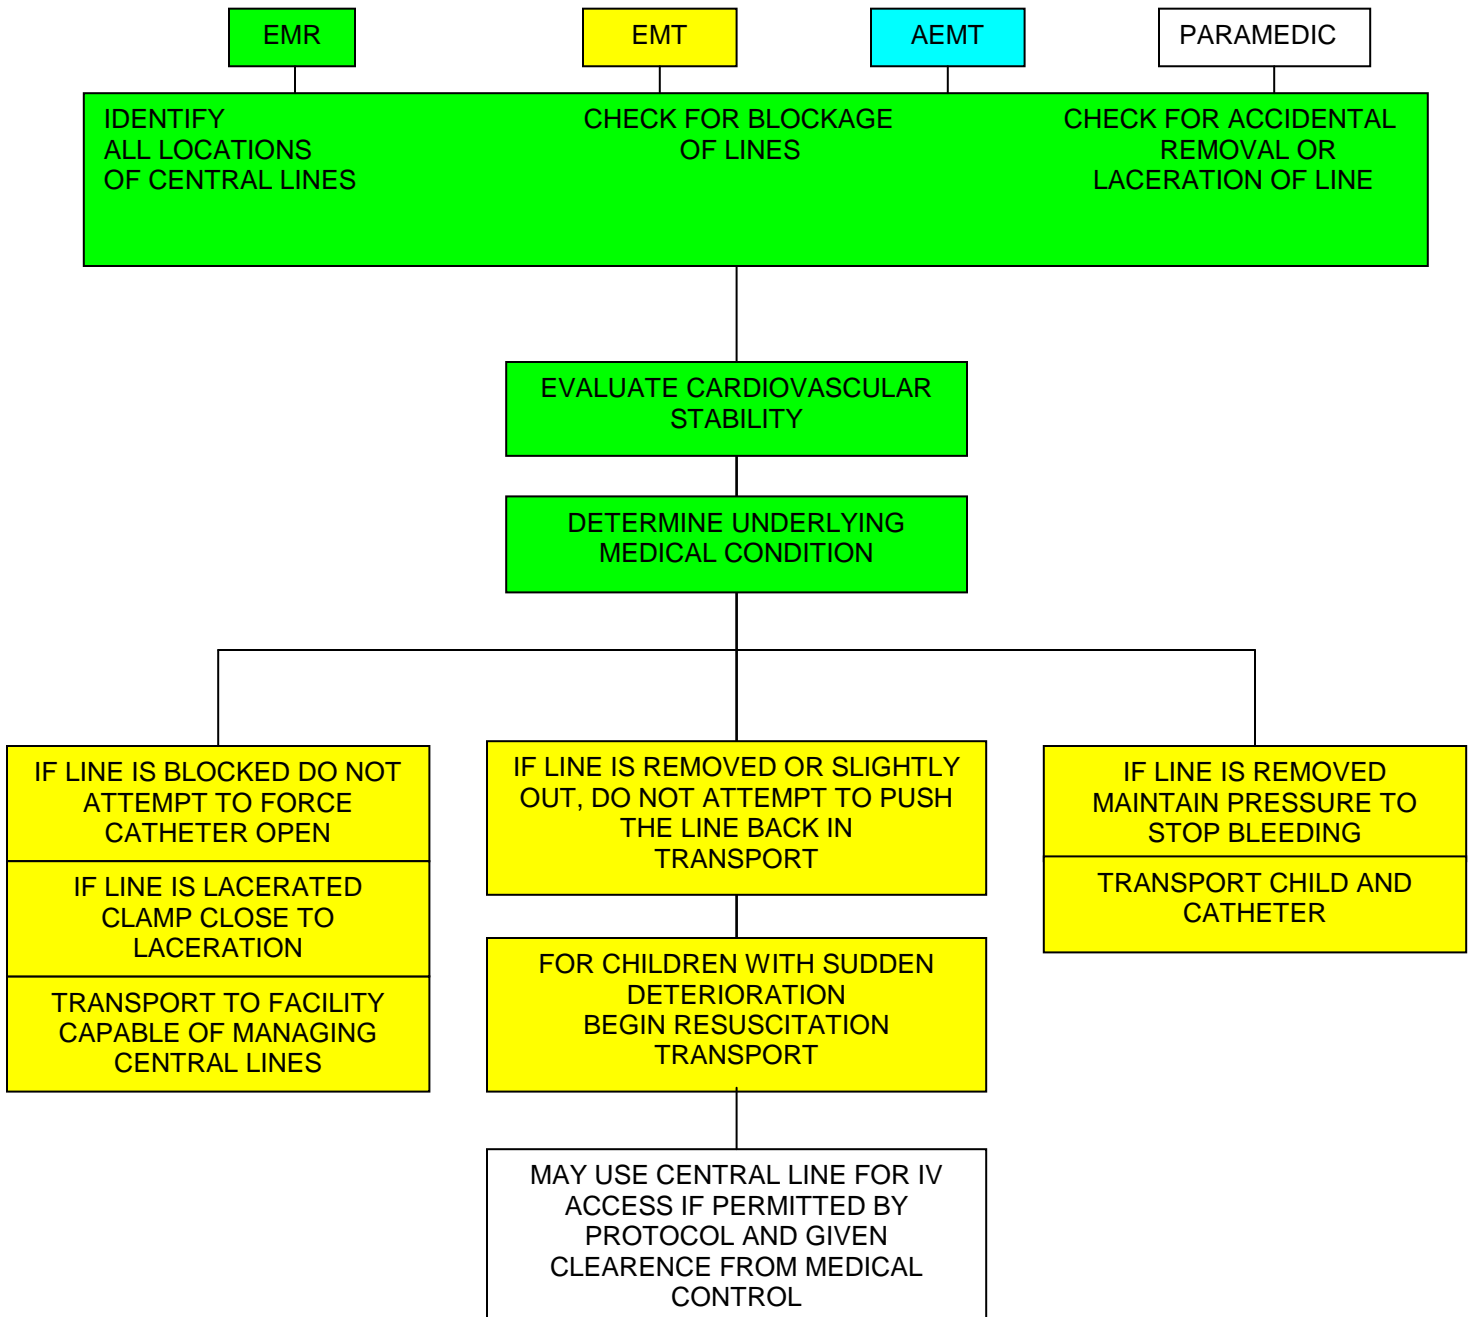

EMT

AEMT

PARAMEDIC

- A. If line is blocked, do not attempt to force the catheter open, transport to a facility capable of managing central lines.
- B. For complete removal, do not attempt to reinsert; transport to the nearest emergency department. Infections are a common complication; don't try to push a line back in, even if it is only slightly out.
- C. For complete removal, maintain pressure on site until bleeding has stopped; transport child and catheter to nearest emergency department (part of the catheter may have broken off.) Always bring the line with you to the hospital.
- D. For partial or complete laceration of the line, clamp proximally to laceration utilizing a padded clamp and transport child and catheter to nearest emergency department.
- E. For children with sudden deterioration begin basic resuscitation and transport to nearest emergency facility (child may have pneumothorax or internal bleeding.)
- F. If there are fluids infusing through the central line, determine the nature of the fluid and the time that the fluid was started.
- G. For paramedic only: May use central line for IV access if permitted by protocol, and given clearance by medical control

EMERGENCIES IN CHILDREN WITH IN-DWELLING CENTRAL LINES

EMERGENCIES IN CHILDREN WITH GASTROSTOMY TUBES

GENERAL CONSIDERATIONS

- A. Children with gastrostomy tubes may have complications of obstruction or dislodgment; obstruction is usually not an emergency but the child may require transport; dislodgment is not life threatening but the tube should be replaced as soon as possible. Both conditions are easily recognized.
- B. The child should be examined for any other possible problems.

EMR

- A. Children who have problems with their tubes may have problems with regurgitation or aspiration.
- B. Be aware of and address any other possible problems from their underlying medical condition.

EMT

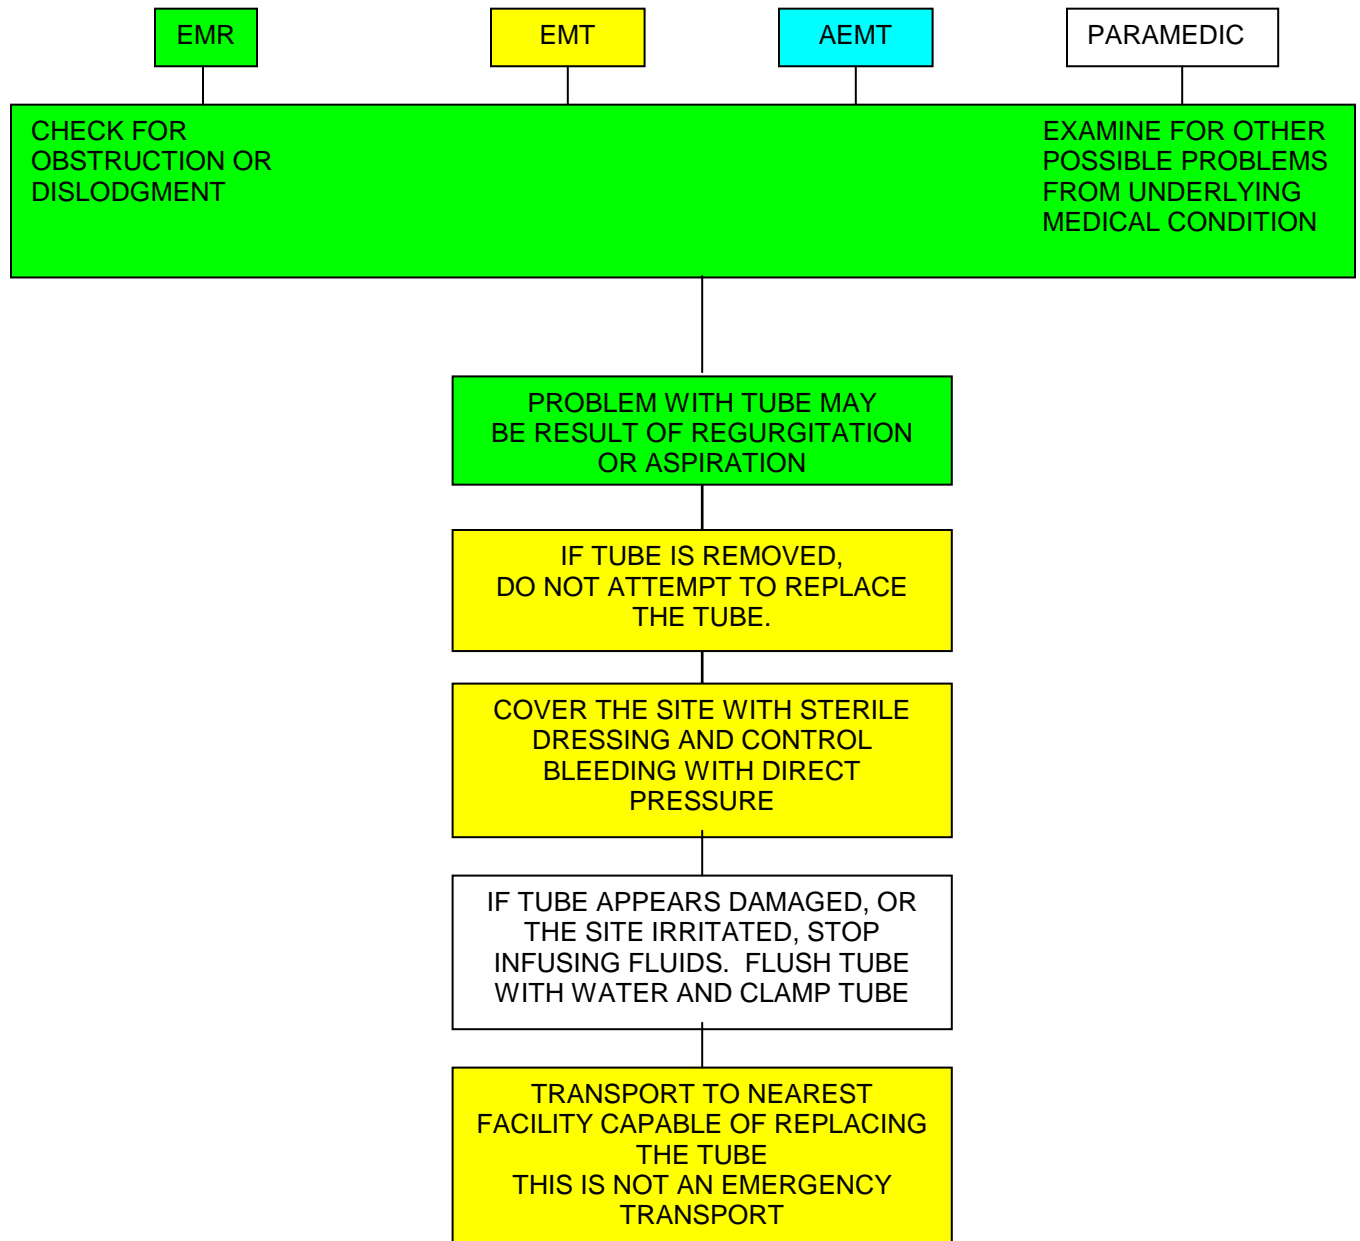

AEMT

- A. Transport the child and the tube to the nearest facility capable of replacing the tube; this is not an emergency transport.
- B. Do not attempt to replace the tube; it is not as easy as it seems and there may be other complications.
- C. Cover the site with a sterile dressing and control any bleeding with direct pressure.

PARAMEDIC

If there are fluids infusing through the feeding tube, determine the nature of the fluids and the time that the fluids were started. If the tube appears damaged, or the site is irritated, stop all infusing fluids, flush the tube with water, and clamp the tube.

EMERGENCIES IN CHILDREN WITH GASTROSTOMY TUBES

EMERGENCIES IN CHILDREN ON VENTILATORS

GENERAL CONSIDERATIONS

- A. Children on mechanical ventilation may exhibit sudden or gradual deterioration, cardiac arrest, increased oxygen demand, increased respiratory rate, retractions, or change in mental status.
- B. Examine the child quickly for possible causes of distress which may be easily correctable (e.g. detached oxygen source) the caretakers will often have done this but double check.
- C. Medications the child is presently taking may be the cause of deterioration.
- D. Try to establish the child's baseline; the child may never look normal.

EMR

- A. Remove the child from the ventilator and bag the child with a secure oxygen source; if the child improves there may be a problem with the ventilator or oxygen source.

EMT

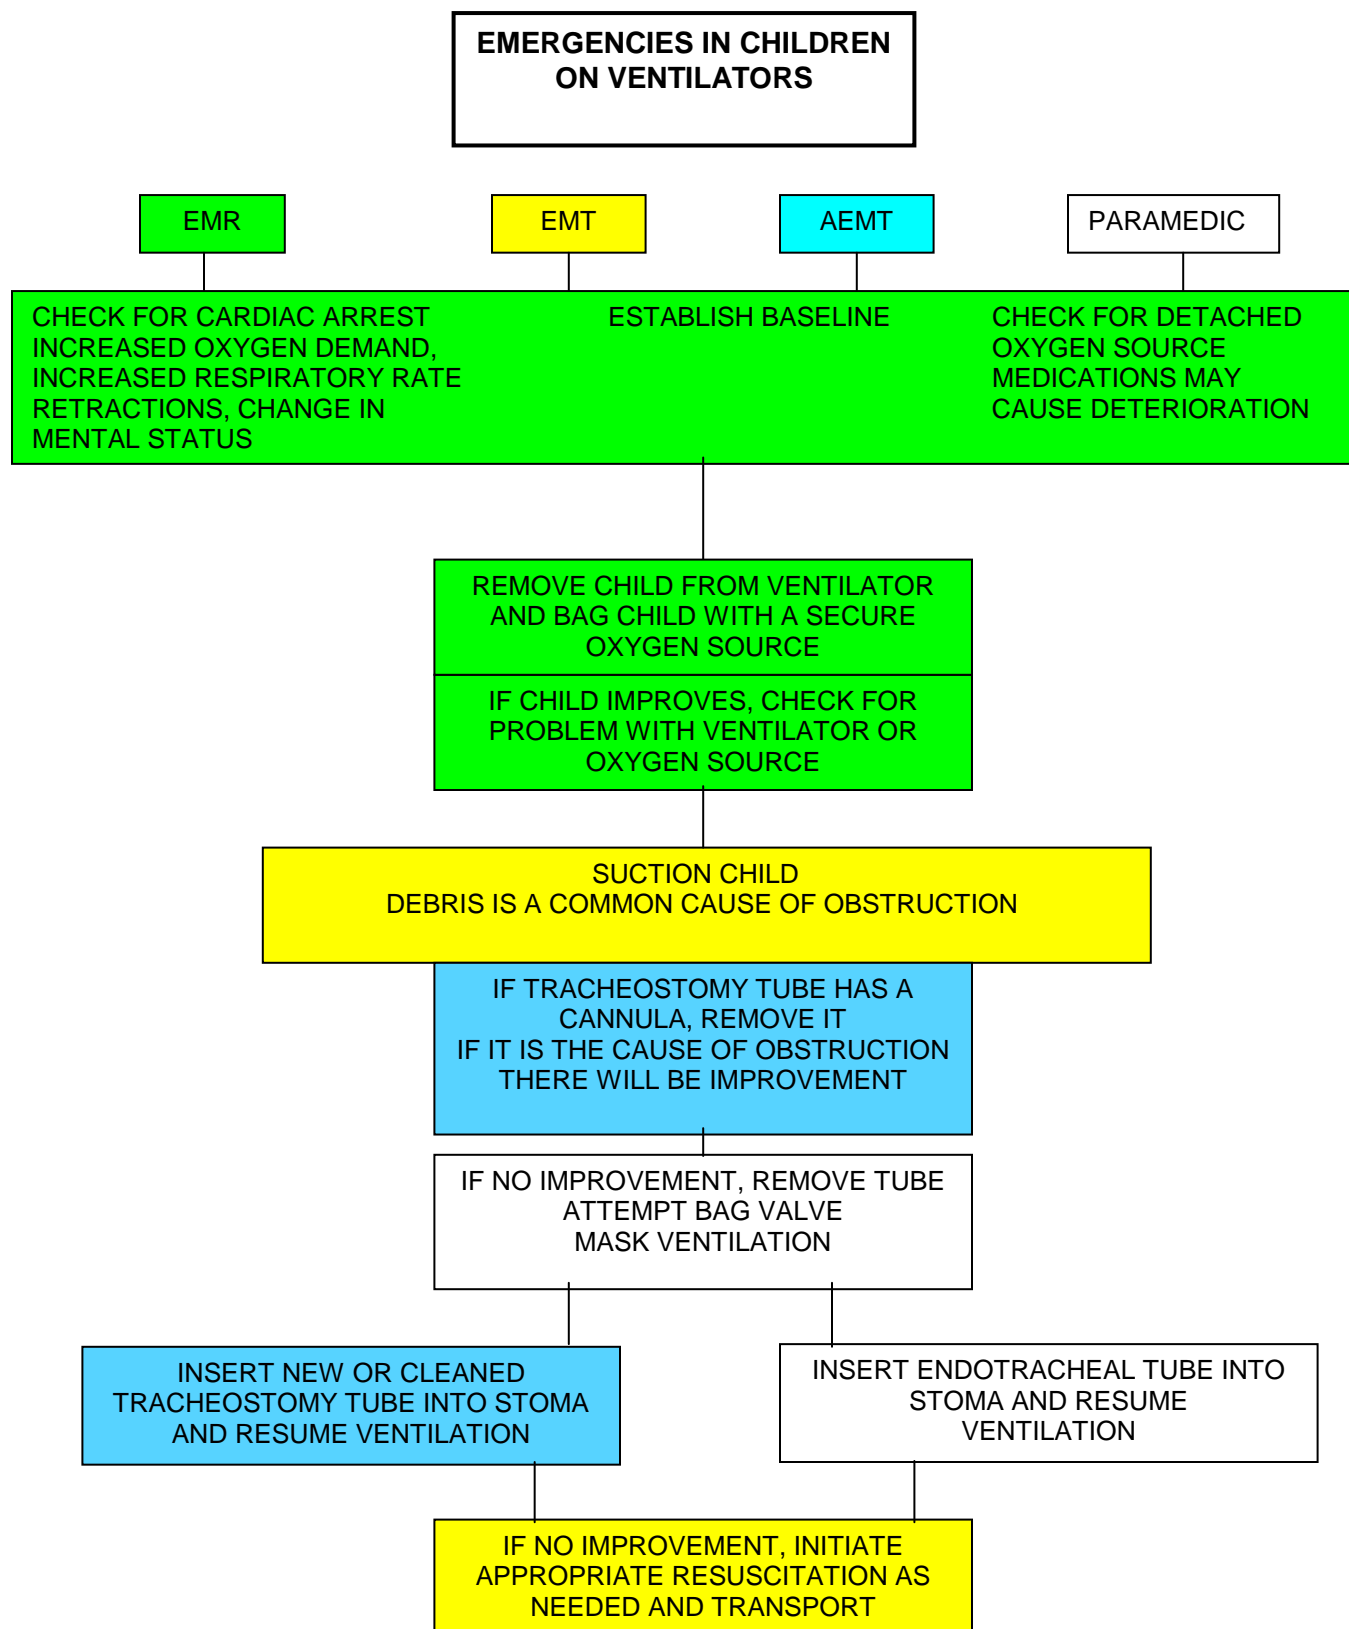

- A. If there is no improvement immediately transport to the nearest medical facility; initiate appropriate resuscitation as needed. Suction the child through a previously established endotracheal device as accumulation of debris is a common cause of obstruction.

AEMT

- A. If suctioning does not relieve the obstruction and the patient has a tracheostomy tube, remove the inner cannula. If it is the cause of obstruction, there should be immediate improvement. A tracheostomy tube that has been previously removed may be replaced after ensuring that the lumen has been cleaned and all obstructive debris has been cleared from the lumen.

PARAMEDIC

- A. If there is no improvement after suctioning and/or removal of the inner cannula and the child is in severe respiratory distress, an occluded endotracheal or tracheostomy tube should be removed and ventilation via bag valve mask and should be attempted. The removal of endotracheal devices following recent surgical placement should be avoided due to increased potential of airway collapse and resultant respiratory compromise. If another endotracheal or tracheostomy tube is available, insert into the stoma and resume ventilation (a previously used tracheostomy tube following cleansing and removal of any obstructive debris from the lumen can be inserted.)
- B. If there is still no improvement see the respiratory distress protocol.

NORMAL PEDIATRIC VITAL SIGNS¹

Age	Pulse	Respiratory Rate	Systolic BP*
Preterm < 1 kg	120-160	30-60	36-58
Preterm 1 kg	120-160	30-60	42-66
Preterm 2 kg	120-160	30-60	50-72
Newborn	126-160	30-60	60-70
Up to 1 year	100-140	30-60	70-80
1-3 years	100-140	20-40	76-90
4-6 years	80-120	20-30	80-100
7-9 years	80-120	16-24	84-110
10-12 years	60-100	16-20	90-120
13-14 years	60-90	16-20	90-120
15 years and older	60-90	14-20	90-130

- Blood pressure is a late and unreliable indicator of shock in children

PEDIATRIC COMA SCORING²

	<u>Glasgow</u>	<u>Glasgow Modified for Infant</u>	
Eye opening	Spontaneous To voice To pain None	Spontaneous To voice To pain None	4 3 2 1
Verbal response	Oriented Confused Inappropriate Garbled speech None	Coos, babbles Irritable cry, inconsolable Cries to pain, Moans to pain None	5 4 3 2 1
Motor response*	Obeys commands Localizes pain Withdraws to pain Flexion Extension Flaccid	Normal movements Withdraws to touch Withdraws to pain Flexion Extension Flaccid	6 5 4 3 2 1

*** NOTE: MOTOR RESPONSE IS MOST INDICATIVE OF LEVEL OF INJURY**

¹ Reference: Children's Hospital Pediatric Reference Code Card, Columbus, Ohio, 1999

² A score of < 8 is generally an indication to hyperventilate the child.

PEDIATRIC PREHOSPITAL MEDICATIONS

<u>Medication</u>	<u>Dose</u>	<u>Route</u>	<u>Remarks</u>
• Acetaminophen (Tylenol®)	10 mg/kg	PO	Useful for musculoskeletal pain and fever control
• Activated charcoal	1 gm/kg	PO	Do not give to child with altered level of consciousness
• Adenosine	0.1 mg/kg	IV, IO	Indicated for SVT. First dose 6mg, second dose 6mg. Max dose 12mg
• Albuterol	2.5 mg	Aerosol	Indicated for wheezing as per protocol
• Amiodarone	5 mg/kg	IV, IO	Over 20-60 minutes, maximum 15 mg/kg per day. For shock-refractory pulseless VT/VF: 5 mg/kg rapid IV/IO
• Atropine	0.02 mg/kg	IV, IO, ET	Minimum dose 0.1 mg; max dose for child 0.5 mg; max dose for adolescent 1.0 mg; may repeat x1; Also useful before intubating children < 5 years old, blocks bradycardia due to vagal nerve stimulation
• Dextrose 25%	2 ml/kg	IV, IO	Try to obtain bedside glucose level before administering ----administer if blood glucose < 60; dilute 50% 1:1 with sterile water; consult Medical Control if infant < 1 month as solution may need to be further diluted.
• Diazepam (Valium®)	0.2-0.3 mg/kg	IV	Indicated for uncontrolled seizure activity; anticipate respiratory depression. Max. dose 10 mg.
• Diazepam (Valium®)	0.5 mg/kg	Rectal	Indicated for uncontrolled seizure activity; anticipate respiratory depression. Max. dose 10 mg.
• Diphenhydramine (Benadryl®)	1 mg/kg	IV	Useful in allergic reactions and anaphylaxis. Max dose 50 mg
• Epinephrine (1:10,000)	0.1 ml/kg (0.01 mg/kg)	IV, IO	Commonly used in cardiac arrest rhythms as first dose. Increase second dose 10 X (may use 1:1,000 solution).
• Epinephrine (1:1,000)	0.1 ml/kg (0.1 mg/kg)	ET, IV, IO	Commonly used in cardiac arrest rhythms. Use for all ET doses, and second and subsequent IV/IO doses. *The ET route has limited absorption, use IV/IO route whenever possible
	0.01ml/kg	IM or SQ	Used for anaphylaxis. Max dose is 0.3 ml
• Morphine	0.1 mg/kg	IV/IM	Useful for moderate pain, may cause respiratory depression. Hypotension and reflex bradycardia may develop from histamine release
• Midazolam (Versed®)	0.1 mg/kg	IV/IO/IM	Indicated for uncontrolled seizure activity; anticipate respiratory depression Useful to facilitate advanced airway management in combative patients
• Naloxone (Narcan®)	0.1 mg/kg	IV, IO, ET	Useful for unknown unconscious, known narcotic overdoses
• Procainamide	15 mg/kg	IV	Over 30-60 minutes. Alternative treatment for recurrent or refractory VT, SVT.

ET = endotracheal IM = intramuscular injection IO = intraosseous IV = Intravenous SQ = subcutaneous injection

Notice of changes to trauma triage rules

This document details the changes have been made to the portions of the Ohio Administrative Code (OAC) that cover trauma triage. These changes, based on research performed by the State Board of Emergency Medical Services, create a definition of ‘geriatric trauma patient’ and create specific criteria for the triaging of geriatric trauma patients.

Summary of changes to trauma triage rules (OAC 4765-14)

4765-14-01 Definitions

- Added (H), definition of “body regions”
- Added (I), definition of “evidence of traumatic brain injury”

4765-14-02 Determination Of A Trauma Victim

- Changed (A) to define “adult trauma victim” as being between 16 and 69 years of age
- Added (C) to define “geriatric trauma victim”

4765-14-03 Enforcement Of State Or Regional Trauma Triage Protocols

- No changes or additions

4765-14-04 Education Of State And Regional Trauma Triage Protocols

- No changes or additions

4765-14-05 Exceptions To Mandatory Transport

- No changes or additions

4765-14-06 Amendments Affecting Regional Protocols

- New rule describing how amendments to triage rules affect regional triage variants

Note on formatting of this document:

New language added to this rule is in underline format.
Geriatric criteria that are different from adult criteria are in **bold** format.

4765-14-01 Definitions.

(A) As used in this chapter and section 4765.01 of the Revised Code, "trauma" or "traumatic injury" means severe damage to or destruction of tissue that satisfies both of the following conditions:

(1) It creates a significant risk of any of the following:

- (a) Loss of life;
- (b) Loss of a limb;
- (c) Significant, permanent disfigurement;
- (d) Significant, permanent disability; and

(2) It is caused by any of the following:

- (a) Blunt or penetrating injury;
- (b) Exposure to electromagnetic, chemical, or radioactive energy;
- (c) Drowning, suffocation, or strangulation;
- (d) A deficit or excess of heat.

(B) "Evidence of poor perfusion" means physiologic indicators of hemorrhage or decreased cardiovascular function, which may include any of the following symptoms:

- (1) Weak, distal pulse;
- (2) Pallor;
- (3) Cyanosis;
- (4) Delayed capillary refill;
- (5) Tachycardia.

(C) "Evidence of respiratory distress or failure" means physiologic indicators of decreased ventilatory function, which may include any of the following symptoms:

- (1) Stridor;
- (2) Grunting;
- (3) Retractions;
- (4) Cyanosis;
- (5) Hoarseness;
- (6) Difficulty speaking.

(D) "Evidence of hemorrhagic shock" means physiologic indicators of blood loss that may include any of the following symptoms:

- (1) Delayed capillary refill;
- (2) Cool, pale, diaphoretic skin;
- (3) Decreased systolic blood pressure with narrowing pulse pressure;
- (4) Altered level of consciousness.

(E) "Seatbelt sign" means abdominal or thoracic contusions and abrasions resulting from the use of a seatbelt during a motor vehicle collision.

(F) "Signs or symptoms of spinal cord injury" means physiologic indicators that the spinal cord is damaged, including, but not limited to, paralysis, weakness, numbness, or tingling of one or more extremities.

(G) "Evidence of neurovascular compromise" means physiologic indicators of injury to blood vessels or nerves including, but not limited to, pallor, loss of palpable pulses, paralysis, paraesthesia, or severe pain.

(H) “Body region” means a portion of the trauma victim’s body divided into the following areas:

- (1) Brain
- (2) Head, face and neck
- (3) Chest
- (4) Abdomen and pelvis
- (5) Extremities
- (6) Spine

(I) “Evidence of traumatic brain injury” means signs of external trauma and physiologic indicators that the brain has suffered an injury caused by external force including, but not limited to:

- (1) Decrease in level of consciousness from the victim’s baseline
- (2) Unequal pupils
- (3) Blurred vision
- (4) Severe or persistent headache
- (5) Nausea or vomiting
- (6) Change in neurological status

4765-14-02 Determination Of A Trauma Victim.

Emergency medical service personnel shall use the criteria in this rule, consistent with their certification, to evaluate whether an injured person qualifies as an adult trauma victim, geriatric trauma victim, or pediatric trauma victim, in conjunction with the definition of trauma in section 4765.01 of the Revised Code and this chapter.

(A) An adult trauma victim is a person between the ages of sixteen and sixty-nine years of age inclusive exhibiting one or more of the following physiologic or anatomic conditions:

(1) Physiologic conditions

- (a) Glasgow coma scale less than or equal to thirteen;
- (b) Loss of consciousness greater than five minutes;
- (c) Deterioration in level of consciousness at the scene or during transport;
- (d) Failure to localize to pain;
- (e) Respiratory rate less than ten or greater than twenty-nine;
- (f) Requires endotracheal intubation;
- (g) Requires relief of tension pneumothorax;
- (h) Pulse greater than one hundred twenty in combination with evidence of hemorrhagic shock;
- (i) Systolic blood pressure less than ninety, or absent radial pulse with carotid pulse present;

(2) Anatomic conditions

- (a) Penetrating trauma to the head, neck, or torso;
- (b) Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;
- (c) Injuries to the head, neck, or torso where the following physical findings are present:
 - (i) Visible crush injury;
 - (ii) Abdominal tenderness, distention, or seatbelt sign;
 - (iii) Pelvic fracture;
 - (iv) Flail chest;
- (d) Injuries to the extremities where the following physical findings are present:

- (i) Amputations proximal to the wrist or ankle;
- (ii) Visible crush injury;
- (iii) Fractures of two or more proximal long bones;
- (iv) Evidence of neurovascular compromise;

- (e) Signs or symptoms of spinal cord injury;
- (f) Second degree or third degree burns greater than ten per cent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway.

(B) A pediatric trauma victim is a person under sixteen years of age exhibiting one or more of the following physiologic or anatomic conditions:

(1) Physiologic conditions

- (a) Glasgow coma scale less than or equal to thirteen;
- (b) Loss of consciousness greater than five minutes;
- (c) Deterioration in level of consciousness at the scene or during transport;
- (d) Failure to localize to pain;
- (e) Evidence of poor perfusion, or evidence of respiratory distress or failure.

(2) Anatomic conditions

- (a) Penetrating trauma to the head, neck, or torso;
- (b) Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;
- (c) Injuries to the head, neck, or torso where the following physical findings are present;

- (i) Visible crush injury;
- (ii) Abdominal tenderness, distention, or seatbelt sign;
- (iii) Pelvic fracture;
- (iv) Flail chest;

- (d) Injuries to the extremities where the following physical findings are present:

- (i) Amputations proximal to the wrist or ankle;
- (ii) Visible crush injury;
- (iii) Fractures of two or more proximal long bones;
- (iv) Evidence of neurovascular compromise.

- (e) Signs or symptoms of spinal cord injury;
- (f) Second or third degree burns greater than ten per cent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway.

(C) A geriatric trauma victim is a person seventy years of age or older exhibiting one or more of the following causes of injury or physiologic or anatomic conditions:

(1) Physiologic conditions

(a) Glasgow coma scale less than or equal to fourteen in a trauma patient with a known or suspected traumatic brain injury

- (b) Glasgow coma score less than or equal to thirteen;
- (c) Loss of consciousness greater than five minutes;
- (d) Deterioration in level of consciousness at the scene or during transport;
- (e) Failure to localize to pain;
- (f) Respiratory rate less than ten or greater than twenty-nine;
- (g) Requires endotracheal intubation;

- (h) Requires relief of tension pneumothorax;
- (i) Pulse greater than one hundred twenty in combination with evidence of hemorrhagic shock;
- (j) **Systolic blood pressure less than one-hundred**, or absent radial pulse with carotid pulse present;

(2) Anatomic conditions

- (a) Penetrating trauma to the head, neck, or torso;
- (b) Significant, penetrating trauma to extremities proximal to the knee or elbow with evidence of neurovascular compromise;

(c) Injuries to the head, neck, or torso where the following physical findings are present:

- (i) Visible crush injury;
- (ii) Abdominal tenderness, distention, or seatbelt sign;
- (iii) Pelvic fracture;
- (iv) Flail chest;

(d) Injuries to the extremities where the following physical findings are present:

- (i) Amputations proximal to the wrist or ankle;
- (ii) Visible crush injury;
- (iii) Fracture of one proximal long bone sustained as a result of a motor vehicle crash;**
- (iv) Fractures of two or more proximal long bones;
- (v) Evidence of neurovascular compromise.

- (e) Signs or symptoms of spinal cord injury;
- (f) Second degree or third degree burns greater than ten per cent total body surface area, or other significant burns involving the face, feet, hands, genitalia, or airway;
- (g) Injury sustained in two or more body regions.**

(3) Cause of injury

- (a) Pedestrian struck by a motor vehicle**
- (b) Fall from any height, including standing falls, with evidence of a traumatic brain injury**

(D) Emergency medical service personnel shall also consider mechanism of injury and special considerations, as taught in the EMT-basic, EMT-intermediate, or EMT-paramedic curriculum, when evaluating whether an injured person qualifies as a trauma victim.

4765-14-03 Enforcement Of State Or Regional Trauma Triage Protocols.

(A) EMS medical directors shall be responsible for enforcing state or regional trauma triage protocols for EMS personnel under their medical direction through a performance improvement or peer review process.

(B) EMS medical directors may request assistance from the RPABs to address issues related to quality improvement and peer review of state or regional trauma triage protocols.

(C) The board shall investigate all complaints regarding violations of state or regional trauma triage protocols consistent with its current procedures for investigations.

4765-14-04 Education of State and Regional Trauma Triage Protocols.

The board shall consult with the state trauma committee, emergency medical service organizations and personnel, regional directors and regional physician advisory boards, emergency medical service instructors, and persons who regularly provide medical direction to emergency medical service personnel in this state for assistance in developing and implementing educational opportunities regarding state and regional trauma triage protocols. The board may also enlist the assistance of the division of EMS or direct the division of EMS to participate in developing and implementing educational opportunities regarding state and regional trauma triage protocols in a manner to be determined by the board.

4765-14-05 Exceptions to Mandatory Transport.

(A) Emergency medical service personnel shall transport a trauma victim, as defined in section 4765.01 of the Revised Code and this chapter, directly to an adult or pediatric trauma center that is qualified to provide appropriate adult or pediatric care, unless one or more of the following exceptions apply:

- (1) It is medically necessary to transport the victim to another hospital for initial assessment and stabilization before transfer to an adult or pediatric trauma center;
 - (2) It is unsafe or medically inappropriate to transport the victim directly to an adult or pediatric trauma center due to adverse weather or ground conditions or excessive transport time;
 - (3) Transporting the victim to an adult or pediatric trauma center would cause a shortage of local emergency medical service resources;
 - (4) No appropriate adult or pediatric trauma center is able to receive and provide adult or pediatric trauma care to the trauma victim without undue delay;
 - (5) Before transport of a patient begins, the patient requests to be taken to a particular hospital that is not a trauma center or, if the patient is less than eighteen years of age or is not able to communicate, such a request is made by an adult member of the patient's family or a legal representative of the patient.
-

4765-14-06 Amendments Affecting Regional Protocols

If the state trauma triage protocols are amended to include criteria that do not appear in a region's protocols, such amendments will automatically be applied to the region's protocols until such time as the region amends their protocols, in accordance with section 4765.40 of the Revised Code.

Statewide Emergency Services Internet Protocol Steering Committee

Created in House Bill 509 – 129th General Assembly

Effective Date September 28, 2012

- Appointments must be made no later than ten days after the effective date.
- First meeting must be held within thirty days of the effective date of the bill (October 28, 2012)
- Subsequent meeting must occur monthly and can be in person or via conference call.

Initial Report Due November 15, 2012

Report shall provide:

1. Recommendations for the state to address the development of a state emergency services internet protocol network, including a review of the current funding model for the state's 911 systems
2. Examine the readiness of the state's current technology infrastructure for statement emergency services internet protocol network
3. Research legislative authority with regard to governance and funding of a statement emergency services internet protocol network, and provide recommendations on best practices to limit duplicative efforts to ensure an effective transition to next generation 911.
4. Make recommendations for consolidation of public safety answering point operations in the is state to accommodate next generation 911 technology and to facilitate a more efficient and effective emergency services system
5. Recommend policies, procedures, and statutory or regulatory authority to effectively govern a statewide emergency services internet protocol network.
6. Designate a next generation 911 statewide coordinator to serve as the primary point of contract for federal initiatives.
7. Coordinate with statewide initiatives and association such as the State Interoperable Executive Committee, the Ohio Geographically Referenced Independent Program Council, the Ohio Multi Agency Radio Communications Systems Steering Committee and other interested parties.

Committee Members (10 members/ 9 voting members):

- The State Chief Information Office (or designee)
- Two Members of the House of Representatives (majority and minority party)
- Two Members of the Senate (majority and minority party)
- Five Members appointed by the Governor
 - 2 Representatives of CCAO
 - 2 Representative of Municipal League
 - 1 Representative of Township Association

State Chief Information Officer is the Chair and is a non-voting member.

Subcommittees:

1. Technical Standards Subcommittee
2. Public Safety Answering Point Operations Subcommittee
 - * may have additional subcommittees, if needed
 - **membership of the subcommittees will be determined by the committees.

Technical Standards Subcommittee (7 members):

1. One member representing wireline or wireless service provider that participates in the state's 911 system.
2. One representative of the Ohio Academic Resources Network
3. One representative of the Ohio multi-agency radio communications system steering committee
4. One representative of the Ohio geographically referenced information program
 - One member from each of the following associations selected by the committee from nominations received from that association:
 5. Ohio Telephone Association
 6. Ohio Chapter of the Association of Public Safety Communications Officials
 7. Ohio Chapter of the Emergency Number Association

Public Safety Answering Point Operations Subcommittee (11 members):

1. One member representing the division of emergency management of the department of public safety
2. One member representing the state highway patrol
3. Two members recommended CCAO who are managers of public safety answering points
4. Two members recommended by Ohio Municipal League who are managers of public safety answering points
 - One member from each of the following associations selected by the committee from nominations received from that association:
 5. Buckeye State Sheriffs' Association
 6. Ohio Association of Chiefs of Police
 7. Ohio Association of Fire Chiefs
 8. Ohio Chapter of the Association of Public Safety Communication Officials
 9. Ohio Chapter of the National Emergency Number Association

Ohio EMS for Children Performance Measures

EMS Agency Survey 2010-11

Pediatric Medical Direction and Pre-Hospital Equipment

Hospital Transfer Guidelines and Agreements

Performance Measures

- Requirements from HRSA for all grantees
- Include pre-hospital, hospital, and systemic measures
- Pre-hospital measures include:
 - On-line and off-line medical direction
 - Pediatric equipment on ambulances

Pre-Hospital Care Measures

- Data collection required for measures dealing with medical direction & equipment
- 80% response rate required by HRSA
- Survey designed by NEDARC
- Sampling strategy designed by NEDARC
- Analysis designed by NEDARC

EMS Agency Survey

- 339 agencies chosen randomly from Ohio agencies
- Survey sent via mail to EMS Coordinator, follow-up done to ensure response
- Survey sent 12/1/10, available electronically on Division of EMS website
- 210 responses received by 2/28/11 (62%)
- 201 respond to 9-1-1 emergencies

Highest Level of Emergency Services Provided

n=201

Online Medical Direction

Performance Measures

- PM 71: The percent of pre-hospital provider agencies in the State/Territory that have on-line pediatric medical direction available from dispatch through patient transport to a definitive care facility.

In the past year, have any of your providers attempted to contact on-line medical direction for medical advice when treating a pediatric patient, age 0-18 years?

BLS Agencies (n=31)

In the past year, have any of your providers attempted to contact on-line medical direction for medical advice when treating a pediatric patient, age 0-18 years?

ALS Agencies (n=170)

In the past year, how often was on-line medical direction available to provide medical advice to your providers when they were treating pediatric patients, age 0-18 years?

In the past year, how often was on-line medical direction available to provide medical advice to your providers when they were treating pediatric patients, age 0-18 years?

ALS Agencies (n=107)

Performance Measure Results

- Defined by answering “Always” or “Almost Always”
- 100% of BLS agencies have on-line medical direction for treating pediatric patients
- 95% of ALS agencies have on-line medical direction for treating pediatric patients

In the past year, when on-line medical direction was available, what type of medical professional PRIMARILY gave your providers medical advice when they were treating a pediatric patient, 0-18 years?

BLS Agencies (n=5)

In the past year, when on-line medical direction was available, what type of medical professional PRIMARILY gave your providers medical advice when they were treating a pediatric patient, age 0-18 years?

ALS Agencies (n=107)

Written

Protocols/Guidelines

Performance Measure

- PM 72: The percent of pre-hospital provider agencies in the State/Territory that have pediatric off-line medical direction available from dispatch through patient transport to a definitive care facility.

**Are written protocols or guidelines (paper or electronic)
available to your providers for the treatment of pediatric
patients, age 0-18 years?**

BLS Agencies (n=31)

**Are written protocols or guidelines (paper or electronic)
available to your providers for the treatment of pediatric
patients, age 0-18 years?**

ALS Agencies (n=170)

Performance Measure Results

- 18 of 31 BLS agencies (58%) responded “Always” or “Almost Always” to how often protocols were available in their vehicle
- 162 of 170 ALS agencies (95%) responded “Always” or “Almost Always” to how often protocols were available in their vehicle

EMS Ground Vehicles

**Does your agency operate any ground vehicles that transport
patients from scene to hospital?**

n=201

**The total number of ground vehicles that your agency
operates that transport patients from scene to hospital
n=609**

Breakdown of the level of emergency services for transporting ground vehicles
n=609

EMS Equipment

Performance Measure

- PM 73: The percent of patient care units in the State/Territory that have the essential pediatric equipment and supplies as outlined in national guidelines.

Suction Catheters: BLS (n=101) & ALS (508)

Nasal Cannulas: BLS (n=101) & ALS (n=508)

Non-Rebreather Masks: BLS (n=101) & ALS (n=508)

Bag-Valve Masks: BLS (n=101) & ALS (n=508)

Masks for Bag-Valve Masks: BLS (n=101) & ALS (n=508)

Nasal Airways: BLS (n=101) & ALS (n=508)

Oral Airways: BLS (n=101) & ALS (508)

Pulse Oximeters: BLS (n=101) & ALS (n=508)

Infant Supplies: BLS (n=101) & ALS (n=508)

Cervical Immobilization Devices: BLS (n=101) & ALS (n=508)

Lower Extremity Traction Devices: BLS (n=101) & ALS (n=508)

Extremity Immobilization Devices: BLS (n=101) & ALS (n=508)

Sphygmomanometers: BLS (n=101) & ALS (n=508)

Other Equipment: BLS (n=101) & ALS (n=508)

Miller Laryngoscope Blades: ALS Only (n=508)

Curved Laryngoscope Blades: ALS Only (n=508)

Stylettes: ALS Only (n=508)

Forceps: ALS Only (n=508)

End-Tidal CO₂ Detection Capability: ALS Only (n=508)

Intravenous Catheters: ALS Only (n=508)

Intraosseous Needles: ALS Only (n=508)

Syringes: ALS Only (n=508)

Transcutaneous Cardiac Pacemakers: ALS Only (n=508)

Endotracheal Tubes: ALS Only (n=508)

Performance Measure Results

- Items below 90% on both BLS and ALS responses:
 - Neonatal-sized mask for BVM
 - Pulse oximeter with pediatric probes
 - Child-sized lower extremity traction device
 - Small extremity immobilization device
- Items below 90%: BLS only
 - Length/weight-based tape
- Items below 90%: ALS only
 - Child-sized nasal cannula
 - Pediatric-sized Magill forceps
 - Meconium aspirator adaptor
 - End-tidal CO2 detection for pediatric patients

ALL Listed Equipment Items: BLS (n=101) & ALS (n=508)

Hospital Survey

Hospital Survey

- 121 hospitals chosen randomly from Ohio hospitals with emergency departments
- Children's hospitals NOT excluded
- Survey sent via mail to ED Manager, follow-up done to ensure response
- Survey sent 12/1/10, available electronically on Division of EMS website
- 63 responses received by 2/28/11 (52%)

Performance Measure

- PM 76: The percentage of hospitals in the State/Territory that have written inter-facility transfer guidelines that cover pediatric patients and that include the following components of transfer:
 - Defined process for initiation of transfer, including the roles and responsibilities of the referring facility and referral center (including responsibilities for requesting transfer and communication).
 - Process for selecting the appropriate care facility.
 - Process for selecting the appropriately staffed transport service to match the patient's acuity level (level of care required by patient, equipment needed in transport, etc.).
 - Process for patient transfer (including obtaining informed consent).
 - Plan for transfer of patient medical record.
 - Plan for transfer of copy of signed transport consent.
 - Plan for transfer of personal belongings of the patient.
 - Plan for provision of directions and referral institution information to family.

Does your hospital or medical facility have written inter-facility guideline(s) that outline procedural and administrative policies with other hospitals for the transfer of patients of all ages, including children, in need of care not available at your hospital? (n=63)

Do your guidelines include information specifically for the transfer of patients for each item below? (n=41)

Performance Measure

- PM 77: The percentage of hospitals in the State/Territory that have written inter-facility transfer agreements that cover pediatric patients.

Does your hospital or medical facility have written inter-facility agreement(s) with other hospitals for the transfer of patients of all ages, including children, in need of care not available at your hospital? (n=63)

Performance Measure Results

- 46% of hospitals have written inter-facility transfer guidelines that cover pediatric patients and that include the required components of transfer
- 55% of hospitals have written inter-facility transfer agreements that cover pediatric patients.

Scope of Practice

Approved by the State Board of EMS (EMS Board), within the Division of EMS of the Ohio Department of Public Safety

This document offers an “at-a-glance” view of the Scope of Practice for Emergency Medical Responders (EMR), Emergency Medical Technicians (EMT), Advanced Emergency Medical Technicians (AEMT), and Paramedics as approved by the EMS Board. The complete scope of practice can be found in Ohio Revised Code Sections 4765.35 (FR), 4765.37 (EMT-B), 4765.38 (EMT-I), and 4765.39 (EMT-P) and further defined in Ohio Administrative Code Rules 4765-12-04 (EMR), 4765-15-04 (EMT), 4765-16-04 (AEMT), and 4765-17-03 (Paramedic).

Performance of services outlined in this document and in the aforementioned code sections, shall only be performed if the Emergency Medical Responder, Emergency Medical Technician, Advanced Emergency Medical Technician, and Paramedic have received training as part of an initial certification course or through subsequent training approved by the EMS Board. If specific training has not been specified by the EMS Board, the Emergency Medical Responder, Emergency Medical Technician, Advanced Emergency Medical Technician, and Paramedic must have received training regarding such services approved by the local medical director before performing those services.

In accordance with Ohio Administrative Code Rule 4765-10-06, the individual Medical Director of each EMS agency may limit or ask that providers obtain medical control approval for certain treatments. Each community may need to tailor and revise the protocol to fit their region and individual practice, but must ensure that they remain within the approved scope of practice.

EMS Medical Directors are reminded that they are not permitted to expand the scope of practice for EMS providers, but may provide clarifications or limitations on services that are permitted. The EMS Board may allow Emergency Medical Responders, Emergency Medical Technicians, Advanced Emergency Medical Technicians, and Paramedics to perform services beyond their respective scopes of practices as part of a board-approved research study. The research study must be approved in advance in accordance with rule 4765-6-04 of the Ohio Administrative Code.

EMS medical directors and EMS providers are strongly encouraged to review the EMS Board's policy statement “Regarding EMS Provider Pre-Hospital transport of Patients with Pre-Existing Medical Devices or Drug Administrations” dated January 2004 (attached to this document, page 6). This statement clarifies how EMS providers, in the prehospital setting, should deal with medical devices and medicine administrations that are outside their scope of practice.

Updated 11/19/03; 5/17/05; 10/26/05; 10/17/07; 3/8/12, 3/5/2013

Additional services					
<p>In the event of an emergency declared by the governor that affects the public's health, an EMR, EMT, AEMT, or Paramedic may perform immunizations and administer drugs or dangerous drugs, in relation to the emergency, provided the EMR, EMT, AEMT, or Paramedic is under physician medical direction and has received appropriate training regarding the administration of such immunizations and/or drugs.</p>					
Nerve Agent or Organophosphate Release					

	<p>An EMR, EMT, AEMT, or Paramedic may administer drugs or dangerous drugs contained within a nerve agent antidote auto-injector kit, including a MARK I[®] kit, in response to suspected or known exposure to a nerve or organophosphate agent provided the EMR, EMT, AEMT, or Paramedic is under physician medical direction and has received appropriate training regarding the administration of such drugs within the nerve agent antidote auto-injector kit.</p>
--	---

Approved Advanced Emergency Medical Technician (AEMT) Medications			
Aspirin			
Oral glucose			
Activated charcoal			
Sublingual nitroglycerin			
Epinephrine 1:1,000 (subcutaneous or intramuscular)			
Dextrose in water			
Diphenhydramine			
Benzodiazepines			
Bronchodilators			
Naloxone (including intranasal)			
Glucagon			
Nitrous oxide			
Nalbuphine			
Narcotics or other analgesics for pain relief			
Lidocaine for pain relief after intraosseous insertions			

As Approved by the EMS Board

The above medications are the ONLY medications that the AEMT has been approved to administer. If a medication does not appear on this listing, it has not been approved by the EMS Board, and SHALL NOT BE ADDED TO THE DEPARTMENT'S PROTOCOL.

The approved route of administration of any specific medication is stated in the respective EMT, AEMT, and Paramedic curriculum. The EMS provider shall administer medications only via the route addressed in each respective curriculum and consistent with their level of training.

Performance of services outlined in this document and in the aforementioned code sections, shall only be performed if the EMR, EMT, AEMT, and Paramedic have received training as part of an initial certification course or through subsequent training approved by the EMS Board. If specific training has not been specified by the EMS Board, the EMR, EMT, AEMT, and Paramedic must have received training regarding such services approved by the local medical director before performing those services.

The EMS Board may allow EMRs, EMTs, AEMTs, and Paramedics to perform services beyond their respective scopes of practice as part of a board-approved research study. The research study must be approved in advance in accordance with rule 4765-6-04 of the Ohio Administrative Code.

The Ohio Board of Emergency Medical Services (“EMS Board”) issues the following statement:

**Regarding EMS Provider Pre-Hospital Transport of Patients with
Pre-Existing Medical Devices or Drug Administrations
January 2004**

This statement is an attempt to provide general information about the above issue facing EMS providers. It should not be treated as legal advice or medical direction. For direct advice regarding a particular scenario, please consult with your medical director and legal counsel. Although the following statement represents the EMS Board’s general position on the above issue, this statement in no way precludes the EMS Board from taking disciplinary action in a particular case if necessary. Any potential complaints brought before the EMS Board will be decided on a case-by-case basis.

Introduction:

The Ohio Department of Public Safety, Division of Emergency Medical Services, has developed a defined scope of practice for EMS providers. It is maintained in matrix form and available on-line as a reference for public access. This scope of practice addresses all levels of EMS providers and has been approved by the EMS Board. Updates to the scope of practice are made as necessary and after approval by the EMS Board. From time to time, EMS providers are confronted on-scene with patients with pre-existing medical situations not included or addressed in their respective EMS Board-approved scope of practice. Specifically, patients with pre-existing medical devices and drug administrations requiring pre-hospital EMS service are becoming more commonplace. The intent of this position paper is to address the EMS provider’s approach to that pre-hospital patient with a pre-existing physician-ordered medical device or drug administration (“MDDA”) not covered in the provider’s scope of practice.

Discussion:

In general, the EMS provider should maintain the pre-existing MDDA and transport the patient to the appropriate facility. There is no expectation that the EMS provider will initiate, adjust, or discontinue the pre-existing MDDA. This implies that the EMS provider will maintain and continue care so that the patient can be transported. The EMS provider is expected to follow local protocols regarding the overall evaluation, treatment, and transportation of this type of pre-hospital patient requiring EMS service. It applies to EMS provider situations where alternative transportation and care is not available or practical (pre-hospital or “911 scene response”). It implies that the most appropriate and available level of EMS provider will respond to the request for pre-hospital EMS service. It also implies that the patient requires the pre-existing MDDA and it is not feasible or appropriate to transport the patient without the pre-existing MDDA.

The number and type of pre-existing MDDAs currently or potentially encountered by the EMS provider in the community setting is extensive and may change frequently. The intent of this position paper is not to provide an inclusive list of pre-existing MDDAs. However, as a guideline for the EMS provider, current pre-existing MDDAs may include ventilatory adjuncts (CPAP, BiPAP), continuous or intermittent IV medication infusions (analgesics, antibiotics, chemotherapeutic agents, vasopressors, cardiac drugs), and non-traditional out-of-hospital drug infusion routes (subcutaneous infusaports, central venous access lines, direct subcutaneous infusions, self-contained implanted pumps).

Conclusion:

In conclusion, the EMS provider confronted with a pre-hospital patient with a pre-existing physician-ordered medical device or drug administration not covered in the EMS provider’s respective scope of practice should provide usual care and transportation while maintaining the pre-existing MDDA, if applicable. Concerns or questions regarding real-time events associated with a pre-existing MDDA should be directed to the relevant Medical Control Physician. Concerns or questions regarding previous, recurrent, or future pre-hospital transportations with a pre-existing MDDA should be directed to the appropriate EMS Medical Director and legal counsel.

The Purpose of Performance Improvement

Ohio Emergency Medical Service organizations must strive to maximize efficiency, effectiveness, promote excellence and personal accountability through peer review and continuous performance improvement.

Amended Substitute House Bill #138 requires EMS organizations to implement ongoing peer review and performance improvement programs to improve the availability and quality of EMS services.

In implementing these programs, EMS organization shall consider how to improve its ability to provide effective trauma care, particularly for pediatric and geriatric patients, and shall take into account the trauma care guidelines developed by the Ohio EMS Board.

Performance Improvement

Information generated solely for use in a peer review or performance improvement program is not a public record, is not subject to discovery and shall not be introduced into evidence in a civil action.

Definitions

Performance Improvement (PI):

The continuous study and improvement of process, system or organization.

Peer review:

A team process in which Emergency Medical Service providers continuously evaluate and improve their own patient care delivery system.

Medical Direction

Medical Direction participation is essential and important for the program's success.

The Medical Director is responsible for program content and spearheads leadership for the performance improvement program. He or she also sets the direction for performance improvement by creating a strong patient focus.

In addition, the EMS Medical Director helps establish clear statements that define the organization's mission, values, objectives, and expectations.

Intent

The intent of any performance improvement program is to:

- ? Provide data and information, in a non-punitive manner, on how well the system and process works.
- ? Implement continuing education, training programs, and equipment needs based on outcome data from the peer review / performance improvement process.

Each Emergency Medical Services Organization will establish:

- ? Medical Direction oversight. Regional Physician Advisory Board (RPAB) oversight if medical direction unavailable.
- ? An ongoing peer review and continuous performance improvement program.
- ? Establish a structure and / or membership to implement the PI process.
- ? Establish performance indicators relevant to their system.
- ? Develop a feedback mechanism to the patient care providers.

Implementation

Obtain EMS Medical Direction or RPAB oversight.

- ? Ensure your system has current prehospital protocols. RPAB Guidelines are available to download from the Ohio Department of Public Safety; Emergency Medical Services web site if a system needs assistance with this process. (www.ohiopublicsafety.com and select Emergency Medical Services)
- ? Protocols set the standard of care by which prehospital care providers are evaluated.
- ? Develop a review process, a method to review runs.

Suggestion for establishing a review process

Committee

- ? Develop a committee representative of the system. Example would be an ED physician as chairman, ED nursing representation, and a representative from each EMS service.
- ? The runs reviewed may depend on the system's run volume. In smaller systems, the committee may elect to review each run. Larger systems will need to select a specific topic, such as chest pain, and review only those runs or a percentage of those runs, depending upon volume.
- ? It is suggested that all systems review sentinel events. A sentinel event is defined as an unexpected occurrence involving death or serious physical or psychological injury, or the risk thereof.

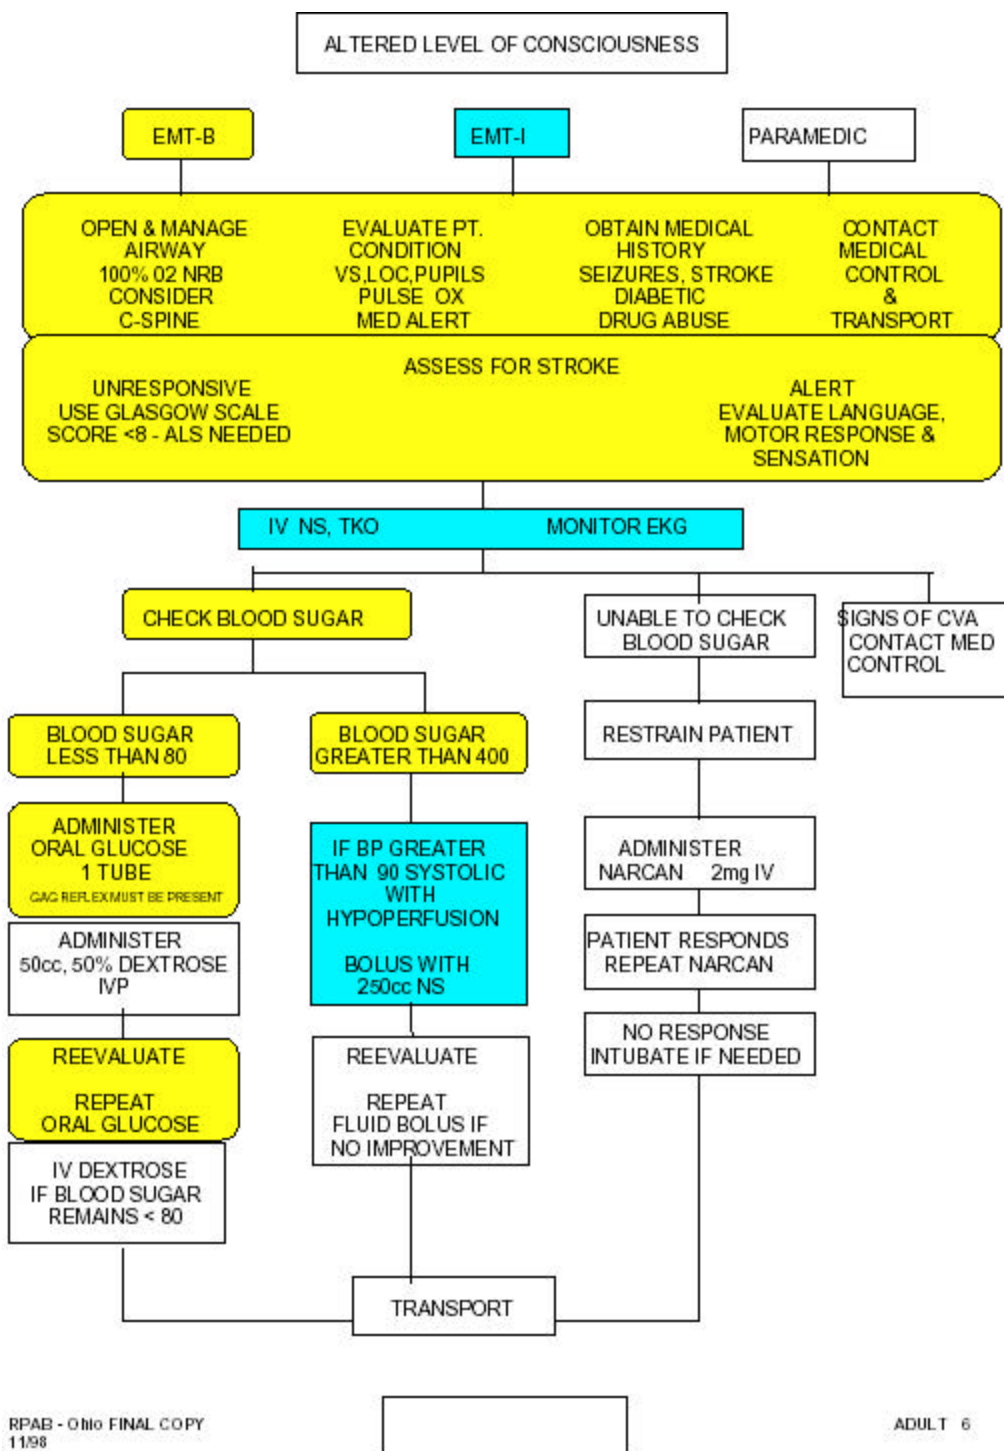

Performance Improvement Coordinator

- ? Some systems may elect to hire and/or appoint an individual to conduct performance improvement reviews and provide feedback to the providers.
- ? This individual may establish the same review system as a committee and review all runs, select runs, or percentages of runs.

Suggested Sample Review Forms

The following pages will show suggested forms for used in reviewing common patient complaints encountered by EMS providers.

- ? These forms will allow EMS organizations to begin the review process and evaluate their system's process and their providers' adherence to the established standard of care. (i.e., their protocols).
- ? It is suggested that one form be used to review each run. The reviewer will read the prehospital care report and determine if documentation reflects adherence to the items listed on the review form.
- ? Each review form reflects the protocols which are used to provide quality care to patients.

Feedback Mechanism

Developing a feedback mechanism is an important process so that providers can see how the system and the process are working.

- ? The feedback mechanism selected must ensure that the confidentiality of both the provider and the patient are maintained.
- ? Various methods can be developed to provide this valuable information. One example would be the use of a newsletter providing pertinent PI information. A second example would be the use of run charts or graphs to depict the PI information. A sample of two of these methods follows.

EMERGENCY MEDICAL SERVICES PERFORMANCE IMPROVEMENT

Emergency medical services providers in the State of Ohio strive everyday to deliver the highest standard of prehospital care to their residents.

December 2001

Assessing Chest Pain Cardiac vs. Non-Cardiac

- ? Not all chest pain is cardiac in origin and EMS personnel must use the following to assist them in the proper assessment and treatment of their patients.
- ? EMS personnel must gather, evaluate, and synthesize a great deal of information in very little time.
- ? Patient assessment means conducting a problem-oriented evaluation of your patient and establishing priorities of care based on existing and potential threats to life.
- ? EMS personnel can then develop a field diagnosis or impression - a prehospital evaluation of the patient's condition and its causes.
- ? Making critical decisions requires critical judgment - the use of knowledge and experience to form an impression of the patient's problem and plan their treatment.

ASSESSING CHEST PAIN

The **OPQRST** mnemonic may be used to recall pertinent questions to ask when obtaining a history from a patient experiencing chest pain.

1. **Onset:** "When did your symptoms begin?" "What were you doing when they began?" "Did your symptoms begin suddenly or gradually?"
2. **Provocation/Palliative:** "Did anything bring on the pain?" "Does anything make the pain better or worse?" (Associated with respiration, movement)

3. **Quality:** "How would you describe your discomfort?" (Pressure, pain, crushing, dull, burning, tearing, throbbing, squeezing, stabbing, vise-like)
4. **Region/Radiation/Referral:** "Where is your discomfort?" (Ask the patient to point to it) "Does it go anywhere else?" (Neck, shoulders, arm, back)
5. **Severity:** "On a scale of 0 to 10, with 0 being no pain and 10 being the worst, what number would you assign your pain or discomfort?"
6. **Timing:** "Does your discomfort come and go or is it constant?"

FEATURES THAT ARE ***NOT*** CHARACTERISTIC OF DISCOMFORT CAUSED BY MYOCARDIAL ISCHEMIA INCLUDE:

- ? Sharp of knife-like pain brought on by respiratory movements or cough.
- ? Primary or sole location of discomfort in the middle or lower abdominal region.
- ? Pain reproduced with movement or palpation of the chest wall or arms.
- ? Constant pain that lasts for many hours.
- ? Very brief episodes of pain that last a few seconds or less.
- ? Pain that radiates into lower extremities.

CLINICAL PRESENTATION

- ? Chest discomfort suggestive of ischemia is present in 75% to 80% of patients with acute MI.

- ? Symptoms include: chest, epigastric, arm, and wrist or jaw discomfort with exertion or at rest. May be accompanied by unexplained nausea and vomiting, persistent shortness of breath caused by left ventricular failure, and unexplained weakness, dizziness, sweating, anxiety, lightheadedness or syncope, or a combination of these symptoms
- ? Discomfort is usually ***NOT*** sharp, worsened by deep inspiration, affected by moving muscles in the area where the discomfort is localized, or positional in nature.

Full Arrests

- ? Twenty runs from January 2002 were reviewed. Most of the runs reviewed were well documented. The committee had a couple of suggestions to help further improve documentation of patient care delivered to cardiac arrested patient.
- ? Be sure to document airway management. Do not leave this open to incorrect interpretation. Be sure to include patient response.
- ? In cases of PEA, be sure to document the rhythm rate on the monitor. Atropine is only administered in those cases where the rate is slow (<60). It is important to document this as justification when atropine is either administered or withheld.

Meeting Information

The next meeting is February 23, 2002.

Please plan to attend as we will be selecting the quality indicators for review for 2002.

Continuing Education

- ? Education is an important component of the performance improvement process
- ? EMS continuing education is one method that can be utilized to correct areas of weakness identified by the peer review / performance improvement process.
- ? Continuing education helps to improve the EMS patient care delivery system.

Re-Evaluation

- ? The peer review / performance improvement system should re-evaluate the selected indicators at a later time to assess if there has been documented improvement.
- ? If there is no improvement, the process should be readjusted in an effort to find an effective method. For example, re-evaluate the educational process, communication system, protocols.
- ? Peer review / performance improvement is a continuous process.

Procedures to Follow After Loss of Trauma Center Status

A hospital can lose its trauma center status in several ways:

- *Application for American College of Surgeons (ACS) verification or re-verification is denied, withdrawn, suspended or terminated.*
- *ACS verification is not obtained by the expiration of Ohio provisional designation.*
- *Voluntary surrender of ACS verification or Ohio provisional designation.*

Pursuant to Ohio Revised Code §3727.09 et seq, the procedures listed in this document are required to be followed when a hospital ceases to be a trauma center, regardless of the manner in which the loss of status occurred. Each of the 5 major steps of this procedure is prefaced with the relevant section of the ORC.

“Trauma victim” and “trauma patient” as used in this document is the same as defined in ORC §3727.09(A)(1) and §4765.01(N). In essence, it is a person who has suffered an injury which poses a risk of loss of life; loss of limb; significant, permanent disability; or significant, permanent disfigurement and is caused by blunt or penetrating trauma; exposure to electromagnetic, chemical or radioactive energy; drowning, suffocation or strangulation; or a deficit or excess of heat.

1. (3727.101(D)(2)(a)) Except as otherwise provided by federal law, at the earliest practicable date transfer to one or more appropriate trauma centers all trauma patients in the hospital to whom the hospital is not permitted to provide trauma care.
2. (3727.102) The hospital shall immediately notify, in writing, the following entities of the loss of trauma center status:
 - The Director of the Ohio Department of Health.
 - Ohio Department of Public Safety’s Division of Emergency Medical Services.
 - The Regional Physicians Advisory Board for their region.
3. (3727.10(C)) The hospital shall immediately make notification of the loss of trauma center status to all other hospitals with which it has a transfer agreement to accept trauma patients.
4. (3727.10) The following prohibitions apply to all hospitals that are not a trauma center and apply immediately when a hospital loses its trauma center status:
 - The hospital shall not represent itself as being able to care for trauma victims in a manner which is inconsistent with its non-trauma center status.
 - The hospital shall not provide trauma care to a trauma victim that is inconsistent with applicable federal laws, state laws, trauma care protocols and patient transfer agreements.
 - The hospital shall not transfer a trauma victim to a hospital that is not a trauma center with the appropriate level of categorization.

Mission Statement

“to save lives, reduce injuries and economic loss, to administer Ohio’s motor vehicle laws and to preserve the safety and well being of all citizens with the most cost-effective and service-oriented methods available.”

5. (3727.101(D)(2)(a) and 3727.09) Within 180 days of loss of trauma center status, the hospital shall have completed the following:
- A. Trauma care protocols shall be written, complying with applicable federal and state laws, and include policies and procedures with respect to all of the following:
 - a. Evaluation of trauma patients, including criteria for prompt identification of trauma patients who require a level of trauma care that exceeds the hospital's capabilities;
 - b. Emergency treatment and stabilization of trauma patients prior to transfer to an appropriate trauma center;
 - c. Timely transfer of trauma patients to appropriate trauma centers based on a patient's medical needs. Trauma patient transfer protocols shall specify all of the following:
 - i. Confirmation of the ability of the receiving trauma center to provide prompt trauma care appropriate to a patient's medical needs;
 - ii. Procedures for selecting an appropriate alternative trauma center to receive a patient when it is not feasible or safe to transport the patient to a particular trauma center;
 - iii. Advance notification and appropriate medical consultation with the trauma center to which a trauma patient is being, or will be, transferred;
 - iv. Procedures for selecting an appropriate method of transportation and the hospital responsible for arranging or providing the transportation;
 - v. Confirmation of the ability of the persons and vehicle that will transport a trauma patient to provide appropriate trauma care;
 - vi. Assured communication with, and appropriate medical direction of, the persons transporting a trauma patient to a trauma center;
 - vii. Identification and timely transfer of appropriate medical records of the trauma patient being transferred;
 - viii. The hospital responsible for care of a patient in transit;
 - ix. The responsibilities of the physician attending a patient and, if different, the physician who authorizes a transfer of the patient;
 - x. Procedures for determining, in consultation with an appropriate trauma center and the persons who will transport a trauma patient, when transportation of the patient to a trauma center may be delayed for either of the following reasons:
 - Immediate transfer of the patient is unsafe due to adverse weather or ground conditions.
 - No trauma center is able to provide appropriate trauma care to the patient without undue delay.
 - d. Peer review and quality assurance procedures for adult and pediatric trauma care provided in or by the hospital.
 - e. Enter into all of the following written agreements:
 - i. An agreement with one or more adult trauma centers in each level of categorization as a trauma center higher than the hospital that governs the transfer of adult trauma patients from the hospital to those trauma centers;
 - ii. An agreement with one or more pediatric trauma centers in each level of categorization as a trauma center higher than the hospital that governs the transfer of pediatric trauma patients from the hospital to those trauma centers.
 - f. The hospital must make trauma care protocols and trauma patient transfer agreements available for public inspection during normal working hours. The hospital must furnish a copy of such documents upon request and may charge a reasonable and necessary fee for doing so, provided that upon request it shall furnish a copy of such documents to the director of health free of charge.

Assessment of Factors Associated with the Delayed Transfer of Pediatric Trauma Patients: An EMS and Emergency Physician Survey

Introduction

Children represent a special challenge for emergency care providers. These challenges can result in delayed recognition of children in distress and therefore delay definitive treatment or appropriate transfer. Despite the fact that within the state of Ohio there are six pediatric trauma centers, the vast majority of ED visits made by children are to general hospitals which are less likely to have pediatric expertise, equipment, and policies in place. Given that injury remains the leading killer of children and that care provided at trauma centers has been shown to improve outcomes, it is essential that seriously injured children are quickly and appropriately evaluated and transferred to a designated trauma center for definitive diagnostic work up and care (Densmore, Lim, Oldham & Guice, 2006; MacKenzie et al., 2006).

Given the demonstrated delays in the transfer of injured children to pediatric trauma centers and the known limitations that exist for many pre-hospital and ED providers in caring for children, this study will help to clarify the existing trauma system, knowledge, and resource barriers impacting the rapid and appropriate transfer of injured children to designated trauma centers in the State of Ohio. Our innovative approach utilized surveys targeted to EMS providers and emergency medicine physicians to directly assess barriers currently impacting the care of injured children in our state. The surveys specifically addressed relevant EMS-C performance measures, knowledge of relevant trauma triage guidelines and recommendations for pre-transfer imaging, pediatric and trauma specific training and perceived barriers to patient transfer. Once the barriers are more clearly delineated within our state, directed training and system changes can be put into place. In addition, the findings from this study will further define a baseline of our current status to allow future tracking of improvements.

Background

Despite the importance of quick and appropriate transfer, we have previously identified that 82% of patients transferred to our Level I pediatric trauma center arrived well beyond the state two hour goal (average 420 minutes). Unfortunately these delays were not isolated among those children with minor injuries; 79% of those with overall severe injuries (Injury Severity Score (ISS) >15) and 47% of those with severe traumatic brain injuries (Glasgow Coma Score (GCS)<9) arrived beyond the two hour goal. When we investigated the etiology of these delays there were no observed differences related to individual hospitals, distance from our institution or mode of transport (air vs. ground). Delays were however more common among those with commercial insurance (75.8% vs. 64.8%; $p<0.05$) and those that had a CT scan prior to transfer (52.1% vs. 23.3%; $p<0.05$). In this prior ODPS funded study we were unable to demonstrate an association with imaging and any specific clinical findings and were therefore uncertain as to the reason providers felt the need to image prior to transfer (Chatoorgoon et al., 2010).

Other work has demonstrated that not only may excess imaging be associated with delays but that these children may require repeat imaging secondary to poor quality or unavailability of initial imaging exposing them to increased radiation risk and increased cost (Chwals et al., 2008). In addition, the reasons for obtaining imaging prior to transfer in a study of adult trauma patients revealed numerous misconceptions ranging from legal requirements, trauma center expectations, and fear of litigation as reasons to delay transfer to obtain imaging (Lee et al., 2008). Until we fully understand the reasons these providers are obtaining imaging prior to patient transfer we will be unable to properly educate and reduce this unnecessary practice.

According to the Institute of Medicine report, *Emergency Care for Children: Growing Pains* (Institute of Medicine [IOM], 2007) although children represent 27% of all ED visits, many hospitals are not adequately prepared to handle pediatric patients. The problems identified in this report include lack of transfer agreements and clear transfer guidelines for pediatric patients, limited and varied pediatric training and experience, lack of a designated pediatric emergency coordinator, failure to use evidence based approaches to provide care and reduce errors, and failure to explore and utilize new technologies to improve the care and rapid appropriate triage of pediatric patients. In addition to delays at outside hospitals, it has been noted that pre-hospital providers may not always bring pediatric trauma victims directly to an appropriate pediatric trauma center; the reasons for these “choices” are not clear. Given these demonstrated limitations, many dedicated well intentioned pre-hospital and ED providers often make do without the specialized pediatric training and resources that are present in pediatric trauma centers.

Methods

Survey development and distribution

Surveys were designed by a multi-disciplinary group including an Emergency Department (ED) physician, an Emergency Medical Services (EMS) provider, a pediatric trauma surgeon and an education specialist. Two surveys were developed, one designed for EMS providers and one for ED physicians. Both were created to help understand knowledge and system issues impacting the prompt identification and transfer of injured children to an appropriate pediatric trauma facility. Both surveys contained questions to obtain general demographic information as well as two case studies with questions, one scenario meeting the State of Ohio defined trauma criteria and another case study that did not definitely meet criteria but was subject to discussion. All surveys allowed participants to enter their answers in either an open-ended or multiple choice fashion (**Appendix 1**).

Utilizing a list of EMS providers provided by the State of Ohio Department of Public Safety and a list of ED physicians from Ohio, provided by the American College of Emergency Physicians (ACEP), individuals were randomly selected to receive the survey and a total of 958 EMS surveys and 936 physician surveys were mailed. The survey was open to all EMS and emergency physician providers who

treat injured children. Exclusion criteria included EMS providers who did not practice in the field and ED physicians currently working in pediatric trauma centers (PTC). The surveys were initially mailed in April of 2010 along with a cover letter introducing the study and requesting the participant to forward the provided SurveyMonkey website link (www.surveymonkey.com) to other peers to complete online. To further incentivize participation a five dollar gift card was included. A follow up letter was sent one month after the initial letters to further encourage participation. Surveys, both hard copy and electronic were accepted until June 30, 2010.

Results

EMS providers

In summary, a total of 825 EMS surveys were completed; 239 via mail and 586 online. There were 89 surveys excluded, 72 submitted with no responses and 17 not practicing in the field leaving a total of 736 surveys available for further analysis.

The majority of responders were paramedics (68%), worked full-time (66%), and were in a 911 service area (94%) (**Table 1**). In addition, 41% were from rural areas in the state and 47% were within 20 miles of the closest pediatric trauma center. Not surprisingly, pediatric experience among these providers was limited with 47% treating 10 or fewer pediatric patients a year, with the majority of providers having no pediatric intubation (65%) or intraosseous line placement (57%) experience in the past year (**Table 2**).

Despite the fact that scenario one was designed to clearly meet state trauma criteria and scenario two was not, 84% and 86% of providers answered that they would transport the patients to a pediatric trauma center. In scenario #1, a motor vehicle collision with a child that had abdominal bruising and pain, 93% of providers included mechanism of injury as the reason for transport to a PTC. Despite the fact that abdominal bruising and pain is a state trauma criterion, only 38% listed the pain and bruising and only 43% of respondents listed state trauma criterion as a reason for transfer to a trauma center (**Figure 1**). In scenario #2, a multi-vehicle collision with a death of the driver and an otherwise stable child, the main reason providers indicated they would transfer to a PTC was death of another passenger in the same vehicle (89.0%) (**Figure 2**). The mechanism of injury and amount of damage to the car, neither of which are State of Ohio trauma criteria were also listed as top reasons to indicate the need to transport directly to a trauma center. Fifty percent also incorrectly responded that this patient met state trauma criteria.

The location, rural, urban or suburban of the EMS provider did not impact the likelihood of transferring either patient (**Figure 3**). Among the providers that would transport the patient from scenario 1 or 2, 16% and 21% respectively, within 20 miles of a PTC would call for air transport (**Figure 4** and **Figure 5**). In addition, 62% would bypass an adult trauma center to transport to a PTC. It was observed that for those responding that they would bypass an adult center, transfer time to a PTC was 25 minutes compared to an average transport time of 34 minutes for those that would not bypass the adult center ($p<0.05$).

For scenario 1 and 2, 16% and 14% respectively, of respondents either were not sure or would not transport the patient directly to a PTC. The reasons provided for not transporting the patient to a PTC are shown in **Figure 6**. The primary reasons provided were that the PTC was too far away and that they would transfer to the closest community hospital. Accordingly, more than 90% of EMS providers who answered they would not transport because of distance were beyond 20 miles away from a PTC, with 49% for scenario #1 and 59% for scenario 2 being more than 40 miles away. Interestingly, only 32% and 23% considered traffic during rush hour as an important factor in scenario #1 and #2. Average transport time of those who would transport to a PTC was significantly different than for those who would not (28 minutes vs. 43 minutes, $p<0.05$). Just under half of those that would not initially transfer to a PTC would reconsider if there was tachycardia, hypotension, altered mental status, or an open fracture (**Figure 7**). Among those that would transfer either patient to a community hospital 83% either were unsure or knew there was not pediatric expertise at that institution. Furthermore, 21% of the EMS providers that would not transport to a PTC responded that there is never a reason to bypass the closest community hospital. Even among those that would not transport to a PTC, 73% correctly identified the patient in scenario 1 as meeting state trauma criteria, and 66% for scenario 2 incorrectly categorized the patient as meeting state trauma criteria.

ED physicians

A total of 486 ED physician surveys were returned: 384 via mail and 102 completed online. There were 107 surveys excluded because the participant was currently practicing in a PTC leaving a total of 377 surveys for further analysis.

Over 80% of respondents were residency trained in emergency medicine with less than 1% having fellowship training in pediatric emergency medicine (**Table 3**). Although 54% of respondents report treating over 200 pediatric patients a year, the majority had performed less than 5 intubations (93%), intraosseous line placement (99%), central line placement (99%), or chest tube placement (100%) (**Table 4**). Only 37% of respondents reported that their institution had an on call surgeon 24 hours a day.

For the first scenario, a child thrown from a dirt bike complaining of facial pain, 90% of the ED physicians correctly identified the patient as a trauma patient according to the State of Ohio definition and 74% would appropriately transfer to a PTC. Although the second scenario, a four year old that fell 5 feet with an upper extremity fracture, does not meet state trauma criteria, 46% of respondents classified this child as a trauma patient and 34% would transfer to a PTC.

ED physicians that would transfer either child, were asked if they would perform diagnostic studies and why prior the transfer. Less than 20% of respondents for the first scenario would do no diagnostic studies and 3% would do only a chest x-ray prior to transfer. For the first scenario, 56% would perform a head computed tomography (CT) prior to transfer (**Figure 8**). In scenario two, many fewer practitioners obtained imaging, other than an extremity film, but there were still nearly 33% that would

have obtained additional imaging. The primary reason provided for obtaining diagnostic studies prior to transfer were to avoid missed injuries, followed by legal concerns (**Figure 9**).

For those providers that would transfer either child the mode of transport is demonstrated in **Figure 10**. For the group that responded that they would transport via helicopter, 46% were greater than 20 miles from the PTC, among those greater than 50 miles from a PTC this percentage increased to 60%.

Among those that would not transfer either patient, 27% do not have 24 hour on-call surgeon coverage. In addition, the majority (69.6%) were from institutions less than 20 miles away from a PTC. Among those providers that would transfer the child in each scenario, 45% and 53% (scenario 1 and 2) work at an adult trauma center and 52% and 41% treat over 200 pediatric patients a year (**Table 5** and **Table 6**).

The ED physicians who would not transfer the patients were asked which additional findings would prompt them to transfer the child to a PTC (**Figure 11**). For the less severely injured child in scenario 2, ED physicians would transfer at a much higher rate if there were changes in the clinical status compared to those that would change their plan to not transfer the more severely injured child from scenario 1.

Discussion

Despite the existence of a trauma system in the State of Ohio it has previously been demonstrated both on a state and local level that greater than 80% of injured patients do not reach an appropriate trauma center within the state goal of 2 hours. Although the etiology of these delays is unclear it has previously been shown that they are associated with excess imaging prior to transfer. This study of over 700 EMS providers and nearly 500 EM physicians across the state adds to our understanding of such delays (**Figure 12**). First, we have demonstrated that both in the pre-hospital and initial hospital phase of care there is an under appreciation of the state trauma criteria and the value of a pediatric trauma center. In addition, in some cases the pre-hospital phase decision not to transfer to a pediatric trauma appears to be associated with the distance to the nearest pediatric trauma center. Meanwhile at the initial hospital many patients receive diagnostic testing prior to transfer for reasons that do not comply with Advanced Trauma Life Support (ATLS) protocols such as the need to avoid missing any injuries or for medico-legal concerns.

EMS providers face multiple challenges in the field when dealing with an injured pediatric patient, most importantly low levels of experience as demonstrated here. As a consequence, the ability to clearly apply the state trauma triage criteria to children appears to be somewhat limited and therefore may contribute to both over and under triage of children. For example, in scenario 1 a child who met trauma criteria because of abdominal bruising and pain was correctly taken to a trauma center by the majority of providers despite few actually identifying this patient as meeting state criteria or reporting that the clinical findings were important in their decision to transfer. Interestingly for both this scenario, as well as the

second scenario which included a clinically stable child involved in a MVC with a death at the scene, mechanism of injury and not the child's exam and vitals were utilized in determining the need for transfer directly to a pediatric trauma center. Mechanism of injury as an isolated triage criterion has not been found to be useful in indicating the need for a trauma resuscitation and rather clinical and physiologic parameters are much more indicative of the need for trauma care (Nuss, Dietrich & Smith, 2001; Kohn, Hammel, Bretz & Stangby, 2004; Cooper, Yarbrough, Zone-Smith, Byrne & Norcross, 1995). Therefore, although the correct decision to transfer was reached by most providers in the first scenario, ongoing education emphasizing the clinical and physiologic parameters outlined in the state's trauma triage criteria is necessary. For scenario two, although if readily accessible the transfer of this child to a pediatric trauma center is reasonable, it is important to recognize and appropriately utilize limited resources so as to ensure the children in most need are promptly transferred and evaluated.

Transferring patients long distances and overutilizing air transport services for scene transports has the potential to overburden the system as well as negatively impact patient safety. Analysis of the survey results interestingly demonstrate that rural providers are just as likely to transfer a child directly to a pediatric trauma center as are their urban and suburban counterparts. It was however noted that clearly, and often appropriately, distance from the pediatric trauma center was indeed a factor in making a decision to transport a child directly to a pediatric trauma center. Of those who would not transfer directly to a pediatric trauma center the majority were greater than 20 miles from the closest pediatric trauma center and on average transport time would be 45 minutes compared to just under 30 minutes for those that would transport directly. This time frame is appropriate given the current trauma triage guidelines which recommend transports not be longer than 30 minutes, although, given the previously noted extensive delays once arriving at a non-trauma center, the 15 minute additional transfer time may actually be in the child's best interest. For those EMS providers that are further from a pediatric trauma center it is important that as a state we continue to develop an inclusive trauma system to encourage the verification of additional level 3 centers that are committed to the prompt and appropriate treatment and transfer of injured children (Haller, 2002; Sampalis, et al., 1999; Hulka et al., 1997).

In addition, although there is continued debate regarding the distance beyond which air transport is of value, most would agree that a distance of less than 20 miles is generally a contraindication to air transport (Thomas, 2007.; Biewener, Aschenbrenner, Rammelt, Grass & Zwipp, 2004). Despite this, nearly 20% of responding EMS providers reported that they would request air transport even though they were less than 20 miles from the closest pediatric trauma center. Development of clear guidelines to support appropriate use of air transport will likely help ensure that the patients that will benefit most for this mode of transport receive it consistently.

Although the majority of the reasons given to not transfer either patient were related to distance from the pediatric trauma center there were some interesting and somewhat concerning observations. First, nearly 20% of respondents that said they would not transfer one or both of the patients reported that

there was “never” a reason to not go to the community hospital first. With the availability of air transport throughout the state and the number of pediatric trauma centers the frequency of this response is concerning and may imply a lack of knowledge regarding the benefits of children being cared for at a pediatric trauma center (Potoka, Schall & Gardner, 2000; Densmore et al., 2006; Hall, Reyes & Meller, 1996; Nakayama, Copes & Sacco, 1992). Second, it is interesting that although EMS providers reported that they would take a child to the nearest community hospital rather than directly to a pediatric trauma center, 80% were unaware of whether that hospital had any pediatric expertise or experience. This again indicates a lack of awareness of the value of children being cared for by those with expertise and experience in managing their unique physiology.

The level of experience of ED providers who are not part of a pediatric trauma center in managing severely injured children has been reported to be quite low (IOM, 2006; Gausche-Hill, Schmitz & Lewis, 2007). The results of this survey of Ohio ED providers confirms this deficiency with over 90% of respondents reporting having performed 5 or fewer critical procedures essential in the care of critically injured children. In addition the majority of these providers are functioning in hospitals that do not have 24 hour 7 day a week coverage by a general surgeon.

Although 90% of providers appropriately recognized the patient in scenario one, a child thrown from a dirt bike complaining of facial pain, as meeting trauma criteria, only 74% would transfer the patient to a pediatric trauma center. In addition, although the patient in the second scenario, a child with a fractured extremity following a low fall, did not meet state criteria, 46% felt it was a trauma and only 34% would transfer. These results suggest that although the majority of providers understand the appropriate criteria for identifying a pediatric trauma patient, not all providers recognize the benefit of transferring that child to a pediatric trauma center. Our data suggests that those working at an adult trauma center or who see more than 200 pediatric patients a year are less likely to transfer either patient. Although this may relate to an overall “comfort” level in dealing with trauma and/or children, available data continues to support that the pediatric trauma patient will have improved outcomes by having their care at a pediatric trauma center. This improved care is not only the result of the pediatric trauma team’s initial care but perhaps even more importantly on the developmentally appropriate care throughout recovery (Potoka, Schall & Ford, 2001).

Among those that did respond that they would transfer either pediatric trauma patient to the closest pediatric trauma center, only 20% would not do any imaging prior to transfer and only 3% would limit their diagnostic imaging to a CXR only. According to ATLS guidelines, initial management should be focused on stabilization, treatment of immediately life threatening injuries and transfer to a definitive care facility, namely an appropriate trauma center. Secondary, or adjunct imaging, should be performed only if it will not delay transfer or there is an appropriately trained provider that can manage the potential injuries identified. For the child in the first scenario, over 50% would perform a head CT prior to transfer to a pediatric trauma center. In addition, for the less severely injured child in scenario 2, over 30% would

perform additional imaging prior to transfer if they chose to transfer this child. As has been previously demonstrated this unnecessary imaging has been associated with delayed transfers and the need to repeat imaging because of poor quality or initial imaging is not available for review (Chatoorgoon et al., 2010; Chwals et al., 2008). In addition to the potential impact on cost, radiation exposure and delay of transfer, imaging without an available specialist (only 37% of respondents had a general surgeon available and likely even fewer had a neurosurgeon comfortable in managing pediatric trauma available) is in direct contradiction to the recommendations of ATLS guidelines.

Interestingly, when the reasons for obtaining such imaging were examined, the majority of respondents reported they were done to avoid missed injuries and for medico-legal reasons. Again although identifying immediately life threatening injuries that can be rapidly treated at the facility is part of ATLS, there is no need to identify all injuries prior to transfer. There is also no need to have definitively diagnosed all injuries prior to transfer from a medico-legal standpoint prior to transfer (Lee et al., 2008; Emergency Medical Treatment and Active Labor Act [EMTALA], 2000). Additionally, many of the other reasons given for performing additional diagnostic tests prior to transfer such as parent expectation, “routine”, and the perceived expectation of the trauma center should all be considered as not being in the best interest of the child.

Conclusions and Recommendations

This study, although limited in that it is a survey study and does not necessarily reflect actual practice, demonstrates several opportunities for improvement of the level of care provided to pediatric trauma patients in the State of Ohio. First, both EMS providers as well as ED physicians across the state may benefit from a more complete understanding of the current trauma triage criteria. As part of understanding the criteria and utilizing them to direct the appropriate patients to a pediatric trauma center it is incumbent upon pediatric trauma centers to continually educate providers and demonstrate with transparent risk adjusted outcomes the important benefits of having children cared for at designated trauma centers. In addition it is critical that triage criteria at all levels, pre-hospital and community hospital, as well as at the pediatric trauma centers themselves is strongly based in evidence that helps ensure the right patient gets to the right place at the right time and has access to the most appropriate resources.

Second this survey study further supports prior observations that providers have limited pediatric experience which has been associated with lower quality of care for children. In order to combat this limitation it is important that unique and readily available education and training opportunities exist. One such approach is the use of high fidelity simulation to train providers in the management of high risk but low frequency events. This method has been demonstrated to be useful in the training of trauma teams as well as numerous health care teams (Falcone et al., 2008; Patterson, Geis & Wears, 2006a). A limitation of simulation training is that it may be difficult for providers in communities at a distance from a simulation center to obtain such training. One potential innovative approach may be to offer simulation

training utilizing distance teleconferencing technology. Finally, the use of telemedicine to “virtually” assist in the management of severely injured children in the field or in the emergency departments of non-pediatric centers may enhance the immediate care of these patients (Marcin, Schepps, Page, Struve, Nagrampa & Dimand, 2004).

Third, given that distance from a pediatric trauma center was identified as an important issue for providers not transporting to a pediatric trauma center it will be important to develop the state’s trauma system to ensure that these children receive timely and high quality care at the first institution they are brought to. This can most likely be achieved not only through the type of education and telemedicine approaches described above but also by supporting and encouraging the development of more level 3 trauma centers as well as a more efficient and appropriate utilization of air transport.

Finally, the challenge of excessive imaging of pediatric patients prior to transfer to definitive care remains a vexing problem. Not only will directed education be important to combat this problem but also expansion of the evidence base describing the deleterious impact of such imaging including increased radiation exposure, increased costs, and delay in care which ultimately may impact outcome.

Information/Qualifications – Principal and all co-investigators

The principal investigator, **Richard A. Falcone, Jr., M.D., M.P.H.**, is currently the Director of the Trauma Services Program within the Division of Pediatric and Thoracic Surgery at Cincinnati Children’s Hospital Medical Center. He is also the Chair of the Trauma Performance Improvement Committee. He has an extensive background in trauma research including epidemiologic studies, quality of care studies and design and evaluation of injury prevention programs and has published over 50 peer reviewed articles. He has been funded by the ODPS for several previous projects as well as an ongoing multicenter project.

Marianne Beaudin, M.D., M.Sc., F.R.C.S.C. is currently the Pediatric Trauma Fellow at Cincinnati Children’s. Dr. Beaudin has a background in both basic science and clinical research including design and evaluation of head injury guidelines and trauma epidemiologic studies. Her clinical research has resulted in several peer reviewed articles, oral and poster presentations.

Margot Daugherty, R.N., M.S.N., M.Ed., is currently the trauma nurse educator at Cincinnati Children’s. Ms. Daugherty has extensive experience in both adult and pediatric trauma program management and pre-hospital care. She is actively involved in teaching health care providers at all levels how to care for injured patients with an emphasis on pediatric patients. She is an ATLS course coordinator as well as TNCC instructor.

Gary Geis, M.D. is a fellowship trained pediatric emergency medicine physician and emergency medicine liaison to the Trauma Services Program at Cincinnati Children's. He is also the assistant medical director of the Cincinnati Children's Center for Simulation and Research and is intimately involved in resident and fellowship education. Dr. Geis has been funded by AHRQ as a co-investigator for his work in simulation and has numerous peer reviewed publications.

Suzanne Moody, M.P.A., is the Clinical Research Coordinator in the Trauma Services Program at Cincinnati Children's and has extensive experience in trauma data management, project organization and data analysis.

Appendix 1: EMS Survey

Demographic questions:

- 1) Years certified as an EMT-P _____ EMT-I _____ EMT-B _____
- 2) Practice status:
Full-time EMS Only _____ Part-time EMS Only _____
Volunteer EMS Only _____
Full-time Firefighter/EMS _____ Part-time Firefighter/EMS _____
Volunteer Firefighter/EMS _____
Full-time EMS Officer/Supervisor _____ Part-time EMS Officer/Supervisor _____
Not practicing in the field at this time _____

If you are not practicing in the field at this time please skip to the end

- 3) Is your primary employer a 911-responder service? Yes _____ No _____
- 4) What are the county, state, and zip code where you practice (primary employer)?
County _____ State _____ Zip code _____
- 5) Is your primary employer service: rural _____ urban _____ suburban _____
- 6) How many pediatric CEU's do you obtain annually? (Numeric only) _____
- 7) How many departments do you work for? _____
- 8) How many pediatric patients would you estimate you treat annually?
- _____ None
_____ 1-5
_____ 6-10
_____ 11-25
_____ 26-50
_____ over 50
- 9) How many pediatric intubations do you perform annually?
- _____ 0
_____ 1-5
_____ 6-10
_____ 11-15
_____ over 15

10) Throughout your career, how many intraosseous lines have you placed on children under 10 years old?

- ☐ 0
- ☐ 1-5
- ☐ 6-10
- ☐ 11-15
- ☐ over 15

11) The closest pediatric trauma center is how many miles from your primary department?

- ☐ 1-10 miles
- ☐ 11-20 miles
- ☐ 21-30 miles
- ☐ 31-40 miles
- ☐ 41-50 miles
- ☐ over 51 miles

12) What is your average transport time to the pediatric trauma center? (In minutes) _____

13) The closest adult trauma center is how miles from your primary department?

- ☐ 1-10 miles
- ☐ 11-20 miles
- ☐ 21-30 miles
- ☐ 31-40 miles
- ☐ 41-50 miles
- ☐ over 51 miles

14) What is your average transport time to the adult trauma center? (In minutes) _____

15) The closest community hospital is how miles from your primary department?

- ☐ 1-10 miles
- ☐ 11-20 miles
- ☐ 21-30 miles
- ☐ 31-40 miles
- ☐ 41-50 miles
- ☐ over 51 miles

16) What is your average transport time to the community hospital? (In minutes) _____

Please respond to the following scenario based questions. If you have more than one EMS employer, base your responses from what you consider your primary place of employment. In addition, please answer these questions based on your current practice, not what you believe the “correct” answer may be.

Scenario 1

You arrive at the scene of an accident of an 8 year-old struck by a car traveling approximately 25 miles per hour. The 8 year old is awake and there was no witnessed loss of consciousness. The child presents with an abrasion to the abdomen and complains of mild pain on palpation. Vital signs: blood pressure 92/60; pulse 110; respirations 20. There are no other obvious injuries and the remainder of your exam is normal. The time is 1630.

17) In your practice, and under ideal circumstances, would you transport this child to a trauma center?

____ Yes

____ No

____ Not sure

If you answered yes to question #17 proceed with question #18

If you answered no to question #17 skip to question #22

If you answered not sure to question #17 skip to question #22

18) If your answer to question 17 is **yes**:

Why would you transfer this patient to a pediatric trauma center? (Select all that apply)

____ Patient age

____ Mechanism of injury

____ Patients vital signs

____ Patients clinical exam

____ Speed of collision

____ Meets the State of Ohio definition of trauma

19) If your answer to question 17 is **yes**:

Would you call for air transport for this child?

____ Yes

____ No

____ Not sure

20) If your answer to question 17 is **yes**:

Would you bypass any adult trauma centers to get to the pediatric trauma center?

- ☐ Yes
☐ No
☐ Not sure

21) If your answer to question 17 is **yes**:

How many children a year do you bring to a pediatric trauma center?

- ☐ Less than 5
☐ 5-15
☐ 15-30
☐ Over 30

Skip to Scenario 2

22) If your answer to question 17 is **no** or **not sure**

Why would you **not** transfer to a pediatric trauma center?

Pediatric trauma center is too far away from the scene of the accident.

- ☐ True
☐ False

23) If your answer to question 17 is **no** or **not sure**

Why would you **not** transfer to a pediatric trauma center?

It is rush hour, traffic might be a concern.

- ☐ True
☐ False

If you answered true to question #23 proceed to question #24

If you answered false to question #23 skip to question #25

24) If your answer to question 23 is **true**

How much longer would you estimate the rush hour traffic will add to your commute to a pediatric trauma center (in minutes)?

minutes

25) If your answer to question 17 is **no** or **not sure**
Why would you **not** transfer to a pediatric trauma center?

This child is not seriously injured enough to require transfer to a pediatric trauma center.

☐ True

☐ False

If you answered true to question #25 proceed to question #26

If you answered false to question #25 skip to question #27

26) If your answer to question #25 is **true**

Which of the following findings would make you believe this child should be transported to a pediatric trauma center? (Select all that apply)

☐ Tachycardia

☐ Altered mental status

☐ Open fracture

☐ Hypotension

☐ Other _____

27) If your answer to question 17 is **no** or **not sure**

Why would you **not** transfer to a pediatric trauma center?

I would take the child to the nearest adult trauma center

☐ True

☐ False

If you answered true to question #27 proceed to question #28

If you answered false to question #27 skip to question #30

28) If your answer to question 27 is **true**

Does this hospital have pediatric expertise (i.e. Pediatric trained physicians, additional training in pediatric trauma care, and have a dedicated pediatric area in the emergency department)?

☐ Yes

☐ No

☐ Not sure

29) Do you believe an adult trauma center would provide better care than your closest hospital for this child?

- ☐ Yes
☐ No
☐ Not Sure

30) In this case, I would transport this child to the nearest facility

- ☐ True
☐ False

If you answered true to question #30 proceed to question #31

If you answered false to question #30 skip to question #32

31) If your answer to question 30 is **true**

Does this hospital have pediatric expertise (i.e. Pediatric trained physicians, additional training in pediatric trauma care, and have a dedicated pediatric area in the emergency department)?

- ☐ Yes
☐ No
☐ Not sure

32) Do you believe there is ever a reason to bypass the closest hospital to bring a child to a pediatric trauma center?

- ☐ Yes
☐ No
☐ Not sure

33) Do you believe there is ever a reason to bypass the closest hospital to bring an adult to an adult trauma center?

- ☐ Yes
☐ No
☐ Not sure

34) Would you ever bypass the closest hospital to bring an adult patient to an adult trauma center?

- ☐ Yes
☐ No
☐ Not sure

35) I do not consider this a trauma as defined by the State of Ohio definition of trauma

☐ True

☐ False

Scenario 2

You are responding to a multi-car crash on a busy rural road. Upon arrival you find three cars; two with heavy front-end damage and one car with heavy damage to the front-end and rear quarter panel on the driver's side. Police direct you to the vehicle with front and rear damage. The vehicle's driver is dead. In the back seat is a three-year-old boy restrained in a 5 point convertible car seat. He is awake and crying, with no increased work of breathing and has strong peripheral and central pulses. Vital signs are: blood pressure 96/60; pulse 116; respirations 24. You note a 2 cm laceration above his left eye and the rest of your exam is normal.

36) In your practice, and under ideal circumstances, would you transport this child to a trauma center?

☐ Yes

☐ No

☐ Not sure

If you answered yes to question #36 proceed with question #37

If you answered no to question #36 skip to question #41

If you answered not sure to question #36 skip to question #41

37) If your answer to question 36 is **yes**:

Why would you transfer this patient to a pediatric trauma center? (Select all that apply)

☐ Patient age

☐ Mechanism of injury

☐ Patient's vital signs

☐ Patient's clinical exam

☐ Death of another passenger

☐ Amount of damage to the vehicles

☐ Meets the State of Ohio definition of trauma

38) If your answer to question 36 is **yes**:
Would you call for air transport for this child?

☐ Yes
☐ No
☐ Not sure

39) If your answer to question 36 is **yes**:
Would you bypass any adult trauma centers to get to the pediatric trauma center?

☐ Yes
☐ No
☐ Not sure

40) If your answer to question 36 is **yes**:
How many children a year do you bring to a pediatric trauma center?

☐ Less than 5
☐ 5-15
☐ 15-30
☐ over 30

Skip to end

41) If your answer to question 36 is **no** or **not sure**
Why would you **not** transfer to a pediatric trauma center?

Pediatric trauma center is too far away from the scene of the accident.

☐ True
☐ False

42) If your answer to question 36 is **no** or **not sure**
Why would you **not** transfer to a pediatric trauma center?

It is rush hour, traffic might be a concern.

☐ True
☐ False

If you answered true to question #42 proceed to question #43
If you answered false to question #42 skip to question #44

43) If your answer to question 42 is **true**

How much longer would you estimate the rush hour traffic will add to your commute to a pediatric trauma center (in minutes)?

____ minutes

44) If your answer to question 36 is **no** or **not sure**

Why would you **not** transfer to a pediatric trauma center?

This child is not seriously injured enough to require transfer to a pediatric trauma center.

____ True

____ False

If you answered true to question #44 proceed to question #45

If you answered false to question #44 skip to question #46

45) If your answer to question #44 is **true**

Which of the following findings would make you believe this child should be transported to a pediatric trauma center? (Select all that apply)

____ Tachycardia

____ Altered mental status

____ Open fracture

____ Hypotension

____ Other _____

46) If your answer to question 36 is **no** or **not sure**

Why would you **not** transfer to a pediatric trauma center?

I would take the child to the nearest adult trauma center

____ True

____ False

If you answered true to question #46 proceed to question #47

If you answered false to question #46 skip to question #49

47) If your answer to question 46 is **true**

Does this hospital have pediatric expertise (i.e. Pediatric trained physicians, additional training in pediatric trauma care, and have a dedicated pediatric area in the emergency department)?

☐ Yes
☐ No
☐ Not sure

48) If your answer to question 36 is **no** or **not sure**

Do you believe an adult trauma center would provide better care than your closest hospital for this child?

☐ Yes
☐ No
☐ Not Sure

49) If your answer to question 36 is **no** or **not sure**

In this case, I would transport this child to the nearest facility

Appendix 1 (Continued)
Physician Survey
Demographic questions

1. Are you still in training?

☐ Yes

☐ No

2. Are you residency trained in Emergency Medicine?

☐ Yes

☐ No

3. Are you fellowship trained in Pediatric Emergency Medicine?

☐ Yes

☐ No

4. Do you have any area of particular interest or specialization?

☐ Yes (please specify) _____

☐ No

5. How many years have you been in practice?

_____ years

6. How many years of practice do you have in an Emergency Department?

_____ years

7. Do you work full-time in an Emergency Department?

☐ Yes

☐ No

8. Do you work in a verified adult trauma center?

☐ Yes

☐ No

☐ Don't know

9. Do you work in a verified pediatric trauma center?

- ☐ Yes
☐ No
☐ Don't know

If you answered yes to question #9 please skip to the end

10. How many pediatric CME's do you obtain on an average annually?

11. Approximately how many pediatric patients would you estimate you treat annually?

- ☐ None
☐ 1 – 25
☐ 26 – 50
☐ 51 – 100
☐ 101 – 200
☐ over 201

12. Approximately how many pediatric intubations did you perform during the last 12 months?

- ☐ None
☐ 1 – 5
☐ 6 – 10
☐ 11 – 15
☐ over 15

13. Approximately how many intraosseous lines have you placed on children under 10 years of age in the last 12 months?

- ☐ None
☐ 1 – 5
☐ 6 – 10
☐ 11 – 15
☐ over 15

14. Approximately how many central lines have you placed in children less than 17 years of age in the last 12 months?

- ☐ None
- ☐ 1 – 5
- ☐ 6 – 10
- ☐ 11 – 15
- ☐ over 15

15. Approximately how many chest tubes have you placed in children less than 17 years of age in the last 12 months?

- ☐ None
- ☐ 1 – 5
- ☐ 6 – 10
- ☐ 11 – 15
- ☐ over 15

16. The closest pediatric trauma center from your primary work place is how many miles away?

- ☐ I work at a pediatric trauma center
- ☐ 1 – 10 miles
- ☐ 11 – 20 miles
- ☐ 21 – 30 miles
- ☐ 31 – 40 miles
- ☐ 41 – 50 miles
- ☐ over 51 miles

Please answer the questions related to the following scenarios as if you were working at your primary place of service. For example: if you work in more than one emergency department, please answer scenario questions based on your practice at the location you most frequently work. In addition, please answer these questions based on what you would actually do, not what you believe the “correct” answer may be.

Scenario 1

A 12 year-old presents to your emergency department with facial pain 30 minutes after crashing a dirt bike. The patient states that the “rear of the bike slid out” from under her causing her to be thrown from the bike; her brother reports that she had a “brief” loss of consciousness. She is complaining of facial, right arm, and right leg pain. She is also holding a retainer in her hand. You note her to be awake and alert with a GCS of 15. Vital signs: blood pressure 108/72; pulse 96; respiratory rate 24; temperature 36.4 (97.6) axillary; oxygen saturation on room air 98%. Your physical exam finds abrasions to her forehead, nose, right arm, and right lower leg. She is also complaining of facial pain on palpation and has bilateral periorbital contusions as well as a dental mal-occlusion. Remainder of the scalp and neck exam is normal to inspection and palpation. Thorax, abdominal and pelvic exam is unremarkable.

17. In your practice, according to the State of Ohio definition of trauma, would you consider and treat this patient as a trauma patient?

- ☐ Yes
- ☐ No
- ☐ Not sure

18. Is there an on-call surgeon available 24/7 at your facility to help manage this patient?

- ☐ Yes, a pediatric general surgeon
- ☐ Yes, an adult general or trauma surgeon
- ☐ Yes, both a pediatric general surgeon and an adult general or trauma surgeon
- ☐ No
- ☐ Not sure

19. Would you transfer this patient to a pediatric trauma center?

- ☐ Yes
- ☐ No
- ☐ Not sure

If you answered yes to question #19 proceed to question #20

If you answered no to question #19 skip to question #23

If you answered not sure or other to question #19 skip question #23

20. If you answered **yes** to question #19

Prior to transfer would you perform the following: (select all that apply)

- ☐ Lab work
- ☐ Chest x-ray
- ☐ Pelvic x-ray
- ☐ C-spine x-ray
- ☐ Head CT
- ☐ Chest CT
- ☐ Abdominal/pelvic CT
- ☐ None
- ☐ Other (please specify) _____

21. If you answered **yes** to question #19

If you ordered diagnostics prior to transfer please select all that apply.

- ☐ I would not order diagnostics
- ☐ To assure no missed injuries
- ☐ Routine at my institution
- ☐ Medical and/or legal concern
- ☐ Receiving facility will not accept patient without studies
- ☐ Expectation of parents
- ☐ Other (please specify) _____

22. If you answered **yes** to question #19

Which mode of transportation would you use to transport this patient to a pediatric trauma center?

- ☐ Basic private ambulance service
- ☐ Pediatric mobile intensive care unit (including transport teams from a pediatric trauma center)
- ☐ Adult mobile intensive care unit
- ☐ Community EMS
- ☐ Helicopter
- ☐ Private car

Skip to Scenario 2

23. If you answered **no** to question #19

Would you transfer the patient to an adult trauma center?

☐ Yes

☐ No

☐ No, I currently work in an adult trauma center

☐ Not sure

24. If you answered **no** to question #19

What additional findings might prompt you to transfer to a pediatric trauma center? (select all that apply)

☐ Results of additional testing

☐ Worsening mental status

☐ Tachycardia

☐ Hypotension

☐ Abdominal pain

☐ Chest pain

☐ Nothing. I don't transfer patients

Scenario 2

You are asked by the nurse to examine a 4 year-old patient who has fallen approximately 5 feet from a tree. He was brought in by the parents by private vehicle. The patient is crying, being held in mom's arms with an obvious deformity of the right forearm. Your exam finds the patient to be awake and alert, consoled somewhat by the mother. Vitals show blood pressure: 98/68; pulse 125; respirations 26; temperature 37.2 (99) orally, oxygen saturation on room air 99%. You note an obvious deformity of the right forearm moderate edema and obvious tenderness. Distal exam of that arm shows intact finger movements with a strong radial pulse present. Sensory exam is limited by patient age and anxiety but seems intact. There are also abrasions noted on the patient's right cheek and hand. You do not palpate tenderness or instability to the face. Remainder of the scalp and neck exam is normal to inspection and palpation. Thorax, abdominal and pelvic exam is unremarkable.

25. In your practice, according to the State of Ohio definition of trauma, would you consider and treat this patient as a trauma patient?

☐ Yes

☐ No

☐ Not sure

26. Is there an on-call surgeon available 24/7 at your facility to help manage this patient?

- ☐ Yes, a pediatric general surgeon
- ☐ Yes, an adult general or trauma surgeon
- ☐ Yes, both a pediatric general surgeon and an adult general or trauma surgeon
- ☐ No
- ☐ Not sure

27. Would you transfer this patient to a pediatric trauma center?

- ☐ Yes
- ☐ No
- ☐ Not sure

If you answered yes to question #27 proceed to question #28

If you answered no to question #27 skip to question #31

If you answered not sure or other to question #27 skip to question #31

28. If you answered **yes** to question #27

Prior to transfer would you perform the following (select all that apply)

- ☐ Lab work
- ☐ Chest x-ray
- ☐ Pelvic x-ray
- ☐ C-spine x-ray
- ☐ Head CT
- ☐ Chest CT
- ☐ Abdominal/pelvic CT
- ☐ None
- ☐ Other (please specify) _____

29. If you answered **yes** to question #27

If you ordered diagnostics prior to transfer please select all that apply.

- ☐ I would not order diagnostics
- ☐ To assure no missed injuries
- ☐ Routine at my institution
- ☐ Medical and/or legal concern
- ☐ Receiving facility will not accept patient without studies
- ☐ Expectation of parents
- ☐ Other (please specify) _____

30. If you answered **yes** to question #27

Which mode of transportation would you use to transport this patient to a pediatric trauma center?

- ☐ Basic private ambulance service
- ☐ Pediatric mobile intensive care unit (including transport teams from a pediatric trauma center)
- ☐ Adult mobile intensive care unit
- ☐ Community EMS
- ☐ Helicopter
- ☐ Private car

Skip to the end

31. If you answered **no** to question #27

Would you transfer the patient to an adult trauma center?

- ☐ Yes
- ☐ No
- ☐ No, I currently work in an adult trauma center
- ☐ Not sure

32. If you answered **no** to question #27

What additional findings might prompt you to transfer to a pediatric trauma center? (select all that apply)

- ☐ Results of additional testing
- ☐ Worsening mental status
- ☐ Tachycardia
- ☐ Hypotension
- ☐ Abdominal pain
- ☐ Chest pain
- ☐ Nothing. I don't transfer patients

Thank you for completing the survey. Please return in the enclosed self-addressed stamped envelope.

****Please encourage the Emergency Physician's in your department to complete the survey at the following link:**

Alan Boster, Grants Administrator
EMS/Trauma Research Grant Program
Ohio Department of Public Safety
Division of EMS
1970 West Broad Street, 5th Floor
Columbus, OH 43223

Dear Mr. Bolster,

The Physical Medicine and Rehabilitation Department at MetroHealth Medical Center is pleased to submit this Final Report for the 2011 to 2012 Ohio Division of EMS Trauma Research Grant: "Defining Trauma Outcomes through an Investigation of Associations between Trauma and Rehabilitation Registry Data." This grant addresses the enhanced value of merging a Trauma Registry and Rehabilitation Registry that will identify variables impacting outcomes.

The attached Final Report has two components: the narrative progress report and the fiscal report. A check in the amount of \$5,961.39, representing the amount of the grant unspent, will be mailed to you from our Accounting/AP Department separately. Please do not hesitate to contact our offices if you have any questions.

Sincerely,

Melvin S. Mejia, MD
Assistant Professor, PM&R

Introduction

The Centers for Disease Control and Prevention describes traumatic injuries as the leading cause of death for children and young adults. Globally, trauma accounts for more than 5.8 million deaths per year¹. Trauma is a leading cause of lost years of life to an individual who has sustained multiple life-threatening injuries².

The inception of systematic trauma care in 1922 by the American College of Surgery did not come to fruition until 1966, with the release of the National Academy of Sciences report, that the need for a system of trauma care was needed³. This report paved the way for the development of the Emergency Medical Services (EMS) system (under the auspices of the Department of Transportation) in 1973. The EMS Systems Act identified trauma systems as one of 15 essential components of an EMS system and from thereon, concerted efforts were undertaken to ascertain that the delivery of trauma care is at its optimum.

In Ohio, the roots of the EMS system can be traced back to 1969, with the leadership of Dr. James Warren through the creation of the Heartmobile Program (mobile coronary care unit), heralding the provision of advanced pre-hospital care across the nation. It was not until 1992, when the Division of EMS was established within the Ohio Department of Public Safety (ODPS). In the same year, Senate Bill 98 was passed creating the State Board of EMS to development and implement prehospital systems of care in the state. In 1999 the Ohio Trauma Registry (OTR) was set up within the Division of EMS requiring hospitals to submit data on trauma victims to the state. The OTR was designed to address data collection issues and quality of trauma care delivery as well as monitoring trauma outcomes. House Bill 138 was passed in July of 2000 to establish a statewide trauma system, to create the Ohio Trauma Committee (OTC), to define the trauma patient, and to establish standards for trauma centers. The OTC was established to assist the State Board of EMS in its objectives to develop a quality trauma system of care for injured patients.

The existence of integrated Trauma Systems and trauma registries have proven to be essential in improving survival rates and diminishing the likelihood of sustaining life-long disabilities^{4,5}. This can be attributed to improved and effective triage systems at the field and the evolution of care in highly specialized regional trauma centers that can provide necessary service in a timely and expeditious manner. A recent meta-analysis revealed a 15% reduction in mortality with the establishment of trauma systems, further justifying their importance⁶.

Recognizing the need to identify and document long term outcomes from traumatic injuries, the Trauma Rehabilitation Registry was established in 2005 within the Division of EMS. This is considered a vital step at incorporating a reliable measure of patient disability via the Functional Independence Measure (FIM) into the Trauma Registry instead of the previously used outcome measure of mortality (2009 Ohio Trauma Registry Annual Report). The data gathered in the Rehabilitation Registry from inpatient rehabilitation facilities however, has not been available in trauma system evaluation reports, creating a shortcoming in the system. Currently, there is an absence of standardization of data reporting and data linkage between the Trauma and Rehabilitation Registries. Little is thus known about the functional outcomes of those who survive catastrophic injuries.

Trauma and Rehabilitation Registry Merge

The objective of the study is to enhance the ability of the MetroHealth Trauma Registry to assess quality of trauma care with the addition of functional outcome measures from the inpatient rehabilitation database.

Study aims:

1. To link the Trauma and Rehabilitation Registry Data
2. To identify variables from the Trauma Registry that are associated with long term functional outcomes for persons who sustained traumatic brain injury (TBI), spinal cord injury (SCI) and polytrauma (multiple injuries).

The proposed study moves toward the direction of the State's goals in having a comprehensive Trauma system. Outlined in the State EMS Trauma Committee proceedings last October 2010 is the creation of a well-integrated trauma program that incorporates rehabilitation services early in the course of the patients' hospitalization, as well as inclusion of rehabilitation data (i.e. functional outcome data) into the trauma system evaluation reports. Vital to this process too is the involvement of rehabilitation personnel into the performance improvement process.

Executive Summary

Purpose: The main purpose of this project was to identify variables from the Trauma Registry that impact long-term outcomes for persons with traumatic injuries.

Methods: Retrospective data analyses using Administrative Data Sets

Participants / Methods: 879 patients with traumatic spinal cord injury, traumatic brain injury and polytrauma from 2005 to 2010, who were transported to a Level I Trauma system and subsequently admitted and discharged from the system's inpatient rehabilitation center. Trauma Registry patients were matched (by medical record number and birth date) to their data in the Rehabilitation Registry. Standard descriptive statistics were calculated to describe participants and outcome measures. Demographic measures included age, sex, race, marital status, trauma type, and health insurance. Trauma data points included ISS, Glasgow Coma Score (GCS), intubation at any time prior to acute rehabilitation, positive and negative drug test, number of comorbidities/complications, total time spent at the scene of the accident. Outcome measures were obtained through the Rehabilitation Registry. These outcomes included: total length of hospital stay (REHAB LOS), rehabilitation discharge disposition, total Functional Independence Measure (FIM) gain, motor FIM gain, and cognitive FIM gain. Chi-square tests for categorical demographic variables and Student's t test for continuous variables were performed to determine any statistically significant differences between the three trauma type groups (i.e. polytrauma, traumatic spinal cord injury (SCI) and traumatic brain injury (TBI)).

Bivariate associations were analyzed utilizing Pearson Correlations with a significance level of less than or equal to .05.

Binary Logistic regression was used to analyze the outcome measure of rehabilitation discharge disposition (home or not to home) and two stage linear regression was used to analyze the functional outcomes as measured with the FIM.

Results: The mean age of the total sample was 42.75 (\pm 18.04), 71.9% were discharged to home, 42.1% were intubated at some time prior to rehabilitation admission, 27.2% had public health insurance, mean ISS was 25.53 (\pm 9.55), mean Glasgow Coma Score was 15.39 (\pm 7.58), average total FIM Motor Gain was 24.68 (\pm 13.64), and mean number of comorbidities/complications was 7.57 (\pm 3.59).

Separating the sample by trauma type we did not find any statically significant differences in the demographics of the three groups. Statistical differences between the trauma types were found for GCS, ISS, REHAB LOS and cognitive FIM gain. The GCS for SCI (mean = 13.333) and TBI (mean = 12.769) groups were higher than the polytrauma group (mean = 10.748). The TBI group had the highest mean ISS (mean = 30.29) compared to the Polytrauma group (mean = 26.15) and SCI group (mean = 13.86). The Polytrauma group had the longest average REHAB LOS (mean = 43.451) compared to the SCI (mean = 39.526) and TBI (mean = 21.611) groups. The SCI group (mean = 2.48) had the lowest cognitive FIM gain than the Polytrauma group (mean = 5.53) and the TBI group (mean = 3.25).

The bivariate analysis between trauma data and rehabilitation outcomes revealed that higher ISS scores were associated with longer length of stays, not going home after rehabilitation, less total FIM gain, and less total FIM motor gain. Higher GCS was associated

with longer length of stay, lower total FIM gain, lower FIM motor gain and lower total FIM cognitive gain. Total scene time was only found to have an association with total FIM cognitive gain, with longer total time at the scene associated with higher levels of total FIM cognitive gain. Interestingly, those who were not tested for drugs had lower total FIM gain and lower total FIM cognitive gain.

Length of hospital stay

Having government sponsored health insurance increased REHAB LOS by 22.086 days and being intubated at any time prior to rehabilitation increased hospital stay by 22.890 days. For every one point increase in ISS increased REHAB LOS by almost one day (.788 days).

Rehabilitation Discharge Disposition

Persons who are older, have more comorbidities/complications, were intubated pre-rehabilitation, and have higher ISS are less likely to be discharged to home after acute rehabilitation. Those persons who are married and have commercial health insurance compared to those without any health insurance are more likely to be discharged to home after acute rehabilitation.

Total FIM Gain

Older persons, persons with more comorbidities/complications, those with high ISS and high GCS decreased the amount of total FIM gain during acute rehabilitation. The strongest predictors in the regression model were GCS and number of comorbidities/complications with a significant level of $\leq .001$.

Total FIM Motor Gain

For total FIM motor gain, the regression analysis indicated that the older a person, the more comorbidities/complications, higher ISS, higher GCS, and longer scene time decreased the level of motor gain as measured by the FIM score. Testing negative for drugs compared to not being tested for drugs increased total FIM motor gain.

Total FIM Cognitive Gain

Having more comorbidities/complications, testing positive for drugs and higher GCS decreases the gain in cognitive function as measured by the FIM. Having been intubated at some time prior to rehabilitation increased a person's gain in cognitive function.

Conclusion, Recommendations and Future Course: Trauma data, especially ISS and GCS, should be included in research and quality projects when trying to determine and understand long-term outcomes of persons with traumatic injuries. Further standardization and utilization of the trauma and rehabilitation registries (i.e. criteria for inclusion and scoring methods) across institutions can define long term outcomes for those who survive SCI. Further improvements in medical informatics will allow for the creation of a repository of data within an institution and across collaborating Trauma systems.

Our continued research with this combined database will be to look at the three trauma groups (Poly, SCI and TBI) separately to determine if different trauma variables affect outcomes of the three groups. In addition, we plan to look at the GCS components (verbal, eye and motor) and their independent effects on outcomes. Further finetuning of the databases will hopefully yield a larger merged study population from which trends and outcomes can be sufficiently derived.

Trauma and Rehabilitation Registry Merge

Review of the Literature/Historical Perspectives

Trauma Registries allow for trauma systems to collect the necessary data for understanding the nature, epidemiology and management of traumatic injuries. The addition of the Trauma Rehabilitation Registry in the state of Ohio strengthens the ability of the Ohio EMS and Trauma systems to assess outcomes along the continuum of care for victims of trauma. Since the implementation of the Trauma Rehabilitation Registry in 2005, the State has yet to merge the two registries or analyze the rehabilitation data in relation with the trauma data. The purpose of this study is to merge MetroHealth Medical Center's (MH) Trauma and Rehabilitation registry databases and analyze the effects of pre-hospital and trauma centered variables on rehabilitation outcomes. This project emphasizes the importance of merging the trauma and rehabilitation datasets to be able to effectively evaluate the quality of health care across all phases of care and determine which variables in both registries define and /or alter outcomes. Findings from this study can assist the State in the modification or implementation of policies and / or protocols that will improve current and future delivery of care and improve outcomes of trauma patients.

Injuries remain a major global public health problem. Worldwide, 5.8 million deaths are attributed to injury per year.¹ The National Trauma Data Bank's (NTDB) 2010 Annual Report reviewed the year 2009 admissions from 682 U.S. Hospitals, with 681,990 records having valid trauma diagnoses. Of these, 654,825 (96%) survived and 27,166 (4.0%) died.² In the state of Ohio, 151,244 individuals were entered in the Ohio Trauma Registry (OTR) from 2005 to 2009, of which 144,622 (95.6%) survived and 6,622 (4.4%) died.³ Trauma is a well-known leading cause of lost years of life to an individual, especially in those who sustain multiple life-threatening injuries.⁴ Injuries definitely impact not only the lives of affected persons and families, but also the society as a whole. Short- and long-term effects are associated with

Trauma and Rehabilitation Registry Merge

injuries; hence, positive outcomes greatly depend on the availability of an effective delivery of care by a trauma system.

The existence of integrated Trauma Systems and trauma registries have proven to be essential in improving survival rates and diminishing the likelihood of sustaining life-long disabilities.^{5,6} This can be attributed to improved and effective triage systems at the field and the evolution of care in highly specialized regional trauma centers that can provide necessary service in a timely and expeditious manner. A recent meta-analysis revealed a 15% reduction in mortality with the establishment of trauma systems further justifying their importance.^{7,8}

The inception of systematic trauma care in 1922 by the American College of Surgery did not come to fruition until 1966, with the release of the National Academy of Sciences - National Research Council report, “*Accidental Death and Disability – The Neglected Disease of Modern Society*”, that the need for a system of trauma care has been recognized.⁹ This report paved the way for the development of the Emergency Medical Services (EMS) system (under the auspices of the Department of Transportation) in 1973. The EMS Systems Act identified trauma systems as one of 15 essential components of an EMS system and from thereon, concerted efforts were undertaken to ascertain that the delivery of trauma care is at its optimum.

In Ohio, the roots of the EMS system can be traced back to 1969, (through the leadership of Dr. James Warren) with the creation of the Heartmobile Program (mobile coronary care unit), heralding the provision of advanced pre-hospital care across the nation. It was not until 1992, when the Division of EMS was established within the Ohio Department of Public Safety (ODPS). In the same year, Senate Bill 98 was passed creating the State Board of EMS to development and implement prehospital systems of care in the state. In 1999 the Ohio Trauma Registry was set up within the Division of EMS requiring hospitals to submit data on trauma

Trauma and Rehabilitation Registry Merge

victims to the state. The Ohio Trauma Registry was designed to address data collection issues, to ensure quality of trauma care delivery and to monitor trauma outcomes. House Bill (HB) 138 was passed in July of 2000 which aims to establish a statewide trauma system, to create the Ohio Trauma Committee, to define the trauma patient and, to establish standards for trauma centers. The Ohio Trauma Committee was established to assist the State Board of EMS in its objectives to develop a quality trauma system of care for injured patients. The trauma patient was defined as:

Patient's first or initial admission for at least 48 hours or transfer into the hospital for at least one injury ICD-9 diagnosis code in the range of 800-959.9 including burns, hypothermia, smoke inhalation, hanging, drowning, abuse, DOAs, patients that die after receiving any evaluation or treatment while on hospital premises, and patients who transfer out of the hospital.

HB 138 also provided for two commissions to study injury prevention and post-critical trauma care. It mandated seven special studies to examine trauma care in the State at the time. In November of 2003 the Post Critical Trauma Commission was completed “to determine how to improve the accessibility, affordability, quality, and cost effectiveness of post-critical adult and pediatric trauma care.”¹⁰ After intense review of Ohio's trauma system, 7 recommendations were made to address identified shortcomings in the current delivery system. The recommendations for improving the rehabilitation component focused on:

- Recognizing the needs of those undergoing rehabilitation and recovery
- Identification of rehabilitation services
- Establishing a resource system to facilitate access to information and services
- Developing educational re-entry programs
- Identification of opportunities for substance use prevention and treatment
- Establishing a registry for the follow-up of long-term complications and outcomes

Trauma and Rehabilitation Registry Merge

Recognizing the serious impact of injury and the need to assess and document long term functional outcomes led to the establishment of the Trauma Rehabilitation Registry in 2005 as a component of the Ohio Trauma Registry. In November 2007, at the request of the Ohio Trauma Committee, the Ohio Society of Trauma, Nurse Leaders (OSTNL) met to design an assessment process for Ohio utilizing the Model Trauma Systems Planning and Evaluation (MTSPE) document.¹¹ In March, 2008, the Ohio Trauma Committee convened to assess Ohio's statewide trauma system. A general assessment was conducted on the system's current strengths and weaknesses, as well as potential opportunities and threats to future development. In 2009, a task force was formed by the Ohio Trauma Committee to develop a strategic plan for Ohio's trauma system. In October of 2010, a final report, "A Framework for Improving Ohio's Trauma System" was completed and approved by the Ohio State Board of EMS.¹² The document focused on 113 indicators by which a state trauma system may be evaluated and the gaps that existed within the current trauma system. The final product was to use as a reference guide for the development of Ohio's statewide trauma system to advance the care of trauma victims. The document focused on eight major areas including:

- Leadership
- Injury Prevention
- Emergency/Disaster Preparedness Plan
- Prehospital Care
- Definitive Care – Acute Care Hospitals and Trauma Centers
- Definitive Care – Rehabilitation
- Evaluation, Quality Management & Performance Improvement
- Trauma System Registry Infrastructure
- Professional Education and Public Information and People with Functional Needs

The creation of a Trauma Rehabilitation Registry is an important step towards an integrated Trauma system that has the ability to examine outcomes through the continuum of care from the pre-hospital to rehabilitation settings.

Trauma and Rehabilitation Registry Merge

A query of the Ohio Trauma Registry (OTR) data from January 2005 through December 2009 showed that 151,244 individuals sustained traumatic injuries. Of those, 144,622 (95.6%) individuals survived, with 2,249 spinal cord injuries (SCI), 63,019 traumatic brain injury (TBI) and 23,090 polytrauma ($ISS \geq 17$). Out of those, 8,213 were discharged from a hospital trauma service into an acute rehabilitation center.³ A review of the MetroHealth Trauma Registry (MTR) data from 2005 to 2009 showed that 339 individuals with SCI, 3,195 individuals with TBI, and 2,803 individuals with Polytrauma were admitted to MetroHealth Medical Center. Of those 31% were discharged to MetroHealth's rehabilitation center, MetroHealth Rehabilitation Institute of Ohio (MRIO). A review of the MetroHealth Rehabilitation Registry (MRR) data from 2005 to 2009 documented that 158 individuals with SCI, 182 individuals with TBI, and 703 individuals with Polytrauma ($ISS \geq 17$) were admitted to MRIO.

The data gathered in the Rehabilitation Registry from inpatient rehabilitation facilities however, have not been used in Trauma system evaluation reports, creating a shortcoming in the system, as identified by several prior reports.^{10,12} Currently, there has been an absence of data reporting and data linkage between the Trauma and Rehabilitation registries. Thus, while the Trauma registry can gauge success of the delivery of trauma care, little is known about outcomes and quality of life in the 95% of persons who survive a traumatic injury. Minimal outcome data are available to assess pre-hospital and hospital care other than victim survival.

This project used MH's Trauma Registry and Rehabilitation Registry data sent to the State, the methods of this study can be replicated in the State Trauma and Rehabilitation Registries. The evaluation of functional outcomes over time will allow further investigation into the fine tuning of pre-hospital and hospital care to better assess impact on outcomes other than life or death.

Conceptual Framework

As stated in the American College of Surgeons *Systems Consultation Guide for Regional Trauma Systems*, the events of September 11, 2001 has led to an increased awareness of the need for collaboration between emergency care and public health systems.¹³ It became evident that an effective trauma system should be able to interface very well with public health services as reflected in the Health Resources and Services Administration's (HRSA) Model Trauma System Planning and Evaluation (MTSPE) document released in 2006.¹¹ Thus, the concept that traumatic injury is a disease that can be prevented or its deleterious effects reduced forms the basis for the application of the public health model to trauma systems. Rehabilitation is an intrinsic component of the trauma system, and is facilitatory in promoting better outcomes and reduction of disability whenever possible. Rehabilitation services and specialists are integrated into the multidisciplinary advisory committee to ensure that pertinent issues to the delivery of care will be addressed appropriately.

Effective trauma systems therefore, invoke cohesive partnerships among varied trauma systems, health care providers and public health agencies, with the goal of reducing the burden of injury and improving the provision of care to those who sustained catastrophic injuries. While trauma registries provide a better understanding of the underlying injury and management, they contain minimal information on how interactions with other phases of care (ie. prehospital, hospital and rehabilitation) influence outcomes of the injured patient. Foremost in addressing this limitation is in emphasizing the role of linkage of data between the Trauma and Rehabilitation registries to evaluate the quality of service rendered across all phases of care and determine which variables inherent in both registries define and / or alter outcomes.

This project was conceptualized to address the need to enhance the ability of the combined Trauma and Rehabilitation registries to ascertain any inherent associations between

Trauma and Rehabilitation Registry Merge

key data variables that can define outcomes for trauma patients. The initial steps in achieving this goal will include merging of the datasets from the Trauma and Rehabilitation Registries. This will be followed by determining which variables from the registries affect long-term outcomes in persons who sustained catastrophic injuries.

Methods

This was an administrative data management and analysis project with the purpose of illuminating the importance of a combined longitudinal database for trauma victims that encompasses the scene of the injury through acute rehabilitation. The study sample consisted of all traumatic spinal cord injury, traumatic brain injury and polytrauma victims from 2005 through 2010 who came to MH's ED and subsequently were admitted and discharged from MH's inpatient rehabilitation facility. To accomplish this goal, we partnered with the data managers from the MH Trauma Registry and the MH Rehabilitation Registry to merge the data sets.

The project began by matching the MH Trauma Registry patients with their individual data located in the MH Rehabilitation Registry using the patients' unique Medical Record Numbers (MRN). To verify the matches, date of birth and gender were used. Discrepancies were resolved by direct review of the patient's electronic medical record. The merged dataset provided an account of trauma victims' clinical records from time of injury in the pre-hospital setting through acute rehabilitation. The merged dataset was analyzed to investigate the relationships between the key data points from the trauma registry and key data points found in the rehabilitation registry (i.e. length of stay, function, discharge disposition and survival).

Table 1 describes the variables used in the analysis, and which database contained the variables prior to the merge. The data fields from the MH Trauma Registry and MH

Trauma and Rehabilitation Registry Merge

Rehabilitation Registry were organized in terms of key data including: demographics, co-morbidity, scene data, injury type, injury mechanism, anatomic site of injury, physiologic data, injury score, and outcome in terms of length of stay, Functional Independence Measure (FIM), discharge disposition, and survival. Key data from the time of injury with pre-hospital management to the Emergency Room, through the Trauma hospital and ultimately to the Rehabilitation Hospital were followed to assess the factors affecting functional outcomes for persons with SCI, TBI and Polytrauma.

Ohio Trauma Registry and Rehabilitation Registry Data Fields Description

Demographics:

The Ohio Registry Annual Data Report of 2003 identified that ninety-five percent (95.4%) of patients treated at a hospital for an injury severe enough to be reported to the OTR survived to be discharged.¹⁴ Persons who are older, males, Black have higher mortality rates, more comorbid conditions, longer lengths of stay and higher health care utilization and health care costs.¹⁵

1. **Age** is recognized as a significant factor that affects the occurrence and severity of injury and outcomes.¹⁶⁻¹⁸ Age was included as a continuous variable. And to look at differences among age groups, the analysis will group individuals into three age categories: pediatric (0-16 years old), adult (17-69 years old), and elderly (≥ 70 years old).¹⁹
2. **Sex** is a binary variable coded as male or female. It has been shown that males who have a blunt trauma have a significantly increased risk of death compared to females.¹⁶
3. **Racial** differences exist, and in the 2003 report, Blacks have the highest overall injury rate of all other racial groups.¹⁴ Race has been shown to be a significant determinant of rehabilitation outcomes, with Blacks having more comorbid conditions, poorer functional outcomes, and higher rates of secondary conditions after injury than any other racial group.²⁰ Race was a race categorical variable defined as White (not of Hispanic origin),

Black (not of Hispanic origin), Hispanic, American Indian or Alaskan Native, Asian or Pacific Islander, Other and Not documented (ND).

4. *Payment Source* has been shown to be a predominant predictor of health outcomes and health disparities even after controlling for other socioeconomic variables, such as race, age and sex.²¹⁻²³ The source of payment during hospitalization gave an estimate of how health care is reimbursed, which affects access to care post-injury, and ultimately long-term health outcomes. The primary payment source responsible for the incurred charges was categorized as: Commercial, Medicare Non-MCO, Medicare MCO, Medicaid Non-MCO, Medicaid MCO, Other Government (e.g. TRICARE, Developmental Disabilities Services and State Vocational Rehabilitation), Workers' Compensation, Self-pay, Uninsured and Not documented (ND).

Pre-existing co-morbidity factors

Alcohol or Drug abuse / misuse is a known contributor to traumatic injury. A recent review of records from the National Trauma Data Bank (NTDB) showed that pre-injury alcohol and drug use, while not associated with worse outcomes, do contribute to increased complications, thereby impacting length of stay and higher hospitalization costs.^{24,25} De Guise and colleagues also found that pre-injury alcohol abuse was related to longer length of stays and longer duration of post-traumatic amnesia in traumatic brain injury.²⁶ Testing positive for alcohol was coded as 'yes or no' and testing positive for non-prescription drugs was coded as 'yes or no'.

Scene Data

There were several types of places where injuries occurred and were assigned values from 0-9. The site of injury either occurred at home, farm, mine/quarry, industrial, recreation/sport place, street/highway, public building, residential institution, other specified place, and

unknown/unspecified/not documented. Scene data variables included incident zip code, trauma scene time, total time from notification to time unit en route and endotracheal intubation.

1. ***Incident Zip Code*** was used to geocode. The geocodes were linked to US Census data and then those codes were used to map the distance from the scene location to a Level I trauma center. The geocoding was also used to describe urban vs. rural make-up of the scene location. It is possible that limitations in access to a trauma center can potentially lead to worse outcomes.²⁷
2. ***Trauma scene time, Total Time from Notification to time unit enroute*** was coded as exact time and used as continuous variables in the analysis. Time data has been shown to affect trauma outcomes, such as survival.²⁸
3. ***Endotracheal Intubation*** was coded as a binomial variable (yes/no). A review of field resuscitation techniques and application of advanced life-support protocols (e.g. establishing airway access via intubation or cricothyrotomy) can help assess long term outcomes in trauma patients.²⁹⁻³² Intubation was coded as ‘yes/no’.

Injury Type

Traumatic injury is categorized as either “blunt” or “penetrating”. ***Penetrating injuries*** are a direct result of penetration into a body cavity (e.g. knife and bullet wounds), whereas ***blunt injuries*** are generally from non-penetrating causes (e.g. motor vehicle crash or a fall). Most injuries reported in 2003 are from blunt injuries (89.2%). The mortality rate related to penetrating injuries is significantly higher than those who sustained blunt trauma.³³

Mechanism of Injury

The ***injury mechanism*** is reported as the External Cause of Injury code or E-code. Standard ICD-9 E-code groupings are presented in the form of a matrix (Table 2) and are depicted as

Trauma and Rehabilitation Registry Merge

mechanism vs. intent of injury. All cells in the matrix are mutually exclusive. The Centers for Disease Control and Prevention in collaboration with members of the American Public Health Association's Injury Control and Emergency Health Services Section (ICEHS) placed E-codes into groupings reflective of similar causes of injury.³⁴

It has been recognized that injuries sustained from a *fall, motor vehicle crash, assault / fight, motorcycle crash and pedestrian-related accidents* comprise the majority of the known injury mechanisms which can impact the quality of life and outcomes in trauma patients.¹⁴

Table 2. E-Code Grouping Matrix table with assignment of E codes for injury mortality data MMWR August 29, 1997

Anatomic Site of Injury

Anatomic site of injury is determined by the same standards of the Ohio Trauma Registry. Site of injury is based on the *International Classification of Disease, 9th Revision, with*

Clinical Modification (ICD-9-CM) described in The Barell Injury Diagnosis Matrix.³⁵ Table 3 outlines the ICD-9 codes associated with type of injury and severity of injury.

Table 3. Anatomic Site of Injury based on ICD-9-CM Code		
Type of Injury	Severity	ICD-9 Codes
Traumatic Spinal Cord Injury	Cervical	806(.0-.1), 952.0
	Thoracic	806(.2-.3), 952.1
	Lumbar	806(.4-.5), 952.2
	Sacrum/Coccyx	806(.6-.7), 952(.3-.4)
	Spine and Back Unspecified	806(.8-.9), 952(.8-.9)
	Cervical	806(.0-.1), 952.0
Traumatic Brain Injury	Type 1	800,801,803, 804 (.1-.4,.6-.9), (.03-.05,.53-.55), 850 (.2-.4), 851-854, 950 (.1-.3), 995.55
	Type 2	800,801,803, 804 (.00,.02,.06,.09) (.50,.52,.56,.59), 850 (.0,.1,.5,.9)
	Type 3	800,801,803,804(.01, .51)
Polytrauma	Injury Severity Score (ISS) \geq 17	

Classification by body region includes head and neck, spine and back, torso, extremities, and unclassifiable by site. There is lack of a validated or consensus definition of polytrauma, leading to multiple descriptions over the years.³⁶ For this study, we adapted the polytrauma definition proposed by Keel to be that of an Injury Severity Score \geq 17.³⁷

Physiologic Data

1. The *Glasgow coma scale (GCS)*, *systolic blood pressure* and *respiratory rate* are part of the physiologic data reported. GCS provides an index of coma depth by documenting the patient's verbal, eye opening and motor responses on a scale of 3 to 15, with higher scores indicating increased level of functioning.³⁸ The GCS has been used to correlate early injury severity measures and outcome after injury (Table 4).

Table 4. Glasgow Coma Score		
	Response	Score
Eye Opening (E)	Spontaneous	4
	To voice	3
	To pain	2
	None	1

Verbal Response (V)	Normal conversation	5
	Disoriented conversation	4
	Words, but not coherent	3
	No words.....only sounds	2
	None	1
Motor Response (M)	Normal	6
	Localizes to pain	5
	Withdraws to pain	4
	Decorticate posture	3
	Decerebrate	2
	None	1
Total = E+V+M		46

2. Hypotension, defined as *systolic blood pressure (SBP)* less than 90 mm Hg, is a well-recognized sign of hemorrhagic shock and is a validated prognostic indicator. A recent study showed that optimization of blood pressure portends to improved mortality and outcomes in those who present with hemorrhagic shock at the scene.^{39,40} The *respiratory rate (RR)* is an important parameter measured in the field. It has been demonstrated that increased mortality and worsened disability is associated with patients who sustained hypoxic insults (pulse oximetry <92%).^{41,42} Along with *GCS and SBP, the Respiratory Rate* define the Revised Trauma Score (described below) which is a physiologic score that can predict outcomes.

3. *Heart rate (HR)* measurements can aid in the determination of the shock index, which is a ratio of the HR and the SBP. It has been suggested that optimizing HR in trauma patients can improve outcomes.⁴³

Injury Score

The Anatomic measures (i.e. AIS, ISS, and RTS) are standard measures used at MH to assess injury severity and as a tool to triage patients. The Ohio Trauma Registry also collects AIS and ISS data to measure injury acuity.

Abbreviated Injury Scale (AIS)

The Abbreviated Injury Scale (AIS, first introduced in 1969) outlined in Table 5 is a simple method for grading and comparing injuries by severity^{44,45}. It is a consensus-derived, anatomically based system of grading injuries on an ordinal scale ranging from 1 (minor injury) to 6 (lethal injury). The AIS does not reflect the combined effects of multiple injuries; however, it forms the foundation of the Injury Severity Score (ISS). The most recent revision is from 1998. The AIS is monitored by a scaling committee of the Association for the advancement of Automotive Medicine.

Table 5. Abbreviated Injury Scale	
Injury	AIS Score
1	Minor
2	Moderate
3	Serious
4	Severe
5	Critical
6	Unsurvivable

A recent study by Clark and colleagues found that an AIS for head and other body regions of 3, 4 or 5 to be strongly associated with mortality.⁴⁶

Injury Severity Score (ISS)

The Injury Severity Score (ISS) was also determined from the Trauma database. This is an anatomical scoring system introduced in 1974 as a means of providing an overall score for patients with multiple injuries.⁴⁷ Each injury is assigned an AIS score and is allocated to one of six body regions (head, face, chest, abdomen, extremities and bony pelvis and external structures). Only the highest AIS score in each body region is used. The ISS is thus defined as the sum of the squares of the highest AIS grade in the most severely injured body regions. Only

one injury per body region is allowed. The ISS ranges from 1-75, and an ISS of 75 is assigned to anyone with an AIS score of 6.

The ISS is the only anatomical scoring system in use and correlates linearly with mortality, morbidity, hospital stay and other measures of severity. It has also been a consistent risk factor predictor for post-injury multiple-organ failure (MOF). However, any error in the AIS scoring increases the ISS error, so accuracy is imperative. Also, many different injury patterns can yield the same ISS score and injuries to different body regions are not weighted. The AIS limits the total number of contributing injuries to 3, which impairs its use in penetrating injuries. The AIS is not recommended as a triage tool, but as a predictor of mortality.

Revised Trauma Score (RTS)

The Revised Trauma Score (RTS) uses 3 specific physiologic parameters: GCS, SBP and RR. The scoring system is outlined below in Table 6. The RTS has two purposes: 1) field triage and 2) quality assurance and outcome prediction. Depending on the purpose, the formula for calculating the score varies. When used for field triage, the RTS is determined by adding each of the coded values together. Thus, the RTS ranges from 0-12 (as above). When used for quality assurance or outcome prediction, the GCS, SBP and RR are added together.

Table 6 Revised Trauma Score			
Glasgow Coma Scale (GCS)	Systolic Blood Pressure (SBP in mm Hg)	Respiratory Rate (RR breaths/min)	Coded Value
13-15	>89	10-29	4
9-12	76-89	>29	3
6-8	50-75	6-9	2
4-5	1-49	1-5	1
3	0	0	0

The RTS has a high inter-rater reliability and accuracy in predicting death than the Trauma Score.^{48,49} However, it can be very difficult to calculate in the field. This is especially

true for the GCS, which is difficult to employ in patients who are intubated and mechanically ventilated. In addition, it is hard to score patients who are pharmacologically paralyzed or who are under the influence of alcohol or drugs. To combat these difficulties, best motor response and the eye-opening responses have been used to predict the verbal response. Substitution of the best motor response for the GCS can predict trauma mortality as well as or better than other trauma severity score.

Outcomes

Outcome measures for analyses consist of the length of stay, Functional Independence Measure (FIM), discharge disposition (e.g. home, nursing home, sub-acute nursing facility) and survival.

Length of Stay (REHAB LOS)

Length of stay can be used as a gauge of the utilization of healthcare resources and severity of the injury. In the years 2005 to 2009 the OTR reported an average REHAB LOS for trauma victims of 5.97 days. Data reported for REHAB LOS are for those that occurred in inpatient trauma, and do not include data from inpatient rehabilitation. The OTR was queried for REHAB LOS of trauma victims with SCI, TBI, and Polytrauma from 2005 to 2009. REHAB LOS for individuals with a diagnosis of SCI was 11.2 days, for TBI, 6.65 days and for polytrauma, 9.84 days.³ The Metro Trauma Registry (MTR) from the years 2006 to 2010 reported an average REHAB LOS of 11.6 days for individuals with a diagnosis of SCI and 6.4 days for individuals with a diagnosis of TBI and 9.8 days for individuals with a diagnosis of Polytrauma.

Functional Independence Measure (FIM)

The **FIM** is the primary assessment tool used for measuring rehabilitation outcomes. The FIM was developed to create a minimal data set that could be uniformly applied as a valid measure of patient disability.⁵⁰ This allows health care providers and researchers to have a reliable method of tracing disability from rehabilitation admission through discharge, and follow-up. The FIM assesses physical functioning in 6 domains (self-care, sphincter control, mobility, locomotion, communication and social cognition) using an 18-item, 7 point Likert Scale with 7 being able to do an activity totally independently to 1 needing total assistance with an activity (Table 7).^{51,52} FIM data will be collected during admission to inpatient rehabilitation and at discharge to provide functional detail on the outcome of trauma victim survivors.

Table 7. Functional Independence Measure (FIM)		
FUNCTION DOMAINS		CODING SCHEME
Self-Care		No Helper
1. Grooming		7 Complete Independence
2. Bathing		6 Modified Independence
3. Dressing-Upper Body		
4. Dressing-Lower Body		Helper-Modified Dependence
5. Toileting		5 Supervision
Sphincter Control		4 Minimal Assistance
1. Bladder		3 Moderate Assistance
2. Bowel		
Transfers		Helper-Complete Dependence
1. Bed, chair, wheelchair		2 Maximal Assistance
3 Toilet		1 Total Assistance
2 Tub Shower		
Locomotion		
1. Walking or Wheelchair		
2. Mode of Locomotion		
3. Stairs		
Communication		
1. Comprehension		
2. Expression		
Social Cognition		
1. Social Interaction		
2. Problem Solving		
3. Memory		

The FIM has good inter-rater reliability,⁵³ but while it has broad domain coverage, FIM

does not measure specific functional skills, i.e. fine motor ability, speed, ease and quality of task execution. Nevertheless, the FIM remains valuable in measuring burden of care and activity restrictions and serves as an important tool in outcomes research and in assessing the quality of a rehabilitation program.⁵⁴

Discharge Disposition

Discharge disposition from Trauma Service was coded into categories: home, died, MetroHealth System, and outside MetroHealth System (i.e. AMA, other hospital system, jail/prison, homeless/shelter, protective services, and hospice). Those discharged to the MetroHealth System were further categorized into admitted to MetroHealth Acute Rehabilitation, admitted another MetroHealth System service, or left AMA. The population for analyses consists of only those persons discharged from the Trauma Service to Acute Rehabilitation. ***Discharge disposition*** from Acute Rehabilitation was coded as Home or Not discharged home. None of the patients admitted to Acute Rehabilitation had a discharge disposition as deceased.

The OTR reported discharge disposition for trauma survivors in 2005 to 2009 as: 55% home, 5.7% Rehabilitation, 20.3% ECF/NH/SNF and 13.8% other. A data query of the OTR also reported data on discharge disposition for SCI (25% home and 32% Rehab), for TBI (45 % home and 12% Rehab), and for Polytrauma (37 % home and 15% Rehab).³ The Metro Trauma Registry (MTR) from the years 2006 to 2010 reported that of 339 individuals with a diagnosis of SCI, 158 (46.6 %) went to rehab; of 3,195 individuals with a diagnosis of TBI, 182 (5.7%) went to rehab; and of 2,803 individuals with a diagnosis of Polytrauma, 703 (30%) went to rehab.

Survival

Survival was reported and broken down by changes in survival by location including: prehospital, emergency department (ED), inpatient trauma and inpatient rehabilitation. In the years 2005 to 2009, the OTR reported 95.6% survival of the 151,244 trauma victims reported. Data reported for death are for those that occurred in the hospital setting (ED or inpatient trauma), and does not include those who die at the injury site or inpatient rehabilitation. The OTR was queried for survival of trauma victims with SCI, TBI, and Polytrauma from 2005 to 2009. Two thousand two hundred forty nine individuals were admitted with a diagnosis of SCI, and of those, 83.5% survived; 63,019 individuals were admitted with a diagnosis of TBI, and of those, 86.6% survived, and 23,090 individuals were admitted with a diagnosis of Polytrauma, and of those, 81.8% survived.³ A review of the MTR data from 2006 to 2010 showed that 339 individuals were admitted with a diagnosis of SCI, and of those, 283 (83.5%) survived; 3,195 individuals were admitted with a diagnosis of TBI, and of those, 2,814 (88.1%) survived; 2,803 individuals were admitted with a diagnosis of Polytrauma, and of those, 2,317 (82.7%) survived.

Analysis

Analysis consists of standard descriptive statistics: frequencies, averages, t-test, and chi-square. For continuous outcome variables, such as the FIM, two staged linear regression was used to investigate the relationship between trauma variables and functional outcomes. In the modeling, demographic and number of comorbidities/complications were controlled allowing for the direct effects of the trauma variables to be illuminated. For the binary outcome of rehabilitation discharge disposition (home/not home) a logistic regression technique was employed. Again, demographic and number of comorbidities/complications were controlled for in this analysis.

Trauma and Rehabilitation Registry Merge

In our original grant proposal, survival was noted as one of the outcomes to be investigated. None of the patients admitted to acute rehabilitation from the MetroHealth Trauma Service died; therefore, we did not include survival in our final analyses of the data. We did, however, look at Trauma Service discharge disposition, for which, survival was one of our outcomes.

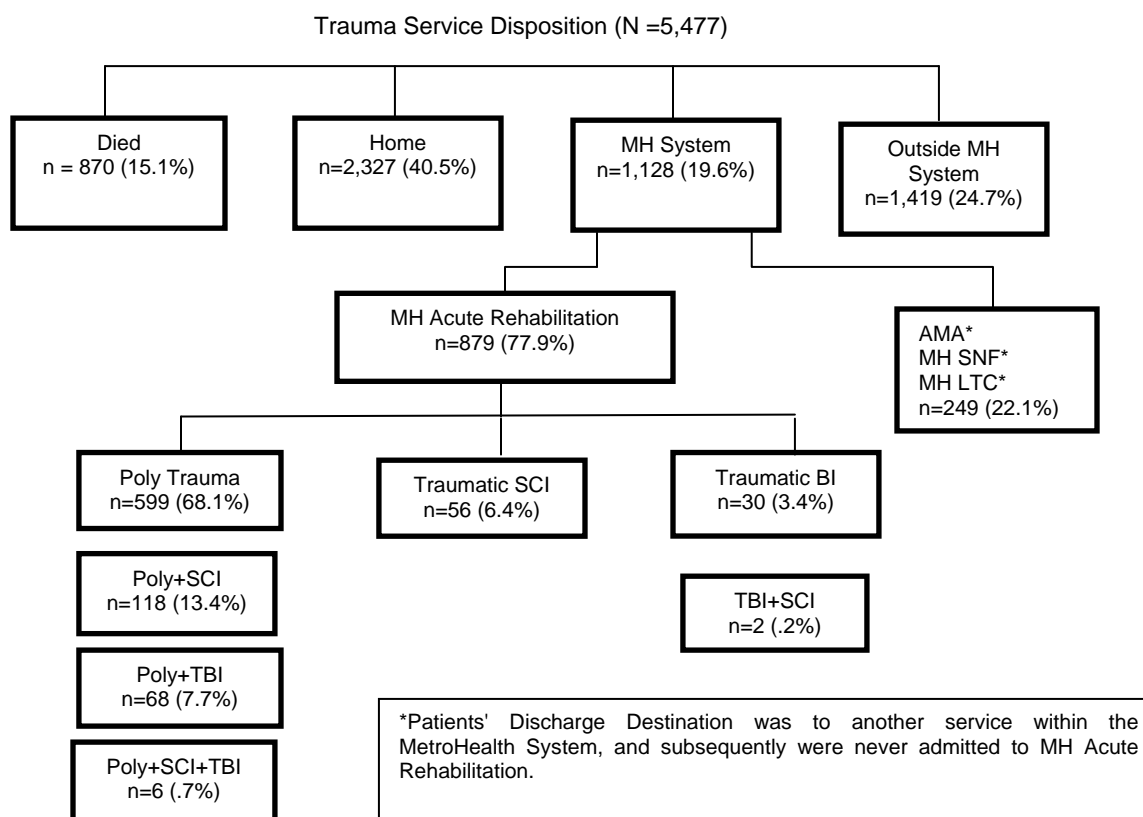

Results

Aim 1: To link the MetroHealth Trauma and MetroHealth Rehabilitation Registry Data.

We were able to link the Trauma and Rehabilitation Registries using patient medical record numbers (MR), birthdate and gender. The two databases linked and we did not have any patients in the Rehabilitation Registry not link back to their trauma data in the Trauma Registry.

Figure 1 displays the study sample generation from the Trauma Registry. Almost 15% of the trauma patients coming to the MH Emergency Department (ED) died prior to being discharged from the ED. Forty percent of patients were sent home from the ED and 24.7% were discharged to a health care facility outside of the MH System. Almost 20% were admitted to a MH service (i.e. acute care, SNF, LTC, or acute rehabilitation). Out of those admitted to a MH System service (1,128), 77.9% were admitted to acute rehabilitation. The total study samples consisted of 879 persons. Of those 879 trauma patients, 600 were Poly traumas, 116 had both Poly trauma and traumatic SCI, 58 SCI patients, 34 were TBI and 2 patients had a TBI and traumatic SCI.

Figure 1 Study Sample Inclusion Flow Chart

Sample Characteristics

Table 8 gives the descriptive statistics for the sample characteristics for the total sample and for the 3 traumatic injury groups. The traumatic SCI and TBI groups include patients who had a singular identification as having a SCI or TBI as documented by the appropriate ICD-9 code. The Poly trauma group includes persons with the ICD-9 code for poly trauma, which may include a SCI or TBI.

Looking at the Total Sample column in Table 8 below, the mean age of the study sample was 42.75 (\pm 18.04), 71.9% were discharged to home from acute rehabilitation, 27.2% had government health insurance, mean number of complications and comorbidities was 7.57 (\pm 3.59), mean Glasgow Coma Score was 15.39 (\pm 7.58), mean ISS was 25.53 (\pm 9).

Trauma and Rehabilitation Registry Merge

55), average total FIM Gain was 29.91 (± 17.21), 42.1% were intubated at some time prior to rehabilitation admission, and 27% tested positive for drug use.

Trauma and Rehabilitation Registry Merge

The columns representing the different trauma categories indicate that the 3 sub-samples are very similar on demographic characteristics. The SCI group is made up of less white (66.7%) than the Poly (73.6%) and TBI (75.0%) groups. The TBI group is slightly older (48.83 years old vs. 42.27 and 45.36). The largest difference is that the TBI group has a higher percentage of patients discharged home (86.1%) than the Poly (71.2%) and SCI (72.4%) groups. In terms of scene time, the SCI group had longer average minutes at the scene (20.5) than the Poly group (14.94). Scene time was missing on all 36 of the TBI patients.

When looking at health characteristics, the SCI group has higher Total FIM Motor Gain (45.36) than the Poly (24.69) and the TBI (22.33) groups. The SCI group had lower intubation rates (12.1%) than the other two groups (45.2% and 22.2%) and lower positive test for drug use (17.2% vs. 27.9% and 22.2%).

Aim 2: To identify variables from the Trauma Registry that are associated with long term outcomes for persons who sustained a poly trauma, traumatic SCI, or a traumatic brain injury.

Pearson correlations were conducted to first uncover which independent variables had an association with the outcome variables of interests (Length of Stay, FIM scores and Rehabilitation discharge disposition). Below in Table 9 are the results of the Pearson correlations and significance level.

Trauma and Rehabilitation Registry Merge

Table 9 Pearson Correlations Between the Independent Variables and Outcomes

Trauma and Rehabilitation Registry Merge

ISS, intubation pre-rehabilitation, government health insurance have, and numbers of comorbidities/complications have statistically significant positive associations with REHAB LOS. Higher ISS, being intubated prior to rehabilitation, having government health insurance are associated, and more comorbidities/complications the longer lengths of hospital stay. Higher Glasgow Coma scores and having commercial health insurance are associated with shorter length of hospital stays.

Higher ISS, older persons, having government health insurance, and fewer comorbidities/complications are associated with not being discharged from rehabilitation to home. Having commercial insurance is associated with going home after acute rehabilitation.

Higher Total FIM Gain is associated with lower Glasgow Coma scores, being younger, being intubated pre-rehabilitation, not having government health insurance, having commercial insurance, and lower number of comorbidities/complications. Not having been tested for drugs is associated with lower Total FIM Gain.

FIM Motor Gain is negatively associated with ISS, Glasgow Coma score, age, sex, number of comorbidities/complications, and commercial health insurance. The higher the ISS, Glasgow Coma score, older persons, females, being female and having government health insurance the lower the FIM Motor Gain. Higher FIM Motor Gain is associated with having commercial health insurance and being intubated prior to rehabilitation.

Higher Glasgow Coma scores, older persons, more comorbidities/complications, those with government health insurance, testing positive for drugs, and not being tested for drugs were associated with lower FIM Cognitive Gain. On the other hand, higher FIM Cognitive gain was associated with being white, intubated prior to rehabilitation, and having commercial health insurance.

Total Length of Stay (REHAB LOS) from Trauma Service Admission through Acute Rehabilitation

Table 10 shows the results of the multiple linear regression analysis results. The full regression model explained 9.7% of the variance in REHAB LOS. In Stage I, race ($B = -3.289$; $p = .040$; blacks coded as '0' and whites coded as '1'), government health insurance ($B = 4.438$; $p = .020$) and number of comorbidities/complications ($B = .659$; $p = .000$) had statistically significant effects on REHAB LOS. Whites had shorter REHAB LOS, having government health insurance increased a patient's REHAB LOS by 4.438 days and for every increase in comorbidities/complications, REHAB LOS increased by .757 days.

Table 10. Multiple Linear Regression for Rehabilitation Length of Stay (REHAB LOS) (N = 714)

STAGE I	Unstandardized Coefficients		Standardized Coefficients
Model	B	Std. Error	Beta
(Constant)	19.535**	2.2216	
Age	-.089*	.040	-.107
Sex	-.588	1.500	-.016
Race	-3.289*	1.594	-.091
Married	.701	1.524	.021
Commercial Health Insurance ^a	2.455	1.635	.081
Government Health Insurance ^a	4.438*	1.835	.130
Number of Comorbidities/Complications	.757**	.182	.190
STAGE II			
(Constant)	17.253**	4.188	
Age	-.044	.042	-.053
Sex	-.355	1.493	-.010
Race	-4.410*	1.618	-.122

Trauma and Rehabilitation Registry Merge

Total Scene Time	.017	.045	.016
$R^2 = .097^{**}$			

^a Referent is Commercial Insurance ^b Referent is Tested Positive for Drugs

* $p \leq .05$ ** $p \leq .001$

Looking at Stage II of the regression model, we find that race, having government health insurance and number of comorbidities/complications remain statistically significant indicating direct effects on REHAB LOS. ISS ($B=.236$; $p=.000$) had a statistically significant relationship with REHAB LOS in a positive direction. For every one unit increase in ISS, REHAB LOS is increased by .236 days. Looking at the standardized coefficients in Stage II, we find that being that number of comorbidities/complications ($Beta=.166$) is the strongest contributor to variation in REHAB LOS.

Acute Rehabilitation Discharge Disposition

Binary Logistic Regression was conducted to look at predictors of acute rehabilitation discharge disposition. Table 11 displays the results of the binary logistic multiple regression analysis for rehabilitation discharge disposition. Rehabilitation discharge disposition is affected by a patient's age, race, marital status, type of health insurance, number of comorbidities/complications and their ISS. Older persons are less likely to be discharge home ($OR = -.961$) after rehabilitation than younger persons. Persons with higher numbers of comorbidities/complications and having higher ISS are also less likely to go home after rehabilitation ($OR = .812$; $OR = .979$ respectively). Whites, married individuals and persons with commercial health insurance compared to those with no health insurance are more likely to be discharged home. ($OR = 1.077$; $OR = 1.731$; $OR = 1.980$ respectively).

Table 11. Binary Logistic Multiple Regression on Rehabilitation Discharge Disposition (N = 712)

^a Referent is Uninsured ^b Referent is Not Tested for Drugs* $p \leq .05$ ** $p \leq .001$ *Total FIM Gain*

Table 12 gives the results of the multiple regression analysis for total FIM gain. The total regression model explains 17.6% of the variance in Total FIM Gain score. In Stage I of the regression model, for every one year of increase in age, Total FIM Gain score decreases by .119 points. For every unit increase in the number of comorbidities/complications there is a decrease of 1.085 points in a Total FIM Gain.

Table 12. Multiple Linear Regression of Total FIM Gain (N = 713)

STAGE I	Unstandardized Coefficients		Standardized Coefficients
Model	B	Std. Error	Beta
(Constant)	42.774**	2.271

R ² = .176**			

^a Referent is Uninsured ^b Referent is Not Tested for Drugs

* $p \leq .05$ ** $p \leq .001$

Turning to Stage II of the regression analysis, we find that age and number of comorbidities/complications continue to have statistically significant direct relationships with Total FIM Gain in the negative direction. ISS and Glasgow Coma Score both have statistically significant direct effects on Total FIM Gain. For every unit increase in number of comorbidities/complications Total FIM Gain decreases by 1.006 points and for every unit increase in Glasgow Coma Score Total FIM Gain decreases by .706 points.

The Standardized Coefficients in Stage II indicate that number of comorbidities/complications (Beta=-.209) and Glasgow Coma Score (Beta=-.207) have the strongest contributions to the variance in Total FIM GAIN.

Total FIM Motor Gain

Table 13 gives the results of the multiple linear regression analysis for total FIM motor gain. The total model explains 13.8% of the variance in total FIM motor gain. Looking at Stage I of the regression model, we find that for every year added to age, there is a drop in total FIM motor gain by .104 points. With every unit gain in number of comorbidities/complications there is a decrease of .851 points in total FIM motor gain.

Table 13. Multiple Linear Regression for Total FIM Motor Gain (N = 713)

STAGE I	Unstandardized Coefficients		Standardized Coefficients
Model	B	Std. Error	
(Constant)	35.885**	1.799	
Age	-.104**	.032	-.138
Sex	-1.736	1.99	-.052
Race	.712	1.265	.021
Married	.125	1.211	.004
Commercial Health Insurance ^a	.350	1.279	.013
Government Health Insurance ^a	-2.260	1.447	-.073

STAGE II			
(Constant)	44.417**	3.235	
Age	-.094*	.033	-.124
Sex	-1.761	1.192	-.053
Race	-.395	1.274	-.012
Married	.199	1.196	.007
Commercial Health Insurance	.321	1.286	.012
Government Health Insurance	-1.947	1.438	-.063
Number of Comorbidities/Complications	-.767**	.140	-.202
Intubated at any time pre-rehab	-.021	.031	-.024
ISS	-.180**	.053	-.126
Tested Positive for drugs ^b	-.508	1.243	-.016
Tested Negative for drugs ^b	.055*	1.228	.002
Glasgow Coma Score	-.375*	.148	-.139
Total Scene Time	-.021*	.031	-.024
R ² = .138**			

^a Referent is Uninsured ^b Referent is Not Tested for Drugs

* $p \leq .05$ ** $p \leq .001$

After adding trauma registry variables into the model, Stage II shows that age and number of comorbidities/complications continue to have a statistically significant relationship with total FIM motor gain. This indicates that age and number of comorbidities/complications have direct relationships with total FIM motor gain. ISS, tested negative for drugs, Glasgow coma score and total scene time have statistically significant relationship with total FIM motor gain. Higher ISS, Glasgow Coma Score and total scene time reduce total FIM motor gain; while testing negative for drugs increases the motor gain score. The standardized coefficients in Stage II of the regression model indicate that ISS (Beta=-.126) and Glasgow Coma Score (Beta=-.139) are the strongest predictors of FIM Motor Gain in the model.

Total Cognitive FIM Gain

Table 14 gives the results of the multiple linear regression analysis for total cognitive FIM gain. The full model explains 22.1% of the variance in total FIM cognitive gain. Stage I of the model finds age, race and number of comorbidities/complications having statistically significant relationships with total FIM cognitive gain. For every added year in age, total cognitive gain is reduced by .015 points. Whites have an increase of 1.654 point in cognitive FIM gain compared to Blacks and for every increase in number of comorbidities/complications there is a decrease of .234 points in total FIM cognitive gain.

Table 14. Multiple Linear Regression for Total Cognitive FIM Gain (N = 713)

STAGE I	Unstandardized Coefficients		Standardized Coefficients
Model	B	Std. Error	Beta
(Constant)	6.889**	.804	
Age	-.015*	.014	-.045
Sex	-.427	.536	-.030
Race	1.654*	.565	.113

Trauma and Rehabilitation Registry Merge

Married	-.775	.541	-.058
Commercial Health Insurance ^a	.226	.571	.019
Government Health Insurance ^a	-1.017	.647	-.075
Number of Comorbidities/Complications	-.234**	.062	.142
STAGE II			
(Constant)	8.585**	1.340	
Age	.025	.014	.077
Sex	-.349	.494	-.024
Race	.412	.528	.028
Married	-.535	.495	-.040
Commercial Health Insurance	-.058	.533	-.005
Government Health Insurance	-.890	.595	-.066
Number of Comorbidities/Complications	-.239**	.058	-.145
Intubation at any time pre-rehab	2.127**	.646	
ISS	.014	.022	.036
Tested Positive for drugs ^b	-.062	.515	-.005
Tested Negative for drugs ^b	.510	.508	.036
Glasgow Coma Score	-.331**	.061	-.282
Total Scene Time	-.009	.013	.023
R ² = .221**			

^a Referent is Uninsured ^b Referent is Not Tested for Drugs

* $p \leq .05$ ** $p \leq .01$

In Stage II of the regression model, age and race are no longer statistically significant; indicating that age and race have an indirect effect on total FIM cognitive gain through the Trauma Registry variables. Number of comorbidities/complications continues to be significant, indicating a direct effect on total FIM cognitive gain. Intubation at any time pre-rehabilitation and Glasgow Coma Score are the Trauma Registry data points that have direct statistically significant effects on total FIM cognitive gain. Being intubated at any time pre-rehabilitation (B=2.127) increases total FIM cognitive gain. Higher Glasgow Coma Scores (B = -.331) decreases total FIM cognitive gain. Glasgow Coma Score is the strongest predictor in the full regression model (Beta=-.282).

Trauma Service (TS) Discharge Disposition and Traumatic Injury

Although not specified in the grant application, we decided to look at ISS in relation to where patients were discharged to from the Trauma Service (TS). This was seen as a way of evaluating if ISS could be a useful in deciding where patients should be discharged to best serve their health care needs. Table 15 shows the mean ISS for each of the traumatic injury groups and their TS discharge disposition.

Table 15 Mean ISS for Trauma Service Discharge Disposition and Traumatic Injury (N = 5,754)

TRAUMA SERVICE DISCHARGE DISPOSITION	INJURY TYPE MEAN ISS

Chart 1. Mean ISS by Trauma Type and Trauma Services Discharge Disposition

Conclusions and Recommendations

Trauma data, especially ISS and GCS, should be included in research and quality projects when trying to determine and understand long-term outcomes of persons with traumatic injuries. The quality and effectiveness of trauma systems and care can be enhanced by merging of Trauma and Rehabilitation registries. Further standardization and utilization of the trauma and rehabilitation registries (i.e. criteria for inclusion and scoring methods) across institutions can define long term outcomes for those who survive SCI. Further improvements in medical informatics will allow for the creation of a repository of data within an institution and across collaborating Trauma systems. It is possible then to effectively link with ease databases from EMS, Trauma and Rehabilitation Services. This comprehensive Trauma system will then have the capability of fully assessing the quality of care being delivered through a continuum of services. This in turn can assist the State with its goals of establishing a well-integrated Trauma System that can define long-term outcomes in persons who sustain catastrophic injuries.

Future Research Directions

Our continued research with this combined database will be to look at the three trauma groups (Poly, SCI and TBI) separately to determine if different trauma variables affect outcomes of the three groups. In addition, we plan to look at the GCS components (verbal, eye and motor) and their independent effects on outcomes. It may be that the GCS for motor response is an important predictor of outcomes for the SCI group, but not for the TBI group. The GCS for verbal response maybe important for the TBI group, but not for the SCI group. A limitation of this study mainly revolve around the discovery of multiple data points for the other trauma

Trauma and Rehabilitation Registry Merge

variables (eg. GCS, BP) and incompleteness of other available records (especially for patients who have been transferred from outside trauma facilities), making it an arduous task for data extrapolation and analysis. It is the hope that further finetuning of the databases will yield a larger merged study population from which trends and outcomes can be sufficiently derived.

FISCAL REPORT – Financial Issues and Considerations

A total of \$57,733.61 out of the \$63,695 award was expended for salaries, based on the effort devoted to the project by each budgeted investigator. \$5,961.39 was unexpended; a reimbursement check will be issued by our Accounting/AP Department and mailed to you within a few weeks.

The unexpended balance is due to the fact that:

- 1) The \$1,226 budgeted for travel was not utilized at all.
- 2) The budget accounted for a salary increase in early October of 2011, per MetroHealth's usual pattern. However, that increase did not take effect until April 29, 2012, nearly eight months later.
- 3) Fringe was budgeted at an average rate of 26%, but was charged based on the actual rate for each employee, per MetroHealth's normal policy. The average fringe rate for the employees who worked on this grant was only 20.02%.

An Award Summary Report and detailed report of personnel charges follows.

OHIO EMERGENCY OPERATIONS PLAN

BASE PLAN

I. FOREWORD

- A. Section 5502.22 of the Ohio Revised Code requires the State of Ohio to develop and maintain a statewide Emergency Operations Plan. The Ohio Emergency Operations Plan (Ohio EOP) is an all-hazards plan that encourages a cooperative, seamless relationship between all levels of official public response to emergencies and disasters.
- B. The Ohio EOP establishes a framework through which state-level departments and agencies and other designated non-governmental agencies assist local jurisdictions to respond to and recover from disasters that affect the health, safety, and welfare of the citizens of Ohio. The Ohio EOP follows the Emergency Support Function structure as outlined in the U.S. Department of Homeland Security's National Response Framework (NRF), and incorporates the National Incident Management System (NIMS), which includes the Incident Command System (ICS).
- C. The Ohio EMA is the central point of coordination within the state for response to, and recovery from, disasters. Established under Section 5502.22 of the Ohio Revised Code, the Ohio EMA coordinates state-level assistance and resources during an emergency and prepares the state for all hazards through planning, training, exercises and funding activities at the state and local level. These activities include providing planning assistance and administering state and federal funding/grant assistance to individuals and governmental entities recovering from disaster damage and costs.
- D. In carrying out and prioritizing emergency operations and in assigning resources under this Plan, the State of Ohio's response priorities are to: save lives, stabilize the incident, protect property, and conserve the environment. The primary focus of Ohio EMA when not in a response or recovery mode is to lead planning and mitigation efforts against the effects of future incidents and to ensure that the state, and the more than 11 million citizens residing in it, are prepared to respond to emergencies. The Executive Director of Ohio EMA is responsible for coordinating all activities of all agencies for emergency management within the state.
- E. The Ohio EOP's Base Plan describes the structure and processes that comprise Ohio's approach to all-hazards emergency management and the integration of the resources of Federal, State, local, and nongovernmental organizations. The Base Plan includes an Introduction, Background, Roles and Responsibilities, Concept of Operations, and two Tabs: the Primary and Support Agency Chart and Terms and Acronyms.

F. Emergency Support Functions

1. The Ohio EOP is structured according to 15 Emergency Support Functions (ESF) that correspond to the format of the NRF. In the State of Ohio, the ESF is the primary mechanism through which federal assistance to the state and state assistance to local governments is managed during emergencies. ESFs detail the roles and responsibilities of state, federal and other public and private agencies that are charged with carrying-out functional missions to assist local jurisdictions in response to disasters.
 2. Each ESF is headed by a Primary Agency that coordinates and reports activity for that ESF.
 3. The Primary Agency is supported by a number of Support Agencies, which are selected based upon their legislative authorities, knowledge, resources, and capabilities for responding to a specific type of disaster.
 4. Any of the Primary or Support Agencies to an ESF can function as a Lead Agency by taking the lead for and carrying out missions that are assigned to the ESF through the State EOC.
 5. State assistance can include the allocation of state resources and technical assistance, and the coordination of federal, interstate, intra-state, local government and non-government agencies in response to emergency events or incidents.
 6. Each primary and support agency has internal plans and procedures that detail how it will address response and recovery responsibilities during state-level emergencies.
 7. Primary and Support Agencies address their emergency response or recovery responsibilities in accordance with the legal authority governing their agency.
 8. Primary and Support agencies will be activated and notified for activation of the State of Ohio's Emergency Operations Center (SEOC) by Ohio EMA. Agency activation will be based upon the requirements for emergency response and recovery and the agencies that are activated will vary depending on those requirements.
- G. The Ohio EOP is promulgated annually. The 2012 edition of the Ohio EOP is the result of the cooperative effort of a number of state, federal and non-governmental organizations over the past year to update and/or create Ohio EOP elements. Eight major elements of the Ohio EOP were updated and/or created during the 2011 Planning Year.
- H. The Ohio EOP is updated continuously, with changes and additions to Plan elements occurring to respond to issues that arise. The date that appears at the lower right of each page is the date that each element was last updated.
- I. The Ohio EOP is available electronically from the Ohio EMA website at www.ema.ohio.gov. Questions regarding the Ohio EOP should be sent to the State of Ohio EOP Planner via email at baschwartz@dps.state.oh.us, or via mail at:

Ohio Emergency Management Agency
State EOP Planner
2855 W. Dublin-Granville Road
Columbus, Ohio 43235-2206

II. BACKGROUND

A. Ohio Hazard Analysis and Risk Assessment

1. According to the 2010 U.S. Census, Ohio is the most densely populated state in the Midwest with a population of 11,536,504, making it the 7th most populous state in the nation. Ohio's population rose by less than 200,000 persons between the years 2000 and 2010.
2. In its history, Ohio has responded to 46 Presidential declarations and thousands of natural and manmade incidents, resulting in many millions of dollars in losses and casualties. The January 2011 State of Ohio Hazard Identification and Risk Analysis (HIRA) identifies hazards that the State of Ohio faces. The HIRA groups these hazards into Natural, Human-Caused and Technological Hazards. The Natural Hazards are sub-grouped into Biological, Geological and Meteorological Hazards, and the Human-Caused Hazards are sub-grouped into Accidental and Intentional Hazards.
 - a. Natural Hazards - Biological
 - i. Human Diseases – Emerging disease, plague, smallpox, anthrax, West Nile Virus, Severe Acute Respiratory Syndrome (SARS), pandemic disease
 - ii. Animal Diseases– Foot-and-mouth disease, Bovine Spongiform Encephalopathy (mad cow disease)
 - iii. Animal or Insect Infestation or Damage
 - b. Natural Hazards - Geological
 - i. Earthquake
 - ii. Landslide, Mudslide, Subsidence
 - c. Natural Hazards - Meteorological
 - i. Areal and riverine flooding
 - ii. Windstorms
 - iii. Tornadoes
 - iv. Seiche Waves
 - v. Flash Floods
 - vi. Winter Storms - snow, ice, hail, sleet
 - vii. Extreme Cold

- viii. Extreme Heat
- ix. Drought
- x. Fire - forest, range, urban, wildland, urban interface
- xi. Geomagnetic Storms - temporary disturbance of atmosphere causing communications disruption
- xii. Lightning Strikes

d. Human-Caused Hazards - Accidental

- i. Radiological Incidents at Nuclear Power Generating Facilities
- ii. Water Control Structure Failures – dams and levees
- iii. Building/Structure Collapse - bridges and transportation tunnels
- iv. Fires
- v. Explosions
- vi. Fuel/Resource Shortages
- vii. Hazardous Materials - explosive, flammable liquid, flammable gas, flammable solid, oxidizer, poison, radiological, corrosive spill or release
- viii. Product Defects and/or Contaminations
- ix. Mine Collapses
- x. Energy/Power/Utility Failures
- xi. Air/Water Pollution and Contamination
- xii. Communications System Interruptions
- xiii. Transportation Accidents
- xiv. Space Debris

e. Human-Caused Hazards - Intentional

- i. Terrorism - chemical, biological, radiological, nuclear, explosive
- ii. Civil Disturbances, Public Unrest, Mass Hysteria, Riots
- iii. Cyber Attacks
- iv. Criminal Activity - vandalism, arson, theft, fraud, embezzlement, data theft

f. Technological Hazards - Accidental/Intentional

- v. Energy/Power/Utility Failures
- vi. Communications System Interruptions

3. Cyber System Failure/Attack Response

- a. Governmental jurisdictions, corporations, educational institutions, utilities, chemical companies, transportation systems, dams, and other critical infrastructure points in Ohio could all be vulnerable to damages and/or system failures due to cyber system infiltration and/or attack from either a domestic or foreign source. The “cyber system” is a fragmented collection of individual entities’ operating

systems that are loosely and indirectly connected via the internet. Although there have been a few recent documented attacks to systems that have originated from outside the country where the attack occurred, most cyber system attacks have originated from inside the country where the attack occurs.

- b. The above-mentioned entities have varying levels of capability and capacity to detect and respond to attacks/failures to their operating systems that create, store, and transmit data and information; or control the operations of critical infrastructure, including power generation, water purification and delivery, control of dams, transportation systems and traffic control, emergency responder dispatch, etc.
- c. The State's SEOC-based response to an incident caused by an attack/failure to/of an entity's operating system would be similar to a non-cyber-based incident response. Depending on the nature of the entity that is impacted, a cyber-generated SEOC-based response could be to a transportation system incident, a communication system incident, a dam failure incident, a hazmat incident, a power outage incident, etc. Additional SEOC-based facilitation and coordination activities in response to a cyber system attack and/or failure could include connecting an impacted entity to the U.S. Computer Emergency Response Team (US-CERT) or another organization that could assist them in recovering from the impacts.
- d. US-CERT (Computer Emergency Readiness Team) is charged with providing response support and defense against cyber-attacks for the Federal Civil Executive Branch (.gov) and with information sharing and collaboration with state and local government, industry and international partners. US-CERT interacts with federal agencies, industry, the research community, state and local governments, and others to disseminate reasoned and actionable cyber security information to the public.

B. Planning Assumptions

- 1. All local jurisdictions in Ohio are in compliance with the requirements of the Ohio Revised Code Sections 5502.21 through 5502.99 regarding the development and maintenance of local Emergency Operations Plans.
- 2. Emergencies and/or disasters requiring state-level assistance may occur at any time.
- 3. Communications equipment and capabilities are adequate to provide a coordinated state-level response.
- 4. All State of Ohio Departments and Agencies that have Primary and/or Support Agency ESF roles and responsibilities have identified personnel and resources and developed internal Standard Operating Procedures to ensure compliance with this plan and the ability to adequately and effectively respond to emergencies and/or disasters.

The procedures that are developed by Primary and Support Agencies to the Ohio EOP are documented and implemented through:

- a. Checklists
 - b. Resource listings
 - c. Maps, charts and other pertinent information
 - d. Staff notification and activation mechanisms
 - e. Processes for obtaining and using equipment, supplies and vehicles
 - f. Methodologies for obtaining mutual aid
 - g. Mechanisms for reporting information to Multi-Agency Coordination Systems, including Departmental Operation Centers and County and State Emergency Operations Centers
 - h. Communication System operating instructions, including systems to provide connectivity with private-sector and non-governmental organizations
5. All State of Ohio Departments and Agencies of state government will support the Ohio EOP to the level of their abilities, resources and expertise.

C. Authorizations

The following list of Authorizations and References includes Executive Orders, Department or Agency Directives, statutes, rules, plans and procedures that provide authorization and operational guidelines for the allocation and assignment of state resources in response to emergencies.

1. Federal

- a. “The Robert T. Stafford Disaster Relief and Emergency Assistance Act”, as amended, 42 U.S.C. Sections 5121, et seq.
- b. National Plan for Telecommunications Support in Non-Wartime Emergencies
- c. Executive Order 12148, Formation of the Federal Emergency Management Agency
- d. Executive Order 12656, Assignment of Federal Emergency Responsibilities
- e. Homeland Security Presidential Directive/HSPD-5, Management of Domestic Incidents, 2003
- f. Homeland Security Presidential Directive/HSPD-8, National Preparedness, 2003
- g. Uniform Administrative Requirements for Grants and Cooperative Agreements to state and Local Governments, 44 CRF Parts 13 and 206.

2. State

- a. Ohio Revised Code, Sections 5502.21 through 5502.51 and 5502.99, Emergency Management

- b. Ohio Administrative Code, Chapter 4501:3
- c. Ohio Revised Code Chapter 3750, State Emergency Response Commission
- d. Ohio Revised Code Chapter 4937, Utility Radiological Safety Board
- e. Ohio Administrative Code, Rules, Chapter 3750
- f. Ohio Administrative Code, Rules, Chapter 4937

D. References

1. Federal

- a. National Response Framework, 2008
- b. The National Incident Management System, 2008

2. State

- a. State of Ohio Hazard Analysis and Risk Assessment, 2011
- b. State of Ohio Enhanced Mitigation Plan, 2011
- c. Ohio Plan for Response to Radiation Emergencies at Licensed Nuclear Facilities

E. Overview of Emergency Support Functions

ESF-1 - Transportation addresses emergency-related transportation issues including assessing damage to, restoring, and maintaining land, air and water transportation routes during emergencies in coordination with governmental and private organizations as required; transporting state personnel, materials, goods, and services to emergency sites; and supporting evacuation and re-entry operations for threatened areas.

ODOT is the Primary Agency for ESF-1. ODOT liaisons will staff the SEOC and coordinate with appropriate support organizations to answer the needs of affected communities. These needs can include damage and situational assessments; repairs to bridges, culverts and other transportation infrastructures; repair of slips and slides; debris clearance; hauling and movement of personnel, materials and goods; and support of local evaluation activities.

ESF-2 – Communications and Information Technology ensures the provision of communication to support state, county, and federal communications efforts. ESF-2 coordinates with communications assets available from state agencies, voluntary groups, the telecommunications industry, county agencies and the federal government. Ohio EMA is the Primary Agency for ESF-2.

ESF-3 – Engineering and Public Works addresses most engineering concerns that are not related to transportation systems, therefore, ODNR serves as the Primary Agency for this function. ESF-3 agencies become involved in a wide array of mission types to assist local governments in response and recovery efforts. These missions could include damage inspection and assessment; demolition and stabilization missions; reconnaissance; emergency repairs; temporary and permanent construction; and debris management.

ESF-4 – Firefighting agencies and departments are responsible for fire suppression in rural, urban, and wildland settings that result from naturally-occurring, technological or man-made emergency incidents. Local jurisdictions have the responsibility of providing basic fire service protection. The Ohio Department of Commerce, Division of State Fire Marshal is the Primary Agency for ESF-4.

ESF-5 – Information and Planning is an element of the Multi-agency Coordination System within the SEOC and is consistent with information and planning activities addressed in the National Response Framework. ESF-5 manages the collection, processing, and analysis of information for dissemination to operational elements. It responds to the information requirements of assessment, response, and recovery personnel. It supports the identification of overall priorities for state-level emergency activities by conducting planning and research and developing displays and briefings as directed by the Executive Director of Ohio EMA, in his/her capacity as the State EOC Director.

In the activated SEOC, ESF-5 personnel report to the Information and Planning Section Coordinator. ESF-5 does not collect raw data in the field, but collects information from state and local personnel in the field, from personnel within Ohio EMA, from state personnel in other ESFs, from private and volunteer organizations, from local EMAs and EOCs, from agency-based Subject Matter Experts (SMEs), from hazard-specific experts, and from federal personnel. Ohio EMA is the Primary Agency for ESF-5.

ESF-6 – Mass Care addresses, coordinates and reports on the emergency mass care activities of state-level organizations responsible for sheltering, feeding, counseling, providing first aid, and related social services and welfare activities required to assist disaster survivors. The primary and support organizations of ESF-6 work as a team in the State Ohio Emergency Operations Center (SEOC) and at the site of an incident to address the emergency mass care needs of Ohio residents, visitors and transients. As the Primary Agency for ESF-6, Ohio EMA coordinates and reports on mass care activities throughout disaster response and recovery.

ESF-7 – Resource Support and Logistics Management provides logistical and resource support to state and local entities involved in emergency response and recovery. This support includes locating, procuring, and issuing resources including equipment, supplies, and services required by emergency responders and disaster survivors. The Ohio Department of Administrative Services is the Primary Agency for ESF-7.

ESF-8 – Public Health and Medical Services addresses public health and medical services concerns during emergency events or incidents. Public health concerns can include: assessment and surveillance of health needs of the affected communities; provision of health related services and supplies; identification of areas where health problems could occur; testing of products for public consumption; and environmental testing.

Medical services concerns can include: logistical support for state health personnel in the field; supply and restocking of health-related equipment and supplies; testing and/or disposal of food, medicine and related products affected by the disaster; assistance in assessing potable water and wastewater/solid waste disposal issues and coordination/equipment; assessment of medical needs of the affected communities in coordination with local emergency medical personnel; provision of medical-related services and supplies that support the affected communities; and assistance and support for mass fatality and triage sites. The Ohio Department of Health is the Primary Agency for ESF-8.

ESF-9 – Search and Rescue provides for the guidance and organization of state agencies that may be employed during Search and Rescue (SAR) operations. SAR operations include, but are not limited to, the location, recovery, and extrication of victims who become lost or entrapped as the result of a major disaster or life-threatening emergency. The Ohio Department of Natural Resources is the Primary Agency for Search and Rescue operations in Ohio.

ESF-10 – Hazardous Materials provides guidance to coordinate state agencies and resources to assist local jurisdictions with the response to a hazardous materials incident. In the plan, the Ohio Environmental Protection Agency is the Primary Agency for ESF-10 coordination; however the Lead Agency designation depends on the hazardous material involved. The Ohio Environmental Protection Agency takes the lead for chemical-related hazmat incidents; the Ohio Department of Health, Bureau of Infectious Disease Control takes the lead for biological-related hazmat incidents; the Ohio Department of Health, Bureau of Radiation Protection takes the lead for radiological-related hazmat incidents; and the Ohio Department of Commerce, Division of State Fire Marshal takes the lead for flammables- and explosives-related incidents.

ESF-10 responsibilities can also include: assisting local agencies in the assessment of, response to, and recovery from hazardous materials incidents; ensuring that prompt measures are taken to contain, remove, and dispose of spilled hazardous materials; and advising the public, in concert with local agencies, of the situation, potential dangers, and precautionary actions that should be taken.

ESF-11 – Food and Agriculture addresses concerns regarding agriculture functions in the State of Ohio during natural disasters. These concerns could include: assessment and surveillance of agriculture needs of affected areas; provision of agriculture related services and supplies; testing of products for public consumption; identification of food assistance needs; identification and application of appropriate agriculture assistance

programs; and obtaining and delivering emergency food supplies in coordination with USDA. The Ohio Department of Agriculture is the Primary Agency for ESF-11.

ESF-12 – Energy coordinates with energy utilities and related governmental and private organizations to provide information for state-level assessment, response and recovery operations related to fuel shortages, power outages, and capacity shortages that may impact Ohio citizens during disasters. The ESF-12 Team also provides information available on the transportation of fuel, sources for the provision of emergency power to support immediate response operations and the restoration of normal energy supplies to energy-affected communities. The Public Utilities Commission of Ohio is the Primary Agency for ESF-12.

ESF-13 – Law Enforcement response and recovery activities can include the following: maintaining law and order within legal authority; assisting with the dissemination of alerts, warnings and notifications; coordination of law enforcement activities from local EOCs and command centers as needed to manage resources and personnel; staffing, on order, roadblocks, traffic control points and other sites; providing evacuation/relocation support; providing communications to support agencies; supporting the relocation and temporary detention of persons confined to institutions; and maintaining and protecting logs, records, digests and reports essential to government and emergency operations. The Ohio State Highway Patrol is the Primary Agency for ESF-13.

ESF-14 – Recovery and Mitigation supports local government jurisdictions in the restoration of communities damaged by disasters. This support may involve coordination of state and federal disaster assistance. Recovery efforts includes coordination with state field personnel, interaction and cooperation with information and planning (ESF -5) personnel, and the Federal Emergency Management Agency (FEMA) for damage assessment and information gathering in order to develop disaster-specific recovery plans and to direct interaction with state and local officials for state recovery efforts. The Ohio EMA is the Primary Agency for ESF-14. Initial coordination efforts will be conducted from the SEOC. If warranted, coordination activities may continue from a FEMA Joint Field Office.

ESF-15 – Emergency Public Information and External Affairs ensures that sufficient state assets are deployed during incidents of a major disaster, emergency or statewide incident of significance to provide accurate, coordinated, and timely information to affected populations, governments, legislators and the media. Ohio EMA is the Primary Agency for ESF-15.

F. Overview of Annexes

The Ohio EOP's 15 ESFs are supported by two Support Annexes and three Incident Annexes. Table BP-2, below, lists the five Annexes and the Primary and Support Agencies that have assigned roles and responsibilities for each Annex.

The Annexes provide guidance and describe the functional processes and administrative requirements necessary to ensure efficient and effective implementation of Ohio EOP objectives.

The **Donations and Volunteer Management Support Annex** documents the design and operations of the state-level donations volunteer management system. The system is designed to manage the receipt, processing and distribution of a wide variety of donated goods and services that are given to assist emergency and disaster victims, and to gather and organize volunteers. This system is intended to be flexible to direct donors to other charitable organizations. Support agencies to this Annex are responsible for addressing and maintaining their own policies and operational structures.

The **Financial Management Support Annex** provides basic financial management guidance to state departments that assist communities in responding to and recovering from disasters. The intent is to ensure that funds are provided expeditiously and that operations are conducted in accordance with established laws and policies.

The **Drought Incident Annex** provides an effective and systematic means for the State of Ohio to assess and respond to a drought. It defines drought as it applies to Ohio, the types of drought and the drought indicators. Ohio EMA activates the Drought Assessment Committee to coordinate drought response, monitor trends, provide reports and make recommendations on response actions.

The **Terrorism Incident Annex** addresses the directives of the Homeland Security Presidential Directive - 8 and the Presidential Decision Directive 39 (PDD - 39) "United States Policy on Counterterrorism" (1995) that directs that specific efforts be made to reduce the overall vulnerability of the U.S. to acts of terrorism. These include the basic actions necessary to enhance the ability to manage both the initial and long-term phases of domestic terrorist events or incidents. Additional actions are detailed within the Annex to address issues stemming from the employment of Weapons of Mass Destruction (WMD).

The **Hazardous Materials Incident Annex**, which described the roles and coordinating mechanisms for managing hazardous materials incidents in the State of Ohio and delineated the responsibilities of each of the primary state agencies that regulate various hazardous materials under the statutory authority of the Ohio Revised Code (including substances considered Weapons of Mass Destruction (WMD) – chemical agents, biological agents, radiological/nuclear material, and explosive devices – has been incorporated into ESF-10, Hazardous Materials.

A chart of ESF and Annex Primary and Support Agency assignments for each organization appears in Tab A to the Base Plan.

III. INTRODUCTION

The threat environment in the United States and in the State of Ohio includes not only the traditional spectrum of manmade and natural hazards – wildland and urban fires, floods, hazardous materials releases, transportation accidents, tornadoes, winter storms, drought, pandemics, and disruptions to the information technology infrastructure – but also the threat of devastating terrorist attacks using chemical, biological, radiological, nuclear, and high explosive weapons.

The National Strategy for Homeland Security; Homeland Security Act of 2002; Homeland Security Presidential Directive-5 (HSPD-5), Management of Domestic Incidents; and Homeland Security Directive-8 (HSPD-8), National Preparedness, establish clear objectives for a concerted national effort to prevent terrorist attacks within the United States; reduce America’s vulnerability to terrorism, natural disasters, and other emergencies; and minimize the damage and hasten the recovery from attacks, natural disasters, and other emergencies that might and will occur.

Ohio has adopted the incident management constructs described in the National Incident Management System (NIMS) and the National Response Framework (NRF) (ORC Section 5502.28). These two documents provide details of a response system for addressing an all-hazards approach to emergency and disaster management.

The NRF is predicated on the NIMS that aligns a variety of Federal special-purpose incident management and emergency response plans into an effective and efficient incident management structure. The NRF and the NIMS together integrate the capabilities and resources of various governmental jurisdictions, incident management and emergency response disciplines, non-governmental organizations, and the private sector into a cohesive, coordinated, and seamless framework for emergency management.

The NIMS provides a nationwide template to enable Federal, State and local governments, and private sector and nongovernmental organizations to work together effectively and efficiently to prevent, prepare for, respond to, and recover from emergency and disaster incidents regardless of cause, size, or complexity. The NRF, using the NIMS, is an all-hazards plan that provides the structure and mechanisms for policy and operational direction for emergency and disaster incident management. Consistent with the model provided in the NIMS, the NRF can be partially or fully implemented, in the context of a threat, anticipation of a significant event, or in response to a significant event.

Using the NRF and the NIMS as a guide, the Ohio EOP establishes a framework through which State of Ohio Agencies assist local jurisdictions to respond to and recover from disasters that affect the health, safety, and welfare of the citizens of Ohio.

A. Purpose

The purposes of the Ohio EOP are to:

1. Ensure that a documented system exists to manage the prompt and efficient deployment of state-level emergency response and recovery resources, and that the system is coordinated with and communicated to agencies that will be responsible for resource deployment.

2. Ensure that a documented system exists to effectively implement and employ systems, plans, and resources necessary to preserve the health, safety, and welfare of persons affected by an emergency.
3. Ensure that a documented system exists to provide state-level resources to persons in need and for the rapid and orderly restoration and rehabilitation of persons and property affected by emergencies.

B. Scope and Application

1. The Ohio EOP

- a. Establishes a concept of operations spanning emergencies from initial monitoring through post-disaster response and recovery.
- b. Defines interagency coordination to facilitate the delivery of state and federal assistance to local jurisdictions when emergency needs exceed their capability or have exhausted local resources.
- c. Provides a system for the assignment of missions to state agencies to address local needs for emergency assistance.
- d. Assigns specific functional responsibilities to appropriate state agencies, private sector groups and volunteer organizations.

2. Phases Of Emergency Management

Emergency management operations are carried out within four distinct phases: mitigation, preparedness, response, and recovery. The scope of this plan includes response and recovery responsibilities for state government.

a. Mitigation

Mitigation includes actions that are taken before or after an emergency to eliminate or reduce the long-term risk to human life and property from natural, technological, and civil hazards. The goals of mitigation activities are to protect people and property and to reduce the costs of response and recovery operations.

Mitigation actions are identified in State and local mitigation plans. The mitigation planning process includes the identification of hazards that have or could occur and the identification of populations and assets that are vulnerable to each identified hazard.

b. Preparedness

Pre-emergency activities that assure that designated organizations will effectively respond to emergencies. Emergency management for preparedness involves four primary activities; training, exercising, planning and resource identification and acquisition.

Because it is not possible to mitigate completely against every hazard that poses a risk, preparedness measures can help to reduce the impact of the remaining hazards by taking certain actions before an emergency event occurs. Preparedness includes plans or other preparations made to save lives and facilitate response and recovery operations. Preparedness measures involve all of the players in the integrated emergency management system – local, State, and Federal agencies, the private sector, non-governmental agencies and citizens.

c. Response

Response actions are taken during or directly after an emergency to save lives, to minimize damage to property and enhance the effectiveness of recovery. Response begins when an emergency event is imminent or immediately after an event occurs. Response encompasses all activities taken to save lives and reduce damage from the event. Good planning, training, and exercising before an event occurs can help reduce cascading events and their effects.

d. Recovery

Post-emergency short-term activities that return infrastructure systems at the site of an incident to minimum operating standards and long-term activities designed to return the site to normal conditions. Recovery begins right after the emergency. Some recovery activities may be concurrent with response efforts. Long-term recovery includes restoring economic activity, rebuilding community facilities and housing, and meeting the incident related needs of the private sector. Long-term recovery (stabilizing all systems) can sometimes take years.

3. The Ohio Emergency Operations Center

a. The State of Ohio Emergency Operations Center (SEOC) is a permanent facility that is located at 2855 West Dublin-Granville Road, Columbus, Ohio 43235-2206. The 24-hour emergency number for the SEOC is 1-614-889-7150.

b. State of Ohio EOC (SEOC) Capabilities:

- i. The SEOC is composed of the following functional areas: Assessment Room, Executive Room, Operations Room, Communications Center and the Joint Information Center.
- ii. The Operations Room has fifty-two work stations for state agencies and workstations for the SEOC staff. These workstations accommodate up to 104 personnel.
- iii. The SEOC uses a Duty Officer system to take incident reports when not activated.

- iv. The SEOC has a one-megawatt diesel-powered generator for emergency back-up power. An emergency well with pumps and alternative water treatment provides a back-up water supply.
- v. The SEOC has a Protection Factor of 140 to ensure viability in the event of nuclear attack. Air filters in a self-contained ventilation system protect personnel in the event of hazardous material releases.
- vi. ESF-2 – Information Technology and Communications, contains information on the SEOC's communications and computing capabilities, as well as information on secure communication equipment and capabilities.

c. Continuity of Operations

- i. Ohio EMA maintains a Continuity of Operations Plan (January 2010) that outlines the Continuity of Operations Program (COOP) for the Agency. The document, in conjunction with supporting Division/Branch COOP procedures and the COOP Functions Database, provides the framework and tools to maintain operations, if the functionality of the Agency's building is compromised or the ability to staff essential functions is degraded. The Agency's COOP Plan provides policy and guidance for Agency personnel, to ensure that critical operations are continued in the event of an emergency or threat of an emergency.
- ii. The goal of the COOP plan is to be able to restore operations of essential functions at an Alternate Working Location (AWL) within 12 hours and to maintain them at the AWL for 30 days.
- iii. Implementation of the plan will be at the discretion of the Ohio EMA's Director or his/her designee.
- iv. In order to continue essential internal operations and to provide support to the operations of county and external agencies during a catastrophic event, Ohio EMA's State Emergency Operations Center (EOC) must be able to continue limited operations, if the primary EOC is damaged or destroyed, as part of the transition to and stand-up of the alternate EOC. The Plan provides a mechanism for this to be done within 1- 2 hours, through an alternate facility and/or a virtual EOC using the EOC's software, which is backed up on the ODPS server. Limited operations will entail, at a minimum, the continued flow of messages through the EOC software, while other task such as mission tracking and situation analysis may be postponed until the EOC's AWL is operational.
- v. The Continuity of Operations Plan will be activated when the functionality of the building is no longer sustainable, either because of damage to the building or because of a decreased number of available staff, due to injury or illness. This includes day-to-day operations in which the Emergency Operations Center (EOC) is not activated or needed, as well as when it is activated.

- vi. If the building is damaged and rendered non-functional, and the damage is localized to the immediate area, then operations will be moved to the Agency's primary AWL, which is located at a state-owned facility within the City of Columbus. If the building is damaged in an incident that impacts a much wider area, including the primary AWL, then operations will be moved to the secondary AWL, which is located at a state-owned facility approximately one hour travel time from the agency's primary facility. If damage is limited to the primary facility, and if Primary AWL is unavailable, Ohio EMA management will work with the Department of Administrative Services to locate one or more offices to house daily operations until the primary facility can be restored to functionality.

4. Cooperative Relationships between Levels of Government

- a. When county-level capabilities are not sufficient to address a disaster, the chief executive or their designee may declare an emergency for their affected jurisdiction and request state assistance in coordination with the County EMA Director by contacting the Ohio Emergency Management Agency.
- b. Depending upon the scope and intensity of the event, the Governor may declare a state of emergency, which will activate state resources and allow them to assist in local response outside of their normal operating constraints. All state assistance is designed to support ongoing local response efforts.
- c. State ESFs address emergency response/recovery missions given to them by county EMA Directors through the SEOC. It is the responsibility of the state to determine how to prioritize, plan for, and address the incident needs expressed by County EMA Directors. State missions will be closely coordinated with local EMA officials and responders through county EOCs throughout the duration of the emergency or incident.
- d. Ohio EMA will contact FEMA Region V in Chicago, Illinois to alert them if it is determined that the Governor will be submitting a formal request for federal disaster assistance. The state request, including a FEMA review of eligibility, will be channeled through FEMA Region V to FEMA Headquarters in Washington D.C. for submission to the President. FEMA is authorized to use the full authority of the Stafford Act and may deploy a Liaison Officer or the Federal Emergency Response Team (ERT) to the SEOC.
- e. Through implementation of the NRF, assistance will be provided to Ohio through federal ESFs. Federal and state ESFs will establish a direct liaison relationship with one another at the SEOC, at the JFO and at the site of the incident or event. These state-federal ESF relationships will remain in effect throughout response and recovery operations, or until the federal ESFs are deactivated.
- f. The Governor, through the Executive Director of Ohio EMA, is responsible for overall decision-making and coordination of state emergency operations.

5. Whole of Community Planning

- a. The State of Ohio continues to move toward having a system for emergency operations planning and response that fully involves the whole community. The State of Ohio promotes FEMA's "Whole of Community" initiative that encourages jurisdictions and response agencies at all levels to involve a wide array of public, private-sector and non-governmental sector agencies that represent the full spectrum of personal need in the emergency operations plan and agency-based operational plan review and development process. The Whole of Community approach is being incorporated into all PPD-8 deliverables, including the National Preparedness Goal, National Preparedness System description, National Planning Frameworks
- b. As defined by FEMA, the Whole of Community approach to planning "is a means by which residents, emergency management practitioners, organizational and community leaders, and government officials can collectively understand and assess the needs of their respective communities and determine the best ways to organize and strengthen their assets, capacities, and interests."
- c. Ohio has long been a pioneer in forwarding the Whole of Community approach to emergency operations planning. As the State continues to expand our use of Whole of Community concepts in the plan development process, we will attempt to engage the full capacity of the private and nonprofit sectors, including businesses, faith-based and disability organizations, and the general public to help us plan better to prevent, protect against, mitigate, respond to, and recover from any type of threat or hazard effectively.
- d. It is the State's hope that expanding the use of Whole of Community concepts in State-level emergency management operations will make emergency operations planning, response and recovery outcomes more efficient, more effective, and more responsive to the needs of Ohio's residents, communities and businesses.

D. Incident Management Structure

1. CAS Level #1 – Situational Awareness and Monitoring

The activation of the SEOC's Assessment Room at CAS Level #1 will start a monitoring and assessment process designed to create situational awareness, stimulate communication within the Ohio EMA staff, and structure ongoing information sharing and consultation with local jurisdictions and/or state organizations to assess and monitor the incident from the time of inception to transition to Joint Field Office operations.

The Planning & Information Section Coordinator will organize ESF #5 personnel, Ohio EMA management, and state agency representatives to facilitate a briefing in the Assessment Room of the SEOC. In the Assessment Room, information is gathered and the event is monitored in cooperation with local emergency management personnel. Representatives of a Core Group of State Agencies report on information they are obtaining through their local resources and activities they are performing as part of their agency's normal mission requirements. Depending upon the course of development of the incident, CAS Level #1 is either brought to closure or is transitioned to CAS Level #2.

2. CAS Level #2 – Increased Monitoring/State Agency Response

Under CAS Level #2, Ohio EMA state liaison personnel are sent to the site of an incident to assess damage, provide information relevant to emergency event or incident and to assess the needs of the political jurisdiction as the situation or incident escalates. State-agency field liaisons are sent to the site of the emergency event or incident to evaluate the situation and to provide information to the SEOC. The affected local jurisdiction may declare emergency if local resources have been exhausted and the need arises to employ state resources. If assistance from state agencies is required, the Governor of the State of Ohio will declare a state of emergency and representatives of State Agencies respond to the EOC to work and report any assigned missions and brief them in the EOC at scheduled times.

Ohio EMA will keep FEMA Region V, and any other appropriate local, state, federal or private partner informed of situational issues during CAS Level #2 in a Situation Report or other appropriate means. If the incident warrants, state resources may be pre-positioned at the site of a potential incident and/or event. If state assistance is not needed, the state will continue to monitor the incident until the incident is closed or is transitioned to CAS Level #1.

3. CAS Level #3 – State Resources and Federal Response Assistance

Activation of the SEOC with Operations Room staffing at various levels from day-time hours through 24-hour staffing and with the activation of State ESF's occurs at CAS Level #3. The Governor of Ohio may declare a state of emergency for the affected jurisdiction, and FEMA Region V monitoring may increase to the point that a Federal Emergency Support Team (FIRST) or a FEMA Emergency Response Team – Advance (ERT-A) team is sent to Ohio and federal resources are pre-positioned for federal response assistance.

State-level damage assessments, need assessments and information-gathering operations will continue. If the incident continues to escalate and state resources are inadequate to address response and/or recovery needs, then the Governor of the State of Ohio may request response and recovery resources and assistance from the federal government.

4. Ohio EMA will coordinate emergency response with the federal Joint Field Office (JFO) as appropriate, and State Agencies that have assigned ESF responsibilities in the Ohio EOP as Primary and Support Agencies will coordinate activities with their federal ESF counterparts. In CAS Level #3, the state maintains close coordination with local emergency management agencies to assess the incident. Operations staff will continue to monitor the situation and coordinate the application of state resources to identified missions until CAS Level #3 is brought to a close or is transitioned to CAS Level #2 or CAS Level #1.

IV. CONCEPT OF OPERATIONS

- A. Local Jurisdiction Response – All emergency incidents begin locally and initial response is carried out by local jurisdictions' response resources under the coordination and facilitation of county EMAs. It is only after local emergency response resources are exhausted or local resources do not exist to address a given emergency that state emergency response resources and assistance may be requested by local authorities.
- B. State-level response in support of local incidents and disasters, including the assignment of State-level response resources will be directed toward addressing the critical tasks of saving lives; stabilizing the incident; protecting and preserving property; and conserving the environment.
- C. The National Incident Management System establishes a clear progression of coordination and communication from the local level to state to regional to national level. Local incident command structures (ICP(s) and Area Command) are responsible for directing on-scene emergency management and maintaining command and control of on-scene incident operations. Support and coordination components consist of multi-agency coordination centers/emergency operations centers (EOCs), and multi-agency coordination entities.

EOCs provide central locations for operational information sharing and resource coordination in support of on-scene efforts. EOCs aid in establishing priorities among the incidents and associated resource allocations, resolving agency policy conflicts, and providing strategic guidance to support incident management activities. In accordance with NIMS processes, emergency response resource and policy issues are addressed at the lowest organizational level practicable. If the emergency response issues cannot be resolved at that level, then they are forwarded up to the next level for resolution.

D. Adoption of National Response Framework and the National Incident Management System

- 1. The NRF organizational structure addresses both site-specific incident management activities and the broader regional or national issues related to the incident, such as impacts to the rest of the country, immediate regional or nationwide actions required to avert or prepare for potential subsequent events, and the management of multiple threats or incidents; particularly those that are non-site-specific, geographically dispersed or evolve over a long period of time.
- 2. The Ohio Emergency Management Agency has made it a policy to adopt, where possible, the organizational structure and concepts presented in the National Response Framework (NRF). Ohio has taken the following actions in adopting the NRF structure and its concepts:
- 3. Adoption of the National Incident Management System
 - a. Section 5502.28 of the Ohio Revised Code requires all departments, agencies and political subdivisions within the state to utilize the National Incident Management System (NIMS) as the standard procedure for incident management in the State of

Ohio. Ohio EMA has carefully reviewed the Ohio EOP and has incorporated a number of NIMS concepts and has incorporated NIMS concepts into the operational structure of the State EOC.

b. Facilitation of NIMS Training and Adoption at the State and County Level

Ohio EMA, through its Training Section, has encouraged and facilitated NIMS training at the state and local level by making available NIMS course materials and tracking the completion of NIMS training. NIMS training at all levels from first responders to elected officials has been made a requirement for the receipt of federal preparedness, including but not limited to Homeland Security and Emergency Management funding that passes through from the state to local jurisdictions.

Since its inception, Ohio EMA has facilitated and coordinated the completion of the NIMSCAST Assessment by assisting counties and other jurisdictions in the completion of their NIMS compliance assessments by assisting them with entering into, logging on to and coordinating the entry of information into the NIMSCAST system at the county and city/township level.

c. Organization and Support of Regional Multi-Agency Coordination Systems

Ohio EMA participated with the Homeland Security Division of the Ohio Department of Public Safety in the creation and coordination of the Ohio Response System (ORS). ORS is an effort to coordinate emergency response in a unified manner, utilizing existing associations and organizations as lead agencies. ORS capabilities focus on the overwhelming impact of a natural or man-made incident that quickly exceeds local resources. The responses of regional resources supplement the resources of local jurisdictions and operate under the control of the jurisdiction.

Development of the ORS meets a requirement of the Ohio Homeland Security Strategic Plan. Under the ORS, emergency response is provided through a tiered arrangement of strategically located local, county and regional response capabilities.

d. Integration of ICS into Operational Standards

Ohio EMA uses an ICS-based Multi-Agency Coordination System structure for the operation of the State Emergency Operations Center. Ohio EMA also supports the adoption and employment of ICS concepts and operational constructs through training and through support of the efforts of other state agencies that have adopted ICS as their emergency response organizational model.

e. Critical Statewide Protective Actions

- i. Ohio's homeland security efforts have been strengthened by the establishment of functions within the Ohio Department of Public Safety, Ohio Homeland Security Division (OHS) that oversee critical statewide protective actions. Through the Division, the Department has a goal of ensuring that Ohio is taking every possible

measure to protect the safety and well-being of our citizens. OHS's mission is to work with federal, state and local governments to ensure that Ohio's citizens and assets are protected from the possibility of a terrorist attack.

- ii. The roles and responsibilities of Ohio EMA and OHS are organized according to the National Response Framework's five phases; Prevention, Protection, Response, Recovery, and Preparedness.
- iii. OHS is responsible for **Prevention** activities that gather, analyze and share intelligence (primarily the Strategic Analysis and Information Center) and **Protection** activities that identify and protect Ohio's critical infrastructure (primarily OHS's Critical Infrastructure Protection program). OHS keeps these functions aligned with law enforcement through their Domestic Preparedness program.
- iv. Ohio EMA is responsible for **Response** activities that develop plans for response to all hazards, including terrorism, and managing the overall direction and control of the state's emergency response; and **Recovery** activities that restore impacted areas to pre-event conditions.
- v. Preparedness activities are a component of each of the four phases (Prevention, Protection, Response and Recovery) and preparedness responsibilities remain with the agency that has responsibility for that phase. OHS takes responsibility for preparedness activities related to prevention and protection, and Ohio EMA takes responsibility for preparedness activities related to response and recovery.

d. Coordination with Federal-Level Facilities and Organizational Entities

- i. The **Joint Field Office** (JFO) is a temporary Federal facility established to coordinate the delivery of Federal assistance to affected jurisdiction(s). The JFO is a multi-agency coordination center that provides a central point for Federal, State, local, tribal, nongovernmental and private sector organizations with primary responsibility for incident oversight, direction, and/or assistance. The JFO enables the effective and efficient coordination of Federal and State incident-related prevention, preparedness, response, and recovery actions.

The JFO utilizes the scalable organizational structure of the NIMS ICS. The JFO organization adapts to the magnitude and complexity of the situation at hand, and incorporates the NIMS principles regarding span of control and organizational structure: command, operations, planning, logistics, and finance/administration.

- ii. The **Federal Coordinating Officer** (FCO) manages Federal resource support activities related to *Stafford Act* events and incidents. The FCO has the authority under the *Stafford Act* to request and/or direct Federal agencies to utilize authorities and resources granted to it under Federal law (including personnel, equipment, supplies, and managerial, technical, and advisory services) in support of State and local assistance efforts. The FCO assists the Unified Command and/or the Area

Command. The FCO works closely with the SFLEO (Senior Federal Law Enforcement Official) and other SFOs (Senior FEMA Official). In *Stafford Act* situations, the FCO provides overall coordination for the Federal components of the JFO and works in partnership with the SCO to determine and satisfy State and local assistance requirements.

- iii. The **Federal Resource Coordinator** (FRC) manages Federal resource support activities related to non-*Stafford Act* Incidents of National Significance when Federal-to-Federal support is requested from DHS. In non-*Stafford Act* situations when a Federal department or agency acting under its own authority has requested the assistance of the Secretary of Homeland Security in obtaining support from other Federal departments and agencies, DHS designates an FRC to coordinate Federal assistance. In these situations, the FRC coordinates support from other Federal departments and agencies using interagency agreements and memoranda of understanding rather than the mission assignment process used for *Stafford Act* incidents. Relying on the same skill set, DHS will select the FRC from the FCO cadre. The FRC is responsible for coordinating the timely delivery of resources to the requesting agency.
- iv. The **Senior Federal Law Enforcement Official** (SFLEO) is the senior law enforcement official from the agency with primary jurisdictional responsibility as directed by statute, Presidential directive, existing Federal policies, and/or the Attorney General. The SFLEO directs intelligence/investigative law enforcement operations related to the incident and supports the law enforcement component of the Unified Command on-scene. In the event of a terrorist incident, this official will normally be the FBI SAC.
- v. **Senior Federal Officials** (SFOs): The JFO Coordination Group may also include other Federal department or agency officials representing agencies with primary statutory responsibility for incident management. SFOs utilize existing authorities, expertise, and capabilities to assist in management of the incident working in coordination with the FCO, SFLEO, and other members of the JFO Coordination Group.
- vi. When activated, a **Disaster Recovery Center** (DRC) is a satellite component of the JFO and provides a central facility where individuals, businesses and private non-profits that have been affected by an incident can obtain information on disaster recovery assistance programs from various Federal, State, local, tribal, private sector, and voluntary organizations.

E. Federal Response Actions

1. Once an incident occurs, federal response priorities shift from prevention, preparedness, and incident mitigation to immediate and short-term response activities to preserve life; stabilize the incident; protect property and the environment; and preserve the social, economic, and political structure of the community. In the context of a terrorist threat, simultaneous activities are initiated to assess regional and national-

level impacts, as well as to assess and take appropriate action in response to other potential threats. Reinforcing the initial response to an incident, some Federal agencies may operate in the Incident Command Post as Federal first responders and participate in the Unified Command structure. Once the JFO is established, the JFO Coordination Group sets Federal operational priorities. The JFO provides resources in support of the Unified Command and incident management teams conducting on-scene operations through the State and local EOCs.

2. Federal response activities include elevating the level of activation for the HSOC, including both the Operational Information and Intelligence and the Resource Management Branches. The National and/or the Regional Response Coordination Centers (NRCC/RRCC) activate the appropriate federal ESFs as needed to mobilize assets and the deployment of resources to support the incident. The NRCC and/or the RRCCs facilitate the deployment and transportation of the ERT, and other teams, such as teams under the National Disaster Medical System, or Urban Search and Rescue teams. Other response actions include the establishment of the JFO and other field facilities, and providing a wide range of support for incident management, public health, and other community needs.
3. Federal response actions include immediate law enforcement, fire, and medical service actions; emergency flood fighting; evacuations; transportation system detours; emergency public information; minimizing additional damage; urban search and rescue; the establishment of facilities for mass care; the provision of public health and medical services, food, ice, water, and other emergency essentials; debris clearance; the emergency restoration of critical infrastructure; control, containment and removal of environmental contamination; and protection of responder health and safety.
4. During the response to a terrorist event, law enforcement actions to collect and preserve evidence and to apprehend perpetrators are critical. These actions take place simultaneously with response operations necessary to save lives and protect property, and are closely coordinated with the law enforcement effort to facilitate the collection of evidence without impacting ongoing life-saving operations.
5. In the context of a single incident, once immediate response missions and lifesaving activities conclude, the emphasis shifts from response to recovery operations and, if applicable, hazard mitigation. The JFO Planning Section develops a demobilization plan for the release of appropriate components.

F. Recovery Actions

1. Recovery involves actions needed to help individuals and communities return to normal when feasible. The JFO is the central coordination point among Federal, State, local, and voluntary organizations for delivering recovery assistance programs. The JFO Operations Section includes the Individual Assistance Branch, the Public Assistance Branch, and the Mitigation Branch. The Individual and Public Assistance Branches of the JFO Operations Section assess State and local recovery needs at the outset of an incident. FEMA coordinates disaster recovery programs with federal

agencies and departments identified in the NRF during response. These activities may transition to the recovery phase of the event. FEMA also ensures programs identified in the Stafford Act are implemented, when appropriate.

2. The federal Individual Assistance Branch coordinates delivery of recovery programs to meet disaster related needs of the private sector, including individuals, families and businesses: coordinates with volunteer organizations; and establishes Disaster Recovery Centers, if needed, with federal, state, local and voluntary organization representation.
3. The federal Public Assistance Branch of the JFO coordinates short term delivery of the Stafford Act authorized public assistance program (PA). PA reimburses eligible applicants, State and local governments and eligible private nonprofit organizations, for costs associated with emergency protective measures, debris removal, and repair or replacement of incident-damaged facilities.
4. FEMA and the Ohio EMA coordinate with other federal, state and local officials to assess the long-term impacts of an incident to identify available resources, and facilitate the development of a course of action to most efficiently apply those resources to restore and revitalize impacted communities.
5. The above branches assist in identifying appropriate assistance programs to meet applicant needs, synchronizing assistance delivery, and encouraging incorporation of hazard mitigation measures where possible in the Recovery process. See Section D, below for more detailed information regarding Mitigation.
6. The Ohio EMA Disaster Recovery Branch (DRB) provides training, guidance and technical assistance regarding supplemental disaster assistance programs. DRB provides guidance to county/local/state officials for preliminary damage assessment (PDA) activities following events, coordinates the Joint Federal/State PDA, and drafts federal disaster assistance request letter(s). The branch also has a role in administering the Individual Assistance and Public Assistance Programs. Specific long and short term responsibilities vary by program. These programs are designed to assist the public (state and local governments and certain eligible private non-profit organizations) and private (individuals, families and businesses) sectors following declared disasters.
7. The Disaster Recovery Branch
 - a. Administers applicable disaster assistance programs for the private and public sectors.
 - b. Coordinates local governments' requests for technical and financial assistance from the state following a local or gubernatorial disaster declaration.
 - c. Conducts damage assessment to determine the impact of an incident and the types of supplemental assistance needed to recover from uninsured losses or damages to the private and public sectors.

- d. Provides disaster recovery assistance training for state, county and local governments, voluntary organizations and members of the general public.
- e. Provides technical assistance to public officials regarding emergency management programs and types of available disaster assistance.

G. Mitigation Actions

1. The mission of the Mitigation Branch is to integrate hazard mitigation principles in a variety of ways to make Ohio communities more sustainable and to make citizens more resilient to future disaster incidents. This mission is implemented through projects and planning efforts that are aimed to reduce the cost of damage caused by disasters, and to minimize the impact on citizens, businesses, and properties. The Mitigation Branch maintains the State's All Hazard Mitigation Plan, coordinates the State Hazard Mitigation Team (SHMT), is the state entity responsible for implementing FEMA's Hazard Mitigation Assistance programs, and assists Ohio communities in their mitigation planning efforts.
2. Hazard Mitigation Planning – Hazard mitigation planning involves identifying potential hazards, assessing potential risk they pose (frequency and magnitude), assessing the vulnerability of the built and natural environment to those risks, and identifying mitigation goals/objectives/actions to reduce risk and vulnerability. The Mitigation Branch assists Ohio communities with the development and update of local mitigation plans through training, funding, and technical assistance. State and local mitigation plans must be developed and updated to ensure continued mitigation program funding through FEMA.
3. Hazard Mitigation Grant Program – The purpose of the Hazard Mitigation Grant Program is to reduce the loss of life and property due to natural disasters, and to enable mitigation measures to be implemented during the immediate recovery from an incident. Projects utilizing these grant funds may be used for mitigation planning activities, innovative mitigation actions that may be difficult to quantify from a benefit/cost perspective, and traditional mitigation projects such as protecting buildings and property from damages resulting from natural hazard events.
4. Mitigation Grant Programs that are administered in the State of Ohio include the Flood Mitigation Assistance Program, the Pre-Disaster Mitigation Competitive Program, the Repetitive Flood Claims program, and the Severe Repetitive Loss program.

H. Demobilization and Transition

1. When a centralized Federal coordination presence is no longer required in the affected area, the JFO Coordination Group implements the demobilization plan to transfer responsibilities and close out the JFO. After the closing of the JFO, long-term recovery program management and monitoring transitions to individual agencies' regional offices and/or headquarters, as appropriate.

2. Similarly, at the state level, the state's Disaster Recovery Branch participates in operations from the beginning of a disaster through the completion of long-term recovery assistance. Ohio EMA maintains a procedure (Procedure #506, Disaster Recovery Branch) to ensure a smooth transition of duties, programs, personnel and equipment from the SEOC to the FEMA Joint Field Office (JFO). This procedure also includes the transition of duties, programs, personnel and equipment back to Ohio EMA/SEOC from the FEMA JFO upon closure of the JFO facility by FEMA.
3. During the Emergency Response Operations phase, Recovery Branch personnel collect private and public damage information from local jurisdictions. During the Recovery Operations phase, the Recovery Branch coordinates and staffs onsite Disaster Recovery Centers where disaster victims can come to apply for and receive financial and other assistance.

I. Remedial Actions and After-Action Reporting

1. The State of Ohio's roles and responsibilities in working to carry out remedial actions and after-action reporting include, but are not limited to:
 - a. Establishing, maintaining and revising After-Action Procedures.
 - b. Facilitating the collection of feedback from all agencies and individuals involved in incidents or exercises, including the utilization of After-Action Meetings and After-Action Surveys.
 - c. Proposing, assigning, and tracking the progress of corrective actions.
 - d. Disseminating the results of corrective actions and lessons learned.
2. Ohio EMA engages in an after-action process through ESF-5, Information and Planning. The after-action effort is an effective processes for capturing the key issues that arise during incidents or exercises in order to develop corrective action plans to resolve problems, or to disseminate best practices. The After-Action Team provides the means for Ohio EMA and other State and local agencies to make inquiries and recommendations through After-Action Survey forms, which can be submitted at any time, and via participation in After-Action Meetings.
3. Ohio's after-action feedback mechanisms contribute to the creation of an after-incident preliminary Corrective Action Plan. The Corrective Action Plan presents issues and inquiries raised by State and local agencies, and recommended improvements and corrective action measures that are assigned to the appropriate Ohio EMA branches for follow-up. Individuals in Ohio EMA are responsible for following-up on their assigned issue(s), following progress of its resolution from beginning to end, and providing progress updates to the After-Action Team throughout the process. Progress updates are sent to all affected agencies, some of whom may be actively cooperating in the resolution of the issues.

J. Emergency Operations Plan Maintenance – Ohio EMA’s Plans Branch has the responsibility to work with state agencies and non-governmental organizations to update, revise and maintain the Ohio EOP ESFs, Annexes and other elements. The Plans Branch works initially with Primary Agencies and then with Support Agencies to review agency’s assigned roles and responsibilities and relationships between ESFs and Annexes.

K. Coordination and Approval

1. When all Primary and Support Agencies have reviewed and commented on a plan segment and have made recommendations for changes, the agencies usually meet with Ohio EMA staff for a roundtable discussion to reach agreement on agency roles and responsibilities and the segment’s purpose, mission, scope, and concept of operations. If the changes to a Plan (ESF, Annex, Tab) are small enough, this process is sometimes accomplished via telephone and/or electronic mail.
2. When all involved agencies have provided input to the update process and a final document has been decided on, Agency Directors sign an acceptance document stating they understand the assignments of responsibility for their agency that they will give operational support.

L. Promulgation

1. The Ohio EOP is promulgated by the Governor of the State of Ohio annually. Approximately two months prior to the desired promulgation date, the following actions are initiated by the State EOP Planner:
 - a. The existing version of the Emergency Operations Plan is reviewed to ensure that its elements accurately reflect and respond to recent changes in law, policy, Corrective Action Plans, content and general directional changes.
 - b. The State EOP Planner produces a Promulgation signature document and a Plan transmittal memo that describes the Plan, reviews changes that occurred during the previous calendar year, and reviews changes that are proposed to occur during the next calendar year.
 - c. The Plan is submitted to the Ohio EMA Director for his/her review and approval.
 - d. After review and approval of the Plan by the Ohio EMA Director, is submitted to the Governor of the State of Ohio for his/her review, approval and Promulgation.
 - e. Upon receipt of the Governor’s Promulgation signature, the signed signature page is added to the Ohio EMA website.

M. Distribution

1. Following Promulgation of the Plan by the Governor of the State of Ohio, the Ohio EOP is filed and distributed as follows:
 - a. Notification of the Promulgation of the Emergency Operations Plan is transmitted electronically to state departments and non-governmental organizations that are listed as either a Primary or Support Agency in the Plan, County EMA Directors, FEMA Region V, Region V states, and neighboring states.
 - b. Hard copies of the Plan are produced and delivered to the Governor, the Ohio EMA Director, and the Director of the Ohio Department of Public Safety.
2. The Ohio EOP is available via the internet by downloading the information from Ohio EMA's website at:

http://ema.ohio.gov/EOP_Detail.aspx , or by contacting the State EOP Planner at baschwartz@dps.state.oh.us, or by writing to:

Ohio Emergency Management Agency
State E.O.P Planner
2855 W. Dublin-Granville Road
Columbus, Ohio 43235-2206

V. ROLES AND RESPONSIBILITIES

A. Operational Overview

To ensure a coordinated, effective, and efficient response to disasters and/or emergencies, all agencies and organizations that have assigned EOP roles and responsibilities must be immediately available and committed to fulfilling their assigned roles and responsibilities to assist local governments and meet the needs of Ohio citizens.

1. Direction and Control
 - a. The Executive Director of Ohio EMA or designated representative may activate the SEOC in order to coordinate state emergency response and recovery activities.
 - b. When a local jurisdiction(s) determines that state-level resources are required to effectively respond to a disaster, county officials will contact Ohio EMA and request assistance, which may result in the Governor issuing an emergency proclamation.
 - c. In the event the Executive Director or [Ohio EMA] determines that it will likely need resources from the federal government, Ohio EMA will begin discussions with the Governor's Office and federal partners. If preliminary damage assessments support the need and meet the federal criteria, the Governor can ask that a joint damage

assessment be conducted. Based on that information, the Governor may request a Stafford Act (FEMA) emergency or major disaster declaration.

- d. When the President issues a federal disaster declaration, the Governor will designate a State Coordinating Officer (SCO) to function as the designated liaison between the State of Ohio and the Federal Emergency Management Agency (FEMA). Historically, the Executive Director of the Ohio Emergency Operations Agency has served as the SCO. The SCO acts in coordination with FEMA's Federal Coordinating Officer (FCO) when federal response and recovery operations are activated in Ohio. FEMA and the State of Ohio work together at the site of the incident, in the SEOC and in the Joint Field Office (JFO), which is the site for FEMA operations. FEMA will support public information efforts throughout the emergency either at the SEOC or from the JFO.
- e. The Executive Director of Ohio EMA, the Governor or the Governor's designee and appropriate and necessary members of the SEOC Executive Group and state executives manage state emergency response and recovery resources.
- f. Ohio EMA will notify state agencies and other appropriate organizations when the SEOC is activated.
- g. Each ESF in Ohio's EOP has one-or-more Primary Agencies and several Support Agencies. The Primary Agency provides overall coordination and reporting of the functional activities of their assigned ESF. A Lead Agency is an agency that because of their expertise and ability has the responsibility of carrying-out a specific function within the operations of an ESF team. Any of an ESF's Primary or Support Agencies may serve as a Lead Agency. ESF teams are designed to coordinate with federal ESF counterparts when federal response and recovery teams are activated in Ohio in the SEOC and/or the JFO.
- f. A non-governmental organization (association, board, commission, agency) will be considered for a role as a Support Agency in the Ohio EOP if they meet the following criteria:
 - i. The organization has a unique set of resources, expertise, information, skills or assets that is not available from a state agency.
 - ii. The organization is the known and accepted provider of a set of resources, expertise, information, skills or assets that are needed and/or called upon in the Ohio EOP.
 - iii. The organization can demonstrate/assure that they will be capable of fulfilling the assignments of responsibility that are assigned to them on a statewide basis.
 - iv. The organization has the authority to provide a support function in an Ohio EOP-related role.

- v. The organization has the necessary resources to adequately provide services on a state-wide basis.
- g. In accordance with the NRF, federal assistance for incident response and recovery is provided through the activation of federal ESFs at a Regional Operations Center (ROC), through activation of a federal Emergency Response Team (ERT) and/or through activation of a JFO. Ohio and its local governments will maintain direction and control over their response operations throughout federal activation. Federal resources will be used to augment and support state and local response operations when operational needs exceed the capabilities of state and local jurisdictions and exhausts state and local resources. Ohio EMA and state ESF teams will maintain close coordination and communication with their federal counterparts during emergency response and recovery operations.
- h. The Ohio Constitution and the State's Continuity of Government Plan address the succession of state-level executive authority to ensure that, if needed, a designated successor is available to coordinate emergency response activities. Article 3, Sec. 15 of the Ohio Constitution states that: In the event that the Governor is unable to discharge the duties of office, the line of succession to the office of Governor shall proceed from the Lieutenant Governor to the President of the Senate and then to the Speaker of the House of Representatives.

The line of succession of executive-level authority at the Ohio Emergency Management Agency begins with the Executive Director and then proceeds to the assistant director. If the executive director and assistant director are unavailable or unable to discharge their duties, the succession proceeds to the Senior Operations Director.
- i. The Executive Group in the SEOC maintains on-going communications with local executives in the affected area(s).
- j. Ohio EMA maintains continuous contact with County EMA Directors in affected area(s).
- k. Detailed procedures covering SEOC operations and coordination with state liaisons/responders at sites other than the SEOC are addressed in the Emergency Operations Center Standard Operation Procedures (EOC-SOP) maintained by Ohio EMA.

2. Situational Assessment

- a. In the SEOC, situational assessment is a function of ESF-5, Information and Planning.
- b. During rapidly-escalating events, Ohio EMA staff and staff from other agencies may be designated to conduct various assessment functions at the incident/disaster site.

- c. Personnel who carry out assessment functions at the incident/disaster site maintain on-going communication with the SEOC to ensure that accurate information is relayed to the Information and Planning Section.

B. SEOC Functional Groups

The State of Ohio Emergency Operations Center (SEOC) organization consists of these functional groups: Executive, Joint Information, Recovery and Mitigation, Operations, Information and Planning, Logistics, and Finance/Administration. The responsibilities and positions of each of these groups are addressed in detail in the Emergency Operations Center Standard Operating Procedures maintained by the Ohio EMA.

C. State-Level Primary and Support Organizations

State, federal, private, volunteer and non-governmental organizations having responsibilities listed in the Ohio EOP appear in Table BP-1. These agencies are referred to as CAS (Crisis Action System) Agencies. Depending upon the nature of the incident, CAS Agencies may be asked to send a representative to the SEOC. All possible representative organizations may not be listed in Table BP-1.

D. Responsibilities

Agencies reporting to the SEOC, the site of the incident, or the JFO for response and recovery operations, are responsible for the following:

1. Standard Operating Procedures

Develop and regularly update internal Standard Operating Procedures or guidelines (SOP) that detail how Ohio EOP and related emergency responsibilities will be addressed. SOPs are included in the State of Ohio's EOP by reference only. SOP documents will be maintained and housed by the agencies responsible for carrying out the tasks and duties referenced in the SOP.

2. Resources

Develop and regularly update internal resource listings of equipment, supplies, and services that would be used by the organization during emergencies. Ensure that emergency resources are operational and available.

3. Liaisons

Identify an emergency liaison for each organization that will coordinate with ESFs in the SEOC, planning staff who will work with Ohio EMA staff to maintain the Ohio EOP; and with federal, state, and local organizations throughout response and recovery. Ensure that sufficient liaisons are identified for 24-hour operations at the EOC and at the site of the emergency as needed. Maintain listings of these personnel and phone numbers where they can be reached on a 24-hour basis.

4. Reports

Provide briefings in the SEOC at assigned times of on-going and projected activities. Maintain contact with field personnel. Develop Action Plans and Situation Reports (SITREPS) and submit them to the ESF-5 staff as needed for administrative, debriefing, and after-action activities.

5. Emergency Staff

Provide personnel for emergency temporary assignments as requested by Ohio EMA. Ensure that these personnel have the required logistical and resource support to carry out emergency responsibilities.

6. Executive Group

Depending upon the nature of the emergency, state government executives may serve as members of the Executive Group in the SEOC in order to evaluate state response activities.

7. Lead Agencies

Certain hazards may require the designation of a Lead Agency for response (e.g., Dept. of Rehabilitation and Corrections during prison riots). During such emergencies, the Lead Agency may provide a team of decision makers in the Lead Agency Room in the SEOC. The Lead Agency team works closely with the Executive Group for emergency response and recovery policy and decision making. In general, a lead agency has the expertise and resources to carry out specific missions as part of an ESF team.

8. Training and Exercises

In order to ensure maximum levels of readiness for state emergency response and recovery operations, organizations that have defined EOP roles and responsibilities will cooperate and participate in Ohio EMA-sponsored emergency exercises and training. These agencies will provide emergency resource and planning information and will be prepared to meet the emergency responsibilities listed in the Ohio EOP.

In some instances, a state agency in a local jurisdiction may act as a first responder, and the local assets of state agencies may be used to advise or assist local officials in accordance with agency authorities and procedures. Mutual aid agreements provide mechanisms to mobilize and employ resources from neighboring jurisdictions to also support the incident command.

9. Local Chief Executive Officers

A mayor, city council, county manager/executive or county commissioner(s), as a jurisdiction's chief executive, is responsible for the public safety and welfare of the people of that jurisdiction. The Local Chief Executive Officer:

- a. Is responsible for coordinating local resources to address the full spectrum of actions to prevent, prepare for, respond to, and recover from incidents involving all hazards including terrorism, natural disasters, accidents, and other contingencies
- b. Is dependent upon State and local law and in some circumstances, has authority to temporarily suspend local laws and ordinances, such as the establishment of curfews, direct evacuations, and authorization to make emergency purchases.
- c. Provides leadership and plays a key role in communicating to the public, and in helping people, businesses, and organizations cope with the consequences of any type of domestic incident within the jurisdiction
- d. Negotiates and enter into mutual aid agreements with other jurisdictions to facilitate resource sharing
- e. Through the county emergency management agency, request State and, if necessary, Federal assistance through the Governor when the jurisdiction's capabilities have been exceeded or exhausted

10. Federal Agencies

During an incident response, Federal departments or agencies may play primary and/or support roles based on their authorities and resources and the nature of the incident. In situations where a Federal agency has jurisdictional authority and responsibility for directing or managing a major aspect of the response, that agency is part of the national leadership for the incident.

The individual or agency may participate as a Senior Federal Official (SFO), a Senior Federal Law Enforcement Official (SFLEO, such as the FBI Special Agent-in-Charge (SAC) for a terrorist event) in the Joint Field Office (JFO), in the Coordination Group at the field level, or as part of the Interagency Incident Management Group (IIMG) at the national level. Some Federal agencies with jurisdictional authority and responsibility may also participate in the Unified Command at the Incident Command Post (ICP).

11. Citizens

Strong partnerships with citizen groups and organizations provide support for incident management preparedness, prevention, response, recovery, and mitigation. Citizen Corps brings these groups together and focuses efforts of individuals through education, training, and volunteer service to help make communities safer, stronger, and better prepared to address the threats of terrorism, crime, public health issues, and incidents of all kinds.

Citizen Corps works through a national network of State and local Citizen Corps Councils, which bring together leaders from law enforcement, fire, emergency medical and other emergency management, volunteer organizations, local elected officials, the private sector, and other community stakeholders.

Local Citizen Corps Councils implement Citizen Corps programs, which may include Community Emergency Response Teams (CERTs), Medical Reserve Corps, Neighborhood Watch, Volunteers in Police Service, Fire Corps and other affiliate programs; provide opportunities for special skills and interests; and organize special projects and community events. Citizen Corps Affiliate Programs expand the resources and materials available to States and local communities by partnering with programs and organizations that offer resources for public education, outreach, and training; represent volunteers interested in helping to make their communities safer; or offer volunteer service opportunities to support first responders, disaster relief activities, and community safety efforts.

E. Operations Software

The Ohio EMA utilizes an electronic operations software system, WebEOC, for situation analysis and mission assignment and management in the SEOC. The software provides information sharing and communications capabilities to facilitate critical systems management. In the event the electronic operations software system is unavailable due to technical difficulties or relocation in accordance with COOP, the SEOC maintains a backup paper EOC operations system.

F. Emergency Support Functions and Annexes

ESFs and Annexes group similar emergency functional assistance that local governments are likely to need from the state. Each ESF or Annex acts as a team of state agencies and other non-governmental organizations to functionally address local emergency and disaster needs. A Primary Agency coordinates and facilitates activities of the Support Agencies that assist in carrying-out functional responsibilities.

Unlike Federal ESFs and Annexes, Ohio uses a modified format that allows a State Agency to function and have a role within several ESFs. A state agency might function as a Primary Agency on one-or-more ESFs and function as a Support Agency on one-or-more other ESFs. An agency might also function as a Lead Agency under one-or-more ESFs.

G. Mutual Aid

- a. Ohio EMA maintains mutual aid agreements, Memoranda of Understanding (MOU) and other written agreements (collectively, Agreements) with a number of agencies at various levels of government. Agreements between the Ohio EMA and other agencies include:
- b. An MOU with the National Oceanic and Atmospheric Administration (NOAA)/National Weather Service (NWS), May 2001 identifies NWS's responsibilities regarding the

dissemination of information over NOAA Weather Radio and NOAA Weather Wire Service and the definition of the general scope of messages that NWS will disseminate.

- c. An Agreement with Ohio Task Force -1 (Urban Search and Rescue Task Force), November 4, 2009 covers employing Ohio Task Force-1 to rapidly deploy search and rescue resources in the State of Ohio.
- d. Various Agreements with the Adjutant General's Department, Ohio National Guard (ONG), with various dates have been entered into for: developing, operating, maintaining and testing an efficient communication system for statewide response; providing efficient and coordinated public information to the citizens of Ohio; allowing Ohio EMA to access the Beightler Complex to utilize the radio antenna, tower, radio equipment room and radio frequencies for communications both during emergencies and during normal operating conditions; cooperating in the supply of City of Columbus water to the Emergency Operations center/Joint Dispatch Facility (EOC/JDF); allowing for the storage of approximately 250,000 sandbags which belong to the U.S. Army Corps of Engineers, supplying radiation monitoring instruments; and jointly maintaining the tunnel connecting the Beightler Complex and the EOC/JDF.
- e. An October 6, 2009 Agreement with the American Red Cross provides for the cooperation between the State of Ohio and the American Red Cross through National Headquarters and/or chapters, in carrying out their assigned responsibilities.
- f. An April 2004 Agreement with the Buckeye State Sheriffs' Association establishes the process for receiving, transmitting and responding to notification of Personal Locator Beacon activations within the geographic boundaries of the State of Ohio.
- g. A September 1991 Agreement with the Search and Rescue (SAR) Coordinator for the Inland Region ensures the effective use of all available resources for SAR activities, incorporates SAR agencies of various states into the SAR network, and provides an avenue for further agreements between the Air Force Rescue Coordination Center and the State of Ohio.
- h. Various September 1991 Agreements with Air Force Rescue Coordination Centers; Tyndall Air Force Base, Florida delineate the operational procedures between the State of Ohio and the Executive Agent for Inland Search and Rescue for use within the geographic boundaries of the State of Ohio.
- i. MOUs between Eleven County Sheriffs' Offices and the Ohio Department of Public Safety, Ohio EMA, the Buckeye State Sheriffs' Association placed interoperable communications vehicles regionally around the state. This allows deployment to all parts of the state within one hour of an incident to enable law enforcement and other first responders to better communicate when responding to large-scale events.
- j. A September 2009 MOU between the Federal Alliance for Safe Homes (FLASH), the Ohio Emergency Management Agency, and the Ohio Department of Insurance establishes a partnership to work together to design/develop, assist in response during emergencies

and to work together to strengthen homes and safeguard families from the impacts of disasters.

- k. A June 2008 MOU between the Aidmatrix Foundation and the Ohio Emergency Management Agency establishes the relationship between the parties to utilize donations management solutions via the internet. The Aidmatrix solution is an online tool that is offered by FEMA as part of the National Donations Management Network.
 - l. A January 2008 MOU between the Ohio Emergency Management Agency and the Ohio State Highway Patrol authorizes OEMA to utilize space in the Ohio State Highway Patrol Academy for its primary alternate work location in the event the emergency operations center becomes unusable for any reason.
2. Other Plans and Agreements
- a. Section 5502.41 of the Revised Code is the Ohio Intrastate Mutual Aid Compact (IMAC) which complements existing mutual aid agreements in the event of a disaster that results in a formal declaration of emergency by a participating political subdivision.
 - b. Section 5502.40 of the Revised Code is the Emergency Management Assistance Compact which is the interstate mutual aid agreement to which all states and territories belong that allows states to assist each other in times of disaster. When any member state's Governor declares a disaster or when a disaster is imminent, other member states may agree to provide assistance in response to requests from the impacted state(s).
 - c. The deployment of locally- and regionally-based personnel and other resources under the Ohio Fire Service Emergency Response System is coordinated by the Ohio Fire Chiefs' Association, with resource requests dispatched through a rotating central dispatch facility. The Ohio Emergency Management Agency is notified of deployments made via the Emergency Response System.
 - d. OEMA's Telecommunications and Facilities Branch maintains MOUs and Agreements with all levels of government and with the private sector. These MOUs and Agreements number in the hundreds and allow access to property and the co-location of equipment to facilitate meteorological and other data collection and the communicating of information with other entities. Specifically, these MOUs include FCC licenses and property access permission, equipment maintenance, and equipment access agreements.

Ohio's Trauma Acute Care Registry (TACR)

TRAUMA PATIENT DEFINITION

In order to ensure consistent data collection across the State of Ohio and following the National Trauma Data Standard, a trauma patient is defined as a patient sustaining a traumatic injury and meeting the patient inclusion criteria described below.

PATIENT INCLUSION CRITERIA

To be included in the Trauma Acute Care Registry (TACR),

1. The patient must incur at least one of the injury diagnostic codes defined in the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) in the range of 800 – 959.9, 987.9, 991.0-991.6, 994.0, 994.1, 994.7, 994.8, 995.50-995.59.
2. The patient **MUST ALSO**:
 - Be admitted for the first time to a hospital or hospital observation unit as defined by a physician order regardless of the length of stay, with the injury having occurred no more than two (2) weeks prior to arrival; **AND/OR**
 - Be transferred via EMS transport (including air ambulance) from one hospital to another hospital regardless of the patient's hospital length of stay; **AND/OR**
 - Have an outcome of death resulting from the traumatic injury (independent of hospital admission or hospital transfer status).

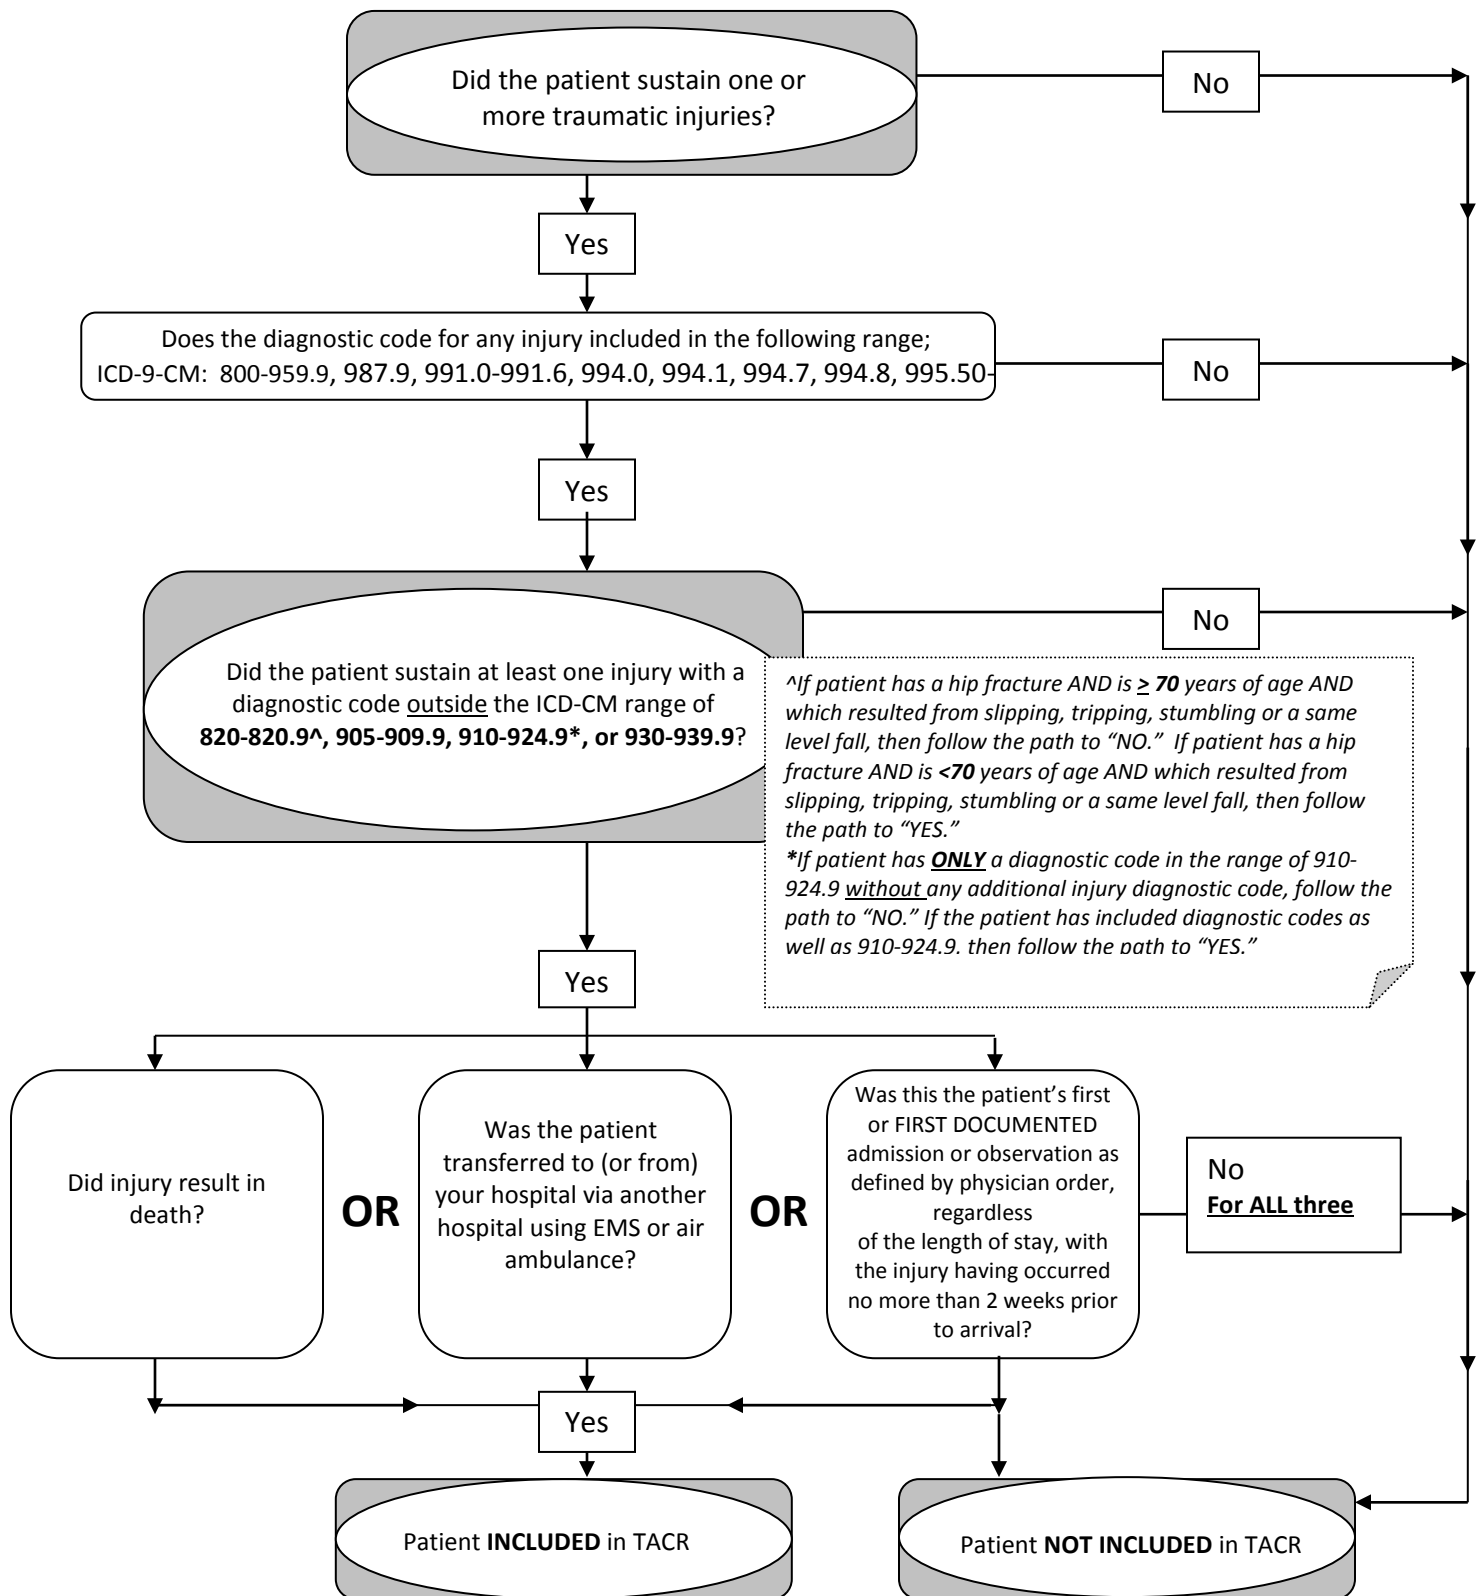

PATIENT EXCLUSION CRITERIA

Patients with the following isolated ICD-9-CM codes are **EXCLUDED** from the TACR:

- **820.0-820.9**, isolated hip fracture in patients **≥ 70 years of age AND** which result from slipping, tripping, stumbling or a same level fall;
- **905-909.9**, late effects of injury;
- **910-924.9**, superficial injuries, including blisters, contusions, abrasions and insect bites (but exclude 910-924.9 if that is the **ONLY** injury identified. Patients who have an injury within the Inclusion ICD-9-CM range as well as a 910-924.9 injury, **WOULD** be included in the registry.); **AND/OR**
- **930-939.9**, foreign bodies.

REVISED OCTOBER 11, 2011

Ohio Trauma Acute Care Registry Inclusion/Exclusion Criteria

REVISED OCTOBER 11, 2011

COMMON NULL VALUES

Data Format is single-choice.

Definition

Common Null Values are terms to be used with TACR Data Elements as described in this document for specifically-defined data fields when an answer cannot be provided.

Field Values

- 25 Not Applicable
- 10 Not Known/Not Recorded/Not Documented

Additional Information

- Although not written out on the following pages, these Common Null Values are included in the TACR dataset for every allowable data field. To ascertain their allowability by data field, see the “Accepts Null Value” notation on every data field descriptor page.
- The Common Null Values selected here---“negative 25” and “negative 10”---were selected to avoid confusion when a true answer is “zero,” and to match common null values reported in the State of Ohio’s Emergency Medical Services Incident Reporting System (EMSIRS) database. At such a time that the EMSIRS and TACR become operationally linked, these values will now match between the two datasets.
- Not Applicable (Field Value -25):* This null value code applies if, at any time of patient care documentation, the information requested was “Not Applicable” (NA) to the patient, the hospitalization or the patient care event. For example, variables documenting EMS care would be NA if a patient self-transport to the hospital.
- Not Known/Not Recorded/Not Documented (Field Value -10):* This null value applies if, at the time of patient care documentation, information was “Not Known” (to the patient, family, healthcare provider) or no value for the element was recorded for the patient. This documents that there was an attempt to obtain information, but it was unknown by all parties or the information was missing at the time of documentation. For example, injury date and time may be documented in the hospital patient care report as “Unknown”. Another example, Not Known/Not Recorded/Not Documented should also be coded when documentation was expected, but none was provided (i.e., no EMS run sheet in the hospital record for patient transported by EMS).
- For any collection of data to be of value and reliably represent what was intended, a strong commitment must be made to ensure the correct documentation of incomplete data. When data elements associated with the TACR are electronically stored in a database or moved from one database to another, the indicated null values should be applied.

REVISED OCTOBER 11, 2011

HOSPITAL CODE

Data Format is numeric.

Definition

Hospital Code is a four-digit (4) hospital code assigned by Ohio Department of Public Safety.

XSD Data Type	<i>xs-facility</i>	XSD Element/Domain (Simple Type)	<i>Facility</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>No</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Stored as a four digit code (xxxx)

Data Source Hierarchy

- State of Ohio Hospital

REVISED OCTOBER 11, 2011

UNIQUE ADMISSION NUMBER

Data Format is numeric.

Definition

Unique Admission Number is a number assigned by each hospital to the patient at the time of admission; this number should be unique for each patient AND each visit.

XSD Data Type	<i>xs-idno</i>	XSD Element/Domain (Simple Type)	<i>IDNo</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>No</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Unique identifier for the patient's visit within a trauma registry, typically a tracking number

Data Source Hierarchy

- 1 Hospital's trauma registry tracking number or
- 2 Medical records

REVISED OCTOBER 11, 2011

DATE EXPORTED

Data Format is a date.

Definition

Date Exported is the date the record was submitted to the TACR.

XSD Data Type	<i>xs-exportdate</i>	XSD Element/Domain (Simple Type)	<i>ExportDate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>No</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY

REVISED OCTOBER 11, 2011

PATIENT'S HOME CITY

Data Format is single-choice.

Definition

Patient's Home City is the patient's city, township, or village of residence.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>HomeCity</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element (five digit FIPS code)

Additional Information

- Used to calculate FIPS code

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 Emergency Department (ED) Documentation

REVISED OCTOBER 11, 2011

PATIENT'S HOME STATE

Data Format is single-choice.

Definition

Patient's Home State is the state, territory, or province (or the District of Columbia) of the patient's residence.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>HomeState</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element (two digit FIPS code)

Additional Information

- Used to calculate FIPS code

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

REVISED OCTOBER 11, 2011

PATIENT'S HOME COUNTY

Data Format is single-choice.

Definition

Patient's Home County is the patient's county (or parish) of residence.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>HomeCounty</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element (three digit FIPS code)

Additional Information

- Used to calculate FIPS code

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_06
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

PATIENT'S HOME ZIP CODE

Data Format is numeric text.

Definition

Patient's Home Zip Code is the zip code of the patient's primary residence.

XSD Data Type	<i>xs-zip</i>	XSD Element/Domain (Simple Type)	<i>HomeZip</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Stored as a 5 digit code (XXXXX).
- May require adherence to HIPAA regulations.

Data Source Hierarchy

- 1 Billing Sheet/Medical Records Coding Summary Sheet
- 2 ED Admission Form
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_08
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

PATIENT'S HOME COUNTRY

Data Format is single-choice.

Definition

Patient's Home Country is the country where the patient resides.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>HomeCountry</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element (two digit alpha country code)

Additional Information

- Values are two character fields representing a country (e.g. U.S.)

Data Source Hierarchy

- 1 Billing Sheet/Medical Records Coding Summary Sheet
- 2 ED Admission Form
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_09
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ALTERNATE HOME RESIDENCE

Data Format is single-choice.

Definition

Alternate Home Residence is documentation of the residential status of a patient who has no home zip code.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>HomeResidence</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Homeless
- 2 Undocumented Resident
- 3 Migrant Worker
- 4 Foreign Visitor

Additional Information

- *Homeless* is defined as a person who lacks housing. The definition also includes a person living in transitional housing or a supervised public or private facility providing temporary living quarters
- *Undocumented Resident* is defined as a national of another country who has entered or stayed in another country without permission
- *Migrant Worker* is defined as a person who temporarily leaves his/her principal place of residence within a country in order to accept seasonal employment in the same or different country
- *Foreign Visitor* is defined as any person visiting a country other than his/her usual place of residence for any reason without intending to receive earnings in the visited country

Data Source Hierarchy

- 1 Billing Sheet/Medical Records Coding Summary Sheet
- 2 ED Admission Form
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

DATE OF BIRTH

Data Format is a date.

Definition

Date of Birth is simply the patient's date of birth.

XSD Data Type	<i>xs-date</i>	XSD Element/Domain (Simple Type)	<i>DateofBirth</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	<i>Minimum Constraint: 1,890 / Maximum Constraint 2,030</i>	

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY
- If age is known, but the date of birth is not, enter 01/01/YYYY (YYYY appropriate to patient's known age)

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_16
- NTDS 1.25

REVISED OCTOBER 11, 2011

AGE

Data Format is numeric.

Definition

Age is simply the patient's age (or best approximation) at the time of injury.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Age</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	<i>Minimum Constraint: 0 / Maximum Constraint 120</i>	

Field Values

- Relevant value for data element

Additional Information

- Used to calculate patient age in hours, days, months or years
- Must also complete variable *Age Units* (see next page)

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_14
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

AGE UNITS

Data Format is single-choice.

Definition

Age Units are the units used to document the patient's age (years, months, days, hours).

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>AgeUnits</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Hours
- 2 Days
- 3 Months
- 4 Years

Additional Information

- Used to calculate patient age in hours, days, months or years
- Must also complete variable *Age*

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 Triage Form/Trauma Flow Sheet
- 4 EMS Run Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_15
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SEX

Data Format is single-choice.

Definition

Sex is the patient's current gender.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Sex</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>No</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Male
- 2 Female

Additional Information

- Patients who have undergone a surgical and/or hormonal sex change should be coded according to what gender they state they are. If they are unable to state their gender, they should be coded according to what sex they appear to be.

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_11
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

RACE

Data Format is multiple-choice.

Definition

Race is simply the patient's race.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Race</i>
Multiple Entry Configuration	<i>Yes, 2</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Asian
- 2 Native Hawaiian or Other Pacific Islander
- 3 Other Race
- 4 American Indian
- 5 Black or African American
- 6 White

Additional Information

- Patient race should be based upon self-report or identified by a family member
- The maximum number of races that may be reported for an individual patient is 2

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 EMS Run Sheet
- 4 Triage Form/Trauma Flow Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_12
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ETHNICITY

Data Format is single-choice.

Definition

Ethnicity is the patient's ethnicity in terms of Hispanic heritage.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Ethnicity</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Hispanic or Latino
- 2 Not Hispanic or Latino

Additional Information

- Patient ethnicity should be based upon self-report or identified by a family member
- The maximum number of ethnicities that may be reported for an individual patient is 1

Data Source Hierarchy

- 1 ED Admission Form
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 Triage Form/Trauma Flow Sheet
- 4 EMS Run Sheet
- 5 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E06_13
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

PRIMARY E-CODE

Data Format is numeric.

Definition

Primary E-Code is a designation used to describe the mechanism (or external factor) that caused the injury event.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>PrimaryEcode</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant ICD-9-CM code value for injury event

Additional Information

- The Primary E-Code should describe the main reason a patient is admitted to the hospital
- E-codes can be used to auto-generate the trauma type (blunt, penetrating, burn) and intentionality based upon the CDC matrix
- ICD-9-CM Codes were retained over ICD-10 due to CMS's continued use of ICD-9
- The E-code series beginning with 849 are NOT entered in this field
- External cause status (E000) and Activity (E001-E030) E-codes should not be reported in this field

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 Billing Sheet/Medical Records Coding Summary Sheet
- 4 ED Documentation

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ADDITIONAL E-CODE

Data Format is numeric.

Definition

Additional E-code is a designation used to describe, for example, a mass casualty event or other external cause of injury.

XSD Data Type	<i>xs- string</i>	XSD Element/Domain (Simple Type)	<i>AdditionalEcode</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant ICD-9-CM code value for injury event

Additional Information

- E-codes can be used to calculate trauma type (blunt, penetrating, burn) and intentionality based upon the CDC matrix
- ICD-9-CM codes were retained over ICD-10 due to CMS's continued use of ICD-9
- The E-code series beginning with 849 are NOT entered in this field
- External cause status (E000) and Activity (E001-E030) E-codes should not be reported in this field

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 Billing Sheet/Medical Records Coding Summary Sheet
- 4 ED Documentation

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ACTIVITY CODE

Data Format is numeric.

Definition

Activity Code describes the activity that the patient was doing at the time of the injury, for example, E001.0 refers to *Walking, Marching, Hiking*.

XSD Data Type	<i>xs- string</i>	XSD Element/Domain (Simple Type)	<i>ActivityCode</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant ICD-9-CM code value for injury event

Additional Information

- An activity E-code from category E001 through E030

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 Billing Sheet/Medical Records Coding Summary Sheet
- 4 ED Documentation

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

EXTERNAL CAUSE STATUS CODE

Data Format is numeric.

Definition

External Cause Status Code indicates a status of the patient at the time that the injury event occurred.

XSD Data Type	<i>xs- string</i>	XSD Element/Domain (Simple Type)	<i>ExternalStatus</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 000.0 Civilian activity done for income or pay
- 2 000.1 Military activity
- 3 000.8 Other external cause status
- 4 000.9 Unspecified external cause status

Additional Information

- External cause while on civilian or military duty
- An External Cause Status E-code from category E000

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 Billing Sheet/Medical Records Coding Summary Sheet
- 4 ED Documentation

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

LOCATION E-CODE

Data Format is numeric.

Definition

Location E-code is an E-code used to describe the place, site or location of the injury event (E849.x).

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>LocationEcode</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant ICD-9-CM code value for injury event

Additional Information

- ICD-9-CM Codes were retained over ICD-10 due to CMS's continued use of ICD-9.

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 Billing Sheet/Medical Records Coding Summary Sheet
- 4 ED Documentation

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

WORK-RELATED

Data Format is single-choice.

Definition

Work-related is whether the injury occurred during paid employment.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>WorkRelated</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Yes
- 2 No

Additional Information

- If work-related, two additional data fields must be completed, *Patient's Occupational Industry* and *Patient's Occupation*

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E07_15
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

PATIENT'S OCCUPATIONAL INDUSTRY

Data Format is single-choice.

Definition

Patient's Occupational Industry is the occupational industry associated with the patient's work environment.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>PatientsOccupationalIndustry</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- | | |
|------------------------------------|------------------------------|
| 1 Finance, Insurance, Real Estate | 8 Construction |
| 2 Manufacturing | 9 Government |
| 3 Retail Trade | 10 Natural Resources, Mining |
| 4 Transportation, Public Utilities | 11 Information Services |
| 5 Agriculture, Forestry, Fishing | 12 Wholesale Trade |
| 6 Professional, Business Services | 13 Leisure, Hospitality |
| 7 Education, Health Services | 14 Other Services |

Additional Information

- Code as *NA* if injury is not work-related
- If work related, also complete *Patient's Occupation*
- Based upon US Bureau of Labor Statistics Industry Classification

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 EMS Run Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E07_16
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

PATIENT'S OCCUPATION

Data Format is single-choice.

Definition

Patient's Occupation is simply the patient's occupation.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>PatientsOccupation</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- | | |
|---|---|
| 1 Business, Financial Operations Occupations | 13 Computer, Mathematical Occupations |
| 2 Architecture, Engineering Occupations | 14 Life, Physical, Social Science Occupations |
| 3 Community, Social Services Occupations | 15 Legal Occupations |
| 4 Education, Training, Library Occupations | 16 Arts, Design, Entertainment, Sports, Media |
| 5 Healthcare Practitioners, Technical Occupations | 17 Healthcare Support Occupations |
| 6 Protective Service Occupations | 18 Food Preparation, Serving Related |
| 7 Building, Grounds Cleaning & Maintenance | 19 Personal Care, Service Occupations |
| 8 Sales & Related Occupations | 20 Office, Administrative Support Occupations |
| 9 Farming, Fishing, Forestry Occupations | 21 Construction, Extraction Occupations |
| 10 Installation, Maintenance, Repair Occupations | 22 Production Occupations |
| 11 Transportation, Material Moving Occupations | 23 Military Specific Occupations |
| 12 Management Occupations | |

Additional Information

- Only completed if injury is work-related
- If work related, also complete *Patient's Occupational Industry*
- Based upon 1999 US Bureau of Labor Statistics Standard Occupational Classification (SOC)

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 EMS Run Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E07_17
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INJURY INCIDENT DATE

Data Format is a date.

Definition

Injury Incident Date is the date that the injury occurred.

XSD Data Type	<i>xs- date</i>	XSD Element/Domain (Simple Type)	<i>IncidentDate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1,990 / Maximum Constraint 2,030	

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY
- Estimates of the of date of injury should be based upon report by patient, witness, family or health care provider. Other proxy measures (e.g. 911 call-time) should NOT be used

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E05_01
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INJURY INCIDENT TIME

Data Format is numeric.

Definition

Injury Incident Time is the time of day that the injury occurred.

XSD Data Type	<i>xs-time</i>	XSD Element/Domain (Simple Type)	<i>IncidentTime</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Document as military time
- Estimates of time of injury should be based upon report by patient, witness, family, or health care provider. Other proxy measures (e.g. 911 call-time) should NOT be used

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E05_01
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INCIDENT CITY

Data Format is single-choice.

Definition

Incident City is the city or nearest township in which the injury occurred or to which the EMS unit responded for the patient.

XSD Data Type	<i>xs- string</i>	XSD Element/Domain (Simple Type)	<i>IncidentCity</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element (five digit FIPS code)

Additional Information

- Used to calculate FIPS code
- If incident location resides outside of formal city boundaries, report nearest city/town

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E08_12
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INCIDENT STATE

Data Format is single-choice.

Definition

Incident State is the state, territory or province (or best approximation) in which the patient was injured or to which the EMS unit responded for the patient.

XSD Data Type	<i>xs- string</i>	XSD Element/Domain (Simple Type)	<i>IncidentState</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element (two digit numeric FIPS code)

Additional Information

- Used to calculate FIPS code

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E08_14
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INCIDENT COUNTY

Data Format is single-choice.

Definition

Incident County is the county or parish (or best approximation) where the patient was found or to which the EMS unit responded to the patient.

XSD Data Type	<i>xs- string</i>	XSD Element/Domain (Simple Type)	<i>IncidentCount</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element (three digit FIPS code)

Additional Information

- Used to calculate FIPS code

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E08_13
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INCIDENT LOCATION ZIP CODE

Data Format is numeric.

Definition

Incident Location Zip Code is the zip code of the location where the patient was injured.

XSD Data Type	<i>xs- zip</i>	XSD Element/Domain (Simple Type)	<i>IncidentZip</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Stored as a five digit code (XXXXX)
- May require adherence to HIPAA regulations

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation

References to Other Databases

- NHTSA V.2.2 – E08_15
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INCIDENT COUNTRY

Data Format is single-choice.

Definition

Incident Country is the country (or best approximation) in which the patient was injured or to which the EMS unit responded to the patient.

XSD Data Type	<i>xs- string</i>	XSD Element/Domain (Simple Type)	<i>IncidentCountry</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element (two digit alpha country code)

Additional Information

- Values are two character fields representing a country (e.g. US)

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation
- 4 Medical Records

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

PROTECTIVE DEVICES

Data Format is multiple-choice.

Definition

Protective Devices is the safety equipment in use or worn by the patient at the time of the injury.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>ProtectiveDevice</i>
Multiple Entry Configuration	<i>Yes, max 10</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- | | |
|--|---|
| 1 None Used | 7 Helmet (e.g., bicycle, skiing, motorcycle) |
| 2 Lap Belt | 8 Airbag Present |
| 3 Personal Floatation Device | 9 Protective Clothing (e.g. padded leather pants) |
| 4 Protective Non-Clothing Gear (e.g. shin guard) | 10 Shoulder Belt |
| 5 Eye Protection | 11 Other |
| 6 Child Restraint (booster seat, child car seat) | |

Additional Information

- Check all that apply
- If “Child Restraint” is present, complete variable *Child Specific Restraint*
- If “Airbag” is present, complete variable *Airbag Deployment*
- Evidence of the use of safety equipment may be reported or observed
- “Lap belt” should be used to include those patients that are restrained, but not further specified
- If chart indicates *three- point restraint*, choose field values #2 and 10

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation
- 4 Medical Records

References to Other Databases

- NHTSA V.2.2 – E10_08
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

CHILD SPECIFIC RESTRAINT

Data Format is single-choice.

Definition

Child Specific Restraint indicates protective child restraint devices used by the pediatric patient at the time of injury.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>ChildSpecificRestraint</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Child Car Seat
- 2 Infant Car Seat
- 3 Child Booster Seat

Additional Information

- Evidence of the use of child restraint may be reported or observed
- Only completed when *Protective Devices* include "Child Restraint"

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation
- 4 Medical Records

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

AIRBAG DEPLOYMENT

Data Format is multiple-choice.

Definition

Airbag Deployment indicates whether an airbag deployed during a motor vehicle crash.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Airbag Deployment</i>
Multiple Entry Configuration	<i>Yes, max 4</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Airbag Not Deployed
- 2 Airbag Deployed Front
- 3 Airbag Deployed Side
- 4 Airbag Deployed Other (knee, airbelt, curtain, etc)

Additional Information

- ***Airbag Deployed Front* should be used for patients with airbag deployment documented in the medical record when the site of the airbag is not further specified.**
- Check all that apply
- Evidence of the use of airbag deployment may be reported or observed
- Only completed when *Protective Devices* include "Airbag"

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 Triage Form/Trauma Flow Sheet
- 3 ED Documentation
- 4 Medical Records

References to Other Databases

- NHTSA V.2.2 – E10_09
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

TRANSPORT MODE FOR ARRIVAL AT YOUR HOSPITAL

Data Format is single-choice.

Definition

Transport Mode for Arrival at Your Hospital is the manner of transport delivering the patient to your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>TransportMode</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Ground Ambulance
- 2 Helicopter Ambulance
- 3 Fixed-wing Ambulance
- 4 Private or Public Vehicle or Walk-in
- 5 Police Transport
- 6 Other Transport Mode

Data Source Hierarchy

- EMS Run Sheet
- ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

OTHER TRANSPORT MODES

Data Format is multiple-choice.

Definition

Other Transport Modes documents all other types of transport used during patient care prior to the patient arriving at your hospital, except the transport mode delivering the patient to your hospital. An example is an ambulance transporting the patient to the helicopter landing zone.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>OtherTransportMode</i>
Multiple Entry Configuration	<i>Yes, 5</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Ground Ambulance
- 2 Helicopter Ambulance
- 3 Fixed-wing Ambulance
- 4 Private or Public Vehicle or Walk-in
- 5 Police Transport
- 6 Other Transport Mode

Additional Information

- For patients with an unspecified mode of transport, select 6, *Other*
- “Non-applicable” (NA) is used to indicate that a patient had a single mode of transport and therefore this field does not apply to the patient

Data Source Hierarchy

- 1 EMS Run Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE EMS RUN REPORT PRESENT

Data Format is single-choice.

Definition

Scene EMS Run Report Present documents whether the run report generated by EMS at the injury scene is found in the patient's medical record.

- For patients transported from the scene of injury to your hospital, this is the run report transporting the patient to your facility from the scene.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>SceneForm</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Yes
- No

Additional Information

- If the patient arrives by any means other than ground or air EMS (i.e. private vehicle, walk-in, law enforcement, etc.) then enter the appropriate code for NA

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- Not an NTDS Field

REVISED OCTOBER 11, 2011

INTER-FACILITY TRANSFER EMS RUN REPORT PRESENT

Data Format is single-choice.

Definition

Inter-facility Transfer EMS Run Report Present documents whether a run report generated during transfer from a previous hospital to your hospital is found in the patient's medical record.

XSD Data Type	<i>xs- tripform</i>	XSD Element/Domain (Simple Type)	<i>TripForm</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Yes
- 2 No

Additional Information

- If the patient has multiple hospital destinations, document only whether the run report is present from the run in which the transferring agency brings the patient directly to your hospital.

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- Not an NTDS Field

REVISED OCTOBER 11, 2011

EMS DISPATCH DATE TO SCENE OR TRANSFERRING FACILITY

Data Format is a date.

Definition

EMS Dispatch Date to Scene or Transferring Facility is the date that the EMS unit transporting to your hospital was notified by EMS dispatch.

- For inter facility transfer patients, this is the run report for the unit transporting the patient to your facility from the transferring facility.
- For patients transported from the scene of injury to your hospital, this is the run report transporting the patient to your facility from the scene.

XSD Data Type	<i>xs- date</i>	XSD Element/Domain (Simple Type)	<i>EMSNotifyDate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1990 / Maximum Constraint 2030	

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY
- Used to auto-generate an additional calculated field, *Total EMS Time* (which is the elapsed time from EMS dispatch to hospital arrival)

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E05_04
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

EMS DISPATCH TIME TO SCENE OR TRANSFERRING FACILITY

Data Format is numeric.

Definition

EMS Dispatch Time to Scene or Transferring Facility is the time that the EMS unit transporting the patient to your hospital was notified by EMS dispatch.

- For inter-facility transfer patients, this is the run report for the unit transporting the patient to your facility from the transferring facility.
- For patients transported from the scene of injury to your hospital, this is the run report transporting the patient to your facility from the scene.

XSD Data Type	<i>xs-time</i>	XSD Element/Domain (Simple Type)	<i>EMSNotifyTime</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Document as military time
- Used to auto-generate an additional calculated field, *Total EMS Time* (which is the elapsed time from EMS dispatch to hospital arrival)

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E05_04
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

EMS UNIT ARRIVAL DATE AT SCENE OR TRANSFERRING FACILITY

Data Format is date.

Definition

EMS Unit Arrival Date at Scene of Transferring Facility is the date that the EMS unit transporting the patient to your hospital arrived on the scene or at the transferring facility (the time the vehicle stopped moving).

- For inter facility transfer patients, this is the run report for the unit transporting the patient to your facility from the transferring facility.
- For patients transported from the scene of injury to your hospital, this is the run report transporting the patient to your facility from the scene.

XSD Data Type	<i>xs- date</i>	XSD Element/Domain (Simple Type)	<i>EMSArrivalDate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1990 / Maximum Constraint 2030	

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY
- Used to auto-generate an additional calculated fields, *Total EMS Response Time* (which is the elapsed time from EMS dispatch to scene arrival) & *Total EMS Scene Time* (which is the elapsed time from EMS scene arrival to scene departure)

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E05_06

REVISED OCTOBER 11, 2011

EMS UNIT DEPARTURE DATE FROM SCENE OR TRANSFERRING FACILITY

Data Format is a date.

Definition

EMS Unit Departure Date from Scene or Transferring Facility is the date that the EMS unit transporting the patient to your hospital left the scene (the time the vehicle started moving).

- For inter facility transfer patients, this is the run report for the unit transporting the patient to your facility from the transferring facility.
- For patients transported from the scene of injury to your hospital, this is the run report transporting the patient to your facility from the scene.

XSD Data Type	<i>xs- date</i>	XSD Element/Domain (Simple Type)	<i>EMSLeftDate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1990 / Maximum Constraint 2030	

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY
- Used to auto-generate an additional calculated field, *Total EMS Scene Time* (which is the elapsed time from EMS scene arrival to scene departure)

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED SYSTOLIC BLOOD PRESSURE

Data Format is numeric.

Definition

Scene First Documented Systolic Blood Pressure is the first recorded systolic blood pressure measured at the scene of injury.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSSbp</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 / Maximum Constraint	300

Field Values

- Relevant value for data element

Additional Information

- Used to auto-generate an additional calculated field, *Revised Trauma Score---EMS* (adult & pediatric)
- If patient is transferred to your facility with no EMS run sheet from the scene of injury, record as *Not Known/Not Recorded/Not Documented*

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E14_04
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED PULSE RATE

Data Format is numeric.

Definition

Scene First Documented Pulse Rate is the first recorded pulse measured at the scene of injury (palpated or auscultated), expressed as a number per minute.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSPulseRate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 / Maximum Constraint	299

Field Values

- Relevant value for data element

Additional Information

- If patient is transferred to your facility with no EMS run sheet from the scene of injury, record as *Not Known/Not Recorded/Not Documented*

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E14_07
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED RESPIRATORY RATE

Data Format is numeric.

Definition

Scene First Documented Respiratory Rate is the first recorded respiratory rate measured at the scene of injury (expressed as a number per minute).

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSRespRate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 / Maximum Constraint	120

Field Values

- Relevant value for data element

Additional Information

- Used to auto-generate an additional calculated field, *Revised Trauma Score---EMS* (adult & pediatric)
- If patient is transferred to your facility with no EMS run sheet from the scene of injury, record as *Not Known/Not Recorded/Not Documented*

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E14_11
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED OXYGEN SATURATION

Data Format is numeric.

Definition

Scene First Documented Oxygen Saturation is the first recorded oxygen saturation measured at the scene of injury (expressed as a percentage).

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSPulseOx</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 / Maximum Constraint 100	

Field Values

- Relevant value for data element

Additional Information

- If patient is transferred to your facility with no EMS run sheet from the scene of injury, record as *Not Known/Not Recorded/Not Documented*

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E14_09
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED GCS EYE OPENING

Data Format is numeric.

Definition

Scene First Documented GCS Eye Opening is the first recorded Glasgow Coma Score eye assessment done at the scene of injury.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSGcsEye</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1 / Maximum Constraint 4	

Field Values

- 1 No eye movement when assessed
- 2 Opens eyes in response to painful stimulation
- 3 Opens eyes in response to verbal stimulation
- 4 Opens eyes spontaneously

Additional Information

- Used to calculate *Overall GCS – EMS Score*
- If patient is transferred to your facility with no EMS run sheet from the scene of injury, record as *Not Known/Not Recorded/Not Documented*

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E14_15
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED GCS VERBAL RESPONSE

Data Format is numeric.

Definition

Scene First Documented GCS Verbal Response is the first recorded Glasgow Coma Score verbal assessment done at the scene of injury.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSGcsVerbal</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1 / Maximum Constraint 5	

Field Values

- Pediatric(≤ 2 years of age)
 - 1 No vocal response
 - 2 Inconsolable, agitated
 - 3 Inconsistently consolable, moaning
 - 4 Cries but is consolable, inappropriate interactions
 - 5 Smiles, oriented to sounds, follows objects, interacts
- Adult
 - 1 No verbal response
 - 2 Incomprehensible sounds
 - 3 Inappropriate words
 - 4 Confused
 - 5 Oriented

Additional Information

- Used to calculate *Overall GCS – EMS Score*
- If patient is transferred to your facility with no EMS run sheet from the scene of injury, record as *Not Known/Not Recorded/Not Documented*

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E14_16
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED GCS MOTOR RESPONSE

Data Format is numeric.

Definition

Scene First Documented GCS Motor Response is the first recorded Glasgow Coma Score motor assessment done at the scene of injury.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSGcsMotor</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1 / Maximum Constraint 6	

Field Values

- Pediatric (<= 2 years of age)
 - 1 No motor response
 - 2 Extension to pain
 - 3 Flexion to pain
 - 4 Withdrawal from pain
 - 5 Localizing pain
 - 6 Appropriate response to stimulation
- Adult
 - 1 No motor response
 - 2 Extension to pain
 - 3 Flexion to pain
 - 4 Withdrawal from pain
 - 5 Localizing pain
 - 6 Obeys commands

Additional Information

- Used to calculate Overall GCS – EMS Score
- If patient is transferred to your facility with no EMS run sheet from the scene of injury, record as *Not Known/Not Recorded/Not Documented*

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E14_17
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED GCS TOTAL SCORE

Data Format is numeric.

Definition

Scene First Documented Scene GCS Total Score is the first recorded total Glasgow Coma Score done at the scene of injury.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSGcsTotal</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 3 / Maximum Constraint 15	

Field Values

- Relevant value for data element

Additional Information

- Used to auto-generate an additional calculated field, *Revised Trauma Score---EMS* (adult & pediatric)
- If the patient is transferred to your facility with no EMS run sheet from the scene of injury, record as *Not Known/Not Recorded/Not Documented*
- If a patient does not have a numeric GCS recorded, but with documentation related to their level of consciousness such as “AAOx3”, “awake, alert and oriented” or “patient with normal mental status”, interpret this as GCS of 15 provided that there is NO other contraindicating documentation.

Data Source Hierarchy

- EMS Run Sheet

References to Other Databases

- NHTSA V.2.2 – E14_19
- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE FIRST DOCUMENTED GCS QUALIFIER

Data Format is multiple-choice.

Definition

Scene First Documented GCS Qualifier documents circumstances related to the patient when or near the time that the *Scene First Documented Scene GCS Total Score* was obtained.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EMSGcsQualifier</i>
Multiple Entry Configuration	<i>Yes, 3</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Patient is chemically sedated
- 2 Obstruction to the patient's eye(s) prevents accurate eye assessment
- 3 Patient is intubated
- 4 GCS is valid meaning that the patient is not sedated, not intubated and without eye obstruction

Additional Information

- Identifies treatments given to the patient that may affect the first assessment of GCS. This field does not apply to self-medications the patient may administer (i.e., ETOH, prescriptions, etc.)
- Select *NA* if the patient was not transported to your hospital by EMS

Data Source Hierarchy

- EMS Run Sheet

REVISED OCTOBER 11, 2011

SCENE INTUBATION

Data Format is single-choice.

Definition

Scene Intubation indicates whether an artificial airway was placed at the scene or en route to your hospital, and if so, the type of artificial airway used.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>SceneIntubation</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Nasal Endotracheal Tube
- 2 Oral Endotracheal Tube
- 3 Surgical Airway (i.e. surgical, needle or percutaneous cricothyrotomy, tracheostomy)
- 4 Other Airway (Supraglottic Airway (e.g., Laryngeal Mask Airway [LMA], Combitube, esophageal obturator airway [EOA], King, Combitube))
- 5 No definitive airway placed (No tube is placed into the trachea)

Additional Information

- A normal response is 5, *No definitive airway placed*
- Select *NA* If the patient did not arrive by EMS to your hospital

Data Source Hierarchy

- 1 EMS Run Sheet

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE CPR

Data Format is single-choice.

Definition

Scene CPR indicates whether cardiopulmonary resuscitation was performed at the scene or en route to your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>CPRScene</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Yes
- 2 No

Additional Information

- Select *NA* if the patient did not arrive at your hospital by EMS

Data Source Hierarchy

- 1 EMS Run Sheet

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SCENE NEEDLE CHEST DECOMPRESSION OR THORACOSTOMY

Data Format is single-choice.

Definition

Scene Needle Chest Decompression or Thoracostomy indicates whether chest decompression was performed on the patient at the scene or en route to your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>NeedleThor</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Yes
- 2 No

Additional Information

- Select *NA* if the patient did not arrive at your hospital by EMS

Data Source Hierarchy

- 1 EMS Run Sheet

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INTER-FACILITY TRANSFER

Data Format is single-choice.

Definition

Inter-facility Transfer is whether the patient was transferred to your facility from another hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>InterFacilityTransfer</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Yes
- 2 No

Additional Information

- A patient transferred from a private doctor's office, stand-alone ambulatory surgery center, urgent care clinic or delivered to your hospital by a non-EMS transport is NOT considered an inter-facility transfer.
- Outlying facilities (i.e. hospitals and free-standing emergency departments) that provide extensive emergency care services to assess and/or stabilize a patient are considered to be acute care facilities.

Data Source Hierarchy

- 1 EMS Run Sheet

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

TRANSFER FROM HOSPITAL

Data Format is single-choice.

Definition

Transfer from Hospital documents the Ohio Department of Public Safety (ODPS) assigned-number for the acute care facility which transferred a trauma patient to your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>TransferFrom</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

Refer to *Appendix 1-A* for the ODPS list of hospital codes.

Data Source Hierarchy

- 1 ED Record
- 2 History & Physical Documentation

REVISED OCTOBER 11, 2011

ED/HOSPITAL ARRIVAL DATE

Data Format is a date.

Definition

ED/Hospital Arrival Date is the date that the patient arrived at your ED/hospital.

XSD Data Type	<i>xs- date</i>	XSD Element/Domain (Simple Type)	<i>HospitalArrivalDate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1990 / Maximum Constraint 2030	

Field Values

- Relevant value for data entry

Additional Information

- If the patient was brought to the ED, enter the date patient arrived at ED
- If the patient was directly admitted to the hospital, enter date patient was admitted to the hospital
- Collected as MMDDYYYY

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record
- 3 Billing Sheet/Medical Records Coding Summary Sheet
- 4 Hospital Discharge Summary

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL ARRIVAL TIME

Data Format is numeric.

Definition

ED/Hospital Arrival Time is the time of day that the patient arrived to your ED/hospital.

XSD Data Type	<i>xs- time</i>	XSD Element/Domain (Simple Type)	<i>HospitalArrivalTime</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data entry

Additional Information

- If the patient was brought to your hospital ED, enter the time patient arrived at the ED.
- If the patient was a directly admit to your hospital and bypassed the ED, enter that time that the patient was admitted to your hospital.
- Document as military time

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record
- 3 Billing Sheet/Medical Records Coding Summary Sheet
- 4 Hospital Discharge Summary

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

TRAUMA ACTIVATION LEVEL

Data Format is single-choice.

Definition

Trauma Activation Level is the highest level of trauma activation called for the patient when at your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Alert</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Highest Level of Activation
- 2 Other Level of Activation
- 3 No Trauma Alert Activation

Additional Information

- Select *NA* if your facility does not have a trauma team

Data Source Hierarchy

- 1 Trauma Flow Sheet
- 2 ED Record

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED SYSTOLIC BLOOD PRESSURE

Data Format is numeric.

Definition

ED/Hospital First Documented Systolic Blood Pressure is the patient's first recorded systolic blood pressure in your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Sbp</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 / Maximum Constraint 300	

Field Values

- Relevant value for data element

Additional Information

- Use to auto-generated an additional calculated field, *Revised Trauma Score---ED* (adult & pediatric)

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED PULSE RATE

Data Format is numeric.

Definition

ED/Hospital First Documented Pulse Rate is the patient's first recorded pulse rate in your ED/hospital (palpated or auscultated), expressed as a number per minute.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>PulseRate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 / Maximum Constraint 299	

Field Values

- Relevant value for data element

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED RESPIRATORY RATE

Data Format is numeric.

Definition

ED/Hospital First Documented Respiratory Rate is the patient's first recorded respiratory rate in your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>RespiratoryRate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 / Maximum Constraint 120	

Field Values

- Relevant value for data element

Additional Information

- If available, complete addition field *First Documented ED/Hospital Respiratory Assistance*
- Used to auto-generate an additional calculated field *Revised Trauma Score---ED* (adult & pediatric)

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED RESPIRATORY ASSISTANCE

Data Format is single-choice.

Definition

ED/Hospital First Documented Respiratory Assistance documents whether the patient was receiving respiratory assistance upon arrival at your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>RespiratoryAssist</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Unassisted Respiratory Rate
- 2 Assisted Respiratory Rate

Additional Information

- Only completed if a value is provided for *ED/Hospital First Documented Respiratory Rate*
- Respiratory Assistance is defined as mechanical and/or external support of respiration

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED OXYGEN SATURATION

Data Format is numeric.

Definition

ED/Hospital First Documented Oxygen Saturation is the patient's first recorded oxygen saturation in your ED/Hospital, expressed as a percentage.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>PulseOx</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 / Maximum Constraint	100

Field Values

- Relevant value for data element

Additional Information

- If available, complete additional field *ED/Hospital First Documented Supplemental Oxygen*

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL SUPPLEMENTAL OXYGEN ADMINISTRATION DURING FIRST DOCUMENTED OXYGEN SATURATION MEASUREMENT

Data Format is single-choice.

Definition

ED/Hospital Supplemental Oxygen Administration during First Documented Oxygen Saturation Measurement is whether supplemental oxygen was provided to the patient during the assessment of *ED/Hospital First Documented Oxygen Saturation Level* at your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>SupplementalOxygen</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 No Supplemental Oxygen
- 2 Supplemental Oxygen

Additional Information

- Only completed if a value is provided for *ED/Hospital First Documented Oxygen Saturation*

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED TEMPERATURE

Data Format is numeric.

Definition

ED/Hospital First Documented Temperature is the patient's first recorded temperature in your ED/Hospital, documented in degrees Fahrenheit.

XSD Data Type	<i>xs-decimal</i>	XSD Element/Domain (Simple Type)	<i>Temperature</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 /Maximum Constraint	300

Field Values

- Relevant value for data element

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED GCS EYE OPENING

Data Format is numeric.

Definition

ED/Hospital First Documented GCS Eye Opening is the patient's first recorded Glasgow Coma Score (GCS) eye assessment documented in your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>GcsEye</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1 /Maximum Constraint 4	

Field Values

- 1 No eye movement when assessed
- 2 Opens eyes in response to painful stimulation
- 3 Opens eyes in response to verbal stimulation
- 4 Opens eyes spontaneously

Additional Information

- Necessary to calculate *Overall GCS ED Score*

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED GCS VERBAL RESPONSE

Data Format is numeric.

Definition

ED/Hospital First Documented GCS Verbal Response is the patient's first recorded Glasgow Coma Score verbal assessment documented in your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>GcsVerbal</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1 /Maximum Constraint 5	

Field Values

- Pediatric(<= 2 years of age)
 - 1 No vocal response
 - 2 Inconsolable, agitated
 - 3 Inconsistently consolable, moaning
 - 4 Cries but is consolable, inappropriate interactions
 - 5 Smiles, oriented to sounds, follows objects, interacts
- Adult
 - 1 No verbal response
 - 2 Incomprehensible sounds
 - 3 Inappropriate words
 - 4 Confused
 - 5 Oriented

Additional Information

- Necessary to calculate *Overall GCS ED Score*

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED GCS MOTOR RESPONSE

Data Format is numeric.

Definition

ED/Hospital First Documented GCS Motor Response is the patient's first recorded Glasgow Coma Score motor assessment documented in your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>GcsMotor</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1 /Maximum Constraint 6	

Field Values

- Pediatric(<= 2 years of age)
 - 1 No motor response
 - 2 Extension to pain
 - 3 Flexion to pain
 - 4 Withdrawal from pain
 - 5 Localizing pain
 - 6 Appropriate response to stimulation
- Adult
 - 1 No motor response
 - 2 Extension to pain
 - 3 Flexion to pain
 - 4 Withdrawal from pain
 - 5 Localizing pain
 - 6 Obeys commands

Additional Information

- Necessary to calculate *Overall GCS ED Score*

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED GCS TOTAL SCORE

Data Format is numeric.

Definition

ED/Hospital First Documented GCS Total Score is the patient's first recorded Glasgow Coma Score documented in your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>GcsTotal</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 3 /Maximum Constraint 15	

Field Values

- Relevant value for data element

Additional Information

- Utilize **only** if total score is available without individual component scores
- Used to auto-generate an additional calculated field, *Revised Trauma Score---ED (adult & pediatric)*

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED/HOSPITAL FIRST DOCUMENTED GCS QUALIFIERS

Data Format is multiple-choice.

Definition

ED/Hospital First Documented GCS Qualifiers are factors that potentially affected the patient's first Glasgow Coma Score assessment done after arrival in your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>GcsQualifier</i>
Multiple Entry Configuration	<i>Yes, 3</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Patient Chemically Sedated
- 2 Obstruction to the Patient's Eye
- 3 Patient Intubated
- 4 Valid GCS: Patient not sedated, not intubated and without eye obstruction

Additional Information

- Identifies treatments given to the patient that may affect the first assessment of GCS. This field does not apply to self-medications the patient may administer (i.e., ETOH, prescriptions, etc.)

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record
- 3 EMS Run Sheet

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

HEIGHT

Data Format is numeric.

Definition

Height is simply the patient's height in centimeters and is required only if the patient is less than or equal to 15 years of age.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Height</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Height in centimeters

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record
- 3 Nursing Admission Record

REVISED OCTOBER 11, 2011

WEIGHT

Data Format is numeric.

Definition

Weight is simply the patient's weight in kilograms and is required only if the patient is less than or equal to 15 years of age.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Weight</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Weight in kilograms

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 ED Record
- 3 Nursing Admission Record

REVISED OCTOBER 11, 2011

ED DISCHARGE DATE

Data Format is a date.

Definition

ED Discharge Date is the date that the patient was discharged from your ED.

XSD Data Type	<i>xs-date</i>	XSD Element/Domain (Simple Type)	<i>EdDischargeDate</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1990 /Maximum Constraint 2030	

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY
- Used to auto-generate additional calculated field, *Total ED Time* (elapsed time from ED admit to ED discharge)
- If the patient is directly admitted to the hospital, code as *NA*

Data Source Hierarchy

- 1 Hospital Discharge Summary
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 Physicians' Progress Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED DISCHARGE TIME

Data Format is numeric.

Definition

ED Discharge Time is the time that the patient was discharged from your ED.

XSD Data Type	<i>xs- time</i>	XSD Element/Domain (Simple Type)	<i>EdDischargeTime</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Document as military time
- Used to auto-generate additional calculated field, *Total ED Time* (which is the elapsed time from ED arrival to ED discharge)
- If the patient is directly admitted to the hospital, code as *NA*

Data Source Hierarchy

- 1 Hospital Record
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 Physicians' Progress Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED DISCHARGE DISPOSITION

Data Format is single-choice.

Definition

ED Discharge Disposition is a general location of where the patient goes at the time of discharge from your ED.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EdDischargeDispo</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- | | |
|---|------------------------------------|
| 1 Floor bed (general admission, non-specialty unit bed) | 7 Operating Room |
| 2 Observation unit | 8 Intensive Care Unit (ICU) |
| 3 Telemetry/step-down unit (less acuity than ICU) | 9 Home without services |
| 4 Home with services | 10 Left against medical advice |
| 5 Died | 11 Transferred to another hospital |
| 6 Other (jail, institutional care, mental health, etc.) | |

Additional Information

- Based upon UB-04 disposition coding
- If reported as “Died” complete variable *Signs of Life*
- If the patient is directly admitted to the hospital, code as *NA*
- If *ED Discharge Disposition* is Field Value #4, 5, 6, 9, 10, or 11, then *Hospital Discharge Date, Time, and Disposition* should be *NA*

Data Source Hierarchy

- Hospital Discharge Summary
- Nursing Progress Notes
- Social Worker Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

SIGNS OF LIFE

Data Format is single-choice.

Definition

Signs of Life is whether the patient arrived for treatment in the ED with signs of life.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>SignsOfLife</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Arrived with no signs of life and was not successfully resuscitated
- 2 Arrived with signs of life but died after arrival

Additional Information

- Only completed when *ED Discharge Disposition* is completed as *Died*
- A patient with no signs of life is defined as having none of the following: organized EKG activity, pupillary responses, spontaneous respiratory attempts or movement, unassisted blood pressure, or pulse.

Data Source Hierarchy

- 1 Triage Form/Trauma Flow Sheet
- 2 Physician's Progress Notes
- 3 ED Documentation

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ED TRANSFER TO HOSPITAL

Data Format is single-choice.

Definition

ED Transfer to Hospital is a subsequent hospital destination of the patient upon discharge from your ED.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>EdDcDestination</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element. Refer to *Appendix 1-A* for the list of hospital codes.

Data Source Hierarchy

1. ED Record
2. History & Physical Documentation

REVISED OCTOBER 11, 2011

ALCOHOL USE INDICATOR

Data Format is single-choice.

Definition

Alcohol Use Indicator is whether the patient was tested for a blood alcohol level in your or a prior hospital for this injury event, and if so, whether alcohol was found in the patient's bloodstream.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>AlcoholUse</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Not tested
- 2 Negative confirmed by test
- 3 Positive within legal limit
- 4 Positive beyond legal limit

Additional Information

- Blood alcohol concentration (BAC) may be documented at any facility (or setting) treating this patient event
- "Beyond legal limit" is defined as a blood alcohol concentration above the legal limit for the State of Ohio
 - ❖ Adult Legal Limit is < 0.08 mcg/dl
 - ❖ Pediatric (\leq 21 years of age) Legal Limit is zero

Data Source Hierarchy

- 1 Lab Results
- 2 ED Physician Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ALCOHOL LEVEL RANGE

Data Format is single-choice.

Definition

Alcohol Level Range is the level of the patient's first documented blood alcohol level (BAL) drawn at your hospital when the BAL is positive AND beyond the legal limit.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>AlcoholLevel</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 0.08 to 0.109
- 2 0.11 to 0.199
- 3 0.20 and above

Additional Information

- This field is answered only if *Positive Beyond Legal Limit* is selected for the data field *Alcohol Use Indicator* (see previous page)

Data Source Hierarchy

- 1 Lab Results
- 2 ED Physician Notes

REVISED OCTOBER 11, 2011

DRUG USE INDICATOR

Data Format is single-choice.

Definition

Drug Use Indicator is whether the patient has a chemical substance in their system either at your or a previous hospital for this injury event.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>DrugUse</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Not Tested
- 2 Negative, confirmed by test
- 3 Positive, confirmed by test, prescription drug(s)
- 4 Positive, confirmed by test, illicit drug(s)

Additional Information

- Drug use may be documented at any facility treating this patient event
- Illicit drugs include both drugs that are illegal by law and prescribed drugs that are abused/misused
- If tests confirm both prescription drugs and illicit drugs, select "4," *Positive, confirmed by test, illicit drug(s)*

Data Source Hierarchy

- 1 Lab Results
- 2 ED Physician Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ADMITTING SPECIALTY

Data Format is single-choice.

Definition

Admitting Specialty is the medical specialty of the attending physician who admits the patient to your hospital.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>AdmSvc</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 0 Not Admitted (Died in your ED, transferred to another facility or discharged home)
- 1 General Surgery (Includes adult general and adult trauma surgery)
- 2 Neurosurgery
- 3 Orthopedic Surgery
- 4 Pediatric Surgery (Includes pediatric general surgery)
- 5 Burn Service
- 6 Thoracic Surgery
- 7 Plastic Surgery
- 8 All Other Surgical Services
- 9 Non-Surgical Service(s)

Additional Information

- This is not necessarily the service to which the patient is designated upon admission to the hospital, but the medical specialty of the patient's attending physician

Data Source Hierarchy

- 1 ED Record
- 2 Trauma Flow Sheet
- 3 Billing/Registration Sheet
- 4 History & Physical

REVISED OCTOBER 11, 2011

HOSPITAL PROCEDURES

Data Format is multiple-choice.

Definition

Hospital Procedures are all operative or essential procedures conducted on the patient during his/her stay at your hospital.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>HospitalProcedure</i>
Multiple Entry Configuration	<i>Yes, 200</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Major and minor procedure (ICD-9-CM) inpatient codes
- The maximum number of procedures that may be reported for a patient is 200

Additional Information

- Operative and/or essential procedures are defined as procedures performed in the Operating Room, Emergency Department, and/or Intensive Care Unit that were essential to the diagnoses, stabilization, or treatment of the patient's specific injuries or their complications at your hospital.
- Include only procedures performed at your hospital.
- At a minimum, the procedures listed on the following page should be captured for TACR. The hospital may choose to capture additional procedures for internal use. Procedures included on in the Procedures List that are designated with an asterisk have the potential to be performed multiple times during one episode of hospitalization. In this case, capture only the first event. If there is no asterisk, capture each event even if there is more than one.

Data Source Hierarchy

- 1 Operative Reports
- 2 ED and ICU Records
- 3 Trauma Flow Sheet
- 4 Anesthesia Record
- 5 Billing Sheet/Medical Records Coding Summary Sheet
- 6 Hospital Discharge Summary

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

PROCEDURE LIST FOR *HOSPITAL PROCEDURES* DATA FIELD

DIAGNOSTIC & THERAPEUTIC IMAGING

Computed tomographic studies*
Diagnostic ultrasound (includes FAST)
Doppler ultrasound of extremities*
Angiography
Angioembolization
Echocardiography
Cystogram
Inferior vena cava (IVC) filter
Urethrogram

CARDIOVASCULAR

Central venous catheterization*
Pulmonary artery catheterization*
Cardiac output monitoring*
Open cardiac massage
Cardiopulmonary Resuscitation (CPR)

CENTRAL NERVOUS SYSTEM

Insertion of ICP monitor
Ventriculostomy
Cerebral oxygen monitoring

GASTROINTESTINAL

Endoscopy (includes gastroscopy, sigmoidoscopy, colonoscopy)
Gastrostomy/jejunostomy/gastrojejunostomy (percutaneous/or endoscopic)

GENITOURINARY

Ureteric catheterization (i.e. ureteric stent)
Suprapubic cystostomy

MUSCULOSKELETAL

Soft tissue/bony debridements*
Closed reduction fractures
Skeletal (and halo) traction*
Fasciotomy

RESPIRATORY

Insertion of endotracheal tube*
Continuous invasive mechanical ventilation
Chest tube*
Bronchoscopy
Tracheostomy

TRANSFUSION

The following blood products should be captured over first 24 hours after hospital arrival:

Transfusion of red cells *
Transfusion of platelets *
Transfusion of plasma *

In addition to coding the individual blood products listed above assign the 99.01 ICD-9 procedure code on patients that receive > 10 units of blood products over first 24 hours following hospital arrival *

OTHER

Hyperbaric oxygen
Decompression chamber
Total Parenteral Nutrition (TPN)

*May be performed multiple times during hospitalization

REVISED OCTOBER 11, 2011

PROCEDURE EPISODE

Data Format is multiple-choice.

Definition

Procedure Episode documents the order of the surgical procedures performed while the patient was in your hospital.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>ProcedureEpisode</i>
Multiple Entry Configuration	<i>Yes, 200</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 First Operative Episode
- 2 Second Operative Episode
- 3 Third Operative Episode
- 4 Fourth Operative Episode
- 5 Fifth Operative Episode
- 6 Sixth Operative Episode
- 7 Seventh Operative Episode
- 8 Eighth Operative Episode
- 9 Ninth Operative Episode
- 10 Tenth or More Operative Episode

Additional Information

- Include only those operative procedures performed at your hospital
- This field is linked to the *Hospital Procedures* Field

Data Source Hierarchy

- 1 Operative Reports

REVISED OCTOBER 11, 2011

HOSPITAL PROCEDURE START DATE

Data Format is a date.

Definition

Hospital Procedure Start Date documents the date that an operative procedure was performed in your hospital.

XSD Data Type	<i>xs- date</i>	XSD Element/Domain (Simple Type)	<i>HospProcedureDate</i>
Multiple Entry Configuration	<i>Yes, 200</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY
- This field is linked to the *Hospital Procedures* Field

Data Source Hierarchy

- 1 Operative Reports
- 2 Anesthesia Record
- 3 OR Nurses' Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

HOSPITAL PROCEDURE START TIME

Data Format is numeric.

Definition

Hospital Procedure Start Time documents the time that an operative procedure was started in your hospital.

XSD Data Type	<i>xs- time</i>	XSD Element/Domain (Simple Type)	<i>HospProcedureTime</i>
Multiple Entry Configuration	<i>Yes, 200</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Document as military time
- Procedure start time is defined as the time that the incision was made or that the essential procedure started
- This field is linked to the *Hospital Procedures* Field

Data Source Hierarchy

- 1 Operative Reports
- 2 Anesthesia Record
- 3 OR Nurses' Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

Procedure Location

Data Format is multiple-choice.

Definition

Procedure Location documents the location of the procedures performed while the patient was in your hospital.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>ProcedureLocation</i>
Multiple Entry Configuration	<i>Yes, 200</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Emergency Department
- 2 Operating Room
- 3 ICU
- 4 Floor
- 5 Radiology

Additional Information

- Include only those operative procedures performed at your hospital
- This field is linked to the *Hospital Procedures* Field

Data Source Hierarchy

- 1 Operative Reports

REVISED OCTOBER 11, 2011

CO-MORBID CONDITIONS

Data Format is multiple-choice.

Definition

Co-morbid Conditions are pre-existing health factors present in the patient prior to arrival at your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Comorbid</i>
Multiple Entry Configuration	<i>Yes, 23</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- | | |
|--|---|
| 0 No Known Co-morbid Conditions | 14 Esophageal Varices |
| 1 Other Co-morbid Conditions Not Otherwise Listed Here | 15 Functionally Dependent Health Status |
| 2 Alcoholism | 16 History of Angina within past 1 month |
| 3 Ascites within 30 days | 17 History of Myocardial Infarction within 6 months |
| 4 Bleeding Disorder/Current Anticoagulant Therapy | 18 History of PVD Revascularization/Amputation |
| 5 Chemotherapy for cancer within 30 days | 19 Hypertension requiring medication |
| 6 Congenital Anomalies | 20 Impaired Sensorium |
| 7 Congestive Heart Failure | 21 Prematurity |
| 8 Current Smoker | 22 Obesity |
| 9 Currently requiring dialysis | 23 Respiratory Disease |
| 10 CVA/Residual Neurological Deficit | 24 Steroid Use |
| 11 Diabetes Mellitus | 25 Cirrhosis |
| 12 Disseminated Cancer | |
| 13 Do Not Resuscitate (DNR) Status | 50 Osteoporosis |

Additional Information

- Field Value #0, *No Known Co-morbid Conditions* is used for patients with no known co-morbid conditions as coded by the hospitals or defined within the NTDS Data Dictionary.
- Field value #1, *Other Co-morbid Conditions Not Otherwise Listed Here*, is used if that patient has a pre-existing condition that is not included in this list.
- Field value #13, *Do Not Resuscitate (DNR) Status*, is selected here ONLY if such a status was medically ordered PRIOR TO the patient's arrival in your ED/hospital. To document patient DNR orders issued AFTER arrival to your ED/hospital, see next page.

Data Source Hierarchy

- History and Physical
- Discharge Sheet
- Billing Sheet

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

DNR STATUS

Data Format is single-choice.

Definition

DNR Status documents the presence of a physician's order to withhold select resuscitative efforts from the patient, and whether the order was issued prior to or during the patient's stay at your ED/hospital.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>DNR</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 0 Not a DNR patient (patient is to receive all resuscitative efforts if needed)
- 1 DNR status ordered prior to patient's arrival at your hospital
- 2 DNR status ordered after patient's arrival to your hospital

Additional Information

- This field is completed for each patient
- DNR status is typically ordered for a patient who does not wish to be resuscitated in the event of a cardiac arrest (no palpable pulse) or respiratory arrest (no spontaneous respirations or the presence of labored breathing) near the end of life.
- A DNR status includes both *DNR-CC* (comfort care) and *DNR-CCA* (comfort care arrest) orders.
- DNR may also be referred to as Allow Natural Death (AND)

Data Source Hierarchy

- 1 Do Not Resuscitate Document
- 2 History and Physical
- 3 Discharge Sheet
- 4 Billing Sheet

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INJURY DIAGNOSES

Data Format is multiple-choice.

Definition

Injury Diagnoses are the patient's diagnoses for all injuries identified at your ED/hospital for this injury event.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>InjuryDiagnoses</i>
Multiple Entry Configuration	<i>Yes, 50</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Injury diagnoses are defined by ICD-9-CM codes; refer to inclusion criteria

Additional Information

- Can be utilized to generate Abbreviated Injury Score and Injury Severity Score
- The maximum number of diagnoses that may be reported for an individual patient is 50

Data Source Hierarchy

- 1 Autopsy Report
- 2 Operative Report
- 3 Discharge Summary
- 4 Trauma Flow Sheet
- 5 Radiology Results
- 6 Billing Sheet/Medical Records Coding Summary Sheet
- 7 ED and ICU Records

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

ISS BODY REGION

Data Format is multiple-choice.

Definition

ISS Body Region is the Injury Severity Score assigned by body region codes that reflects the patient's injury(ies) diagnosed at your ED/hospital for this injury event.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>IssRegion</i>
Multiple Entry Configuration	<i>Yes, 50</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1/Maximum Constraint 6	

Field Values

- 1 Head or Neck
- 2 Face
- 3 Chest
- 4 Abdominal or Pelvic Contents
- 5 Extremities or Pelvic Girdle
- 6 External

Additional Information

- Field value #1, *Head or Neck*, includes injury to the brain, skull, cervical spine and/or cervical spine fractures
- Field value #2, *Face*, includes those areas involving the mouth, ears, nose and/or facial bones
- Field value #3, *Chest*, includes all lesions to internal organs within the chest, diaphragm, rib cage and/or thoracic spine
- Field value #4, *Abdominal or Pelvic Contents*, includes all lesions to internal organs within the abdomen and lumbar spine
- Field value #5, *Extremities or Pelvic Girdle*, includes sprains, dislocations, fractures and amputations **except for the spinal column, skull and rib cage**
- Field value #6, *External*, includes injuries such as lacerations, contusions, abrasions and burns independent of their location on the body surface

Data Source Hierarchy

- 1 Autopsy Report
- 2 Operative Report
- 3 Discharge Summary
- 4 Trauma Flow Sheet
- 5 Radiology Results
- 6 Billing Sheet/Medical Records Coding Summary Sheet
- 7 ED and ICU Records

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

AIS PRE-DOT CODE

Data Format is multiple-choice.

Definition

AIS Pre-dot Code is a component of the Abbreviated Injury Scale (AIS) code that reflects the patient's injuries diagnosed at your ED/hospital.

XSD Data Type	<i>xs-string</i>	XSD Element/Domain (Simple Type)	<i>AisPre-dot</i>
Multiple Entry Configuration	<i>Yes, 50</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- The pre-dot code is the 6 digits preceding the decimal point in an associated AIS code

Additional Information

- Can be utilized to generate Abbreviated Injury Score and Injury Severity Score

Data Source Hierarchy

- AIS Dictionary using ICD-9-CM injury codes found

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

AIS SEVERITY

Data Format is multiple-choice.

Definition

AIS Severity is the Abbreviated Injury Scale (AIS) severity codes that reflect the patient's injuries diagnosed at your ED/hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>AisSeverity</i>
Multiple Entry Configuration	<i>Yes, 50</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1 /Maximum Constraint 9	

Field Values

- 1 Minor Injury
- 2 Moderate Injury
- 3 Serious Injury
- 4 Severe Injury
- 5 Critical Injury
- 6 Maximum Injury, Virtually Non-survivable
- 7 Not Possible to Assign an AIS

Additional Information

- Field value #7, *Not Possible to Assign an AIS*, is chosen if the severity of an injury is not known

Data Source Hierarchy

- AIS Dictionary using ICD-9-CM injury codes found

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

AIS VERSION

Data Format is single-choice.

Definition

AIS version is the software version used to calculate Abbreviated Injury Scale (AIS) severity codes for the patient's current injury event.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>AisVersion</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 AIS 80
- 2 AIS 85
- 3 AIS 90
- 4 AIS 95
- 5 AIS 98
- 6 AIS 05

Data Source Hierarchy

- AIS Dictionary using ICD-9-CM injury codes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INJURY SEVERITY SCORE

Data Format is single-choice.

Definition

Injury Severity Score (ISS) is a nationally-accepted scoring system that reflects the patient's injuries for this injury event.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Iss</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1 / Maximum Constraint 75	

Field Values

- Relevant ISS value for the constellation of injuries

Data Source Hierarchy

- AIS Dictionary using ICD-9-CM injury codes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

TOTAL ICU LENGTH OF STAY

Data Format is numeric.

Definition

Total ICU Length of Stay documents the total number of days that the patient spent in any intensive care unit (ICU) (including all episodes) while in your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>TotalIcuLos</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 /Maximum Constraint 400	

Field Values

- Relevant numeric value

Additional Information

- Recorded in full day increments with any partial day listed as a full day
- Field allows for multiple ICU admission and discharge dates
- If patient is admitted and discharged on the same date from the ICU, the *Length of Stay* (LOS) is one day

Data Source Hierarchy

- 1 ICU Nursing Flow Sheet
- 2 Calculate Based on Admission Form and Discharge Sheet
- 3 Nursing Progress Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

TOTAL VENTILATOR DAYS

Data Format is numeric.

Definition

Total Ventilator Days documents the total number of days that the patient spent on mechanical ventilation (excluding time in the OR) while in your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>TotalVentDays</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 0 /Maximum Constraint 400	

Field Values

- Relevant value for data element

Additional Information

- Recorded in full day increments with any partial day listed as a full day
- Field allows for multiple start and stop dates and calculates total days spent on a mechanical ventilator. If a patient begins and ends mechanical ventilation on the same date, the total ventilator days is one day.
- Excludes mechanical ventilation time associated with OR procedures

Data Source Hierarchy

- 1 ICU Respiratory Therapy Flowsheet
- 2 ICU Nursing Flow Sheet
- 3 Physician's Daily Progress Notes
- 4 Calculate Based on Admission Form and Discharge Sheet

References to Other Databases

REVISED OCTOBER 11, 2011

HOSPITAL DISCHARGE DATE

Data Format is a date.

Definition

Hospital Discharge Date is simply the date that the patient was discharged from your hospital.

XSD Data Type	<i>xs-date</i>	XSD Element/Domain (Simple Type)	HospitalDcDate
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>	Minimum Constraint 1990 /Maximum Constraint 2030	

Field Values

- Relevant value for data element

Additional Information

- Collected as MMDDYYYY
- Used to calculate *Total Length of Hospital Stay* (which is the elapsed time from ED/Hospital arrival to Hospital Discharge)

Data Source Hierarchy

- 1 Hospital Record
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 Physician Discharge Summary

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

HOSPITAL DISCHARGE TIME

Data Format is numeric.

Definition

Hospital Discharge Time is simply the time of day that the patient was discharged from your hospital.

XSD Data Type	<i>xs-time</i>	XSD Element/Domain (Simple Type)	<i>HospitalDCTime</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Document as military time
- Used to calculate field *Total Length of Hospital Stay* (which is the elapsed time from ED/Hospital Arrival to Hospital Discharge)

Data Source Hierarchy

- 1 Hospital Record
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 Physician Discharge Summary

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

HOSPITAL DISCHARGE DISPOSITION

Data Format is single-choice.

Definition

Hospital Discharge Disposition documents in general terms where the patient went after discharge from your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>HospitalDcDispo</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Discharged/Transferred to another hospital for ongoing acute inpatient care
- 2 Discharged to an intermediate care facility (ICF)/long term care facility (LTCF)
- 3 Discharged/Transferred to home under the care of an organized home health service
- 4 Left against medical advice (AMA) or discontinued care
- 5 Died
- 6 Discharged home with no home services
- 7 Discharged to a skilled nursing facility (SNF)
- 8 Discharged to hospice care
- 9 Discharged to another type of inpatient rehabilitation facility (IRF)
- 10 Discharged to a long term acute care hospital (LTACH)

Additional Information

- In field values #3 and #6, "Home" refers to the patient's current place of residence (e.g., home, prison, etc.)
- Field values based upon UB-04 disposition coding
- Disposition to any other non-medical facility should be coded as 6
- Disposition to any other medical facility should be coded as 9
- Refer to the [glossary](#) for definitions of facility types

Data Source Hierarchy

- 1 Hospital Discharge Summary Sheet
- 2 Nurses Notes
- 3 Case Manager/Social Services Notes

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

INPATIENT TRANSFER TO HOSPITAL

Data Format is single-choice.

Definition

Inpatient Transfer to Hospital documents a subsequent hospital destination for the patient after inpatient admission at your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>DcDestination</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Refer to *Appendix 1-A* for the list of hospital codes

Data Source Hierarchy

- 1 Discharge Summary
- 2 Progress Notes
- 3 Billing/Registration Sheet

REVISED OCTOBER 11, 2011

DISCHARGE STATUS

Data Format is single-choice.

Definition

Discharge Status is whether the patient left your hospital alive or dead.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Outcome</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>No</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Alive
- 2 Dead

Data Source Hierarchy

- 1 Discharge Summary
- 2 Progress Notes
- 3 Billing Sheet

REVISED OCTOBER 11, 2011

TIME OF DEATH

Data Format is numeric.

Definition

Time of Death is simply the time of day that the patient was pronounced dead.

XSD Data Type	<i>xs-time</i>	XSD Element/Domain (Simple Type)	<i>TimeOfDeath</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Relevant value for data element

Additional Information

- Document as military time
- Only complete field when *Discharge Status* is completed as *Dead*
- This may differ from the time of discharge
- *Time of Death* must be \leq *Hospital Discharge Time*

Data Source Hierarchy

- 1 Hospital Record
- 2 Billing Sheet/Medical Records Coding Summary Sheet
- 3 Physician Discharge Summary

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

PRIMARY METHOD OF PAYMENT

Data Format is single-choice.

Definition

Primary Method of Payment is the patient's foremost source of payment for care while in your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>PrimaryPayer</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Medicaid
- 2 Not Billed (for any reason)
- 3 Self Pay
- 4 Private/Commercial Insurance
- 5 No Fault Automobile Insurance
- 6 Medicare
- 7 Other Government Payer Source
- 8 Workers Compensation
- 9 Blue Cross/Blue Shield
- 10 Other

Data Source Hierarchy

- 1 Billing Sheet/Medical Records Coding Summary Sheet
- 2 Hospital Admission Form

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

BILLED HOSPITAL CHARGES

Data Format is single-choice.

Definition

Billed Hospital Charges is the final dollar amount billed to the patient for this injury admission at your hospital (excludes professional fees).

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Charges</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- Whole dollar amount of total hospital charges rounded off to the nearest dollar

Data Source Hierarchy

- Billing Sheet

REVISED OCTOBER 11, 2011

ORGANS/TISSUE REQUESTED

Data Format is multiple-choice.

Definition

Organs/Tissue Requested is whether the local organ procurement organization (OPO) was contacted by your hospital in regards to possible donation of the patient's organs and/or tissues.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>OrganReq</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Yes
- 2 No

Additional Information

- Select *NA* if the patient is alive

Data Source Hierarchy

- 1 Discharge Summary
- 2 History and Physical
- 3 Billing Sheet

REVISED OCTOBER 11, 2011

AUTOPSY PERFORMED

Data Format is single-choice.

Definition

Autopsy Performed documents whether an internal organ exam was performed on the patient by a trained pathologist.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Autopsy</i>
Multiple Entry Configuration	<i>No</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- 1 Yes, an autopsy was performed
- 2 No, an autopsy was not performed

Additional Information

- Select *NA* if the patient is alive

Additional Information

- If only an external or visual-type exam was done and no internal organs were surgically explored, field value #2, *No, an autopsy was not performed*, should be selected.

Data Source Hierarchy

- 1 Autopsy Report
- 2 Discharge Summary

REVISED OCTOBER 11, 2011

HOSPITAL COMPLICATIONS

Data Format is multiple-choice.

Definition

Hospital Complications document any medical complication that occurred during the patient's stay at your hospital.

XSD Data Type	<i>xs-integer</i>	XSD Element/Domain (Simple Type)	<i>Complications</i>
Multiple Entry Configuration	<i>Yes, 25</i>	Accepts Null Value	<i>Yes, common null values</i>
Required in XSD	<i>Yes</i>		

Field Values

- | | |
|--|--|
| 0 No Complications | 19 Organ/space surgical site infection |
| 1 Complications occurred that are otherwise not on this list | 20 Pneumonia |
| 2 Abdominal compartment syndrome | 21 Pulmonary embolism |
| 4 Acute renal failure | 22 Stroke/CVA |
| 5 Acute respiratory distress syndrome (ARDS) | 23 Superficial surgical site infection |
| 8 Cardiac arrest with CPR | 25 Unplanned intubation |
| 9 Coagulopathy | 27 Urinary tract infection |
| 11 Decubitus ulcer | 28 Catheter related blood stream infection |
| 12 Deep surgical site infection | 29 Osteomyelitis |
| 13 Drug or alcohol withdrawal syndrome | 30 Unplanned return to OR |
| 14 Deep vein thrombosis (DVT)/thrombophlebitis | 31 Unplanned return to ICU |
| 15 Extremity compartment syndrome | 32 Severe sepsis |
| 16 Graft/prosthesis/flap failure | |
| 18 Myocardial infarction | |

Additional Information

- The Field Value #1, *Complications occurred that are otherwise not on this list*, is chosen if that patient had a complication but it is not included in the list here. The list here mirrors the NTDS list of tracked patient complications.
- The field value #0, *No Complications*, should be used for patients who knowingly developed no medical complications as a result of this injury episode.

Data Source Hierarchy

- 1 Discharge Summary
- 2 History and Physical
- 3 Billing Sheet

References to Other Databases

- NTDS 1.2.5

REVISED OCTOBER 11, 2011

GLOSSARY OF TERMS

Discharge Disposition

Field Value	Variable	Definition
2	Intermediate Care Facility (ICF)	A nursing home providing long-term care less than a skilled level, usually custodial care only.
7	Skilled Nursing Facility (SNF)	A nursing home or unit which provides skilled nursing or rehabilitation care, less than the level of an inpatient rehabilitation facility.
8	Hospice	A special way of caring for persons who are terminally ill. Hospice services can be provided in the home or at a nursing facility.
9	Inpatient Rehabilitation Facility (IRF)	A hospital or part of a hospital which provides intensive (3 hours per day) of rehabilitation therapies to persons with disability from recent injury or illness.
10	Long Term Acute Care Hospital (LTACH)	A special hospital or part of a hospital that provides treatment for patients who stay, on average, more than 25 days for extended acute care. Most patients are transferred from an intensive or critical care unit.

REVISED OCTOBER 11, 2011

CO-MORBID CONDITIONS

Field Value	Variable	Definition	ICD-9 Code Range
2	Alcoholism	Alcohol consumption to an extent that adversely affects social and work-related functioning and produces withdrawal symptoms when habitual intake is stopped or greatly reduced; to be determined based upon the screening tool used at your hospital	291.0-291.3, 291.5, 291.81, 291.89, 291.9, 303.00-303.93, 305.00-305.03, V11.3
3	Ascites	The presence of fluid accumulation (other than blood) in the peritoneal cavity noted on physical examination, abdominal ultrasound or abdominal CT/MRI	789.5 (pre 2008), 789.59
4	Bleeding disorder/ Current anti-coagulant Therapy	A condition that places the patient at risk for excessive bleeding due to a deficiency of blood clotting elements (e.g. vitamin K deficiency, hemophilia, thrombocytopenia) and/or the use of chronic anticoagulation therapy (Coumadin, Plavix, or similar medications); does not include the patient on chronic aspirin therapy	269.0, 286.0, 286.1, 286.4, 287.1, 287.3 (pre-2006), 287.5, 287.9
5	Chemotherapy for Cancer within 30 days	The receipt of oral or intravenous chemotherapy treatment in the 30 days prior to admission for any type of medically diagnosed cancer	V58.1 (pre 2006), V58.11
6	Congenital Anomaly	A medical condition present since birth	740.0 – 759.9, 758.3 (pre 2005), 752.8 (pre 2004)
7	Congestive Heart Failure (CHF)	The inability of the heart to pump a sufficient quantity of blood to meet the metabolic needs of the body; may be noted in the medical record as CHF, congestive heart failure or pulmonary edema	398.91, 402.01, 402.11, 402.91, 404.11, 404.13, 404.13, 404.91, 404.93, 425.0-425.9, 428.0
8	Current Smoker	A patient who has smoked cigarettes, pipes and/or cigars in the year prior to admission	
9	Currently requiring or on Dialysis	Acute or chronic renal failure prior to injury that requires periodic peritoneal dialysis, hemodialysis, hemofiltration or hemodiafiltration	V45.1
10	CVA/residual neurological deficit	A history prior to injury of a cerebrovascular accident (embolic, thrombotic, or hemorrhagic) with persistent residual motor, sensory or cognitive dysfunction (e.g., hemiplegia, hemiparesis, aphasia, sensory deficit and/or impaired memory)	430-438.9, 436
11	Diabetes Mellitus	Acute or chronic pancreatic failure prior to injury that requires exogenous parenteral insulin or an oral hypoglycemic agent	205.00-250.33, 250.40-250.73
12	Disseminated Cancer	Cancer that has spread to one site or more sites in addition to the primary site in the body; other terms include fulminant, terminal, diffuse, widely metastatic, widespread and/ or carcinomatosis	196.0-199.1

REVISED OCTOBER 11, 2011

CO-MORBID CONDITIONS, continued

13	Do Not Resuscitate (DNR) Status	The patient has a <i>Do Not Resuscitate</i> (DNR) medical order document or similar advance directive documented in the medical record	
14	Esophageal Varices	Engorged collateral veins in the esophagus which bypass a scarred liver to carry portal blood to the superior vena cava	456.0-456.20
15	Functionally dependent health status	An inability of the patient to complete activities of daily living (ADL) including but not limited to bathing, feeding, dressing, toileting, and/or walking; there are two generally-accepted forms: 1 Partially dependent: The patient requires the use of equipment or devices coupled with assistance from another person for some ADL. Any patient coming from a nursing home setting who is not totally dependent would fall into this category, as would any patient who requires kidney dialysis or home ventilator support that requires chronic oxygen therapy yet maintains some independent functions. 2 Totally dependent: The patient cannot perform any ADL. This includes a patient who is totally dependent upon nursing care, or a dependent nursing home patient. All patients with psychiatric illnesses should be evaluated for their ability to function with or without assistance with ADLs just as the non-psychiatric patient.	
16	History of angina within past 1 month	Pain or discomfort between the diaphragm and the mandible resulting from myocardial ischemia, experienced by the patient within the past month	V12.50
17	History of Myocardial Infarction (MI) within past 6 months	Death of a segment of heart muscle caused by a blood clot in the coronary artery interrupting blood supply, within the past 6 months	
18	History of Revascularization/ Amputation for Peripheral Vascular Disease (PVD)	Angioplasty or revascularization procedure for atherosclerotic PVD (e.g. aortafemoral, femoral-femoral, femoral-popliteal) or amputation procedure for PVD (e.g. toe amputations, transmetatarsal amputations, below the knee or above the knee amputations); excludes amputation for trauma or resection of abdominal aortic aneurysms	
19	Hypertension requiring medication	History of a persistent elevation of systolic blood pressure >140 mm Hg and a diastolic blood pressure >90 mm Hg requiring antihypertensive medications (e.g. diuretics, beta blockers, ACE inhibitors, calcium channel blockers).	401.0-401.9, 402.00, 402.10, 402.90, 403.00, 403.10, 403.90, 404.00, 404.10, 404.90, 405.01-405.99
20	Impaired sensorium	Patients with chronic mental status changes and/or delirium including but not limited to schizophrenia, dementia, Alzheimer's disease, mental retardation, developmental delay, documented behavior disturbances and/or attention deficit disorders	290-290.9, 299.00, 312.9, 314.00, 315.2, 315.31, 315.39, 315.5, 315.8, 315.9, 317, 318.0, 318.1, 319, 331.1

REVISED OCTOBER 11, 2011

			(pre 2004), 331.11-331.2, V11.0, V11.1, V11.2, V11.8
21	Prematurity	Premature birth (gestation <37 weeks), a newborn history of bronchopulmonary dysplasia, ventilator support for greater than 7 days after birth, and/or the diagnosis of cerebral palsy	343.0 - 343.9, 765.00-765.19, 770.

CO-MORBID CONDITIONS, continued

22	Obesity	Body Mass Index (BMI) of 40 or greater	278.00-278.01
23	Respiratory Disease	Severe chronic lung disease including but not limited to asthma, cystic fibrosis, chronic obstructive lung disease (COPD), emphysema and /or chronic bronchitis; excludes patients with <i>acute</i> asthma, diffuse interstitial fibrosis and/or sarcoidosis	277.00, 490-493.92
24	Steroid use	Use of oral or parenteral corticosteroid medications (e.g. Prednisone, Decadron) in the 30 days prior to injury for a chronic medical condition (e.g. COPD, asthma, rheumatologic disease, rheumatoid arthritis, inflammatory bowel disease); does not include topical/dermal corticosteroids those administered by inhalation or rectally	
24	Cirrhosis	Chronic progressive disease of the liver characterized by the replacement of healthy cells with scar tissue; often characterized by jaundice	
50	Osteoporosis	Thinning of bone tissue and loss of bone density over time; most common in post-menopausal women	733.0 – 733.01

REVISED OCTOBER 11, 2011

Complications

	Variable	Definition	ICD-9 Code Range
2	Abdominal Compartment Syndrome (ACS)	Sudden increase in intra-abdominal pressure resulting in alteration of respiratory, hemodynamic and renal functions; patients with this syndrome are critically ill requiring ventilator support and/or reoperation	958.93
3	Acute Renal Failure (ARF)	Sudden renal dysfunction after injury requiring hemodialysis, ultrafiltration or peritoneal dialysis	403.11, 403.91, 404.12, 404.92, 582.0-582.9, 583.0-583.7, 584.5-584.9, 585 (pre 2006), 586, 588.0, 958.5
5	Acute Respiratory Distress Syndrome (ARDS)	Sudden, severe lung failure characterized by $\text{PaO}_2/\text{FiO}_2 \leq 200$, decreased compliance, and diffuse bilateral pulmonary infiltrates without associated evidence of CHF, requiring mechanical ventilation and persisting beyond 36 hours; typically occurs in conjunction with catastrophic medical conditions, such as pneumonia, shock, sepsis and trauma	518.5, 518.82 cross-referenced with procedural codes for ventilator support (96.70, 96.71, 96.72)
8	Cardiac Arrest with CPR	Absence of cardiac rhythm or presence of chaotic cardiac rhythm that results in loss of consciousness requiring the initiation of any component of basic and/or advanced cardiac life support; excludes patients that arrive at the hospital in full arrest	427.5
9	Coagulopathy	Twice the upper limit of the normal range for PT or PTT in a patient without a pre-injury bleeding disorder	286.6, 287.1, 287.3
11	Decubitus Ulcer	A "pressure sore" resulting from pressure exerted on the skin, soft tissue, muscle or bone by the weight of an individual against a surface	707.0 (pre 2005), 707.00-707.09
12	Deep Surgical Site Infection	An infection that occurs within 30 days of an operation involving deep soft tissues (e.g. fascial and muscle layers) at the site of incision and at least one of the following: <ul style="list-style-type: none"> • Purulent drainage from the deep incision site • Dehiscence at the surgical site or elective reopening of the surgical site by a surgeon because of fever ($> 38^\circ\text{C}$), localized pain or tenderness • Abscess at the incision site • Diagnosis of a deep incision infection 	
13	Drug or alcohol withdrawal syndrome	Set of symptoms seen when an individual reduces or stops habitual alcohol consumption or illicit drug use; symptoms include tremulousness, agitation, rapid heartbeat, high blood pressure, seizures, hallucinations and/or delirium tremens.	291.0, 291.3, 291.81, 292.0

REVISED OCTOBER 11, 2011

14	Deep Vein Thrombosis (DVT)/ thrombophlebitis	Formation or existence of a blood clot or thrombus within the vascular system often coupled with inflammation; diagnosis may be confirmed by venogram, ultrasound or CT; treatment includes anticoagulation therapy and/or placement of a vena cava filter or vena cava surgery	451.0, 451.11, 451.19, 451.2, 451.81- 451.84, 451.89, 451.9, 453.40, 459.10-459.19, 997.2, 999.2
----	--	---	--

Complications, continued

15	Extremity compartment syndrome	Swelling and increased pressure within a limited space (a fascial compartment) that compromises blood vessels, nerves and/or tendons that run through that compartment; more commonly involves the leg but can also occur in the forearm, arm, thigh and shoulder	
16	Graft/ prosthesis/flap failure	Mechanical failure of an extracardiac vascular graft or prosthesis including myocutaneous flaps and skin grafts requiring return to the operating room or a balloon angioplasty	996.00, 996.1, 996.52, 996.61, 996.62
18	Myocardial infarction (MI)	Death of a segment of heart muscle, caused by a blood clot in the coronary artery interrupting blood supply; in this context, following the injury and occurring during the hospital stay	410.00, 410.02, 410.10, 410.12, 410.20, 410.22, 410.30, 410.32, 410.40, 410.42, 410.50, 410.52, 410.60, 410.62, 410.70, 410.72, 410.80, 410.82, 410.90, 410.92
19	Organ/ space surgical site infection	<p>An infection that occurs within 30 days after an operation and involves any part of the anatomy (e.g. organs or spaces) other than the surgical incision and at least one of the following:</p> <ul style="list-style-type: none"> ▪ Purulent drainage from a drain that is placed through a stab wound or puncture into the organ/space ▪ Organisms isolated from an aseptically obtained culture of fluid or tissue in the organ/space ▪ An abscess or other evidence of infection involving the organ/space that is found on direct examination, during reoperation or by histopathologic or radiologic examination • Diagnosis of an organ/space SSI by a surgeon or attending physician 	

REVISED OCTOBER 11, 2011

20	Pneumonia	<p>Inflammation of one or both lungs caused by infection from a bacterium, virus, chemical or physical irritant; patients must meet at least one of the following two criteria:</p> <p>Criterion 1. Rales or dullness to percussion on physical examination of chest AND any of the following:</p> <ul style="list-style-type: none"> a. New onset of purulent sputum or change in character of sputum b. Organism isolated from blood culture c. Isolation of pathogen from specimen obtained by transtracheal aspirate, bronchial brushing, or biopsy <p>Criterion 2. Chest radiographic examination shows new or progressive infiltrate, consolidation, cavitation, or pleural effusion AND any of the following:</p> <ul style="list-style-type: none"> a. New onset of purulent sputum or change in character of sputum b. Organism isolated from the blood c. Isolation of pathogen from specimen obtained by transtracheal aspirate, bronchial brushing, or biopsy d. Isolation of virus or detection of viral antigen in respiratory secretions e. Diagnostic single antibody titer (IgM) or fourfold increase in paired serum samples (IgG) for pathogen f. Histopathologic evidence of pneumonia 	480.0-480.3, 481, 482.0, 482.1, 482.2, 482.30, 482.31, 482.32, 482.39, 482.40, 482.41, 482.49, 482.81-482.89, 482.9, 483.0, 483.1, 483.8, 484.1, 484.8, 485, 486
21	Pulmonary embolism	The obstruction of the pulmonary artery or a branch of it leading to the lungs by a blood clot; often diagnosed by a V-Q scan, pulmonary arteriogram and/or CT angiogram.	415.11, 415.19

Complications, continued

22	Stroke/CVA	Embotic, thrombotic or hemorrhagic vascular accident with motor, sensory and/or cognitive dysfunction (e.g. hemiplegia, hemiparesis, aphasia, sensory deficit, impaired memory) that persists for 24 or more hours; in this context, following the injury and occurring during the hospital stay	997.02
23	Superficial surgical site infection	<p>Infection that occurs within 30 days after an operation and infection involves only skin or subcutaneous tissue of the incision and at least one of the following:</p> <ul style="list-style-type: none"> • Purulent drainage, with or without laboratory confirmation, from the superficial incision • Organisms isolated from an aseptically obtained culture of fluid or tissue from the superficial incision • Pain, tenderness, localized swelling, redness, or heat at the superficial incision site and which is deliberately re-opened by the surgeon • Diagnosis of superficial incisional surgical site infection by the surgeon or attending physician 	
25	Unplanned intubation	Patient requires placement of an endotracheal tube and mechanical or assisted ventilation due to respiratory or cardiac failure manifested by severe respiratory distress, hypoxia, hypercarbia, or respiratory acidosis; unplanned intubation also occurs if a patient requires re-intubation after being extubated	
27	Urinary tract infection	Infection in the kidney, ureter, bladder and/or adjacent structures that occurs when microorganisms enter through the urethra	

REVISED OCTOBER 11, 2011

28	Catheter-related blood stream infection	Infection in the blood stream as a result of microorganisms entering through an intravenous catheter	
29	Osteomyelitis	Inflammation of bone and bone marrow, caused by infection	
30	Unplanned return to the OR	Patient requires an unanticipated subsequent surgical procedure in the operating room due to a complication	
31	Unplanned return to the ICU	Patient requires an unanticipated readmission to an intensive care unit (ICU) after discharge to another medical/surgical hospital unit, as the result of deterioration in health status	
32	Severe sepsis	Severe, widespread bloodstream infection with resultant organ dysfunction, hypoperfusion and/or hypotension; "septic shock"	

REVISED OCTOBER 11, 2011

GLOSSARY OF ABBREVIATIONS

ACE	Angiotensin Converting Enzyme
ACS	Abdominal compartment syndrome; American College of Surgeons
ADL	Activities of daily living
AIS	Abbreviated Injury Scale
ARDS	Acute respiratory distress syndrome
ARF	Acute Renal Failure
BMI	Body mass index
BP	Blood pressure
CDC	Centers for Disease Control and Prevention
CHF	Congestive heart failure
CPAP/BIPAP	Continuous positive airway pressure/variable bi-level positive airway pressure
CT	Computerized topography
CVA	Cerebral vascular accident
DNR	Do not resuscitate
DNR-CC	Do not resuscitate; comfort care only
DNR-CCA	Do not resuscitate; comfort care arrest
DVT	Deep vein thrombosis
EOA	Esophageal Obturator Airway
ED	Emergency department
EMS	Emergency medical services
FAST	Focused assessment with sonography for trauma
FIPS	Federal Information Processing Standard codes
GCS	Glasgow Coma Score
ICD-9-CM	International Classification of Diseases, Ninth Revision, Clinical Modification
IgG	Immunoglobulin G
ISS	Injury Severity Score
LMA	Laryngeal Mask Airway
MI	Myocardial infarction
MRI	Magnetic resonance imaging
MMDDYYYY	Date designation that represents the month in two digits followed by the day of the month in two digits, followed by the year in four digits
NHTSA	National Highway Traffic Safety Administration
NTDS	National Trauma Data Standard
OPO	Organ Procurement Organization
OR	Operating Room
OTR	Ohio Trauma Registry
PT	Prothrombin time
PTT	Partial thromboplastin time
PVD	Peripheral vascular disease
SaO ₂	Saturation of oxygen in arterial blood
TACR	Trauma Acute Care Registry
UB-04	Uniform Billing Form-04
XSD	XML (Extensible Markup Language) Schema definition
xs-string	XML schema defining the acceptable layout (commas, spaces, carriage returns, etc.)
YYYY	Year designation that is represented in four digits, e.g. 2010

Ohio Trauma Registry Inpatient Rehabilitation Facility Patient Inclusion Criteria

Patient's first or initial admission to an inpatient rehabilitation facility who meet one of the following inclusion criteria;

1. Patients whose acute care hospitalization included any of the inclusion criteria; **OR**
2. Patients who have an Impairment Group Code on admission listed in the table on page 4 Inclusion Criteria

ICD-9-CM Diagnosis Codes on discharge from acute care hospital		
ICD-9-CM Diagnosis Codes		ICD-9-CM Diagnoses Descriptions
800.00 – 819.1		Fractures
821.00 – 904.9		Fractures, dislocations/sprains, intracranial injury, internal injury of thorax, abdomen and pelvis, open wounds, injury to blood vessels
911.0, 911.1, 912.0, 912.1		Abrasions/friction burns to trunk, shoulder and upper arm
916.0, 916.1, 919.0, 919.1		Abrasions / friction burns hip, thigh, leg, ankle, other or multiple sites
920 – 929.9		Contusions and crush injury
940.0 – 959.9		Burns, injury to nerves and spinal cord, traumatic complications and unspecified injury
987.9		Smoke inhalation
991.0 – 991.6		Frostbite, hypothermia and external effects of cold
994.0, 994.1, 994.7, 994.8		Asphyxiation, strangulation, drowning, and electrocution
995.50 – 995.59		Child maltreatment and abuse
OR		
ICD-9-CM Diagnoses		E-CODE
348.1	Anoxic Brain Injury	E800 – E848.8 E878 – E905.0 E906.0 – E928.8 E950.0 – E998.9
348.4	Uncal herniation	
348.5,	Cerebral Edema	
348.8	Pneumocephalus	
372.72	Subconjunctival hemorrhage	
518.5	Traumatic ARDS	
784.7	Epistaxis	
		AND WITH ANY OF THE FOLLOWING External Cause Codes (E-Codes)

Acute Care Hospitalization ICD-9-CM Diagnoses Codes EXCLUDED	
820.00 – 820.9	Isolated hip fracture
905.0 – 909.9	Late effects of injury
910.0 – 910.9, 911.2 – 911.7, 912.2 - 912.9, 913.0 - 913.9, 914.0 - 914.9, 915.0 - 915.9, 916.2 - 916.9, 917.0 - 917.9, 918.0 - 918.9, 919.2 - 919.9	Blisters, insect bites
930 – 939	Foreign bodies
Acute Care Hospitalization External Cause Codes EXCLUDED	
E849.0 – E849.9	Place of occurrence
E850.0 – E869.9	Poisonings
E870.0 – E879.9	Misadventures during surgical and medical care
E905.1 – E905.9	Venomous animals and plants (except snakes)
E929.0 – E929.9	Late effects of Accidental Injury
E930.0 – E949.9	Drugs, medicinal and biological substances causing adverse effects in therapeutic use

Version 1.0 Effective January 1, 2005

Adult Impairment Group Code on Admission to Rehabilitation Facility			
Brain Dysfunction		Orthopedic Disorders	
02.1	Non-traumatic injury *	08.12	Status Post Bilateral Hip Fractures
<i>* must be associated with an acceptable E-code.</i>		08.2	Status Post Femure (shaft) Fracture
		08.3	Status Post Pelvic Fracture
		08.4	Status Post Major Multiple Fractures
02.21	Traumatic, open injury		
02.22	Traumatic, closed injury		
Spinal Cord Dysfunction, Traumatic			
004.210	Paraplegia, unspecified	Amputation of Limb (trauma related)	
04.211	Paraplegia, incomplete	05.1	Unilateral Upper Limb above the elbow (AE)
04.212	Paraplegia, complete	05.2	Unilateral Upper Limb below the elbow (BE)
04.220	Quadriplegia, Unspecified	05.3	Unilateral Lower Limb above the knee (AK)
04.2211	Quadriplegia, Incomplete C1-4	05.4	Unilateral Lower Limb below the knee (BK)
04.2212	Quadriplegia, Incomplete C5-8	05.5	Bilateral Lower Limb above the knee (AK/AK)
04.2221	Quadriplegia, Complete C1-4	05.6	Bilateral Lower Limb above/below the knee (AK/AK)
04.2222	Quadriplegia, Complete C5-8	05.7	Bilateral Lower Limb below the knee (BK/BK)
04.230	Other Traumatic Spinal Cord Dysfunction	05.9	Other amputation
Major Multiple Trauma		Burns	
14.1	Brain + Spinal Cord Injury	11	Burns
14.2	Brain + Multiple Fracture/Amputation		
14.3	Spinal Cord + Multiple Fracture/amputation		
14.9	Other multiple trauma		

Pediatric Impairment Group Code on Admission to Rehabilitation Facility			
Traumatic Brain Dysfunction		Burns	
2.21	Traumatic, open injury	7.1	Burns
2.22	Traumatic, closed injury		
2.9	Unspecified traumatic brain injury	Orthopedic Disorders	
2.11	Anoxic/Hypoxemic Encephalopathy	Orthopedic Conditions	
Traumatic Spinal Cord Dysfunction		5.11	Status Post Unilateral Hip Fracture
4.21	Incomplete Traumatic Paraplegia	5.12	Status Post Femure (shaft) Fracture
4.22	Complete Traumatic Paraplegia	5.13	Status Post Pelvic Fracture
4.23	Unspecified Traumatic Paraplegia	5.14	Status Post Major Multiple Fractures
4.24	Incomplete Traumatic Tetraplegia Quadriplegia, C1-4	Amputation of Limb (trauma related)	
4.25	Incomplete Traumatic Tetraplegia Quadriplegia, C5-8	5.21	Unilateral Upper Extremity above the elbow
4.26	Complete Traumatic Tetraplegia Quadriplegia, C1-4	5.22	Unilateral Upper Extremity below the elbow
4.27	Complete Traumatic Tetraplegia Quadriplegia, C5-8	5.23	Unilateral Lower Extremity above the knee
4.29	Unspecified Traumatic Tetraplegia Quadriplegia	5.24	Unilateral Lower Extremity below the elbow
		5.25	Bilateral Lower Extremity above the knee
Major Multiple Trauma		5.26	Bilateral Lower Ext. above/below the knee
6.1	Brain + Spinal Cord Injury	5.27	Bilateral Lower Extremity below the knee
6.2	Brain + Multiple Fracture/Amputation	5.29	Other amputation
6.3	Spinal Cord + Multiple Fracture/amputation		
6.9	Other multiple trauma		

Version 1.0 Effective January 1, 2005
Ohio Trauma Rehabilitation Registry Field Definitions

Unless specifically indicated, these definitions apply to all fields in the database:

ND = Not Documented

If the information is probably known but is not documented, or the information is not documented but should have been and would have been knowable.

Example: "sex"

NA = Not Applicable

If the information requested is not applicable, or the information does not make sense for this field

Example: seat belt use for motorcycle crash

0 = Zero

Use only for numeric fields when that is what the correct number is.

Example: in *Length of Stay* fields if the patient did not have a LOS in that area

NT = Not Tested

Use for fields in which the desired data is a laboratory test result when the test was not ordered.

Example: for alcohol level, when that test was never ordered

UNK = Unknown

If the information is unknowable and cannot ever be obtained. That is, there is no way to know the answer, or the information is specifically documented as "unknown" in the medical record.

Example: The time of injury if the patient is found unconscious the next morning

Field # 1: Rehabilitation Facility Code

Values: The facility code assigned by the Ohio Department of Public Safety.

- 1. Length 4
- 2. Start Position 1
- 3. End Position 4
- 4. Allow blank or not NO
- 5. Data Type (Numeric, Character). NUMERIC

See Appendix 1 – ODPS Rehabilitation Facility Codes.

Field Instructions:

Must be present on all records submitted to the Ohio Department of Safety.

A four-digit code assigned by the Ohio Department of Public Safety. This code needs to be entered initially. After initial entry it will automatically be entered for each record.

[Click Here](#) to return to the Table of Contents

Field #2: Unique Patient Encounter/Admission Number

Values: A number assigned by each facility to the patient at the time of admission. This number should be unique for each patient AND each visit. This number may be referred to as a patient account number. Medical record numbers are typically specific to each patient BUT are frequently the same for all rehabilitation facility visits by the same patient.

1. Length 15
2. Start Position 5
3. End Position 19
4. Allow blank or not NO
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

Enter the rehabilitation facility's unique patient number for this patient.
This record is for audit purposes only and will not be made public.

[Click Here](#) to return to the Table of Contents

Field #3: Date Exported

Value: Date (mmddyyyy) that this record was submitted to the Ohio Trauma Registry.

1. Length 8
2. Start Position 20
3. End Position 27
4. Allow blank or not NO
5. Data Type (Numeric, Character). DATE

Field Instructions:

This is a generated field and will be completed when the record is exported to Ohio Trauma Registry.

[Click Here](#) to return to the Table of Contents

Field # 4: Zip Code of Residence

Values: The patient's five-digit zip code for place of residence, at the time of their injury.
Enter "99999" for patients that reside outside of the USA.

- | | | |
|------------------------------------|----|---------|
| 1. Length | 5 | |
| 2. Start Position | 28 | |
| 3. End Position | 32 | |
| 4. Allow blank or not | NO | |
| 5. Data Type (Numeric, Character). | | NUMERIC |

Field Instructions:

Enter in the patients' zip code number of their residence at the time of their injury. If patient is homeless, enter the zip code of the location of injury.
Enter "99999" for patients that reside outside of the USA. Do not enter the 4-digit extension.

[Click Here](#) to return to the Table of Contents

Field #5: Patient's Date of Birth

Values: mmdyyy
99999999 – Not documented

1. Length 8
2. Start Position 33
3. End Position 40
4. Allow blank or not NO
5. Data Type (Numeric, Character). DATE

Field Instructions:

The patient's date of birth. Enter the month, day and year of the patient's Date of Birth. If the patients' age is known, but the date of birth is not, enter 01/01/YYYY (YYYY appropriate to patients known age)

Entire year must be used

Example: 1998

Enter in the patient's date of birth. Must use this format "01/01/1998".

It is necessary to enter the year using the entire year.

[Click Here](#) to return to the Table of Contents

Field #6: Gender

Values: 1- Male
2- Female
3- ND (Not Documented)

1. Length 1
2. Start Position 41
3. End Position 41
4. Allow blank or not NO
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

The patient's gender at the injury date. Enter the patient's gender using the options available from code table above. Use the pulldown menu to select this field. Select the most appropriate option.

[Click Here](#) to return to the Table of Contents

Field #7: Race/Ethnicity

Values: 1- American Indian or Alaskan Native
2- Asian
3- Black, not of Hispanic origin
4- Hispanic or Latino
5- Native Hawaiian or Other Pacific Islander
6- White
7 – Other
8 – Multi-racial
9- ND (Not Documented)

1. Length 1
2. Start Position 42
3. End Position 42
4. Allow blank or not NO
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

The patient's race/ethnic group. Enter the patient's race from the available options. Use the pulldown menu to select this field. Select the most appropriate option. If more than one race value #1 to #6 is selected then value number 8 – *Multiracial* must be selected. Note that pediatric facilities are limited to selection of only one value. Adult facilities can select multiple values, which will reported as 8 – multi-racial.

Values: 1- White
2- Black
3- Hispanic
4- Native American
5- Asian
6- Other
7- Multi-racial

[Click Here](#) to return to the Table of Contents

Field #8: Date of Onset (Date Injury Occurred)

Values: mmdyyy
88888888 – ND (Not Documented)
99999999 – Unknown, if specifically documented as “Unknown” in the medical record.

1. Length 8
2. Start Position 43
3. End Position 50
4. Allow blank or not NO
5. Data Type (Numeric, Character). DATE

Field Instructions:

The date the injury occurred. Enter the month, day and year of the injury. The year must be 4-digits. Example: 1998. The date on which injury occurred must be the earliest date associated with the trauma event. All treatment dates must be equal to or after the date on which the injury occurred.
Enter the patient’s actual date of injury

[Click Here](#) to return to the Table of Contents

Field #9: Rehabilitation Admission From

Values: 1 – Home
2 – Board and Care
3 – Transitional Living
4 – Intermediate care
5 – Skilled Nursing Facility
6 – Acute Unit of own facility
7 – Acute Unit another facility
8 – Chronic Hospital (LTAC)
9 – Rehabilitation facility
10 – Other
12 – Alternate Level of care
13 – Subacute setting
14 – Assisted Living Residence

1. Length 2
2. Start Position 51
3. End Position 52
4. Allow blank or not NO
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

If # 4, 5, 7, or 9 is selected, field # 10 Transferring Facility ID must be competed. **Value number 11 is purposefully not utilized for this field.**

Definitions

Home: A private, community based dwelling (a house, apartment, mobile home, etc) that houses the patient, family, or friends.

Board and Care: A community based setting where individuals have private space (either a room or apartment), or a structured retirement facility. The facility may provide transportation, laundry, and meals, but no nursing care.

Transitional Living: A community based, supervised setting where individuals are taught skills so they can live independently in the community.

Intermediate care (nursing home): A long term care setting that provides health related services but a registered nurse is not present 24 hours a day. Patients live by institutional rules; care is ordered by a physician, and a medical record is maintained. Patients in intermediate care are generally less disabled than those in skilled care facilities

Skilled Nursing Facility (nursing home): A long term care setting that provides skilled nursing services. A registered nurse is present 24 hours a day. Patients live by institutional rules; care is ordered by a physician, and a medical record is maintained.

Acute Unit of own Facility: An acute medical/surgical care unit in the same facility as the rehabilitation unit.

Acute Unit another Facility: An acute medical/surgical care facility separate from the rehabilitation unit.

Chronic Hospital (LTAC): A long-term care setting classified as a hospital, long term acute care.

Rehabilitation facility: An inpatient setting that admits patients with specific disabilities and provides a team approach to comprehensive rehabilitation services, with a physiatrist (or physician of equivalent training/experience) as the physician of record.

Version 1.0 Effective January 1, 2005

Other: Used only if no other code is appropriate

Alternate Level of care: Physically and fiscally distinct units that provides care to individuals who no longer meet acute care criteria

Subacute setting: Subacute care is goal-oriented, comprehensive, inpatient care designed for an individual who has an acute illness, injury or exacerbation of a disease process. It is rendered immediately after, or instead of, acute hospitalization to treat one or more specific active, complex medical conditions an overall situation. Generally the condition of an individual receiving subacute care is such that the care does not depend heavily on high technology monitoring or complex diagnostic procedures. Subacute care requires the coordinated services of an interdisciplinary team, including physicians, nurses, and other relevant professional disciplines whoa re knowledgeable and trained to assess and manage specific conditions and perform the necessary procedures. Subacute care is given as part of a specially designed program, regardless of the site. Subacute care is generally more intensive than traditional nursing home care, but less than acute inpatient care. It requires frequent (daily to weekly) patient assessment and review of the clinical course and treatment plan for a limited time period (several days to several months), until a condition is stabilized or a predetermined course is completed.

Assisted Living Residence: A community based setting that combines housing, private quarters, freedom of entry and exit, supportive services, personalized assistance, and healthcare designed to respond to individual needs of those who need help with activities of daily living and instrumental activities of daily living. Supportive services are available 24 hours a day to meet scheduled and unscheduled needs in a way that promotes maximum dignity and independence for each resident. These services involve the resident's family, neighbors, and friends.

Field #10: Pediatric Prehospital Setting

Values: 01 – Home
 02 – Acute Care unit of own facility
 03 – Acute care unit of another facility
 04 – Rehabilitation facility
 05 – Residential facility
 06 – Transitional living center
 07 - Skilled nursing facility
 08 – Shelter
 09 – Other
 10 - Died

1. Length 2
2. Start Position 53
3. End Position 54
4. Allow blank or not YES
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

Select the value that most accurately describes the patients living arrangements prior to their hospitalization.
Note the value 04 is not used in this field.

Values:

[Click Here](#) to return to the Table of Contents

Field #11: Pediatric Living With

Values: 01 – Two parents
02 – One parent
03 - Relatives
04 – Foster care
05 - Other
07 – ND

1. Length 2
2. Start Position 55
3. End Position 56
4. Allow blank or not YES
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

Select a value in this field ONLY if the value selected in field # 10 *Pediatric Prehospital Setting* is equal to "01-Home"

[Click Here](#) to return to the Table of Contents

Field #12: Pediatric Education Category

Values: 01 – Not a student
 02 – Early Intervention program
 03 – Preschool
 04 – Kindergarten through 12th
 05 – Other

1. Length 2
2. Start Position 57
3. End Position 58
4. Allow blank or not YES
5. Data Type (Numeric, Character) NUMERIC

Field Instructions: Select the value that best describes the patients educational category

[Click Here](#) to return to the Table of Contents

Field #13: Pediatric Educational Setting

Values: 01 – Regular Class
 02 – Regular class with accommodation
 03 – Special Class
 04 – Home-based or Home Schooled
 05 – Day Care/nursery school/center-based/community

1. Length 2
2. Start Position 59
3. End Position 60
4. Allow blank or not YES
5. Data Type (Numeric, Character). NUMERIC

Field Instructions: If value 2, 3 or 4 is selected for the Pediatric Education Category, then an appropriate value for this field must be reported. If 01 or 05 is selected for Pediatric Education Category, then 06- NA must be selected.

[Click Here](#) to return to the Table of Contents

Field #14: Adult Prehospital Living With

Values: 01 – Alone
 02 – Family/Relatives
 03 - Friends
 04 – Attendant
 05 - Other
 06 - ND

1. Length 2
2. Start Position 61
3. End Position 62
4. Allow blank or not YES
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

Select the value that most accurately describes the patients living arrangements prior to their hospitalization

[Click Here](#) to return to the Table of Contents

Field #15: Adult Prehospital Vocational Category

Values: 01 – Employed
02 – Sheltered
03 – Student
04 – Homemaker
05 – Not Working
06 – Retired for Age
07 – Retired for Disability
08 – ND

1. Length 2
2. Start Position 63
3. End Position 64
4. Allow blank or not YES
5. Data Type (Numeric, Character) NUMERIC.

Field Instructions:

Select the value that most accurately describes the patients' vocation prior to their hospitalization

DEFINITIONS

Employed – The patient works for pay in a competitive environment or is self employed

Sheltered – The patient works for pay in a non-competitive environment

Student – the patient is enrolled in an accredited school (including trade school), college or university.

Homemaker – The patient works at home, does not work outside the home, is not paid by an employer, and is not self employed

Not Working – The patient is unemployed, but is not retired or receiving disability benefits

Retired for Age – The patient is retired (usually 60 years of age or older) and is receiving retirement benefits

Retired for Disability – The patient is receiving disability benefits and is less than 60 years of age.

[Click Here](#) to return to the Table of Contents

Field #16: Adult Prehospital Vocational Effort

Values: 01 – Full-time
02 – Part-time
03 – Adjusted Work load
04 – NA
05 - ND

1. Length 2
2. Start Position 65
3. End Position 66
4. Allow blank or not YES
5. Data Type (Numeric, Character). NUMERIC

Field Instructions: Select the value that most accurately describes the patients' vocation prior to their hospitalization, if values 1 – 4 are selected in field # __ Prehospital Vocation Category, then 01-03 are valid selections for this field. If 05-07 are selected in field # __, then 04 must be selected

DEFINITIONS

Full-time – The patient worked a full schedule (i.e. 37.5 or 40 hours per week) – which ever is normal where he/she works

Part-time - The patient worked less than full time (i.e. less than 37.5 or 40 hours per week) depending on the norm where he/she works.

Adjusted Workload – The patients' workload was adjusted due to disability. The patient was not able to perform all the work duties of the position

[Click Here](#) to return to the Table of Contents

Field #17: Transferring Facility ID

Values: ODH or ODPS assigned number.

- | | | |
|------------------------------------|----|---------|
| 1. Length | 4 | |
| 2. Start Position | 67 | |
| 3. End Position | 70 | |
| 4. Allow blank or not | NO | |
| 5. Data Type (Numeric, Character). | | NUMERIC |

Field Instructions:

If the patient is transferred from an Ohio hospital, enter the ODH assigned Ohio hospital code.
See Appendix 2 for the list of ODH assigned Ohio hospital codes

If the patient is transferred from an out of state hospital, enter the ODPS assigned out of state hospital code.
See Appendix 3 for the list of ODPS assigned out of state hospital codes.

If the patient is transferred from an Ohio Rehabilitation Facility, enter the ODPS assigned Ohio Rehabilitation Facility code. See Appendix 1 for the list of ODPS assigned Ohio Rehabilitation Facility codes

If the patient is transferred from an Ohio Nursing Facility, enter the ODH assigned Ohio Nursing Facility code.
See Appendix 4 for the list of ODH assigned Ohio Nursing Facility codes

[Click Here](#) to return to the Table of Contents

Field #18: Rehabilitation Facility Arrival Date

Values: mmdyyy

1. Length 8
2. Start Position 71
3. End Position 78
4. Allow blank or not NO
5. Data Type (Numeric, Character) DATE

Field Instructions:

The arrival date that the patient actually arrived at the rehabilitation facility.
Enter the month, day and year.

The actual date that the patient arrived at the rehabilitation facility.
Date format: 01/29/1998. The year must be complete year (1998).

[Click Here](#) to return to the Table of Contents

Field #19: Etiologic Diagnosis (ICD-9-CM Code)

Values: Report the ICD-9-CM diagnosis codes

- | | |
|------------------------------------|---------|
| 1. Length | 5 |
| 2. Start Position | 79 |
| 3. End Position | 83 |
| 4. Allow blank or not | YES |
| 5. Data Type (Numeric, Character). | NUMERIC |

Field Instructions:

Use an ICD-9-CM code to indicate the etiologic problem that led to the condition for which the patient is receiving rehabilitation. These should be diagnosis codes, not external cause of injury codes. When creating a data file the decimal point MUST be used. Example: 801.11 = 801.11 or 810 = 810.0. Give the complete code not category codes.

[Click Here](#) to return to the Table of Contents

Field #20: Co-Morbid Conditions (ICD-9-CM Codes)

Values: Report 10 additional ICD-9-CM codes of diagnoses

- | | | |
|------------------------------------|-----|---------|
| 1. Length | 50 | |
| 2. Start Position | 84 | |
| 3. End Position | 133 | |
| 4. Allow blank or not | YES | |
| 5. Data Type (Numeric, Character). | | NUMERIC |

Field Instructions:

The ICD-9-CM code for each injury diagnosis. List up to 10 codes. When creating a data file the decimal point MUST be used. Example: 801.11 = 801.11 or 810 = 810.0

[Click Here](#) to return to the Table of Contents

Version 1.0 Effective January 1, 2005

Field #21: Complications during Rehabilitation Stay (ICD-9-CM Codes)

Values: Report up to 6 ICD-9-CM codes

- | | |
|------------------------------------|---------|
| 1. Length | 30 |
| 2. Start Position | 134 |
| 3. End Position | 163 |
| 4. Allow blank or not | YES |
| 5. Data Type (Numeric, Character). | NUMERIC |

Field Instructions:

Enter an ICD-9-CM code for each complication that began with this rehabilitation stay. List up to 6 codes. When creating a data file the decimal point MUST be used. Example: 801.11 = 801.11 or 810 = 810.0

[Click Here](#) to return to the Table of Contents

Field # 22: Disability Assessment Tool Adult/Pediatric

(FIM™/WeeFIM® instrument)

Values: 1- Adult
2- Pediatric

- | | | |
|-----------------------------------|-----|----------|
| 1. Length | 1 | |
| 2. Start Position | 164 | |
| 3. End Position | 164 | |

Field # 25: Date of Discharge or Death

Values: mmddyyyy

1. Length 8
2. Start Position 201
3. End Position 208
4. Allow blank or not NO
5. Data Type (Numeric, Character). DATE

Field Instructions:

Enter the date of the patient's discharge, transfer or death from the rehabilitation facility. The actual date that the patient was discharged from the rehabilitation facility or date that the patient was pronounced dead.

Date format: 01/29/1998. The year must be complete year (1998).

[Click Here](#) to return to the Table of Contents

Field # 26: Discharge Status

Values: 1- Alive
2- Dead

1. Length	1	
2. Start Position	209	
3. End Position	209	
4. Allow blank or not	NO	
5. Data Type (Numeric, Character).		NUMERIC

Field Instructions:

Enter the status of the patient upon discharge from the rehabilitation facility. The patient was alive or dead when they left the rehabilitation facility.

[Click Here](#) to return to the Table of Contents

Field #27: Adult Discharge Disposition

Values:

- 1 – Home
- 2 – Board and Care
- 3 – Transitional Living
- 4 – Intermediate care
- 5 – Skilled Nursing Facility
- 6 – Acute Unit of own facility
- 7 – Acute Unit another facility
- 8 - Chronic Hospital (LTAC)
- 9 – Rehabilitation facility
- 10 – Other
- 11 - Died
- 12 – Alternate Level of care
- 13 – Subacute setting
- 14 – Assisted Living Residence

- 1. Length 2
- 2. Start Position 210
- 3. End Position 211
- 4. Allow blank or not YES
- 5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

The patient's disposition upon discharge from the rehabilitation facility. If #01 is selected you must make an entry in Field # *XX Discharge Living With*. If #04, 05, 07, or 09 is selected you must enter an ODPS or ODH Assigned facility code in field # *XX-Transfer to Other Rehabilitation Facility*.

Field # 28: Adult Discharge Living With

Values: 01 – Alone
02 – Family/Relatives
03 - Friends
04 – Attendant
05 - Other
06 - NA

1. Length 2
2. Start Position 212
3. End Position 213
4. Allow blank or not YES
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

If values 1, 2, 3 or 14 are selected in field #27 – *Adult Discharge Disposition*, then values 01 through 05 are valid for this field, otherwise 06- NA must be selected.

[Click Here](#) to return to the Table of Contents

Field # 29: Pediatric Discharge Disposition

Values: 01 – Home
 02 – Acute Care unit of own facility
 03 – Acute care unit of another facility
 04 – Rehabilitation facility
 05 – Residential facility
 06 – Transitional living center
 07 - Skilled nursing facility
 08 – Shelter
 09 – Other
 10 - Died

1. Length 2
2. Start Position 214
3. End Position 215
4. Allow blank or not YES
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

Select the value that most accurately describes the patients living arrangements prior to their hospitalization.
Note that the value "04" is not used in this field.

Field # 30 Pediatric Discharge Living With

Values: 01 – Two parents
 02 – One parent
 03 - Relatives
 04 – Foster care
 05 - Other
 07 – ND

1. Length 2
2. Start Position 216
3. End Position 217
4. Allow blank or not YES
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

Select a value in this field ONLY if the value selected in field # 29 *Pediatric Prehospital Setting* is equal to "01-Home"

[Click Here](#) to return to the Table of Contents

Field # 31: Discharge Referrals

Values: 01 - None
 02 – Outpatient
 03 – Home-based paid professional therapy
 04 – Both 2 and 3
 05 – Inpatient hospital
 06 - Day treatment
 07 – School-based
 08 – Other (examples – homeless or women’s shelters, protective services, etc.)

1. Length 10
2. Start Position 218
3. End Position 227
4. Allow blank or not NO
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

More than one value may be selected.

[Click Here](#) to return to the Table of Contents

Field # 32: Transfer to Other Hospital/Facility

Value: ODH assigned # for in-state hospitals
ODPS assigned # for out of state hospitals
ODPS assigned # for rehabilitation facilities
ODH assigned # for licensed nursing home

1. Length 4
2. Start Position 228
3. End Position 231
4. Allow blank or not YES/NO
5. Data Type (Numeric, Character). NUMERIC

Field Instructions:

Enter the location of the patient disposition from the hospital. If the patient is transferred to another Ohio hospital, enter the ODH assigned Ohio hospital code. See Appendix 1-A for the list of ODH assigned Ohio hospital codes. If the patient is transferred to an out of state hospital, enter the ODPS assigned out of state hospital code. See Appendix 1-B for the list of ODPS assigned out of state hospital codes. If the patient is transferred to a rehabilitation facility, enter the ODPS assigned rehabilitation facility code. See Appendix 1-C for the list of ODPS assigned rehabilitation facilities codes. If the patient is transferred to a licensed nursing home, enter the ODH assigned nursing home facility code. See Appendix 1-D for the list of ODH assigned nursing home facilities codes.

Field #35: Adult Length of Stay in Rehabilitation Facility

Values: mm/dd/yyyy

Interruptions in care #1

1st Interruption date mm/dd/yyyy

1st Return date mm/dd/yyyy

Interruptions in care #2

2nd Interruption date mm/dd/yyyy

2nd Return date mm/dd/yyyy

Interruptions in care #3

3rd Interruption date mm/dd/yyyy

3rd Return date mm/dd/yyyy

1. Length 48

2. Start Position 246

3. End Position 293

4. Allow blank or not YES

5. Data Type (Numeric, Character). DATE

Field Instructions:

Enter the dates of up to three interruptions in care. The length of stay in the rehabilitation facility will be calculated by subtracting the total number of days of interrupted care from the total number of days from admission to discharge. Using this process will allow the LOS to be calculated

An interruption in care is defined as a discharge from the rehabilitation center and returns to the same facility within three consecutive days.

[Click Here](#) to return to the Table of Contents

Field #36: Pediatric Length of Stay in Rehabilitation Facility

Values: mm/dd/yyyy

Interruptions in care #1

1st Interruption date mm/dd/yyyy

1st Return date mm/dd/yyyy

Interruptions in care #2

2nd Interruption date mm/dd/yyyy

2nd Return date mm/dd/yyyy

Interruptions in care #3

3rd Interruption date mm/dd/yyyy

3rd Return date mm/dd/yyyy

1. Length 48

2. Start Position 294

3. End Position 341

4. Allow blank or not YES

5. Data Type (Numeric, Character). DATE

Field Instructions:

Enter the dates of up to three interruptions in care. The length of stay in the rehabilitation facility will be calculated by subtracting the total number of days of interrupted care from the total number of days from admission to discharge. Using this process will allow the LOS to be calculated.

APPENDIX 5

Authority/Mandate Ohio Revised Code

§ 4765.06 Incidence reporting system for collecting information on delivery and frequency of services; trauma registries; confidentiality of information.

Text of Statute

(A) The state board of emergency medical services shall establish an emergency medical services incidence reporting system for the collection of information regarding the delivery of emergency medical services in this state and the frequency at which the services are provided. All emergency medical service organizations shall submit to the board any information that the board determines is necessary for maintaining the incidence reporting system.

(B) The board shall establish a state trauma registry to be used for the collection of information regarding the care of adult and pediatric trauma victims in this state. The registry shall provide for the reporting of adult and pediatric trauma-related deaths, identification of adult and pediatric trauma patients, monitoring of adult and pediatric trauma patient care data, determination of the total amount of uncompensated adult and pediatric trauma care provided annually by each facility that provides care to trauma victims, and collection of any other information specified by the board. All persons designated by the board shall submit to the board any information it determines is necessary for maintaining the state trauma registry. At the request of the board any state agency possessing information regarding adult or pediatric trauma care shall provide the information to the board. The board shall maintain the state trauma registry in accordance with rules adopted under section [4765.11](#) of the Revised Code.

Rules relating to the state trauma registry adopted under this section and section [4765.11](#) of the Revised Code shall not prohibit the operation of other trauma registries and may provide for the reporting of information to the state trauma registry by or through other trauma registries in a manner consistent with information otherwise reported to the state trauma registry. Other trauma registries may report aggregate information to the state trauma registry, provided the information can be matched to the person that reported it. Information maintained by another trauma registry and reported to the state trauma registry in lieu of being reported directly to the state trauma registry is a public record and shall be maintained, made available to the public, held in confidence, risk adjusted, and not subject to discovery or introduction into evidence in a civil action as provided in section [149.43](#) of the Revised Code and this section. Any person who provides, maintains, or risk adjusts such information shall comply with this section and rules adopted under it in performing that function and has the same immunities with respect to that function as a person who performs that function with respect to the state trauma registry.

(C) The board and any employee or contractor of the board or the department of public safety shall not make public information it receives under Chapter [4765](#). of the Revised Code that identifies or would tend to identify a specific recipient of emergency medical services or adult or pediatric trauma care.

(D) Not later than two years after the effective date of this amendment, the board shall adopt and implement rules under section [4765.11](#) of the Revised Code that provide written standards and procedures for risk adjustment of information received by the board under Chapter [4765](#). of the Revised Code. The rules shall be developed in consultation with appropriate medical, hospital, and emergency medical service organizations and may provide for risk adjustment by a contractor of the board. Before risk adjustment standards and procedures are implemented, no member of the board and no employee or contractor of the board or the department of public safety shall make public information received by the board under Chapter [4765](#). of the Revised Code that identifies or would tend to identify a specific provider of emergency medical services or adult or pediatric trauma care. After risk adjustment standards and procedures are implemented, the board shall make public such information only on a risk adjusted basis.

(E) The board shall adopt rules under section [4765.11](#) of the Revised Code that specify procedures for ensuring the confidentiality of information that is not to be made public under this section. The rules shall specify the circumstances in which deliberations of the persons performing risk adjustment functions under this section are

Version 1.0 Effective January 1, 2005

not open to the public and records of those deliberations are maintained in confidence. Nothing in this section prohibits the board from making public statistical information that does not identify or tend to identify a specific recipient or provider of emergency medical services or adult or pediatric trauma care.

(F) No provider that furnishes information to the board with respect to any patient the provider examined or treated shall, because of this furnishing, be deemed liable in damages to any person or be held to answer for betrayal of a professional confidence in the absence of willful or wanton misconduct. No such information shall be subject to introduction in evidence in any civil action against the provider. No provider that furnishes information to the board shall be liable for the misuse or improper release of the information by the board or any other person.

No person who performs risk adjustment functions under this section shall, because of performing such functions, be held liable in a civil action for betrayal of professional confidence or otherwise in the absence of willful or wanton misconduct.

Ohio Administrative Code

4765-4-01 State trauma registry.

(A) In carrying out its responsibilities for the collection of trauma data pursuant to section ORC"4765.06 of the Revised Code and this chapter, the board may reference commonly accepted medical diagnostic codes in identifying those conditions that are included within the definition of trauma.

(B) The board shall use the state trauma registry to collect and analyze data that is necessary to evaluate the delivery of adult and pediatric trauma care within the state. The data collected by the state trauma registry shall be of such a nature as to allow the board to identify and evaluate the following:

- (1) Incidence, type, severity, and outcome of trauma injuries;
- (2) Criteria used to establish triage protocols;
- (3) Geographic patterns of injury, including but not limited to areas or regions of the state where improvements are needed in the delivery of trauma care;
- (4) Other factors to consider in recommending, designing, or implementing an integrated statewide trauma care delivery system, including but not limited to public education on trauma and injury prevention, access to trauma care, prehospital availability, and cost of trauma care.

(C) Data and information submitted to, and maintained by, the state trauma registry shall be in such a format that:

- (1) Protects the identity of specific patients to whom medical care has been rendered;
- (2) Identifies specific health care facilities by a code or similar designation other than name;
- (3) Avoids or minimizes duplication of entry.

<JD:"4765-4-02"

4765-4-02 Operation of state trauma registry.

(A) As used in this rule, "subcommittee" means the trauma registry advisory subcommittee authorized in paragraph (B) of this rule.

(B) The state trauma registry established pursuant to section <JL:JUMP,"4765.06","1_PORC"4765.06 of the Revised Code and this chapter shall be overseen by a subcommittee of the state trauma committee, which shall be known as the trauma registry advisory subcommittee.

(C) The board shall make appointments to the subcommittee. Membership of the subcommittee shall include the following:

- (1) Two surgeons selected from a list of nine names, three each submitted by the Ohio chapter of the American college of surgeons, the Ohio state medical association, and the Ohio osteopathic association, respectively. One of the two surgeons chosen shall be affiliated with a facility that has applied for designation as, or has been verified as, a level I or level II trauma center by the

Version 1.0 Effective January 1, 2005

American college of surgeons;

(2) Two emergency physicians, one each selected from list of three names submitted by the Ohio chapter of the American college of emergency physicians and a list of three names submitted by the Ohio chapter of the American academy of pediatrics;

(3) Two trauma registrars selected from a list of three names submitted by the alliance of Ohio trauma registrars;

(4) Two nurses, one each selected from a list of three names submitted by the Ohio society of trauma nurse coordinators and a list of three names submitted by the Ohio emergency nurses association;

(5) Two hospital representatives selected from a list of twelve names, three each submitted by the Ohio hospital association, the Ohio osteopathic association, the association of Ohio children's hospitals, and the health forum of Ohio, respectively;

(6) One prehospital emergency medical services provider selected from a list of three names submitted by each organization representing prehospital emergency medical services providers that is authorized by section <JL:JUMP,"4765.02","1_PORC"4765.02 of the Revised Code to submit nominations to the governor for appointments to the board;

(7) One representative of rehabilitation providers selected from a list of three names submitted by the Ohio rehabilitation association;

(8) One consumer who is not affiliated with an emergency medical services provider, selected from a list of three names submitted by the chairman of the board.

(9) One physical medicine and rehabilitation physician selected from a list of nine names, three each submitted by the Ohio society of physical and rehabilitative medicine, the Ohio state medical association, and the Ohio osteopathic association, respectively.

(10) One county coroner selected from a list of nine names, three each submitted by the Ohio state coroner's association, the Ohio state medical association, and the Ohio osteopathic association, respectively.

(11) Two health information management technicians or medical record coders from non-trauma center hospitals, selected from a list of three names submitted by the Ohio health information management association.

(12) One representative from a regional trauma registry selected from a list of three names submitted by the chairman of the state trauma committee.

(D) In making appointments to the subcommittee, the board shall make a good faith effort to ensure representation from health care facilities of differing size and trauma care capabilities, and from various geographic regions of the state.

(E) The initial subcommittee members shall serve staggered terms. Of the initial appointments to the subcommittee, the board shall designate four members whose terms shall end one year after the initial date of appointment and four members whose terms shall end two years after the initial date of appointment. The remaining initial subcommittee members shall each serve a term of three years. Any member appointed to the subcommittee after the initial appointments shall serve a term of three years. No member shall serve more than two consecutive terms.

(F) The board may fill any vacancies that occur prior to the expiration of a term in the same manner as the original appointment. Any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall serve for the remainder of the unexpired term. Any member appointed to fill an unexpired term shall remain eligible to serve two additional three-year terms.

(G) The subcommittee shall annually select a chairman from among its members.

(H) The subcommittee may establish such task forces or work groups as it deems necessary to assist in its functions.

Version 1.0 Effective January 1, 2005

4765-4-03 Required reporting to state trauma registry.

(A) The following entities shall submit data and information to the state trauma registry:

(1) Health care facilities including:

(a) Hospitals registered under Chapter <JL:JUMP,"3701","1_PORC"3701. of the Revised Code;

(b) Nursing facilities licensed or certified under Chapter <JL:JUMP,"3721","1_PORC"3721. of the Revised Code;

(c) County homes or county nursing homes as defined in section <JL:JUMP,"5155.31","1_PORC"5155.31 of the Revised Code;

(d) Inpatient rehabilitation facilities as defined in Chapter 3701-83 of the Administrative Code;

(e) Ambulatory surgical facilities as defined in section <JL:JUMP,"3702.30","1_PORC"3702.30 of the Revised Code;

(2) State and other public agencies designated by the board that possess information regarding trauma care;

(3) County coroners.

(B) Those entities required to submit data and information to the state trauma registry under this chapter shall provide information regarding injured patients in the following categories that are applicable to its operations:

(1) Trauma patients who meet the minimum requirements set forth by the board for inclusion into the Ohio trauma registry;

(2) Type of trauma injury as identified by medical diagnostic codes designated by the board;

(3) Severity of injury;

(4) Patient outcomes;

(5) Type of prehospital emergency care received by each trauma patient;

(6) Financial data pertinent to trauma care;

(7) Remuneration received from all sources for treatment of trauma patients.

(C) All trauma related deaths shall be reported by the coroner of the county in which the death occurred to the state trauma registry in a manner specified by the board within one hundred-eighty days after the death occurs,

(D) The information required to be provided to the state trauma registry under section <JL:JUMP,"4765.06","1_PORC"4765.06 of the Revised Code and this chapter shall be provided and maintained in such a way as to protect against revealing the identity of the patient. Any person handling information received for the state trauma registry has a fiduciary duty to maintain the confidentiality of such information and shall sign and adhere to a contract with the department of public safety, division of EMS, regarding the confidentiality of such information. If such person violates this fiduciary duty or violates any terms of the contract, the department of public safety, division of EMS, may terminate such person and employ any other remedies, legal or equitable, available to it. Health care facilities and other providers shall be identified in the registry by a code or similar designation other than name.

(E) Except as provided in paragraph (C) of this rule or as otherwise specified by the board, the information required under section <JL:JUMP,"4765.06","1_PORC"4765.06 of the Revised Code and this chapter shall be reported on a quarterly basis and shall be submitted to the state trauma registry not later than ninety calendar days after March thirty-first, June thirtieth, September thirtieth, and December thirty-first of each year. The board may develop policies for granting extensions to the submission deadlines.

(F) The information required to be provided to the state trauma registry under section <JL:JUMP,"4765.06","1_PORC"4765.06 of the Revised Code and this chapter shall be submitted in a format authorized by the board for such purpose,

(G) In identifying the information to be provided to the state trauma registry under section <JL:JUMP,"4765.06","1_PORC"4765.06 of the Revised Code and this chapter, the board shall take into consideration the financial and other burdens that these requirements will place on the entities that are required to report.

(H) Any entity, otherwise required to report to the state trauma registry under section <JL:JUMP,"4765.06","1_PORC"4765.06 of the Revised Code or this chapter, that reports required information to a regional trauma registry need not report individually to the state trauma registry, provided the regional registry reports such information to the state trauma registry in compliance with section <JL:JUMP,"4765.06","1_PORC"4765.06 of the Revised Code and this chapter. Those entities intending to report through a regional registry shall so notify the board in a manner

Version 1.0 Effective January 1, 2005

indicated by the board.

(I) Any entity that fails to submit data and information to the state trauma registry, as required under section <JL:JUMP,"4765.06","1_PORC"4765.06 of the Revised Code or this chapter, may be ineligible to participate in the emergency medical services grants program established under section <JL:JUMP,"4765.07","1_PORC"4765.07 of the Revised Code and as provided in Chapter 4765-5 of the Administrative Code.

HISTORY: Eff 5-19-97; 4-28-02

Rule authorized by: RC <JL:JUMP,"4765.11","1_PORC"4765.11

Rule amplifies: RC <JL:JUMP,"4765.06","1_PORC"4765.06R.C.

<JL:JUMP,"119.032","1_PORC"119.032 review dates: 2/11/2002 and 04/28/2007

<JD:"4765-4-04"

4765-4-04 Definitions.

(A) "Glasgow coma scale" or "GCS" is a numeric rating used to assess the severity of neurologic injury.

(B) "Information that identifies or would tend to identify a specific recipient of emergency medical services or adult or pediatric care" shall have the same meaning as "individually identifiable health information" as defined in the health insurance portability and accountability act (HIPAA) of 1996, attached hereto as an appendix.

(C) As used in HIPAA and this chapter, "Individually identifiable health information" is information that is a subset of health information, including demographic information collected from an individual, and

(1) Is created or received by a health care provider, health plan, employer, or health care clearinghouse; and

(2) Relates to the past, present, or future physical or mental health or condition of an individual; the provision of health care to an individual; or the past, present, or future payment for the provision of health care to an individual; and

(a) That identifies the individual; or

(b) With respect to which there is a reasonable basis to believe the information can be used to identify the individual.

(D) "Injury severity score" or "ISS" is a mathematical measure assessing the cumulative effect of injury severity.

(E) "Major Trauma Outcome Study" or "MTOS" is a nationally based research project conducted between 1982 and 1987, which created and validated the TRISS Methodology.

(F) "Risk Adjustment" means methodologies applied to a data set in order to identify and control patient variables that are present which may influence patient outcome.

(G) "TRISS" is a methodology which combines the following variables in order to determine a probability of survival:

(1) Physiologic (Systolic Blood Pressure, Respiratory Rate, Glasgow Coma Scale Score);

(2) Anatomic injury severity score;

(3) Age (55 years or older, or younger than 55 years);

(4) Trauma Type (Blunt or Penetrating Injury).

4765-4-06 Risk adjustment of state trauma registry data.

(A) Methodologies

- (1) TRISS shall be the primary methodology used to risk adjust data in the state trauma registry.
- (2) The subcommittee may evaluate other methodologies and make recommendations to the trauma committee and board on the use of such methodologies.
- (3) The coefficients used to calculate TRISS shall be those derived from the MTOS.
- (4) The subcommittee may evaluate the possibility of creating Ohio specific coefficients, based upon the Ohio trauma registry data set, to utilize with the TRISS methodology, and when appropriate, these equations may be utilized. Additionally, the subcommittee may evaluate other appropriate data sets for use in developing specific coefficients.

(B) Analysis

- (1) The subcommittee shall utilize a variety of acceptable techniques for providing statistical analysis of risk-adjusted data.
- (2) The subcommittee shall utilize a variety of methodologies to risk adjust by sex, age, or other factors, in order to analyze state trauma registry data for specific age groupings, including pediatric and geriatric age groupings.

(C) Risk Adjusted Outcomes

- (1) Mortality shall be an outcome that is risk adjusted. In addition, the subcommittee may evaluate the feasibility of risk adjusting other outcomes and make recommendations to the trauma committee and board on the selection and evaluation of such outcomes.

<JD:"4765-4-07"

4765-4-07 Protected information within the state trauma registry.

(A) Information that identifies or would tend to identify a specific recipient of emergency medical services or adult or pediatric trauma care shall include, but not be limited to, the recipient's social security number, date of birth, and name.

- (1) No records shall be provided in response to a public records request if the request asks for information sorted by, or if the request contains, information that identifies or would tend to identify a specific recipient of emergency medical services or adult or pediatric trauma care.
- (2) No records provided in response to a public records request shall contain any information that identifies or would tend to identify a specific recipient of emergency medical services or adult or pediatric trauma care.

(B) Information that identifies or would tend to identify a specific provider of emergency medical services or adult or pediatric trauma care shall include, but not be limited to, the provider's hospital code, medical record number, and county.

- (1) Prior to the implementation of risk adjustment standards and procedures, no records shall be provided in response to a public records request if the request asks for information sorted by, or if the request contains, information that identifies or would tend to identify a specific provider of emergency medical services or adult or pediatric trauma care.
- (2) Prior to the implementation of risk adjustment standards and procedures, no records provided in response to a public records request shall contain any information that identifies or would tend to identify a specific provider of emergency medical services or adult or pediatric trauma care.
- (3) After risk adjustment standards and procedures are implemented, such records may be made public, but only on a risk adjusted basis.

4765-4-08 Risk adjustment deliberations.

(A) The department of public safety, division of EMS, may contract with individuals or organizations with specific expertise in risk adjustment and statistical analysis of medical data in order to perform risk adjustment of information received by the board under Chapter

<JL:JUMP,"4765","1_PORC"4765. of the Revised Code.

(B) Each person performing risk adjustment of Ohio trauma registry data has a fiduciary duty to maintain the confidentiality of such information. In the event a person performing risk adjustment under this chapter violates this duty, the department of public safety, division of EMS, may terminate such person and employ any other remedies, legal or equitable, available to it.

(C) Each person performing risk adjustment of Ohio trauma registry data shall sign and adhere to a contract with the department of public safety, division of EMS, regarding the confidentiality of such information. In the event a person performing risk adjustment under this chapter violates any terms of this contract, the department of public safety, division of EMS, may terminate such person and employ any other remedies, legal or equitable, available to it.

(D) All meetings in which persons are engaged in performing risk adjustment functions, including deliberations therein, shall not be open to the public.

(E) All records of deliberations of persons performing risk adjustment functions shall be maintained in confidence.

APPENDIX 6

Trauma Registry Advisory Subcommittee

Dr. James Begley M.D.	Physical Medicine/Rehabilitation Physician
Ms. Sally Betz, R.N., MSN	Registered Nurse
Ms. Margie Brunn, CSTR	Trauma Registrar
Ms. Paula Fowles, R.N.	Rehab Representative
Ms. Elizabeth Gash, RHIA	Medical Records Professional
Ms. Roxanna Giambri, RHIA	Regional Trauma Registry Representative
Ms. Vickie Graymire, R.N., MS	Registered Nurse
Mr. Henry Kauffman, EMT-P, Fire Chief	EMS Representative
Dr. Barry Knotts, M.D., FACS, Ph.D	Surgeon, level 1 Trauma Center
Mr. Jon Konves, EMT-P	Trauma Registrar
Dr. Carl Parrott, M.D.	County Coroner
Dr. Douglas Paul, D.O.	Hospital Representative
Ms. Vicki Ruppert, R.N., BSN	Hospital Representative
Mr. Michael Smeltzer, MPH	Consumer
Dr. Richard Treat, M.D.	Surgeon, non level 1 Trauma Center
Ms. Debbie Znosko, CCS	Medical Records Professional

APPENDIX 7

File Key Lay Out

No.	Field Name	Length	Type	Start	End	Nullable	Values	Instructions
1	Rehabilitation Facility Code	4	N	1	4	NO	The facility code assigned by the Ohio Department of Public Safety. See Appendix 1 - ODPs Rehabilitation Facility Codes.	Must be present on all records submitted to the Ohio Department of Safety. A four-digit code assigned by the Ohio Department of Public Safety. This code needs to be entered initially. After initial entry it will automatically be entered for each record.
2	Unique Patient Encounter/Admission Number	15	A	5	19	NO	A number assigned by each facility to the patient at the time of admission. This number should be unique for each patient AND each visit. This number may be referred to as a patient account number. Medical record numbers are typically specific to each patient BUT are frequently the same for all rehabilitation facility visits by the same patient.	Enter the rehabilitation facility's unique patient number for this patient. This record is for audit purposes only and will not be made public.
3	Date Exported	8	DATE	20	27	NO	Date (mmddyyyy) that this record was submitted to the Ohio Trauma Registry.	This is a generated field and will be completed when the record is exported to Ohio Trauma Registry.
4	Zip Code of Residence	5	N	28	32	NO	The patient's five-digit zip code for place of residence, at the time of their injury. Enter "99999" for patients that reside outside of the USA.	Enter in the patients' zip code number of their residence at the time of their injury. If patient is homeless, enter the zip code of the location of injury. Enter "99999" for patients that reside outside of the USA. Do not enter the 4-digit extension.
5	Patient's Date of Birth	8	DATE	33	40	NO	mmddyyyy	The patient's date of birth. Enter the month, day and year of the patient's Date of Birth. If the patients age is known, but the date of birth is not, enter 01/01/YYYY (YYYY appropriate to patients known age) Entire year must be used Example: 1998 Enter in the patient's date of birth. Must use this format "01/01/1998". It is necessary to enter the year using the entire year.
6	Gender	1	N	41	41	NO	1 - Male 2 - Female 3 - ND (Not Documented)	The patient's gender at the injury date. Enter the patient's gender using the options available from code table above. Use the pulldown menu to select this field. Select the most appropriate option.
7	Race/Ethnicity	1	N	42	42	NO	1 - American Indian or Alaskan Native 2 - Asian 3 - Black, not of Hispanic origin 4 - Hispanic or Latino 5 - Native Hawaiian or Other Pacific Islander 6 - White 7 - Other 8 - Multi-racial 9 - ND (Not Documented)	The patient's race/ethnic group. Enter the patient's race from the available options. Use the pulldown menu to select this field. Select the most appropriate option. If more than one race value #1 to #6 is selected then value number 8 - <i>Multiracial</i> must be selected. Note that pediatric facilities are limited to selection of only one value. Adult facilities can select multiple values, which will reported as 8 - multi-racial.
8	Date of Onset (Date Injury Occurred)	8	DATE	43	50	NO	mmddyyyy	The date the injury occurred. Enter the month, day and year of the injury. The year must be 4-digits. Example: 1998. The date on which injury

Version 1.0 Effective January 1, 2005

								<p>occurred must be the earliest date associated with the trauma event. All treatment dates must be equal to or after the date on which the injury occurred.</p> <p>Enter the patient's actual date of injury.</p>
9	Rehabilitation Admission From	2	N	51	52	NO	<p>01 - Home 02 - Board and Care 03 - Transitional Living 04 - Intermediate care 05 - Skilled Nursing Facility 06 - Acute Unit of own facility 07 - Acute Unit another facility 08 - Chronic Hospital (LTAC) 09 - Rehabilitation facility 10 - Other 12 - Alternate Level of care 13 - Subacute setting 14 - Assisted Living Residence</p>	<p>If # 4, 5, 7, or 9 is selected, field # 10 Transferring Facility ID must be completed. Value number 11 is purposefully not utilized for this field. <u>Home</u>: A private, community based dwelling (a house, apartment, mobile home, etc) that houses the patient, family, or friends.</p> <p><u>Board and Care</u>: A community based setting where individuals have private space (either a room or apartment), or a structured retirement facility. The facility may provide transportation, laundry, and meals, but no nursing care.</p> <p><u>Transitional Living</u>: A community based, supervised setting where individuals are taught skills so they can live independently in the community.</p> <p><u>Intermediate care (nursing home)</u>: A long term care setting that provides health related services but a registered nurse is not present 24 hours a day. Patients live by institutional rules; care is ordered by a physician, and a medical record is maintained. Patients in intermediate care are generally less disabled than those in skilled care facilities</p> <p><u>Skilled Nursing Facility (nursing home)</u>: A long term care setting that provides skilled nursing services. A registered nurse is present 24 hours a day. Patients live by institutional rules; care is ordered by a physician, and a medical record is maintained.</p> <p><u>Acute Unit of own Facility</u>: An acute medical/surgical care unit in the same facility as the rehabilitation unit.</p> <p><u>Acute Unit another Facility</u>: An acute medical/surgical care facility separate from the rehabilitation unit.</p> <p><u>Chronic Hospital (LTAC)</u>: A long-term care setting classified as a hospital, long term acute care.</p> <p><u>Rehabilitation facility</u>: An inpatient setting that admits patients with specific disabilities and provides a team approach to comprehensive rehabilitation services, with a physiatrist (or physician of equivalent training/experience) as the physician of record.</p> <p><u>Other</u>: Used only if no other code is appropriate</p> <p><u>Alternate Level of care</u>: A physically and fiscally distinct unit that provides care to individuals who no longer meet acute care criteria</p> <p><u>Subacute setting</u>: Subacute care is goal-oriented, comprehensive,</p>

Version 1.0 Effective January 1, 2005

								<p>inpatient care designed for an individual who has an acute illness, injury or exacerbation of a disease process. It is rendered immediately after, or instead of, acute hospitalization to treat one or more specific active, complex medical conditions an overall situation. Generally the condition of an individual receiving subacute care is such that the care does not depend heavily on high technology monitoring or complex diagnostic procedures. Subacute care requires the coordinated services of an interdisciplinary team, including physicians, nurses, and other relevant professional disciplines whoa re knowledgeable and trained to assess and manage specific conditions and perform the necessary procedures. Subacute care is given as part of a specially designed program, regardless of the site. Subacute care is generally more intensive than traditional nursing home care, but less than acute inpatient care. It requires frequent (daily to weekly) patient assessment and review of the clinical course and treatment plan for a limited time period (several days to several months), until a condition is stabilized or a predetermined course is completed.</p> <p><u>Assisted Living Residence:</u> A community based setting that combines housing, private quarters, freedom of entry and exit, supportive services, personalized assistance, and healthcare designed to respond to individual needs of the those who need help with activities of daily living and instrumental activities of daily living. Supportive services are available 24 hours a day to meet scheduled and unscheduled needs in a way that promotes maximum dignity and independence for each resident. These services involve the resident's family, neighbors, and friends.</p>
10	Pediatric Prehospital Setting	2	N	53	54	YES	01 - Home 02 - Transitional living center 03 - Skilled nursing facility 05 - Other 06 - ND	Select the value that most accurately describes the patients living arrangements prior to their hospitalization. Note the value 04 is not used in this field.
11	Pediatric Living With	2	N	55	56	YES	01 - Two parents 02 - One parent 03 - Relatives 04 - Foster care 05 - Shelter 06 - Other 07 - ND	Select a value in this field ONLY if the value selected in field # 10 <i>Pediatric Prehospital Setting</i> is equal to "01-Home"
12	Pediatric Education Category	2	N	57	58	YES	01 - Not a student 02 - Early Intervention program 03 - Preschool 04 - Kindergarten through 12th 05 - Other	Select the value
13	Pediatric Educational Setting	2	N	59	60	YES	01 - Regular Class 02 - Special class (approx. 12:1) 03 - Special Class (approx. 6:1) 04 - Home-based 05 - Day Care/nursery school/center-based/community 06 - NA	If value 2, 3 or 4 is selected for the Pediatric Education Category, then an appropriate value for this field must be reported. If 01 or 05 is selected for Pediatric Education Category, then 06- NA must be selected.

Version 1.0 Effective January 1, 2005

14	Adult Prehospital Living With	2	N	61	62	YES	01 - Alone 02 - Family/Relatives 03 - Friends 04 - Attendant 05 - Other 06 - ND	Select the value that most accurately describes the patients living arrangements prior to their hospitalization.
15	Adult Prehospital Vocational Category	2	N	63	64	YES	01 - Employed 02 - Sheltered 03 - Student 04 - Homemaker 05 - Not Working 06 - Retired for Age 07 - Retired for Disability 08 - ND	Select the value that most accurately describes the patients' vocation prior to their hospitalization. Employed - The patient works for pay in a competitive environment or is self employed Sheltered - The patient works for pay in a non-competitive environment Student - the patient is enrolled in an accredited school (including trade school), college or university. Homemaker - The patient works at home, does not work outside the home, is not paid by an employer, and is not self employed Not Working - The patient is unemployed, but is not retired or receiving disability benefits Retired for Age - The patient is retired (usually 60 years of age or older) and is receiving retirement benefits Retired for Disability - The patient is receiving disability benefits and is less than 60 years of age.
16	Adult Prehospital Vocational Effort	2	N	65	66	YES	01 - Full-time 02 - Part-time 03 - Adjusted Work load 04 - NA 05 - ND	Select the value that most accurately describes the patients vocation prior to their hospitalization, if values 1 - 4 are selected in field # __ Prehospital Vocation Category, then 01-03 are valid selections for this field. If 05-07 are selected in field # __, then 04 must be selected. Full-time - The patient worked a full schedule (i.e. 37.5 or 40 hours per week) - which ever is normal where he/she works Part-time - The patient worked less than full time (i.e. less than 37.5 or 40 hours per week) depending on the norm where he/she works. Adjusted Workload - The patients workload was adjusted due to disability. The patient was not able to perform all the work duties of the position
17	Transferring Facility ID	4	N	67	70	NO	ODH or ODPS assigned number.	If the patient is transferred from an Ohio hospital, enter the ODH assigned Ohio hospital code. See Appendix 1-A for the list of ODH assigned Ohio hospital codes If the patient is transferred from an out of state hospital, enter the ODPS assigned out of state hospital code. See Appendix 1-B for the list of ODPS assigned out of state hospital codes. If the patient is transferred from an Ohio Rehabilitation Facility, enter the ODPS assigned Ohio Rehabilitation Facility code. See Appendix 1-C for the list of ODPS assigned Ohio Rehabilitation Facility codes If the patient is transferred from an Ohio Nursing Facility, enter the ODH assigned Ohio Nursing Facility code. See Appendix 1-D for the list of ODH assigned Ohio Nursing Facility codes
18	Rehabilitation Facility	8	DATE	71	78	NO	mmddyyyy	The arrival date that the patient actually arrived at the rehabilitation

Version 1.0 Effective January 1, 2005

	Arrival Date						facility. Enter the month, day and year. The actual date that the patient arrived at the rehabilitation facility. Date format: 01/29/1998. The year must be complete year (1998).
19	Etiologic Diagnosis (ICD-9-CM Code)	5	N	79	83	YES	Report the ICD-9-CM diagnosis codes Use an ICD-9-CM code to indicate the etiologic problem that led to the condition for which the patient is receiving rehabilitation. These should be diagnosis codes, not external cause of injury codes. When creating a data file the decimal point MUST be used. Example: 801.11 = 801.11 or 810 = 810.0. Give the complete code not category codes.
20	Co-Morbid Conditions (ICD-9-CM Codes)	50	N	84	133	YES	Report 10 additional ICD-9-CM codes of diagnoses The ICD-9-CM code for each injury diagnosis. List up to 10 codes. When creating a data file the decimal point MUST be used. Example: 801.11 = 801.11 or 810 = 810.0
21	Complications during Rehabilitation Stay (ICD-9-CM Codes)	30	N	134	163	YES	Report up to 6 ICD-9-CM codes Enter an ICD-9-CM code for each complication that began with this rehabilitation stay. List up to 6 codes. When creating a data file the decimal point MUST be used. Example: 801.11 = 801.11 or 810 = 810.0
22	Disability Assessment Tool Adult/Pediatric	1	N	164	164	NO	1 - Adult 2 - Pediatric Facilities using an adult assessment-scoring model (i.e. FIMTM) should select <i>1 - Adult</i> . Facilities that use a pediatric scoring model, (i.e. WeeFIMTM) regardless of the patient's age should select <i>2 - Pediatric</i> .
23	Disability Assessment upon Admission	18	N	165	182	NO	0 - Activity Does Not Occur 1 - Total Assistance 2 - Maximum Assistance 3 - Moderate Assistance 4 - Minimal Assistance 5 - Supervision 6 - Modified Independence 7 - Complete independence 25 Self-Care: Eating 26 Self-Care: Grooming 27 Self-Care: Bathing 28 Self-Care: Dressing-Upper Body 29 Self Care: Dressing-Lower Body 30 Self-Care: Toileting 31 Sphincter Control: Bladder Management 32 Sphincter Control: Bowel Management 33 Transfers: Bed, Chair, Wheelchair 34 Transfers: Toilet 35 Transfers: Tub, Shower 36 Locomotion: Walk. Wheelchair 37 Locomotion: Stairs 38 Communication: Comprehension 39 Communication: Expression 40 Social Cognition: Social Interaction 41 Social Cognition: Problem Solving 42 Social Cognition: Memory Motor Subscore Motor Subscore is a calculated field, the sum of fields #25 through #37 Cognitive Subscore is a calculated field; the sum of fields #38 through #42 Total Motor and Cognitive score is a calculated field, the sum of Motor subscore and Cognitive subscore Disability Assessment upon admission should be determined during the first three calendar days of the patients admission

Version 1.0 Effective January 1, 2005

							Cognitive subscore Total Motor and Cognitive score	
24	Disability Assessment Score upon Discharge	18	N	183	200	NO	1 - Complete Dependence 2 - Maximum assistance 3 - Moderate Assistance 4 - Minimal Assistance 5 - Supervision 6 - Modified Independence 7 - Complete independence 25 Self-Care: Eating 26 Self-Care: Grooming 27 Self-Care: Bathing 28 Self-Care: Dressing-Upper Body 29 Self Care: Dressing-Lower Body 30 Self-Care: Toileting 31 Sphincter Control: Bladder Management 32 Sphincter Control: Bowel Management 33 Transfers: Bed, Chair, Wheelchair 34 Transfers: Toilet 35 Transfers: Tub, Shower 36 Locomotion: Walk. Wheelchair 37 Locomotion: Stairs 38 Communication: Comprehension 39 Communication: Expression 40 Social Cognition: Social Interaction 41 Social Cognition: Problem Solving 42 Social Cognition: Memory Motor Subscore Cognitive subscore Total Motor and Cognitive score	Motor Subscore is a calculated field, the sum of fields #25 through #37 Cognitive Subscore is a calculated field; the sum of fields #38 through #42 Total Motor and cognitive score is a calculated field, the sum of Motor subscore and cognitive subscore
25	Date of Discharge or Death	8	DATE	201	208	NO	mmddyyyy	Enter the date of the patient's discharge, transfer or death from the rehabilitation facility. The actual date that the patient was discharged from the rehabilitation facility or date that the patient was pronounced dead. Date format: 01/29/1998. The year must be complete year (1998).
26	Discharge Status	1	N	209	209	NO	1 - Alive 2 - Dead	Enter the status of the patient upon discharge from the rehabilitation facility. The patient was alive or dead when they left the rehabilitation facility.
27	Adult Discharge Disposition	2	N	210	211	YES	01 - Home 02 - Board and Care 03 - Transitional Living 04 - Intermediate care 05 - Skilled Nursing Facility 06 - Acute Unit of own facility 07 - Acute Unit another facility 08 - Chronic Hospital (LTAC) 09 - Rehabilitation facility 10 - Other	The patient's disposition upon discharge from the rehabilitation facility. If #01 is selected you must make an entry in Field # <i>XX Discharge Living With</i> . If #04, 05, 07, or 09 is selected you must enter an ODPS or ODH Assigned facility code in field # <i>XX-Transfer to Other Rehabilitation Facility</i> .

Version 1.0 Effective January 1, 2005

							11 - Died 12 - Alternate Level of care 13 - Subacute setting 14 - Assisted Living Residence	
28	Adult Discharge Living With	2	N	212	213	YES	01 - Alone 02 - Family/Relatives 03 - Friends 04 - Attendant 05 - Other 06 - NA	If values 1, 2, 3 or 14 are selected in field #27 - <i>Adult Discharge Disposition</i> , then values 01 through 05 are valid for this field, otherwise 06- NA must be selected.
29	Pediatric Discharge Disposition	2	N	214	215	YES	01 - Home 02 - Transitional living center 03 - Skilled nursing facility 05 - Other 06 - ND	Select the value that most accurately describes the patients living arrangements prior to their hospitalization. Note that the value "04" is not used in this field.
30	Pediatric Discharge Living With	2	N	216	217	YES	01 - Two parents 02 - One parent 03 - Relatives 04 - Foster care 05 - Shelter 06 - Other 07 - ND	Select a value in this field ONLY if the value selected in field # 29 <i>Pediatric Prehospital Setting</i> is equal to "01-Home"
31	Discharge Referrals	10	N	218	227	NO	01 - Referral to Bureau of Vocational Rehabilitation 02 - Referral to Bureau of Visual Impairment 03 - Outpatient therapy 04 - Home Health Services 05 - Other (examples - homeless or women's shelters, protective services, etc.) 09 - No Referrals Made	More than one value may be selected.
32	Transfer to Other Hospital/Facility	4	N	228	231	YES/NO	ODH assigned # for in-state hospitals ODPS assigned # for out of state hospitals ODPS assigned # for rehabilitation facilities ODH assigned # for licensed nursing homeMay be BLANK if Field Number #27 is NOT = 5, 6, 7, 8, 9 (adult) or if Field Number #29 is NOT = 03	Enter the location of the patient disposition from the hospital. If the patient is transferred to another Ohio hospital, enter the ODH assigned Ohio hospital code. See Appendix 1-A for the list of ODH assigned Ohio hospital codes. If the patient is transferred to an out of state hospital, enter the ODPS assigned out of state hospital code. See Appendix 1-B for the list of ODPS assigned out of state hospital codes. If the patient is transferred to a rehabilitation facility, enter the ODPS assigned rehabilitation facility code. See Appendix 1-C for the list of ODPS assigned rehabilitation facilities codes. If the patient is transferred to a licensed nursing home, enter the ODH assigned nursing home facility code. See Appendix 1-D for the list of ODH assigned nursing home facilities codes.
33	Billed Rehabilitation Facility Charges	10	N	232	241	YES	Whole Dollar amount of total rehabilitation facility charges rounded off to the nearest dollar Blank* - Not Documented It is acceptable to leave this field blank . Calculations that will be performed on this field (addition, averages, means, etc.) require either a whole dollar amount or a blank field. DO NOT use "ND" or "9999" in this field.	The final billed amount charged for this admission, excluding professional fees, at the rehabilitation facility, expressed in a whole dollar figure. Total amount charged to the patient for treatment received at the rehabilitation facility expressed in a whole dollar amount. *If the information is not documented leave this field blank.

Version 1.0 Effective January 1, 2005

34	Payment Source	4	N	242	245	NO	<p>1 - Primary Source 2 - Secondary Source</p> <p>Code each source with one of the following values 01 - Blue Cross 02 - Medicare non-MCO 03 - Medicaid non-MCO 04 - Commercial Insurance 05 - MCO HMO 06 - Workers' Compensation 07 - Crippled Children's Services / Bureau of Children with Medical Handicaps 08 - Developmental Disabilities Services 09 - State Vocational Rehabilitation 10 - Private Pay 11 - Employee Courtesy 12 - Unreimbursed 13 - CHAMPUS 14 - Other 15 - None 16 - No-Fault Auto Insurance 51 - Medicare MCO 52 - Medicaid MCO</p>	<p>The entity that is expected to be responsible for the largest percentage of the patient's bill for the current encounter, both as a primary payor source as well as a secondary payor source. Values 17-50 are not utilized.</p> <p>Select from the pulldown menu the appropriate final payment source responsible for the outstanding charges incurred.</p>
35	Adult Length of Stay in Rehabilitation Facility	48	DATE	246	293	YES	<p>mm/dd/yyyy Interruptions in care #1 1st Interruption date mm/dd/yyyy 1st Return date mm/dd/yyyy</p> <p>Interruptions in care #2 2nd Interruption date mm/dd/yyyy 2nd Return date mm/dd/yyyy</p> <p>Interruptions in care #3 3rd Interruption date mm/dd/yyyy 3rd Return date mm/dd/yyyy</p>	<p>Enter the dates of up to three interruptions in care. The length of stay in the rehabilitation facility will be calculated by subtracting the total number of days of interrupted care from the total number of days from admission to discharge. Using this process will allow the LOS to be calculated</p> <p>An interruption in care is defined as a discharge from the rehabilitation center and returns to the same facility within three consecutive days.</p>
36	Pediatric Length of Stay in Rehabilitation Facility	48	DATE	294	341	YES	<p>mm/dd/yyyy Interruptions in care #1 1st Interruption date mm/dd/yyyy 1st Return date mm/dd/yyyy</p> <p>Interruptions in care #2 2nd Interruption date mm/dd/yyyy 2nd Return date mm/dd/yyyy</p> <p>Interruptions in care #3 3rd Interruption date mm/dd/yyyy 3rd Return date mm/dd/yyyy</p>	<p>Enter the dates of up to three interruptions in care. The length of stay in the rehabilitation facility will be calculated by subtracting the total number of days of interrupted care from the total number of days from admission to discharge. Using this process will allow the LOS to be calculated.</p>

TAB_NAME : Incident & Patient

ALLOWED VALUES : **995** - BLS, Emergency

The provision of basic life support (BLS) services. Please note that just because an EMT-I or EMT-P was on the run does not mean ALS service

was provided.

1005 - ALS, Level 1 Emergency

The provision of an assessment by an advanced life support (ALS) provider and/or the provision of one or more ALS interventions. An ALS provider is defined as a provider certified as an EMT-Intermediate or Paramedic. An ALS intervention is defined as any procedure beyond the scope of an EMT-Basic.

1010 - ALS, Level 2

The administration of at least three different medications and/or the provision of one or more of the following ALS procedures:

- Defibrillation/Cardioversion
- Endotracheal Intubation
- Central Venous Line
- Cardiac Pacing
- Chest Decompression
- Surgical Airway
- Intraosseous Line

1015 - Paramedic Intercept

ALS services delivered by paramedics that operate separately from the agency that provides the ambulance transport.

1020 - Specialty Care Transport

A level of inter-facility service provided beyond the scope of the Paramedic. This is necessary when a patient's condition requires ongoing care that must be provided by one or more health professionals from an appropriate specialty (nursing, medicine, respiratory care, or cardiovascular care).

1030 - Rotary Wing (Helicopter)

Transportation was made by helicopter ambulance. This takes precedence over BLS, ALS and Specialty Care Transport.

-25 - Not Applicable

This value may be used only if the Incident Disposition indicates no patient contact.

NOTE: NHTSA-2 values 990, 1000, 1015, and 1025 not accepted by EMSIRS-2.

VALIDATIONS AND CROSSCHECKS : 1. Must be value "Not Applicable" if Element #74 (Incident Disposition) is value "Cancelled", "No Patient Found", "No Treatment Required", or "Patient Refused Care".
2. If Element #6 (Crew Certification/License Levels) does not have at least one value "EMT-Intermediate" or "EMT-Paramedic", then can NOT be values "ALS Level 1", or "ALS Level 2".

ALLOWED VALUES : **1135** - Home/Residence

Any home, apartment, or residence (not just the patient's home).
Includes the yard, driveway, garage, pool, garden, or walk of a home, apartment, or residence.

1140 - Farm

A place of agriculture, except for a farmhouse. Includes land under cultivation and non-residential farm buildings.

1145 - Mine or Quarry

Includes sand pits, gravel pits and tunnels under construction.

1150 - Industrial Place and Premises

A place where things are made or are being built, includes construction sites, factories, warehouses, industrial plants, docks and railway yards.

1155 - Place of Recreation or Sport

Includes amusement parks, public parks and playgrounds, sports fields/courts/courses, sports stadiums, skating rinks, gymnasiums, and resorts.

1160 - Street or Highway

Any public street, road, highway, or avenue.

1165 - Public Building

Any publicly owned building and its grounds, including schools and government offices.

1170 - Trade or Service

Any privately owned building used for business. Includes bars, restaurants, office buildings, churches, stores, bus/railway stations. Excludes health care facilities.

1175 - Health Care Facility

A place where healthcare is delivered, except nursing homes. Includes clinics, doctor's offices, and hospitals.

1180 - Residential Institution (nursing home, jail/prison, group home)

A place where people live that is not a private home, apartment, or residence. Includes nursing home, jail/prison, orphanage, and group home.

1185 - Lake, River, Reservoir

Any body of water, except swimming pools.

1190 - Other Location

Any place that does not fit any of the above categories (this should be very rare).

-10 - Unknown

This value may be used only if the Incident Disposition was "Cancelled".

EMS Division
Policy Number EMS-888.03
Ohio Trauma Registry Data Submission Deadlines

Purpose

To provide data and analysis that enables the EMS and Trauma communities to evaluate and improve patient care and enhance system development. The Office of Research and Analysis (ORA) is charged with maintenance and oversight of the data systems created in Ohio Revised Code §4765.06.

To ensure data systems receive medical record information in a timely and uniform manner.

Policy

A. Applicability

This policy applies to all hospitals and in-patient rehabilitation facilities required to submit data to the Ohio Trauma Registry (OTR).

B. Authority

1. ORC §4765.06(B) requires the state Board of Emergency Medical Services to “establish a state trauma registry to be used for the collection of information regarding the care of adult and pediatric trauma victims in this state.”
2. OAC Chapter 4765-4-7 allows the state Board of Emergency Medical Services to “develop policies for granting extensions to the submission deadlines.”

C. Deadlines

1. All records shall be submitted to the Ohio Trauma Registry no later than 90 days after the end of the calendar quarter in which the patient was discharged.
2. Calendar quarters are defined as follows:
 - 1st Quarter: January, February, March
 - 2nd Quarter: April, May, June
 - 3rd Quarter: July, August, September
 - 4th Quarter: October, November, December

Mission Statement

“to save lives, reduce injuries and economic loss, to administer Ohio’s motor vehicle laws and to preserve the safety and well being of all citizens with the most cost-effective and service-oriented methods available.”

Procedure for OTR compliance determination

Definitions

Abbreviations used:

- ORA – Office of Research and Analysis, EMS Division, Ohio Department of Public Safety
- OTR – The Ohio Trauma Registry

Compliant: A hospital is considered to be compliant when it has submitted data to OTR which:

- Is submitted on or before the deadline approved by the EMS Board, and
- Contains an expected number of records, within a certain range for that facility based on historical data volumes submitted by the hospital in the past, or otherwise confirms that its data is accurate as set forth below.

Non-Compliance: Non-compliance with OTR data submission can occur in several different ways. The following categories of non-compliance will be used:

- **Category 1 Non-compliance:** No efforts were made to submit data to OTR.
- **Category 2 Non-compliance:** Efforts were made to submit data to OTR but no records were received or accepted by OTR. An example of Category 2 non-compliance includes when a hospital intends to upload its trauma data to OTR but mistakenly uploads the wrong data file.
- **Category 3 Non-compliance:** Based on the statistical analysis of historical data volumes submitted by the particular hospital in the past, records were received by OTR but the number of records was significantly fewer than expected, and the hospital could not verify that this volume of records was accurate.

Expected range of records: The number of records, within a certain range, projected to be received by OTR from each hospital during a submission period. This range is determined by statistical analysis of each facility's submission history.

Exceptions

There are two circumstances in which a hospital's compliance with the OTR submission requirements will not be subject to the procedure set forth in this document:

1. Hospitals that have applied to the State Board of Emergency Medical Services for, and have been granted, extensions on submission of OTR data will be excluded from this process until such time as the extension expires. After the extension expires, a hospital's compliance with the OTR reporting obligations will be subject to the procedures set forth in this policy and the hospital will be required to submit all of the relevant data for the period of time covered by the extension.
2. Hospitals that have notified ORA that they have had no patients that meet OTR inclusion criteria for that reporting period.

Procedure

On the first business day after the end of an OTR data submission period, ORA staff will take the following steps to determine the compliance status of each hospital in the state that is required to submit OTR data.

1. Compliance Analysis #1 (Activity) will be performed for the reporting period for all hospitals.
 - a. For hospitals that have not submitted any records for the reporting period:
 - i. If the hospital uses commercial trauma registry software or submits its data through a regional trauma registry and no trauma data file upload transactions

PUBLIC RECORD

Mission Statement

"to save lives, reduce injuries and economic loss, to administer Ohio's motor vehicle laws and to preserve the safety and well being of all citizens with the most cost-effective and service-oriented methods available."

- took place during the reporting period, the hospital will be declared as having a **Category 1 Non-compliance** status.
- ii. If the hospital uses commercial trauma registry software or submits its data through a regional trauma registry and file upload transactions did take place during the reporting period, but for whatever reason the data that is intended to be submitted is not properly uploaded to OTR, the hospital will be declared as having a **Category 2 Non-compliance** status.
 - iii. If the hospital uses direct, web-enabled data entry to report its trauma data directly to OTR, instead of through a regional trauma registry, the hospital will be declared as having a **Category 1 Non-compliance** status.
2. Compliance Analysis #2 (Quantitative) will be performed for hospitals that had records accepted into OTR for the reporting period:
- a. Hospitals that submit an amount of data such that they meet or exceed the expected range of records will be declared to be in compliance.
 - b. Hospitals that fall below the expected range of records will be declared as having a **Category 3 Non-compliance** status. If the hospital confirms that the data is accurate even though it falls outside the expected range, the hospital shall be deemed compliant with its OTR reporting obligations.
3. Hospitals with a non-compliance status will be notified of their status per the *Notification of Non-compliance* policy.

Policy on Notification of Non-compliance – Trauma Acute Care Registry

On the first business day after the end of a submission period the Office of Research and Analysis (ORA) shall determine which hospitals are not in compliance with submission requirements.

Except in response to public records requests, no deliberate public declaration of non-compliance will be made until all appropriate steps listed hereafter are followed.

1. For hospitals participating in regional trauma registries

- a. ORA staff shall contact the registrar of the regional trauma registry that has contracted with hospitals in its region to submit data on behalf of the non-compliant hospital(s). This contact can be made by telephone or e-mail, whichever is most convenient for ORA staff.
 - i. ORA staff will provide the registrar of the regional trauma registry the name(s) of the non-compliant hospital(s) and the nature of the non-compliance.
 - ii. A deadline of not less than two weeks after contact is made with the registrar of the regional trauma registry will be set for the regional registry to complete submission of outstanding data or to agree on an alternative solution that is mutually agreed to by the ORA staff and regional trauma registry.
- b. If the outstanding data is not received by the OTR by the deadline established in Section 1(a)(ii) of this policy, ORA staff will contact the chief executive of the regional trauma registry to inform them of the situation.
 - i. ORA staff will provide the chief executive of the regional trauma registry the name(s) of the non-compliant hospital(s) and the nature of non-compliance.
 - ii. A deadline of two weeks after contact is made with the chief executive of the regional trauma registry will be set for the regional registry to complete submission of outstanding data or to agree on an alternative solution that is mutually agreed to by the ORA staff and regional trauma registry.
 - iii. ORA staff will contact the non-compliant hospitals who report their trauma data to a regional trauma registry and inform them that their data still has not been submitted by the regional trauma registry.
- c. If the outstanding data is not received by the OTR by the deadline set forth in Section 1(b)(ii) of this policy, ORA staff will contact the Ohio Hospital Association for assistance in facilitation of obtaining the outstanding data.
 - i. A deadline will be set based on mutual agreement between ORA and OHA, based on OHA's and ORA's mutual assessment of the situation.
- d. If the outstanding data is not received by the deadline agreed to by ORA and OHA and established by Section 1(c)(i) of this policy, the following process will apply:
 - i. ORA staff will contact the chief executive officer and the governing board of the hospital via certified letters informing them of their non-compliance with the trauma registry reporting requirements of ORC §4765.06.
 - ii. Non-compliance will be noted on the EMS Division website
 - iii. The hospital will be declared ineligible to receive priority 2, 3 and 4 trauma research grants made available by the EMS Board under ORC §4765.07.

Mission Statement

"to save lives, reduce injuries and economic loss, to administer Ohio's motor vehicle laws and to preserve the safety and well being of all citizens with the most cost-effective and service-oriented methods available."

2. For Trauma Centers that report their trauma data directly to the OTR and not through a regional trauma registry

- a. ORA staff shall contact the trauma registrar of the non-compliant trauma center hospital. This contact can be made by telephone or e-mail, whichever is most convenient for ORA staff.
 - i. ORA staff will provide the trauma registrar of the non-compliant trauma center the nature of non-compliance.
 - ii. A deadline of two weeks after telephone contact is made with, or an e-mail is sent to, the trauma registrar of the non-compliant trauma center will be set for the non-compliant trauma center to complete submission of outstanding data or to agree on an alternative solution that is mutually agreed to by the ORA staff and non-compliant trauma center.
- b. If the outstanding data is not received by the OTR by the deadline set forth in Section 2(a)(ii) of this policy, ORA staff will contact the Trauma Program Manager and Trauma Medical Director of the non-compliant trauma center and inform them of the non-compliance.
 - i. ORA staff will inform the Trauma Program Manager and Trauma Medical Director of the nature of non-compliance.
 - ii. A deadline of one week after contact is made with the Trauma Program Manager and Trauma Medical Director of the non-compliant trauma center will be set for the non-compliant trauma center to complete submission of outstanding data or to agree on an alternative solution that is mutually agreed to by the ORA staff and the trauma center.
- c. If the outstanding data is not received by the deadline set forth in Section 2(b)(ii) of this policy, ORA staff will contact chief executive officer of the hospital and the Ohio Hospital Association (OHA) to request its assistance in obtaining the outstanding data from the non-compliant trauma center.
 - i. ORA staff will provide the OHA and the chief executive officer of the non-compliant trauma center with information regarding the nature of non-compliance and all attempts to secure the data from the non-compliant trauma center.
 - ii. A deadline of one week after contact is made with the OHA and the chief executive officer of the non-compliant trauma center will be set for complete submission of outstanding data or to agree on an alternative solution that is mutually agreed to by the ORA staff and the chief executive officer of the non-compliant trauma center.
- d. If the outstanding data is not received by the OTR by the deadline set forth in section 2(c)(ii):
 - i. Non-compliance will be noted on the EMS Division website.
 - ii. The hospital will be declared ineligible to receive priority 2, 3 and 4 trauma research grants made available by the EMS Board under ORC §4765.07.

3. For non-trauma facilities that submit their trauma data directly to the OTR and not through a regional trauma registry

- a. ORA staff shall contact the primary medical records contact of the non-compliant hospital. This contact can be made by telephone or e-mail, whichever is most convenient for ORA staff.
 - i. ORA staff will provide the primary medical records contact of the non-compliant hospital information regarding the nature of the hospital's non-compliance.
 - ii. A deadline of two weeks after telephone contact is made with, or an e-mail is sent to, the primary medical records contact of the non-compliant hospital will be set for complete submission of outstanding data or to agree on an alternative solution that is mutually agreed to by the ORA staff and the primary medical records contact of the non-compliant hospital.
- b. If the outstanding data is not received by the OTR by the deadline set forth in Section 3(a)(ii), ORA staff will contact the chief executive officer of the non-compliant hospital and the OHA to enlist its assistance in obtaining the outstanding data from the non-compliant hospital.
 - i. ORA staff will provide the OHA and the chief executive officer of the non-compliant hospital with information regarding the nature of non-compliance and all attempts to secure the data from the non-compliant hospital.

- ii. A deadline will be set based on mutual agreement between ORA, OHA, and the chief executive officer of the non-compliant hospital regarding the complete submission of outstanding data or to agree on an alternative solution that is mutually agreed upon by ORA, OHA, and the chief executive officer of the non-compliant hospital.
- c. If the outstanding data is not received by the OTR by the deadline set forth in Section 3(b)(ii), then the following will occur:
 - i. ORA staff will contact the OHA and the chief executive officer and the governing board of the non-compliant hospital via certified letters informing them of the hospital's non-compliance with ORC §4765.06.
 - ii. Non-compliance will be noted on the EMS Division website.
 - iii. The hospital will be declared ineligible to receive priority 2, 3 and 4 trauma research grants made available by the EMS Board under ORC §4765.07.

4. Documentation of Communications and Correspondence

- a. A record of all communications and correspondence with hospitals, regional trauma registries and the Ohio Hospital Association shall be maintained.
 - i. This record shall be maintained in accordance with the Ohio Department of Public Safety's record retention policies.
 - ii. Except in response to public records requests, no deliberate public release of this record will be made until all steps listed above have been followed.

EMS Board Policy

Approved August 22, 2002

Revised February 18, 2009 (updated OAC reference)

Requests for extension to deadlines for submission of data to the Ohio Trauma Registry

This policy is developed in accordance with section 4765-4-07(B) of the Ohio Administrative Code, which states that the board may develop policies for granting extensions to the deadlines for submission of trauma registry data.

Pursuant to this policy, the board hereby directs the Division of EMS (the “Division”) to determine whether a request for extension should be granted and, if so, the length of time for such extension.

Any entity wishing to obtain an extension must send a written request to the Division (Ohio Department of Public Safety, Division of EMS, 1970 W. Broad Street, Columbus, OH 43223) within 15 days prior to the submission deadline date, and include the following information in the request:

- (1) Justification for the extension;
- (2) Length of extension requested;
- (3) Specific plan for submission of the required trauma data within the length of time requested;
- (4) Signature of the chief executive officer.

If a request for extension is received after the submission deadline date, but no later than fifteen days after such date, the Division may grant an extension only if it determines that there are extenuating circumstances affecting either the submission of the request for extension in a timely manner, or the ability of the facility to comply with the data submission requirement. Any request for extension received more than fifteen days after the submission deadline date will not be granted.

Mission Statement

“to save lives, reduce injuries and economic loss, to administer Ohio’s motor vehicle laws and to preserve the safety and well being of all citizens with the most cost-effective and service-oriented methods available.”

Time Segment Definitions

Out of Chute: from Time Unit Notified to Time Unit En Route

To Scene: from Time Unit En Route to Time Unit On Scene

On Scene: from Time Unit On Scene to Time Unit Departed Scene

Transport: from Time Unit Departed Scene to Time Unit Arrived At Hospital

Return to Service: from Time Unit Arrived At Hospital to Time Unit Back In Service

Total Time: from Time Unit Notified to Time Unit En Route

**Average Scene Time by Selected Natures of Incident
in minutes
CY 2008**

	Arrest	Cardiac	CVA	Pediatric	Respiratory
Ohio	10.4	11.2	10.8	9.1	10.6
Region 01	10.7	10.5	11.2	8.8	10.1
Region 02	11.1	10.7	10.6	8.0	9.8
Region 03	8.4	9.1	8.7	7.6	8.4
Region 04	10.1	11.3	11.1	8.8	10.5
Region 05	10.9	11.0	10.9	11.5	11.5
Region 06	12.0	11.3	11.4	9.8	11.3
Region 07	9.6	10.0	10.1	7.8	9.5
Region 08	10.3	12.1	11.2	9.2	11.0
Region 09	10.6	11.9	10.6	8.4	10.8
Region 10	10.6	11.2	10.7	8.9	11.1

How these categories are determined

Arrest – Patients with Provider Assessment codes 1801 through 1899

Cardiac – Patients with Provider Assessment codes 0301 through 0309

CVA – Patients with Provider Assessment codes 0401 or 0402

Pediatric – All patients less than 16 years old

Respiratory – Patients with Provider Assessment codes 1401 through 1414

Trauma Scene Time Distribution

Inclusion Criteria:

- Incidents with valid mechanism of injury (indicating a trauma incident)
- 'At Scene' time known and valid
- 'Departed Scene' time known and valid

Exclusion Criteria:

- Incidents without valid mechanism of injury
- 'At Scene' time not documented or invalid
- 'Departed Scene' time not documented or invalid
- Extrication or other factor extending scene time reported
- Scene times less than 1 minute or greater than 60 minutes
- Transport by air ambulance

Average Trauma Scene Time by GCS

Inclusion Criteria:

- Incidents with valid mechanism of injury (indicating a trauma incident)
- 'At Scene' time known and valid
- 'Departed Scene' time known and valid
- Incidents with GCS between 3 and 15

Exclusion Criteria:

- Incidents without valid mechanism of injury
- 'At Scene' time not documented or invalid
- 'Departed Scene' time not documented or invalid
- Extrication or other factor extending scene time reported
- Scene times less than 1 minute or greater than 60 minutes
- Incidents with any GCS component score (eye, verbal, or motor) not documented
- Transport by air ambulance

Performance Statistics
IV Placement

Volunteer Out of Chute Time

Evaluation of Pediatric Trauma Triage Criteria for Highest Activation

Final Report for Ohio EMS Injury Prevention Research Grant EMS Funding Priority 4 2010-2011

Principal Investigator: Richard A. Falcone, Jr., M.D., M.P.H

Co-Investigators:

Lynn Haas RN, MSN, CNP
Suzanne Moody, MPA
Margie Koehn, CSTR
Taunya Kessler CCS

Data Contributors:

Anne Moss RN, Akron Children's Hospital
Christine McKenna RN, Children's Hospital of Pittsburgh
Cinda Werner RN, Children's Hospital of Wisconsin
Lisa Schwing RN, Dayton Children's Hospital
Deb Brown RN, Dell Medical Center of Central Texas
Kathy Haley RN, Nationwide Children's Hospital
Laura Cizmar RN, Rainbow Babies & Children's
Rochelle Armola RN, Toledo Children's Hospital

Acknowledgements

We would like to acknowledge the nine hospitals that actively participated in this study and commend them on their willingness and dedication to help improve care for the injured child.

Appendix.....	Pg. 31

Information /Qualifications: Principal and Co-Investigators

All investigators are members of Trauma Services within the Division of Pediatric and Thoracic Surgery at Cincinnati Children's Hospital Medical Center.

The principal investigator, **Richard A. Falcone, Jr., M.D., M.P.H.**, is the Director Trauma Service at Cincinnati Children's Hospital. His extensive knowledge and experience in pediatric trauma management, along with Dr. Falcone's Masters of Public Health from Harvard University specializing in Outcomes Research, provides a strong foundation for development of quality research studies.

Lynn Haas RN, MSN, CNP has been the Trauma Program Manager at Cincinnati Children's Hospital for the past 21 years. Ms. Haas has extensive experience as a pediatric trauma program manager and has been involved in numerous performance improvement initiatives and clinical research projects.

Suzanne Moody, MPA is the Research Coordinator at Cincinnati Children's for the past year. Her previous experience includes trauma project management at the Greater Cincinnati Health Council.

Margie Koehn, CSTR, has had oversight over the trauma registry at Cincinnati Children's for the past 18 years and is a recognized expert in trauma data management. Ms. Koehn is a member of the Ohio Trauma Registry Advisory Subcommittee (TRAS) and past president of the Ohio Alliance of Trauma Registrars (AOTR). Her expertise assisted in the development of the web-based database and exporting of data.

Taunya Kessler, CCS is the current Trauma Registrar at Cincinnati Children's and has extensive knowledge in coding and quality monitoring of registry data. Ms. Kessler is the current vice-president of the AOTR and a member of the Tri-State Trauma Coalition (TSTC) Performance Improvement Committee.

Executive Summary

The goal of this study was to prospectively evaluate the correlation of triage criteria, including those mandated by the ACS, with the need for immediate resources provided by a trauma resuscitation team. Two consensus lists were developed: 1) pre-hospital activation criteria and 2) Emergency Department (ED) high level resources requiring full team trauma activation. Inclusion criteria included any traumatically injured child evaluated by the Trauma Service in the ED who met either an activation criterion or used a specific resource. Drowning and suffocation victims were excluded.

A total of 656 patients were entered into this study from 9 verified Level I / II pediatric trauma centers over a one-year study period. Forty-five percent (N=296) of the patients utilized at least one high level resource. Gun-shot to the abdomen (92%), blood given prior to arrival (83%), traumatic arrest (83%) and tachycardia with poor perfusion (83%) were most predictive of utilizing a high level resource at least once. Definitions of appropriate triage (i.e. criteria with ED resource use), over-triage (i.e. criteria without ED resource use) and under-triage (i.e. no criteria with ED resource use) were developed and were the basis for the study conclusions. Of the 656 enrolled patients, 55% would have been over-triaged while 9% would have been under-triaged.

All activation criteria were ordered in priority according to the percentage of time a resource was utilized. Over-triage and under-triage were re-calculated with the sequential addition of one criterion. After the addition of the 9th criteria, there is a point where the addition of more criteria only increases the over-triage rate but has minimal impact on the under-triage rate. The six mandated ACS COT criteria (ACS-6) were evaluated for effectiveness. Within the study population, 350 (53%) patients met at least one ACS-6 criteria. Utilizing the ACS-6, 24% would have been over-triaged and 16% would have been under-triaged. It is significant that the under-triage is only 16% with the use of 6 criteria but only decreases to 9% with the presence of all 23 criteria. Overall, the ACS-6 performed well in the context of over-triage and under-triage rates. The inclusion of additional criteria had little impact on under-triage but instead, continued to increase the over-triage rate.

On specific analysis, five of the 6 ACS-6 criteria were consistently listed within the top 10 criteria within the ranking system that was utilized for this study. Only “GCS deterioration by 2” was consistently ranked lower than the other 5. With the deletion of the “GCS deterioration by 2” criterion, the addition of “tachycardia / poor perfusion” and “40 ml / kg bolus prior to arrival” (i.e. ACS-7) could potentially limit resource utilization for pediatric trauma resuscitations while continuing to maintain the acceptable over-triage and under-triage rates.

In conclusion, highly sensitive pediatric triage criteria are needed in order to appropriately initiate the highest level of trauma team activation. The ACS-6 mandated criteria performed well when evaluating this by over-triage and under-triage rates of the highest injured pediatric patients. It is generally accepted that some amount of over-triage is necessary to minimize the risk of under-triage. The inclusion of additional criteria beyond the ACS-6 had a small impact on under-triage yet continued to increase the over-triage rate significantly. Small revisions in the ACS-6 criteria for the pediatric population may potentially have some benefits.

Introduction

Verified trauma centers utilize the trauma resuscitation team concept to provide immediate care to the severely injured patient. The size and composition of a resuscitation team vary per hospital with some basic mandated components. In order to increase efficiency, most trauma centers utilize a tiered trauma resuscitation system, matching the personnel and resources of the resuscitation team to the immediacy of the patient's need for care. In many hospitals across the nation, a three-tiered system exists - highest level of activation for the most critical, mid-level activation for moderate injuries, and lowest tier evaluation for those with more minor injuries. Resources vary at each level, increasing as the level of activation increases.

The goal of distributing scarce resources in a safe and cost-effective manner is achieved through appropriate triage criteria for each tier of the trauma resuscitation. In May 2002, the Committee on Trauma of the American College of Surgeons (ACS COT) mandated 6 triage criteria for the highest level of activation for both adult and pediatric trauma centers.[1] Trauma centers were then encouraged to expand their triage criteria, eventually leading to each hospital developing their own unique grouping of activation criteria. A variety of triage criteria have been proposed and adopted, but a national consensus does not exist for the highest level of activation. The goal of this study was to prospectively evaluate the correlation of triage criteria, including those mandated by the ACS, with the need for immediate resources provided by a trauma resuscitation team. As resource utilization and acuity are highest for the most critically injured child, the findings of this study take an important first step toward improving the quality and timeliness of care in a fiscally responsible manner.

Review of Literature

It is estimated that 10-15% of traumatically injured children have life threatening injuries that demand a rapid and systematic approach to their treatment.[2] Even more significant is that the presence of a trauma resuscitation team can decrease mortality by 25% to 30% for the seriously injured child. [2]

With this knowledge, it remains imperative that accurate field and hospital pediatric triage criteria are defined and utilized for the highest level of trauma resuscitation activation.

Over the past decade, the benefits of tiered trauma resuscitation have included improved staff utilization and reduced costs while maintaining favorable outcomes in the area of safety, morbidity, and mortality.[3-15] Even with this positive clinical benefit, trauma clinicians quickly realized that the presence of a trauma resuscitation team in the Emergency Department consumed many hospital resources. In 2002, the ACS COT delineated six minimum triage criteria (ACS-6) for the initiation of adult / pediatric highest activation trauma resuscitations.[1] These include the following:

- age-specific hypotension
- respiratory compromise or obstruction
- transfer patients from another hospital who are receiving blood
- gunshot wound to the abdomen, neck or chest
- Glasgow Coma Scale (GCS) score of ≤ 8
- deterioration of Glasgow Coma Scale score by 2

In 2006, the ACS COT updated their publication “Resources for Optimal Care of the Injured Patient” to include these 6 triage criteria as requirements, along with the presence of key individuals and physician response time for highest level trauma activations.[1] After meeting these basic requirements, each trauma hospital can expand beyond these criteria to fit its needs. However, along with this freedom comes inconsistency, as each hospital has different triage criteria for the highest level of trauma team activation.

Trauma researchers now suggest that some common trauma triage criteria, currently utilized across the nation, can be eliminated so as to substantially decrease over-triage, or false positive results, without increasing under-triage, or false negatives results.[14, 16] More specifically, over-triage refers to unnecessary mobilization of a trauma resuscitation team for patients without significant injuries. When over-triage occurs, this leads to increased stress on resources and inefficiency. Conversely, under-triage refers to not mobilizing adequate resources available to treat an injured child. Under-triage affects the overall safety of the injured child as life-threatening injuries can initially go undetected, possibly leading

to a negative outcome. It is generally accepted that some amount of over-triage is necessary and expected in order to minimize the risk of under-triage.

In order to minimize both over and under triage it is crucial to carefully exam triage criteria for their effectiveness. Mechanism of injury in isolation as a criterion has not been found to be indicative of the need for a resuscitation team.[6, 11, 12, 17-25] The only specific mechanism of injury that does yield a high sensitivity as a criterion is a gun-shot wound to the torso or head.[12, 19, 24-26] Combining parameters and adding a scoring system has demonstrated high sensitivity / specificity yet has proven to be cumbersome to complete during a critical and stressful situation.[14, 16, 22, 27-30]

Recent studies indicate that physiologic parameters are strong indicators for when to activate the highest activation within a tiered system.[12, 14, 19, 30, 31] Examples of such physiologic parameters include respiratory rate [31, 32], intubation status [31, 33], Glasgow Coma Score (GCS) [12, 14, 17, 31, 34, 35], heart rate [36-38], and systolic blood pressure [13, 20, 31, 33, 39], each of which has its own limitations. Most of these studies have been completed in the adult population, with only a few being pediatric specific.[22, 40, 41]

A study completed by Steele et al. did not support the obligatory use of the six required ACS COT criteria, either for adults or pediatrics patients; [42] however, these criteria continue to be mandated for adult and pediatric trauma centers. Additional difficulty exists as many individuals question the use of adult triage criteria for children. A study by Phillips et al. concluded that utilization of adult triage criteria for children leads to high under-triage rates.[40] Conversely, unnecessary over-triage has the potential to divert time and resources away from other sick children in the Emergency Department. Therefore, in order to provide optimal care, it is extremely important to develop highly sensitive triage criteria to ensure all pediatric trauma patients who require expeditious trauma care receive it with maximum efficiency, given the type and severity of the injury.

Methodology

This prospective multi-center observational study involved the following nine verified Level I / II pediatric trauma centers: Cincinnati Children's Hospital, Akron Children's Hospital, Children's

Hospital of Pittsburgh, Children's Hospital of Wisconsin, Dayton Children's Hospital, Dell Children's Medical Center of Central Texas, Nationwide Children's Hospital, Rainbow Children's Hospital, and Toledo Children's Hospital. The study was approved by the Institutional Review Board (IRB) of each participating hospital.

Highest activation trauma triage criteria from participating pediatric trauma centers were aggregated and grouped by criteria. Standardization of criteria was required for the following: 1) degree of body surface area for burns with exclusion of location; 2) location of amputation and decision to exclude digit amputations; 3) inclusion of paralysis and / or motor deficit within the suspected spinal cord injury category; and 4) decision regarding age appropriate blood pressure limits. A Delphi method of reaching consensus was then utilized, obtaining expert opinions from all Ohio pediatric Trauma Directors and Trauma Program Managers. The initial list, which contained 34 criteria, was distributed to all members who then ranked each activation criteria from highest to lowest priority. After the first round of voting, the following 4 low priority criteria were subsequently eliminated: positive loss of consciousness (LOC), high voltage electrical contact, confirmed intracranial bleed with GCS \leq 12, and LOC with GCS \leq 12. Scores were reviewed and then re-ranked by the expert consensus panel. After the second round of voting, the criterion of "witnessed pedestrian run over" was also eliminated, taking the final consensus list to 29 criteria. (**Appendix 1 – hereinafter designated as "Criteria"**) Interestingly, discussion occurred regarding eliminating the lowest two criteria – "death of a same vehicle occupant" and "ejection from vehicle". However, as these criteria were thought to occur frequently on a national level, it was decided to include them within the study and analysis.

As with the activation criteria, a Delphi method of prioritization was utilized for development of a consensus list of Emergency Department (ED) procedures that the panel of experts believed should correlate with the highest trauma team activation. An initial list of 14 procedures was generated and standardized. After two rounds of prioritization, emergency tracheostomy and emergent transfer to PICU were eliminated from the procedure list. Based on the second review, a final list of 12 ED procedures was generated. (**Appendix 2 – hereinafter designated as "Resource"**)

For inclusion in this study, traumatically injured children evaluated by the Trauma Service at an American College of Surgeon's or state verified pediatric trauma center were screened. Only those patients that met any criteria in **Appendix 1** or **Appendix 2** and were evaluated in the Emergency Department were included in the study.

Children who were pronounced dead in the Emergency Department due to a traumatic injury were included, while children who were victims of drowning and suffocation were excluded from the study.

Once patient eligibility was established, data was collected from all

nine pediatric trauma centers and entered into a password protected on-line data collection program.

Study patients were able to meet multiple activation criteria and utilize multiple resources. Additional demographic information and specific clinical outcomes were obtained from each hospital's Trauma Registry.

Statistical analysis was performed for the continuous variables (i.e. age, ISS, time to OR transfer and time to ICU transfer) using the Wilcoxon Rank Sum test. For the categorical variables (i.e. mortality, ED disposition, and discharge to rehab) the two groups were compared using the Fisher's Exact test. All tests were conducted at the two-sided 5% level of significance.

Analysis of Research Findings

Patient Characteristics

A total of 656 patients were entered into this study from 9 verified Level I / II pediatric trauma centers over a one-year study period. Percentage of patients per hospital varied from 4% - 21%. (Figure 1) In order to assess for hospital bias, the percentage of study patients to overall admitted injured patients was calculated. (Table 1)

Table 1: Patient Volume from Participating Hospitals

	Level of Pediatric Verification	# Patients in Study	# Trauma Registry Patients during Study Period	% of Total Patients Entered in Study
Hospital A	II	55	1285	4.3%
Hospital B	I	98	1185	8.3%
Hospital C	I	116	1719	6.7%
Hospital D	I	43	430	10.0%
Hospital E	I	137	1982	6.9%
Hospital F	II	41	614	6.7%
Hospital G	I	53	714	7.4%
Hospital H	I	86	1416	6.1%
Hospital I	I	27	377	7.2%
TOTAL		656		Avg = 7.1

The average percentage of injured pediatric patients admitted to the study was 7.1% with a range between 4.3% - 10.0% for the nine participating hospitals. As to be expected, hospitals with larger overall injured patients submitted more

patients to the study; however, percentages were fairly consistent.

Of these 656 patients, 72 died (11%), with 24 patients (4%) dying during resuscitative measures in the Emergency Department (ED). Median age was 8.1 years with a median ISS of 14.0. The most frequent ED Disposition was PICU (43%); however, a significant population (22%) went directly from the ED to the Operating Room (OR). Seventy four patients (11%) ultimately required an in-patient rehabilitation admission. (Table 2)

Table 2: Demographic Information on Study Population

	N	Mean	Median		N	%
Age	656		8.1	Mechanism of Injury		
ISS	656		14.0	MV-occupant	153	23.3
Time to OR (min)	147		74.6	Falls	88	13.4
Time to ICU (min)	284		92.7	NAT / abuse	66	10.1
	N	%		Struck by/against	63	9.6
Activation Status				MV-pedestrian	39	6.0
Highest	405	61.7		Gun-shot	33	5.0

Mid	162	24.7		BB	29	4.4
None	89	13.6		Sports	21	3.2
	N	%		Bike	16	2.4
ED Disposition				Fire/flames	13	2.0
PICU	284	43.3		MV-bike	13	2.0
Floor	154	23.5		Other	122	18.6
OR	147	22.4			N	%
Morgue	24	3.7		Mortality	72	11.0
Other	47	7.2		D/C to Rehab	74	11.3

Of the 656 patients, 596 (91%) met at least one triage criterion, while 255 (43%) met 2 criteria and 119 (20%) met three or more criteria. The most common criterion was GCS \leq 8 (N=214), followed by respiratory distress (N=103), intubated at outside hospital, (N=100) and penetrating non gun-shot (N=97). Of the 656 patients, 296 (45%) utilized at least one high level resource (range 1-7) during the ED resuscitation. Of those patients that required a resource, 202 (68%) used 1 resource, 70 (24%) used 2-3 resources while 24 patients (8%) used 4-7 resources. The most frequent ED resource utilized was intubation / re-intubation (N=115), blood administration (N=67), and \geq 40 ml / kg fluid bolus after patient arrival (N=63). The resource procedure of pericardiocentesis was not utilized for any patients in this study. (Table 3)

Table 3: Frequency of High Level ED Resources

Resources	# of Occurrences	Frequency
Intubation / Re-intubation	115	17.5%
Blood administration	67	9.9%
Fluid bolus: \geq 40 /kg after arrival	63	9.6%
Time to OR: 45 – 90 min after arrival	62	9.5%
Time to OR: < 45 min after arrival	50	7.6%
CPR	38	5.8%
Central line	32	4.9%

IO insertion	22	3.4%
Chest tube insertion	21	3.2%
Needle decompression	6	0.9%
Open thoracotomy	3	0.5%

For each criterion, the average number of resource utilization was calculated. The criterion of gun-shot to the abdomen utilized the most resources with an average of 2.46 resources per occurrence, followed by above-the-ankle amputation (2.33 resources), and traumatic arrest (2.31 resources). Seven activation criteria averaged more than 2 resources while an additional 5 criteria averaged at least 1 resource per occurrence. (Figure 2)

In this study population, there were certain activation criteria which occurred infrequently. These small sample sizes limited the validity of study conclusions related to these criteria. Therefore, criteria which contained less than 5 patients, such as above wrist amputation (N=0) and above ankle amputations (N=3), were excluded from further analysis. BB chest (N=4), BB neck (N=2), and gun-shot neck (N=2) were either grouped within the “BB any” or “GSW any” category.

Among criteria with more than 5 patients, gun-shot to the abdomen (92%), blood given prior to arrival (83%), traumatic arrest (83%), and tachycardia with poor perfusion (83%) were most predictive of utilizing a high level resource at least once. Eleven of the 23 criteria required at least 1 resource 50% of the time. Twenty patients with suspected spinal cord injury did not use a high level ED resource in any circumstance. (Figure 3)

The most frequent activation criteria that required two or more resources was blood prior to arrival (67%), followed by traumatic arrest (65%), age appropriate SBP < 90 (59%), and tachycardia with poor perfusion (59%). Overall, the top 11 activation criteria were consistent in both the single resource and the two or more resource category. (Figure 4)

Over-Triage and Under-triage: Relationship of Activation Criteria with Resource Utilization

Central to conclusions for this study is the methodology of measuring: 1) appropriate triage; 2) over-triage; and 3) under-triage. The definitions related to this study for over-triage and under-triage are specific only to high level trauma activations. Table 4 depicts how this study defines over-triage and under-triage in the context of the highest trauma activation criteria utilized and the overall study inclusion numbers within each category. Utilizing this matrix for all 656 enrolled patients, 55% (360/656) would have been over-triaged while 9% (60/656) would have been under-triaged

Table 4: Relationship of Resource Utilization vs. Activation Criteria

Activation Criteria	Resource Utilization	
	No	Yes
	No (Not in study)	Under-triage = no activation criteria but yes resource N=60
Yes	Over-triage = activation criteria met but no resource N=360	Appropriate triage = activation criteria met and yes resource N=236

For each of the 23 activation criterion with more than 5 patients, the following measures were calculated: 1) over-triage, 2) under-triage, and 3) percent of time a resource was utilized. Criteria were then ordered in priority according to the percent of time that a resource was utilized. Over-triage and under-triage were re-calculated with the sequential addition of one criterion. Using this information, the following figure depicts the relationship of over-triage and under-triage utilizing the sequential addition of criteria. (Table 5)

Table 5: Sequential Listing of Criteria with Over-Triage and Under-Triage

<i>Sequential Addition of Criteria</i>	Criteria (Ordered by: % Time Any Resource Utilized)	Under-triage	Over-triage	% Time Resource Utilized When Criteria Present
1	Gunshot abdomen (N=13)*	43.29	0.15	92
1-2	Traumatic arrest (N=52)	36.89	1.54	83
1-3	Blood prior to arrival (N=18)*	36.13	1.99	83
1-4	Tachy/poor perfusion (N=33)	33.54	2.74	82
1-5	SBP <90 (N=44) *	32.77	4.27	77
1-6	40ml/kg prior to arrival (N=41)	30.95	5.79	71
1-7	Resp distress/failure (N=103) *	24.85	10.06	67
1-8	Intubated scene (N=76)	23.02	12.04	67
1-9	GCS<=8 (N=214)*	17.38	18.75	64
1-10	Penetrating abdomen (non-GSW)(N=17)	16.31	19.82	59
1-11	Penetrating to chest (no-GSW) (N=21)	15.24	21.65	43
1-12	Inhalation injury (N=7)	14.94	22.26	43
1-13	BB abdomen (N=7)	14.48	22.87	43
1-14	GCS deteriorating by 2 (N=94)*	12.35	28.81	41
1-15	Penetrating to neck (non-GSW) (N=13)	11.59	30.03	38

1-16	GSW head (N=8)*	11.43	30.49	38
1-17	GSW chest (N=11)*	11.13	31.4	36
1-18	Intubated OSH (N=100)	10.52	33.84	31
1-19	Death of occupant (N=47)	10.21	37.96	30
1-20	BB head (N=10)	10.21	39.18	20
1-21	Ejection from vehicle (N=62)	9.91	44.82	19
1-22	Penetrating to head (non-GSW) (N=46)	9.45	50.3	17
1-23	Suspected cord injury (N=20)	9.45	53.05	0

*Criteria within ACS-6

An inverse relationship exists, for when the under-triage decreases; there is a concomitant increase in over-triage. (Figure 5) After the addition of the 9th criteria, the under-triage slope starts to lessen and after the addition of the 15th criteria, the under-triage curve appears to flatten out. At this point, there may be a point of diminishing return, where the addition of more criteria only increases the over-triage rate but has minimal impact on the under-triage rate.

Predictive Value of Six ACS COT Mandated Criteria

The six mandated ACS COT criteria (ACS-6) for the initiation of adult / pediatric highest activation trauma resuscitations include the following: 1) age-specific hypotension; 2) respiratory compromise or obstruction; 3) transfer patients from another hospital who are receiving blood; 4) gun-shot wound to the abdomen, neck or chest; 5) Glasgow Coma Score (GCS) score of ≤ 8 ; and 6) deterioration of GCS score by 2. The category of ED discretion was not studied. All ACS-6 criteria were

included within the consensus list of criteria and specifically analyzed to compare how well they performed compared to the other consensus criteria.

Within the study population, 350 (53%) patients met at least one of the ACS-6 criteria. Utilizing only the ACS-6, 24% of patients would have been over-triaged and 16% would have been under-triaged. In order to evaluate the ACS-6 effectiveness, these six criteria were grouped together and utilized as baseline for over-triage and under-triage rate. Addition of criteria, based on the highest percent of time any resource is utilized, was then sequentially added to the ACS-6 group. With each addition of criteria, over-triage and under-triage were re-calculated and graphed. (Figure 6)

With the sequential addition of 11 criteria to the ACS-6, there is a steeper increase in over-triage with a more moderate and gradual decline in under-triage. With the addition of the first 4 criteria to the ACS-6 grouping, there is minimal change to either the over-triage or the under-triage status.

In specifically analyzing the predictive ability of each of the ACS-6 activation criteria, five of the six criteria exist within the top nine activation criteria. The ACS-6 specific requirement of “GCS deterioration by 2” generated less resource usage and was subsequently ranked lower (13 / 17) according to percentage of time a resource is utilized. (Table 6)

Table 6: Ranking of ACS-6 Criteria

Rank	Criteria
1	GSW any (N=34) *
2	Traumatic arrest (N=52)
3	Blood prior to arrival (N=18) *
4	Tachy/poor perfusion (N=33)
5	SBP <90 (N=44) *
6	40ml/kg prior to arrival (N=41)
7	Resp distress/failure (N=103)*
8	Intubated scene (N=76)
9	GCS<=8 (N=214)*
10	Penetrating (non-GSW) (N=97)
11	Inhalation injury (N=7)
12	BB any (N=23)
13	GCS deteriorating by 2 (N=94) *
14	Intubated OSH (N=100)
15	Death of occupant (N=47)
16	Ejection from vehicle (N=62)
17	Suspected cord injury (N=20)

Various combinations of activation criteria can be utilized in the calculation of over-triage and under-triage rates. The table below outlines these various methodologies, listing their over-triage and under-triage rates for comparison. (Table 7)

*Criteria within ACS-6

Table 7: Comparison of Under-triage and Over-triage for specific criteria grouping

Ranking Options	Under-triage	Over-triage
All 23 criteria (ranked on % time used resources utilized)	9.5%	55.1%
Top 13 criteria (ranked on % time of resources utilized - to include all of the ACS-6)	10.5%	39.2%
Top 9 criteria (with GSW abdomen changed to GSW any); includes 5 of 6 ACS-6 criteria	16.9%	20.4%
ACS-6	15.9 %	24.1 %
ACS-6 + addition of 4 additional criteria based on % time of resources utilized (traumatic arrest, tachycardia/ poor perfusion, 40 ml / kg bolus prior to arrival, intubated at scene)	14.8 %	26.2 %

Under-triage

Under-triage can result in life-threatening injuries going undetected. In this study, 60 (9%) patients were in the under-triage category, met no activation criteria, but utilized an ED high level resource. Additional analysis was necessary for the under-triage population, in order to inspect for the potential of omitted triage criteria. The under-triage group and the remainder of the study population were compared and found to not be statistically different in the categories of median age, median ISS, % patients with $ISS \geq 15$, median time to OR, and discharge to rehab. Statistically significant areas included the following: 1) time to ICU transfer, where the under-triage group took longer (76 minutes vs. 51.5 minutes), 2) mortality, where the under-triage group was much lower (1.7% vs. 14.3%) and disposition from the ED. A higher percentage of the under-triage patients were sent to the OR compared to the appropriately or over-triaged patients (52% vs. 19.5%), whereas a lower percentage of the patients who were under-triaged were sent to the floor compared to the appropriately or over-triaged patients (12% vs. 25%). (Table 8) One death occurred in the under-triage group, which consisted of an adolescent requiring intubation after a suicide attempt ($ISS=43$). In this circumstance, appropriate pre-hospital information was not relayed to the hospital.

Table 8: Demographic Comparisons of Under-triage and Non Under-triage Population

Variable	Under-triage (N=60)	Appropriate and Over- triage (N=596)	p-value*
Median Age (years)	7 (4,10)	8 (3,13)	0.17
Median ISS	10 (4,18)	10 (4,22)	0.97
Median Time to OR (minutes)	76 (47, 88)	51.5 (32, 88.5)	0.11
Median Time to ICU (minutes)	100 (85, 161)	68 (50, 101)	0.0002
Mortality	1 (1.7%)	71 (14.3%)	0.0091
ED Disposition			< 0.0001
ICU	21 (35%)	263 (44%)	
OR	31 (52%)	116 (20%)	
Morgue	0 (0%)	24 (4%)	
Floor	7 (12%)	147 (25%)	
Other	1 (2%)	46 (7%)

*The Wilcoxon Rank Sum test was used for comparisons for the continuous variables. The Fisher Exact test was used for comparison for categorical variables. A p-value of <0.05 is considered significant.

**Median values reported using inter-quartile percentages (25%, 75%)

Of the 60 under-triage patients, 5(8.3%) required more than 1 resource during the ED resuscitation. Most common resources utilized were 11 patient intubations (18%), 7 patient fluid boluses of ≥ 40 ml / kg after arrival (12%), 7 patient transports to OR < 45 minutes after arrival (12%), 5 patients administered blood (8%), 5 patient transports to OR between 45 – 90 minutes after arrival (8%), and 1 patient required a central line insertion (2%). Twenty-two patients (37%) required either an intubation, emergent transfer to the OR within 45 minutes or blood administered during the resuscitation.

In analyzing this population, 31 patients (51.7%) had an ED disposition of OR; however, only 12 patients (20%) reached the OR within 90 minutes of arrival. Operative need for these 12 patients included the following: emergency craniotomy (N=4; ISS range 16-26); exploratory laparotomy (N=4; ISS range 10-20); repair of open fracture (N=2; ISS 10, 25); emergency airway (N=1; ISS 14); and an open skull fracture (N=1; ISS=10). Of note is at least 6 cases (10%; ISS range of 17-43) had inadequate pre-hospital information conveyed to the hospital staff. All 6 cases had physiological parameters which would have fit study criteria, and all eventually had the highest level trauma activation based on Emergency Department physician discretion. Of the total 60 under-triage patients, ED physician discretion for activation of highest level of resuscitation was only utilized for 16 patients (27%) while an additional 28 patients (47%) had a mid-level activation initiated. Sixteen patients within the under-triage group utilized a high level ED resource without any activation of the trauma team.

Discussion

Despite the presence of a tiered trauma system for the past decade, adult and pediatric trauma centers continue to struggle with a definitive list of highest level activation criteria. In mandating six criteria for highest level activation in 2002, the ACS COT attempted to match resources with the needs of the severely injured patient and the presence of an attending trauma surgeon at the resuscitation. However, trauma centers expanded this criteria leading to inconsistency, inefficacy of human resources and increased health care costs. This study of 656 traumatically injured children is our initial attempt to better understand and thus select pediatric triage criteria that will allow for the accurate prediction of resource needs for highest level trauma activations.

Basic to the foundation of this study, is our methodology of measuring over-triage, appropriate triage and under-triage for the most severely injured. The *Resources for Optimal Care of the Injured Patient: 2006* utilizes a general definition for under-triage – “triage decision that classified patients as not needing trauma center care when, in fact, they do”. [1] By using this method, a target under-triage rate should be 1% or less. Conversely, over-triage is “over-utilization of finite resources” with an acceptable range of 25-50%.[1] For this study, the definitions for over-triage and under-triage are specific only to high level trauma activations; therefore, they have a much different connotation than the generally accepted definition than those recommended by the ACS COT.

In order to measure over-triage and under-triage, specific outcome measures needed to be identified. In the article by Steele et al. (2007), who previously investigated the ACS-6 criteria, the only ED resuscitative outcome measurement was “emergency transfer to the OR within an hour”. Steele, et al. found that only 0.3% of the pediatric population required emergent transfer to the OR while over 23% of the pediatric population met at least one of the ACS-6 criteria. [42] They concluded that the ACS-6 were not good pediatric predictors for highest level activation. As many injured children are treated non-operatively and the benefits of the trauma team extend well beyond just operative management, we felt that this outcome measure was narrow in scope. In another study investigating pediatric activation criteria, Phillips et al (1996) utilized discharge data on level of injury as their outcome measurement. Phillips concluded that within their state pediatric trauma criteria, only GCS, ejection from vehicle, and penetrating injuries had a statistically significant impact on predicting major trauma in pediatric patients. In Phillip’s study, over-triage was at an acceptable rate of 15%, with an unacceptable rate of 33% under-triage. [40] However, the intent from our study was not to validate whether the triage criteria predicted major trauma; but instead, to investigate what pediatric triage criteria utilized specific high level ED resources by the trauma team. Therefore, throughout this study, we believe that our operational definition of appropriate triage (i.e. criteria with ED resource use), over-triage (i.e. criteria without ED resource use) and under-triage (i.e. no criteria with ED resource use) is a strong methodology for comparison and development of conclusions.

The determination of which specific ED resources correlate with highest level trauma team activation was determined by consensus among a consortium of trauma experts. Within this determination, the following two issues generated additional discussion. An operational definition was established on a time cut-off between emergent and non-emergent chest tube insertion. For this study, only chest tubes placed within 30 minutes of arrival were included as a high level resource. However, it is recognized that emergent chest tubes may have been placed outside of that time frame. Secondly, it was recognized that an emergent disposition to the OR was a major resource need for the severely injured child. For statistical purposes, the categories were broken down to “less than 45 minutes” and “between 45 to 90 minutes”. Concern was expressed that children would be included in the study who electively went to the OR quickly, possibly because of OR and / or surgeon availability. Specific analysis of the under-triage population did not validate that concern, as only 4 patients (7%) were questionable if the OR was emergent vs. non-emergent. These included: 1) 3 cases of exploratory laparotomy for possible bowel injury (ISS=10, 14, and 14); and 2) 1 case of OR for depressed skull fracture (ISS=10).

For this study, the categories of GSW, BB and penetrating injury (non-GSW) were specifically divided into body regions (i.e. head, neck, chest and abdomen) and analyzed individually. This made the analysis difficult, as in many of these categories the sample size was too small. In the category of GSW, there was much variation in the ranking of ED resource utilization. GSW to abdomen was consistently ranked high in ED resource utilization while GSW to chest and GSW to head had a more moderate ED resource utilization. GSW to neck, with only 2 patients in the study, was excluded but did use an average of 2 ED resources per case. With this larger than anticipated variation, the grouping of “GSW any” was included within the analysis.

Amputations were also included in this study with the decision to exclude any type of digit amputation within the overall criteria and only focus on amputations of above-wrists and above-ankle. We recognized that some emergent situations, specifically with immediate transfer to the OR, may include digit re-implantation. This specific scenario did occur with one of the under-triage population. In the final analysis, the category of amputations was eventually excluded due to small sample size;

however, consideration and additional research should continue regarding this criterion. In all three patient situations, a high number of ED resources were utilized. Consideration should be given to merging this specific mechanism of injury into the tachycardia / poor perfusion criteria.

In all multi-center studies, consideration needs to be given to practice-bias regarding ED treatment modalities during a trauma resuscitation. For example, a specific hospital may be more aggressive administering blood while another may be more aggressive toward early insertion of a central line. In order to assess for this potential bias, future detailed analyses will be required.

Multiple methods were examined to rank criteria: 1) average number of resources used per criteria; 2) percentage of time any resource utilized with a criteria; 3) percentage of time that two resources were utilized for a criteria; 4) mean ISS per criteria; and 5) ranked by under-triage. After a comparison analysis it became apparent that 9 criteria were consistently in the top of each ranking system. Given that our primary concern was the utilization of any resource requiring the trauma team we utilized the “percentage of time any resource utilized with a criteria” for the majority of our analyses.

One priority of this study was to evaluate the effectiveness of the mandated ACS COT criteria (ACS-6) for highest team activation. For this study, ED physician discretion was not prospectively evaluated. Within the study population, 350 (53%) patients met at least one of the ACS-6 criteria. Utilizing only the ACS-6 criteria, 24% of patients would have been over-triaged and 16% would have been under-triaged. It is significant that the under-triage is only 16% with the use of the 6 criteria and only decreases to 9% with the presence of all 23 criteria. Overall, the ACS-6 performed well in the context of over-triage and under-triage rates. The inclusion of additional criteria had little impact on under-triage but instead, continued to increase the over-triage rate.

Five of the 6 ACS-6 criteria were consistently listed within the top 10 criteria within the ranking system that was utilized for this study. Only “GCS deterioration by 2” was consistently ranked lower than the other 5. It was also noted that some of the non-ACS-6 criteria are actually included within the ACS-6 grouping. For example, a patient with a pre-hospital history of traumatic arrest should automatically be included in the ACS-6 grouping as they would fit the criteria of GCS < 8 or hypotension

in the field. A patient with an extremity amputation may or may not fit into a category of age-appropriate hypotension. With the deletion of the “GCS deterioration by 2” criterion, the addition of “tachycardia / poor perfusion” and “40 ml / kg bolus prior to arrival” (i.e. ACS-7), this change could potentially limit resource utilization for pediatric trauma resuscitations while continuing to maintain the acceptable over-triage and under-triage rates. (Table 10)

Table 10: Proposed Changes for Activation Criteria

Top 13 ranked triage criteria	ACS – 6 (current)	ACS – 7 (proposed changes)
GSW Any	GSW Any	GSW Any
Traumatic Arrest	Blood prior to arrival	Blood prior to arrival
Tachycardia / poor perfusion	SBP < 90 (age appropriate)	SBP < 90 (age appropriate) *To include traumatic arrest
Blood prior to arrival	Respiratory distress / failure	Respiratory distress / failure *To include intubation at scene
SBP < 90 (age appropriate)	GCS ≤ 8	GCS ≤ 8
40 ml / kg bolus prior to arrival	GCS deterioration by 2	Tachycardia / poor perfusion
Respiratory distress / failure		40 ml / kg bolus prior to arrival
Intubated at scene		
GCS ≤ 8		
Penetrating (non GSW) chest		
Inhalation injury		
BB any		
GCS deterioration by 2		

The under-triage population (N=60) was specifically analyzed to assess if any criteria was potentially missing from the consensus list of activation criteria. The ISS was comparable to the rest of the patient population, leading one to believe that the under-triage category was just as severely injured. On careful analysis of this group, no obvious missed criterion was apparent. In assessing the ED

resources utilized by this group, three important resources utilized were intubation, patients requiring transport to the OR in 45 minutes and patients requiring blood. These accounted for 22 patients (37%) of the under-triage group. One repeated validation that was obtained from analysis of the under-triage group was the importance of reliable pre-hospital information on clinical parameters. At least 6 patients (10%) would have been met criteria if there had been improved communications from our pre-hospital colleagues. Examples of this which would have decreased the under-triage group include: 1) pre-hospital information conveyed as “intermittently arousable” with patient requiring emergent craniotomy within 45 minutes of arrival (ISS=25); 2) pre-hospital information only as “less responsive” with patient requiring intubation (ISS=17); 3) pre-hospital information conveyed as “sometimes unconscious” with patient requiring intubation (ISS=17). Of these 6 under-triage patients, the inaccurate information provided to the hospital were all regarding assessment of GCS in children. Further attention should be concentrated on providing additional training on assessment of pediatric GCS to the pre-hospital personnel and to the hospital personnel taking the calls on how to appropriately interpret these findings.

Information on the sensitivity of specific activation criteria is vital for trauma centers as they attempt to establish an acceptable over-triage and under-triage rate. For many institutions, the aspect of under-triage is probably the most important to assess. However, assuming that the decrease of under-triage is the main ingredient of the equation can be a perilous decision. As a result, over-triage can precipitously increase the cost, both in finances and in the human resource aspect of personnel. Some argue that cost should not be a factor when there is consideration of a child’s life. However, in this era of cost containment in health care, balancing these two measures should continue to be priority. The goal of this study was to take an important first step toward improving the quality and timeliness of care for the severely injured child in a fiscally responsible manner. Trauma resuscitations, especially at the highest level are expensive endeavors as evidenced by resource and personnel utilization. For the participating hospitals in this study, the average charge for highest activations was \$7,843. If only the ACS-6 criteria were utilized, 55 highest activation resuscitations would have been eliminated or reduced to a mid-level activation; thus with a potential savings between \$230,000- \$431,000. This variation in

cost savings is dependent on whether the activation charge is eliminated or reduced to a mid-level activation. This does not take into account the financial impact of mandating personnel for the highest activation, specifically the attending / fellow pediatric surgeon and frequently utilizing anesthesia and operating room personnel.

Challenges / Limitations

A major challenge for appropriate trauma activation, whether at a mid-level or the highest level, is the timeliness and quality of the verbal report from referring hospitals, inter-facility transport service or EMS squad. This is especially true for pediatrics, as many individuals are not as comfortable assessing the younger injured child. In this study, some criteria were easily identified and reported while other criteria, such as tachycardia with poor perfusion, and respiratory distress / failure are more subjective. If this information was not adequately reported by the pre-hospital or referring institutions, then patients were included within the under-triage category. The criteria $GCS \leq 8$ appears easily quantifiable; however, obtaining this information on a pediatric child, along with a constantly changing neurologic status, makes this criterion sometimes difficult to verbally and accurately convey. Consistency and increased specific definitions from pre-hospital personnel on these parameters would assist trauma center personnel and decrease the need for interpretation.

A limitation for this study was the infrequency of specific injuries, leading to small sample size within the category; thereby, removing these from the study analysis. Interestingly, amputations (above wrist and above ankle) and gun-shot to neck utilized a high level of resources although they infrequently occurred. Additional research into these areas with a larger sample size would be of benefit.

Attempts were made to standardize each definition for the 9 pediatric trauma centers that participated, yet compliance of this was dependent on each participating hospital. A data dictionary of each criterion was developed by the 9 Trauma Program Managers. Discussion on various scenarios and clinical indicators occurred via phone conferences before the start of the research project. Three additional points of demographic information, such as insurance coverage and whether the activation was

upgraded / downgraded during the ED stay would have been helpful to the study analysis. A break-down of ED Disposition of “Other: another institution” or “Discharge home” would have benefited analysis.

Conclusion

Highly sensitive pediatric triage criteria are needed in order to appropriately initiate the highest level of trauma team activation. The ACS-6 mandated criteria performed well when evaluating this by over-triage and under-triage rates of the highest injured pediatric patients. It is generally accepted that some amount of over-triage is necessary to minimize the risk of under-triage. The inclusion of additional criteria beyond the ACS-6 had a small impact on under-triage yet continued to increase the over-triage rate significantly. Small revisions in the ACS-6 criteria for the pediatric population may potentially have some benefits. Additional education on assessment of GCS in the pediatric population and / or interpretation of pre-hospital information may assist with appropriate highest level trauma team activation.

Appendix 1: Activation Criteria with Data Collection Definitions

Activation Criteria	Data Definitions
Traumatic Arrest	Cessation of cardiac activity
Respiratory distress / failure from scene	Outwardly evident, physically labored respiratory effort; dyspnea to include SOB; retractions; stridor; not included - patient with ongoing CPR
Intubated patient from referring facility	LMA included. Include when aeromedical personnel intubates before leaving referring hospital.
Intubated patient from scene	LMA included
Tachycardia with poor perfusion	Age appropriate HR to be utilized
≥ 40 ml / kg fluid bolus before patient arrival	Regardless of type of fluid
Blood received any time before patient arrival	Any amount
GCS < 8	Glasgow Coma Score, utilizing all 3 components of eye, verbal and motor noted in the field. Check this if patient was intubated due to a reported GCS < 8.
GCS deteriorating by 2 (any time prior to patient arrival)	
Suspected spinal cord injury with motor deficit	Include any observed/reported motor deficit
Burns > 30% body surface area (BSA)	As estimated at scene
Suspicion of inhalation injury (chemical / thermal)	
Systolic blood pressure (SBP) < 90 (with age appropriate definitions) < 1 = 60; ages 1-2 = 70; ages 3-5 = 75; ages 6-12 = 80	At least one episode in the prehospital setting, referring hospital or during transport.
Extremity amputation (above ankle)	To include partial or complete amputation
Extremity amputation (above wrist)	To include partial or complete amputation
Penetrating wound (non GSW) to head	A wound made by a sharp object that breaks the skin and enters into a cavity, organ or body area. Must be more than a superficial laceration.
Penetrating wound (non GSW) to neck	See above
Penetrating wound (non GSW) to chest	See above
Penetrating wound (non GSW) to abdomen	Penetrating to at least the level of the fascia
GSW to head	
GSW to neck	
GSW to chest	
GSW to abdomen	
BB to head	
BB to neck	
BB to chest	
BB to abdomen	
Ejection (car / pick-up truck / motorcycle)	Not include: car surfing, ATV, motorized scooter, Amish buggy
Death of occupant within same vehicle	Not to include death in other vehicle

Appendix 2: Emergency Department Resources

- Intubation / Re-intubation
- Administration of blood
- Fluid Bolus (≥ 40 ml / kg since time of arrival)
- Arrival time to Operating Room transfer < 45 minutes after patient arrival
- Arrival time to Operating Room transfer 45 – 90 minutes after patient arrival
- IO insertion
- Pericardiocentesis
- CPR / traumatic arrest
- Needle decompression
- Central line insertion (femoral, subclavian, etc.,)
- Chest tube insertion within 30 minutes after patient arrival
- Open thoracotomy

EVALUATION OF TRAUMA TRIAGE CRITERIA FOR MEDICAL TRANSPORT OF ADULTS AND CHILDREN

Final
Report

INTRODUCTION

Currently, the state of Ohio has promulgated legislative mandated trauma triage criteria.

These criteria are to be used by emergency care providers to determine which patients are to be transported to state designated Trauma Centers. While the criteria are based on nationally recognized guidelines, they do not suggest the appropriate mode of transport. The current study hoped to address which of these criteria were useful in predicting the benefit of air transport of adult patients to a Level I trauma center and to extend this analysis to include pediatric patients as well.

Executive Summary

The study was conducted to determine which of the statewide trauma criteria was predictive of the following outcomes: operative procedure in first 24 hours, administration of blood products, intensive care admission and in-hospital death in Level 1 trauma facilities among patients transported by helicopter. We had previously validated that the following criteria predicted high utilization: age ≥ 45 , Glasgow Coma Score ≤ 13 , systolic BP < 90 and the presence of a flail chest. Applying these criteria prospectively, we found that these variables

had a sensitivity of 97% (80.2%-100%), specificity of 53.2% (50.6%-51.6%), a NPV of 100% (98.0%-100%) and a PPV of 11.9% (9.9%-12.3%). No deaths were seen among patients who met none of these criteria. On the other hand, the statewide pediatric trauma criteria performed poorly with over 35% of patients being discharged from the emergency department after evaluation.

Acknowledgements

This project was funded through an Ohio Department of Emergency Medical Services's Trauma Research Grants Program. This work has currently led to one published manuscript, two published abstracts, as well as national and regional presentations (see Appendix A)/

Information/Qualifications – Principal and all co-investigators:

Howard Werman, MD, Professor of Clinical Emergency Medicine, The Ohio State University

Michael Cudnik, MD, MPH, Assistant Professor of Clinical Emergency Medicine, The Ohio State University

Lynn White, MS

Judy Opalek, PhD
Research Director, Trauma Program
Grant Medical Center

The PI for this project is Howard Werman, MD, Professor of Emergency Medicine at The Ohio State University College of Medicine, Columbus, OH. Dr. Werman is an attending physician at The Ohio State University Medical Center and has been the Medical Director for MedFlight of Ohio since 1998. Dr. Werman has an active publication record in the area of air medical transport and is the recipient of multiple awards for service, research and education.

Michael Cudnik, MD, MPH, is Assistant Professor of Emergency Medicine at The Ohio State University College of Medicine. Dr. Cudnik received his MPH in Biostatistics and Epidemiology from Oregon Health and Science University in 2007 where he completed a Clinical Research fellowship working with the Resuscitation Outcomes Consortium (ROC) research network. Dr. Cudnik has published extensively in the area of trauma and has considerable experience and expertise with large database analysis.

Lynn White, MS. At the time of this study, Ms. White was the Clinical Manager of the Research program at The Ohio State University Medical Center Department of Emergency Medicine. Ms. White holds an adjunct assistant professorship at The Ohio State University and has had considerable research experience and publications in the areas of resuscitation, trauma and air medical transport. Ms. White is currently the National Director of Resuscitation and Accountable Care at AMR Medicine.

Judy Opalek, PhD, is the Trauma Research Manager at Grant Medical Center in Columbus, OH. She received her PhD from The Ohio State University and has published widely in the trauma literature.

A review of the literature related to the project topic

Trauma is the leading cause of death for patients between the ages of one and 44 and represents a substantial proportion of health care costs in the United States.^{1,2} Transport of the most critically injured patients is understood to be of critical importance, and therefore, it is important that we understand and provide the most effective transport methods for this

population. This is particularly true since air medical transport has grown substantially in the last decade with over 400,000 patient transports utilizing over 900 helicopter resources has occurred in the United States.³

Some research has demonstrated the benefit of air medical transport for trauma victims, in terms of cost effectiveness and survival when compared to ground transport.⁴⁻⁶ However, overuse of air medical resources is a significant concern, with some studies demonstrating over-triage rates of 60% in the adult population and 85% in pediatric trauma.^{5,7} The cost of transport is high, and safety risk to both the patient and staff is real, making it essential that only patients who will clearly benefit should be transported by air.^{8,9} It is estimated that the cost of an average air transport is 5 to 15 times the cost of a typical ground transport.³

Although broad based trauma triage guidelines currently exist, there is little evidence-based information available to guide EMS in their decisions to call for air transport from the scene of injured patients.^{9,10} Even less is known about the use of air transport in pediatric trauma victims.¹¹ Several states use destination protocols defining when a patient should be transported to a trauma center without clearly defining the most appropriate mode of transport. Our previous work¹² demonstrated that four variables available on scene could which patients would require the resources of a trauma center based on the need for early operative intervention, admission to an ICU, blood product administration and in-hospital mortality.

The purpose of this study was to prospectively validate whether clinical variables available at the scene of injury were associated with appropriate trauma hospital resource utilization and

improved clinical outcomes. Additionally, we began a preliminary investigation as to the performance of pediatric trauma triage criteria as a tool for selective air medical transport.

Historical perspectives on the topic of this report

While there have been previous investigations on the outcomes of trauma patients transported by air when compared to ground transport, this is the first known investigation examining the specific topic of the performance of state or national trauma triage criteria in predicting the need for air medical transport. Previous investigations have cited high over-triage rates (i.e. transporting trauma patients with minor injuries) of over 60% in adults and over 85% in children.

A brief review of the current status of the topic in Ohio, the surrounding states, and nationally

Currently, there are over 35 helicopters transporting patients throughout Ohio. Nationally, the number is increasing at a rapid rate (currently there are over 900 air transport assets in the US) without clear and convincing evidence as to which patients truly benefit from air medical transport. The State of Ohio has promulgated pediatric, adult and even geriatric field trauma triage guidelines (see Table 1) but these do not specifically address the use of air medical assets.

STUDY DESIGN AND SETTING

This was a prospective, analysis of consecutive injured, adult patients (16 years of age or older) who were transported by a single air transport agency (MedFlight) to one of the three Level One trauma centers in Central Ohio (Grant Medical Center, Nationwide Children's Hospital, OSU Medical Center). The project was approved by the Institutional Review Boards (IRB) at all participating trauma centers.

Data were prospectively collected from August 1, 2010 through September 30, 2011. The data collected for each patient transport were derived from three different sources. The first was a direct survey of prehospital personnel by air medical dispatch personnel. These indicators included elements of the State of Ohio Trauma Triage Criteria (Table 1) including mechanism of injury as well as anatomical and physiologic characteristics of the patient at the scene (see ‘variables collected’ below). The questionnaire included 40 questions based on trauma triage guidelines for the State of Ohio including pediatric-specific triage criteria. The data were maintained by personnel at MedFlight and became part of the on-line transport debriefing system. Additionally, patient demographic and geographical scene information data were included as these data are routinely collected as part of the program’s computer aided dispatch system.

Hospital data were obtained from each receiving hospital’s trauma registry. The registries are prospectively collected with specific data elements based on the State of Ohio’s trauma data registry criteria which is further derived from the National Trauma Database (NTDB). All patients transported directly from the scene of the injury by air medical transport to each of the Level I trauma centers were included in the analysis. The three Level I trauma centers are located in a single large, metropolitan city and are the only two Level I trauma centers in the region (two adult and one pediatric). In order to be entered into the trauma registry, a patient must have sustained a traumatic injury, within the ICD-9 injury diagnosis of 800 to 959.9, excluding those with an isolated hip fracture (ICD-9 series 820). In addition, the patient must be admitted to the trauma team, be classified as trauma team activation, or evaluated by a member of the hospital’s trauma team while in the Emergency Department. Quality assurance

measures, such as re-abstraction and data checks, are completed on a minimum of 10% of the registry patient entries. Edit fails are also in place to check blank or incorrectly entered data and the coding summary comparison from Medical Information Management is reviewed for inconsistencies in the diagnosis and the coding to ensure consistent and accurate data collection and documentation.

Variables Collected

Prehospital variables collected from the scene at the time of injury are listed in Table 1. These variables were obtained via direct query of the transport team by the dispatcher at MedFlight headquarters. In addition, the zip codes from the area in which the injury occurred, the number of loaded statute miles for each transport, and whether or not the injury occurred in a rural location (as defined by the U.S. Census Bureau), were also collected from the transport agency.

Variables obtained from each trauma center included: age (in years), gender, race (White, Black, Asian, Hispanic, Other), insurance status (private, Medicare/Medicaid, workers compensation, self pay), injury severity score (ISS), intensive care unit (ICU) length of stay (LOS) in days, hospital LOS in days, trauma type (blunt vs. penetrating), and the ICD-9 discharge diagnoses. ISS, LOS, and ICU LOS were continuous variables; all others were categorical.

The primary outcome of interest was in-hospital mortality, defined as death from any cause while in the hospital. Additional outcomes collected included: early death, defined as death within 24 hours of admission; early blood use, defined as a blood transfusion within 24 hours

of admission; ICU admission for greater than 24 hours; and emergent surgery, defined as any operation that occurred within 24 hours of arrival. These additional outcomes were chosen as they potentially represent extensive trauma center resource utilization and could represent the necessity of expeditious transport to a Level 1 trauma center via air transport. In particular, the outcome of early blood transfusion was chosen based on clinical experience as well as prior work that such patients are often much more seriously injured and will require additional resources in addition to the blood products themselves.¹⁰ Such criteria have also been suggested by others as indicative of hospital resource use in trauma patients.¹² In addition, a combined outcome of all variables (death, ICU admit >24 hours, early emergent surgery within 24 hours, or blood transfusion within 24 hours) was also assessed.

Data Analysis

Descriptive statistics were used to describe the study population and the prehospital questions and were reported as means with 95% confidence intervals (CI) or medians with inter-quartile ranges (IQR), where appropriate. Continuous and categorical variables were compared using Chi-Square Analysis and Kruskal-Wallis test, where appropriate. We then compared the ability of our four variable clinical decision rule (CDR) to predict both mortality and the use of Level I resources as judged by the presence of early operative intervention, administration of blood products, ICU admission and in-hospital mortality. These variables included: age \geq 45 years, GCS \leq 13, systolic BP < 90 mmHg and the presence of a flail chest.

We then calculated the sensitivity, specificity, and positive (PPV) and negative predictive values (NPV) with 95% CIs of the rule when applied to patients in the initial dataset. In

addition, Receiver Operatic Characteristic (ROC) curves were calculated for each of the models with their respective outcomes.

RESULTS

A total of 455 patients enrolled from August 2010 through September 2011. Demographics are listed in Table 2. The majority of patients were male (60%), white (79%), with injuries occurring in a rural locations (60%) and having sustained blunt force trauma (95%). The patients had a median ISS of 9 and an overall mortality of 6%.

The most common triage criteria used to summon air transport were motor vehicle collision (MVC) with high risk mechanism (18%), Glasgow Coma Score (GCS) ≤ 13 (16%), a loss of consciousness for more than 5 minutes (16%) and an MVC of >20 MPH (13%). High risk mechanisms of injury included: death of another occupant in the vehicle compartment, ejection of the patient and vehicle telemetry data show high risk of injury. Of all the factors listed, however, only a GCS ≤ 13 was associated with mortality ($p < 0.05$).

We evaluated whether criteria defined in our prior study¹¹ was predictive of trauma center resources among air transported patients. When applying the previously identified criteria to this population the model had a sensitivity of 97% (80.2%-100%), a specificity of 53.2% (50.6%-51.6%), a NPV of 100% (98.0%-100%) and a PPV of 11.9% (9.9%-12.3%). No deaths were missed if the CDR rule was negative (i.e. no deaths in patients without one of the four criteria). The area under the curve for the model was 0.88, suggesting a reasonably accurate model (see Figure 1).

Data collected on pediatric patients transported to Nationwide Children's Hospital by air medical transport are summarized in Table 3. It should be noted that a significant proportion of the patients (35.1%) were treated and discharged from the emergency department.

DISCUSSION

In this prospective portion of the project, we found that the predictive model developed in our previous work¹² performed well in terms of the negative predictive value and sensitivity of the model. Moreover, it suggests that the state-wide trauma triage criteria utilized to define the trauma patient may not perform well in determining which patients benefit from air medical transport. Our results suggest that further study is needed to determine if more patients can be transported by ground to their local facility where further assessment would determine the need for secondary transport to a trauma center. Only patients with a low systolic blood pressure < 90 mmHg, a GCS less than 14, evidence of a flail chest or trauma victims with other triage criteria who are older than 45 years have demonstrated a need for immediate resources available in the trauma center.

The findings of this project are similar to work that has done by others. Bledsoe et al, in a recent meta-analysis, reported that more than 60% of injured patients who were transported by air medical transport had only minor injuries and that 26% of patients were discharged less than 24 hours after arriving at the trauma center.⁷ We found an even greater number of patients with minor injuries in our study population with 70% of patients ultimately having an ISS \leq 15, suggesting that the issue of over-utilization may be greater in our system than others. This suggests that the criteria currently in use may be overly conservative based on the current factors that are being

incorporated from the scene of injury. Indeed, work by others has suggested that triage criteria involving mechanism of injury alone is not a good indicator of risk of mortality or serious injury.¹⁴⁻¹⁶ As such, the CDC has revamped their triage guidelines and has suggested that this criteria alone warrants transport to the closest trauma center, rather than the highest level trauma center.¹ Based on the results of our study, mechanism of injury by itself may not be a suitable factor alone to warrant air medical transport to a Level I trauma center.

Some guidelines continue to advocate that mechanism, by itself, may be enough to warrant air medical transport to a trauma center.^{9, 10} While such patients may still require the resources and care available at a trauma center, they may not need a helicopter transport. Such a finding has been observed by others and refining such a criterion could potentially decrease the over-utilization of air medical transport for injured patients.^{17, 18}

While there is a considerable body of evidence to suggest that appropriate use of air medical transport can improve patient outcomes,¹⁹ the overuse of air medical transport is in of itself not a benign process. The cost of air medical transport is often significantly greater than the cost of ground transport. As the cost of medical care continues to increase, such expenses will continue to be held under close scrutiny. In addition, flights deemed to be medically inappropriate may not be reimbursed for their services,²⁰ which will pass the burden of cost onto patients, many of whom may

not be able to pay for such charges. In addition, there is also the issue of patient and staff safety.²¹ In recent years, there has been an increase in the number of helicopter crashes with resultant injury and even deaths of the occupants.²² There is a clear safety risk of transport of an injured patient who does not have life or limb-threatening injuries, as well as the safety risk for pilots and staff caring for the patient should not be considered acceptable. Ensuring that only appropriate patients are transported in the most effective and safest method possible should be the top priority for all agencies.

Field triage by prehospital providers is challenging not only because such decisions are made in the early stages of injury, but also because of the natural progression of symptoms that occur with injured patients.²³ One has to balance the amount of under-triage (i.e. sensitivity) with over-triage (i.e. specificity), as flying an uninjured patient has its own negative consequences to both the patient and the trauma center. The clinical decision rule developed in this project due to its high sensitivity, would lend itself to a negligible under-triage rate with an acceptable over-triage rate. Moreover, the very clear and easily identifiable variables we have included in this model make it an attractive first step in identifying injured patients who require helicopter transport in our state. While the primary model developed is encouraging, the opposite is true for the model developed evaluating the combined clinical outcomes. This model will be included in the published manuscript. Its fair discriminatory ability, while it may be acceptable for some clinical decisions, would be unacceptable for field triage as

the over-triage rate would be unacceptably high whenever any acceptable sensitivity would be reached.

LIMITATIONS

There are several limitations to this project. The first is that we have described limited geographical system that may be very different from other trauma systems. There is also a lack of a comparison group of ground transported patients. Prior work has shown that air transport is beneficial compared to ground transport in seriously injured patients.²⁴ The lower median ISS in our project also may limit the external validity of our findings as the median ISS in our project was much less than a recently published retrospective project from the NTDB, a study which found a beneficial impact of helicopter transport.²⁵ It should also be noted that there are additional air medical providers in the region that was covered in this project who were not included in this analysis. However, MedFlight is the highest volume air medical transport agency in this region and responds to approximately 95% of the scene calls for injured patients during the study period, reducing such bias.

CONCLUSIONS

In this injured cohort of air medical transported patients, a minority of patients had serious injuries that required the resources immediately available at a Level I trauma center. Mechanism of injury was clearly found to be a poor indicator of trauma mortality or trauma center resource utilization. Future studies are needed to develop

evidence-based prehospital trauma triage criteria specifically directed towards air medical transport in order to decrease over-triage of patients.

Summary of Research Data Requests
2007

This document contains a brief summary of all requests that were made in 2007 for research data from the EMS Office of Research and Analysis.

The summary of each request contains the date the request was made, the reference number that the request was assigned, who made the request, a synopsis of what was requested, and finally, what data sources were used to fulfill the request.

The purpose of this document is to demonstrate to both the EMS and trauma care communities that the data they work diligently to collect and submit are not just being sent into a “black hole” but are, in fact, being used to improve care given to ill and injured people, as well as to enhance the systems delivering that care.

You may note that several requests have a summary that states “Unable to fulfill due to confidentiality restrictions.” We include these to reassure the providers of data that while we are eager for the data to be used to improve care, we are also very conscientious of the various privacy concerns of the patient and the providers of care, and adhere to the laws and rules that govern privacy.

The data sources listed in this document are abbreviated. Below are the translations for these abbreviations:

- Agency DB – Agency Database; houses information on each EMS agency in the state.
- Certifications DB – Certifications Database; houses information on the people who hold certification by the State of Ohio as EMT or firefighter
- Education DB – Education Database; houses information on all EMS and Fire educational institution allowed to operate in the State of Ohio.
- EMSIRS – The EMS Incident Reporting System; houses information on all emergency runs made by emergency medical services.
- Grants DB – Grants Database; houses information on the grant funds distributed to EMS agencies for training and equipment, as well as funds distributed for research into EMS and trauma care.
- TACR – Trauma Acute Care Registry; a module of the Ohio Trauma Registry, this houses cause of injury, treatment and outcome information on all seriously injured persons admitted to hospitals in the State of Ohio.
- TRR – Trauma Rehabilitation Registry; a module of the Ohio Trauma Registry, this houses admission and discharge assessments of functional impairment of trauma patients sent to inpatient rehabilitation facilities.

Finally, we would like to acknowledge all of the people across Ohio who work so hard to collect and submit the data stored in these databases that are used to make EMS and trauma care better for everyone. Without their care and attention to detail, none of this would be possible. Thank you, and well done.

Research Data Requests - 2007				
Date	Number	Organization	Summary of request	Data Source(s)
1/2/07	07-001	Xenia FD	Number of times diltiazem was administered in Region 2	EMSIRS
1/18/07	07-002	EMS Board	Multiple requests from the EMS Board for strategic planning sessions	EMSIRS, TACR
1/23/07	07-003	Xenia FD	Number of incidents in Region 2	EMSIRS
